SUBJECT: **Phase I Environmental Site Assessment**
San Diego Unified Port District
Salt Pond 20, Approximately 90 Acres
Assessor Parcel Numbers: 615-020-(08/12), 616-021-08, 616-021-09 (portion) and 621-020-(04/08)
San Diego, San Diego County, California

Dear Mr. Brown :

Enclosed is the Phase I Environmental Site Assessment (ESA) report for the above-referenced property. We trust the information presented in this report meets your needs at this time.

An executive summary is provided; however, we recommend that the report be read in its entirety for a comprehensive understanding of the items contained therein.

We appreciate the opportunity to provide these services to The San Diego Unified Port District, Planning & Green Port. Should you require additional information, or have questions regarding this report, please contact Travis Meier at (619) 831- 4676.

Respectfully submitted,

KLEINFELDER

Travis Meier, QISP
Project Manager

1 EXECUTIVE SUMMARY

A Phase I Environmental Site Assessment (ESA) was performed by Kleinfelder, for San Diego Unified Port District, Planning & Green Port Program (the Port / "Client"), for the property referred to as Salt Pond 20, located on Assessor Parcel Numbers (APNs) 616-020-(08/12), 616-021-08, 616-021-09 (portion) and 621-020-(04/08) in the City of San Diego, San Diego County, California (Site). The Site consists of a total of approximately 90 acres of land north of Palm Avenue. The six parcels are collectively referred to as the "Site".

check acreage

The Port plans to create a wetlands mitigation bank within the bermed area surrounding the Site. As part of this development, soil/sediment will be excavated and removed to create channels and lowlands for the creation of wetlands. The Port would like to reuse the excavated soil/sediment on other properties. The primary purpose of this Phase I ESA is to identify Recognized Environmental Conditions (RECs) at the Site, as outlined in ASTM International (ASTM) Designation E 1527-13, as noted below. Additionally, information will be used to evaluate potential impact on reuse of soil/sediment. Please note that this Phase I is not being performed for property transaction purposes.

This report was prepared using the ASTM International Designation E 1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (the "Standard Practice"), and the All Appropriate Inquiry (AAI) section of the Small Business Liability Relief and Revitalization Act (the Federal Brownfields Law). The Phase I ESA findings include:

- Soil at the Site consists of loam to clay loam, with very slow infiltration rates. The underlying geology of the Site varies from a fine- to medium-grained sandstone mapped as part of the San Diego Formation. Groundwater flow in the vicinity of the Site is toward the south-southwest.
- Soils at the Site have a high potential tor corrode concrete placed in direct contact with the soil.
- Based on historical research, the Site appears to have been developed with historic salt works infrastructure operations and an old rail line trestle structure.

Copyright 2018 Kleinfelder

- VMT Auto Sales (1502 Palm Ave.) is located on the southernmost Site property boundary. The area consists of a paved parking area, billboard and small office structure.
- The Site was used as a salt evaporation and holding pond from the 1870s to the 1960s. Since the late 1960s, the Site has been unused.
- The Site is not listed in any databases searched by Environmental Data Resources (EDR)
- According to the Division of Oil, Gas and Geothermal Resources (DOGGR) database, an oil or gas well was drilled in the central portion of the Site in 1963; however, a well was not observed during the Site walk, and is indicated on the map as a dry hole. Well abandonment documentation is included in Appendix B.
- No off-Site facilities were found to represent a recognized environmental condition (REC) to the Site, or likely result in vapor migration through soils onto the Site.
- Kleinfelder's Phase I ESA did not identify Historica RECs (HRECs) or Controlled RECs (CRECs) associated with the Site.
- A 48-inch storm drain outfall and two 1-foot storm water outfalls are located along the southern Site boundary at the western portion of the Site. Another storm drain outfall is located west of the Site along 13th Street, which drains toward the Site.
- Four RECs were identified in connection to the Site.
    - An oil/gas well drilled by Robert Egger in 1963, is located in the central portion of the Site. The well was deemed dry and later abandoned on September 12, 1963. Drilling and abandonment logs are included in Appendix B.
    - Effluent from storm water outfalls located on and directly adjacent to the Site could impact soil and water quality beneath the Site and are considered RECs. Sampling is recommended in these locations.
    - A previous soil characterization report titled Wetlands Restoration of Salt Pond 20 Soil Quality and Plannability Evaluation Report and completed by Great Ecology found concentrations of arsenic in soil samples from the Site exceeding the effects range low (ERL) (Long et.al., 1995). Due to the proposed future use of the Site, further soil investigation is recommended.
    - The VMT Auto Sales facility (1502 Palm Ave.) was observed to contain a floor drain within a covered limited maintenance area. Staining was not observed

Copyright 2018 Kleinfelder

around the floor drain, although particulate matter was noted. The floor drain is reported to travel via underground pipe and empty onto the southeast portion of adjacent Pond 20. Further soil investigation in the area where the floor drain discharges (to be determined in field) is recommended.

In addition to these conditions, deviations from the Phase I ESA Standard (if any) are discussed in Chapter 8 of this report. This report is subject to the limitations in Section 2.5.

Copyright 2018 Kleinfelder

2 INTRODUCTION

This report is a summary of work performed using the guidelines set forth in ASTM Designation E 1527-13*, "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process"* (the ASTM Standard) and AAI standards of the Small Business Liability and Revitalization Act (the "Brownfields Law"). This report also generally conforms to the ASTM Standard's suggested table of contents. Minor format modifications have been made to the ASTM Standard's suggested table of contents to assist in better reading and understanding the report findings.

2.1 PURPOSE

The Port plans to create a wetlands mitigation bank within the bermed area surrounding the Pond 20. As part of this development, soil/sediment will be excavated and removed to create channels and lowlands for the creation of wetlands. The Port would like to reuse the excavated soil/sediment on other properties. The purpose of this Phase I ESA is to identify, to the extent feasible pursuant to the scope of services defined in our Proposal No. MT160090.001P, dated January 26, 2018 and limitations discussed in this report, RECs associated with the Site. As defined in the ASTM Standard, a REC is:

> *The presence or likely presence of any hazardous substances or petroleum products in, on or at a property: (1) due to a release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.*

As defined in the ASTM Standard, a *de minimis* condition is:

> *A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.*

Copyright 2018 Kleinfelder

ASTM Standard E 1527-13 also introduces the designation of CREC. As defined in the ASTM Standard a CREC is:

> *"… a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).*

The ASTM Standard also defines HRECs as:

> *…a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to environmental controls.*

The final decision on whether a past release is an HREC rests with the environmental professional (EP) and will be influenced by the current impact of the past release to the Site.

This report describes Kleinfelder's assessment methodology and documents our findings, subject to the limitations presented in Section 2.5 of this report. Kleinfelder is not performing this Phase I due to a property transaction but rather to determine if onsite media is suitable for offsite transport and re-use. Any RECs identified at the site will reflect the purpose of this Phase I investigation report.

Kleinfelder professionals conducting this Site assessment included Mr. Stefan Birardi, the primary author of this report and the person who performed the Site reconnaissance. Travis Meier is the Project Manager who oversaw this project and is the EP. The EP Statement of Qualifications is included in Appendix A. Other Environmental Professionals who contributed to this project include Lizanne Simmons. Resumes of Environmental Professionals are available from Kleinfelder upon request.

2.2 DETAILED SCOPE-OF-SERVICES

The following sections describe Kleinfelder's work scope:

- Section 2, **Introduction**, includes a discussion of the purpose/reason for performing the Phase I ESA, additional services requested by the Client (e.g., an evaluation of business environmental risk factors associated with the Site), significant assumptions (e.g., property boundaries if not marked in the field), limitations, exceptions, special terms and conditions (e.g., contractual), and user reliance parameters.
- Section 3, **Site Description**, is a compilation of information concerning the Site location, legal description, current and proposed use of the Site, a description of structures and improvements on the Site at the time of Kleinfelder's assessment, and adjoining property use.
- Section 4, **Records Review**, is a compilation of Kleinfelder's review of several databases available from Federal, State, and local regulatory agencies regarding hazardous substance use, storage, or disposal at the Site; and for offsite facilities within the search distances specified in the ASTM Standard. Records provided by the Client are summarized and copies of relevant documents are included in the appendices of this report. Physical setting sources (including topography and soil and groundwater conditions) and typical Client-provided information (e.g., title records, environmental liens, specialized knowledge, valuation reduction for environmental issues, and owner, property manager, and occupant information) are also summarized in this section. Other interviews with people knowledgeable about the Site (including the Client) are included in Section 7.
- Section 5, **History of the Site**, summarizes the historical use of the Site and adjoining properties. This Site history is based on various sources, which may include a review of historical aerial photographs, Sanborn Fire Insurance Maps, city or suburban directories, historical topographic maps, building department records, and results of previous Site assessments (if any and reasonably ascertainable).
- Section 6, **Site Reconnaissance**, describes Kleinfelder's observations during the Site reconnaissance. The methodology used and limiting conditions, are described.
- Section 7, **Interviews**, is a summary of telephone and personal interviews performed with "Key Site Managers" that may include the Site owner/manager, occupants/tenants, local government officials, and the Client. Additional interview sources may be

Copyright 2018 Kleinfelder

contacted if Key Site Managers were not available prior to production of this report and may include adjoining landowners and people with historical knowledge of the area.

- Section 8, **Evaluation**, is a presentation of our findings and opinions regarding the information in Sections 3 through 7, and presents our conclusions regarding the presence of RECs, HRECs, CRECs, and *de minimis* conditions connected with the Site, and recommendations.
- Section 9, **References**, is a summary of some of the resources used to compile this report.

Pertinent documentation regarding the Site is included in the appendices of this report.

2.3 ADDITIONAL SERVICES

An evaluation of business environmental risk associated with the Site was not included in Kleinfelder's scope of services. The scope of this Phase I ESA does not incorporate ASTM Standard non-scope considerations such as radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, and high-voltage power lines.

2.4 SIGNIFICANT ASSUMPTIONS

Kleinfelder does not guarantee the accuracy of the information supplied by its sources, but reserves the right to rely on this information in formulating a professional opinion on the potential for contamination at the Site. Kleinfelder also assumes the Client provided all applicable and available environmental records and specialized knowledge regarding the Site. Kleinfelder has not made other significant assumptions during the performance of this Phase I ESA.

2.5 LIMITATIONS AND EXCEPTIONS

Phase I ESAs are non-comprehensive by nature and may not identify all environmental problems, and will not eliminate all risk. This report is a qualitative assessment. Kleinfelder

Copyright 2018 Kleinfelder

offers a range of investigative and engineering services to suit the needs of our clients, including more quantitative investigations. Although risk can never be eliminated, more detailed and extensive investigations yield more information, which may help the Client understand and better manage risks. Since such detailed services involve greater expense, we ask our clients to participate in identifying the level of service, which will provide them with an acceptable level of risk. Please contact the signatories of this report if you would like to discuss this issue of risk further.

Kleinfelder performed this Phase I ESA in general accordance with the guidelines set forth in the ASTM Standard, and the proposed scope subsequently approved by our Client. No warranty, either express or implied, is made. Environmental issues not specifically addressed in this report were beyond the scope of our services and not included in our evaluation.

This report may be used only by the Client and only for the purposes stated within a reasonable time from its issuance, *but in no event later than 1 year from the date of the report.* Land or facility use, on- and offsite conditions, regulations, or other factors may change over time, and additional work may be required with the passage of time. Since Site activities and regulations beyond our control could change at any time after the completion of this report, our observations, findings, and opinions can be considered valid only as of the date of the Site visit. Pursuant to the ASTM Standard's Section 4.6, this report should not be relied upon after 180 days from the date of its oldest component. Any party other than the Client who wishes to use this report shall notify Kleinfelder of such intended use. Based on the intended use of the report, Kleinfelder may require that additional work be performed and that an updated report be issued. Non-compliance with any of these requirements by the Client or anyone else will release Kleinfelder from any liability resulting from the use of this report by any unauthorized party, but only to the extent of any such non-compliance by the Client.

2.6 SPECIAL TERMS AND CONDITIONS

Kleinfelder was retained by the San Diego Unified Port District to conduct a Phase I site assessment for the primary purpose of identifying RECs at the Site. Additionally, information will be used to evaluate potential impact on reuse of soil/sediment. This Phase I is not being prepared for property transactional purposes.

Copyright 2018 Kleinfelder

3 SITE DESCRIPTION

The Site description is presented in this section and describes the condition of the Site at the time of the Phase I ESA. The Site location is shown on Figure 1. Tables 3-1 through 3-4 summarize the physical characteristics of the Site and adjoining properties.

3.1 LOCATION AND LEGAL DESCRIPTION

The information presented in Table 3-1 includes the physical location and legal description of the Site. This information was obtained from review of various maps (such as topographic maps and tax assessor maps), aerial photographs, public records at City and/or County offices, interviews, and/or information provided by the Client.

Table 3-1
Location and Legal Description

Parameter	Information/Comments
LOCATION	The Site is comprised of six parcels of land (APNs), all of which are located north of Palm Avenue (see Figure 1).
ASSESSOR'S PARCEL NUMBER	The Site encompasses six APNs, including 616-020-(08/12), 616-021-08, 616-021-09 (portion) and 621-020-(04/08), comprising approximately 90 acres of land.
ADDRESS(ES)	The only portion of the Site that has a physical address consists of the VMT Auto Sales facility which is located at 1502 Palm Avenue, San Diego, California 92154.
SECTION, TOWNSHIP, AND RANGE	Township 18 South, Range 02 West, Section 21, San Bernardino Baseline and Meridian.
ZONING	The Port of San Diego does not have a zoning ordinance or zoning map for its jurisdiction. Under the certified Port Master Plan, land use designations for parcels are assigned. These parcels are currently undesignated, and will be incorporated into the Port Master Plan as a commercial use and/or conservation/wetlands use.

3.2 CURRENT / PROPOSED USE OF THE PROPERTY

At the time of Kleinfelder's assessment, land use in the general Site vicinity appeared to be consist of commercial and individual residential properties. Current and proposed uses of the Site are described in Table 3-2.

Copyright 2018 Kleinfelder

Table 3-2

Current / Proposed Uses

Parameter	General Observations
CURRENT USE	The Site is currently vacant outside of the VMT Auto Sales lot which consists of a paved parking area, billboard and small office structure.
PROPOSED USE	The Site is proposed to be a wetlands mitigation bank operated by the San Diego Unified Port District.

3.3 DESCRIPTION OF STRUCTURES / IMPROVEMENTS

Structures and/or improvements observed on the Site at the time of Kleinfelder's Site reconnaissance are described in Table 3-3.

Table 3-3

Structures and Improvements

Parameter	General Observations
STRUCTURES	The Site is undeveloped except for several small structures associated with a portion of the Site occupied by VMT Auto Sales (1502 Palm Ave.).
IMPROVEMENTS	Access roads and berm improvements run along the perimeter of the Site. Powerlines are also present along the perimeter of the Site. One 48-inch storm drain outfall is located in the southwest corner, on the western side of the berm (potentially off Site). Two 1-foot storm water slope outfalls are located at the southern portion of the Site along and near Palm Avenue. A sewer access vault and associated line are located within the eastern portion of the Site.

Currently, one structure is located in the southeast corner of the Site (VMT Auto Sales, 1502 Palm Ave.). Remnants of prior structures (i.e., support posts from walking docks) from salt works infrastructure and/or from a historical rail line (Section 5.4) are visible.

3.4 CURRENT USES OF ADJOINING PROPERTIES

Kleinfelder performed a brief drive-by survey of the properties adjoining the Site on February 15, 2018. A summary of the surrounding properties is presented in Table 3-4 and shown on Figure 2.

Copyright 2018 Kleinfelder

Table 3-4

Adjoining Properties

Direction	Land Use Description
NORTH	The Site is bound to the north by the Bayshore Bikeway and Otay River, followed by South Bay Salt Works infiltration ponds
EAST	The Site is bound to the east by residential properties (mobile home parks) followed by Interstate 5. The southeast portion of the Site occupied by VMT Auto Sales is bordered by Amigos Tire Shop and Auto Repair
SOUTH	The Site is bound to the south by Bayside Palms Mobile Home Village and Palm Avenue, followed by residential and commercial properties.
WEST	The Site is bound to the west by Soapy Joe's Car Wash, residential land and undeveloped land, followed by 13th Street and residential and commercial properties.

Copyright 2018 Kleinfelder

4 RECORDS REVIEW

4.1 STANDARD ENVIRONMENTAL RECORD SOURCES

The purpose of the records review was to obtain and review records that would help to evaluate RECs of potential concern in connection with the subject Site and bordering properties. Federal, state and local regulatory agencies publish databases or "lists" of businesses and properties that handle hazardous materials or hazardous waste, or are the known location of a release of hazardous substances to soil and/or groundwater. These databases are available for review and/or purchase at the regulatory agencies, or the information may be obtained through a commercial database service. On February 8, 2018, Kleinfelder contracted a commercial database service, Environmental Data Resources (EDR) of Shelton, Connecticut to perform the government database search for listings within the appropriate ASTM International minimum search distance of the Site. Kleinfelder provided EDR with a Site map to incorporate the search distances from the Site boundary. Included in The EDR Radius Map™ Report with GeoCheck® is a listing of specific databases outlined by the ASTM Standard (EDR, 2018a). A listing of the search distances, databases evaluated, dates the databases were last updated, and types of information contained in each database provided as Appendix D to this report.

EDR utilizes a geographical information system to plot the locations of reported spills, leaks, incidents, etc. Kleinfelder reviews this information to help establish if the Site, or nearby properties, have been included in the noted databases and lists. Each of the listings was reviewed to assess whether the corresponding property details included in the EDR report revealed a potential environmental impact to the Site. A number of listings in the EDR database report were found not to have the potential to impact the Site based on the following criteria, or a combination thereof:

- The listed property is located at a distance such that environmental conditions at the property are unlikely to impact the Site, based on Kleinfelder's evaluation of the relevant data in EDR's report and knowledge of the Site vicinity.
- The listed property is located in a down-gradient or cross-gradient direction from the Site, *based on the anticipated direction of groundwater flow at the property being evaluated* (which is estimated to be generally toward the west to southwest at known locations in the Site vicinity). Note that the groundwater flow direction at the Site is

Copyright 2018 Kleinfelder

believed to be to the north-northwest, and thus may vary from the property being evaluated.

- The listed property is listed in a database as a consequence of maintaining an UST and/or is listed in the Small Quantity Generator (SQG) Database but is not situated on or immediately adjoining to the Site and is not listed in other databases associated with a release of a hazardous substance or petroleum product, and/or is not listed as having environmental violations. The listing of a facility in one or more of the UST-related databases and/or the SQG Database is by itself not indicative of an unauthorized release.
- The listing for the property suggests a short-term release occurred (i.e., from a traffic accident or involving chemicals associated with an illegal drug laboratory in a residence), and associated response action has been completed.
- The quantity of the hazardous substance(s) or petroleum product released from an off-Site facility is not considered to have resulted in contamination above the most stringent criteria that would require regulatory action, and therefore no impact to the Site is anticipated.
- The listed property record indicates the property was characterized, the reported release affected soil only, the listed property is not on or adjacent to the Site, and the release is not recognized as indicative of area-wide conditions or is characterized as a soil removal action only.
- The listed property information indicates contamination on the property is limited to relatively non-mobile contaminants, including polynuclear aromatic hydrocarbons, heavy carbon-chain oils, and metals, in soil only, on a property that does not adjoin the Site.
- The listed property record indicates the environmental case for the property has been closed to the satisfaction of the designated lead regulatory agency, and residual contamination, if present, is not considered likely to affect the Site based on one or more of the criteria discussed in the bulleted items above. This condition is referred to by the ASTM Standard as an HREC.

Based on these criteria indicating no material threat of a release that affected the Site and/or no release that could require future regulatory agency oversight, these listings were not evaluated further and are not discussed in the following sections.

Copyright 2018 Kleinfelder

4.2 RESULTS OF DATABASE SEARCH

The remaining property listings were reviewed to assess whether these properties had environmental releases, which may have resulted in RECs in relation to the Site. The listed properties for which a reported release may have resulted in a REC were further assessed by performing a review of agency files available through the State Water Resources Control Board (SWRCB) GeoTracker™ website (http://geotracker.waterboards.ca.gov/) and other relevant regulatory agency websites, to evaluate whether the listed release represents a potential impact to the Site.

4.2.1 Site Listings

The Site was not identified in any databases searched by EDR.

4.2.2 Offsite Listings

- *Resco Self Storage (1714 Palm Avenue, 235 feet south-southeast from Site, higher elevation than Site, up-gradient to cross-gradient)* – The facility is reported under SLIC and San Diego County Site Assessment and Mitigation (SAM) files to have impacted groundwater with waste/motor/hydraulic/lubricating oil. Documentation present on Geotracker™ indicates that the property was used since the early 1980s for storage of commercial vehicles and heavy equipment. A Phase II ESA investigation performed at the facility in 2001 indicated low-level concentrations of total petroleum hydrocarbons (TPH) extended-range in subsurface and groundwater samples collected at the facility. Groundwater wells were not installed but estimated groundwater flow direction was listed to be in a westerly direction, based on groundwater flow in nearby facilities along or near Palm Avenue. A former disposal pit (miscellaneous debris/equipment) was identified in the northern portion of the property which also indicated elevated TPH-extended range (heavy oil) concentrations in collected soil samples. Consequently, in December 2003, approximately 20 cubic yards of soils was excavated and disposed from the former disposal pit area. The consultant for the project, Golder Associates, concluded that residual subsurface contamination, following the excavation, presented no significant impacts to human health and/or water resources. In a letter from the San Diego County Department of Environmental Health (SDCDEH, March 2004), the agency

Copyright 2018 Kleinfelder

concurred with the recommendations and issued a letter of "No Further Action" in relation to remediation at the facility. Surface water, drinking water wells and off-site beneficial uses were listed to not have been impacted in relation to contamination originating from the facility. The provided information indicates that the Resco facility appears to be hydraulically up-gradient from the southwestern portion of the Site and cross-gradient from the southeastern portion of the Site. Based on this information, the limited extent of contamination, types of contaminants involved, removal of the contaminated soil, and the distance from the Site, the Resco facility is not considered a REC in relation to the Site.

- *7 Eleven Food Stores (1311 Palm Avenue, 305 feet south-southwest from Site, higher elevation than Site, cross-gradient)* – The facility is listed in EMI, SLIC, San Diego County SAM, San Diego County Hazardous Material Management Division (HMMD), UST, SWEEPS UST, and HIST UST databases. The 7 Eleven facility is listed to have, or historically have contained unleaded gasoline USTs of varying sizes and grades. A release of unleaded gasoline from a LUST is listed to have impacted an unidentified media in April 1992. The facility is listed with a status of "Completed – Case Closed" as of October 1992. Numerous violations are listed for the 7 Eleven facility, but appear to be limited to record keeping, housekeeping, and leak detection system issues related to the gasoline service station activities present at the facility. Based on the information provided, the estimated cross-gradient location of the facility in relation to the Site, and the short closure time frame, the facility is not considered a REC in relation to the Site.
- *Fast Lube (1574 Palm Avenue, 424 feet south-southeast from Site, higher elevation than Site, up-gradient)* – The facility is listed in LUST, San Diego County SAM, San Diego County HMMD, UST, and HIST CORTESE databases. The Fast Lube facility is reported to have, or historically have contained, varying sizes of waste oil, motor oil, regular unleaded gasoline, and leaded gasoline USTs, and is also listed as having a gasoline release from a UST which impacted surrounding soil only in January 1987. The case was closed in February 1987. Based on the information provided, the facility is not considered a REC in relation to the Site.
- *ASAP Oil Exchange & Smog (1776 Palm Avenue, 470 feet southeast from Site, higher elevation than Site, up-gradient to cross-gradient)* – The facility is listed in LUST, SLIC, San Diego County SAM, San Diego County HMMD, LUST, and HIST CORTESE databases. The ASAP Oil Exchange & Smog facility is listed to have, or to have historically maintained, a waste oil UST with a capacity of 550 gallons. A release of waste/motor/hydraulic/lubricating oil is listed to have impacted only soil at the facility.

Copyright 2018 Kleinfelder

The case is listed as “Completed – Case Closed” as of September 1991. Waste oil and related materials are listed to be generated and disposed of from facility operations. Based on the information provided, the facility is not considered a REC in relation to the Site.

- *Pacific Bell (1288 Palm Avenue, 619 feet south-southwest from Site, higher elevation than Site)* – Pacific Bell is listed in the RCRA-SQG. HIST UST, FINDS and ECHO databases. It does not appear a release occurred at this facility. Groundwater flow direction information was not available for this facility. Based on the groundwater flow direction data from adjacent facilities, the Pacific Bell site appears to be hydraulically downgradient of the Site. Based on the provided information, the Pacific Bell facility is not considered a REC in relation to the Site.

- *ARCO #09563 (1890 Palm Avenue, 954 feet east-southeast from Site, higher elevation than Site, cross-gradient)* –ARCO #09563 is listed in San Diego Co. SAM, HIST UST, and EMI databases. EDR indicates a record of the drinking water aquifer being impacted between 1995 and 2010. Targeted dual-phase extraction events were conducted for four 8-hour periods in October 2003 and during a two-week period from October through November 2008. Based on information for this facility on the GeoTracker™ website from April 2005 through April 2010, groundwater flow was reported primarily to the south to southwest, with occasional flow to the west and southeast. During the last quarterly monitoring event, groundwater impact did not extend off site in the direction of the Site. Due to the apparent hydraulic cross-gradient location of this facility, and case closure granted in 2011, the facility is not considered a REC in relation to the Site.

- *William E. Lin DDS/Saturn Cleaners (655 Saturn Boulevard, 1,546 feet east-southeast of the Site, higher elevation, cross-gradient)* –The listings are provided under the named William E. Lin DDS, but is anticipated to actually be in relation to an adjacent dry cleaning named Saturn Cleaners. The facility is reported under SLIC (Lead Agency - San Diego Local Oversight Program), San Diego Co. SAM, San Diego Co. HMMD, FINDS, EMI, and HAZNET. The SLIC case was closed on 1/27/2004 after a cleanup of chlorinated hydrocarbons in soil was completed. All other violations do not pertain to the environmental integrity of the Site. Groundwater flow direction data were not available for this site. Based on the groundwater flow direction data from ARCO #09563 (see below), the William E. Lin/Saturn Cleaners site appears to be hydraulically cross-gradient of the Site. Based on the referenced information, soil only impact, and the distance from the Site, the facility is not considered a REC in relation to the Site.

Copyright 2018 Kleinfelder

- *Numerous Other Adjacent Listings (Varying Addresses and Distance)* – There are numerous additional listings that are located in close proximity to the Site. However, due to these facilities not being listed with documented releases, being located off-site in estimated downgradient directions, or currently having a status of "Case Closed", the facilities are considered to not be RECs in relation to the Site (see discussion in Section 4.1).

4.2.3 Orphan List

Facilities not plotted by EDR due to poor or inadequate address information are referred to as orphan sites. The orphan summary/unmapped site report was reviewed by Kleinfelder to assess the potential for the orphan listings to pose a REC to the Site. Three orphan facilities were identified by EDR in the report (EDR, 2018a).

- Imperial Beach Outlying Landing
- Port of San Diego
- SDG&E – Imperial Beach Substation

A review of these properties was completed, and it was determined that there is a low probability for RECs to the Site.

4.2.4 Vapor Migration

Vapor migration is the movement of vapor-phase contaminants, such as hydrocarbons or solvents, through the subsurface soils. Based on the lack of constituents identified on Site and adjacent properties, vapor migration is not likely.

4.3 OTHER RECORDS REVIEWED / AGENCIES CONTACTED

The following additional sources of environmental records were reviewed during this Phase I ESA for the purposes of meeting the ASTM Standard. Local regulatory agencies were contacted for reasonably ascertainable and practically reviewable documentation regarding RECs present at the Site and adjoining facilities. Summaries of interviews with local regulatory

Copyright 2018 Kleinfelder

agency representatives are included in Section 7 of this report (with interview documentation included in Appendix C). The following agencies were contacted:

- San Diego Air Pollution Control District (SDAPCD)
- San Diego County Department of Environmental Health (SDCDEH)
- Pipeline and Hazardous Materials Safety Administration (PHMSA), National Pipeline Mapping System (NPMS)
- California Department of Toxic Substances Control (DTSC)
- San Diego Regional Water Quality Board (SDRWQB)

Information from these agencies is presented below.

4.3.1 San Diego Air Pollution Control District (SDAPCD)

Kleinfelder submitted a written request for information to the SDAPCD. No records were found pertaining to the Site.

A copy of the records request and associated documents from SDAPCD is provided in Appendix C.

4.3.2 San Diego County Department of Environmental Health (SDCDEH)

Kleinfelder submitted a written request to the SDCDEH. No records were found pertaining to the Site.

A copy of the records request and associated documents from SDAPCD is provided in Appendix C.

Copyright 2018 Kleinfelder

4.3.3 Pipeline and Hazardous Materials Safety Administration, National Pipeline Mapping System

According to the California State Fire Marshal, pipeline information is available at the PHMSA's online NPMS (https://www.npms.phmsa.dot.gov). Kleinfelder researched pipeline information on the NPMS on February 19, 2018 for the Site and vicinity. Based on our review, there are no mapped natural gas transmission pipelines or hazardous liquid pipelines located on the Site, or in the immediate vicinity of the Site. A copy of the NPMS map is included in Appendix C.

4.3.4 San Diego Regional Water Quality Control Board

Kleinfelder submitted written request to the SDRWQCB on February 15, 2018 for records associated with the Site and vicinity of the Site. SDRWQCB responded on February 16, 2018 stating they had no listings for the Site, or properties immediately adjoining the Site in databases maintained by the SDRWQCB. The agency response is located in Appendix C.

4.4 PHYSICAL SETTING SOURCE(S)

Table 4-1 presents information concerning the physical setting of the Site. This information was obtained from published maps.

Copyright 2018 Kleinfelder

Table 4-1
Physical Setting

Data	General Information
USGS TOPOGRAPHIC QUADRANGLE	Based on a review of the United States Geological Survey (USGS) San Diego, California 7.5-Minute Series (Topographic) Quadrangle Maps dated 2012, the Site is located at an approximate elevation of 19 feet above mean sea level (msl). The topographic relief of the Site is relatively flat, sloping down gently toward the north-northwest.
SOIL TYPE	According to EDR (2018a), soils at the Site consist of loam, with very slow infiltration rates. The soils are clayey with either having a high water table, or are shallow to an impervious layer. The soils are composed of sandstone from the San Diego Formation, consisting of a coastal transitional marine and non-marine pebble conglomerate deposit and marine sandstone rock with fossils. (websoilsurvey.com). A geotechnical report prepared for the Site (Geotechnics Incorporated [Geotechnics], 2000) reiterates the information provided above and states that soils encountered during the geotechnical investigation consisted of Bay Point Formation/Unnamed Near-shore Marine Sandstone underlain by Estuarine Deposits. Fill soil (soft sandy clay) was also noted to be present in earthen berms that surround the perimeter of the salt pond. Encountered soils were evaluated to be compressible to highly compressible and have a high potential for corrosion.
OIL AND GAS WELLS	Kleinfelder reviewed Department of Oil Gas and Geothermal Resources (DOGGR) Well Finder online database for oil and gas wells located on the Site and in the Site vicinity. There was one gas well depicted on the Site with an API # 07300015, the well is noted to have been drilled by Robert Egger in 1963. According to records, the initial well was drilled to a depth of 2,360 feet below ground surface (bgs). Robert Egger attempted to convert the well into a water well for agricultural reasons. The well is listed as a plugged and abandoned on September 12, 1963 as a dry well.

Information about the regional geology is presented in Table 4-2. This information was obtained by Kleinfelder from published data and maps, interviews with public agencies, and/or previous investigations performed by Kleinfelder in the Site vicinity.

Copyright 2018 Kleinfelder

Table 4-2

Regional Geology and Hydrogeology

Physical Parameter	Information/Comments
REGIONAL PHYSIOGRAPHY AND GEOLOGY	The Site is located within the Peninsular Ranges Geomorphic Province of southern California. The ranges form a northwest-trending geomorphic province characterized by steep mountain highlands, basins, valleys and rivers. The Site is located in a tectonic and seismically active region part of four major, northwest trending faults (Kennedy and Tan, 2008).
DEPTH TO GROUNDWATER AND DIRECTION OF ANTICIPATED FLOW [1]	Based on groundwater monitoring wells in the vicinity of the Site, and encountered groundwater in borings performed on-Site and on adjacent locations, groundwater was typically encountered in borings at depths ranging from 2 to 7 feet bgs (Geotechnics Incorporated, 2000). Groundwater at the Site is anticipated to flow generally in a north-northwest direction based on surface topography (EDR, 2018a) toward San Diego Bay. However, at other facilities with groundwater monitoring wells along or in the vicinity of Palm Avenue (ARCO 9663 [1890 Palm Avenue], ARCO 9755 [1185 Palm Avenue], and TOSCO [1085 Palm Avenue], groundwater typically flows west to southwest. Therefore, estimates of up-gradient versus down-gradient have been discussed with respect to groundwater flow at individual properties with respect to the Site.
WATER SUPPLY	Not Available
FLOOD ZONE DESIGNATION	According to The EDR Radius Map™ Report with GeoCheck®, the Site is located within a 100-year zone. (EDR, 2018a). In addition, borings performed in relation to the geotechnical investigation previously performed at the Site (Geotechnics, 2000) indicated depth to water varied from 2 feet bgs to 7 feet bgs.

[1] Groundwater flow direction is based on historical reports related to the Site as well as known groundwater information from off-Site sources. Site-specific conditions may vary due to a variety of factors including geologic anomalies, utilities, nearby pumping wells (if present), and other factors.

4.5 USER PROVIDED INFORMATION

According to the Client, the purpose for performing this Phase I ESA is to evaluate the usability of soil for transport and use at a new location. Information regarding the current owners/occupants of the Site is summarized in Table 4-3.

Copyright 2018 Kleinfelder

Table 4-3

Owner / Occupant Information

Entity	Name
OWNER	San Diego Unified Port District
OCCUPANT(S)	The Site is currently vacant outside of the VMT Auto Sales lot which consists of a paved parking area, billboard and small office structure.

Summaries of interviews of key individuals with knowledge of the Site ("Key Site Managers") are provided in Section 7. The following sections present information provided to Kleinfelder by the Client.

4.5.1 Title Records

A chain-of-title report was not provided by the Client. Therefore, a review of a chain-of-title report was not performed as part of this Phase I ESA.

4.5.2 Environmental Liens and Usage Limitations

According to information provided in EDR's regulatory agency database search report (EDR, 2018a), there are no liens pertaining to the Site listed in the Federal Superfund Liens List maintained by US EPA, and no known recorded land-use environmental deed restrictions pertaining to the Site listed in the State Liens Database. However, the San Diego National Wildlife Refuge is located directly north of the Site, which may limit specific types of future development.

A sales transaction for the Site property is not pending, therefore, a lien review was not warranted.

4.5.3 Value Reduction

As part of the ASTM Designation E 1527-13 process, information is to be gathered regarding the prospective purchase price of the Site relative to its fair market value. If there appears to be a value reduction, that reduction must be identified with respect to whether the difference could

Copyright 2018 Kleinfelder

be attributed to environmental degradation of the property. Based on conversations with the User, the Site is not for sale and value reduction is not applicable.

4.5.4 Other Information/Documents Provided

Kleinfelder personnel reviewed and summarized the following documents:

Wetlands Restoration of Salt Pond 20 Soil Quality and Plannability Evaluation Report (Great Ecology, 2017)

- Great Ecology established four sampling stations within the Site property boundary to characterize the Site (P20-1, P20-2, P20-3, P20-4) (Figure 2). Two stations characterized the eastern half of the Site (P20-3, P20-4), one station characterized the central western portion of the Site (P20-2) and one station characterized the berm (P20-1).
- Great Ecology reported arsenic was the only constituent to be above screening concentrations. Additionally, Synthetic Precipitation Leaching Procedure (SPLP) analysis was run on the samples with the highest arsenic concentration from each location to evaluate leachability.
- Total petroleum hydrocarbons were not detected. Other organic contaminants were nearly absent, with the exception of minor detections of polynuclear aromatic hydrocarbons (PAHs) at P20-1. Pesticides and polychlorinated biphenyls (PCBs) were not detected.
- At sample station P20-1, arsenic was detected at 8.5 milligrams per kilogram (mg/kg) in sample 1T and 10.7 mg/kg in sample 1M, which are both above the ERL of 8.2 mg/kg (Long et.al., 1995).

Wetland Restoration of Salt Pond 20 Basis of Design Report (Environmental Science Associates [ESA], 2017)

- This document provides preliminary plans that illustrate Site topography, soil composition, habitat acreage and a plant species list for future restoration projects.

Copyright 2018 Kleinfelder

Preliminary Geotechnical Investigation, Pond 20 – Former Western Salt Property (Geotechnics Incorporated, 2000)

- The scope of services included evaluation of the Site geotechnical conditions through research and review of available documents, performance of nine cone penetration test soundings (CPT) and advancement of four borings to depths of 8 to 40 feet bgs.
- Samples collected from the borings were submitted for laboratory testing for the following geotechnical analyses:
    - Moisture content and density
    - Particle size analyses
    - Atterberg limits
    - Consolidation
    - Shear strength
    - Expansion
    - Sulfate content
- Conclusions of the investigation included the following:
    - The subsurface soils are highly compressible and will consolidate upon placement of fill and structural loads. Areal settlement will occur over a period of time.
    - The on-Site soils have a high potential for corrosion and may have an effect on concrete, ferrous metals, and buried utilities that are placed in contact with the material.

A copy of these reports are included in Appendix C.

Copyright 2018 Kleinfelder

5 HISTORY OF THE SITE

The history of the Site was researched to identify obvious uses. Historical land use was researched to the first developed use, or back to 1940, whichever was earlier or readily available. Table 5-1 summarizes the availability of information reviewed during this assessment.

Table 5-1
Historical Information Sources

Source	Years Reviewed	Source / Availability
SANBORN FIRE INSURANCE MAPS	None available.	EDR, 2018b
AERIAL PHOTOGRAPHS	1949, 1953, 1964, 1966, 1970, 1979, 1985, 1989, 1994, 2005, 2010,and 2014	EDR, 2018c
CITY DIRECTORIES	1903, 1907. 1921,1927, 1933, 1938, 1940, 1943, 1945, 1948, 1950, 1952, 1955, 1956, 1960, 1961, 1962, 1965, 1966, 1970, 1971, 1975, 1976, 1980, 1984, 1985, 1989, 1991, 1992, 1995, 2000, 2006, 2010, and 2014	EDR, 2018d
HISTORICAL TOPOGRAPHIC MAP REPORT	1904, 1930, 1943, 1953, 1975, 1991, 1996 and 2012.	EDR, 2018e
BUILDING DEPARTMENT	N/A	
PREVIOUS ASSESSMENT(S)	2017	Great Ecology, 2017

5.1 SANBORN FIRE INSURANCE MAPS

Sanborn Fire Insurance Maps provide historical land use information for some metropolitan areas and small, established towns. Kleinfelder requested EDR to search its library of Sanborn Fire Insurance Maps for maps of the Site. EDR responded that no Sanborn Fire Insurance Maps were available for the Site (EDR, 2018b). A copy of the EDR provided report is included in Appendix D.

Copyright 2018 Kleinfelder

5.2 AERIAL PHOTOGRAPHS

A review of historical aerial photography may indicate past activities at a property that may not be documented by other means or observed during a reconnaissance visit. The effectiveness of this technique depends on the scale and quality of the photographs and the available coverage. Aerial photographs were obtained from several historical photograph collections through EDR (2018c),and span a period of 65 years. A tabulation of the aerial photographs reviewed by Kleinfelder is presented in Table 5-2. Copies of the aerial photographs provided by EDR are included in Appendix D.

Table 5-2

Historical Aerial Photographs Reviewed

Year	Approximate Scale	Summary
1949	1"=500'	**Site:** No development is observed on the Site. A stream channel is visible on the western portion of the Site. **Surrounding Area:** The area to the north of the Site is South San Diego Bay. Palm Avenue is visible to the south of the Site followed by additional undeveloped property. The Site is bordered to the west and east by a few residences and agricultural/undeveloped land.
1953	1"=500'	**Site and Surrounding Area:** With the exception of increased residential development to the west and east of the Site, no significant changes are observed on the Site or adjoining properties from the previously reviewed aerial photograph.
1964	1"=500'	**Site:** A paved parking lot is visible on the southern portion of the Site along Palm Avenue, which is currently VMT Auto Sales. **Surrounding Area:** With the exception of increased residential and commercial development to the south, west and east of the Site, no significant changes are observed on adjoining properties from the previously reviewed aerial photograph.
1966	1"=500'	**Site:** No development is observed on the Site. A stream channel is visible on the north/ northeast portion of the Site. **Surrounding Area:** Increased commercial development observed to the south, east and west of the Site. Agricultural activity is visible northeast of the Site

Copyright 2018 Kleinfelder

Table 5-2 (continued)

Historical Aerial Photographs Reviewed

Year	Approximate Scale	Summary
1970	1"=500'	**Site:** No development is observed on the Site. A stream channel is visible on the north/ northeastern portion of the Site. **Surrounding Area:** Additional commercial and residential development is observed to the south, east and west of the Site.
1979	1"=500'	**Site and Surrounding Area:** With the exception of increased residential and commercial development to the south, west and east of the Site, no significant changes are observed on the Site or adjoining properties from the previously reviewed aerial photograph.
1985	1"=500'	**Site and Surrounding Area:** With the exception of increased residential and commercial development to the south, west and east of the Site, no significant changes are observed on the Site or adjoining properties from the previously reviewed aerial photograph.
1989	1"=500'	**Site and Surrounding Area:** With the exception of increased residential and commercial development to the south, west and east of the Site, no significant changes are observed on the Site or adjoining properties from the previously reviewed aerial photograph.
1994	1"=500'	**Site:** It appears the Site is dry and accumulation of salt is visible. **Surrounding Area:** No significant changes from the previous photograph are observed.
2005 to 2014	Various	**Site and Surrounding Area**: No significant changes are observed on the Site or surrounding properties from those conditions observed in the 1996 aerial photograph.

Note: Aerial photographs only provide information concerning indications of land use, and no conclusions regarding the release of hazardous substances or petroleum products can be drawn from the review of photographs alone.

5.3 CITY DIRECTORIES

City directories provide information regarding property occupants by address. EDR provided a city directory abstract, included in Appendix D, for the period between 1903 and 2014 (EDR, 2018d). The following listings were available for the address currently occupied by VMT Auto Sales (1502 Palm Ave.)

2014 - DJ Auto Sales/VMT Auto Sales Inc.

2010 - DJ Auto Sales

2006 - VMT Auto Sales

Copyright 2018 Kleinfelder

2000 – No listing

1992 – Calafia Motors

1989 – Calafia Motors

The remainder of the Site does not have a physical address, consequently, there were no other city directory listings. Listings for properties surrounding the Site were consistent with other records searched.

5.4 HISTORICAL TOPOGRAPHIC MAP REVIEW

Kleinfelder obtained information regarding historical topographic maps of the Site vicinity from EDR (2018e). The topographic maps reviewed for this assessment are listed in Table 5-3 and copies of the maps are included in Appendix D.

Table 5-3

Historical Topographic Maps Reviewed

Year	Scale	Summary
1904	1:62,500	**Site:** No development is depicted on the Site. An intermittent stream is depicted on the northern portion of the Site oriented northwest to southeast. Southern Pacific Lines railroad appears to bisect the western portion of the Site. Palm Avenue is depicted south of the Site. **Surrounding Area:** Development is depicted west and southwest of the Site.
1930	1:62,500	**Site:** With the exception of the rail line that was present on Site being removed. No significant changes are depicted on the Site. **Surrounding Area:** The surrounding area is increasingly more developed.
1943	1:31,680	**Site:** With the exception of an unnamed Otay River tributary on the western property boundary no significant changes are depicted on the Site **Surrounding Area:** The Otay River and San Diego and Arizona Eastern rail line are depicted north of the Site. The surrounding area is increasingly more developed
53	1:24,000	**Site:** No significant changes are depicted on the Site. **Surrounding Area:** Salt evaporators are added north of the Site. Interstate 5 Freeway is observed east of the Site. The surrounding area is increasingly more developed.

Copyright 2018 Kleinfelder

Table 5-3 (continued)

Historical Topographic Maps Reviewed

Year	Scale	Summary
1975	1:24,000	**Site: A building is shown at the VMT Auto Sales location.** No other significant changes are depicted on the Site. **Surrounding Area:** Mobile homes are shown south and east of the Site. The San Diego and Arizona Eastern rail lines are no longer observed north of the Site. A sewage disposal facility is depicted north east of the Site boundary. The area is increasingly more developed with residential and commercial buildings.
1991	1:24,000	**Site:** No significant changes are depicted on the Site. **Surrounding Area:** The surrounding area is increasingly more developed with residential and commercial properties.
1996	1:24,000	**Site:** No significant changes are depicted on the Site. **Surrounding Area:** The San Diego National Wildlife Refuge (SSDBU) is observed north of the Site
2012	1:24,000	**Site and Surrounding Area:** No significant changes are depicted on the Site. No structures are depicted on the 2012 Topographic Map.

Based on our review of historical topographic maps reviewed, no evidence of a REC was noted for the Site.

5.5 BUILDING DEPARTMENT

No building structures were observed on Site, with the exception of an office trailer and some make-shift coverage and storage structures (not anticipated to be permitted and/or require permitting), located at the VMT Auto Sales facility (1502 Palm Ave.); therefore, a visit to the Building Department was not deemed necessary.

5.6 PREVIOUS ASSESSMENTS

Kleinfelder obtained and reviewed a report completed May 2017 by Great Ecology titled: *Wetlands Restoration of Salt Pond 20 Soil Quality and Plannability Evaluation Report*.

Copyright 2018 Kleinfelder

- Great Ecology established four sampling stations within the Site property boundary to characterize the Site (P20-1, P20-2, P20-3, P20-4). Two stations characterized the eastern half of the Site (P20-3, P20-4), one station characterized the central western portion of the Site (P20-2) and one station characterized the berm (P20-1).
- Great Ecology reported arsenic was the only constituent to be above screening concentrations. Additionally, SPLP analysis was run on samples to evaluate leachability.
- Total petroleum hydrocarbons were not detected. Other organic contaminants were nearly absent with the exception of minor detections of PAHs at P20-1. Pesticides and PCBs were not detected.
- At sample station P20-1, arsenic was detected at 8.5 mg/kg in sample 1T and 10.7 mg/kg in sample 1M, which are both above the ERL of 8.2 mg/kg.

The full report is included in Appendix C.

Copyright 2018 Kleinfelder

6 SITE RECONNAISSANCE

Kleinfelder's Phase I ESA activities included a Site reconnaissance. This section summarizes the findings from the Site reconnaissance.

6.1 METHODOLOGY AND LIMITING CONDITIONS

Mr. Travis Meier and Mr. Stefan Birardi of Kleinfelder performed a Site reconnaissance on February 15, 2018. The Site reconnaissance included a visual inspection of the Site to assist in identifying the presence or likely presence of hazardous substances or petroleum hydrocarbons under conditions that indicate an existing release, a past release, or threat of release into structures, soil, groundwater, or surface water at the Site (i.e., RECs). Observations of readily-apparent environmental conditions are summarized in Table 6-1, and color photographs of the Site are presented in Appendix E. The approximate Site boundaries are shown on Figures 1 and 2. Mr. Meier and Mr. Birardi were able to observe the entire Site and were accompanied during the Site reconnaissance by Mr. George Liddle and Mr. Brent Eastty, representatives from the San Diego Unified Port District. Weather conditions were sunny and warm. A separate Site reconnaissance for the VMT Auto Sales portion of the property (1502 Palm Ave.) was performed by Mr. Meier on March 21, 2018. Observations of the reconnaissance are included in Table 6-1 and photographs are presented in Appendix E.

6.2 GENERAL SITE SETTING

The Site is located within the City of San Diego in San Diego County, California. This property is comprised of six San Diego County Assessor's parcels identified as APNs 616-020(04/08), 616-021-08, 616-021-09 (portion) and 621-020-(04/08). The Site is bordered to the north by the Otay River and South San Diego Bay, to the east by open space, Imperial Sands Mobile Park, and Amigos Tire Shop & Auto Repair, to the south by Palm Avenue and Bayside Palms Mobile Home Village, and to the west by 13th street and various residential and commercial buildings. A dirt berm runs from the southwest corner of the Site towards the Otay River and South San Diego Bay roughly following the property boundary around the perimeter.

Copyright 2018 Kleinfelder

6.3 SITE OBSERVATIONS

Kleinfelder's Site observations are summarized in Table 6-1.

Table 6-1

Site Observations

General Observations	Remarks	Observed	Not Observed
Current use	The Site is currently vacant outside of the VMT Auto Sales lot, which consists of a paved parking area, billboard and small office structure.	X	
Past use	Based on historical sources reviewed and an interview with the Brent Eastty, the Site was previously used as a salt infiltration pond.		X
Structures	A small office building in relation to the VMT Auto Sales portion of the Site (1502 Palm Ave.) is located in the southern portion of the Site.	X	
Roads	There are no paved roads on Site (outside of VMT Auto Sales lot), although dirt access roads are present.	X	
Topography of Site and surrounding area	A dirt berm runs the perimeter of the Site. The Site is relatively flat.	X	
Aboveground storage tanks (ASTs)	No ASTs were observed on Site		X
Asbestos and lead	Unknown, no testing was performed.		X
Below grade vaults	A sewer vault is located in the eastern portion of the Site.	X	
Burned or buried debris			X

Copyright 2018 Kleinfelder

Table 6-1 (continued)

Site Observations

General Observations	Remarks	Observed	Not Observed
Chemical storage	A small amount of typical household chemicals (motor oil, paint, etc.) were observed in a storage area on the VMT Auto Sales lot.	X	
Chemical mixing areas			X
Discolored soil or water			X
Ditches, streams, creeks, drainages	An unnamed Otay River tributary runs south to north along the western portion of the Site. Nestor Creek runs along the eastern portion of the Site.	X	
Drains and piping (e.g. floor drains, floor trenches, bay drains, sand traps, grease traps)	A floor drain was observed at a low point in a covered limited maintenance area on the VMT Auto Sales lot. The drain is reported to travel via underground piping and discharge to the southeast portion of Pond 20. Staining was not observed in the vicinity of the drain; however, particulate accumulation was noted.	X	
Interior and exterior observations or environmental conditions that may involve the use, storage, disposal or generation of hazardous substances or petroleum products.		**Observed**	**Not Observed**
Drums			X
Electrical or hydraulic equipment (polychlorinated biphenyls [PCBs])	Two pole-mounted transformers were observed. One transformer is located in the southeast portion of the Site. The second transformer is located along Boundary Avenue near the Otay River pump station. No signs of staining were observed beneath either transformer.	X

Site Observations

Interior and exterior observations or environmental conditions that may involve the use, storage, disposal or generation of hazardous substances or petroleum products.		Observed	Not Observed
Water supplies (potable and process)	Existing sewer and storm drain 25' easements running northeasterly and southeasterly on the property boundary lines in the southern portion of the Site. A water meter and associated water distribution lines were also observed on the VMT Auto Sales lot.	X	
Wells (irrigation, monitoring, or domestic)			X
Wells (dry)			X
Wells (oil and gas)	The EDR report indicates an oil well was drilled in the central portion of the Site, but it was not observed during the Site walk.		X

6.4 RESULTS OF SITE RECONNAISSANCE

The Site consists of six parcels of land with all of the parcels located north of Palm Avenue. As previously stated in the report, the entire Site is undeveloped outside of the VMT Auto Sales lot, which consists of a paved parking area, billboard and small office structure. Debris from historic salt works infrastructure operations and/or former railroad trestle infrastructure was observed throughout the entire Site. A field report with photos and descriptions is included in Appendix E.

6.4.1 Southern Area

An access gate is located at 1410 Palm Avenue, adjacent to the east of Soapy Joe's Car Wash, in the southwest corner of the Site. A 48-inch storm drain outfall was observed to contain various trash debris flowing onto the Site. Two 1-foot storm water outfalls were also observed at the southern portion of the Site. VMT Auto Sales is located on the southernmost property boundary north of Palm Avenue (1502 Palm Avenue) and west of Bayside Palms Mobile Home Village. The VMT Auto Sales facility generally consists of a paved parking area, billboard and small office building. A covered, limited maintenance area with an adjacent floor drain, is

Copyright 2018 Kleinfelder

present with a storage room containing typical automotive maintenance materials (batteries, oil, washer fluid, etc.) located adjacent to it.

6.4.2 Northern Area

The northern area of the Site is bordered by the Otay River and the San Diego Bay National Wildlife Refuge. Miscellaneous wood and concrete debris is located throughout this area.

6.4.3 Eastern Area

Nestor Creek flows from Boundary Avenue south towards Imperial Sands Mobile Park. A pole-mounted transformer is located near the southern fence line of the mobile home park (see Figure 2). No staining was observed during the time of the Site visit. A sewer line runs south to north towards the Otay River pump house. A sewer vault is located south of the pump house (see Figure 2). Three pole-mounted transformers were not observed on Site; however, the pole was leaning in the direction that over hanged the Site boundary fence line. Homeless encampments were observed at the southeast portion of the Site, with varying amounts of debris associated with them.

6.4.4 Western Area

Residential properties are located along the western perimeter of the Site boundary separated by a chain link fence. An Osprey nesting platform is located nearest 13th Street. A storm drain from 13th Street flows onto the property west of the berm, yet no water was observed during the Site visit. A used oil filter was observed on the eastern bank of the berm.

7 INTERVIEWS

Key Site Managers are contacted to obtain current and historical environmental information concerning the Site. The following sections highlight information revealed during the interviews.

7.1 INTERVIEW WITH SITE PERSONNAL

During the Site reconnaissance, Kleinfelder personnel interviewed Mr. George Liddle and Mr. Brent Eastty for information pertaining to the Site. They provided a wetlands restoration preliminary design sheet, which includes figures, grading plans, erosion control plans and a landscaping plan. They also provided a soil quality and plannability evaluation report. Mr. Liddle and Mr. Eastty stated no current environmental issues, liens, or releases are associated with the Site, to their knowledge. A completed Owner Questionnaire and Client provided reports are located in Appendix C. Summary information, provided by Mr. Eastty, indicated that the salt evaporation and extraction industry has operated in South San Diego Bay since the early 1870s, which included the property associated with the Site. In the 1890s, Western Salt Company acquired most of the salt producing entities and lands in South San Diego Bay. When operational, water traveled through the ponds by gravity, siphons or pump. Within Pond 20 (Site), lower lying channels were created, parallel to the interior berm edge, that served as borrow areas for the reconstruction and repair of the berms surrounding the Site, and water storage within the Site. Pond 20 was constructed to hold water, and the entire Site was underlain by a thick impermeable clay layer, in an effort to prevent the leaching of water from the pond. In 1916, the Savage Dam failed and released waters contained within the lower Otay Lake to the lower watershed. The dam failure washed away several berms within the Saltworks, including those associated with Pond 20, and deposited substantial volumes of sediment throughout the Site. Pond 20 became logistically and economically inefficient to operate and has since been unused. Currently, Pond 20 is covered with a thick white salt crust, which remained after the hypersaline water evaporated (Eastty, 2018).

During the Site reconnaissance of the VMT Auto Sales lot (1502 Palm Ave.) on March 21, 2018, Mr. Victor Tirado was interviewed in relation to his knowledge of the property. Mr. Tirado is the manager of VMT Auto Sales and has occupied the property for over 29 years. He indicated that he has no knowledge of any environmental related assessment or violations in

Copyright 2018 Kleinfelder

relation to his occupancy of the property. Mr. Tirado stated that he has continually used small amounts of typical vehicle maintenance-related hazardous materials (motor oil, vehicle paint, etc.). He indicated that the materials are all kept in either the hazardous materials cabinet in the storage room or in adjacent areas in the storage room. Mr. Tirado went on to explain that spillage of any material was addressed via application of kitty litter and proper disposal, and that only minor vehicle maintenance was performed at the facility (i.e., topping off liquids and changing malfunctioning sensors) and the maintenance requiring additional efforts were performed at an off-Site facility. An Interview Questionnaire completed with information provided by Mr. Tirado is included in Appendix C.

7.2 INTERVIEWS WITH LOCAL GOVERNMENT OFFICIALS

Information obtained from regulatory agencies contacted by Kleinfelder is discussed in Section 4.2.

Copyright 2018 Kleinfelder

8 EVALUATION

Kleinfelder performed this Phase I ESA of the Site consistent with the scope and limitations of ASTM Designation E 1527-13. The following sections describe Kleinfelder's findings and provide general background information about the Site. Findings address RECs, HRECs, and notation of *de minimis* quantities, as applicable to the Site. In summary, Kleinfelder's assessment revealed the following information concerning the Site:

8.1 BACKGROUND

The following is a summary of Site background information:

- The salt evaporation and extraction industry has operated in South San Diego Bay since the early 1870s, which included the Site. In the 1890s, Western Salt Company acquired most of the salt producing entities and lands in South San Diego Bay. When operational, water traveled through the ponds (including the Site) by gravity, siphons or pump. Within Pond 20 (Site), lower lying channels were created parallel to the interior berm edge that served as borrow areas for the reconstruction and repair of the berms to facilitate water storage. Pond 20 was constructed in an effort to hold water, and the Site was underlain by a thick impermeable clay layer in an effort to prevent leaching of water from the Site. In 1916, the Savage Dam failed and released waters contained within lower Otay Lake to the lower watershed. The dam failure washed away several berms within the Saltworks, including those associated with Pond 20, and deposited substantial volumes of sediment throughout the Site. Pond 20 became logistically and economically inefficient to operate and has since been unused. Currently, Pond 20 (i.e., Site) is covered with a thick white salt crust as the result of the hypersaline water evaporating (Eastty, 2018).
- The Site consists of approximately 90 acres of land comprised of 6 parcels identified by the San Diego County Assessor as APNs) 616-020-(08/12), 616-021-08, 616-021-09 (portion) and 621-020-(04/08. The Site is located south of the confluence of Nestor Creek, the Otay River and South San Diego Bay.

Copyright 2018 Kleinfelder

8.2 FINDINGS AND OPINIONS

The following is a summary of the findings and opinions of this Phase I ESA:

- Wood debris from historic salt works infrastructure operations or possibly an old rail line is found throughout the Site.
- Soils at the Site have a high potential to corrode concrete placed in direct contact with it.
- VMT Auto Sales is located along the southern Site boundary at the eastern portion of the Site. The business was vacated as of April 1, 2018.
- A 48-inch storm drain outfall and two 1-foot storm water outfalls are located along the southern Site boundary at the western portion of the Site. Standing water and miscellaneous trash debris was observed in the vicinity of the 48-inch storm drain. One storm drain was observed adjacent to 13th Street that outfalls toward the Site just west of the berm. Although water was not noted along the discharge area at the time of the Site reconnaissance, a used oil filter was observed just east of the berm. Since the berm material is included in the future plans for soil re-use, there is potential for soil and groundwater impact from outfall effluent in the area.
- Four RECs were identified on Site.
    - A former oil/gas well was drilled by Robert Egger in the central portion of the Site. The well was deemed dry and later abandoned on September 12, 1963. Drilling and abandonment logs are included in Appendix B.
    - Effluent from storm water outfalls located on and directly adjacent to the Site could impact soil and water quality beneath the Site and are considered RECs. Sampling is recommended in these locations.
    - As reported in previous soil characterization report dated May 22, 2017, concentrations of arsenic exceeding the ERL were detected in samples collected from the berm on the west side of the Site. The sample with the highest concentration of arsenic was also analyzes using the SPLP. The results of the SPLP analysis did not exceed applicable screening levels. Kleinfelder suggests characterization of the soil/sediment be performed in this area prior to re-use.
    - The VMT Auto Sales facility was observed to contain a floor drain within a covered limited maintenance area. Staining was not noted around the floor drail, although particulate matter was observed. The floor drain is reported to travel

Copyright 2018 Kleinfelder

via underground pipe and empty onto the southeast portion of adjacent Pond 20. Further soil investigation in the area where the floor drain discharges (to be determined in field) is recommended.

8.3 DEVIATIONS AND ADDITIONAL SERVICES

The scope of this Phase I ESA does not incorporate ASTM Standard non-scope considerations, such as radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality/vapor intrusion, and high-voltage power lines.

8.4 CONCLUSIONSAND RECOMMENDATIONS

Kleinfelder has performed a Phase I ESA, in conformance with the scope of services required by ASTM Designation E 1527-13, our Proposal No. MT160090.001P/01-1017, dated January 26, 2018 and limitations discussed in this report. Exceptions to and deviations from this practice are described in Sections 8.1 and 8.2 of this report.

- Kleinfelder's Phase I ESA did not identify HRECs or CRECs associated with the Site.
- Kleinfelder personnel identified four RECs in association with the Site.
    - A former oil/gas well drilled by Robert Egger in 1963 is reported to have been located in the central portion of the Site. According to records, the initial well was drilled to a depth of 2,360. Robert Egger attempted to convert the well into a water well for agricultural reasons. The well was deemed dry and later abandoned on September 12, 1963. The former well was not observed during the Site reconnaissance. During soil excavation activities, there is a possibility to encounter well casing debris and additional material associated with well abandonment.
    - Effluent from storm water outfalls located on and directly adjacent to the Site could impact soil and water quality beneath the Site and are considered RECs. Sampling is recommended in these locations.
    - A previous soil characterization report dated May 22, 2017 and titled *Wetlands Restoration of Salt Pond 20 Soil Quality and Plannability Evaluation Report* found concentrations of arsenic exceeding the ERL on the Site. Due to the

Copyright 2018 Kleinfelder

potential re-use of the soil, Kleinfelder suggests a soil characterization prior to export and re-use.

- The VMT Auto Sales facility was observed to contain a floor drain within a covered limited maintenance area. The floor drain is reported to travel via underground pipe and empty onto the southeast portion of adjacent Pond 20. Further soil investigation in the area where the floor drain discharges (to be determined in field) is recommended.

Although outside standard ASTM 1527-13 criteria, Kleinfelder has reviewed geotechnical information provided due to the potential impact in relation to the planned reuse of on-Site soil for fill material. Accordingly, it is Kleinfelder's opinion that soil characterization for both environmental contaminants as well as geotechnical-related reuse constraints be performed at the Site prior to any off-Site export or re-use of soils. Soil characterization is recommended to be performed at the following locations:

- Conduct targeted sampling for potential chemicals of concern in the vicinity of the abandoned oil/gas well, around the floor drain at the Vehicle Maintenance Facility, at the discharge location for the floor drain at the Vehicle Maintenance Facility and the discharge locations for the storm drain outfalls located on and directly adjacent to the Site.
- Conduct a random sampling of the 90-acre facility to evaluate the soil proposed for export for potential chemicals of concern and compatibility of the geotechnical properties with the proposed reuse.

8.5 DATA GAPS

There were no significant data gaps in association with the Site. Should additional information be received that would alter our conclusions and recommendations, the Client will be notified.

Statement of Qualifications

STATEMENT OF QUALIFICATIONS

We declare that to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all-appropriate inquiries in conformance with the standards and practices set forth in CFR Part 312.

Travis Meier, QISP
Project Manager

Lizanne Simmons, PG
Senior Principal Geologist

The resumes of above-listed environmental professionals performing this Phase I ESA are on file at the Kleinfelder office and are available on request.

REPORT OF WELL ABANDONMENT

Inglewood, California

September 24, 1963

Mr. Robert Egger, Sr.
1701 - 19th Street
Imperial Beach, California
Agent for ROBERT EGGER

DEAR SIR:

Your report of abandonment of Well No. "Robert Egger" 1, Sec. 21, T. 18 S., R. 2 W., S.B. B. & M., - - - field, San Diego County, dated September 14, 1963, has been examined in conjunction with records filed in this office.

A review of the reports and records shows that the requirements of this Division, which are based on all information filed with it, have been fulfilled.

It is of the greatest importance to have a complete history of the well. Use this form to report a full account of all important operations during the drilling and testing of the well or during re-drilling, altering of casing, plugging, or abandonment with the dates thereof. Be sure to include such items as hole size, formation test details, amounts of cement used, top and bottom of plugs, perforation details, sidetracked junk, bailing tests, shooting and initial production data.

Date	
1963	
8-20-63	Move equipment from Long Beach to Location
21	Install B.O.P. and test same - start rigging up
22	Finish rigging up - dig suction pit - run drill pipe to 515 ft
23 to 27	Cleaned out hole to 2500 ft. 9-7/8"
28	Placed cement plug at 2500 ft using 60 sks common cement W/3% calcium chloride - let set for 4 hours and found top of plug at 2360 ft. Inspected by D. O. G.
29	Cemented in stucco whipstock plug at 600 ft using 55 sks cement,
30	11 sks sand & 3 % calcium chloride. Let set 16 hrs. Top of plug
	at 485 ft. While topping off plug we sidtracted plug with 8-3/4
bit	bit at 560 ft. Set whipstock at 579 ft. Bit went back into origi-
31	nal hole. Cleaned out to 680 and recemented with stucco plug
9- 1-63	at this depth using 85 sks cement. Top of plug at 470 (Hard)
2	Cleaned out and set whipstock at 575 ft. Re-set at 606 ft and
3	continued drilling on course.
4	Drilling ahead
5	" Small gas show @ 996 ft in clay & shells. Mudded off in 30 Min
6 to 11	Drilling ahead
	" " T D 2638
12	Placed cement plug at 2250 using 32 sks cement, 3% calcium chloride
	Top of plug at 460 ft. Inspected by D. O. G. Placed surface plug
	in top of 10-3.4" casing using 11 sks cement.
	Well Abandoned. No fishing jobs. No junk in hole at any time.
9-13-63	Dismantling rig and moving out.

Special Report on Operations Witnessed

No. T 163-830

Mr. Robert Egger, Sr.
1701 - 19th Street
Imperial Beach, California
Agent for ROBERT EGGER

Inglewood, Calif.
September 18, 1963

DEAR SIR:

Operations at well No. "Robert Egger" 1, Sec. 21, T. 18 S, R. 2 W., S B B & M. xxxxxxxxxx Field, in San Diego County, were witnessed on September 12, 1963, Mr. D. Lande, Engineer, representative of the supervisor was present from 8:00 p.m. to 9:00 p.m. There were also present R. Egger, Operator and A. Godfrey, Contractor

Present condition of well: 20" cem. 28'; 10-3/4" cem. 519'; T.D. (present hole)2638', plugged with cement 2250'-2150'± and 565'-461'; T.D. (1st hole) 5503'.

The operations were performed for the purpose of testing the location and hardness of a cement plug placed from 565' to 461' in the process of abandonment.

Mr. Godfrey reported:

1. On August 29, 1963, 55 sacks of cement, plus 20% sand, was pumped in the hole through 3" drill pipe hanging at 600', calculated to fill to 480'.
2. The cement was drilled out of the hole from approximately 480' to 529', and a removable whipstock was set at 529'.
3. An 8-3/4" hole was drilled from 529' to 685'.
4. On September 1, 1963, 85 sacks of cement, plus 20% sand, was pumped into the hole through 3" drill pipe hanging at 685', filling to 454'.
5. The cement was drilled out of the hole from 454' to 606', and a removable whipstock was set at 606'.
6. An 8-3/4" hole was drilled from 606' to 2060' and a 7-3/4" hole drilled to 2638'.
7. On September 12, 1963, 32 sacks of cement was pumped into the hole through 3" drill pipe hanging at 2250', calculated to fill to 2150'.
8. On September 12, 1963, 51 sacks of cement was pumped into the hole through 3" drill pipe hanging at 565', filling to 461'.

THE ENGINEER NOTED THAT the cement plug at the reported depth of 461' supported 1/2 of the weight of the drill pipe.

THE PLUGGING OPERATIONS AS WITNESSED AND REPORTED ARE APPROVED.

Imperial Beach, California

Inglewood, Calif.
September 13, 1963

Agent for ROBERT EGGER

DEAR SIR:

Your proposal to abandon Well No. "Robert Egger" 1, Section 21, T. 18 S, R. 2 W, S B B. & M., xxxxxxxx Field, San Diego County, dated Sept. 11, 1963 received Sept. 12, 1963 has been examined in conjunction with records filed in this office. Present conditions as shown by the records and the proposal are as follows:

RECORDS IN ADDITION TO, OR AT VARIANCE WITH, THOSE SHOWN IN THE NOTICE:
T.D. (1st hole) 5503'; T.D. (present hole) 2630'.

THE NOTICE STATES

"THE PRESENT CONDITION OF THE WELL IS:

1. Total Depth: 2630 ft
2. Complete casing record, including plugs:
   22" conductor pipe cemented 28' to surface
   32 lb - 10-3/4" casing cemented at 519 ft with 570 sks construction cement.
3. Last Produced Not tested
   (Date) (Oil, B/D) (Water, B/D)

Additional Data for Dry Hole

4. Oil or Gas showings and results of tests:
   Small gas show at 997 ft. Mudded off quickly
5. Stratigraphic markers and depths:
6. Formation at bottom: Blue clay
7. Base of fresh water sands: Unknown"

PROPOSAL

"THE PROPOSED WORK IS

To place cement plug from 2250' to 2150'
To place contact plug from 50 ft below casing to 50' into casing namely from 569' to 469'
This hole is a whipstocked hole from the original Robert Egger well.
Whipstock was placed at 560 ft and drilled in a westerly direction.
Hole is to be abondoned.(sic)"

DECISION

THE PROPOSAL IS APPROVED PROVIDED:

1. The hole shall be plugged with cement from 25' to the surface.
2. THIS DIVISION SHALL BE NOTIFIED TO WITNESS:
   a. The location and hardness of the cement plug at 469'.
   b. The placing of the cement plug from 25' to the surface.

September 5, 1963

DEAR SIR:

Operations at well No. "Robert Egger" 1, Sec. 21, T. 18 S, R. 2 W, S B B & M. xxxxxxxxxxxxxxx Field, in San Diego County, were witnessed on August 28, 1963. Mr. S. Cordova, Engineer, representative of the supervisor was present from 2:00 p.m. to 5:30 p.m. There were also present A. Godfrey, Contractor and H. Duvall, Driller

Present condition of well: 20" cem. 28'; 10-3/4" cem. 519'; T.D. 5503', plugged with cement 2500'-2360'.

The operations were performed for the purpose of testing the location and hardness of a cement plug placed from 2500' to 2360' in the process of plugging back to redrill.

Mr. Godfrey reported:

1. The hole was cleaned out to 2521'.
2. On August 28, 1963, 60 sacks of cement, plus 3% calcium chloride, was pumped into the hole through 3-1/2" drill pipe hanging at 2500', filling to 2360'.

THE ENGINEER NOTED THAT the cement plug at the reported depth of 2360' supported 1/2 of the weight of the drill pipe.

THE LOCATION AND HARDNESS OF THE CEMENT PLUG AT 2360' ARE APPROVED.

Inglewood, Calif.
August 29, 1963

DEAR SIR:

Your proposal to redrill Well No. "Robert Egger" 1, Section 21, T. 18 S, R. 2 W, S B B. & M., xxxxxx Field, San Diego County, dated Aug. 28, 1963 received Aug. 28, 1963, has been examined in conjunction with records filed in this office. Present conditions as shown by the records and the proposal are as follows:

THE NOTICE STATES
"The present condition of the well is as follows:
1. Total depth. 5503'
2. Complete casing record, including plugs:
20" cem. 28'
10 3/4" cem. 519'
plugged with cement 2500'-~~2400'~~ 2360'

3. Last produced. Never produced
(Date) (Oil, B/D) (Water, B/D) (Gas)"

PROPOSAL
"The proposed work is as follows:
1. To plug with cement from 619' to 490'
2. Clean out cement to 540'±, set whipstock and drill 7" hole to 2500'± "

DECISION
THE PROPOSAL IS APPROVED PROVIDED:
1. Fluid consistent with good drilling practice shall be used, and the column of fluid maintained at all times to the surface, particularly while pulling the drill pipe.
2. Adequate blowout prevention equipment shall be installed and maintained in operating condition at all times.
3. This Division shall be consulted before running any additional casing, or placing any plugs in the hole. Additional requirements may be specified at that time.

Well No. "Robert Egger" 1,
Sec. 21, T. 18 S., R. 2 W.,
San Diego County.

Dear Mr. Egger

Thank you for your letter of August 4, 1963, advising this office that you will be plugging the above-captioned well within the next 30 days.

As stated in our Report on Proposed Operations No. P 162-1234, dated December 28, 1962, this Division shall be notified to witness a test for the location and hardness of the plug. You may arrange for an engineer to witness the plug by phoning this office at ORegon 8-7274. Our office operates on a 24-hour, 7-day-a-week basis; however, I would suggest you notify this office at least four hours in advance of the time you wish to have an engineer present.

Imperial Beach, California

Dear Mr. Egger:

I have been reviewing the records for your well No. "Robert Egger" 1, Sec. 21, T. 18 S., R. 2 W., S.B.B.& M., San Diego County, and I note that the interface plug required to be placed from 2500 to 2400 feet has not been done. In order to prevent any possible contamination of the fresh waters, this plug must be placed in the hole without further delay even if you do not intend to convert the well to water at this time.

Please inform this office when you intend to begin work.

Sincerely,

WM. C. BAILEY
Deputy Supervisor

Robert Egger well No. "Robert Egger" 1
Sec. 21, T. 18 S., R. 2 W., S.B.B.&M.
San Diego County

Dear Mr. Baker:

Thank you for your letter of January 8 giving us information regarding the fresh waters in the vicinity of the subject well. The only information we had at the time we issued our Report on Proposed Operations No. P 162-1234, dated December 28, 1962, was that reported by Mr. Egger in his Notice of Intention to Abandon Well. Mr. Egger reported at that time that the base of the fresh waters was above the shoe of the 10-3/4-inch casing which is cemented at 519 feet. Since our issuance of report No. P 162-1234 we have received an electric log of the well indicating the base of the fresh waters to be at 2,450 feet.

Therefore, in order to protect the fresh water-bearing formations, we are amending our Report on Proposed Operations No. P 162-1234, as follows:

1. The hole shall be plugged with cement from 2,500 to 2,400 feet.
2. The cement plug required to be placed from 539 to 499 feet is waived.
3. This Division shall be notified to witness the location and hardness of the cement plug at 2,400 feet.

Sincerely,

WM. C. BAILEY
Deputy Supervisor

DIVISION OF OIL AND GAS
RECEIVED
JAN 23 1963
INGLEWOOD, CALIFORNIA

4026 Alabama Street
San Diego 4, California
January 8, 1963

California Division of Oil and Gas.

Dear Sirs:

I am writing in regards to the account of Mr. Robert Egger. Operation Number p 162-1234

I am afraid there is some confusion on the proposed conversion of this well to a water well.

The intention is to explore for water to a depth of approximately eighteen hundred feet. As I have drilled a well in the same general location to a depth of seventeen hundred and thirty six feet and obtained a very good well and am down past thirteen hundred feet in another and am beginning to pick up good water showings. Now if this well is plugged by 40 feet of hard cement at botton of conductor casing, chances are very good that in drilling, the plug out, the seal will be broken around the conductor casing and blowout prevention will be lost.

The well is adequately caped to prevent any blowout as mentioned in the original proposal.

I have been a licensed contractor in California for a good many years and have done a lot of work in this area. License number C 57-129965.

I hope this meets with your approval.

Respectfully

J. Bartlett Baker

J. Bartlett Baker.

REPORT ON PROPOSED OPERATIONS No. P 162-1234

Mr. Robert Egger, Sr.
1701 - 19th Street
Imperial Beach, California
Agent for ROBERT EGGER

Inglewood, Calif.
December 28, 1962

DEAR SIR:

Your proposal to abandon Well No. "Robert Egger" 1, Section 21, T. 18 S., R. 2 W., S. B. B. & M., - - - Field, San Diego County, dated Dec. 24, 1962, received Dec. 27, 1962 has been examined in conjunction with records filed in this office. Present conditions as shown by the records and the proposal are as follows:

RECORDS IN ADDITION TO, OR AT VARIANCE WITH, THOSE SHOWN IN THE NOTICE:
The probable base of the fresh waters is at ~~500'~~ 2450'.

THE NOTICE STATES:
"THE PRESENT CONDITION OF THE WELL IS:
1. Total Depth: 5,503' kb
2. Complete casing record, including plugs:
   32 lb, 10-3/4" new t&c casing in 10' and 20' joints cemented at 519' KB with 570 sacks construction cement.
   22" conductor pipe cemented 28' KB to surface.
3. Last Produced not tested
   (Date) (Oil, B/D) (Water, B/D)

Additional Data for Dry Hole
4. Oil or Gas showings and results of tests:
   None
   Schlumberger electrical and sonic logs run.
   Baroid mud & gas logging truck on job from to 5,503'
5. Stratigraphic markers and depths:
   Basement at 4920' ??
6. Formation at bottom: granite ??
7. Base of fresh water sands: behind surface pipe"

PROPOSAL:
"THE PROPOSED WORK IS
Weld a coupling on to the 10-3/4" surface casing 4' below the surface and have a screw on plug with two handles screwed into the coupling.
DECISION:
THE PROPOSAL IS APPROVED PROVIDED THAT
1. The hole shall be plugged with cement from ~~539' to 499'~~ 2500' to 2400'.
2. The hole shall be securely capped at the surface until such time as the actual work of converting to a water well is commenced.
3. THIS DIVISION SHALL BE NOTIFIED TO WITNESS the location and hardness of the cement plug at ~~499'~~. 2400' (Correction letter 1-24-63 es)

NOTE:
1. Landowner, Robert Egger, 1701 - 19th Street, Imperial Beach, California, has filed a letter with this Division requesting that the well be left in condition to be used for water.
2. Location of Well: Approx. 1037' N., 522' E. from SW cor. of Sec. 21, T. 18 S., R. 2 W., S.B.B.&M.
3. Landowner shall file a complete report in duplicate on our Form 103 with this Division covering all work performed in converting the well into a fresh-water well. In the event of the inability to convert the well into a ~~fresh~~ water well, a supplementary Notice of Intention to Abandon shall be filed with this Division.

Attn: Mr. J. L. Zulberti

Gentlemen:

I

I have decided to try to convert the Robert Egger No. 1 well into a water well.

As I am the landowner of the surrounding 180 acres of farm land I am having trouble keeping an adequate water supply for Vegetable land. This well could be of help in more than one way. At present I am taking a constant water table survey and checking the quality water in order to determine the source of the water surrounding the well.

As a safety measure I have welded a coupling on to the 10-3/4" surface casing 4' below the surface and have a screw on plug with two handles screwed into the coupling.

As Landowner and operator, I agree to be responsible for the proper care of the well.

Yours truly,

Robert Egger

Notice of Intention to Abandon Well

This notice must be given at least five days before work is to begin; one copy only.

Imperial Beach Calif. Dec. 24, 1962

DIVISION OF OIL AND GAS

In compliance with Division 3, Public Resources Code, notice is hereby given that it is our intention to abandon

Well No. Robert Egger No. 1, Sec. 21, T. 18 S.,

R. 2 W., S.B. B. & M., Field, San Diego County,

commencing work on 19.

THE PRESENT CONDITION OF THE WELL IS:

1. Total Depth: 5,503' kb

2. Complete casing record, including plugs:

32 lb, 10-3/4" new t&c casing in 10' and 20' joints cemented at 519' KB with 570 sacks construction cement.
22" conductor pipe cemented 28' KB to surface.

3. Last Produced not tested
(Date) (Oil, B/D) (Water, B/D)

ADDITIONAL DATA FOR DRY HOLE

4. Oil or Gas showings and results of tests:
None
Schlumberger electrical and sonic logs run.
Baroid mud & gas logging truck on job from to 5,503'

5. Stratigraphic markers and depths:

Basement at 4920' ??

6. Formation at bottom: granite ??
7. Base of fresh water sands: behind surface pipe

THE PROPOSED WORK IS

Weld a coupling on to the 10-3/4" surface casing 4' below the surface and have a screw on plug with two handles screwed into the coupling.

Attention: Mr. James Trefren

SUBJECT: PRELIMINARY GEOTECHNICAL INVESTIGATION
Pond 20 - Former Western Salt Property
San Diego, California

Dear Mr. Trefren:

We have completed our preliminary geotechnical investigation for the subject Pond 20 project. Our services were completed in accordance with our Agreement for Professional Engineering Services dated April 27, 2000. The results of our investigation are presented in this report, along with our conclusions and preliminary recommendations.

Based on our discussions with you, we understand the specific development is not known at this time, but it may be developed for either commercial, industrial, retail or hotel use. No building locations or grading information is available at this time. Accordingly, our investigation was preliminary in nature and was intended to provide information on the subsurface soil and groundwater conditions and how they may impact the future development. We should conduct a subsequent Geotechnical Investigation once building locations and proposed improvements are known.

We appreciate this opportunity to provide professional services. If you have any questions or require additional services, please do not hesitate to contact us.

PRELIMINARY GEOTECHNICAL INVESTIGATION
POND 20 - FORMER WESTERN SALT PROPERTY
SAN DIEGO, CALIFORNIA

1.0 INTRODUCTION

This report presents the results of our preliminary subsurface investigation for the Pond 20 site, formerly known as the Western Salt Property, located in San Diego, California. The purpose of our investigation was to evaluate the subsurface soil and groundwater conditions at the site, and their impact on future development. The conclusions and recommendations presented in this report are based on our field explorations, laboratory testing, engineering evaluations, and our experience with similar soils and geologic conditions. This report is preliminary and will require a more detailed investigation once building locations and proposed improvements are known.

2.0 SCOPE OF SERVICES

The scope of our services for this project included evaluation of the site geotechnical conditions. The following work was performed as part of this investigation:

- Research and review of the available published geologic maps, topographic maps, stereoscopic photographs, in-house geotechnical reports, and reports by others, pertinent to the site and adjacent properties.

- A geologic reconnaissance of the proposed development area.

- A subsurface exploration consisting of 9 cone penetration test soundings (CPT) and drilling 4 borings to depths ranging between 8 and 40 feet below existing grade. The borings were drilled using a truck-mounted, rotary wash drill rig. Samples were retrieved during drilling using Standard Penetration Test samplers , Shelby tubes, and modified California samplers. The results of our field investigation are presented in Appendix B of this report.

- Laboratory testing on samples collected during drilling. Testing included moisture content and density, particle size analyses, Atterberg limits, consolidation, shear strength, expansion, and sulfate content. The results of our laboratory testing are presented in Appendix C of this report.

- Engineering analysis of field and laboratory data.

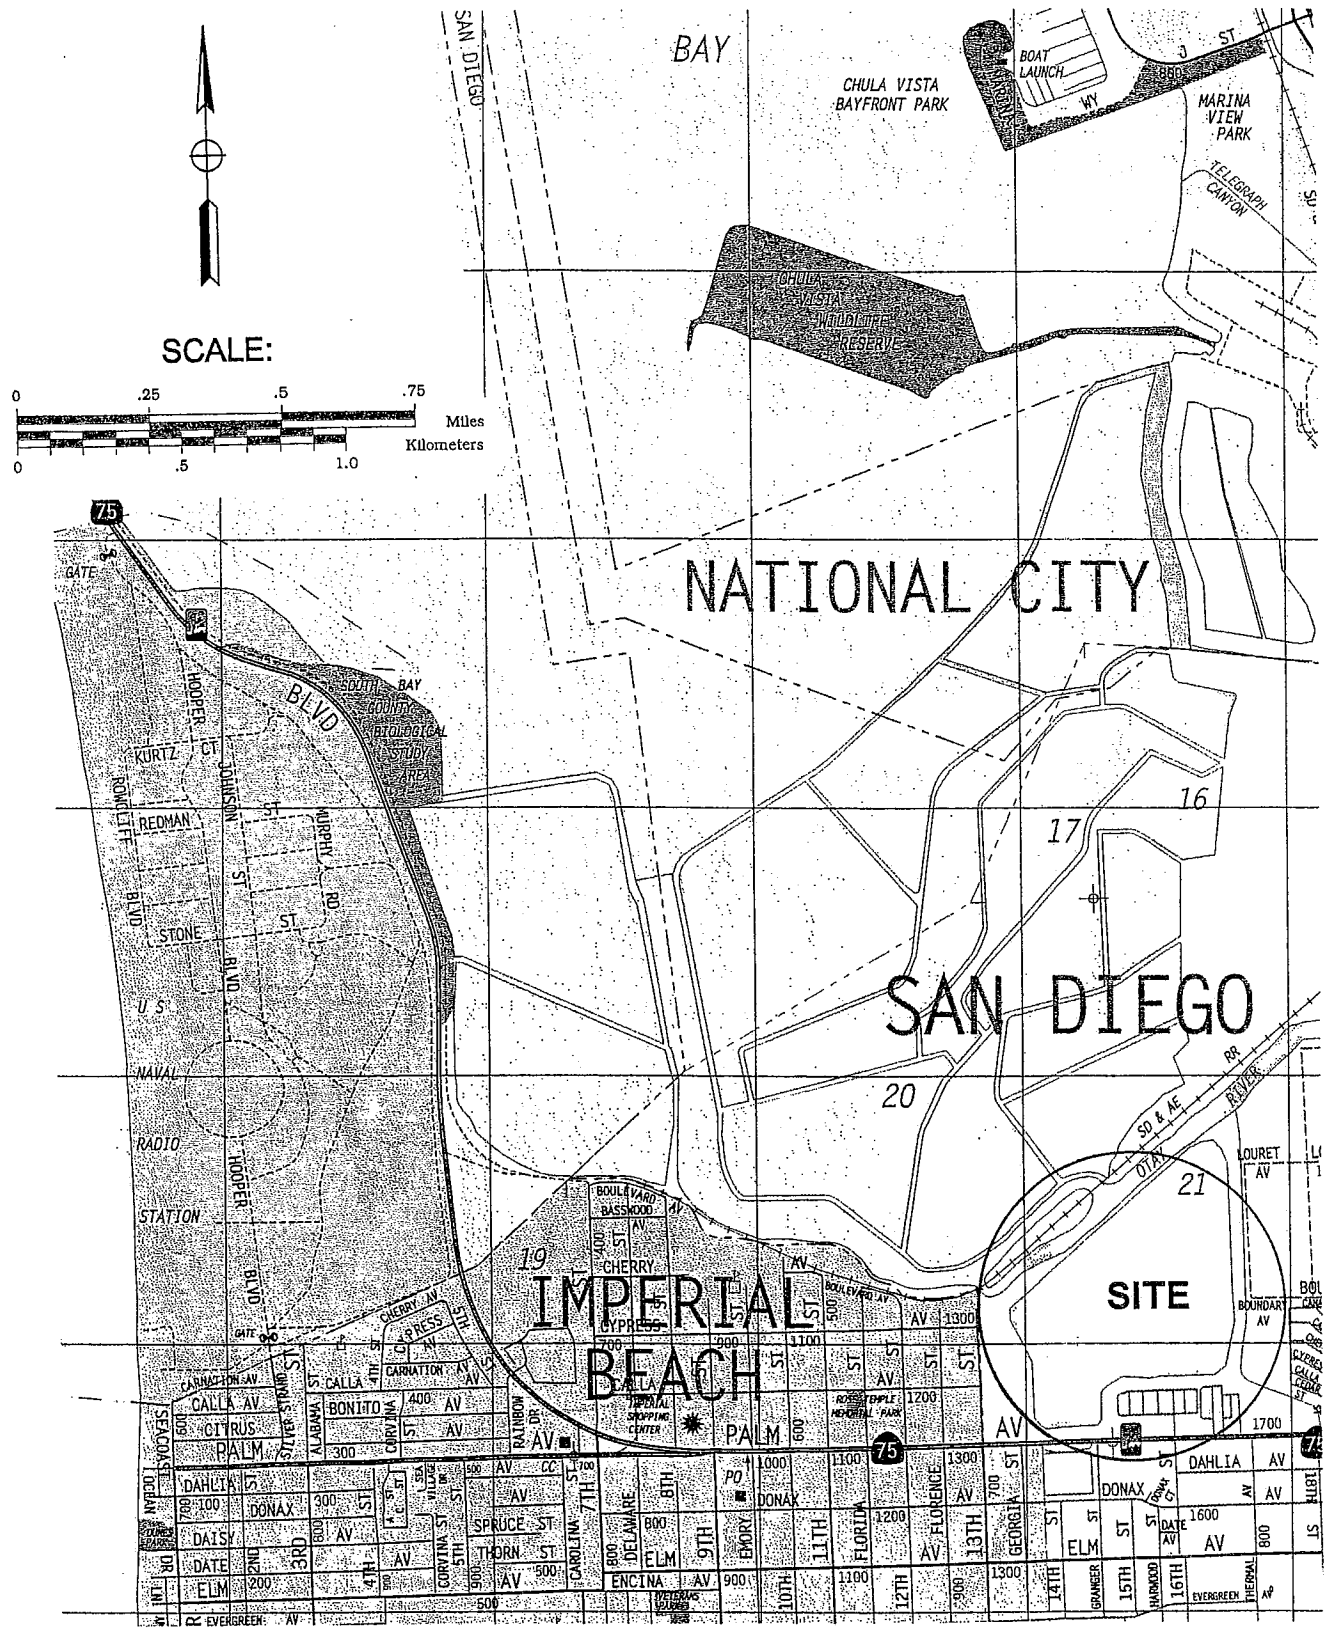

- Preparation of this preliminary report summarizing our findings, conclusions, and preliminary recommendations. This report provides an evaluation of foundation types, including spread footings or deep foundations, recommendations for excavation and grading, evaluation of liquefaction potential and other geologic and seismic hazards, and an estimate of settlement potential due to the addition of fill and structural loads.

3.0 SITE DESCRIPTION

The subject property consists of approximately 95 acres at the southerly terminus of the San Diego Bay. The southerly half of the site will be developed, but the northerly half will remain open space. The subject site is located within the former wetlands of the San Diego Bay and the drainage basin of the Otay River. The site was also formerly used as evaporation ponds for production of salt. The location of the site is shown in Figure 1, Site Location Map. Current site elevations vary from about 8 to 16 feet above mean sea level (MSL). The site layout in relation to our boring and CPT locations is shown on the Site Plan, Figure 2.

4.0 GEOLOGY AND SUBSURFACE CONDITIONS

The subject site is located within the coastal plain section of the Peninsular Range Geomorphic Province of California. The coastal plain consists, in general, of subdued land forms underlain by Cenozoic sedimentary formations. Based on published maps (Kennedy and Siang, 1977) and our subsurface exploration, the subject site is underlain at depth by Quaternary-age sandstone associated with the Bay Point Formation and unnamed near-shore marine sandstone, alluvium, and minor fill soils. The approximate locations of the borings and CPT tests are shown on the Site Plan, Figure 2. Logs describing the subsurface conditions encountered are given in the figures of Appendix B. Generalized descriptions of the materials encountered are presented as follows from oldest to youngest.

Reference: 2000 Thomas Brothers Guide

Geotechnics Incorporated

SITE LOCATION MAP

Project No. 0298-019-00
Document No. 0-0477

FIGURE 1

4.1 Bay Point Formation / Unnamed Near-shore Marine Sandstone

The Bay Point Formation and an unnamed near-shore marine sandstone underly the site at depth. As observed in our borings, this formation consisted generally of gray to reddish brown, silty, fine grained sandstone. Beds of gravel were also observed. The formational materials were observed to be generally dense to very dense and weak to moderately cemented. Drilling refusal was encountered in the Bay Point Formation in all of our CPT's.

4.2 Estuarine Deposits

The estuarine deposits were observed beneath most of the site, in the lower elevations. The maximum depth observed in our borings and CPT's was approximately 40 feet. The estuarine deposits consist of interbedded layers of sand, silt and clay. The soils varied from poorly graded sand (SP), poorly graded sand with silt (SP-SM), silty sand (SM), clayey sand (SC), sandy silt (ML), sandy clay (CL), and high plasticity clay (CH) based on the Unified Soil Classification System.

The estuarine deposits were typically dark brown to dark gray in color. The clays varied from low to high plasticity. The sands were generally fine grained. Standard penetration test (SPT) blow counts and CPT soundings indicated that the sand beds were very loose to medium dense. The clays were generally very soft to soft, with occasional stiff layers. Consolidation testing indicates that the estuarine deposits are compressible and highly susceptible to settlement upon placement of fill or structural loads. The CPT and boring data show bedding consistent with an estuarine depositional environment, with relatively discontinuous layers of sand, silt and clay.

4.3 Fill

The site is bounded by an earthen berm with a variable depth of undocumented fill which is believed to be associated with development of the salt pond. As observed in Boring 2, the fill consists of a dark gray, moist and soft sandy clay (CL) of low to moderate plasticity. The fill soils are also considered highly compressible and susceptible to settlement due to structural or fill loads.

4.4 Groundwater

Groundwater was observed in Borings 1, 2, and 3 drilled over the Estuarine deposits. Groundwater was not observed in Boring 4 where it was drilled in the upper portions of the site within Bay Point Formation. As observed in the borings, the depth to groundwater varied from approximately 2 to 7 feet below grade. However, groundwater was observed at the surface in a majority of the southerly half of the site. The exploratory borings were left open for 30 minutes to one hour to allow the water level to stabilize. The site is situated roughly 8 to 16 feet above mean sea level, and the portion of the Otay River just north and east of the site typically contains surface water. Consequently, it is our opinion that the observed groundwater is a permanent feature associated with the bay and Otay River.

5.0 GEOLOGIC HAZARDS

The subject site is located within an area which has previously been mapped by the City of San Diego Seismic Safety Element as having a high potential for liquefaction. Seismic hazards at the site may be caused by ground shaking during seismic events on nearby or distant active faults. Based on maps used in conjunction with the 1997 Uniform Building Code, the site is located approximately 6.8 miles from the Rose Canyon fault zone. An inferred fault is mapped approximately 1.5 miles east of the site in the City of San Diego Seismic Safety Study. Evidence of past soil failures, landslides, or active faulting on the site was not encountered.

5.1 Ground Rupture

No evidence of active faulting was found during the subsurface investigation, nor have any potentially active faults been mapped within the subject site. Accordingly, ground rupture is not considered to be a significant hazard at the site.

5.2 Liquefaction

Liquefiable soils typically consist of cohesionless sands and silts that are loose to medium dense, and saturated. To liquefy, these soils must be subjected to ground shaking of

sufficient magnitude and duration. The site is underlain by generally loose and soft sandy to silty estuarine deposits and a shallow groundwater table. Based on our preliminary evaluation, the potential for liquefaction to occur is high.

5.3 Subsidence

The subject site is not within an area known for fluid extraction (oil or water), nor is the area known for past cases of subsidence due to fluid removal (Alfors, 1973). It is our opinion that subsidence due to the extraction of fluids is remote. If not mitigated, the potential for significant seismically induced subsidence is anticipated to be high due to the soft to loose nature of the soils underlying the site.

5.4 Landslides and Lateral Spreading

Evidence of ancient landslides or slope instabilities was not observed at the site during our investigation. Accordingly, the potential for landslides to significantly impact the site is considered low. Due to the proximity of the San Diego Bay, the site may be susceptible to lateral spreading associated with a seismic event on a nearby active fault.

5.5 Tsunamis, Seiches, and Earthquake-Induced Flooding

Given the site's relatively low elevation above sea level and short distance from the ocean, damage due to tsunamis (seismically induced waves) is considered moderate to high. Although the occurrence of tsunamis in southern California is relatively infrequent, documented accounts do exist. Houston and Garcia (1974) published predicted run-up heights for coastal Southern California, using 100-year and 500-year events. Predicted run-up heights for the subject site range from approximately 5.3 feet for the 100-year recurrence, and approximately 10.0 feet for the 500-year recurrence. Based the site's elevation, most of the property appears to be above the elevation of the 100-year predicted tsunami runup, with some areas below the predicted 100-year runup elevation. The site may be subject to inundation by a 500-year predicted tsunami runup.

The site is adjacent to a large relatively confined body of water. Accordingly, the potential for seiches (oscillations in a body of water due to earthquake shaking) is considered moderate to high. Flooding after periods of rainfall may occur. The potential for flooding should be evaluated by the project civil engineer.

6.0 CONCLUSIONS

Based on our preliminary investigation and evaluation, it is our opinion that the site could be developed for proposed commercial, retail, industrial or hotel uses. However, mitigation of compressible and liquefiable soils will be necessary to provide suitable support for proposed improvements. From a geotechnical standpoint, the following conditions should be considered in determining site use and development costs:

- The subsurface soils are highly compressible and will consolidate upon placement of fill and structural loads. Areal settlement will occur over a period of time. The amount of settlement and length of time for settlement to occur is proportional to the height of fill placed and depth of compressible soils. Consolidation could be accelerated by the addition of a surcharge fill placed above the planned level of fill.

- Due to their loose relative density and the presence of a high water table, the existing soils are susceptible to liquefaction and will require mitigation prior to building construction.

- Heavy structural loads and basement foundations should be supported on a system of driven piles that extend into the underlying Bay Point Formation materials. One- to two-story structures could be supported on spread footings after completion of the consolidation period.

- Stabilization of the existing surface soils using geotextile and gravel will be necessary prior to placing fill soils.

- The on-site soils have a high potential for corrosion which may affect concrete in contact with the existing soils, ferrous metals, and underground buried utilities.

7.0 PRELIMINARY RECOMMENDATIONS

The following sections presents preliminary recommendations regarding geotechnical aspects of the site which will impact development. The following preliminary recommendations are based on our field explorations, laboratory testing, engineering evaluations, and our experience with similar soils and geologic conditions. This report is preliminary and will require a more detailed investigation after building locations and proposed improvements are known.

7.1 Grading

The site is currently underlain by highly compressible soils and a shallow groundwater table. The use of heavy equipment in close proximity to groundwater will create unstable subgrade conditions. Prior to placing fill, the subgrade may be stabilized using a layer of woven geotextile Type 270 WS, per "Greenbook" specification 213-2. As an alternate, Mirafi 700X geotextile or Tensar BX1100 geogrid, installed in accordance with the manufacturer's requirements, may be used to stabilize the subgrade. Generally, the geotextile or geogrid may be placed directly on the pumping subgrade after removing any large tire rutting. Geotextile laps should be at least 24 inches wide and be tightly secured in accordance with manufacturer's recommendations. A minimum of 2 feet of 1½-inch minus crushed rock should then be placed on top of the geotextile. The crushed rock material should be compacted to achieve a firm and unyielding condition.

Care should be taken during gravel placement to ensure the geotextile is not moved out of position or overstressed. Crushed rock material may be placed in one lift using a track dozer. To avoid overstressing the geotextile, the gravel should be pushed ahead of the dozer from end dumped piles. Geotextile should be stored in areas where damage by delivery trucks or equipment can be prevented.

Imported fill soils should be predominantly granular and have an expansion index of no more than 20 based on UBC Test Method 18-2 or ASTM D4829. The "open space" area north of the site may be used as a source of fill. We recommend that only the upper approximately 2 feet of existing sandy soil be used, and not the underlying clay and silt materials.

All fill and backfill to be placed in association with site construction should be accomplished slightly above optimum moisture content and using equipment that is capable of producing a uniformly compacted lift. The fill should be compacted to at least 95 percent relative compaction as defined by ASTM D 1557. Fill slopes should be constructed at a maximum inclination of 2:1 (horizontal to vertical). Fill slopes should be overbuilt and surcharged with the full height of fill extending above the proposed toe of slopes to consolidate the compressible soils beneath them and improve global stability.

7.2 Areal Settlement

Based on the current site elevations, we estimate the site will be raised approximately 8 to 10 feet to match the street grades along Palm Avenue. For that height of fill our settlement analysis indicates total areal settlement on the order of approximately 12 to 16 inches may occur on the northerly end of the site where the Estuarian soils are up to approximately 40 feet deep. On the southerly end where the Estuarian soils are on the order of approximately 25 feet deep, areal settlement on the order of approximately 8 to 10 inches may occur.

The time for settlement to occur may range between 14 to 16 months, depending on the height of fill and depth of compressible materials. This time period may be reduced to about 8 to 10 months by placing an additional 10-foot surcharge above the planned level of fill. Settlement may be further accelerated by the placement of wick drains spaced uniformly in a grid pattern. During grading, the rate and amount of settlement should be monitored by placing settlement monuments, pneumatic settlement cells, or magnetic extensometers. By monitoring the settlement, one can determine if settlement is completed and when construction can commence.

7.3 Foundations

Heavy loaded structures should be supported on a system of deep, driven piles. We also recommend that basement foundations in close proximity to the soft, compressible soils also be supported on driven piles. The piles may consist of 12-, 16-, or 24-inch square pre-cast concrete piles. For piles extended a minimum of 5 to 10 feet into Bay Point Formation, capacities of up to 150 to 200 kips per pile may be achieved. Pile lengths on the order of 50 to 35 feet in length may be necessary depending on the building locations.

To eliminate frictional downdrag loads, or negative skin friction, the piles should not be installed until areal settlement has taken place. Otherwise, significant loads may develop on the piles causing excessive settlement and/or pile failure. Final pile capacities should be provided by conducting a foundation investigation after building locations are known and after consolidation has occurred.

Spread footings, post-tension slabs, or grade beam foundations may be used for lightly loaded, one- to two- story structures, provided sufficient time has been allowed for areal settlement to occur. A bearing value of up to 2,500 pounds per square foot may be used for preliminary foundation design. We recommend shallow foundations be supported on a minimum 5-foot compacted fill mat placed uniformly beneath proposed structures.

7.4 Excavations Below Grade

Proposed buildings constructed at street level grade could have one level of basement beneath them. Basement levels should be water-proofed and designed for hydrostatic pressure due to possible variations in groundwater levels. Any excavations deeper than one basement level will encounter water seepage, instability, and soil heave at the base. If deep excavations are proposed, they should be properly shored with sheet piling extending to the required depths to prevent basement heave.

7.5 Soil Corrosivity

Soil samples were tested for water-soluble sulfate content to evaluate the general degree of sulfate attack on concrete in contact with soil. The test results are reported in Appendix C in terms of the percentage by weight of the water soluble sulfate in the soil. Based on the results of our test, the on-site soils have a severe degree of sulfate attack on concrete in contact with the soil. This would require that concrete piles be made using Type V cement. In addition, we anticipate the soil is high in salinity and would be highly corrosive to ferrous metals.

8.0 LIMITATIONS OF INVESTIGATION

This investigation was performed using the degree of care and skill ordinarily exercised, under similar circumstances, by reputable geotechnical consultants practicing in this or similar localities. No other warranty, expressed or implied, is made as to the conclusions and professional opinions included in this report.

The samples taken and used for testing and the observations made are believed representative of the project site; however, soil and geologic conditions can vary significantly between borings. As in most projects, conditions revealed by excavation may vary from the preliminary findings. If this occurs, the changed conditions must be evaluated by the geotechnical consultant and additional recommendations made, if warranted.

This report is issued with the understanding that it is the responsibility of the owner, or of his representative, to ensure that the information and recommendations contained herein are brought to the attention of the necessary design consultants for the project and incorporated into the plans, and the necessary steps are taken to see that the contractors carry out such recommendations in the field.

The findings of this report are valid as of the present date. However, changes in the condition of a property can occur with the passage of time, whether due to natural processes or the work of man on this or adjacent properties. In addition, changes in applicable or appropriate standards of practice may occur from legislation or the broadening of knowledge. Accordingly, the findings of this report may be invalidated wholly or partially by changes outside our control. Therefore, this report is subject to review and should not be relied upon after a period of three years.

This report is preliminary and should be followed with a final geotechnical investigation after specific building locations and proposed improvements are determined.

We appreciate this opportunity to be of professional service. Please call if you have any questions or require additional services.

Sincerely,

GEOTECHNICS INCORPORATED

APPENDIX B

SUBSURFACE EXPLORATION

The subsurface exploration consisted of nine Cone Penetration Test soundings and four borings. The CPT's were conducted in general accordance with ASTM D5778, and were pushed using a PowerProbe direct push rig anchored with a 6-inch-diameter ground anchor. The borings were drilled using an 8-inch-diameter, rotary wash drill rig using drilling mud to prevent the hole from caving. The CPT's and borings were extended to depths of between approximately 8 and 40 feet below the existing ground surface. The approximate locations of the borings and CPT soundings are shown on Figure 2. Logs describing the subsurface conditions encountered are presented on the following Figures B-1 through B-14. Bulk and relatively undisturbed samples were obtained from the borings at selected intervals.

Bulk samples were sealed in plastic bags, labeled, and returned to the laboratory for testing. Relatively undisturbed samples were collected using thin-walled Shelby tubes in general accordance with ASTM D1587 and a modified California (CAL) sampler . The CAL sampler is a ring-lined tube with an inside diameter of 2 $^3/_8$ inches and an outside diameter of 3 inches. Ring samples were sealed in plastic bags, placed in rigid plastic containers, labeled, and returned to the laboratory for testing. The hammer used to drive the CAL sampler weighed 140 pounds, with a free fall of 30 inches. The number of blows needed to drive the CAL sampler 12 inches is shown on the attached logs. Relatively undisturbed samples of cohesive soils were collected using Shelby tubes using ASTM D 1587-94 as a guideline. The Shelby tubes used for sampling have an outside diameter of 3 inches and wall thickness of about 1/16 inch.

The boring and CPT locations and elevations were established by field surveys conducted by Port personnel. Soil conditions at locations between the borings may be substantially different from those at the specific locations explored. It should be recognized that the passage of time can result in changes in the soil conditions reported in our boring logs.

APPENDIX C

LABORATORY TESTING

Laboratory testing was conducted in a manner consistent with that level of care and skill ordinarily exercised by members of the profession currently practicing under similar conditions and in the same locality. No other warranty, expressed or implied, is made as to the correctness or serviceability of the test results or the conclusions derived from these tests. Where a specific laboratory test method has been referenced, such as ASTM, Caltrans, or AASHTO, the reference applies only to the specified laboratory test method and not to associated referenced test method(s) or practices, and the test method referenced has been used only as a guidance document for the general performance of the test and not as a "Test Standard." A brief description of the tests performed follows:

Classification: Soils were classified visually according to the Unified Soil Classification System. The soil classifications are shown on the boring logs of Appendix B. Classification was supplemented by laboratory testing in accordance with ASTM D422 and ASTM D4318. Classification of soils from the CPT's were derived using the CPT Classification Chart presented in Figure B-10.

In-Situ Moisture/Density: The in-place moisture content and dry unit weight of selected soil samples were determined using relatively undisturbed samples from the shelby tubes and liner rings of a CAL sampler. The dry unit weight and moisture content are shown on the boring logs in Appendix B.

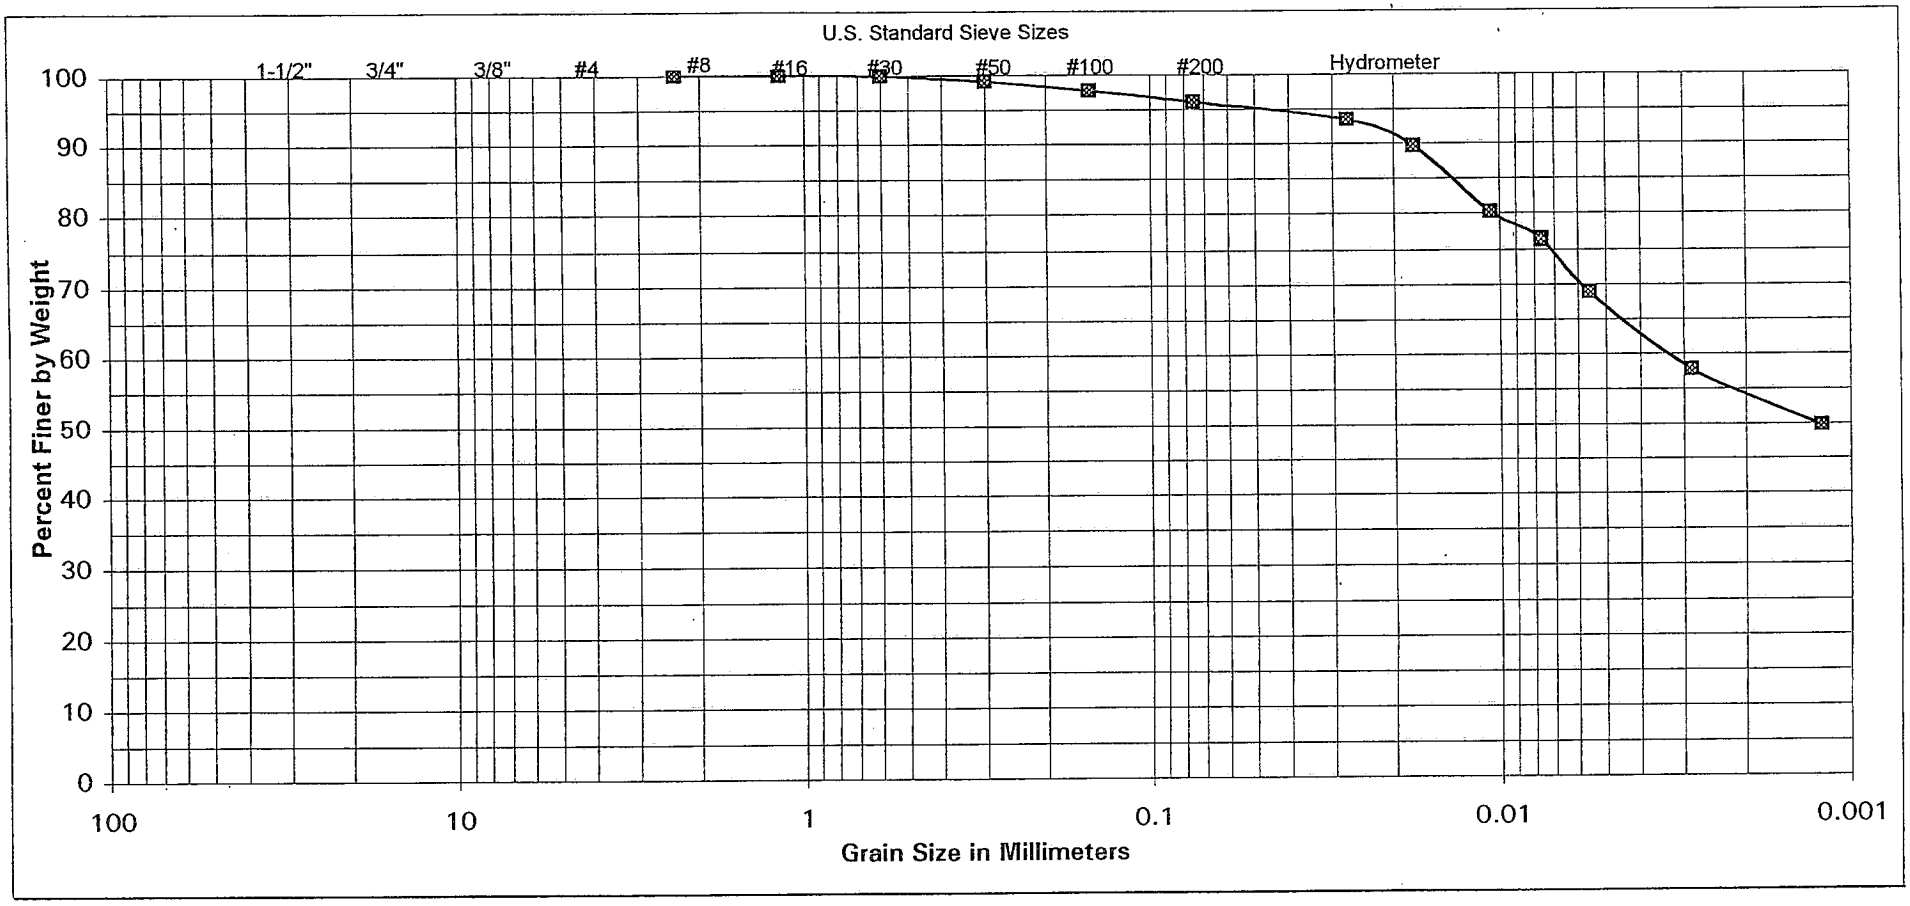

Particle Size Analysis: Particle size analysis was performed in general accordance with the laboratory procedures outlined in ASTM D422. The grain size distribution was used to estimate presumptive soil strength parameters and foundation design criteria. The results are given in Figures C-1.1 and C-1.2.

Atterberg Limits: The Atterberg limits were determined by using ASTM D4318. The results are summarized in Figures C-1.1 and C-1.2.

Sulfate Content: To assess the potential for reactivity with below grade concrete, selected soil samples were tested for water-soluble sulfate content. The water soluble sulfate was extracted under vacuum from the soil using 100:1 and 200:1 (water to dry soil) dilution ratios. The extracted solution was then tested for water soluble sulfate in general accordance with ASTM D516. The results are presented on Figure C-2.

Direct Shear: The shear strengths of selected samples were determined by performing direct shear tests in general accordance with ASTM D3080. Relatively undisturbed Shelby tube samples and samples from the liner rings of a 2 $^{3}/_{8}$-inch ID Modified California sampler were tested. The results of these laboratory tests are summarized in Figures C-3.1 through C-3.3.

Consolidation: Selected relatively undisturbed Shelby tube samples were tested for one-dimensional consolidation in general accordance with ASTM D2435. Consolidation test results are summarized in Figures C-4.1 through C-4.3.

1 INTRODUCTION

The Port of San Diego (Port) proposes a wetland restoration project at the Pond 20 site (Site). The Site consists of a former salt evaporation pond on an 83.5-acre parcel of land, located in South San Diego Bay in San Diego, CA. The Port has engaged Great Ecology to design and permit a mitigation bank at the Site, which would conceptually excavate materials to lower the average elevation by several feet. The new topography would be designed to restore tidal habitat, and bank credits would be sold under terms of a mitigation banking agreement. Significant excavation is included in the conceptual design, and we sought to prepare a Sampling and Analysis Plan suitable for regulatory review and implement a modest investigation of soil quality consistent with a feasibility-level analysis. This report includes results of our investigation.

1.1 Site Description

The Site consists primarily of a low diked area, which is hydrologically isolated from the Nestor Creek and Otay River systems. Based on historical survey information, and to be verified by pending topographic survey data, the elevation of the area within the dike ranges from approximately 4.5 to 11.5 feet above mean lower low water (ft MLLW; 1988 North American Vertical Datum [NAVD88]). The proposed average restoration target elevations range from -0.5 to 16.2 ft MLLW (NAVD88), with the majority of restored habitat below 7.0 ft MLLW.

Site materials subject to this investigation are primarily in non-wetland upland areas currently above the High Water Line (+7.79 ft MLLW for San Diego Bay, NOAA Station ID: 9410170) and isolated from tides. We therefore use the conventional term “soils” in this report, although some materials from deeper portions of the conceptual excavation prism might be considered sediments.

Data presented in this report are intended to inform an evaluation of placement options for upland soils, and an evaluation of the viability of underlying soils for planting.

1.2 Geologic and Hydrogeologic Conditions

The Site is located within the western Peninsular Range Geomorphic Province of Southern California, which stretches 900 miles from the Los Angeles Basin and the Transverse Ranges to the southern end of Baja California (Norris and Webb 1990).

The Site lies within the Otay Hydrologic Unit, a watershed covering 154 square miles that is drained by the Otay River and its tributaries. The Otay River flows east to west toward San Diego Bay. The Site is

located adjacent to Nestor Creek, and includes a tidal channel just upstream of the mouth of the Otay River where it meets San Diego Bay (FIGURE 1). The majority of the Site is hydrologically isolated from storm and municipal runoff. Soils subject to this investigation are in the upland portion of the Site, and from the existing surface elevation to the proposed finished grade.

1.3 Field and Database Reconnaissance

Field reconnaissance has indicated no history of spills or releases of hazardous materials, nor any visual indications of soil degradation (e.g., staining from hydrocarbons). The California State Water Resources Control Board Geotracker database has also been reviewed and indicates the Site does not have any history of cleanup investigations.

1.4 Adjacent Parcel information

The Otay River Floodplain has long been under consideration as a mitigation site, and was selected by Poseidon Resources for mitigation of their Carlsbad Desalination facility as required by their Coastal Development Permit E-06-013 (Coastal Commission 2013). The Poseidon mitigation project also includes the Pond 15 site, located north of the San Diego Bay National Wildlife Refuge on the east side of San Diego Bay. The Otay River Floodplain Site lies to the north and east of Pond 20, and, based on visual assessment of the sites and a limited survey of historical aerial photography, some of the Otay River Floodplain mitigation site may share a similar land use history. The specific area likely to share a land use history lies south of the Otay River Channel and west of the Nestor Creek channel.

Poseidon prepared several studies which informed their initial design. One study, a cultural resource survey of the Otay River Floodplain site, revealed significant Native American artifacts in the northeastern corner of the site (i.e., on the far side of the area relative to the Pond 20 site). A detailed soil characterization analysis, found significant soil contamination from DDT, chlordane, and PCBs in the eastern portion of the Otay River Floodplain site, east of Nestor Creek. Some areas of DDT contamination had concentrations high enough to be considered hazardous (Coastal Commission 2013). Contamination is likely related to historical agricultural uses (which did not occur at Pond 20).

Regardless, extensive review of Poseidon's mitigation effort indicated the soil quality of lands directly north of Pond 20 did not affect the proposed mitigation use and furthermore, bulk soil chemistry data indicated placement of materials in an estuarine environment with sensitive biological

GREATecology
ENVIRONMENT + DESIGN

receptors was fully consistent with natural resource conservation at the San Diego Bay National Wildlife Refuge (Coastal Commission 2013). Since Pond 20 shares its land use history with the western portion of the Otay River Floodplain site, and not the agricultural uses which appear to co-occur with contamination on the eastern portion of the Otay River Floodplain site, the Poseidon data indicates land uses at salt ponds did not result in contamination. Furthermore, the data indicate that soil quality associated with historical salt production are consistent with reuse of materials as substrate for sensitive biological resources in San Diego Bay.

1.5 Study Objectives

This sampling and analysis effort includes three distinct objectives to assess conditions at the Site:

1. Characterize the post-excavation (or z-layer) surface for soil structure parameters;
2. Characterize the post-excavation (or z-layer) for plant growth characteristics; and
3. Conduct a screening-level assessment of anticipated excavation (cut).

1.6 Approach and Report Organization

Although the final deposition site for excess materials is currently unknown, we anticipate a combination of regulatory agencies will have a role in the project permitting process. Great Ecology generally followed guidance provided by the Southern California Dredge Material Management Team (DMMT) of regulatory agencies, which include the U.S. Army Corps of Engineers, the Environmental Protection Agency (EPA), the California Coastal Commission, and the California Regional Water Quality Control Board (RB). We followed general guidance for soil and sediment testing provided in the Inland Testing Manual (EPA/USACE 1998), and were consistent regarding parameters listed in the RB Solid Waste Waiver (RB 2014). We also conducted standard horticultural analyses.

To accomplish study objectives, Great Ecology prepared a Sampling and Analysis Plan (SAP) to document approach, field activities, analytical methods, quality assurance parameters (Great Ecology 2017) (APPENDIX A). Great Ecology established four stations within the Site property boundary. Two stations characterized the eastern half of the Site, one station characterized the central western portion of the Site, and one station characterized the berm where it will be breached to create a connection to the Otay River. Great Ecology collected core soil samples to generate the study dataset, which included an assessment of the three-dimensional extent of potential contaminants and soil

structure characteristics. Additional core samples collected from the z-layer were tested for plantability characteristics.

2 METHODS

2.1 Sample Collection and Documentation

Great Ecology designated four sampling stations to investigate soil conditions at 1) the conceptual future berm breach area and 2) the interior of the Site. Interior stations were positioned to capture conditions across the site. Stations were identified in the field using latitude and longitude data generated prior to the field effort and also landscape feature cues from available aerial photography (e.g., vegetation changes, erosional patterns, and hydrological features). On January 30, 2017, Great Ecology collected core sediment samples using a hand auger. FIGURE 1 is a map of the Site sample locations overlaid on topographic data generated in 2017. Field staff successfully collected samples representative of the proposed locations, and verified field positioning with visual landmarks.

Great Ecology recorded field conditions and observations relating to the sampling in a field log. Recorded data included date and time of sample collection; study name, station identifier, volume and identification codes of subsamples collected; latitude and longitude of station locations; meteorological information; core sample characteristics: penetration and sediment characteristics at approximately one foot increments; and presence (or absence) of unusual colors, odors, debris, petroleum hydrocarbon sheens, or other relevant sediment characteristics. We provide the original field logs in APPENDIX B and photographic documentation of the grab samples and cores associated with each station in APPENDIX C.

Logs also included the vertical dimensions of subsampled strata and a sample inventory for each location. Individual composite samples varied with respect to dimensions of vertical profile sampled based on the achieved depth of each core and soil characteristics. For example, in shallow borings (e.g., sample P20-2), the surficial sediment sample comprised of the top one foot of sediment, whereas for deeper borings with consistent soil characteristics, a deeper boundary was established for the bottom of surficial sediment stratum (e.g., the top three feet of sediment at P20-3).

2.2 Sample Handling

Prior to sampling, and in between each station, we thoroughly cleaned all non-disposable sampling equipment with Alconox detergent and rinsed with deionized water (retained and disposed offsite).

Field staff collected core samples using a stainless steel hand auger with a maximum depth of 10 feet. Each one foot section of core was placed on a clean Visqueen sheet for stockpiling and labeled by depth for assessment following the achievement of target depth or deepest possible penetration depth.

Field staff logged, photographed, and subsampled the core using clean stainless steel spoons. Composite samples of the core were prepared in stainless steel mixing bowls to represent the top soil layer, the mid-level zone of accumulation, and the z-layer. The z-layer was subsampled immediately by the staff geologist immediately upon reaching the deepest layers to preserve the best percent moisture test conditions.

Once materials were laid out on the Visqueen, sample characteristics were reviewed and a decision made with regard to subsample strata boundaries. Clean stainless steel spoons and bowls were used to prepare representative composite samples of sufficient volume for analyses. Once field-homogenized, composite materials were transferred to clean containers provided by the NELAP-accredited analytical laboratory, Enthalpy Analytical, Inc. (Enthalpy) of Orange, California. Based on the shallow profile of the borings, all excess materials were backfilled into the borehole to minimize waste.

For sample identification, Great Ecology used a standard sample identification code: three characters to denote the study site (P20) followed by one character to denote the station identifier (i.e., 1 through 4, from FIGURE 1). The last character denoted the depth horizon, with "T" representing the surface soils, "M" representing the mid-level soils, and "Z" representing the bottom soils. For example, the sample identifier of P20-1T corresponds to the soil collection at Station 1 in the surface horizon of the soil profile.

Field staff retained samples overnight in iced coolers before delivering the samples to an Enthalpy courier who transported the samples to the laboratory. Samples were accompanied by a Chain of Custody document that denoted requested analyses.

2.3 Bulk Sediment Analysis

Enthalpy evaluated all samples for metals, total petroleum hydrocarbons (TPH), pesticides, polychlorinated biphenyls (PCBs), and polycyclic aromatic hydrocarbons (PAHs), sulfides, and conventional analyses (TABLE 1). Where appropriate, analytical results were compared to relevant

TABLE 1: SAMPLE ANALYSIS METHODS AND TARGET REPORTING LIMITS

Parameter	Method	Procedure	Sediment Target Reporting Limits[a]
Conventional Analyses			
Grain Size	ASTM D4464M	Sieve/Optical	0.1 g
Percent Solids	SM 2540Bh	Gravimetric	0.1 percent

PCBs[d]	USEPA 8082[h]	GC/SIM	10 µg/kg
PAHs[e]	USEPA 8270C[h]	GC/MS SIM	20 µg/kg

[a] Target reporting limits provided by Calscience Environmental Laboratories.
[b] Includes diesel range organics, TPH as gasoline, and TPH as motor oil.
[c] Includes 4,4- isomers of DDD, DDE, and DDT; aldrin; α-, β-, δ- and γ-BHC; chlordane; dieldrin; endosulfan I and II; endosulfan sulfate; endrin and endrin aldehyde; heptachlor and heptachlor epoxide; methoxychlor; and toxaphene.
[d] Includes congener analysis only.
[e] Includes Low Molecular Weight PAHs (naphthylene, acenaphthylene, acenaphthene, fluorine, and phenanthrene) and High Molecular Weight PAHs (fluoranthene, pyrene, benzo(a)anthracene, chrysene, benzo(b,k)fluoranthene, benzo(a)pyrene, indeno(1,2,3-c,d)pyrene, dibenzo(a,h)anthracene, and benzo(g,h,i)perylene).
Mass Units: kg = kilogram, g = gram, mg = milligram, µg = microgram
As = arsenic, Cd = cadmium, Cr = chromium, Cu = copper, Pb = lead, Ni = nickel, Se = selenium, Ag = silver
PAH = polycyclic aromatic hydrocarbon
PCB = polychlorinated biphenyl
TPH = total petroleum hydrocarbons
ICP-MS = inductively coupled plasma mass spectroscopy
GFAAS = graphite furnace atomic absorption spectroscopy
GC/ECD = gas chromatography/electron capture dissociation method
GC/MS SIM = gas chromatography/mass spectroscopy selective ion monitoring method

screening criteria, which in this case were Effects Range-Low (ERL) and Effects Range-Median (ERM) values (Buchman 2008). ERL concentrations correspond to the level above which there may be ecological effect in marine environments. Concentrations were well below the Effects Range-Median (ERM) concentrations, above which ecological effects are likely. In addition, Waypoint Analytical (Waypoint) evaluated the z-layer for agricultural suitability (plantability). Plantability was assessed by comparing results to horticultural benchmarks.

2.4 Leachability Analysis

Once bulk soil results were available, arsenic was found to be the only constituent above screening concentrations (per RB 2014). We conducted limited synthetic precipitation leaching procedure (SPLP) testing to assess leachability. SPLP testing used the same metals analysis (EPA 6010B) as was used for bulk soil chemistry, but were prepared to evaluate the mobility of pollutants (EPA 1312/3010A). Arsenic was the only analyte evaluated for leachability.

3 RESULTS

The following section describes bulk sediment analytical chemistry results, as well as leachability test results. APPENDIX D contains original laboratory reports provided by Enthalpy, including quality assurance data and summary tables with all the analytical data. APPENDIX E contains original soil plantability laboratory report provided by Waypoint Analytical.

3.1 Field Data

Great Ecology successfully sampled all four stations. With the exception of the berm location (Station P20-1), field staff were unable to achieve grab target recovery objectives due to the presence of groundwater (TABLES 2 and 3). Berm materials from location P20-1 were predominantly moist gray clay with lenses of fine sand. Berm materials were generally consistent with the visual/textural characteristics of materials at the top of the berm (the upper limit of our boring was approximately five feet below the crest of the berm) and berm materials in general (extending south and northeast of the sampling location, see FIGURE 1).

Core subsections from Station 2, 3, and 4 were generally dominated by sandy loams. Groundwater was shallower in the westernmost location within the berm. Soils in the interior portions of the berm were generally consistent with respect to the relative percentage of sand to clay (see APPENDIX B for field log data).

TABLE 2: SUMMARY CORE LOCATION INFORMATION

Station ID	Date (Time)	Latitude	Longitude	Target Recovery (ft)	Actual Core Depth (ft)
P20 – 1	1/30/17 (14:30)	32°35'14.91"	117°06'18.84"	6 [1]	6.5 [1]
P20 – 2	1/30/17 (12:55)	32°35'12.99"	117°06'09.36"	9.2	3.0
P20 – 3	1/30/17 (11:30)	32°35'10.04"	117°05'59.02"	10.5	8.0
P20 – 4	1/30/17 (09:30)	32°35'17.09"	117°05'55.09"	12.8	9.2

[1] Target recovery was adjusted in the field based on observed site characteristics.
ft = feet

TABLE 3: CORE LOG SUMMARY INFORMATION

Station ID	Target Recovery (ft)	Depth (ft)	Core Material Description
P20 – 1	6 [1]	6.5 [1]	Top 2 ft: moist brown clay with mottling in soil. From 2 to 6.5 ft: moist gray clay with minor lenses of fine sand. No groundwater.
P20 – 2	9.2	3.0	Top 1 ft: moist, dark brown. From 1 to 3 ft: wet, dark brown fine sand. Groundwater at 1.5 ft.
P20 – 3	10.5	8.0	Top 3 ft: Medium tan sand. From 3 to 5 ft: Fine tan sand. From 5 to 8 ft: gray, medium-coarse wet sand with mud. Groundwater at 3 ft.
P20 – 4	12.8	9.2	Top 3 ft: loose, brown, dry sand. From 3 to 5 ft: more compact material, similar to the top 3 ft with minor clay. From 5 to 9.2 ft: sand with lenses of clayey material and coarse sand. Groundwater at 5 ft.

[1] Target recovery was adjusted in the field based on observed site characteristics.
ft = feet

3.2 Bulk Sediment Chemistry Results

TABLES 4 to 12 summarize the bulk sediment analytical results. Contaminants were generally very low qualitatively, consistent with the minimal historical development of the site and hydrological isolation. All estimated concentrations are noted with "J" qualifiers (if applicable).

Total petroleum hydrocarbons were not detected (TABLE 5). Other organic contaminants were nearly absent, except very minor detections of PAHs, well below ground surface at Location P20-1 (TABLES 6 and 7). Pesticides and PCBs were not detected (TABLES 8 to 10).

Metals concentrations (TABLE 11) were also very low; nearly all locations contained sediments with concentrations below the Effects Range-Low (ERL) concentrations. Only two samples, both at P20-1 (the berm) exceeded ERL levels, which exceeded only the arsenic ERL. The surface and mid-depth samples exhibited only minor exceedances of the ERL, and were well below the ERM. This result, particularly in the absence of other ERL exceedances, indicates a very low likelihood of ecological effects in marine environments.

The presence of arsenic at levels above a screening threshold resulted in additional characterization to assess leachability. For these analyses, the highest bulk sediment concentration samples from each of the four locations were tested to consider a "worst-case" scenario using the SPLP method. Selected soil samples were: P20-1M, P20-2Z, P20-3Z, and P20-4Z; results are included in TABLE 11. All leachability results were well below the STLC limit, in all cases by between 2 and 3 orders of magnitude. When arsenic was detected (2 of the 4 samples; concentrations of 0.013 mg/L in sample P20-1M, and 0.016 in sample P20-4Z), values were below both the Basin Plan levels for waters designated as domestic or municipal supply (MUN = 0.050 mg/L, RB 2016) and the most stringent environmental water quality standard (California Toxics Rule, Saltwater Criterion Continuous Concentration = 0.036 mg/L, EPA 2000).

3.3 Data Quality and Validity

Great Ecology reviewed the quality assurance compliance data provided by Enthalpy to ensure analytical data were valid and representative. There were no quality assurance data provided by Waypoint. In this section, Great Ecology provides summary data for the Enthalpy reports; additional data are included as case narrative statements and quality control data within their respective reports (APPENDIX D).

The maximum achieved reporting limits were higher than the target values for some organic analytes, as well as the metals, but the vast majority fell below the lowest respective guideline values (i.e., ERL concentrations), where applicable.

For mercury, analytical reporting limits fell below the ERM value (0.71 mg/kg), but above the ERL concentration (0.15 mg/kg). However, the method detection limit (MDLs) were reviewed and ranged from 0.02-0.03 mg/kg. Therefore, if it had been present at levels above the ERL, mercury would have been detected and qualified as an estimate. In addition, Great Ecology found the quality control data

for mercury method blank, matrix spike, and laboratory control samples to be in compliance with quality assurance control limits. Mercury data are therefore deemed valid and representative.

For the metals analyses, several method blank detections were present in QC Batch 1174933 (see Page 28 of Enthalpy Lab Request 387148). Method blank detections included antimony, selenium, and zinc; all detections were below respective reporting limits (1 to 5 mg/kg), but above respective method detection limits. Great Ecology reviewed data for the samples that corresponded to QC Batch 1174933; all results were non-detect or less than the ERL (see above tables); therefore, any overestimation of actual antimony, selenium, or zinc was considered moot.

The matrix spike analyses for antimony were out of acceptable control ranges. However, data were considered valid on the basis of laboratory control sample analyses. Therefore, data are deemed valid.

The lab control and matrix spike analyses for benz(a)anthracene and benzo(b)fluoranthene overestimated concentrations to a degree outside control limits. Since these analytes were not detected, a conservative interpretation of the results concludes that these analytes are not present at levels of concern. The naphthalene laboratory control samples were out of control limits, but the matrix spike data (and surrogate analyses) were within control limits and are therefore deemed valid. These data were appropriately qualified.

A single deviation from the SAP (attached as APPENDIX A) was recognized in that only the 4,4- isomers of DDD, DDE, and DDT were analyzed. 2,4 isomers were not analyzed, and were a minor component of DDT-containing products (historically). Since assessment of 4,4 isomers of DDTs is consistent with current guidance regarding how Total DDTs are calculated and compared to benchmark screening criteria (e.g., Buchman 2008), this deviation did not impact the conclusions of this report.

In summary, we consider the reported bulk sediment chemistry data to be valid and representative.

3.4 Data Limitations

The statements above generalize sediment quality on the basis of a small number of sample locations relative to the anticipated volume of excavation. However, generalization is justifiable based on land use history, minimal development, hydrological isolation, and consistency with available bulk sediment chemistry for adjacent lands with similar land uses and hydrology (e.g., USFWS 2016).

4 DISCUSSION

4.1 Field Operations

Great Ecology staff members performed field collection efforts, sample handling, and soil analyses as outlined in the study SAP (see APPENDIX A). Field staff achieved limited progress toward core target depth at three of four stations due to shallow groundwater. Recovery depths were limited as a result of groundwater intrusion and borehole collapse at interior locations. Soil sampling at the berm location (P20-1) was successful.

4.2 General Soil Conditions

The particle size distribution data was observed to be qualitatively different at the interior stations when compared to berm soils. Berm soil was generally finer material, and was observed to have higher TOC and moisture content (TABLE 2). Berm materials appeared visually and texturally distinct from interior soils (see APPENDIX C).

4.3 Bulk Sediment Chemistry

Apart from metals, the majority of priority pollutant contaminants were not detected at the Site. The following categories of contaminants were non-detect at all stations and depth horizons:

- Total petroleum hydrocarbons (TPHs);
- Low-molecular weight polycyclic aromatic hydrocarbons (LPAHs);
- Pesticides; and
- Polychlorinated biphenyls (PCBs).

Location P20-1 had detected levels of high-molecular weight polycyclic aromatic hydrocarbons (HPAHs) in the z-layer; however, combined these HPAHs totaled 57 µg/kg, well below the ERL concentration for HPAHs (1,700 µg/kg) and Total PAHs (4,022 µg/kg) (Buchman 2008).

Arsenic was the only metal with concentrations exceeding benchmark concentrations. At Location P20-1, arsenic concentrations in the top and middle soil horizons exceeded the ERL (8.2 mg/kg). Interior stations did not exceed ERL criteria. SPLP testing demonstrates that the arsenic is insoluble at all locations, and comparisons to water quality criteria indicate no threat to surface or groundwater conditions.

All encountered concentrations are low with regard to ecological risk criteria.

4.4 Horticultural Evaluation of the Z-Layer

Salinity presents the most significant constituent from a horticultural/plantability perspective. Soil salinity was not limited to surficial soils, and extended into the z-layer samples. Salinity far exceeded the tolerance of the majority of salt marsh plants (>30 dS/m) in the z-layer at all stations. Station 2 had the lowest salinity relative to the other stations, and Station 4 had the highest. These represent the shallowest and deepest samples, respectively, taken within the berm at the Site.

The agricultural suitability analyses revealed additional concerns for plantability. The sodium adsorption ratio (SAR) for every station indicates these soils are sodic (>15). Sodic conditions lead to a negative impact on soils structure and water infiltration. Further, the elevated levels of boron present a concern; elevated boron can cause burning of foliage and negatively impact survivorship rates for young plants.

High salinity coupled with high SAR and boron values and low total organic carbon at most stations represent a threat to plant survivorship and indicate a need for soil amendments and leaching prior to planting onsite. Further detail on the agricultural suitability analysis is available in Waypoint's attached report (APPENDIX E).

4.5 Conclusion

A review of the Pond 20 hydrology and site history indicate a lack of contaminant sources in the recent and extended history of the Site, and available bulk sediment chemistry from adjacent parcels corroborates this opinion (Coastal Commission 2013). Direct testing of materials encountered during our investigation indicated that bulk sediment physical characteristics and bulk sediment chemistry were consistent with the hypothesized lack of contamination. Soil arsenic was the only analyte to exceed a screening value; additional leachability testing indicated that it is tightly bound and does not present a risk to even the most susceptible aquatic receptors. As a result, data collected herein indicate that the materials areEF substantially 'inert' with regard to beneficial reuse at offsite locations

1 INTRODUCTION

The San Diego Unified Port District (District) is planning a wetland mitigation bank for the Pond 20 site, located in South San Diego Bay in San Diego, CA. The District engaged Great Ecology to design the mitigation bank. As part of a previously completed feasibility study, Great Ecology created a conceptual design for an 83.5-acre mitigation bank on Sub-parcel B (Site; FIGURE 1). The Site currently consists of largely barren upland open space resulting from its historic use as a salt evaporator pond. The conceptual design includes proposed channels that re-establish tidal connections and excavation of the Site to elevations appropriate to support the establishment of tidal wetlands. Preliminary estimates indicate a significant volume of soil/sediment (between approximately 100,000 and 250,000 cubic yards) will be excavated and either relocated onsite or exported offsite for reuse.

1.1 Document Purpose

This Sampling and Analysis Plan (SAP) was prepared by Great Ecology to outline our sampling and analysis approach. The analysis will characterize the materials, document soil/sediment characteristics, and describe anticipated post-excavation surface conditions (or z-layer conditions) to inform the design process.

This SAP was prepared in accordance with guidance provided by the Southern California Dredge Material Management Team (DMMT) of regulatory agencies, which include the U.S. Army Corps of Engineers, the Environmental Protection Agency (EPA), the California Coastal Commission, and the Regional Water Quality Control Board. Although the final deposition site for excess materials is currently unknown, we anticipate a combination of DMMT agencies will have a role in the project permitting process.

2 SITE CONTEXT

2.1 Geologic, Topographic, and Hydrogeologic Conditions

The Site is located within the western Peninsular Range Geomorphic Province of Southern California, which stretches 900 miles from the Los Angeles Basin and the Transverse Ranges to the southern end of Baja California (Norris and Webb 1990).

The Site consists primarily of a low diked area, which is hydrologically isolated from the Nestor Creek and Otay River systems. Based on historical survey information, and to be verified by pending topographic survey data, the approximate elevation of the area within the dike ranges from approximately 4.5 to 11.5 feet above mean lower low water (MLLW; 1988 North American Vertical

Datum [NAVD88]). The proposed average restoration target elevations range from -0.5 to 16.2 feet MLLW (NAVD88), with the majority of restored habitat below 7.0 feet MLLW.

The Site lies within the Otay Hydrologic Unit, a watershed covering 154 square miles that is drained by the Otay River and its tributaries. The Otay River flows east to west toward San Diego Bay. The Site is located adjacent to Nestor Creek, and includes a tidal channel just upstream of the mouth of the Otay River where it meets San Diego Bay (FIGURE 1). The Site soils/sediments subject to this investigation are in the upland portion of the Site, and from the existing surface elevation to the proposed finished grade.

2.2 *Field and Database Reconnaissance*

Field reconnaissance has indicated no history of spills or releases of hazardous materials, nor any visual indications of soil degradation (e.g., staining from hydrocarbons).

3 METHODOLOGY

3.1 *Objectives and Approach*

This sampling and analysis effort includes three distinct objectives:

1. Characterize the post-excavation (or z-layer) surface for soil structure parameters;
2. Characterize the post-excavation (or z-layer) for plant growth characteristics; and
3. Conduct a screening-level assessment of anticipated excavation spoils (cut).

3.2 *Soil/Sediment Sampling Protocol*

The sampling protocol will employ a hand auger team to sample four locations (FIGURE 2). Clean plastic sheeting (e.g., Visqueen) will be used to establish a zone for equipment mobilization and for sample handling. Hand auger progress will be monitored and logged by staff under the supervision of a California-licensed geologist or engineer.

Materials will be stockpiled on the surface during excavation for subsequent subsampling with the exception of the z-layer, which will be subsampled immediately upon reaching target depth to preserve the best percent moisture test conditions. Archive samples may be collected if warranted by field conditions.

Sampling at each location will result in two samples: a z-layer sample, which will receive comprehensive analysis, and a composite of the overlying soils/sediments, which will be tested for an abbreviated list of analytes limited to conventional, metals, and organic compound analyses.

Borings will not be tested at a scale finer than two feet (materials will be logged at an appropriate scale). If horizons less than two feet in length are observed to exhibit unexpected or unusual characteristics (e.g., hydrocarbon staining), those soils/sediments will be sampled and at minimum archived for potential analysis.

3.3 Soil/Sediment Sample Analysis

Samples collected during the site investigation will be analyzed by a National Environmental Laboratory Accreditation Program (NELAP) certified laboratory using EPA and other standard methods of analysis (e.g., ASTM International). Analyses are focused on four primary indicators:

- Conventional descriptive analyses;
- Soil/sediment characteristics;
- Metals; and
- Organic pollutants.

Respective methods, method publications, and target analytical concentrations are detailed in TABLE 1. The table is subject to modification based on ongoing review; duplication of methods by different laboratories will be avoided if independent testing is necessary.

3.4 Sample Management and Shipment

Chain of custody documentation will serve as a tracking tool to ensure proper analyses are undertaken in accordance with this plan. Chain of custody documentation will accompany iced coolers when transported to the laboratory, and during any subsequent transfer. All samples will be packed and shipped to the laboratory in such a manner as to prevent loss of sample due to breakage, leaks, or cross-contamination. The transfer from the field team to the laboratory will occur at the end of the sampling period, and the Great Ecology field coordinator will be responsible for completing chain of custody documentation for all samples prior to their shipment to the laboratory. The laboratory will be instructed to homogenize samples prior to collection of aliquots for specific analyses.

Upon collection, each sample container will be labeled with water-resistant ink. The sample label information will include the project name, a unique sample identification number (e.g., “P20-1”), sampling date and time, and the sampler's initials. The unique sample identification number will, at minimum, include information corresponding to the boring number and sample horizon or composite nature.

Sample containers for chemical analysis will be labeled, placed in freezer bags, if needed, and immediately placed on bagged ice in a cooler. Additional bagged ice will be placed over the top of the samples for shipment/transport as needed.

Great Ecology will make arrangements to ensure the samples are delivered within an appropriate time frame for fixed laboratory analysis.

TABLE 1 CONVENTIONAL, GEOTECHNICAL, AND ANALYTICAL TESTING ANALYSES

Parameter	Method	Procedure/ Specification	Soil/Sediment Target Reporting Limits[a]
CONVENTIONAL ANALYSES			
Grain Size	ASTM D4464M	Sieve/Optical	0.1 g
Percent Solids	SM 2540B[h]	Gravimetric	0.1 percent
TOC	USEPA 9060[i]	Combustion	0.1 percent
Total Sulfides	USEPA 376.2M[h]	Titrametric	0.1 mg/kg
Dissolved Sulfides	USEPA 376.2M[h]	Titrametric	0.1 mg/kg
GEOTECHNICAL CHARACTERISTICS			
Plasticity Index	ASTM D4318	Atterberg Limit	-
In-Situ Moisture	ASTM D2937)	Gravimetric	-
Shear Strength	ASTM D2166	Unconfined Compressure	-
Grain Size	ASTM D422	Sieve/Hydrometer	0.1 g
METALS			
As, Cd, Cr, Cu, Pb, Ni, Se, Ag	USEPA 6020[i]	ICP-MS	0.1 mg/kg
Zn	USEPA 6020[i]	ICP-MS	1.0 mg/kg
Hg	USEPA 7471A[i]	GFAAS	0.02 mg/kg
ORGANICS			
TRPH	USEPA 418.1M[h]	IR Spectroscopy	1.0 mg/kg
Pesticides[b]	USEPA 8081A[i]	GC/ECD	2-20 µg/kg
PCBs[c]	USEPA 8082[i]	GC/ECD	10 µg/kg
PAHs[d]	USEPA 8270C[i]	GC/MS SIM	20 µg/kg
PLANTABILITY ANALYSES			
Various, by Agricultural Laboratory – salinity, sodium adsorption ratio (SAR), soluble cations, sulfate, boron, pH, and qualitative lime.			

[a] Target reporting limits provided by Calscience Environmental Laboratories
[b] Includes 2,4- and 4,4- isomers of DDD, DDE, and DDT; α–, β–, δ–, and γ-BHC; chlordane; dieldrin; endosulfan I and II; endosulfan sulfate; endrin and endrin aldehyde; heptachlor and heptachlor epoxide; methoxychlor; and toxaphene.
[c] Includes congeners and Aroclors 1016, 1221, 1232, 1242, 1248, 1254, 1260, and 1262.
[d] Includes Low Molecular Weight PAHs (naphthylene, acenaphthylene, acenaphthene, fluorine, and phenanthrene) and High Molecular Weight PAHs (fluoranthene, pyrene, benzo(a)anthracene, chrysene, benzo(b,k)fluoranthene, benzo(a)pyrene, indeno(1,2,3-c,d)pyrene, dibenzo(a,h)anthracene, and benzo(g,h,i)perylene).
[h] *Standard Methods for the Examination of Water and Wastewater*, 19th Edition (APHA, 1995)
[i] SW-846. Test methods for Evaluating Solid Waste, Physical/Chemical Methods (USEPA 1986-1996)
Mass Units: kg – kilogram, g – gram, mg – milligram, µg – microgram, ng – nanogram L – liter
ASTM – American Society for Testing & Materials
TOC – total organic carbon
PAH – polycyclic aromatic hydrocarbon
PCB – polychlorinated biphenyl
TRPH – total recoverable petroleum hydrocarbons
NA – not applicable
ICPMS – inductively coupled plasma mass spectroscopy
IR – infrared
GFAAS – graphite furnace atomic absorption spectroscopy
GC/ECD – gas chromatography/electron capture dissociation method
GC/MS SIM – gas chromatography/mass spectroscopy selective ion monitoring method
GC/FPD – gas chromatography/flame photometric detection method

4 REPORTING

A final report will document the above investigation and be supported by tables, figures, and appendices, as appropriate. The report will characterize the Site soil/sediment, describe its chemical characteristics, and if feasible given boring depths, identify underlying native soil conditions and estimate the vertical extent and volume of fill material.

5 OTHER INVESTIGATION ACTIVITIES

5.1 Photographs

Photographs will be taken of the sampling locations and surrounding site to document the sampling areas, use of field equipment, and related activities.

5.2 Boring Logs

Boring logs will be generated for each boring completed. Boring logs will document the depth below ground surface from which sample volumes are extracted. The logs will include the date, the total depth, the depth at which groundwater was encountered (if any), and the soil type in accordance with the Unified Soil Classification System. The logs will also include observations regarding soil discoloration and/or odors in ambient air, and corresponding sample identifiers.

5.3 Site Control

To avoid open boreholes at the site, with the attendant safety hazards, the boreholes will be backfilled with excavated materials. Great Ecology appreciates that spoil from the borings could be considered "investigation-derived waste," which typically would be containerized and transported offsite for disposal. However, there is no indication that the material is hazardous waste or could pose any kind of health issue and, as a result, materials will be returned to the boring holes.

5.4 Permitting and Utility Clearance

The County of San Diego, Department of Environmental Health (SDCoDEH) requires permits for soil borings to depths greater than 20 feet below ground surface; our borings will be well above this threshold and permits are therefore not needed. As required by law, Underground Service Alert of Southern California (DigAlert) will be notified of the planned investigation so that the appropriate utility companies have the opportunity to respond and check for conflicts.

5.5 Health and Safety Plan (HASP)

The proposed investigation will be conducted in accordance with a site-specific HASP. The HASP will describe the site-specific chemical and physical hazards that may be encountered, as well as "generic" hazards associated with working in proximity to trenching, drilling, and other equipment. The HASP will specify the minimum health and safety procedures and measures to eliminate or minimize site-specific and generic hazards. In addition to preparing onsite workers and management for the anticipated potential hazards, the HASP will enable workers and management to respond to changing conditions and make professional judgments regarding the interpretation of subsurface assessment data and related control measures. Specifically, the HASP will:

- Inform all field personnel, contractors, subcontractors, and visitors of the potential hazards associated with the work to be performed at the site; and
- Identify the minimum precautionary measures and personal protective equipment.

Field personnel will be required to read, understand, and follow the HASP in the field. Subcontractors must also follow the HASP or follow their own health and safety procedures, provided these are at least as stringent.

Prior to any field work during which exposure to hazardous conditions could occur, contractor and subcontractor personnel will be required to sign a HASP review form as an acknowledgement of their understanding of its contents and as an agreement to follow its procedures and guidance. Visitors to the Site will be familiarized with the HASP and will be required to sign a HASP review form. A copy of the HASP will be available onsite while soil/sediment sampling work is in progress.

5.6 Anticipated Schedule

The project team anticipates completing field work associated with soil and soil/sediment sampling and investigation between January 25 and February 10, 2017. Reporting is anticipated to be completed and delivered within 45 days of completion of field activities.

Data Qualifiers and Definitions

Qualifiers

A	See Report Comments.
B	Analyte was present in an associated method blank.
B1	Analyte was present in a sample and associated method blank greater than MDL but less than RDL.
BQ1	No valid test replicates. Sample Toxicity is possible. Best result was reported.
BQ2	No valid test replicates.
BQ3	No valid test replicates. Final DO is less than 1.0 mg/L. Result may be greater.
C	Possible laboratory contamination.
D	RPD was not within control limits. The sample data was reported without further clarification.
D1	Lesser amount of sample was used due to insufficient amount of sample supplied.
D2	Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
DW	Sample result is calculated on a dry weigh basis.
E	Concentration is estimated because it exceeds the quantification limits of the method.
I	The sample was read outside of the method required incubation period.
J	Reported value is estimated
L	The laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was out of control limits. Associated sample data was reported with qualifier.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
M1	The matrix spike (MS) or matrix spike duplicate (MSD) is not within control limits due to matrix interference.
M2	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits. The associated LCS and/or LCSD was not within control limits. Sample result is estimated.
N1	Sample chromatography does not match the specified TPH standard pattern.
NC	The analyte concentration in the sample exceeded the spike level by a factor of four or greater, spike recovery and limits do not apply.
P	Sample was received without proper preservation according to EPA guidelines.
P1	Temperature of sample storage refrigerator was out of acceptance limits.
P2	The sample was preserved within 24 hours of collection in accordance with EPA 218.6.
Q1	Analyte Calibration Verification exceeds criteria. The result is estimated.
Q2	Analyte calibration was not verified and the result was estimated.
Q3	Analyte initial calibration was not available or exceeds criteria. The result was estimated.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
S1	The associated surrogate recovery was out of control limits; result is estimated.
S2	The surrogate was diluted out due to the presence of high concentrations of target and/or non-target compounds. Surrogate recoveries in the associated batch QC met recovery criteria.
S3	Internal Standard did not meet recovery limits. Analyte concentration is estimated.
T	Sample was extracted/analyzed past the holding time.
T1	Reanalysis was reported past hold time due to failing replicates in the original analysis (BOD only).
T2	Sample was analyzed ASAP but received and analyzed past the 15 minute holding time.
T3	Sample received and analyzed out of hold time per client's request.
T4	Sample was analyzed out of hold time per client's request.
T5	Reanalysis was reported past hold time. The original analysis was within hold time, but not reportable.
T6	Hold time is indeterminable due to unspecified sampling time.
T7	Sample was analyzed past hold time due to insufficient time remaining at time of receipt.

Definitions

DF	Dilution Factor
MDL	Method Detection Limit. Result is reported ND when it is less than or equal to MDL.
ND	Analyte was not detected or was less than the detection limit.
NR	Not Reported. See Report Comments.
RDL	Reporting Detection Limit
TIC	Tentatively Identified Compounds

Subject: RE: Pond 20 Mitigation Bank (01/30/17) - Enthalpy Analytical Final Report #387148

Ranjit-
Good morning,
We would like to proceed with running the Pond 20 samples for SPLP, and analyze for arsenic. We will run the samples with the highest dry weight values in each core: P20-1M (Berm), and also samples P20-2Z, P20-3Z, and P20-4Z (Interior). So four samples total of the batch. From a QA perspective, there will be a duplicate in the batch, correct? (i.e., not necessarily one of our samples).

Thanks
Nick

Nick Buhbe, M.S.
Director, Western Region

Subject: RE: Pond 20 Mitigation Bank (01/30/17) - Enthalpy Analytical Final Report #387148

Nick,

SPLP extraction = $35
EPA 6010B As = $15

Total = $50 per sample (standard 5-7 business day TAT)

Subject: RE: Pond 20 Mitigation Bank (01/30/17) - Enthalpy Analytical Final Report #387148

Ranjit-
How much would it cost to run SPLP analyses for arsenic alone, for four of the samples?

I think there may be a set-up fee, then a per sample cost? At least that's how they used to price these at CEL, for dredge material.

And are there holding time restrictions on this analysis that would come into play?

Thanks,
Nick

Ranjit-
Good morning,

We have a potential request from this client to perform SPLP analyses on these samples. We are working out the precise request in terms of how many samples, modifications to the method, etc., but first things first:

Can you verify that you still have the samples on-hand?

Thank you.
Nick

Subject: Pond 20 Mitigation Bank (01/30/17) - Enthalpy Analytical Final Report #387148

Hi Nick Buhbe,

Attached is your final report #387148.

Thank you.

In accordance with our paperless initiative, we are no longer mailing or faxing reports by default. If you require a hard copy, please inform your Project Manager.

Data qualifiers and additional information necessary for the interpretation of the test results are contained in the PDF file and may not be included in the EDD.

CONFIDENTIALITY NOTICE: The contents of this email message and any attachments are intended solely for the addressee(s) and may contain confidential, proprietary and/or privileged information and may be legally protected from disclosure. If you are not the intended recipient of this message or their agent, or if this message has been addressed to you in error, please immediately alert the sender by reply email and then delete this message and any attachments and the reply from your system. If you are not the intended recipient, you are hereby notified that any disclosure, use, dissemination, copying, or storage of this message or its attachments is strictly prohibited.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 17-02-0124 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 02/01/17. They were assigned to Work Order 17-02-0124.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

SM 2540B - TOTAL SOLIDS:
The values for % solids were provided by Enthalpy.

Glossary of Terms and Qualifiers

Work Order: 17-02-0124 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

APPENDIX E: SOIL AGRICULTURAL SUITABILITY REPORT

Anaheim Office
Lab No: 17-039-0008
February 17, 2017

Great Ecology
2251 San Diego Ave. Suite A218
San Diego, CA 92110

Attn: Nick Buhbe

POND 20 SAN DIEGO, CA- JOB # CA281.002

Attached are the results of the analyses performed on four soil samples that were received by our laboratory on February 8, 2017. These samples were analyzed to determine salinity (ECe), sodium adsorption ratio (SAR), soluble cations (calcium, magnesium, potassium and sodium), sulfate, boron, pH and qualitative lime.

Analytical Results:

Salinity (ECe) is elevated in all four samples, ranging from 60.4 dS/m in the P20-2Z to 88.6 dS/m in the P20-4Z sample. In all four samples, soluble sodium is the greatest contributor to salinity and is not properly balanced by calcium and magnesium in regards to soil structure formation and water infiltration, as indicated by the high sodium adsorption ratio (SAR) values ranging from 60.56 in the P20-2Z sample to 85.06 in the P20-1Z sample. Soils with an SAR of 15 or greater are described as "sodic". This is a condition in which sodium is expected to have a severe negative impact on soil structure and water infiltration.

Boron is elevated in the four samples, ranging from 2.42 parts per million (ppm) in the P20-1Z sample to 10.50 ppm in the P20-2Z sample. Elevated boron can cause burning of foliage and when very high can have a severe negative impact on plant growth of many species and, potentially, survivability.

The reaction of the soil represented by the P20-2Z sample is slightly alkaline at 7.2 on the pH scale, which is suitable for a broad range of plants. The other three samples are moderately alkaline with pH values ranging from 7.8 in the P20-Z sample to 8.0 in the P20-3Z sample. Salt marsh plants do tend to have some tolerance for alkaline soil conditions and this may not be an issue, though some plants could potentially show some yellowing of younger foliage. An absence of qualitative lime in all four samples indicates that the soil is weakly buffered in the alkaline range.

Comments

These salinity levels are even higher throughout than in the past analysis at Del Mar Phase 2.

We assume that salt marsh plants with a high tolerance of saline soil conditions are slated for this project.

In the event that an attempt is made to reclaim this soil for non-halophytes, the following comments are provided as they were in the previous report.

If there is a desire to reduce soluble salts then leaching irrigations should be applied to flush salts from the root zone. Drainage must be sufficient for leaching to be effective. Severely compacted areas should be ripped or tilled to a depth of at least 9 inches.

It would also be prudent to incorporate gypsum in areas to be leached to provide additional soluble calcium to help adjust SAR values downward. It is worth noting that we often see good downward water movement through the soil profile in sodic soils when the ECe value is also very high, as is the case in all of these samples. In those instances, water movement will often be sufficient at the start of leaching but as the ECe decreases and the SAR remains elevated, the soil can "lock up" and drainage will slow. Gypsum should help with this but it is something to monitor for.

Be sure to allow the soil to dry slightly between irrigations to avoid creating anaerobic soil conditions. Leaching irrigations should be applied evenly and in a manner that avoids run off and pooling.

The amount of leaching that will be applied to reduce salts should also reduce boron in the soil. After leaching, consider submitting samples for re-testing to determine post-leaching salinity, SAR and boron values. Additional leaching and/or gypsum application may be needed.

Also keep in mind that as salts are flushed out of the root zone, the sub soil is likely to remain saline and high in boron. Some plants could still potentially show burning of foliage.

Provided below are gypsum application rates and leaching recommendations. These estimates are designed with the goals of reducing salinity to less than 4.0 dS/m and reducing the SAR to less than 6.0. If the plants chosen for this project have a high tolerance to elevated salinity, less gypsum will be required.

Sample Identification	**Lbs. of gypsum to apply in lbs. per 1000 sq. ft. to a depth of 6 inches**	**Amount of leaching to apply in inches.**
P20-1Z	200	13
P20-2Z	200	12
P20-3Z	200	13
P20-4Z	200	14

There is some chance that pH values may also decrease as the SAR values decrease. However, high pH values due to sodic conditions are typically in the 8.5 to 9.0 range and it does not appear that, in this case, the alkaline reaction is due to sodicity. The pH values will likely remain in the alkaline range even as the SAR values decrease.

If follow up testing again shows moderately alkaline reaction and you wish to adjust the pH values downward to avoid any potential issues of alkalinity induced chlorosis that can be accomplished by incorporating soil sulfur. The rates of sulfur incorporation should be based on pH values after the SAR values have reached safely low levels.

If we can be of any further assistance, please feel free to contact us.

1. TOPOGRAPHIC MAPPING PREPARED BY TOWILL USING LIMITED FIELD SURVEY AND CONTROL AND LiDAR. SUPPLEMENTAL GROUND SURVEY WAS PERFORMED BY ESA IN 2016 AND 2017. NOT ALL SURVEY POINTS ARE SHOWN, BUT THEY ARE AVAILABLE TO THE CONTRACTOR IF REQUESTED, THE AERIAL PHOTOGRAPHY WAS TAKEN AT THE SAME TIME AS THE LiDAR COLLECTED BY TOWILL.
2. ELEVATIONS ARE REFERENCED TO NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD 88). HORIZONTAL CONTROL IS CALIFORNIA STATE PLANE COORDINATE SYSTEM, ZONE 6, IN FEET (NAD 83). ALL ELEVATIONS AND HORIZONTAL COORDINATES ARE IN FEET. TIDAL DATUMS AT PORT OF SAN DIEGO, MEAN HIGHER HIGH WATER (MHHW) IS 5.3 FT NAVD, MEAN TIDE LEVEL (MTL) IS 2.5 FT NAVD, MEAN LOWER LOW WATER (MLLW) IS −0.4 FT NAVD.

ADDITIONAL NOTES WILL BE PROVIDED AS PART OF SUBSEQUENT DESIGN STAGES

7. SUBTIDAL: <-0.4' (1.68 ACRES)

TOTAL: 76.48 ACRES

PRELIMINARY PLANT SPECIES LIST

Scientific Name	Common Name
Subtidal	
Zostera marina	Eelgrass
Low Marsh	
Batis maritima	Saltwort
Spartina foliosa	Cordgrass
Mid Marsh	
Distichlis spicata	Saltgrass
Frankenia salina	Alkali heath
Jaumea carnosa	Jaumea
Lasthenia glabrata	Yellow rayed goldfields
Limonium californicum	Sea lavender
Salicornia pacifica	Pickleweed
Triglochin concinna	Arrow grass
High Marsh	
Arthrocnemum subterminale	Parish's glasswort
Cressa truxillensis	Alkali weed
Distichlis spicata	Saltgrass
Frankenia salina	Alkali heath
Jaumea carnosa	Jaumea
Juncus acutus ssp. leopoldii	Leopold's rush
Lasthenia glabrata	Yellow rayed goldfields
Limonium californicum	Sea lavender
Monanthochloe littoralis	Shoregrass
Pluchea odorata	Saltmarsh fleabane
Salicornia pacifica	Pickleweed
Suaeda californica	California seablite
Upland	
Achillea millefolium	Yarrow
Acmispon glaber	Deerweed
Ambrosia psilostachya	Western ragweed
Baccharis pilularis	Coyote brush
Peritoma arborea	Bladderpod
Cressa truxillensis	Alkali weed
Elymus condensatus	Giant wild rye
Elymus triticoides	Beardless wild rye
Encelia californica	California brittlebush
Eriogonum fasciculatum	California buckwheat
Eschscholzia californica	California poppy
Isocoma menziesii	Coast goldenbush
Stipa pulchra	Purple needlegrass
Salvia apiana	White sage
Salvia mellifera	Black sage
Brackish-Tolerant	
Schoenoplectus californicus	California bulrush

NOTE:
1. REFINED PLANT SPECIES LIST WITH CONTAINER SIZES, PLANT SPACING, SEED MIXES, AND APPLICATION RATES WILL BE SPECIFIED IN THE 60% DESIGN SET.

SHEET 14 OF 14
DRAWING NO. LP-xxxx-xx
REV. -

Pond 20 Site History

Pond 20 is located north of Palm Avenue, northwest of the intersection with 13th Street. The Site is located south of the confluence of Nestor Creek, the Otay River, and South San Diego Bay.

The salt evaporation and extraction industry has operated in South San Diego Bay since the early 1870s and included the bermed portion of Pond 20. In the 1890s, Western Salt Company acquired most of the salt producing entities and lands in South San Diego Bay, including Pond 20. The "Saltworks," as the Western Salt Company operation was known, included a large complex of networked condensation and crystallization salt evaporator ponds in South San Diego Bay. When operational, water traveled through the ponds by the pull of gravity, siphons, or pumps. Salt concentrated as the pond water evaporated, and the increasingly saline water was pumped from pond to pond until the salt precipitated and was harvested. Within Pond 20, lower lying channels were created parallel to the interior berm edge that likely served as borrow areas for the reconstruction and repair of the berms, and water storage for pumped transfers within the salt pond system. Pond 20 was ultimately constructed to hold water, and the entire site was underlain by a thick impermeable clay layer to prevent the leaching of water from the pond, which remains largely intact today.

In 1916, the Savage Dam failed and released Lower Otay Lake to the lower watershed. The dam failure washed away several berms within the Saltworks, including those of Pond 20, and deposited substantial volumes of sediment within Pond 20. Pond 20 and the rest of the Saltworks were restored and operational by 1918, with water entering Pond 20 via siphons. Historic photos (attached) include a 1953 image of Pond 20 as a functioning salt evaporator pond with distinct standing water.

The high elevation of Pond 20, along with its inland location and distance from the other ponds, and increased costs to pump water soon made its continued use logistically and economically inefficient within the Saltworks operation. Western Salt attempted to reincorporate Pond 20 into Saltworks operations in the 1960s using a new system of electrical pumps to facilitate the movement of water from Pond 20 to the other ponds in the network. The 1966 photo of Pond 20 shows the site partially inundated within the Western Salt Works complex. This effort ultimately failed and Pond 20 as a whole has since remained vacant. The ponded water began to slowly evaporate from the closed-system site, as shown in the photo from 1989. Today, Pond 20 is largely upland surrounded by deep borrow pits located along the inner edge of the berms that fill with water when it rains, and formed a thick white salt crust after the hypersaline water evaporated. This condition is shown in the photo taken in 2014.

The Salt Works is still in operation today, located to the northeast of Pond 20 along Bay Boulevard, and does not include Pond 20.

PUBLIC RECORDS REQUEST FORM

ATTENTION REQUESTOR: To expedite your request for District records, please fill out this form completely, and identify specifically the type of records you are requesting. Please limit your request to one facility or one site address for each request form filed. Additional forms or pages can be used if requesting information for more than one facility or for records not identified on this form. Requests should reasonably describe identifiable records prepared, owned, used, or retained by the District. District Public Records staff is available to assist you in identifying those records in the District's possession. The District is not required by law to create a new record.

INSTRUCTIONS FOR REQUESTING RECORDS

1. In order to expedite your request, requests for records should be in writing. Requests will be processed in the order received. A form is available on the APCD's web page at http://www.sdapcd.org. Requests may be submitted by facsimile to (858) 586-2601, or by email to apcdpermits@sdcounty.ca.gov.

2. Requests must be for records prepared, owned, used, or retained by the District. Requests should be for clearly identifiable records. If necessary, the District will assist the requestor in making a request that describes reasonably identifiable records. Copies will not be provided if disclosure would infringe upon a copyright, trade secret, or is otherwise exempt in accordance with state law.

3. A search for facility records can only be conducted by one or all of the following:

    i. Facility Name, Address, or Identification Number;
    ii. Facility Application Number, or Permit to Operate Number; or
    iii. Facility Notice of Violation/Notice to Comply Number.

4. You will be notified in writing within ten (10) days whether your request seeks copies of disclosable public records prepared, owned, used, or retained by this agency.

4. If the search for records finds the records voluminous, you will be notified of the approximate number of pages and/or length of time it will take to process your request.

5. If the records you requested have been marked confidential by the source of the record, you will be notified and given the option of continuing with the District's trade secret process.

6. If your request is to review records, rather than receive copies, the District will notify you once the records are gathered, and arrangements will be made for your review.

Direct costs of duplication are the following:

Paper copies: $.20 first page of each separate document plus $.05 per page for subsequent pages.

Scanned copies: $.20 first page of each separate document plus $.02 per page for subsequent pages, plus $10.00 for each CD.

Electronic copies (provided in an electronic format already maintained by the District) may be provided for free if sent electronically, or for the cost of each CD as specified above.

In addition, when records are requested in electronic format, the requestor shall bear the cost of producing a copy of the record, including the cost to construct the record and the cost of programming and computer services necessary to produce a copy of the record when either of the following applies: (1) the District would be required to produce a copy of an electronic record and the record is one that is produced only at otherwise regularly scheduled intervals, or (2) the request would require data compilation, extraction, or programming to produce the record. [Gov. Code Sec. 6253.9(b)] The District will provide an invoice for charges due along with the copied records. These charges are due and payable upon receipt of the invoice and the copied records. Non-payment of invoices could result in a requirement that requests for records be pre-paid in person before releasing the requested documents.

If you have questions pertaining to the submittal of a Public Records Act request, you may contact the Public Records staff at **(858) 586-2600, Monday through Friday, 8:00 a.m. to 5:00 p.m. Our Fax number is (858) 586-2601. Our email address is apcdpermits@sdcounty.ca.gov.**

Electronic copies (provided in an electronic format already maintained by the District) may be provided for free if sent electronically, or for the cost of each CD as specified above.

In addition, when records are requested in electronic format, the requestor shall bear the cost of producing a copy of the record, including the cost to construct the record and the cost of programming and computer services necessary to produce a copy of the record when either of the following applies: (1) the District would be required to produce a copy of an electronic record and the record is one that is produced only at otherwise regularly scheduled intervals, or (2) the request would require data compilation, extraction, or programming to produce the record. [Gov. Code Sec. 6253.9(b)] The District will provide an invoice for charges due along with the copied records. These charges are due and payable upon receipt of the invoice and the copied records. Non-payment of invoices could result in a requirement that requests for records be pre-paid in person before releasing the requested documents.

If you have questions pertaining to the submittal of a Public Records Act request, you may contact the Public Records staff at **(858) 586-2600, Monday through Friday, 8:00 a.m. to 5:00 p.m. Our Fax number is (858) 586-2601. Our email address is apcdpermits@sdcounty.ca.gov.**

PUBLIC RECORDS REQUEST FORM

ATTENTION REQUESTOR: To expedite your request for District records, please fill out this form completely, and identify specifically the type of records you are requesting. Please limit your request to one facility or one site address for each request form filed. Additional forms or pages can be used if requesting information for more than one facility or for records not identified on this form. Requests should reasonably describe identifiable records prepared, owned, used, or retained by the District. District Public Records staff is available to assist you in identifying those records in the District's possession. The District is not required by law to create a new record.

San Diego Air Pollution Control District
INSTRUCTIONS FOR REQUESTING RECORDS

1. In order to expedite your request, requests for records should be in writing. Requests will be processed in the order received. A form is available on the APCD's web page at http://www.sdapcd.org. Requests may be submitted by facsimile to (858) 586-2601, or by email to apcdpermits@sdcounty.ca.gov.

2. Requests must be for records prepared, owned, used, or retained by the District. Requests should be for clearly identifiable records. If necessary, the District will assist the requestor in making a request that describes reasonably identifiable records. Copies will not be provided if disclosure would infringe upon a copyright, trade secret, or is otherwise exempt in accordance with state law.

3. A search for facility records can only be conducted by one or all of the following:

    i. Facility Name, Address, or Identification Number;
    ii. Facility Application Number, or Permit to Operate Number; or
    iii. Facility Notice of Violation/Notice to Comply Number.

4. You will be notified in writing within ten (10) days whether your request seeks copies of disclosable public records prepared, owned, used, or retained by this agency.

4. If the search for records finds the records voluminous, you will be notified of the approximate number of pages and/or length of time it will take to process your request.

5. If the records you requested have been marked confidential by the source of the record, you will be notified and given the option of continuing with the District's trade secret process.

6. If your request is to review records, rather than receive copies, the District will notify you once the records are gathered, and arrangements will be made for your review.

Direct costs of duplication are the following:

Paper copies: $.20 first page of each separate document plus $.05 per page for subsequent pages.

Scanned copies: $.20 first page of each separate document plus $.02 per page for subsequent pages, plus $10.00 for each CD.

Electronic copies (provided in an electronic format already maintained by the District) may be provided for free if sent electronically, or for the cost of each CD as specified above.

In addition, when records are requested in electronic format, the requestor shall bear the cost of producing a copy of the record, including the cost to construct the record and the cost of programming and computer services necessary to produce a copy of the record when either of the following applies: (1) the District would be required to produce a copy of an electronic record and the record is one that is produced only at otherwise regularly scheduled intervals, or (2) the request would require data compilation, extraction, or programming to produce the record. [Gov. Code Sec. 6253.9(b)] The District will provide an invoice for charges due along with the copied records. These charges are due and payable upon receipt of the invoice and the copied records. Non-payment of invoices could result in a requirement that requests for records be pre-paid in person before releasing the requested documents.

If you have questions pertaining to the submittal of a Public Records Act request, you may contact the Public Records staff at **(858) 586-2600, Monday through Friday, 8:00 a.m. to 5:00 p.m. Our Fax number is (858) 586-2601. Our email address is apcdpermits@sdcounty.ca.gov.**

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction orforecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

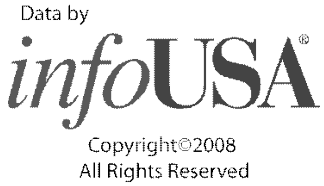

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1903 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 2640 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

Contact: Travis Meier

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EDR® Environmental Data Resources Inc

BUILD FAX® PROPERTY HISTORY

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of Kleinfelder, Inc. on Feb 08, 2018.

TARGET PROPERTY

90 Acres North of Palm Avenue
San Diego, CA 92154

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **YES**

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000
Permit Type: Bldg -
New Permit Number: 101000000405
Status: Valuation: $1,000,000.00

The EDR Property Tax Map Report

Environmental Data Resources Inc

6 Armstrong Road
Shelton, CT 06484
800.352.0050
www.edrnet.com

EDR Property Tax Map Report

Environmental Data Resources, Inc.'s EDR Property Tax Map Report is designed to assist environmental professionals in evaluating potential environmental conditions on a target property by understanding property boundaries and other characteristics. The report includes a search of available property tax maps, which include information on boundaries for the target property and neighboring properties, addresses, parcel identification numbers, as well as other data typically used in property location and identification.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting

the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

CVS PHARMACY #9115	*645 SATURN BLVD*	*ESE 1/8 - 1/4 (0.189 mi.)*	*J46*	*124*

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 8 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/30/2017 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 19 LUST sites within approximately 0.5 miles of the target property.

SAN DIEGO CO. SAM: The listing contains all underground tank release cases and projects pertaining to properties contaminated with hazardous substances that are actively under review by the Site Assessment and Mitigation Program.

A review of the SAN DIEGO CO. SAM list, as provided by EDR, and dated 03/23/2010 has revealed that there are 16 SAN DIEGO CO. SAM sites within approximately 0.5 miles of the target property.

SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the SLIC list, as provided by EDR, has revealed that there are 10 SLIC sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 6 UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 11 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2017 has revealed that there are 2 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 4 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Site History:	According to the Phase II report, several Polynuclear Aromatic Hydrocarbons (PAHs) found during soil sampling in a vacant lot are above the California Human Health Screening Levels (CHHSLs) for residential and commercial use soil. The improvement activities include the reuse of two existing structures and the current vacant lot will be improved with landscaping.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Registry ID: 110055767255

Environmental Interest/Information System
STATE MASTER

Registry ID: 110006487621

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110002881123

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Local Agency:	SAN DIEGO COUNTY LOP
File Location:	Local Agency
Local Case Number:	H21344-002
Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Gasoline
Site History:	The case was opened after soil contamination was discovered during the removal of two 12,000 gallon underground storage tanks (UST) on March 27, 1995. The maximum concentrations of TPHg and benzene were detected beneath the underground storage tank and dispenser island areas. Two site assessments were conducted in 1995 which included the installation of ten wells (5 wells were destroyed/replaced) and four soil borings. MTBE wasn't analyzed until 2001. The extent of contaminated soil with TPH concentrations greater than 100 mg/kg extended from 5 to 15 feet in the areas of monitoring wells MW2, MW4

TESORO (USA) 63099 (Continued) **S103950687**

and MW5, near the former USTs and south of the dispenser areas. The extent of soil contamination has been shown to be limited to the property. The consultant estimated that approximately 2,000 cubic yards of contaminated soil remain onsite. Two soil vapor surveys and human health risk assessments were conducted for the site. The consultant concluded that there was not an excess cancer risk to human health from vapor intrusion. Eleven monitoring wells were installed in association with the site investigation. Two pre-existing wells (GTI1 & GTI2) were also monitored. Groundwater monitoring was conducted at the site from July 1995 until June 2010. Maximum concentrations of 360,000 ug/l gasoline (TPHg), and 15,000 ug/l benzene, were detected in groundwater at the site. The extent of the groundwater plumes were mainly confined to the site. The site is located in a beneficial use groundwater area. Thrifty Oil submitted a Corrective Action Plan (CAP) in 2002 proposing a feasibility test for dual phase extraction (DPE). DPE feasibility testing was later approved by the DEH in August 2003 for wells MW2 and MW4. Four DPE events were initially conducted at the site between October 27 and 30, 2003. The test indicated that hydrocarbons were removed at a rate of approximately 2.24 pounds per hour. A revised CAP was submitted to DEH in December 2007 with an Addendum dated May 18, 2008 which were conditionally approved by DEH on May 18, 2008. The CAP included a work plan for a DPE event. An additional DPE event was conducted during October and November 2008, after it was determined that the City of San Diego was proceeding with the sewer installation. Four quarters of groundwater monitoring were conducted to evaluate the effectiveness of the DPE event. Underground utilities near the site include gas, electric, sewer, telephone and water lines. All of the utilities except the sanitary and storm sewer lines are buried less than 4.5 feet below ground surface. The sewer lines adjacent to the site are buried at depths of 8 to 9 feet and therefore were potential conduits for groundwater flow. However, according to the consultant, the dissolved plumes did not appear to be following the sewer lines that are oriented north-south and east-west. The hydrocarbon plume appeared to follow groundwater flow direction which was to the southeast and southwest. Wells MW7 & MW8 were abandoned in 2004, due to the City of San Diego's plans to construct a sewer line in the street. A CAP progress report and closure request was submitted in November 2010, following completion of the groundwater monitoring events. The consultant concluded the following: that all former sources of contamination had been removed from the site; the amount of residual soil contamination was limited; that vapor phase concentrations in subsurface soil beneath the building would not pose an unacceptable health risk to site occupants; and that the groundwater plume was assessed and contracting. The concentrations of contaminants in all wells were decreasing or slightly fluctuating. The consultant estimated that benzene will attenuate to reach the maximum contaminant level (MCL) in 53 years; MTBE will reach the MCL in approximately 16 years, and TBA will reach the State notification level in approximately 60 years. The groundwater plume does not pose a threat to sensitive receptors based its size and location. The plume is generally confined to the site boundaries. The nearest surface water body is a concrete lined channel 350 feet south of the site. The previously low detections in wells MW7 & MW8, and current decreasing concentrations in all wells indicate that it is unlikely that the plume will travel past its current configuration; and therefore, will not reach the channel. According to the consultant,

TESORO (USA) 63099 (Continued) **S103950687**

the California American Water Company is the local water purveyor in the area and they do not have any public supply wells within a one-mile radius of the site. They buy all of their water from the City of San Diego. There may be up to five irrigation wells located within a one-mile radius of the site. The existence of these wells could not be verified by the consultant.

FINDS:

Registry ID: 110002737691

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

CVS PHARMACY #9115 (Continued) **1015740268**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Case Worker: CF
RB Case Number: 9UT3469
Local Agency: SAN DIEGO COUNTY LOP
File Location: Local Agency
Local Case Number: H03268-001
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History: A dispenser island renovation was performed in 1997 at the service station located on the southwest corner of the intersection of Palm Avenue and Saturn Boulevard in South San Diego, California. Soil samples were collected adjacent to each dispenser at depths of 5.5 to 6 feet below ground surface (bgs). Samples were also collected at a depth of 6 feet bgs beneath associated product piping and at a depth of 8 feet bgs between two existing single-walled fiberglass underground storage tanks (USTs) containing gasoline. Analytical results for the samples indicated that a release of gasoline had occurred. DEH opened an unauthorized release case for the site on April 14, 1997. The Site is located within the Otay Valley Hydrologic Area which is designated as beneficial for municipal, agricultural, and industrial uses. Site assessment activities at the site commenced in February 1998 with the installation of four groundwater monitoring wells to depths of approximately 26 feet bgs. Water levels measured in the wells were approximately 5.5 to 6.5 below top-of-casing reference points. Groundwater elevation data indicated a westerly flow direction. Analytical results indicated detection of gasoline and its constituents, including benzene, toluene, ethylbenzene, xylene and the fuel oxygenate methyl-tert-butyl-ether (MTBE), confirming that the unauthorized release had impacted groundwater. Three piezometers and 9 additional monitoring wells were subsequently installed at the site. On December 10, 2002, the single-walled gasoline USTs and product piping at the site were removed under DEH permit and replaced with two double-walled USTs. The waste oil UST at the site was removed on April 24, 2009. Due to the presence of soil staining and a hydrocarbon sheen on groundwater in the excavation, a second unauthorized release case (#H03268-002) was opened. The waste

SHELL SERVICE STATION (Continued) **1000404985**

oil case was consolidated into DEH Case #H03268-001 on January 13, 2010. Two rounds of cone penetrometer test (CPT) assessment activities were performed at the site to assess whether two separate water-bearing zones were present in the shallow subsurface. Six CPT soundings were advanced on May 12 and 13, 2005, and depth-discrete groundwater samples were collected. An additional 6 CPT soundings were advanced on August 20 through 22, 2012. Discrete-depth groundwater samples were collected. Based on the CPT data, the consultant concluded that it does not appear that there are two separate water-bearing zones beneath the site. However, the consultant stated that a gravel layer encountered at a depth of 17 feet bgs may be acting as a preferential pathway. A Corrective Action Plan (CAP) was submitted for the site on May 13, 2014. The CAP documents that limited residual soil impacts remain onsite. There are an estimated 186 cubic yards (yd3) of impacted soil remaining in the area of the dispenser islands. The primary impacts are to groundwater. Shell completed some minor remedial efforts at the site, including excavation of impacted soil at the time of UST removals and system upgrades (853 yd3), a dual-phase extraction pilot test (162 pounds), and multiple well pump-out events (29,475 gallons). A review of sensitive receptor survey was completed within a mile of the site. No off-site sensitive receptors were identified. The consultant evaluated the potential health risk for on-site employees from vapor intrusion using SWRCB Low-Threat Closure Policy criteria and determined there was no risk. The CAP concluded that the lateral extent of the dissolved plume is stable and that dissolved contaminant concentrations exhibit decreasing tends. Trend analyses for contaminant analytical data for site wells indicate that water quality goals for benzene, MTBE, and TBA will be met in approximately 42, 15, and 18 years, respectively. It was noted that TBA concentrations for the samples collected from one piezometer are stable (i.e., the trend is flat). Since TBA is a degradation product of MTBE, and it is estimated that the MTBE concentrations in the vicinity of the piezometer will take 15 years to degrade its MCL, DEH estimates that TBA would take up to 37 years to reach its California Public Health Goal. The CAP recommended no further action (i.e., remediation of gasoline-impacted soil and groundwater by natural attenuation) and case closure for the site. DEH concurred with these recommendations and approved the CAP on September 11, 2014.

Local Agency: SAN DIEGO COUNTY LOP
File Location: Local Agency
Local Case Number: H03268-002
Potential Media Affect: Not reported
Potential Contaminants of Concern: Not reported
Site History: In March 1997, case H03268-001 was opened following UST upgrading activites. Groundwater has been monitored and sampled at the site begining in 1998. Please see the Enironmental Data tab for additional site specific information. In April 2009, a 550-gallon waste oil UST was removed and soil samples were collected and anaylzed. Based on the analytical results of the soil samples, case H03268-002 was opened. In January 2010, DEH consolidated cases H03268-001 and H03268-002. Please refer to case H03268-001for technical documents and correspondences.

FINDS:

Registry ID: 110002801068

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

RB Case Number:	9UT2154
Local Agency:	SAN DIEGO COUNTY LOP
File Location:	Local Agency
Local Case Number:	H05360-002
Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Gasoline
Site History:	Case Summary: Unauthorized release case H05360-001 was opened after an environmental assessment conducted in 1986 showed the presence of fuel-degraded soil and groundwater at the site. Free product was also reported in two monitoring wells. Release case H05360-002 was later opened following the discovery of a release of gasoline from a product line in 1992. The two cases were consolidated into one case (H05360-002) in January 2010. A total of 30 groundwater monitoring wells were installed and sampled to delineate the extent of petroleum hydrocarbon contamination from the two releases. A soil vapor extraction (SVE) remediation system operated at the site between May 1989 and February 1997, and reportedly removed approximately 19,530 pounds of petroleum hydrocarbons. Approximately 326 gallons of free product was recovered by hand-bailing from May 1996 to April 2010, when free product was no longer observed in any wells. In 1994, approximately 25 tons of impacted soil was excavated during a UST realignment and transported to the Candelaria facility in Anza, CA. In September 2000, one 250-gallon waste oil underground storage tank (UST) and three 10,000-gallon gasoline USTs were removed from the site along with the dispensers and associated product piping. The tank cavity was over-excavated, and a total of approximately 774 tons (521 cubic yards) of hydrocarbon-impacted soil was transported to the Soil Wash Technologies, Inc. facility in San Diego, CA for disposal. In August 2005, soil vapor samples were collected from ten on-site locations at depths of five feet and ten feet below grade. The maximum benzene, toluene, ethylbenzene, and xylenes concentrations were reported in a vapor sample collected at a depth of ten feet below ground surface. MTBE was not detected in any of the vapor samples. A cancer risk of 1.4 X 10-7 was calculated for benzene in soil vapor. The consultant states that the residual contaminants pose no significant health risk (below one in one million). In accordance with a DEH-approved Corrective Action Plan (CAP), a multi-phase extraction system was operational between September 2010 and April 2012. An estimated 1,565 pounds of petroleum hydrocarbons was removed as vapor, and approximately 2,548,760 gallons of groundwater were treated and released under a sewer discharge permit. Residual soil impacts cover an area of approximately 19,200 square feet at a depth interval between 21 to 27 feet below grade. This represents an

ARCO FACILITY #9755 (Continued) **S104581408**

estimated volume of residual impacted soil of 4,200 cubic yards. Following the shutdown of the system in late 2012, due to asymptotic conditions, four consecutive quarters of post remediation groundwater sampling were conducted. Trend analyses were completed using the post-remediation data, and Thrifty calculated that benzene concentrations will naturally attenuate to the Maximum Contaminant Level (MCL) of one microgram per liter by 2077. The California American Water Company, the water district which provides water to the City of Imperial Beach, states that they have no plans to pump groundwater in the City of Imperial Beach for distribution to its customers. Thrifty concludes that site remediation efforts were effective in removing/remediating the secondary source to the extent practicable and predicts that the residual dissolved contaminant concentrations will continue to naturally attenuate on site and off site. Case closure is recommended, and DEH concurs. A 60-day public review and comment period regarding DEHs intent to close the case was completed on June 2, 2014. DEH received a comment letter from the City of San Diego, Public Utilities Department expressing concerns regarding potential impacts on the Citys ability to develop groundwater resources near the site in the future. Both Thrifty and DEH sent response letters addressing their comments.

Local Agency:	SAN DIEGO COUNTY LOP
File Location:	Local Agency
Local Case Number:	H12196-002
Potential Media Affect:	Aquifer used for drinking water supply, Soil
Potential Contaminants of Concern:	Gasoline
Site History:	Comments: The Site is located on the southwestern corner of the intersection of Palm Avenue and 11th Street in Imperial Beach, CA. The Site is a former gasoline station which included four underground storage tanks (USTs): two 12,000-gallon regular unleaded gasoline USTs, one 10,000-gallon diesel UST, and one 500-gallon waste oil UST. Other previous features of the Site included eight fuel dispensers located at two islands. Currently, the Site is an auto repair and truck rental facility. On November 4, 2003, the product piping, dispensers and four USTs were removed from the Site. One 10,000-gallon diesel UST, two 12,000-gallon unleaded gasoline USTs, and one 280-gallon waste oil UST were removed. Free product was observed in the tank excavation upon removal of the USTs. Approximately 250 tons of potentially hydrocarbon-impacted soil was excavated and disposed during demolition activities. Based on these results, SAM opened Unauthorized Release Case H12196-002. In July 2007, a vapor risk assessment was conducted to evaluate potential health risk posed by benzene and naphthalene vapor migration to the surface from impacted soil and groundwater at the Site. A total of four vapor probes were installed (two near the station building and two on the western portion of the Site) to assess potential risk to occupants of the station building and an adjacent building. Vapor risk was evaluated using the SAM Vapor Risk 2000 Model. Based on the results of the assessment, it was concluded that the vapor risk was below the SAM threshold of 1 x 10-6 and that no further assessment of vapor risk was warranted. In September 2008, a 72-hour dual-phase extraction (DPE) feasibility test was conducted to evaluate the technical feasibility of DPE as a method of soil and groundwater remediation at the Site. During the DPE event, approximately 924 pounds of vapor-phase hydrocarbons were extracted from the soil and approximately 6,500 gallons of groundwater were extracted. The total residual petroleum hydrocarbon mass in soil (<100 mg/kg TPHg) is estimated to be approximately 1,204 pounds in the areas of the dispensers/piping and USTs. Fifteen groundwater monitoring wells and three remedial wells have been installed at the Site. Groundwater was monitored between February 2005 and May 2013. Historically, free product has been detected in MW-3. Free product removal was conducted in 2008 during the DPE feasibility test and was removed on a quarterly basis using a bailer between May 2005 and April 2012. Free product thickness ranged from 0.01 to 0.03 feet from April 2010 to April 2012 and no free product was detected during the Third Quarter 2012 groundwater sampling event. Free product has been removed to the maximum extent practicable. Hydrocarbon-impacted groundwater at the

TOSCO SVC STATION #5234-30829 (Continued) **S104747223**

Site appears to be consistent with a release from the former dispensers, piping, and USTs. On-site dissolved phase petroleum hydrocarbon concentrations are stable to declining over time. A Corrective Action Plan (CAP) and CAP Addendum were submitted on December 15, 2011 and October 1, 2013, respectively, requesting case closure. The CAP Addendum concluded that no active remediation is required to mitigate remaining hydrocarbon impacts beneath the Site. It was proposed that groundwater data be collected during the subsequent four semi-annual monitoring and sampling events to determine groundwater contaminant trends and distribution. The public participation process for the above-referenced CAP and CAP Addendum was completed. DEH received no public comments and concurred with the CAP and CAP Addendum. According to the environmental consultants registered professional, the Site presents no significant risk to human health and the environment. DEH concurs with this conclusion

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/11/2017
Date Data Arrived at EDR: 12/22/2017
Date Made Active in Reports: 01/05/2018
Number of Days to Update: 14

Source: EPA
Telephone: N/A
Last EDR Contact: 02/06/2018
Next Scheduled EDR Contact: 04/16/2018
Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/11/2017

Next Scheduled EDR Contact: 05/21/2018
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/11/2017

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 11/11/2017

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

PORT OF SAN DIEGO SALT POND 20
90 ACRES NORTH OF PALM AVENUE
SAN DIEGO, CA 92154

TARGET PROPERTY COORDINATES

Latitude (North):	32.586421 - 32° 35' 11.12''
Longitude (West):	117.098547 - 117° 5' 54.77''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	490751.2
UTM Y (Meters):	3605253.8
Elevation:	19 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5622818 IMPERIAL BEACH, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

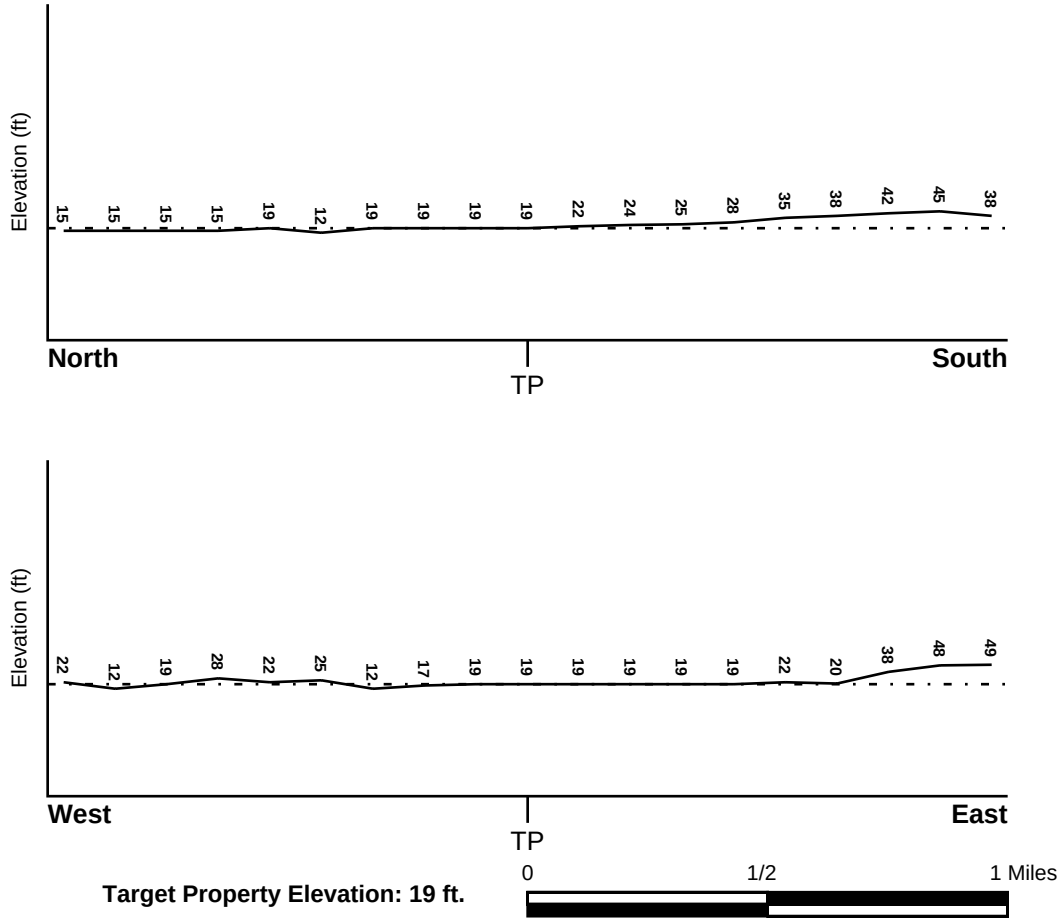

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 19 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06073C2153F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06073C2151F	FEMA FIRM Flood data
06073C2152F	FEMA FIRM Flood data
06073C2154G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
IMPERIAL BEACH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1	1/2 - 1 Mile WSW	SW
1G	1/2 - 1 Mile WSW	SW

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: LAKES AND LAGOONS

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: GRANGEVILLE

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 92 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.9
2	11 inches	59 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 8.4 Min: 7.9

Soil Map ID: 3

Soil Component Name: HUERHUERO

Soil Surface Texture: loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 6 Min: 5.1

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
2	11 inches	55 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 0.42 Min: 0.01	Max: 8.4 Min: 7.4
3	55 inches	72 inches	stratified sand to sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 4 Min: 1.4	Max: 8.4 Min: 7.4

Soil Map ID: 4

Soil Component Name: HUERHUERO

Soil Surface Texture: loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

1	0 inches	11 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 6 Min: 5.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
2	11 inches	55 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.42 Min: 0.01	Max: 8.4 Min: 7.4
3	55 inches	72 inches	stratified sand to sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 4 Min: 1.4	Max: 8.4 Min: 7.4

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish & Game
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Contact: Travis Meier

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Kleinfelder, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

INTERVIEW QUESTIONNAIRE
PHASE I ENVIRONMENTAL SITE ASSESSMENT
Compatible with ASTM Standard E 1527-13

Prepared by Kleinfelder Environmental Site Characterization Practice Group
Version 1: February 20, 2006

Site Name: VMT Auto Sales

Site Address: 1502 Palm Ave, San Diego, CA 92154

Date: March 21, 2018

Interviewer: Travis Meier

Interviewee: Victor Tirado

Site Association: Occupant for 29 years

Years Associated: 29

Please answer the following questions to the best of your knowledge.

1. Was the property or adjoining property ever used for industrial purposes (e.g. manufacturing) or as a gas station, dry cleaners, waste treatment, processing facility, motor repair facility, photo lab, commercial printing facility, junkyard/disposal/recycling/ landfill? If yes, please list the activity, hazardous substances used, and approximate dates when the activity occurred.

   Prior land use, hazardous substances used, and dates:
   Adjacent to E is

   Prior owners, key site managers/operators, occupants and dates:
   Victor Tirado, 29 years, car sales lot prior to occupancy.

   Existing or prior structures used for what purposes and duration:
   Small mobile office w/ attached storage area, covered workarea

2. Do any of the following documents exist for the site or any portion of the site? If so, can you provide Kleinfelder with a copy? (This question to be asked before site visit).

- ☐ Environmental site assessment reports
- ☐ Environmental compliance audit reports
- ☐ Environmental permits
- ☐ Underground Storage Tank registration
- ☐ Underground Injection System registration
- ☐ Material Safety Data Sheets
- ☐ Community Right-To-Know Plan
- ☐ Safety plans: preparedness and prevention plans; spill prevention; countermeasure; and control plans, etc.
- ☐ Reports regarding hydrogeologic conditions on the property or surrounding area;
- ☐ Correspondence from any government agency relating to past or current violations of environmental laws with regard to the property or relating to environmental liens encumbering the property
- ☐ Hazardous waste generator notices or reports
- ☐ Geotechnical studies
- ☐ Risk assessments
- ☐ Recorded Activity and Use Limitations (AULs)

3. Have you ever observed evidence of or do you have prior knowledge of any of the following items being used, stored, discarded, dumped above grade, buried, or burned onsite? Circle all that apply and indicate amount and approximate dates.

MATERIAL	QUANTITY	DATE(S) OBSERVED	COMMENTS
Above ground storage tank (AST)*	N/A		Size: Contents: Condition:
Automotive batteries	3	3/21/18	
Industrial batteries	2	3/21/18	
Pesticides (>5 gallon)	N/A		
Paints (> 5 gallon)	N/A		
Chemicals/Hazardous Substances (> 5 gallon liquid)	N/A		All less than 5gal (oil, paint, pavement seal)

MATERIAL	QUANTITY	DATE(S) OBSERVED	COMMENTS
Chemicals/Hazardous Substances (dry sacks, containers, etc.)	N/A		
Industrial drums (typically 55 gallons)	N/A		Contents: Condition:
Transformer or other equipment that may contain PCBs (e.g. hydraulic equipment)*	N/A		Installation date:
Underground storage tank*	N/A		Size: Contents: Condition:
Unknown materials you suspect may be hazardous substances	N/A		Describe:

*Please provide records if available.

4. What method(s) is used to contain spills of hazardous waste?

Kitty litter then disposal off-Site

5. What method(s) is used to dispose of hazardous waste?

See above

6. Are there any permits for handling, use, storage, or disposal of hazardous waste?

N/A

7. Have you observed evidence of or have prior knowledge of the following onsite?

MATERIAL	QUANTITY	DATE(S) OBSERVED	COMMENTS
Equipment Maintenance Areas	1	3/21/18	Limited vehicle maint. area
Accidental spills or releases of chemicals or petroleum products	N/A		

MATERIAL	QUANTITY	DATE(S) OBSERVED	COMMENTS
Possible asbestos containing materials (e.g. pipe, building, etc.)	N/A		Describe material:
Fill dirt originating from an unknown or contaminated site?	N/A		Source:
Pits, ponds, or lagoons associated with waste treatment or waste disposal?	N/A		Location:
Stained soil or odiferous soil? (e.g. oily black)	N/A		Location:
Sumps or dry wells*	N/A		Size : Contents : Condition :
Vent pipes, fill pipes, access ways to a fill pipe protruding from the ground or adjacent to a structure onsite?	N/A		Location:
Heating and cooling systems (include fuel source)	None		Source:
Flooring, drains, walls that are stained or emitting a foul odor (do NOT include water damage)?	N/A		Location:

*Please provide records if available.

8. Is the property served by a private well or non-public water system? If so, please answer the following: N/A

   a. Was the well used for domestic (D), agricultural irrigation (I), or monitoring (M) purposes? Are the wells currently operational and if not, when were they last used? When was the well drilled? How deep is the well? What is the approximate discharge rate?

Well No.	Type	Operating?	Last Used	Date Drilled	Depth	Discharge Rate	Location
1-							
2-							

b. Have the wells been sampled for contaminants that exceed applicable requirements for the designated use (e.g. Drinking Water Standards)? If so, please provide the dates and copies of well records.

c. Has the well or water system been designated by any governmental environmental/health agency as contaminated?

9. Is there an oil/gas well or oil/gas vent located onsite? If so, please indicate the location. Please supply any documents available.

N/A

10. Is the property or has the property to your knowledge been previously served by a septic system? If so, please indicate the location of the tank and leach lines (if applicable) and list any hazardous materials disposed.

Porta potty only, no sewer. Pumped out as needed by outside service

11. Does the property discharge waste water into a storm water sewer system or a sanitary sewer system onto or adjacent to the property? If so, please describe location, piping flow, quantity discharged, and water quality.

Yes, drain (floor) from limited maintenance area noted to discharge via underground pipe to Pond 20, west of the VMT facility. Pipe said to follow northern fence & daylight but not able to be specifically located by Mr. Tirado

12. Do you have knowledge of the following with respect to the property? Circle and explain all that apply.

a. Environmental clean-up, ongoing or pending. No

b. Environmental liens No

c. Governmental notifications regarding any possible past or present violations of environmental laws. No

d. Past, threatened, pending lawsuits or administrative proceedings relevant to a release of a hazardous substance or petroleum product, in, on, or from the property. No

e. Prior environmental assessment that indicated the presence of hazardous substances, petroleum hydrocarbons, contaminants, or recommended further assessment. No

f. Deed Restrictions No

g. Citizen complaints regarding activities onsite No

AGRICULTURAL SITES:

13. What crops have been grown onsite, currently and in the past?

CROP	DATE	LOCATION
N/A		

If crops are present or have been grown, please answer questions 14 through 16 below:

14. Have pesticides been applied to fields or other portions of the site? If so, please answer the following questions:

    a. List the names of pesticides (includes herbicides, fungicides, insecticides, rodenticide) used and dates applied.

PESTICIDE AND BRAND NAME	DATE	CROP OR ANIMAL USE
N/A		

b. Have you been notified of any violation of environmental law with respect to application or storage of pesticides?

N/A

c. Location of pesticide mixing areas, if any (past or present)?

N/A

d. Method of pesticide application?

N/A

15. Have fertilizers been applied to the site? What type and method of application?

N/A

16. Are there any buried pipelines for irrigation or other purposes onsite? If so, what materials is the piping constructed of? Asbestos containing material, PVC, other? Describe the location of buried piping.

N/A

Site Observations

General Observations	Interior	Exterior	Remarks	Photo
Self-Serve Water Station	N/A	Not Observed		
Separators and Clarifiers	Not Observed	Not Observed		
Septic Systems or Cesspools	N/A	Not Observed		
Soil piles	N/A	Not Observed		
Solid Waste	Not Observed	Not Observed		
Stained Soil or Pavement	N/A	Not Observed		
Stains and Corrosion	Not Observed	Not Observed		
Standing Surface Water or Other Pools of Liquid	N/A	Not Observed		
Storm drains/Catch basins	N/A	Not Observed		
Stressed Vegetation (Other than from insufficient water)	N/A	Not Observed		
Transformers or Equipment Containing Polychlorinated Biphenyls (PCBs)	Not Observed	Observed	Two pole mounted transformers were observed to be onsite. One pole mounted transformer is located in the southeast section of the site near the Mobil home park. The other pole mounted transformer is located north of the same parcel along the pump house fence line.	
Underground storage tank (UST)	N/A	Not Observed		
Unidentified substance containers	Not Observed	Not Observed		
Water supplies (potable and process)	Not Observed	Not Observed		
Wells (dry)	Not Observed	Not Observed		
Wells (irrigation, monitoring, or domestic)	Not Observed	Not Observed		
Wells (Oil and Gas)	N/A	Not Observed		
Wells (Tankfield Observation)	N/A	Not Observed		

INTERVIEW QUESTIONNAIRE
PHASE I ENVIRONMENTAL SITE ASSESSMENT
Compatible with ASTM Standard E 1527-13

Prepared by Kleinfelder Environmental Site Characterization Practice Group
Version 1: February 20, 2006

Site Name: Pond 20

Site Address: (No official address). Site can be accessed at 1410 Palm Ave, San Diego, CA

Date: 1-15-18

Interviewer: Travis Meier

Interviewee: Brent Eastty

Site Association: San Diego Unified Port District

Years Associated: 1998-2018

Please answer the following questions to the best of your knowledge.

1. Was the property or adjoining property ever used for industrial purposes (e.g. manufacturing) or as a gas station, dry cleaners, waste treatment, processing facility, motor repair facility, photo lab, commercial printing facility, junkyard/disposal/recycling/ landfill? If yes, please list the activity, hazardous substances used, and approximate dates when the activity occurred.

   Prior land use, hazardous substances used, and dates:
   See site history Attachment with photos.

   Prior owners, key site managers/operators, occupants and dates:
   " "

   Existing or prior structures used for what purposes and duration:
   " "

2. Do any of the following documents exist for the site or any portion of the site? If so, can you provide Kleinfelder with a copy? (This question to be asked before site visit).

- ☐ Environmental site assessment reports
- ☐ Environmental compliance audit reports
- ☐ Environmental permits
- ☐ Underground Storage Tank registration
- ☐ Underground Injection System registration
- ☐ Material Safety Data Sheets
- ☐ Community Right-To-Know Plan
- ☐ Safety plans: preparedness and prevention plans; spill prevention; countermeasure; and control plans, etc.
- ☑ Reports regarding hydrogeologic conditions on the property or surrounding area;
- ☐ Correspondence from any government agency relating to past or current violations of environmental laws with regard to the property or relating to environmental liens encumbering the property
- ☐ Hazardous waste generator notices or reports
- ☑ Geotechnical studies
- ☐ Risk assessments
- ☐ Recorded Activity and Use Limitations (AULs)

3. Have you ever observed evidence of or do you have prior knowledge of any of the following items being used, stored, discarded, dumped above grade, buried, or burned onsite? Circle all that apply and indicate amount and approximate dates.

MATERIAL	QUANTITY	DATE(S) OBSERVED	COMMENTS
Above ground storage tank (AST)*			Size: Contents: Condition:
Automotive batteries			
Industrial batteries			
Pesticides (>5 gallon)			
Paints (> 5 gallon)			
Chemicals/Hazardous Substances (> 5 gallon liquid)			

MATERIAL	QUANTITY	DATE(S) OBSERVED	COMMENTS
Chemicals/Hazardous Substances (dry sacks, containers, etc.)			
Industrial drums (typically 55 gallons)			Contents: Condition:
Transformer or other equipment that may contain PCBs (e.g. hydraulic equipment)*			Installation date:
Underground storage tank*			Size: Contents: Condition:
Unknown materials you suspect may be hazardous substances			Describe:

*Please provide records if available.

4. What method(s) is used to contain spills of hazardous waste?

n/a

5. What method(s) is used to dispose of hazardous waste?

n/a

6. Are there any permits for handling, use, storage, or disposal of hazardous waste?

no

7. Have you observed evidence of or have prior knowledge of the following onsite?

MATERIAL	QUANTITY	DATE(S) OBSERVED	COMMENTS
Equipment Maintenance Areas			
Accidental spills or releases of chemicals or petroleum products			

MATERIAL	QUANTITY	DATE(S) OBSERVED	COMMENTS
Possible asbestos containing materials (e.g. pipe, building, etc.)			Describe material:
Fill dirt originating from an unknown or contaminated site?			Source:
Pits, ponds, or lagoons associated with waste treatment or waste disposal?			Location:
Stained soil or odiferous soil? (e.g. oily black)			Location:
Sumps or dry wells*			Size : Contents : Condition :
Vent pipes, fill pipes, access ways to a fill pipe protruding from the ground or adjacent to a structure onsite?			Location:
Heating and cooling systems (include fuel source)			Source:
Flooring, drains, walls that are stained or emitting a foul odor (do NOT include water damage)?			Location:

*Please provide records if available.

8. Is the property served by a private well or non-public water system? If so, please answer the following: no

   a. Was the well used for domestic (D), agricultural irrigation (I), or monitoring (M) purposes? Are the wells currently operational and if not, when were they last used? When was the well drilled? How deep is the well? What is the approximate discharge rate?

Well No.	Type	Operating?	Last Used	Date Drilled	Depth	Discharge Rate	Location
1-							
2-							

b. Have the wells been sampled for contaminants that exceed applicable requirements for the designated use (e.g. Drinking Water Standards)? If so, please provide the dates and copies of well records.

c. Has the well or water system been designated by any governmental environmental/health agency as contaminated?

9. Is there an oil/gas well or oil/gas vent located onsite? If so, please indicate the location. Please supply any documents available.

no

10. Is the property or has the property to your knowledge been previously served by a septic system? If so, please indicate the location of the tank and leach lines (if applicable) and list any hazardous materials disposed.

no

11. Does the property discharge waste water into a storm water sewer system or a sanitary sewer system onto or adjacent to the property? If so, please describe location, piping flow, quantity discharged, and water quality.

12. Do you have knowledge of the following with respect to the property? Circle and explain all that apply.

a. Environmental clean-up, ongoing or pending.

b. Environmental liens

c. Governmental notifications regarding any possible past or present violations of environmental laws.

d. Past, threatened, pending lawsuits or administrative proceedings relevant to a release of a hazardous substance or petroleum product, in, on, or from the property.

e. Prior environmental assessment that indicated the presence of hazardous substances, petroleum hydrocarbons, contaminants, or recommended further assessment.

f. Deed Restrictions

g. Citizen complaints regarding activities onsite

AGRICULTURAL SITES:

13. What crops have been grown onsite, currently and in the past? none

CROP	DATE	LOCATION

If crops are present or have been grown, please answer questions 14 through 16 below:

14. Have pesticides been applied to fields or other portions of the site? If so, please answer the following questions:

    a. List the names of pesticides (includes herbicides, fungicides, insecticides, rodenticide) used and dates applied.

PESTICIDE AND BRAND NAME	DATE	CROP OR ANIMAL USE

b. Have you been notified of any violation of environmental law with respect to application or storage of pesticides?

no

c. Location of pesticide mixing areas, if any (past or present)?

none

d. Method of pesticide application?

n/a

15. Have fertilizers been applied to the site? What type and method of application?

no

16. Are there any buried pipelines for irrigation or other purposes onsite? If so, what materials is the piping constructed of? Asbestos containing material, PVC, other? Describe the location of buried piping.

existing sewer and storm drain 25' easements running northeasterly and southeasterly on the property boundary lines in the southern portion of the site (see attached 1999 ALTA survey)

SECTION 1
Introduction

This report documents the hydrodynamic modeling and geomorphic assessment of the Salt Pond 20 Wetland Restoration. This modeling report describes the modeling and analysis work completed to date and provides details on the project that can be used to inform the regulatory agency permitting processes, for environmental review, and as a basis for the final design.

1.1 Project Background

The San Diego Unified Port District (District) owns an 85-acre parcel in South San Diego Bay called Pond 20[1]. Pond 20 lies in the Otay River floodplain (**Figure 1-1**) and historically supported rich tidal wetland habitat but was filled and used as a commercial solar salt evaporator pond from the late 1800s until the 1940s. The District acquired the parcel in 1998 and, after many years of study and public outreach, determined the best use of Pond 20 was to restore it and use it as a commercial wetland mitigation bank.

The Pond 20 project would lower the overall elevation of the site and reconnect it to tidal flows from San Diego Bay via excavated channels. The design would generate tidal wetlands and upland transitional coastal sage scrub habitat along the perimeter of the property. The majority of Pond 20 would support mid and high marsh habitat, but the project would also establish low marsh, intertidal mudflats, and subtidal habitat along and within the tidal channels.

To the north of the project site is the Otay River Floodplain Site (**Figure 1-2**), which is part of the Otay River Estuary Restoration Project (ORERP) proposed by Poseidon Water L.P. (Poseidon) in coordination with the U.S. Fish and Wildlife Service and the San Diego Bay National Wildlife Refuge. The ORERP is being designed to addresses Poseidon's mitigation responsibilities for impacts caused by the construction and operation of the Carlsbad desalination plant. As of July 2019, the Final EIR for the ORERP is published and its Record of Decision signed and 30%-complete drawings of the Otay River Floodplain Site are complete. At this point, it is assumed that this project will be constructed before the Pond 20 project.

[1] This pond is sometimes referred to as Pond 20A, but is referred to as Pond 20 throughout this report in order to be consistent with other project documents.

Pond 20 Site

ESA

The Pond 20 restoration will need to coordinate restoration design with ORERP for eventual construction. For environmental review purposes, this report evaluates the scenario where the Pond 20 project is constructed without (or before) the ORERP, since the ORERP is not yet constructed. ESA understands that the Poseidon EIS will inform the cumulative impacts section of the Pond 20 EIR.

1.2 Previous Modeling

Previous modeling for the Pond 20 area was conducted in 2003 by Philip Williams and Associates Ltd. (PWA)[2] for the Lower Otay River Restoration project. In 2014-2016, additional modeling was conducted for the ORERP. Scott Jenkins Consulting modeled tidal flows for existing conditions and project conditions (Jenkins 2014), while Everest International Consultants modeled fluvial hydraulics to address the potential for flooding due to the project. Additionally, the Federal Emergency Management Agency (FEMA) modeled the area in 1989 with updates in 2015. These reports and their results are summarized in the following sections.

1.2.1 FEMA (2015, 1989)

The FEMA administers the National Flood Insurance Program, a voluntary Federal program that enables property owners in participating communities to purchase insurance protection against losses from flooding. The County of San Diego has adopted and enforces floodplain management regulations to reduce future flood risks, and as a result, FEMA makes flood insurance available within the community as a financial protection against flood losses. FEMA produces Flood Insurance Study (FIS) Reports and Flood Insurance Rate Maps (FIRMs) to document the existence and severity of flood hazards in a community. These reports and maps are updated regularly as conditions change, through Letters of Map Revision (LOMR) and eventually through updates to the FIRMs. The FIS Report for San Diego County covers the Otay River and Nestor Creek (FEMA 2019).

The Otay River was studied in 1981 and restudied in 1989 and 2015. While the 2015 restudy of the Otay River is the most up-to-date FEMA model the data on the hydrologic and hydraulic models or methods was not available. The Otay River upstream of the confluence with Nestor Creek to the upstream limit [not provided] was studied in 1989 using approximate methods by the United States Army Corps of Engineers (USACE), Los Angeles District, for FEMA. The hydraulic model HEC-2 was used. Per the FIS, "The 1-percent annual chance discharge was established in 1974 by the USACE and the City of San Diego (USACE, December 1974). Discharges for the 10-, 2-, and 0.2-percent annual chance floods were determined through coordination between the USACE, the City of San Diego, and San Diego County." FEMA (1989) model and methods data is shown in **Table 1-1**.

[2] Environmental Science Associates (ESA) and PWA merged in 2010. PWA is now part of ESA.

TABLE 1-1
FEMA FIS MODEL AND METHODS DATA

	Drainage Area (square miles)	Channel Manning's Roughness "n" Values	Overbank Manning's Roughness "n" Values	10% Annual Chance Peak Discharge (cfs)	2% Annual Chance Peak Discharge (cfs)	1% Annual Chance Peak Discharge (cfs)	0.2% Annual Chance Peak Discharge (cfs)
Otay River	123	0.040	0.040	1,200	12,000	22,000	50,000
Nestor Creek (At Palm Avenue)	3	0.030-0.045	0.030-0.100	*	*	1,093	*

* Not calculated
cfs = cubic feet per second
SOURCE: FEMA (2019)

Nestor Creek was studied in 1981 and restudied in 1989 using detailed methods by the United States Army Corps of Engineers (USACE), Los Angeles District, for FEMA. The hydraulic model HEC-2 was used. Per the FIS,

> *The 1-percent annual chance discharges for the Nestor Creek restudy were developed by the National Resources Conservation Service (NRCS) formerly Soil Conservation Service (SCS) (U.S. Department of Agriculture, Soil Conservation Service, 1964, with updates and Boyle Engineering Corporation, Hydrologic Analysis, 1978) for the previous FIS, but these values have been changed according to the Leedshill-Herkenhoff, Inc., report published in November 1986 "Nestor Creek Flood Control Master Plan". Starting water-surface elevations were computed using the slope-area methods. (FEMA 2019)*

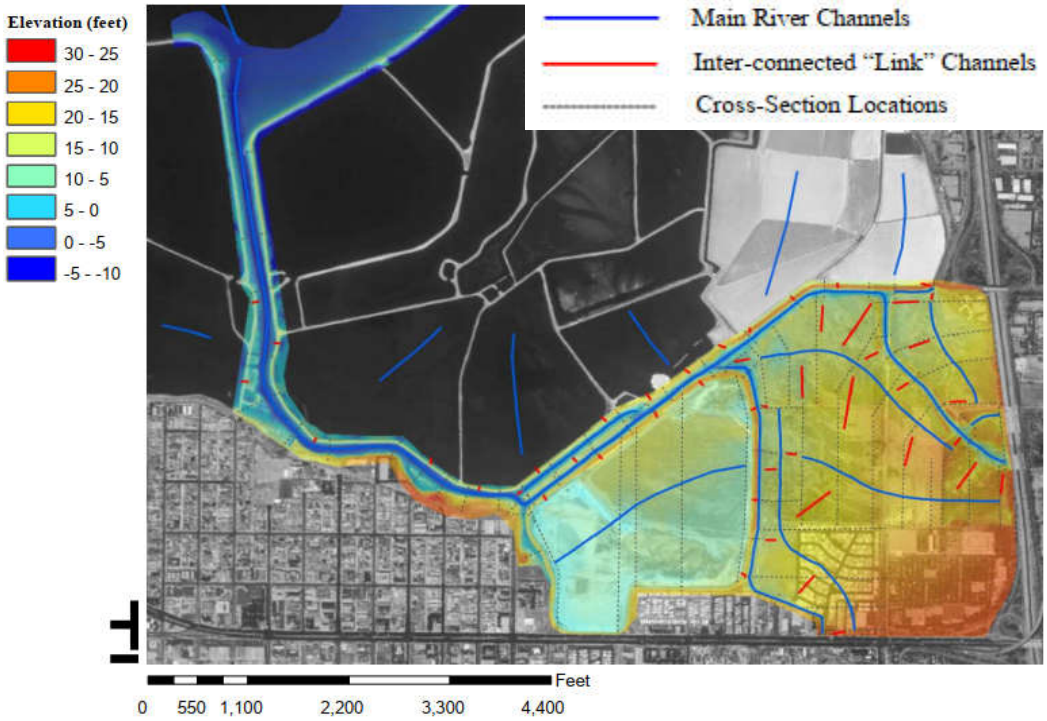

The FIS describes flood problems from the Otay River:

> *There are no major flooding problems on Otay River. Some areas downstream of Broadway Avenue will be inundated by the 1-percent annual chance flood [100-year flood]. A large flood on the Otay River will divide in such a way that the greater portion of the water will flow almost uniformly over the Southern Pacific Railroad embankment, travel 150 feet, and then flow over the perimeter dike into the salt evaporation ponds at the southern end of San Diego Bay. Once the floodwaters pass over the perimeter dike and encounter the asymmetrical maze of interior dikes, weir flow will occur in several directions simultaneously before ultimately flowing back over the dike and into the bay. The smaller portion of the floodwaters will be conveyed the last 2 miles to the San Diego Bay by a partially improved, limited-capacity, soft-bottom channel. (FEMA 2019)*

1.2.2 PWA (2003) Lower Otay River Restoration

PWA (now ESA) was contracted by Ducks Unlimited (DU) and the U.S. Fish and Wildlife Service to evaluate changes in flood conditions associated with wetland restoration alternatives for the Lower Otay River Restoration (an earlier iteration of the current Pond 20 project and ORERP). PWA used the general alternative concepts developed by the U.S. Fish and Wildlife Service and DU staff for the analysis.

PWA developed a one-dimensional MIKE11 model to represent existing and project conditions. The model included the Lower Otay River, Nestor Creek, and South San Diego Bay (**Figure 1-3**).

SOURCE: PWA 2003
NOTE: All elevations are in NAVD

Wetland Restoration of Salt Pond 20

Figure 1-3
PWA 2003 Existing Conditions Model Schematic

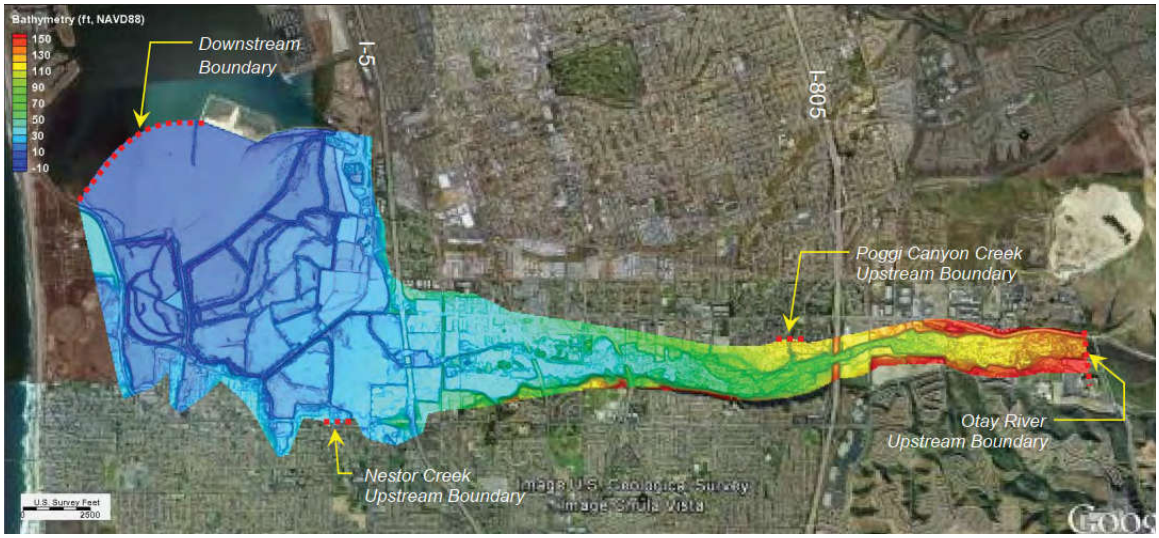

Tidal datums from the NOAA tide gage at the Navy Pier near downtown San Diego were used to develop a representative tide cycle using a cosine interpolation at a 5-min interval. A monthly tide cycle was developed using the Tides & Currents Software (1993). MHHW (5.08 ft NAVD) was used as the max high tide to match the boundary condition in the FEMA study. A simple equilateral triangle hydrograph with a storm duration of 24 hours, base flow of 10 cfs, and a peak discharge matching the FEMA 100-year stream flow was used.

The tidal conditions modeling results showed the maximum inland extent of the tides was roughly 11,500 feet from the river mouth or approximately 1,500 feet upstream from the confluence of the Otay River and Nestor Creek. Results showed some tidal muting at the site compared to tides in the San Diego Bay.

The flood conditions modeling results showed localized overbank flooding begins almost immediately, and that the hydraulic constriction between the Pond 20 levee and the salt works levees further increases flooding.

1.2.3 Everest (2016) and Jenkins (2014) Otay River Floodplain Restoration

Everest was contracted by Poseidon to conduct a fluvial hydraulic study to address the potential for flooding due to the ORERP. Everest developed a two-dimensional (2D) model using TUFLOW to represent existing and ORERP conditions. Topographic data from 2010-2012 was used to develop a DEM for the model extent, which extends further east than the PWA modeling (**Figure 1-4**). The pedestrian bridge at the corner of the Pond 20 site was modeled with blockages based on a visual observation of the bridge.

SOURCE: Everest 2016

Pond 20 Mitigation Bank

Figure 1-4
Everest 2016 Model Extent

Tidal datums from the NOAA Naval Pier tide gage were used to develop a synthetic tidal series. This is the same gage used by PWA, but Everest used the updated tidal epoch so the values are raised by 0.21 – 0.23 feet. The series was developed by fitting a sinusoidal curve to the datums over a 24-hour period. Similar to PWA, the highest observed water level was not used for the 100-year storm event model boundary and MHHW was used as a more realistic representation of a storm event.

As was done by PWA, a simple equilateral triangle hydrograph with a storm duration of 24 hours, base flow of 10 cfs, and a peak discharge matching the 100-year stream flow was used.

Scott Jenkins Consulting was contracted by Poseidon to model tidal flows for existing conditions and ORERP conditions (Jenkins 2014). Jenkins used the tidal hydraulics model, TIDE_FEM, and the littoral transport model TIDE_FEM/SEDXPORT. The model used a 30-year simulation period of San Diego Bay tides, 1980-2009 based on the NOAA tide gage on the Navy Pier. The model was calibrated using data for San Dieguito Lagoon.

1.3 Modeling Goals

The goals of the hydrodynamic modeling and geomorphic assessment for this project are two-fold:

1. Evaluate potential effects of the project on water levels and channel scour to inform the restoration design and the CEQA analysis.
2. Evaluate wetland hydrology under current and future conditions with sea-level rise to inform the habitat elevations for the restoration design.

SECTION 2
Hydrodynamic Model Setup

ESA developed a 2D hydrodynamic model of the Salt Pond 20 Wetland Restoration project using the USACE's HEC-RAS software package (v 5.0.7). This approach captures 2D simulations of overbank flows across the broad floodplain where complex flow patterns occur. The model boundary includes the Otay River west of Interstate-5 (I-5)[3], Nestor Creek, the full salt pond complex, and a portion of south San Diego Bay. Two model geometries were analyzed:

- **Existing Conditions**: this scenario includes the existing topography, bathymetry, and hydrologic connections without the project. It is also referred to as the no-project scenario in discussions related to sea-level rise (Section 3.5).
- **Project Conditions**: this scenario assumes the Pond 20 site is restored without (or before) the ORERP. This scenario includes a berm separating the two project sites, to reduce the flood risk to the Otay River Floodplain Site once Pond 20 is restored.

Figure 2-1 shows the model extent used for the Existing and Project Conditions, along with the structures, inflow locations, and tidal boundary conditions.

Sections 2.1 and 2.2 describe the development of the two model geometries including:

- Topography/Bathymetry – land and underwater surface elevations controlling where water flows.
- Structures – bridges, culverts, and berm/levee features located on or adjacent to the channel that influence the hydraulics in the area.
- Hydraulic Roughness – a property of different land covers that imposes a resistance to flow (e.g., grasses or open dirt areas have lower hydraulic roughness and provide a lower resistance to flow, while areas with dense salt marsh have higher hydraulic roughness and provide a higher resistance to flow).

Sections 2.3 and 2.4 describe the different hydrology and tidal boundary conditions used for the different modeling runs:

- Hydrology – inflows from the Otay River and Nestor Creek.
- Tidal Boundary Conditions – downstream water surface elevation driven by the tides in San Diego Bay.

Section 2.5 discusses the numerical solver used to run the model.

[3] Modeling completed by Everest in 2016 showed no change in water levels upstream of the I-5 (Section 1.2.2).

Figure 2-1
Initial Model Geometry

2.1 Existing Conditions

The Existing Conditions model represents the Pond 20 restoration site and vicinity as it exists at the time of this report, prior to the construction of the Pond 20 project or the ORERP.

2.1.1 Topography

The model topography was developed from three datasets, combined to achieve full coverage of the model boundary. The main topography dataset was based on 1-foot topographic and bathymetric contours provided by Poseidon in February 2019. The contours were converted into a digital elevation model (DEM) for input to the HEC-RAS model and compared to available DEM datasets to check for errors and inconsistencies (including 2010 LiDAR[4] and 2014 LiDAR[5] of San Diego County). The 2014 LiDAR was used to attain coverage in areas the Poseidon data did not cover, such as developed residential and commercial areas and areas west of Silver Strand Boulevard. Finally, 2010 LiDAR was used to cover small gaps in the 2014 LiDAR, mostly building footprints.

In 2017, the Port contracted Towill, Inc. to set horizontal and vertical control around the perimeter of the site, and to prepare a basemap based on LiDAR flown in 2017. ESA also surveyed transects across Pond 20 in 2016, which were used to ground-truth the Towill LiDAR. Elevations and horizontal position data were collected using an RTK-GPS unit connected to the Leica SmartNet North America Network. All horizontal coordinates were founded on the State of California Coordinate System, Lambert Conformal Projection, Zone VI, NAD83. Both the Towill and ESA survey were compared to the more recent 2019 survey from Poseidon. While the Towill survey provides finer resolution in the project site, the Poseidon data was considered to be at a sufficient scale for modeling purposes.

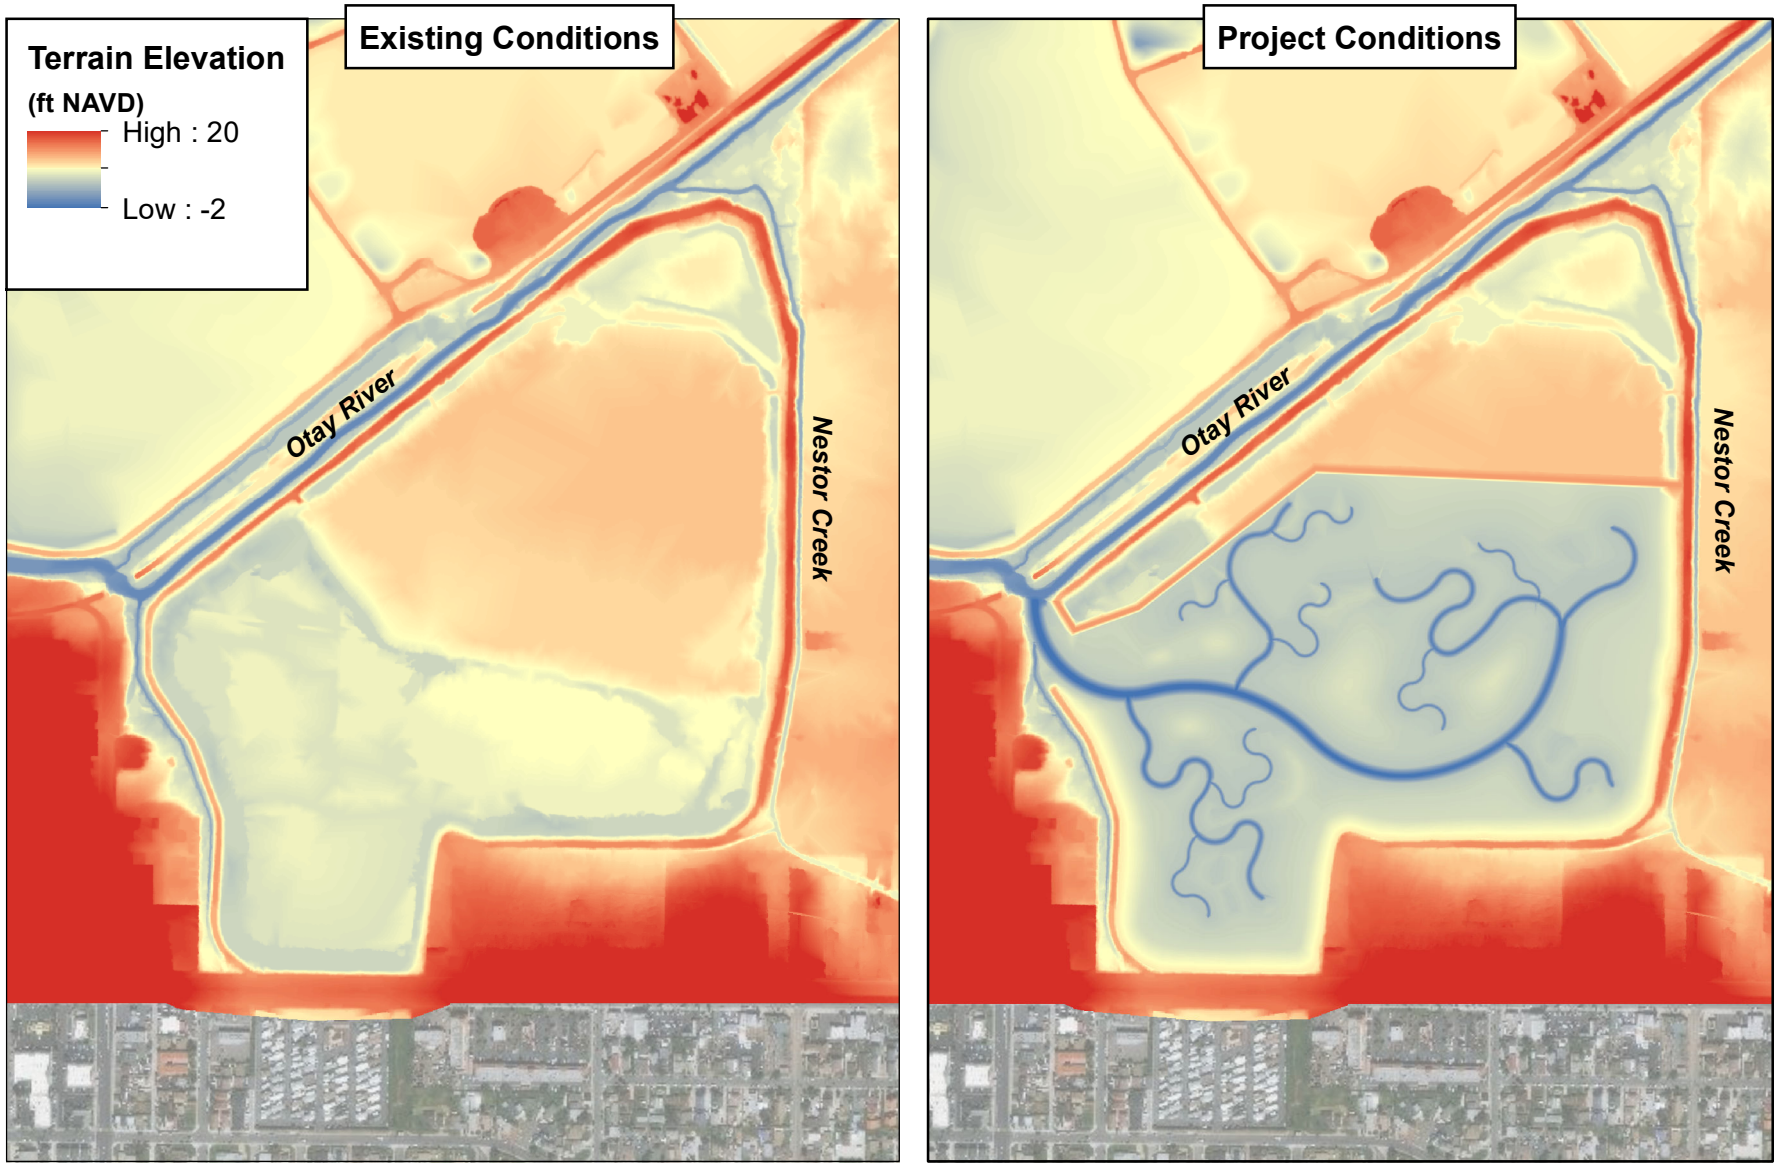

After reviewing initial model results, ESA surveyed the Bayshore Bikeway in the vicinity of Bayside Park to ground-truth elevations in that area on December 6, 2019. Results from the survey were used to refine the model geometry for the storm event model runs[6] (see Section 2.3.1).

Figure 2-2 shows the existing topography at the site (left panel) compared to the project topography (right panel).

4 2010 LiDAR report available here: https://coast.noaa.gov/htdata/lidar1_z/geoid12a/data/2612/supplemental/ca2011_noaa_topobathy_merge_m2612_final_report.pdf

5 2014 LiDAR report available here: https://coast.noaa.gov/htdata/lidar2_z/geoid12b/data/8611/supplemental/San_Diego_LiDAR_FOCUS_Report.pdf

6 The changes to the model geometry based on the survey were deemed small enough that they were not expected to impact the model results for the tidal conditions model runs (see Section 2.3.2), so the tidal conditions runs were not updated based on this data and rely on the Poseidon 2019 topography in this area.

Pond 20 Site Topography for Modeled Conditions

2.1.2 Structures

The structures included in the HEC-RAS Existing Conditions model were two bridges and two culverts.

The Bayshore Bikeway bridge that crosses the Otay River (Figure 2-1) is shown in **Figure 2-3** and referred to as the "South Pedestrian Bridge," throughout this report. The bridge geometry was developed based on available as-builts, field photos, aerial imagery, and model terrain. The bridge is supported by concrete footings at either end of the bridge. Piers from the historic railroad bridge that crossed the river in the same location remain under the South Pedestrian Bridge, but they do not support the bridge.

SOURCE: ESA 2017

Pond 20 Mitigation Bank

Figure 2-3
South Pedestrian Bridge

The Bayshore Bikeway bridge adjacent to the Otay River is referred to as the "North Pedestrian Bridge" throughout the report (Figure 2-1). The geometry was developed based on available as-builts, field photos, aerial imagery, and model terrain.

Two culverts that go under the Bayshore Bikeway are included in the model; one connecting Ponds 10 and 10A, and another connecting Bayside Park to the Otay River (Figure 2-1). The culvert geometry for the culvert connecting Ponds 10 and 10A was developed based on aerial

imagery and model terrain. The geometry of the culvert connecting the river to Bayside Park was surveyed by ESA on December 6, 2019 and incorporated into the storm event model runs[7].

The Otay River has two inline structures that were not included in the model. Aerial imagery shows a weir-like dirt road approximately 700 feet downstream of the I-5 and a small culvert structure approximately 2,000 feet downstream of the I-5. Both of these structures would be overtopped by 5 to 8 feet in the 100-year event and, therefore, would not constrain flow, so they were not included in the model.

2.1.3 Hydraulic Roughness

The hydraulic roughness for most of the Otay River was assigned a value of 0.030 for open channel areas and 0.045 for areas of the channel that were vegetated (Chow 1959). One segment of the Otay River channel immediately downstream of the I-5 is a natural channel with dense brush, so it was assigned a value of 0.060. The floodplain and developed land were assigned a value of 0.040. The North and South Pedestrian Bridges were assigned a roughness of 0.07. The culverts were assigned a roughness of 0.011. Hydraulic roughness for Existing Conditions is shown in **Figure 2-4**.

2.2 Project Conditions

The Project Conditions model represent the scenario where the Pond 20 project is constructed without (or before) the ORERP.

2.2.1 Topography

The model topography was developed from the three Existing Conditions datasets plus the Pond 20 project design terrain. In the case where the Pond 20 project moves ahead of the ORERP, the Port would be responsible for providing flood protection to the Otay River Floodplain site until the ORERP is constructed. A temporary berm would be constructed between the two sites on the Port's property, approximately 2,500 feet long and 40 feet wide. The berm is included in the Project Conditions model.

The resultant model topography is shown in the right panel of Figure 2-2.

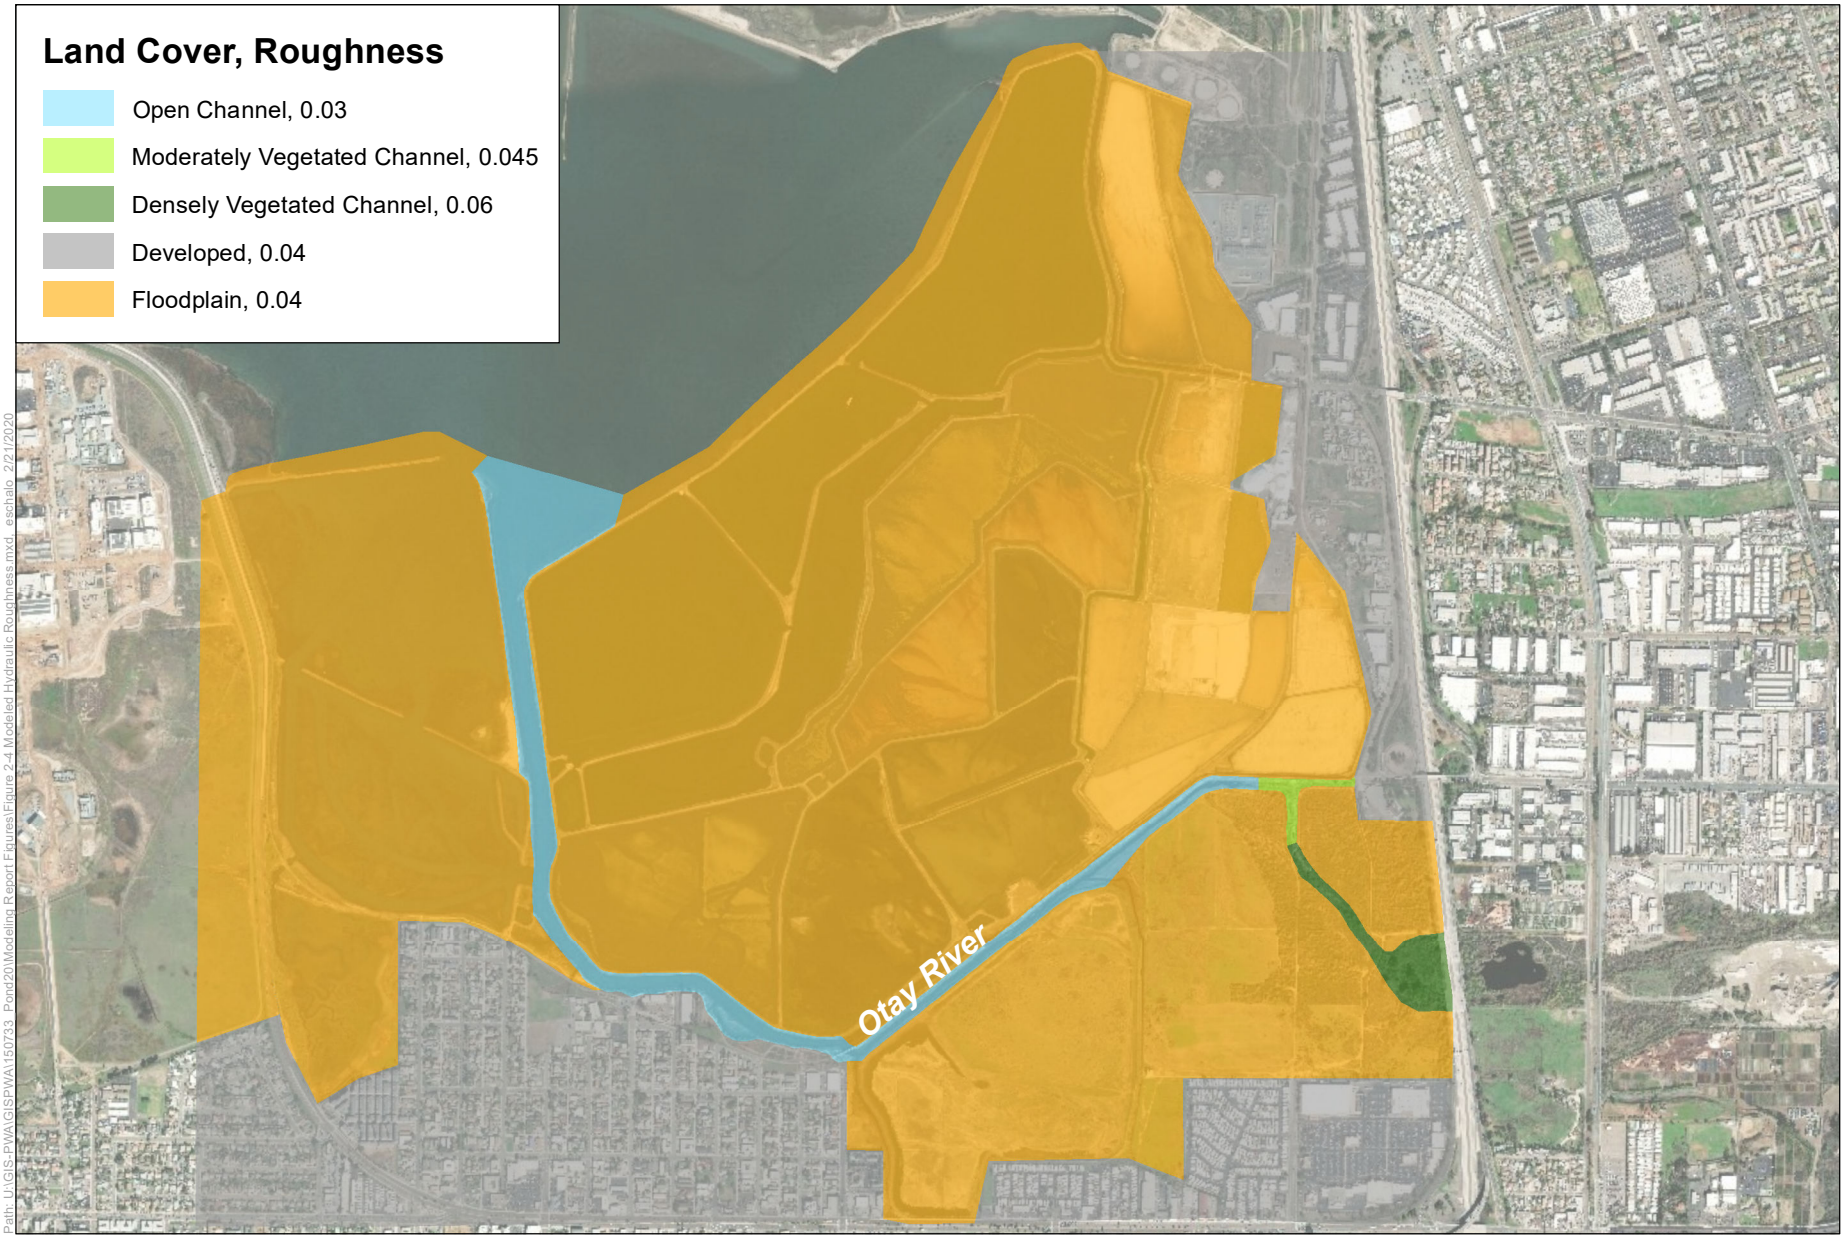

2.2.2 Structures

The Project Conditions structures are the same as the Existing Conditions structures, discussed in Section 2.1.2.

2.2.3 Hydraulic Roughness

The Project Conditions hydraulic roughness values are the same as the Existing Conditions hydraulic roughness values, discussed in Section 2.1.3.

[7] The changes to the culvert geometry based on the survey were deemed small enough that they were not expected to impact the model results for the tidal conditions model runs (see Section 2.3.2), so the tidal conditions runs were not updated based on this data and rely on aerial imagery and model terrain for culvert geometry.

2.3 Hydrology

2.3.1 Storm Conditions Model Runs

ESA developed dimensionless unit hydrographs for the 10-year and 100-year recurrence interval storm events for Otay River and Nestor Creek. The hydrographs were developed using the Soil Conservation Service dimensionless unit hydrograph procedure, which was derived based on an average of a large number of unit hydrographs from basins that vary in characteristics, such as size and geographic location. The Otay River and Nestor Creek hydrographs have a storm duration of 72 hours and a base flow of 10 cfs. The peak discharges for the 10- and 100-year storm events match the FEMA flows (FEMA 2016). The 10-year peak discharges for Otay River and Nestor Creek are 1,200 cfs and 730 cfs, respectively. The 100-year peak discharges for Otay River and Nestor Creek are 22,000 cfs and 1,093 cfs, respectively. The hydrology was applied as inflows at the most upstream portions of the Otay River and Nestor Creek.

The dimensionless unit hydrographs were used because they are more representative of watershed hydrology under storm conditions than an equivalent triangular unit hydrograph or an equilateral triangular hydrograph. PWA 2003 and Everest 2016 both used a simple equilateral triangle hydrograph for the 100-year storm for Otay River and Nestor Creek. The hydrographs developed using the dimensionless unit hydrograph resulted in 30% less volume during the 100-year storm event for the Otay River and 91% less volume for Nestor Creek compared to the triangular hydrographs used previously. **Figure 2-5** show a comparison of the triangular and unit hydrographs.

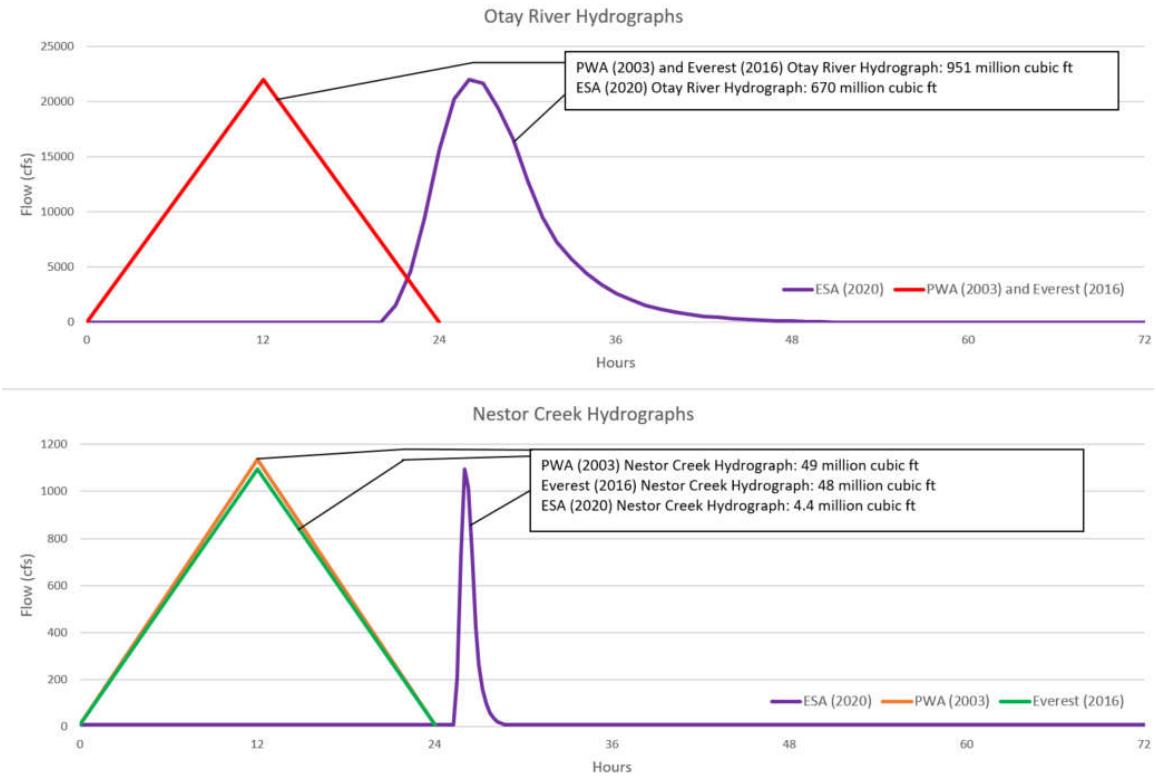

2.3.2 Tidal Conditions Model Runs

The 10 cfs base flow was used for the tidal conditions (no storm event) scenarios. The hydrology was applied as inflows at the most upstream portions of the Otay River and Nestor Creek.

2.4 Tidal Boundary Conditions

The Otay River terminates in the San Diego Bay, and the channel's hydraulics are influenced by the tidal input and water levels of the bay. The nearest NOAA tide gage is Station 9410170 located in the San Diego Bay at the Broadway Pier, approximately nine miles north of the Otay River mouth. ESA collected water level data at the South Pedestrian Bridge from January 17, 2018 until April 13, 2018 to analyze how the tides propagate through the bay and how the water levels at the site compare to the water levels at the NOAA tide gage. ESA's gage data was combined with the NOAA tide gage data to develop tidal boundary conditions for three downstream boundary conditions:

- 2-week typical tides time series – used for the tidal conditions model runs.
- 3-day spring high tide series – used for the storm conditions model runs and timed so that the peak storm flow coincides with the spring high tide for worst-case water elevations.
- 3-day spring low tide series – used for the scour scenarios and timed so that the peak storm flow coincides with the spring low tide for worst-case velocities, shear stresses, and erosion.

SOURCE: ESA 2020

Pond 20 Mitigation Bank

Figure 2-5
100-Year Hydrographs for Otay River and Nestor Creek

Additionally, these tidal boundary conditions were increased to account for sea-level rise for the various sea-level rise scenarios. Downstream tidal boundary conditions are further discussed in the sections below.

2.4.1 ESA Water Level Data Collection

Since the elevations where different salt marsh species can occur are dependent on tidal water levels, and even a few inches can make a difference to the success of specific species, understanding water levels at a restoration site is essential. While the NOAA tide gage provides a long-term dataset of water levels for San Diego Bay (water levels have been collected there since 1906), there is often some amount of tidal amplification or muting that can make water levels vary throughout different parts of a bay. ESA collected water level data at the Pond 20 site to get a better understanding of how the water levels at the site compare to the more extensive NOAA tide data time series.

Data was gathered by installing a tide gage at the South Pedestrian Bridge and surveying it into NAVD. Data was collected from January 17, 2018 until April 13, 2018. The water level data showed an amplification of tide levels compared to the NOAA gage data (e.g., the high water levels at Pond 20 were higher). ESA estimated that the tide range at the site was approximately 10 percent greater than the tide range at the NOAA gage during the period of measurement.

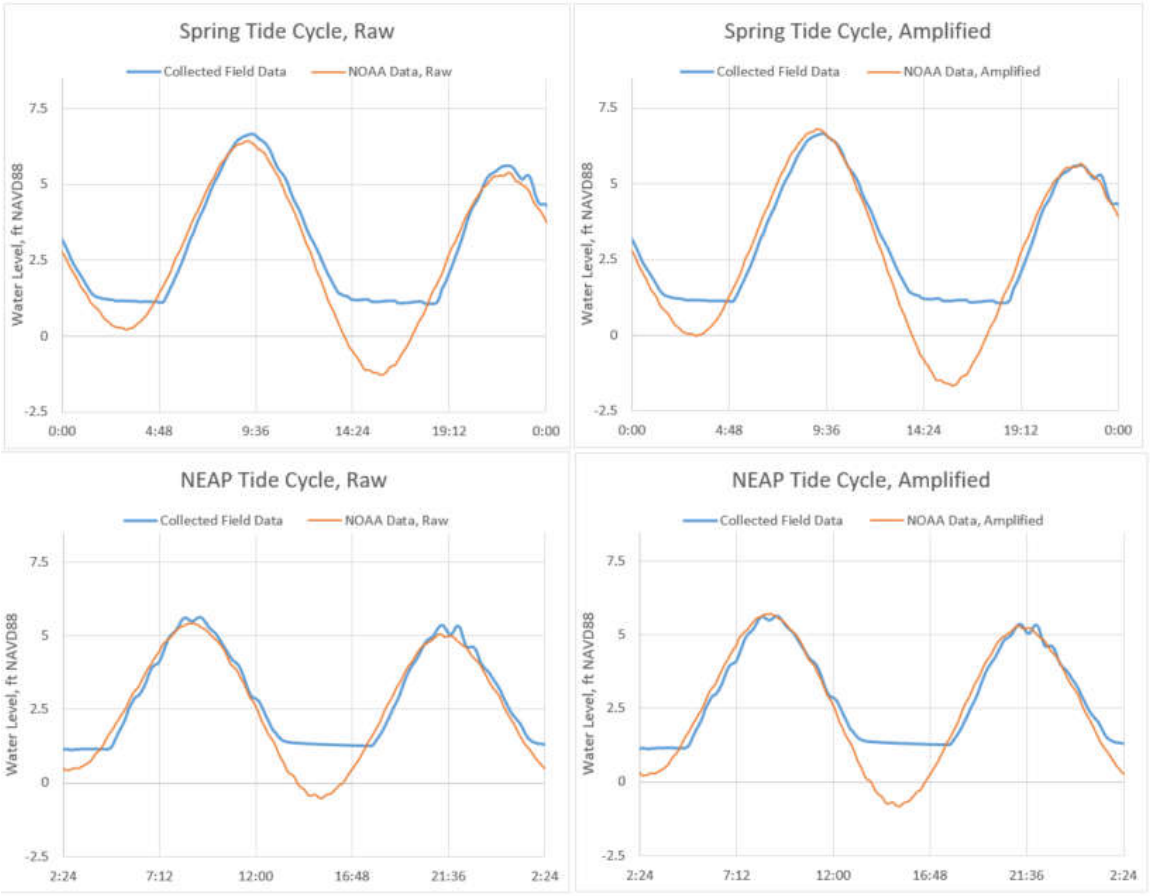

2.4.2 Adjusted NOAA Tidal Data

Table 2-1 provides the NOAA tidal datums and FEMA extreme coastal water levels and the adjusted Pond 20 tidal datums. The NOAA data were amplified by 10 percent to account for the observed tidal amplification at the site (**Figure 2-6**).

TABLE 2-1
TIDAL DATUM AND OBSERVED WATER LEVELS IN SAN DIEGO BAY

Tidal Datum		San Diego Bay (NOAA/FEMA) ft NAVD	Adjusted Pond 20 ft NAVD
500-year still water level[1]		11.1	
Highest observed (11/25/2015)	HOWL	7.8 (3:48 PM)	N/A
Highest Astronomical Tide	HAT	7.3	7.8
100-year still water level[1]		7.1	
50-year still water level[1]		6.5	
10-year still water level[1]		6.3

Pond 20 Mitigation Bank

Figure 2-6
NOAA Gage Data Amplification

2.4.3 Model Input

To evaluate flood risk, a conservative tidal boundary condition around the spring high tide was chosen. A representative 2-week tide cycle from February 24 to March 9, 2017, including a spring high tide of 6.2 ft NAVD, was used for the typical tides scenario (**Figure 2-7**).

For the storm event model runs, the tide cycle was shortened to a 36-hour period, including the 6.2 ft NAVD high tide, to reduce model times. The peaks of the 10- and 100-year Otay River and Nestor Creek flood discharge hydrographs were set to coincide with the 6.2 ft NAVD high tide as shown in Figure 2-7. For the scour model runs, the peaks of the 100-year flood discharge hydrographs were set to coincide with a -1.3 ft NAVD low tide.

2.4.4 Sea-Level Rise

Background and Guidance Documents

Projections of global sea-level rise are well-documented and investigated, with recent research projecting sea-level rise on the order of 2 to 10 feet by 2100 in California (e.g., Cayan et al. 2008; Griggs et al. 2017). This research has been used to develop a series of policy guidance documents by the State of California that recommend including specific amount of sea-level rise in project planning and design, the most recent being the California Ocean Protection Council's (OPC) *State of California Sea-Level Rise Guidance* (OPC 2018). The OPC (2018) Guidance includes tables of projected relative sea-level rise at well-established tide gages located along the coast of California through 2150 for a range of risk aversion scenarios, including low, medium-high, and extreme (e.g., H++). **Table 2-2** shows the projections for San Diego Bay. These projections were developed and summarized with the intention that local planning and design efforts would have a consistent and accepted basis for addressing future sea-level rise.

TABLE 2-2
PROJECTED SEA-LEVEL RISE (IN FEET) FOR SAN DIEGO

		Probabilistic Projections (in feet) (based on Kopp et al. 2014)				H++ scenario (Sweet et al. 2017) *Single scenario
		MEDIAN	LIKELY RANGE	1-IN-20 CHANCE	1-IN-200 CHANCE	
		50% probability sea-level rise meets or exceeds...	66% probability sea-level rise is between...	5% probability sea-level rise meets or exceeds...	0.5% probability sea-level rise meets or exceeds...	
			Low Risk Aversion		Medium - High Risk Aversion	Extreme Risk Aversion

High emissions	2150	4.3	3.0 - 6.1	7.9	13.3	22.0

SOURCE: OPC 2018

The California Coastal Commission (CCC) recently updated their *Sea-Level Rise Policy Guidance* in 2018 (CCC 2018). The CCC (2018) Guidance provides a basis for selecting the time horizon and the risk level of the project, which are used to define the appropriate sea-level rise amounts. The CCC (2018) Guidance recommends that project planning and design consider a range of scenarios in order to bracket the possible timing of a given amount of sea-level rise.

The OPC Guidance identifies three levels of risk to consider when planning for sea-level rise (blue boxes in Table 2-2):

- The low risk aversion scenario is appropriate for adaptive, lower consequence decisions (e.g., unpaved coastal trail), but is not adequate to address high impact, low probability events.

- The medium-high risk aversion scenario is appropriate as a precautionary projection that can be used for less adaptive, more vulnerable projects or populations that will experience medium to high consequences as a result of underestimating sea-level rise (e.g., coastal housing development).
- The extreme risk aversion scenario is appropriate for high consequence projects with little to no adaptive capacity and which could have considerable public health, public safety, or environmental impacts (e.g., coastal power plant, wastewater treatment plant, etc.).

For habitat restoration projects, the CCC (2018) Guidance recommends using multiple time horizons and sea-level rise projections (CCC 2018, pg. 102):

> *Determining an anticipated life for restoration activities or other related projects is somewhat more complex than for typical development projects because these activities are typically meant to exist in perpetuity. As such, assessing sea-level rise impacts may necessitate analyzing multiple different time frames, including the present, near future, and very long-term depending on the overall goals of the project. For restoration projects that are implemented as mitigation for development projects, an expected project life that is at least as long as the expected life of the corresponding development project should be considered.*

Port of San Diego Sea-Level Rise Projections

The Port recently completed a sea-level rise vulnerability assessment[8] pursuant to Assembly Bill 691. During the development of the Port's AB 691 Report, the OPC Guidance was in draft form and the recommended risk levels (blue boxes in Table 2-2) were not identified. With technical feedback from a Sea-Level Rise Ad Hoc Committee comprised of important Port stakeholders, the Port chose to use three sea-level rise projections for years 2030, 2050, and 2100 consistent with the 5% probability identified in the OPC Guidance. Due to the uncertainty of long-range projections of sea-level rise, the Port also chose a fourth scenario for 2100, consistent with the 50% probability identified in the OPC Guidance. **Table 2-3** presents the scenarios developed for the vulnerability assessment.

TABLE 2-3
PORT OF SAN DIEGO'S SEA-LEVEL RISE PROJECTIONS (IN FEET)

	2030	2050	2100
5% Probability projection	n/a	n/a	2.6
50% Probability projection	0.7	1.4	4.5

Pond 20 Sea-Level Rise Scenarios

To assess the potential flood impacts and to inform the habitat design for Pond 20, five sea-level rise amounts were selected to bracket the range of potential projections: 0.7, 1.4, 2.6, 4.5, and 7.0 feet. These amounts take into consideration both the Port-recommended scenarios (0.7, 1.4, 2.6,

[8] https://pantheonstorage.blob.core.windows.net/environment/FINAL-San-Diego-Unified-Port-District-Sea-Level-Rise-Vulnerability-and-Coastal-Resiliency-Report-AB691.pdf

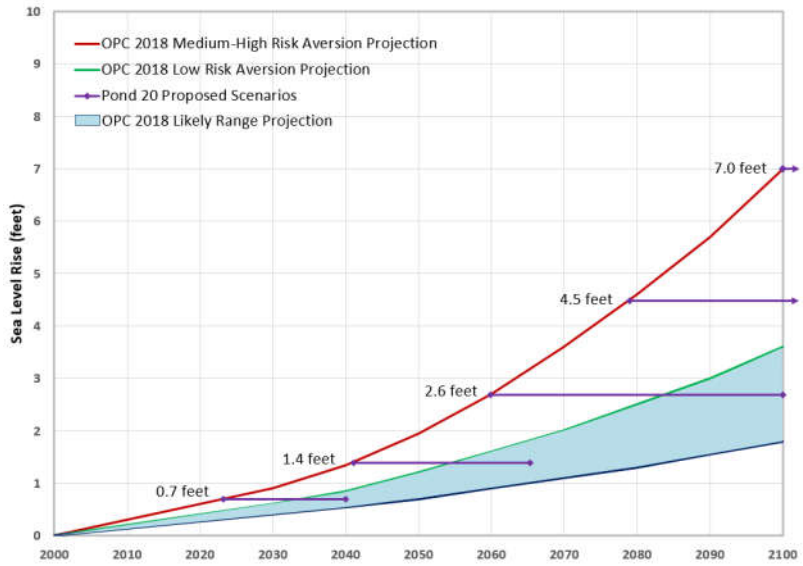

and 4.5 feet) and State recommendations to evaluate the medium-high risk aversion projection at 2100 (7.0 feet).

Table 2-4 shows the model scenarios and the corresponding time frames based on the low (the second year in the range) and medium-high risk aversion projections (the first year in the range). To analyze potential flood impacts, the medium-high risk aversion scenario is recommended per the OPC Guidance, since homes and other developments in the area are at risk for flooding. The medium-high risk aversion scenario can also be used to evaluate the potential loss of wetland with sea-level rise. The low risk projection provides a more likely to occur scenario, and since habitat restoration requires a balance of creating wetland habitat post-restoration and providing space for future wetland habitat, the low risk aversion projection can be used to represent a more likely sea-level rise scenario (rather than the medium-high risk aversion).

TABLE 2-4
POND 20 SEA-LEVEL RISE PROJECTIONS (IN FEET)

	~2023-2040	~2041-2065	~2060-2100	~2080-2120	2100-2150+
Amounts of sea-level rise	0.7	1.4	2.6	4.5	7.0

Figure 2-8 presents the five selected sea-level rise scenarios graphically with the State-recommended projections over time. The red curve represents the medium-high risk aversion projection of sea-level rise. The blue line represents sea-level rise projections for a likely range (the second and third columns in Table 2-2). The purple lines illustrate how the Pond 20 scenarios correspond to different time frames based on the different projections.

Wetland Restoration of Salt Pond 20

Figure 2-8
Pond 20 Sea-Level Rise Scenarios

2.5 Numerical Solver

After receiving a peer review of the hydrodynamic model set up and results, the numerical solver used in the hydrodynamic model was updated to address one of the comments. The comment suggested considering the Full Momentum equations in HEC-RAS rather than the Diffusion Wave equations that were initially used. The Diffusion Wave equations are simplified and computationally faster, while the Full Momentum equations can be more accurate, but are more computationally demanding.

The Full Momentum numerical solver was run for the typical tides under current sea levels scenario. The results showed that the water levels at the Pond 20 site are very similar between the two methods, with the Diffusion Wave resulting in slightly higher high tide water levels (i.e., up to 0.1 feet higher). However, during neap tides, the Full Momentum shows slightly higher water levels. This is within the range of modeling uncertainty, so it is not expected to change the conclusions in this report. Consequently, results in this report for the typical tides runs are based on the Diffusion Wave numerical solver.

The Full Momentum numerical solver was also run for the 100-year storm event under current sea levels and compared to the initial Diffusion Wave model. The results showed more variability, so the results in this report for the 100-year storm event runs were updated to be based on the Full Momentum numerical solver.

2.6 Run Catalog

Table 2-5 presents the initial run catalog for the different model scenarios with the varying model inputs.

SECTION 3
Hydrodynamic Model Results and Discussion

3.1 Model Verification

The model was verified using tide gage data collected by ESA near the Pond 20 site at the South Pedestrian Bridge (Section 2.4.1). The model was run for the 12-week period coincident with when the tide gage was collecting data. The results show that the water levels at the South Pedestrian bridge match closely to the observed data above approximately 3 ft NAVD (**Figure 3-1**). This is also demonstrated by the percent exceedance curve (**Figure 3-2**). As modeled water levels drop below 3 ft NAVD, the modeled water levels are generally higher than observed water levels. This is likely due to the 10 cfs base flows for both the Otay River and Nestor Creek included in the model to maintain model stability[9]. However, flow data for Otay River and Nestor Creek during the tide gage data collection period was not available for comparison to the base flow assumption.

While the model may overestimate the lowest water levels, the model verification shows that the model results closely match observed data for higher water levels. Since the Pond 20 site is proposed to be mostly mid to high marsh with transition zone and upland habitat along the edges, the model verification shows the model is appropriate for the purpose of this project.

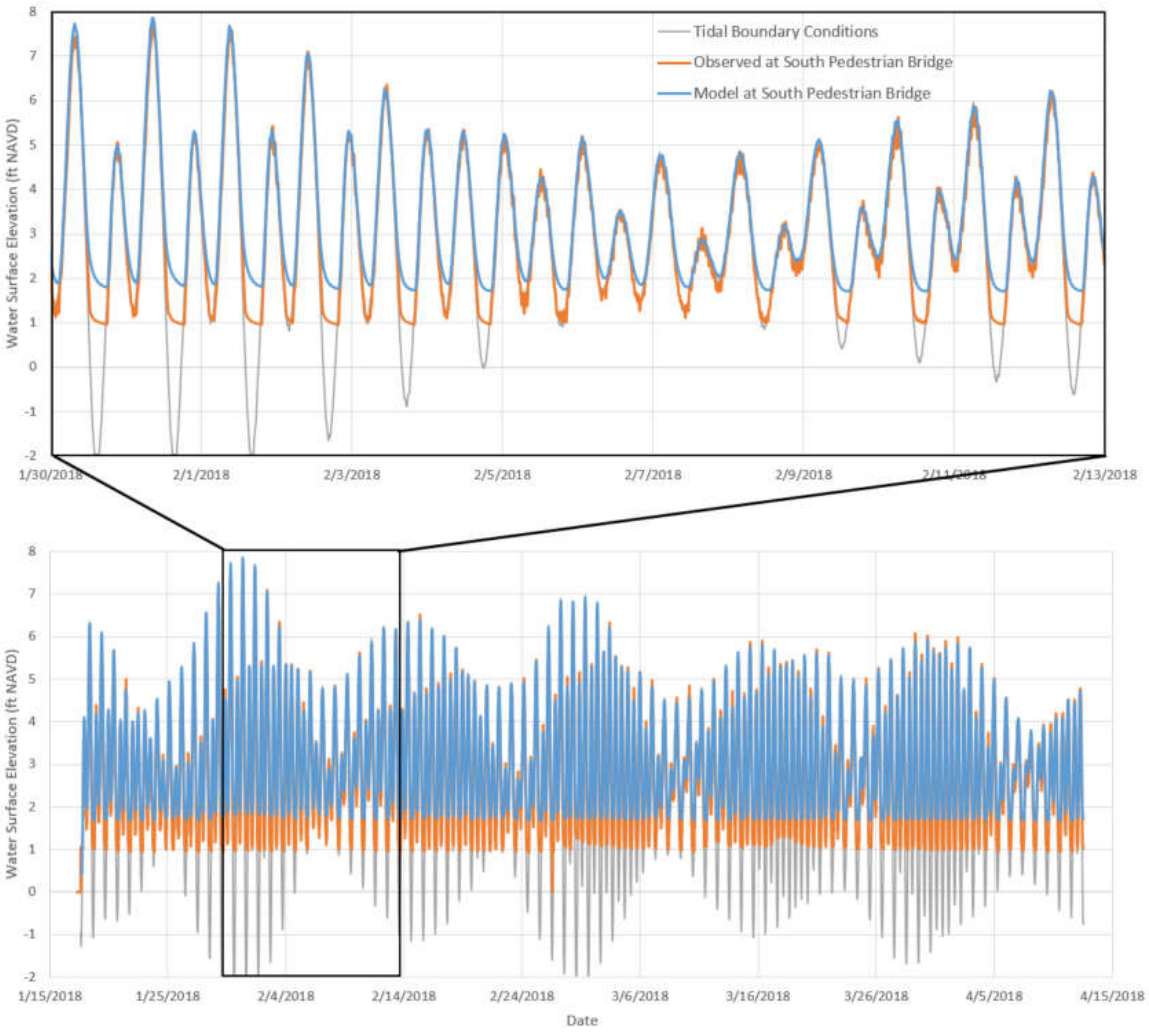

3.2 Model Results for Typical Tides Under Current Sea Levels

Table 3-1 shows the water level results for the different model scenarios compared to the tides in San Diego Bay for a typical spring high tide and **Figure 3-3** shows the time series corresponding to these results.

TABLE 3-1

Figure 3-2
Percent Exceedance Curve of Modeled Water Levels at the South Pedestrian Bridge Compared to Observed Water Levels

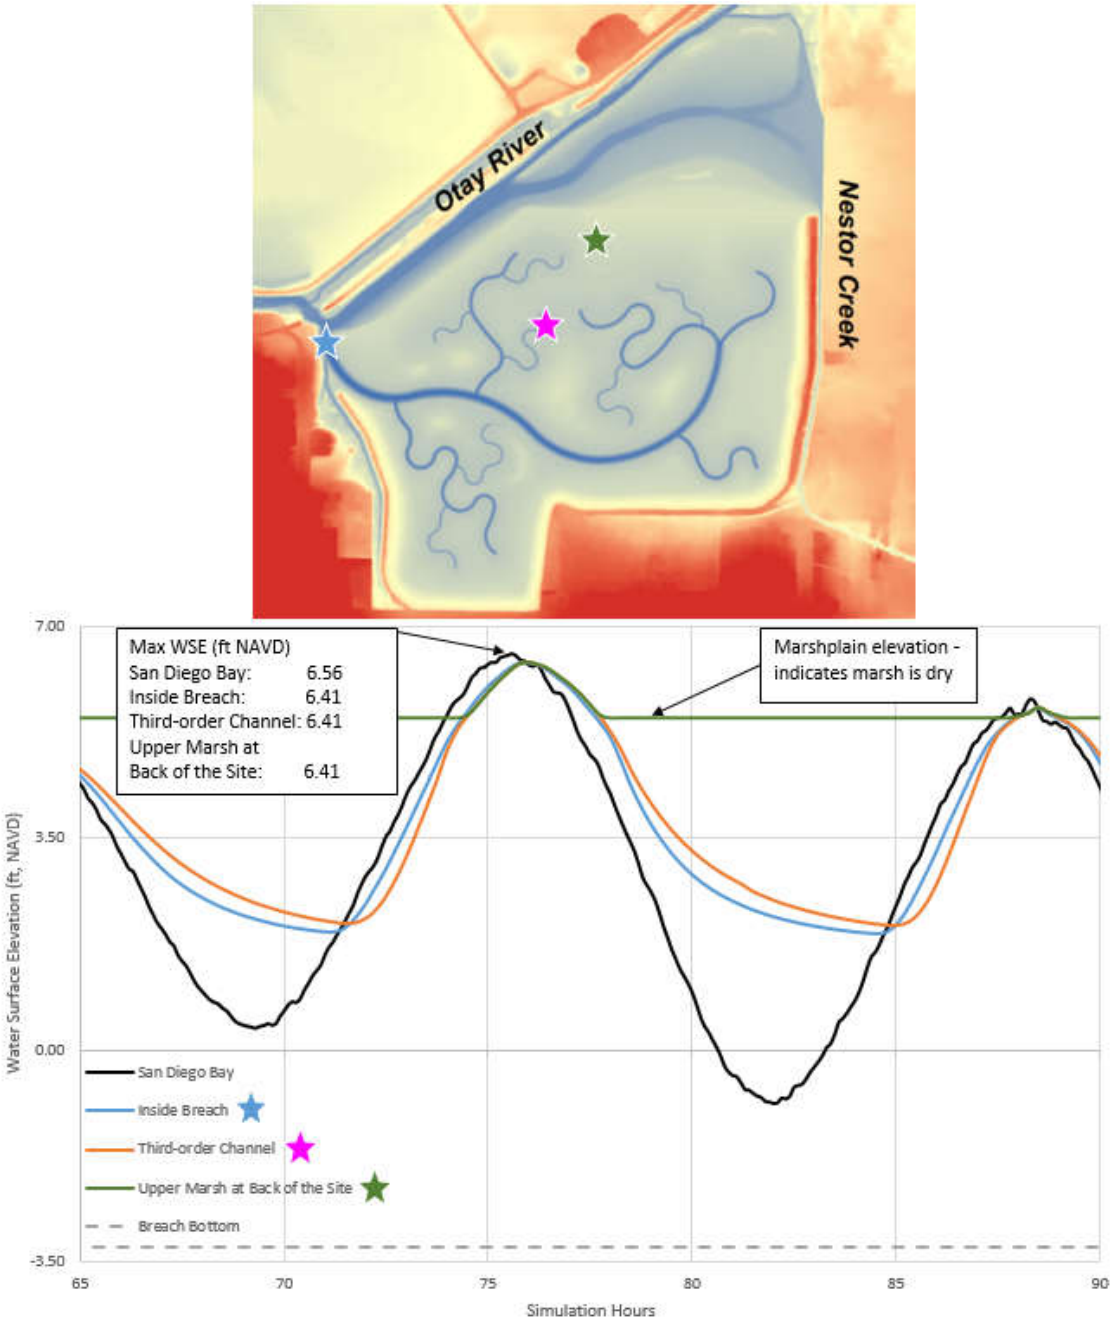

Pond 20 Mitigation Bank

Figure 3-3
Modeled Water Levels at the Pond 20 tributary or breach mouth

The Existing Conditions results show a higher maximum water surface elevation and shorter lag time from the tides in the bay, compared to Project Conditions. This is due to the smaller tidal prism under this scenario. Because berms limit the tides from entering the Pond 20 site under Existing Conditions, the tidal prism is made up of only the Otay River itself. The Otay River channel geometry is oversized for the tidal prism under existing conditions (see Section 4.3 for additional information about the Otay River geomorphology), so the high tides are not muted, although there is a slight delay (48 minutes) from when the high tide peaks in the bay to when it peaks near the Pond 20 site.

Under Project Conditions, the Pond 20 site is excavated and connected to the Otay River, increasing the tidal prism in the system. Directly following Pond 20 restoration, it is expected that the high tides at the site would be slightly muted, since the Otay River would be slightly undersized to convey the larger tidal prism. This is reflected in the model results showing a slightly reduced high tide level relative to San Diego Bay. However, over time, the Otay River would be expected to scour to accommodate the increased tidal prism, and the high tide muting would be reduced or eliminated.

Water levels within the Pond 20 site were also analyzed to evaluate any tidal muting across the floodplain. **Figure 3-4** shows modeled water levels at various locations at the Pond 20 site under Project Conditions. The model results show there is very minimal tidal muting across the marsh.

Pond 20 Mitigation Bank

Figure 3-4
Model Water Levels at Various Marsh Locations for Project Conditions

3.3 Model Results for the 100-Year Storm Event under Current Sea Levels

3.3.1 Model Results

100-Year Flood Dynamics

Model results for the 100-year storm event under Existing Conditions indicate that water initially overtops the banks of the Otay River channel causing shallow inundation of the properties along the river upstream of the project site (upper left panel of **Figure 3-5**). As flood waters continue to rise, model results indicate that water would then overtop the existing Pond 20 berm from the south along Bayside Palm Mobilehome Village and the Pond 22 berm (upper right panel of Figure 3-5). Soon after, water levels in the Otay River overtop into Ponds 48 and 20 (north) around the North Pedestrian Bridge (bottom left panel of Figure 3-5). According to the model results, Pond 22 would eventually fill up and overflow into the adjacent Ponds 21, 23, 24, and 27 (bottom right panel of Figure 3-5). When that happens, Pond 20 is also completely inundated. As maximum flood water levels are reached, Ponds 22 and 23 spill back into the Otay River further downstream of the South Pedestrian Bridge. As water levels drop in the Otay River, model results indicate many of the ponds remain full of stormwater.

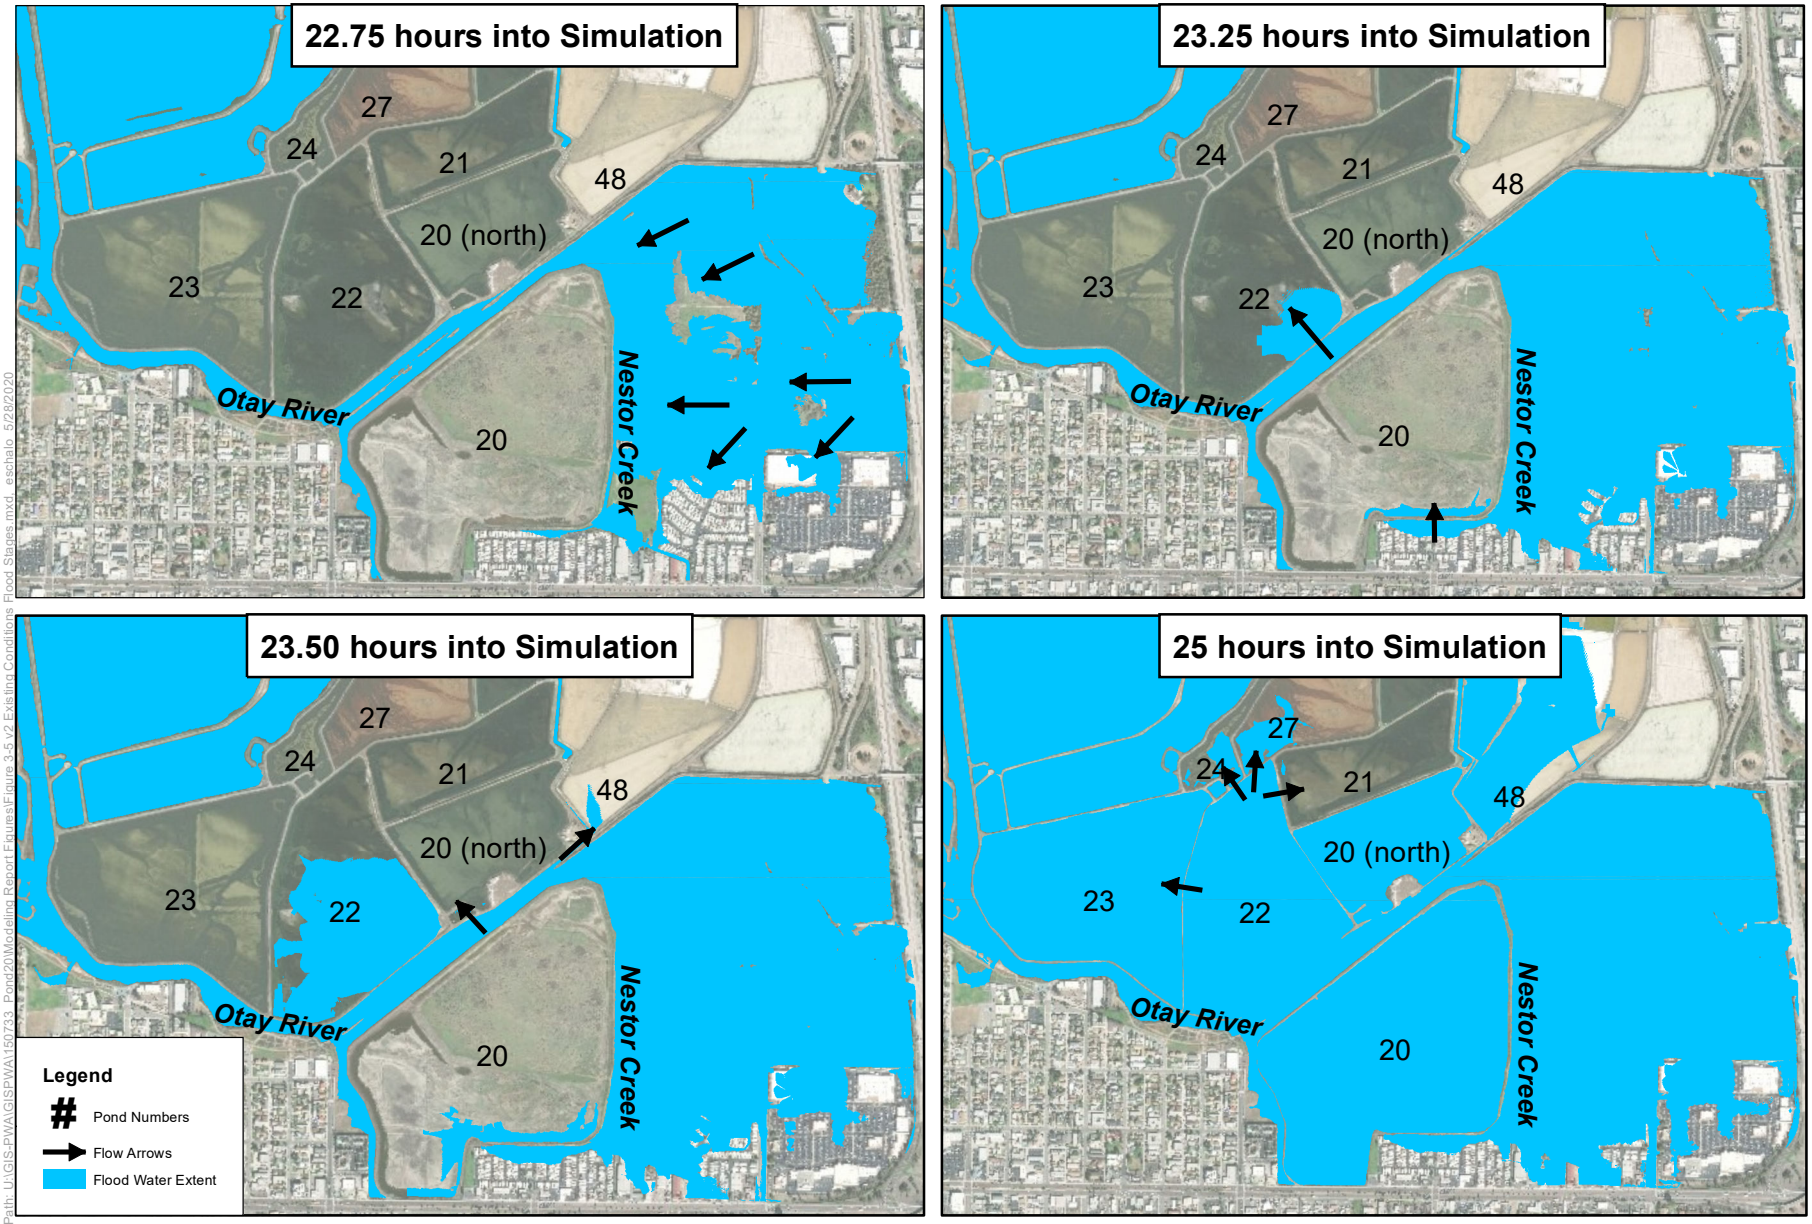

During the 100-year storm event under Project Conditions, model results show the storm flows follow a similar pattern compared to Existing Conditions.

Maximum Flood Elevations

Figure 3-6 shows a profile plot of the maximum water levels along the Otay River for Existing and Project Conditions and **Table 3-2** provides the water level values. The water levels for Existing and Project Conditions are within 0.1 ft along the entire river. The results for Project Conditions show a slightly higher water level (0.1 ft) between Ponds 11 and 12, which is not expected to effect the area.

Pond 20 Mitigation Bank

Figure 3-6
Modeled Water Levels on the Otay River

Figure 3-7 shows the maximum water levels of the full model area for Existing and Project Conditions. The model results show that Pond 20 reaches a lower maximum water level during the 100-year storm event under Project Conditions (since it can drain out through the breach). The maximum water levels in Ponds 10 and 10A increase by 0.1 ft under Project Conditions according to the results, which is not expected to effect the surrounding area.

Bayside Park

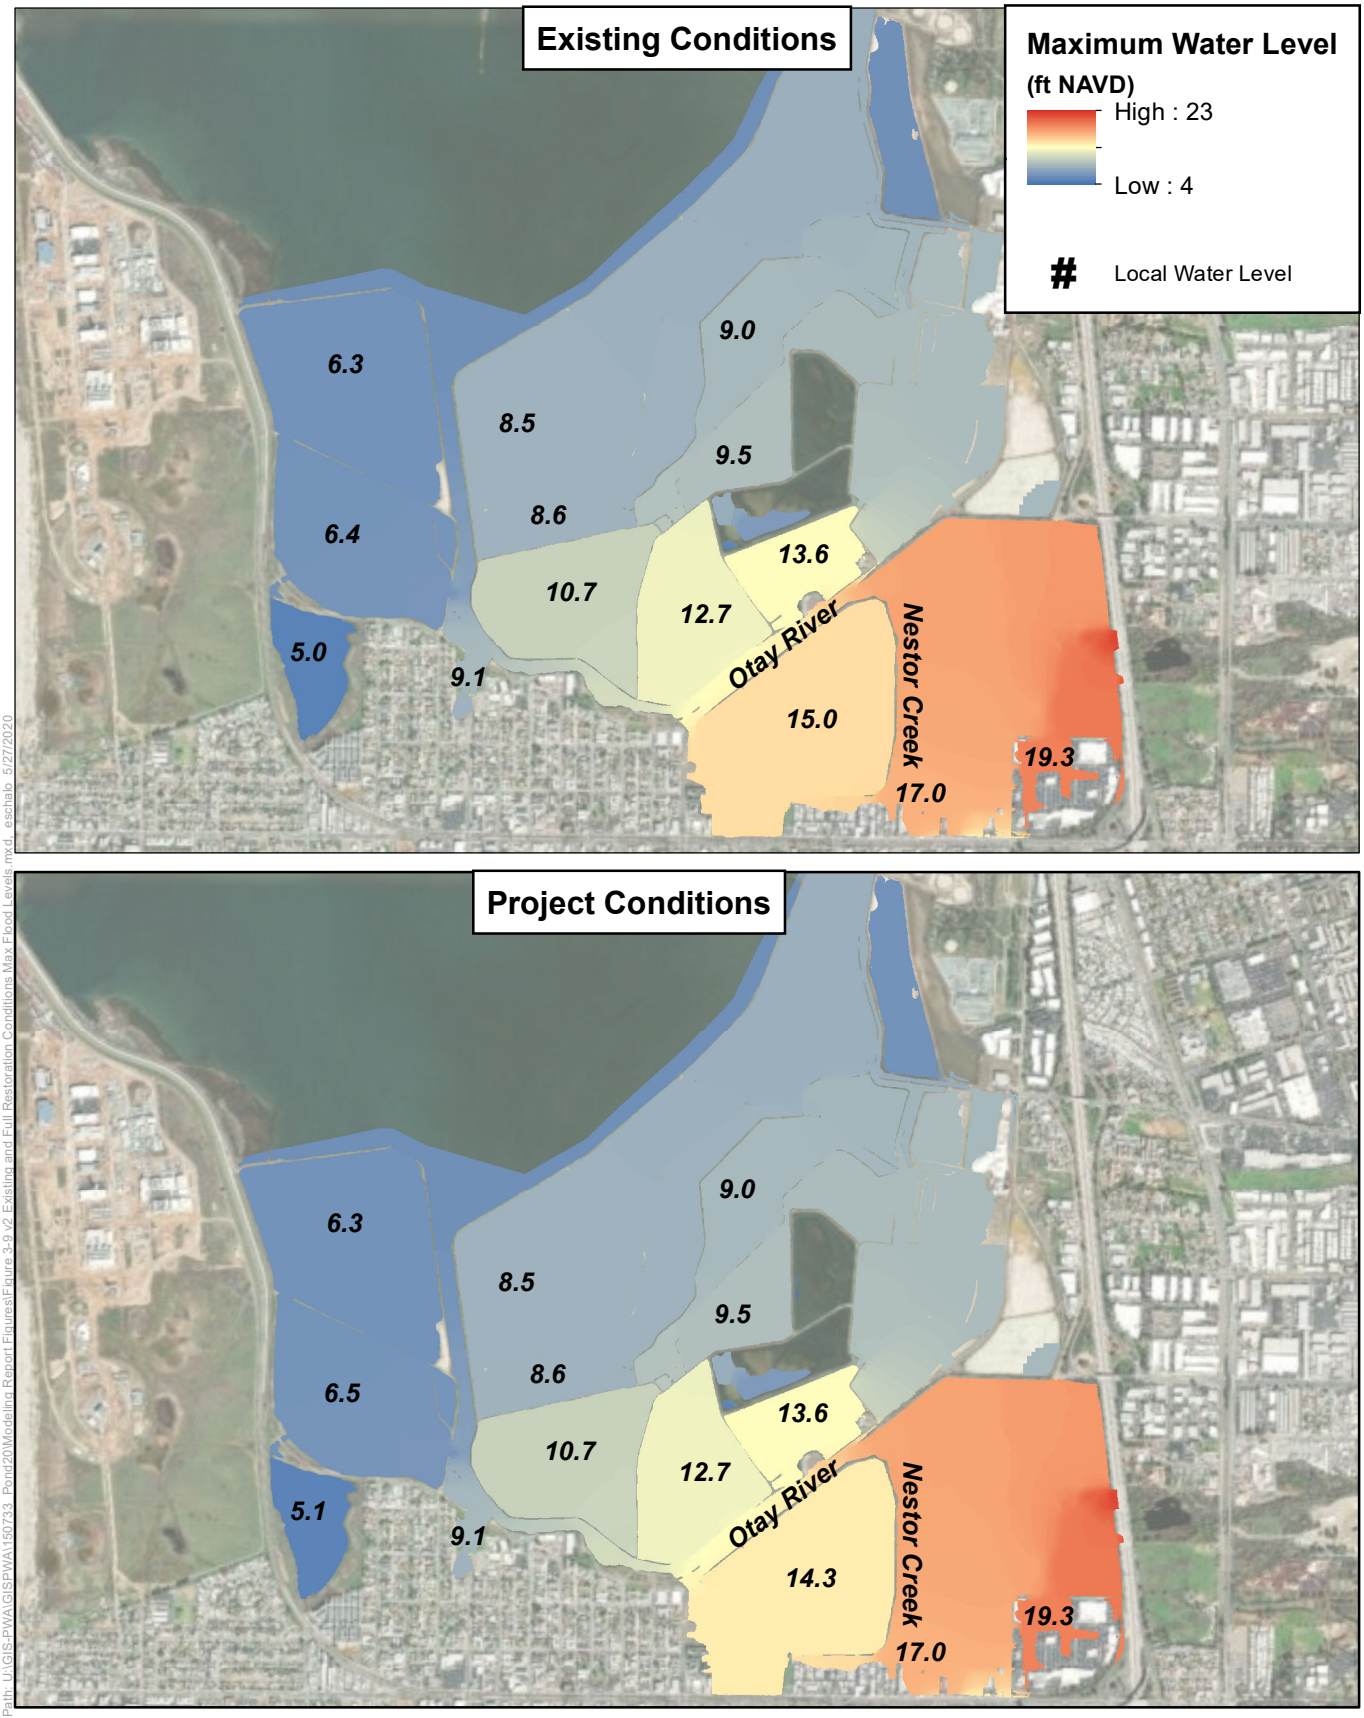

The model results show that the maximum water levels at Bayside Park are similar for Existing and Project Conditions (**Table 3-3**). **Figure 3-8** shows the inundation extent in the vicinity of Bayside Park for the two model scenarios. Existing Conditions shows a slightly greater flood extent than Project Conditions because the flood waters peak a little bit sooner than under Project Conditions and stay high. The difference between model runs is within the expected model uncertainty (0.1 ft for maximum water levels).

Existing Conditions	9.1	8.6
Project Conditions	9.1	8.5

Comparison to FEMA

As discussed in Section 1.2.1, the FEMA (1989) model is a 1D steady-state hydraulic model. In steady-state, the model is run with a continuous peak flow as the upstream boundary condition, as compared to an unsteady model, which applies a time-varying flow hydrograph as the upstream boundary conditions. In effect, this means that the system experiences a much greater volume of water compared to the unsteady model documented in this report. As a result, the 100-year floodplain delineated on the FEMA FIRM is much more extensive than the inundation model results documented in this report, specifically in properties along the river upstream of the site and south of the Pond 20 site where it is closest to Palm Avenue (**Figure 3-9**). The FEMA FIRM 100-year floodplain does not include Bayside Park, although the FIRM shows higher water levels in the Otay River in this area than those modeled as part of this report. The FEMA model may not include the culvert under the Bayshore Bikeway and/or other recent changes to the area.

3.3.2 Additional Considerations

Due to the complex nature of the Otay River floodplain system, additional considerations were analyzed to further evaluate the flood risk due to the Pond 20 project and to understand potential variations in the maximum water levels during a 100-year storm event.

Salt Works Culverts and Berm Breaching

South Bay Salt Works provided data on the culverts connecting various salt ponds (correspondence with Tracy Strahl on 9/24/2019). These culverts, shown in the red circles in **Figure 3-10**, would allow flood flows to move through the system before overtopping the pond berms, which may lower overall flood levels during major storm events. The project is not expected to worsen flooding compared to Existing Conditions if the culverts are considered because model results show that the storm flows move through the system similarly for Existing and Project Conditions.

SOURCE: South Bay Salt Works 2019

Pond 20 Mitigation Bank

Figure 3-10
South Bay Salt Work Culverts

Additionally, the salt pond berms, which were built for commercial uses and are not accredited levees under FEMA, could breach during a 100-year storm event. The FEMA FIS states,

> *"A thorough field inspection of the salt pond dikes indicates that there is no protective covering on any of these dikes. Without revetment, these earthen dikes will very likely wash out during a 1-percent annual chance [100-year storm] discharge of 22,000 cfs on the Otay River. Even with a much lower discharge on the Otay River, during the 1983 storm season these dikes washed out. During a 1-percent annual chance event, the Otay River will break out of its present low flow channel and spread over the area of the salt ponds." (FEMA 2016).*

Historical records support this outcome as well. The Great Flood of 1916, caused by severe rain and collapse of the Otay Dam, destroyed the salt ponds (Friends of Chula Vista Library 2016). If the salt pond berms were to breach during a 100-year storm, this could lower water levels in the system as more water would be able to flow into the ponds (and out of the Otay River). The project is not expected to worsen flooding compared to Existing Conditions if the berms breached because model results show that the storm flows move through the system similarly for Existing and Project Conditions.

Wetted Salt Works Ponds

During typical Salt Works operations, the salt ponds north of the Otay River are filled with water and then allowed to evaporate to create salt. Water is moved between ponds to facilitate this process. The model runs described above assumed the ponds were empty (except for some tidal flooding in the ponds near the bay). The additional water in the ponds would reduce their flood storage capability, so water levels in the system would likely be higher than described above. At these higher water levels, the differences between Existing and Project Conditions is expected to be the same, since the model results show that the storm flows move through the system similarly for Existing and Project Conditions.

Effect of Long-Term Geomorphology on 100-Year Flood Water Levels

Tidal channels, such as the Otay River, typically adjust in size to accommodate the tidal flow moving through the channel. For example, an undersized channel tends to scour, because the restricted flow area creates higher velocities, which can erode the channel bottom or edges. The channel will continue scouring until it begins to approach dimensions that are in equilibrium with the tidal flow. Conversely, an oversized channel may fill in with sediment (assuming sufficient sediment supply), because tidal flows are slower, allowing sediment to drop out of suspension.

Restoration of Pond 20 will increase the tidal prism of the Otay River system. Therefore, it is expected that the Otay River channel will scour over time to accommodate the increased tidal prism. Section 4.3 discusses in detail the expected geomorphic change of the Otay River due to the project. In the long-term (e.g., 10+ years), it is expected that the scoured out Otay River will reduce water levels during major storm events compared to Existing Conditions, as more conveyance would be available.

Summary

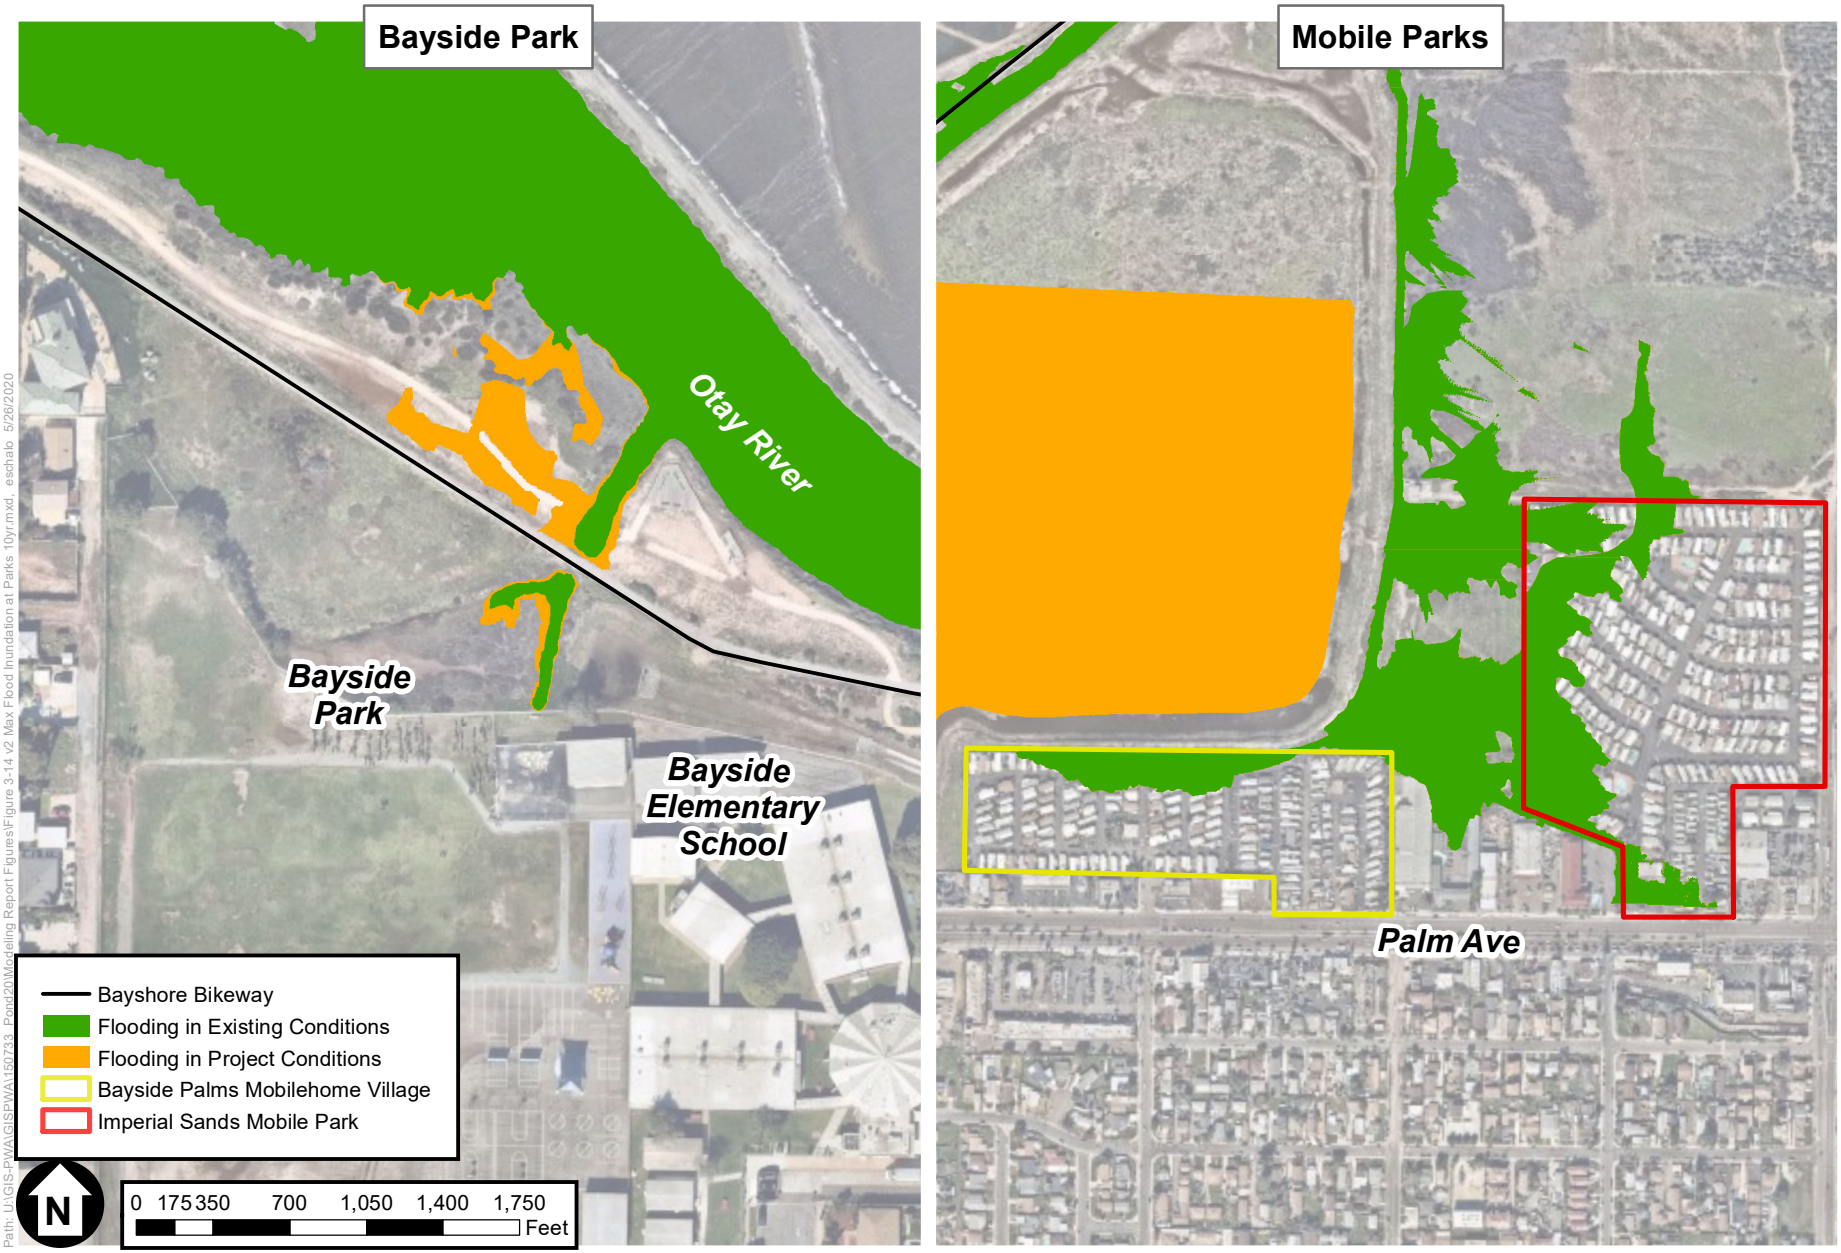

Consideration of some of the uncertainties within the Otay River system (e.g., how flood flows would move through culverts and breaches, the available flood storage in the salt ponds, and the timing of scour in the Otay River) indicates that precise water levels within the system are sensitive to the modeling assumptions. However, the similarity between Existing and Project Conditions is expected to remain the same within ±0.1 ft of each other.

3.4 Model Results for the 10-Year Storm Event under Current Sea Levels

In addition to considering the 100-year storm event, the 10-year storm event was analyzed to understand the effect of the project during more frequent storm events.

During the 10-year storm event under Existing and Project Conditions, model results show that water overtops the banks of the Otay River channel, and inundates the open space surrounding the channel. Flood waters from Nestor Creek, inundate the properties along the river upstream of the site with no differences in the flood extent between the two scenarios (**Figure 3-11**). As the flood waters from Nestor Creek and Otay River meet, the water levels are low enough to be contained within the Otay River channel all the way to the bay (e.g., no pond berms are overtopped by storm waters). Under Project Conditions, the Pond 20 site fills with water, as designed. Flood waters during the 10-year storm event do not overtop into Bayside Park. Some water flows through the Bayside Park culvert and is stored within the marsh along the Bayshore Bikeway; inundation does not extend to the park or Bayside Elementary School (Figure 3-11).

Figure 3-12 show the maximum water levels along the Otay River during the 10-year storm event for the modeled conditions. Both profiles are well below the salt pond berms (grey line), showing the berms are not overtopped. Water levels are similar for the Existing and Project Conditions. The Pond 20 project provides some additional storage due to the lowering of the site grades, so water levels are slightly lower under Project Conditions based on the model results.

3.5 Future Conditions with Sea-Level Rise

3.5.1 Typical Tides

As discussed in Section 2.4.4, a variety of sea-level rise scenarios were modeled with the typical tidal conditions to better understand the long-term tidal conditions with the project. The modeling results shows that with sea-level rise of 1.4 ft or less, the tides at the site show some muting at higher water levels, due to the constraint of the Otay River geometry (Section 3.3.2 and Section 4.3 below). As the Otay River scours to accommodate the increasing tidal prism, the higher tide levels are expected to increase. With sea-level rise at 2.6 ft or above, the predicted water levels at the site increase linearly with sea-level rise (e.g., with 4.5 ft of sea-level rise, water levels increase 4.5 ft). By 7.0 ft of sea-level rise, the tides inundate the salt ponds north of the site regularly, so the Otay River geomorphology becomes less of a factor in the water levels at the site as the bay has basically been extended to the edge of the site. Additionally, this analysis assumes the tidal amplification within San Diego Bay remains the same; however, the amplification will likely change. Section 5 discusses how the tide levels in the future are expected to affect habitats at the site.

3.5.2 100-Year Storm Event

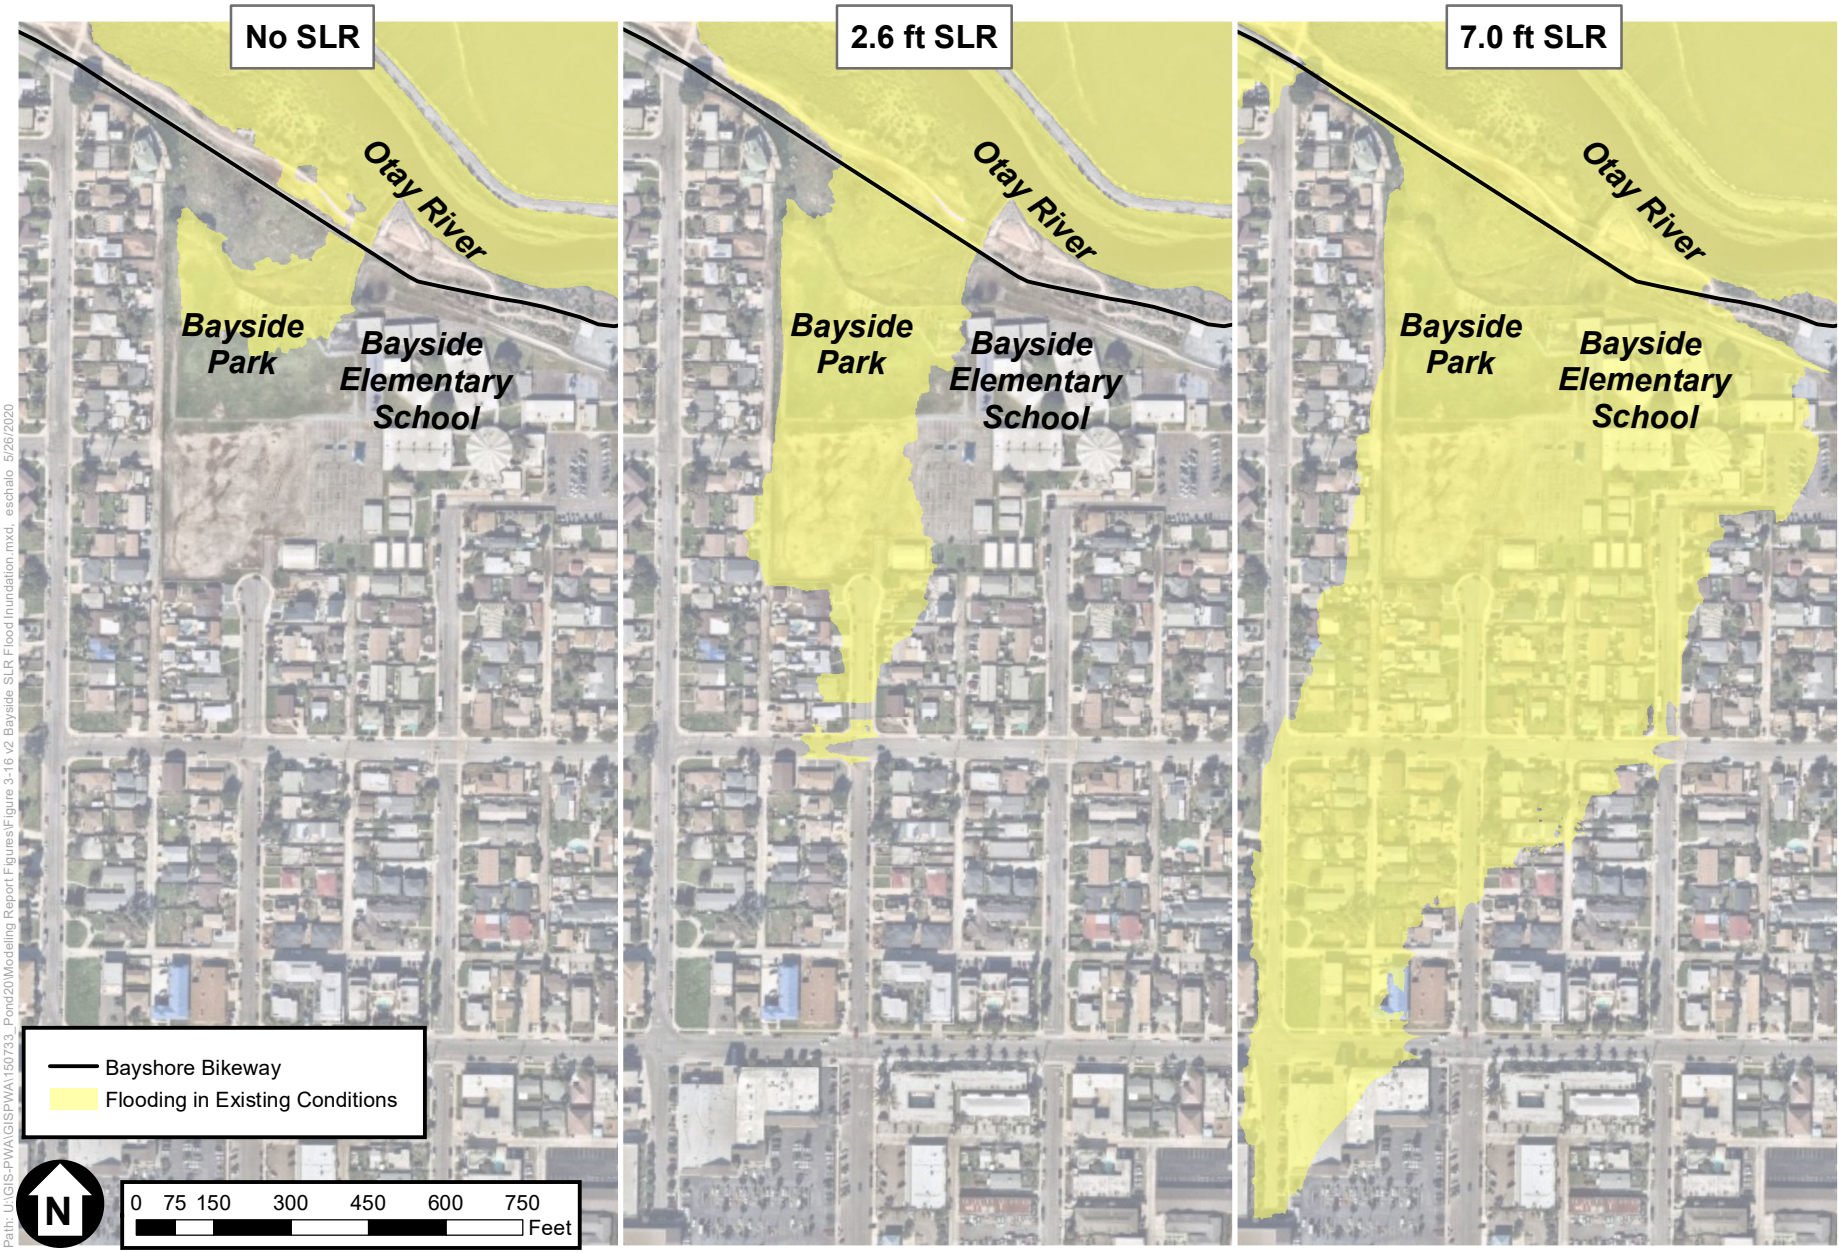

Several sea-level rise scenarios were modeled with the 100-year flood event to better understand long-term flood risks with the project. As shown in **Table 3-4**, as sea-level rise increases over time, modeled maximum flood levels in the system, and specifically at Bayside Park, increase. This relationship is not linear. For example, a 2.6-ft increase in sea levels yields a 0.40-ft increase in flood levels at Bayside Park under Existing Conditions. This is because the 100-year storm event drives a large volume of water through the system, so the storm event influences the water levels more strongly than the tides. The project is not expected to worsen flooding from sea-level rise compared to Existing Conditions because model results show that the project does not significantly change flood levels for the current sea level.

TABLE 3-4
WATER LEVELS AT BAYSIDE PARK DURING A 100-YEAR STORM WITH SEA-LEVEL RISE

Model Geometry	Maximum Water Level at Bayside Park (ft NAVD)		
	No SLR	2.6 ft of SLR	7.0 ft of SLR
Existing Flood	8.85	9.25	13.19

Note: SLR = sea-level rise

As shown in **Figure 3-13**, the flooding around Bayside Park is expected to increase with sea-level rise. Even without the project, adaptation strategies will likely be needed to protect the surrounding area and Bayside Elementary School from flooding with 2.6 ft of sea-level rise. **Figure 3-14** shows the modeled flooding around Pond 20 with increasing amounts of sea-level rise. The flood extent looks very similar with up to 7.0 ft of sea-level rise, since upstream on the Otay River and near Pond 20, the flood levels are controlled by the riverine flow more than the tides. Project Conditions flooding is not expected to worsen flooding from sea-level rise compared to Existing Conditions.

SECTION 4
Geomorphic Scour Analysis

ESA conducted a geomorphic assessment and scour analysis to evaluate how the Otay River might change with the restoration of Pond 20. This section also considers how the project could impact the South Pedestrian Bridge that crosses the Otay River near the Pond 20 breach location.

Hydraulic scour for this channel is the result of stormwater flows from rainfall runoff (fluvial processes) as well as tidal forces. The scour analysis was completed following Federal Highway Administration (FHWA) HEC-18 and HEC-25 design guidelines. FHWA guidance requires an evaluation of contraction scour (which occurs uniformly along the entire channel cross section), abutment scour, and pier scour, as well as long-term scour, which is a prediction of potential long-term erosion that could occur due to a variety of geomorphic factors.

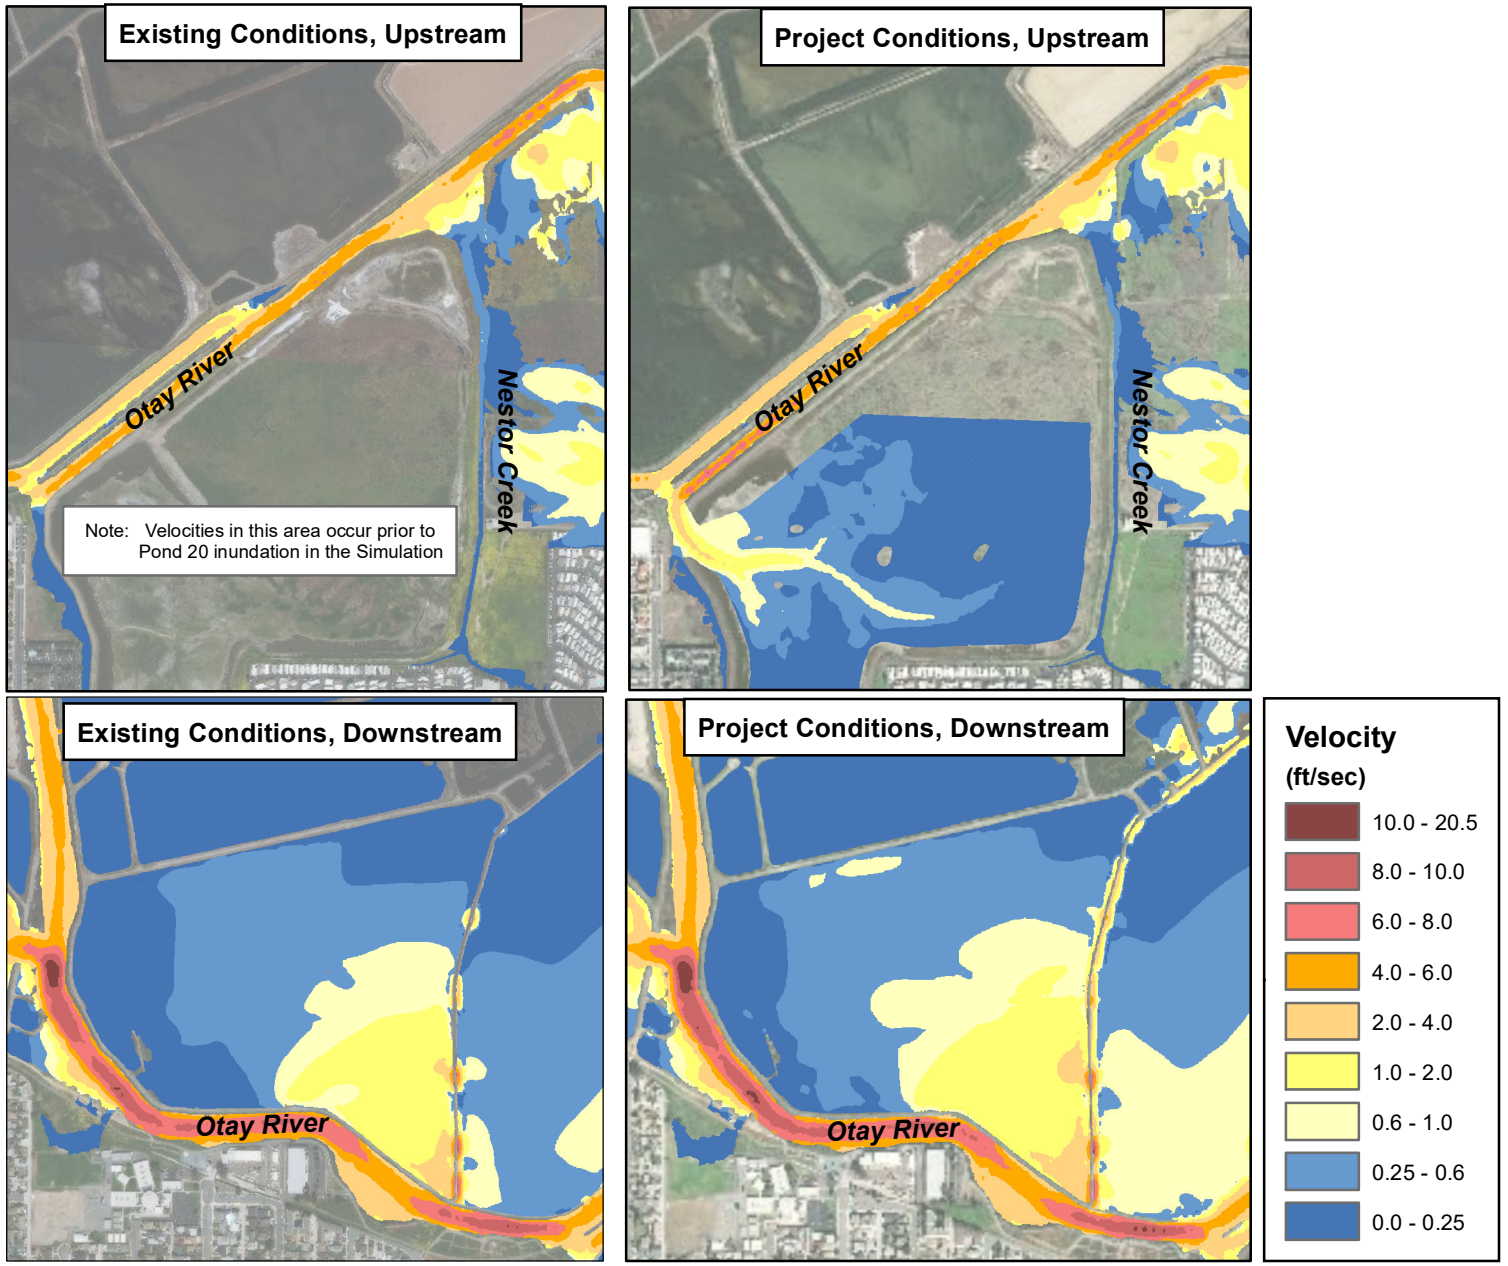

4.1 Hydrodynamic Model Results

The HEC-RAS model described in Sections 3 and 4 was run for worst-case scour conditions by timing the peak of the 100-year hydrograph with low tide, which maximizes the water slope in the channel, resulting in the highest velocities. While HEC-RAS is not designed to perform sediment transport erosion and deposition analysis in 2D flow areas, comparing velocities and shear stresses under Existing and Project Conditions provides one line of evidence in evaluating potential effects of the project.

Figure 4-1 shows the velocities for the Existing Conditions and Project Conditions[10]. Under Existing Conditions, flood waters expand over the floodplain upstream of Pond 20, and then contract into the channel near the confluence of Nestor Creek, resulting in high velocities in the channel in this area. The Project Conditions results show very similar patterns. **Figure 4-2** shows the difference in velocities between Existing Conditions and Project Conditions[11]. The model results show that the project increases peak velocities upstream of the South Pedestrian Bridge by up to 2.5 ft/s and downstream of the bridge by up to 0.3 ft/s.

[10] The data reflects multiple timesteps taken from the model output in order to reflect maximum velocity over the full model domain.

[11] Increases in velocity of about 5 ft/s were limited in extent. Based on review of model results, increases in velocity above 5 ft/s are likely due to instabilities in the model velocity.

ESA

The hydrodynamic model also determines shear stress across the model domain. In an analysis of erosion on tidal flats, Ganthy (2011) derived equations relating shear stress to erosion based on lab tests of field cores and in situ jet-testing measurements. Ganthy proposes:

$$E = E_0 \left(\frac{\tau_0}{\tau_{cr}} - 1 \right)^{\alpha}$$

where E is erosion in g/m^2-s, E_0 is erosion at the critical shear stress in g/m^2-s, τ_0 is shear stress in Pascals (Pa), τ_{cr} is the critical shear stress in Pa, and α is an empirical constant.

Combining the equation above with the critical shear stress for coarse silt[12] provides a method to calculate conservatively high erosion rates from the modeled shear stresses. Additionally, the Ganthy study used tidal flat sediment cores, which may be less consolidated with higher erodibility than cores taken from a channel bottom. The Ganthy equation results in approximately 4-7 ft of scour during the 100-year flood event upstream of the South Pedestrian Bridge (shown as red areas on the right panel of Figure 4-2) for both Existing and Project Conditions. Project Conditions show approximately 0.2 ft more scour than Existing Conditions. Downstream of the South Pedestrian Bridge, the Ganthy equation shows approximately 5-8 ft of scour during the 100-year flood event for both Existing and Project Conditions, with Project Conditions showing approximately 0.1 ft more scour than Existing Conditions.

The exact amount of erosion estimated using the HEC-RAS shear stresses combined with Ganthy (2011) should be considered approximate. However, what this analysis does show is that the project is not expected to increase erosion in the channel during a 100-year storm by more than 0.2 ft compared to Existing Conditions.

Within the tidal channels of the project site, maximum modeled velocities were on the order of 2 ft/s, which is typical in a natural tidal marsh system. Some channel erosion in this area during a large, infrequent storm event is acceptable and not likely to impede the function of the restoration design.

4.2 Contraction, Abutment, and Pier Scour

Analysis of contraction, abutment, and pier scour of the Otay River channel near the South Pedestrian Bridge was conducted using a spreadsheet analysis for Existing and Project Conditions for the 10- and 100-year fluvial flow events. **Table 4-1** presents a summary of the hydraulic characteristics at the South Pedestrian Bridge used in the analysis.

[12] A value of 0.18 Pa was selected for the critical shear stress to reflect no vegetation, which is the closest surrogate to in-channel conditions from the Ganthy study. USGS suggests a range of 0.08 – 0.11 Pa for coarse silt. Anchor 2013 provided sediment sampling within the Otay River with results suggesting the channel sediments were largely silt.

TABLE 4-1
HYDRAULIC CHARACTERISTICS AT THE SOUTH PEDESTRIAN BRIDGE DURING A 100-YEAR STORM

Scenario	Flow (cfs)	Flow Area (ft^2)	Average Peak Velocity (ft/s)	Length of flow obstructed by left bridge abutment (ft)
Existing Conditions	3,835	1,180	3.2	5
Project Conditions	3,944	1,192	2.5	5

4.2.1 Contraction Scour

Under Existing Conditions during the 100-year flood event, the floodplain contracts back into the Otay River channel near the confluence with Nestor Creek, and scour is expected in this area. The HEC-RAS modeling results show increased velocities at the confluence compared to upstream (Section 4.1). The flow width does not contract significantly from this point through the bridge, as flow is trained by the Pond 20 berm and the Bayshore Bike Path berm, so any contraction scour at the South Pedestrian Bridge under Existing Conditions is expected to be minor. Project Conditions exhibits a similar flow width and contraction dimensions since the northern berm of the Pond 20 site is left in place. As under Existing Conditions, the project is expected to have contraction scour in the vicinity of the confluence with Nestor Creek. Within the Pond 20 site, flows constrict to move through the project breach, so some scour could be expected in this area (as shown by the higher velocities in Figure 4-1). However, scour in this area is likely acceptable and not likely to impede the function of the restoration design. Additionally, the project is not expected to increase the scour in this area compared to Existing Conditions.

In the 10-year event, the majority of the flood stays within the Otay River channel. The analysis shows that no or minimal scour is expected under Existing and Project Conditions at the bridge during the 10-year storm event.

4.2.2 Abutment Scour

The FHWA methodology for abutment scour using the Froehlich equation was used to analyze Existing and Full Restoration Conditions for both the 10- and 100-year flows. The Froehlich equation showed that the 100-year event for both Existing and Project Conditions would result in 0 – 2 feet of scour on the left abutment of the South Pedestrian Bridge. The right abutment of the South Pedestrian Bridge is expected to experience minimal abutment scour because the flow upstream of the abutment runs parallel to the levee and therefore the abutment is not causing an obstruction. The project is not expected to increase scour at the abutments compared to Existing Conditions during the 100-year storm event.

There is no expected abutment scour for Existing Conditions or Project Conditions during the 10-year flow event because the flows area does not expand far enough to cause the abutments to be an obstruction.

4.2.3 Pier Scour

While the piers under the bridge do not support the bridge (they are a remnant of the previous railroad bridge), scour at the piers could contribute to overall scour under the bridge. The FHWA methodology for pier scour using the HEC-18 equation was used to analyze Existing and Project Conditions for both the 10- and 100-year flows. The HEC-18 equation showed that the 100-year event under both the Existing and Project Conditions would result in 5.5 – 7.5 feet of scour at the piers under the South Pedestrian Bridge. The project is not expected to increase scour at the piers compared to Existing Conditions during the 100-year storm event.

For the 10-year flow, the HEC-18 equation showed that Existing and Project Conditions would result in 2 to 4.5 feet of scour at the piers under the South Pedestrian Bridge. This indicates that scour is similar between the two scenarios and the project would not increase scour at the piers during the 10-year event.

4.3 Long-Term Scour

Sea-level rise in combination with the project will increase the tidal prism and potential for scour of the Otay River channel. This change in tidal prism is the biggest contributing factor for long-term scour at the bridge.

ESA used empirical tidal channel hydraulic geometry relationships to estimate channel cross-sectional area, width, and depth based on tidal prism. **Table 4-2** presents the results of the analysis for Existing and Project Conditions for current conditions and 2.6 and 4.5 feet of sea-level rise at two locations: the mouth of the Otay River and at the South Pedestrian Bridge.

Figure 4-3 shows the existing cross-section of the Otay River at the South Pedestrian Bridge compared to the projected channel cross-sections. The existing cross-section is much wider than the projected, without-project cross-section (80 ft compared to 45 ft), but is shallower (5.0 ft compared to 7.2 ft). The hydraulic geometry estimates that the Otay River cross-section below MHHW at the South Pedestrian Bridge should be 180 ft^2 to accommodate the tidal prism in the channel (prior to restoration). The actual channel cross-sectional area in this location is 340 ft^2. The existing channel is larger than would be predicted by hydraulic geometry relationships because fluvial flood events scour out a larger cross-sectional area than the tidal prism alone.

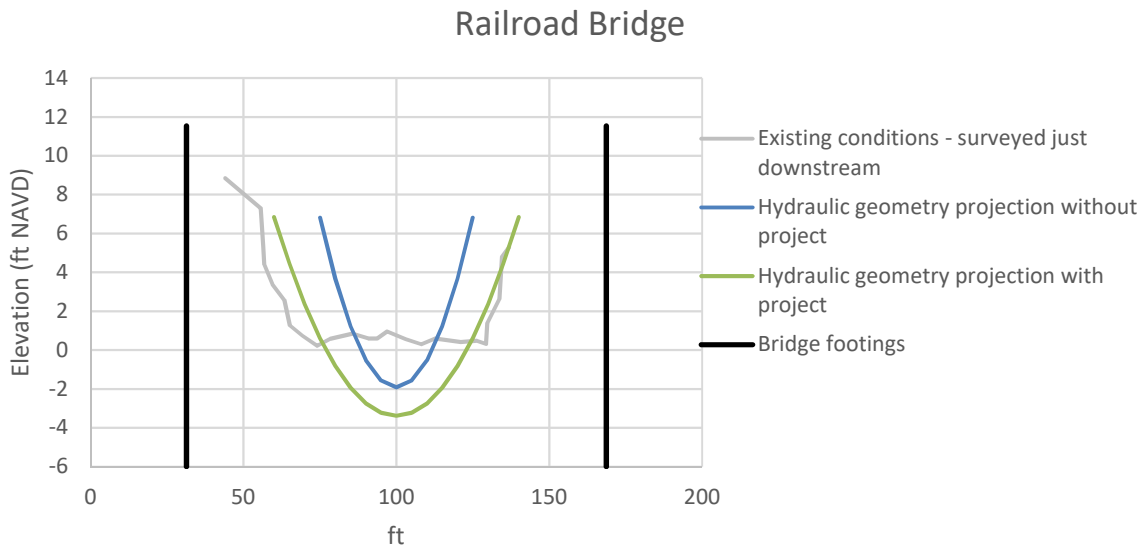

The hydraulic geometry analysis indicates that the project is likely to increase the channel depth by up to about 1.5 ft at the South Pedestrian Bridge and 0.6 ft at the mouth of the Otay River, compared to Existing Conditions in the long-term (e.g., over 10+ years). The analysis also estimates that the channel width could increase by up to about 29 ft at the South Pedestrian Bridge and 15 ft at the Otay River mouth, compared to Existing Conditions in the long-term. The South Pedestrian Bridge abutments are wider than the predicted channel cross-sections under Project Conditions, which indicates that long-term scour at the bridge is not expected to affect the bridge.

TABLE 4-2
HYDRAULIC GEOMETRY CHANNEL SIZING PROJECTIONS

	Existing Conditions	Project Conditions
	Depth below MHHW (ft)	
At mouth of Otay River under current conditions	9.6	10.2
At mouth of Otay with 2.6 ft of SLR	10.8	12.4
At mouth of Otay with 4.5 ft of SLR	Sea-level rise overtops the salt pond berms, so the exact location of the mouth of the Otay River changes to further back in the system	
At South Pedestrian Bridge under current conditions	7.2	8.7
At Pedestrian bridge with 2.6 ft of SLR	8.4	11.5
At Pedestrian bridge with 4.5 ft of SLR	9.3	12.7
	Top width at MHHW (ft)	
At mouth of Otay River under current conditions	97	112
At mouth of Otay with 2.6 ft of SLR	132	189
At mouth of Otay with 4.5 ft of SLR	Sea-level rise overtops the salt pond berms, so the exact location of the mouth of the Otay River changes to further back in the system	
At South Pedestrian bridge under current conditions	45	74
At Pedestrian bridge with 2.6 ft of SLR	68	154
At Pedestrian bridge with 4.5 ft of SLR	89	201
	Cross-sectional area below MHHW (ft^2)	
At mouth of Otay River under current conditions	536	653
At mouth of Otay with 2.6 ft of SLR	824	1363
At mouth of Otay with 4.5 ft of SLR	Sea-level rise overtops the salt pond berms, so the exact location of the mouth of the Otay River changes to further back in the system	
At Pedestrian bridge under current conditions	184	363
At Pedestrian bridge with 2.6 ft of SLR	323	1029
At Pedestrian bridge with 4.5 ft of SLR	475	1494

[1] MHHW is 1.62 ft NAVD in San Diego Bay (NOAA). Under 2.6 ft of sea-level rise, MHHW would be 4.22 ft NAVD. Under 4.5 ft of sea-level rise, MHHW would be 6.12 ft NAVD.

If the channel is limited from down-cutting (e.g., due to hard materials in the channel), the channel may widen to accommodate the tidal prism, rather than widening and downcutting. If downcutting was completely restricted, Project Conditions could increase the channel top width at MHHW to 260 ft. This conservatively high estimate of potential widening indicates that channel widening could potentially effect the bridge. ESA recommends probing the sediments in the channel in the vicinity of the bridge to identify any areas that may limit downcutting to inform engineering design. Hardened areas could potentially be removed as part of constructing the project. ESA recommends monitoring of the channel in this area to track changes.

Pond 20 Mitigation Bank

Figure 4-3
Hydraulic Geometry with Project

Figure 4-4 shows cross-sections and channel widths between berms for the Otay River from the Pond 20 breach to the mouth of the river. The narrowest cross-section (cross-section 5 in Figure 4-4) is just downstream of the South Pedestrian Bridge, between an area with trails on the left bank and the Pond 22 berm on the right bank. This cross-section has a width of approximately 70 feet between the bottom of the berm and the toe of the slope. The hydraulic geometry relationships predict that with the project, the channel would scour to approximately 74 feet in this area. The left bank has a marsh bench that is approximately 25 ft wide. Because the marsh is less consolidated and more easily erodible then the Pond 22 berm, it is expected that the marsh area will preferentially scour compared to the Pond 22 berm. Since the scour due to the increase in tidal prism would be a slow process (e.g., occurring over 10+ years), ESA recommends monitoring the channel expansion to ensure that the Pond 22 berm is not effected.

Further down the river, the existing channel becomes wider, as the tidal prism conveyed through that part of the channel increases. Table 4-2 shows the predicted channel geometry under the different scenarios for the mouth of the Otay River. The existing channel width at the mouth of the Otay River between pond berms is 175 feet (cross-section 1 in Figure 4-4); the project is predicted to have a top width of 112 feet, so significant long-term scour is not expected downstream.

Otay River Channel Existing Width

ESA

SECTION 5
Habitat Elevations

Zones of general topographic suitability for various tidal and tidally-adjacent habitat types can be defined based on the elevation of the area relative to tidal datums (i.e., as a surrogate for the frequency of tidal inundation). ESA calculated estimated habitat elevation ranges at Pond 20 based on vegetation-inundation relationships measured at other reference sites and field measurements at Pond 20.

5.1 Existing Conditions (Pre-Restoration) and Verification

Inundation frequencies were determined for each habitat zone based on literature values and experience at other Southern California sites (ESA PWA 2015, James and Zedler 2000, Josselyn and Welchel 1999, Myers et. al 2017, Ward, Callaway, and Zedler 2003, Zedler 1982, and Zedler 2000). **Table 5-1** presents the percent inundations and the corresponding elevations based on the adjusted NOAA San Diego gage tide data for existing, pre-restoration conditions. Each zone represents the expected elevation bands suitable for supporting subtidal, marsh, and upland habitat types along the Otay River.

TABLE 5-1
ELEVATION BANDS AND INUNDATION FREQUENCIES OF DIFFERENT HABITAT TYPES UNDER EXISTING CONDITIONS

Habitat Type	Elevation Bands (ft NAVD)	Inundation Frequency (% time)
Upland	> 7.5	< 3-yr tidal inundation
Transition Zone	7.0 to 7.5	1% to 3-yr inundation
High Marsh	6.0 to 7.0	1% to 5%
Mid Marsh	4.3 to 6.0	5% to 26%
Low Marsh	2.9 to 4.3	26% to 51%
Mudflat	0.9 to 2.9	51% to 99.99%
Subtidal	< 0.9	> 99.99% (based on observed water levels at the South Pedestrian Bridge)

The habitat elevations in Table 5-1 were compared to elevations of pickleweed at Pond 20 for verification. A brief survey (n = 5) of the fringing marsh around Pond 20 showed pickleweed occurring down to 4.9 feet NAVD and up to as high as 7.5 feet NAVD in some locations. It is not uncommon for pickleweed to grow up into the transition zone. The habitat zones in Table 5-1 do

not all currently occur at the site but are for a comparative baseline reference only. Lack of a regular tidal connection at the site precludes the necessary suitable conditions for certain habitat types to form, such as subtidal or mudflats.

It is important to note that defining precise elevations between habitats is helpful for designing a restoration site, but in reality, vegetation will establish above and below these elevation boundaries. Additional considerations include:

- Transition zone lower and upper elevation limits vary between systems and are dependent on topography (e.g., slope), tidal muting, and fluvial flooding frequency and depth.
- High marsh upper elevation limit can be highly variable and depends on topography (e.g., slope) and tidal muting.
- Mid marsh elevation limits are likely more consistent between natural marshes with different tidal connections/muting.
- Low marsh elevation limits are especially sensitive to distortions of low tides (e.g., distance from tidal connections, etc.). The low marsh elevation range is wider and extends lower where low tides are fully expressed (e.g., San Diego Bay, Anaheim Bay, Upper Newport Bay) and narrower where low tides are distorted (e.g., Carpinteria marsh, Tijuana estuary).
- Mudflat elevation limits are also sensitive to distortion of low tides (e.g., distance from tidal connections, etc.).

5.2 Post-Restoration Conditions at Current Sea Level

To determine the habitat elevations under post-restoration conditions, water levels from the hydrodynamic modeling analysis were used (Section 3). **Table 5-2** shows the habitat elevation bands that could be expected at the Pond 20 site. These elevations reflect the muted tides discussed in Section 3.2, but assume no change in sea-level in concordance with the pre-restoration conditions.

TABLE 5-2
ELEVATION BANDS AND INUNDATION FREQUENCIES OF DIFFERENT HABITAT TYPES UNDER PROJECT CONDITIONS

Habitat Type	Post-Restoration Elevation Bands (ft NAVD)
Upland	> 7.5
Transition Zone	7.0 to 7.5
High Marsh	5.7 to 7.0
Mid Marsh	4.1 to 5.7
Low Marsh	2.8 to 4.1
Mudflat	1.8 to 2.8
Subtidal	< 1.8

As discussed in Section 3.2, while the tides are reintroduced to the Pond 20 as part of the project, the higher water levels in the system decrease slightly due to the large increase in tidal prism. Until the Otay River scours to accommodate the increased flow, some tidal muting at the higher water levels is expected. The modeling results show muting is only likely to be between 0.1 – 0.3 ft.

5.3 Post-Restoration Conditions with Sea-Level Rise

Future habitat elevations were estimated for the sea-level rise scenarios discussed in Section 2.4.4. To determine the future habitat elevations at Pond 20, the inundation frequency was determined for the model results with sea-level rise. **Table 5-3** lists the post-restoration habitat zones across five future sea-level rise scenarios.

TABLE 5-3
ELEVATION BANDS AND INUNDATION FREQUENCIES OF DIFFERENT HABITAT TYPES UNDER SEA- LEVEL RISE

Habitat Type	Elevation bands with 0.7 ft of sea-level rise (ft NAVD)	Elevation bands with 1.4 ft of sea-level rise (ft NAVD)	Elevation bands with 2.6 ft of sea-level rise (ft NAVD)	Elevation bands with 4.5 ft of sea-level rise (ft NAVD)	Elevation bands with 7.9 ft of sea-level rise (ft NAVD)
Upland	> 8.2	> 8.9	> 10.1	> 12.0	> 14.5
Transition Zone	7.6 to 8.2	8.3 to 8.9	9.6 to 10.1	11.5 to 12.0	14.0 to 14.5
High Marsh	6.4 to 7.6	7.0 to 8.3	8.2 to 9.6	10.2 to 11.5	12.8 to 14.0
Mid Marsh	4.8 to 6.4	5.5 to 7.0	6.5 to 8.2	8.3 to 10.2	11.0 to 12.8
Low Marsh	3.4 to 4.8	4.1 to 5.5	5.4 to 6.5	7.1 to 8.3	9.5 to 11.0
Mudflat	2.0 to 3.4	2.2 to 4.1	2.5 to 5.4	3.5 to 7.1	5.7 to 9.5
Subtidal	< 2.0	< 2.2	< 2.5	< 3.5	< 5.7

As discussed in Section 3.5.1, the modeling results show that with sea-level rise of 1.4 ft or less, the tides in the site show some muting at higher water levels due to the constraint of the Otay River geometry. As the Otay River scours to accommodate the increasing tidal prism, the higher water levels are expected to increase, but the results above do not account for this. At 2.6 ft of sea-level rise, areas of the site that were formerly low and mid salt marsh will likely be converted to mudflat. By 7.0 ft of sea-level rise, the tides inundate the salt ponds north of the site regularly, so the Otay River geomorphology becomes less of a factor in the water levels at the site as the bay extends to the edge of the site.

Figures 5-1 through 5-6 show the anticipated habitats at Pond 20 with increasing amounts of sea-level rise. **Tables 5-4 and 5-5** report the acreages and percent area of the site of each habitat type for existing habitat conditions as well as for each of the six sea-level rise scenarios for restored habitat conditions. Through the proposed restoration activities, marsh would be created at the site (approximately 67 acres), with mid marsh as the primary habitat and high marsh as secondary habitat (**Figure 5-1**). Mid and high marsh would continue to be the dominant habitat types at the site under a 0.7 ft sea-level rise scenario (**Figure 5-2**). With 1.4 ft of sea-level rise, the marsh would shift to low and mid marsh with some small areas of high marsh. The remaining high marsh would be relegated to thin bands along the periphery bordered by transition zone and

upland buffers (**Figure 5-3**). The restored site would fully accommodate the slight increase in subtidal inundation and mudflat expansion with minor influence on major groups of marsh and upland habitats under this scenario. However, under a 2.6 ft sea-level rise scenario, high marsh, uplands, and the transition zone between them would decrease by over 70 percent as additional flooding of the site alters the landscape and increases topographic suitability and acreage of mudflats and low marsh (**Figure 5-4**). Under a 4.5 ft sea-level rise scenario, mudflats become the primary habitat (approximately 67 acres), edging out all other habitat types to the periphery of the site (**Figure 5-5**). High marsh, uplands, and their transition zone are nearly absent, representing less than a fraction of a percent of the land. For a 7.0 ft. sea-level rise scenario, the site fundamentally transitions into an inundated subtidal basin (approximately 53 acres), leaving only about 29 acres of terrestrial habitat and eliminating almost all vegetated wetland, including mudflats (**Figure 5-6**). All marsh, upland, and their transition zone collectively comprise less than approximately 3 percent of the site. For this extreme scenario, the functional capacity of the site for wetland or upland ecological service would be virtually lost.

TABLE 5-4
RESTORED HABITAT TYPES AND ACREAGES UNDER SEA-LEVEL RISE SCENARIOS

Scenario	Subtidal	Mudflats	Low Marsh	Mid Marsh	High Marsh	Transition Zone	Upland
0.0 ft. SLR	4	1	1	37	28	2	7
0.7 ft. SLR	4	1	1	37	28	4	5
1.4 ft. SLR	5	3	34	31	4	2	3
2.6 ft. SLR	6	30	34	7	4	1	0
4.5 ft. SLR	7	67	3	4	0	0	0
7.0 ft. SLR	53	28	1	0	0	0	0

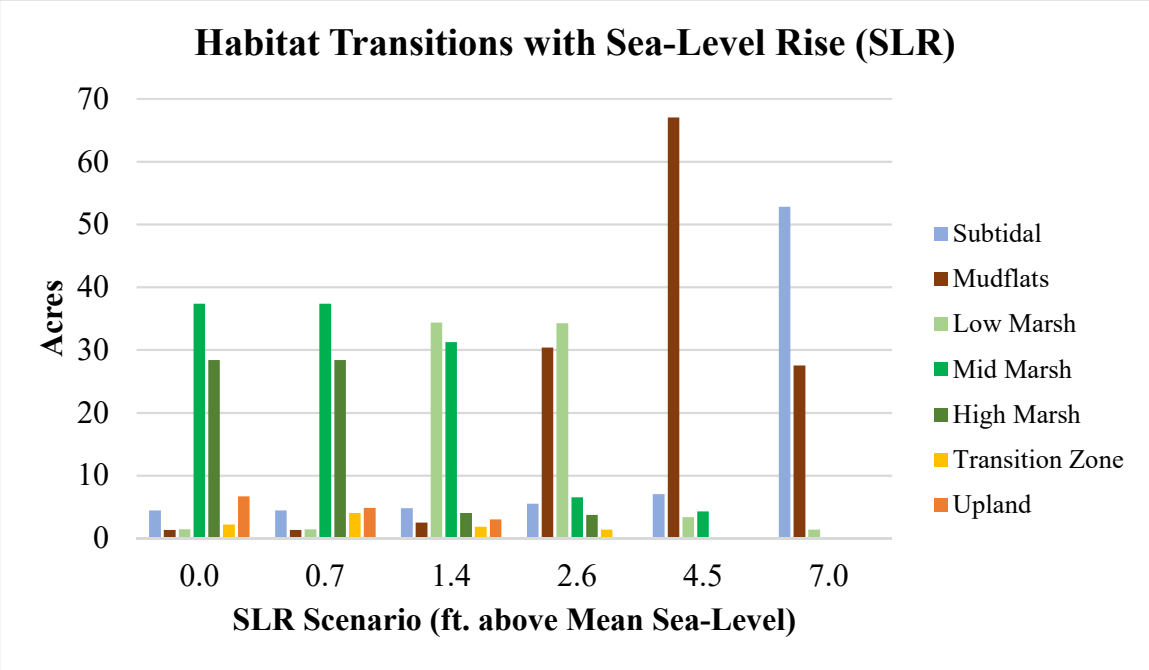

Figure 5-6. Restored Habitats – 7.0 ft of Sea Level Rise

Given these findings, the proposed design shows resilient ecological form and function under the OPC Low Risk Aversion Projection (Figure 2-8). The configuration of habitats would retain the same general distribution, acreages, and proportions while continuing to provide ecological wetland and upland buffer services through the year 2080 (2.6 ft of sea-level rise). Low marsh would be expected to become the primary habitat by the mid-2080s, but all other habitats would continue to persist at the site by year 2100. However, ecological services derived from the mid marsh, high marsh, uplands, and their transition zone would be reduced. For comparison, under the OPC Medium-High Risk Aversion Projection, the site would likely transform into mostly mudflats by year 2080 and almost fully submerged by year 2100. Only marginal wetland ecological services would be expected to persist under this more extreme projection, albeit a less likely future climate outcome. No ecological service from high marsh, uplands, or their transition zone would be expected as these habitats would no longer exist by end-of-century. **Figure 5-7** shows the relative changes in habitat composition across all six scenarios.

Figure 5-7. Habitat Transitions with Sea-Level Rise

SECTION 6
Conclusions

6.1 Hydrodynamic Model

Precise water levels within the system are sensitive to the modeling assumptions, but results for Existing and Project Conditions show similar water levels throughout the Otay River within ±0.1 ft.

The modeling results show that flood waters during a 100-year fluvial flood event move through the system similarly for Existing and Project Conditions. The model results show that the Pond 20 project would have similar water levels (differences less than 0.1 ft) in the Otay River downstream of the Pond 20 site compared to Existing Conditions and during a 100-year fluvial flood event. The 100-year flow model results show water levels and flood extent at Bayside Park would be similar, with the project providing a slight reduction in flooding extent.

6.2 Scour and Geomorphic Analysis

The scour and geomorphic analysis of the Otay River show the following results:

- Increase in peak velocities in the channel upstream of the South Pedestrian Bridge by up to 2.5 ft/s and downstream by about 0.3 ft/s during a 100-year fluvial flood event for Project Conditions.
  - The duration during which the Pond 20 velocity is higher than the Existing Conditions velocity is around 3 hours, so the expected difference in erosion between Pond 20 Alone and Existing Conditions is on the order of 0.2 ft upstream of the South Pedestrian Bridge and 0.1 ft downstream. This is an approximately 1-5% increase in the amount of erosion, which is expected to be within the range of uncertainty in the methods used to estimate the erosion amount.
  - The channel scour under the 10-year fluvial flood event was not analyzed.
- No contraction scour is expected at the South Pedestrian Bridge under Existing and Project Conditions.
- Increase in channel dimensions at the South Pedestrian Bridge based on long-term, tidal scour.
  - If downcutting of the channel is limited by hardened materials in the channel bottom, the Pond 20 project could increase the channel top width at MHHW to 260 ft, which could potentially effect the bridge.
  - ESA recommends probing the sediments in the channel in the vicinity of the bridge to identify any areas that may limit downcutting. Any hardened areas could potentially be removed as part of constructing the project.

- The project is not expected to increase abutment scour on the abutments of the South Pedestrian Bridge during a 10- or 100-year fluvial flood event.
- No increase in potential pier scour is expected at the South Pedestrian Bridge for the Pond 20 project compared to Existing Conditions for either 10- or 100-year fluvial flood events.
- Increase in channel dimensions downstream of the South Pedestrian Bridge based on long-term, tidal scour.
  - The narrowest cross-section, just downstream of the bridge has a width of approximately 70 feet and could scour out to 77 feet with just Pond 20.
  - There is some potential for some scour of the Pond 22 berm and the bank at the narrowest cross-section, just downstream of the bridge, due to the Pond 20 restoration. However, it is expected that the marsh area will preferentially scour compared to the Pond 22 berm, since the marsh is less consolidated and more easily erodible. Since the scour due to the increase tidal prism would be a slow process (e.g., occurring over 10+ years), ESA recommends monitoring the channel expansion to ensure that the Pond 22 berm is not effected.
  - Further down the river, the existing channel becomes wider, so significant long-term scour is not expected downstream.

The potential effects of the project on channel scour and the South Pedestrian Bridge could possibly be addressed through establishing and implementing a post-restoration channel and bridge scour monitoring and maintenance program. This program could involve developing a monitoring plan, thresholds for considering maintenance, and potential maintenance actions such as re-grading or armoring portions of the channel where erosion may be problematic.

Unified Port of San Diego

STORMWATER REQUIREMENTS APPLICABILITY CHECKLIST

Tenant:	Project Name:	Project No.
Unified Port of San Diego	Wetland Mitigation Bank at Pond 20	

SECTION 1: PERMANENT POST-CONSTRUCTION BMP REQUIREMENTS
Part A: Determine if the Port BMP Design Manual Applies to the Project

1. **New Development** *(see Limited Exclusion)***:** Is your project a new development that will create 10,000 square feet or more of impervious surfaces collectively over the entire project site? ..... ☐ Yes ☒ No
2. **Redevelopment** *(see Limited Exclusion)***:** Is your project a redevelopment that will create and/or replace 5,000 square feet or more of impervious surface collectively over the entire project on an existing site of 10,000 square feet or more of impervious surfaces?..... ..... ☐ Yes ☒ No

If "Yes" to either of the above, *the project is categorized as a Priority Development Project (PDP) and is subject to permanent post-construction stormwater BMP requirements as outlined in the Port BMP Design Manual. A Port Stormwater Quality Management Plan (SWQMP) for PDPs is required that identifies and supports the use of permanent structural BMPs, as appropriate. See Note for Port template requirements. As permanent source control and site design BMP requirements are addressed in the required SWQMP submittal, Part B of of this checklist can be skipped. Continue to Section 2 to identify construction phase stormwater requirements.*

If "No" to both of the above, *continue to question 3.*

3. **New Development or Redevelopment:** Is your project a new or redevelopment project characterized by one of the following? If so, identify the applicable category.....…..... ☐ Yes ☒ No
   - A) The project will create and/or replace 5,000 square feet or more of impervious surface collectively over the entire project site and support one or more of the following uses:
     - i. Restaurant development. This includes any facility that sells prepared foods and drinks for consumption including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption.
     - ii. Development on any natural slope that is twenty-five percent or greater.
     - iii. Parking lots.
     - iv. Streets, roads, highways, freeways and/or driveways.
   - B) The project will create and/or replace 2,500 square feet or more of impervious surface collectively over the entire project and discharges directly to an Environmentally Sensitive Area (ESA)*. "Discharging directly to" includes flow that is conveyed overland a distance of 200' or less from the project to the ESA, or conveyed in a pipe or open channel any distance as an isolated flow from the project to the ESA (i.e. not commingled with flows from adjacent lands). * San Diego Bay is considered an ESA
   - C) The project supports one or more of the following:
     - i. Automotive repair shop
     - ii. Retail gasoline outlet that is 5,000 square feet or more or has a project Average Daily Traffic of 100 or more vehicles per day.
   - D) New development or redevelopment project that results in the disturbance of one or more acres of land and is expected to generate pollutants post construction.

If "Yes" to question 3, *the project is categorized as a Priority Development Project (PDP) and is subject to permanent post-construction stormwater BMP requirements as outlined in the Port BMP Design Manual. A Port Stormwater Quality Management Plan (SWQMP) for PDPs is required that identifies and supports the use of permanent structural BMPs, as appropriate. See Note (Page 3) for Port template requirements. Permanent source control and site design BMP requirements must be included in the SWQMP submittal. As such, skip Part B of this checklist. Continue to Section 2 to determine construction phase stormwater requirements.*

If "No" to question 3, *the project is a standard project and is not subject to permanent post-construction stormwater BMP requirements as outlined in the Port BMP Design Manual. A standard project Stormwater Quality Management Plan (SWQMP) consisting of a series of checklists is required for the project. See Note (Page 3) for Port template requirements. Continue to Part B to determine minimum source control and site design BMP requirements appropriate for the project as outlined in the Port BMP Design Manual. Also Complete Section 2 to determine construction phase stormwater requirements.*

Limited Exclusion: *Redevelopment does not include trenching and resurfacing work associated with utility work. Projects that follow design criteria as defined in the MS4 permit E.3.b.(3) may be exempt from PDP requirements.*

DocuSign Envelope ID: 7EAC0321-3ED2-44EF-B509-EA2561C50BB5

SECTION 1: PERMANENT POST-CONSTRUCTION BMP REQUIREMENTS
Part B: Determine Minimum Permanent Stormwater BMP Requirements

GENERAL REQUIREMENTS	
1. Are onsite BMPs planned for this project?	☐ Yes ☒ No

If "Yes", *the project must meet general requirements identified in the Port BMP Design Manual, outlined in Section 2.1 and discussed in Section 4.1.*

SOURCE CONTROL BMPs	
1. Does the project include any new storm drains, or alteration to existing storm drains?	☐ Yes ☒ No
2. Does the project include an outdoor material storage area?	☐ Yes ☒ No
3. Does the project include any outdoor work area with potential for pollutant generation?	☐ Yes ☒ No
4. Does the project include any outdoor trash storage areas?	☐ Yes ☒ No
5. Will commercial or industrial waste handling or storage occur at the site, excluding typical office or household waste?	☐ Yes ☒ No
6. Does the project include any material loading and unloading areas?	☐ Yes ☒ No
7. Will vehicle or equipment fueling, washing or maintenance take place on the site?	☐ Yes ☒ No
8. Does the project include landscaped areas?	☐ Yes ☒ No

If "Yes" to any of the above, *the project must implement, where applicable/technically feasible, permanent source control BMPs identified in the Port BMP Design Manual, outlined in Section 2.1 and discussed in Section 4.1.*

SITE DESIGN BMPs	
1. Does the project include any permanent structures within 100 feet of any natural water body?	☐ Yes ☒ No
2. Does the existing site footprint include natural areas with trees, vegetation, or natural soils?	☐ Yes ☒ No
3. Does the project include new impervious areas including roads, parking lots, driveways, rooftops, paths or sidewalks?	☐ Yes ☒ No
4. Does the project include new pervious landscape areas and irrigation systems?	☐ Yes ☒ No

If "Yes" to any of the above, *the project must implement, where applicable and technically feasible, site design practices identified in the Port BMP Design Manual, outlined in Section 2.1 and discussed in Section 4.1.*

DocuSign Envelope ID: 7EAC0321-3ED2-44EF-B509-EA2561C50BB5

SECTION 2: CONSTRUCTION PHASE STORMWATER BMP REQUIREMENTS

1. Will the project include clearing, grading, or disturbances to ground such as stockpiling, or excavation that results in soil disturbances of at least one acre total land area? ……..….....	☒ Yes ☐ No

If "Yes", *a Construction Stormwater Pollution Prevention Plan (SWPPP) for projects greater than 1-acre is required and this project will trigger the General Construction Stormwater Permit. See Note for Port template requirements.*
If "No", *continue to questions 2 and 3.*

2. Will the project include pavement resurfacing, grading or soil disturbances greater than 100 square feet?.....……..….....	☐ Yes ☐ No
3. Will the project occur over or within receiving water?.....…….....	☐ Yes ☐ No

If "Yes" to either of the above, *a Construction BMP Plan for Projects less than 1-acre is required. See Note for Port template requirements.*
If "No" to both of the above, *continue to questions 4 and 5.*

4. Will stormwater or urban runoff have the potential to contact any portion of the construction area, including washing and staging areas? …….. .	☐ Yes ☐ No
5. Will the project use any construction materials that could negatively affect water quality if discharged from the site (such as paints, solvents, concrete, and stucco)?.....	☐ Yes ☐ No

If "Yes" to either of the above, *no Construction SWPPP or Construction BMP Plan is required but contractor is required to follow general construction phase BMPs as identified in the project temporary stormwater pollution control specifications.*
If "No" to both of the above, *no construction phase stormwater BMP requirements are required.*

NOTE*: Additional information for construction phase and permanent post-construction stormwater BMP requirements can be found in the Port BMP Design Manual document found on the Port's website. The Port requires the use of Port templates for construction phase and permanent post-construction stormwater BMP requirement submittals.*

- *SWQMP templates for standard projects and PDPs: http://www.portofsandiego.org/environment/stormwater/1766-usmp-template.html.*
- *Port Construction SWPPP and Construction BMP Plan templates: http://www.portofsandiego.org/environment/stormwater/838-swppp-templates.html*

Two different specifications are available to cover construction phase requirements. One specification is used when a Construction SWPPP or Construction BMP Plan document is prepared by the contractor submitting the bid and the second is when the document has been prepared and added to the specifications.

For questions regarding construction phase and/or permanent post-construction stormwater BMP requirements, contact the Port's Planning and Green Port department at (619) 686-6254.

1 Introduction

This Noise and Vibration Report was completed for the proposed Wetland Mitigation Bank at Pond 20 and Port Master Plan Amendment (PMPA) Project (project) to identify potential impacts on nearby sensitive land uses. Project construction and operational noise and vibration levels were calculated and compared to applicable laws, guidelines, and/or regulations.

This page is intentionally blank.

2 Project Location and Description

2.1 Project Location

The project site consists of approximately 95 acres of San Diego Unified Port District (District)-owned and federally managed land located in the City of San Diego, east of the City of Imperial Beach, and south of the confluences of Otay River and San Diego Bay (Figure 2-1). The project site is located within the Imperial Beach United States (U.S.) Geological Survey 7.5-minute quadrangle and is entirely within the Coastal Zone.

There is no official address for the project site; however, it is located immediately north of Palm Avenue (State Route 75), south of the San Diego Bay National Wildlife Refuge South San Diego Bay Unit managed by U.S. Fish and Wildlife Service, east of 13th Street, west of 16th Street, and southwest of Otay Valley Regional Park. Interstate (I-) 5 is located approximately 1 mile east of the project site (Figure 2-2).

The project site is composed of six parcels of land identified as assessor parcel numbers:

- 616-020-(08/12)
- 616-021-08
- 616-021-09 (portion)
- 621-020-(04/08)

2.2 Project Description

The proposed project includes two primary project components: the creation of the Wetland Mitigation Bank at Pond 20 (Bank Site) and a PMPA. The project site is divided into three main areas, as shown on Figure 2-2: the Bank Parcel, Parcels A, B, and C, and the berm breach location. The Bank Parcel is 83.5 acres and contains the southern portion of the former salt evaporation pond known as Pond 20 and extends beyond the existing salt pond berms to also include Nestor Creek and the Otay River Tributary. The Bank Site would be developed within the existing Pond 20 berms in the Bank Parcel and would be up to 80 acres in size. Parcels A, B, and C are immediately adjacent to the Bank Parcel but entirely outside the Pond 20 berms. The proposed project includes a "project-level" and "program-level" environmental evaluation.

2.2.1 Project-Level Components – Wetland Mitigation Bank at Pond 20

The District is proposing the creation of a wetland mitigation bank within a portion of District-owned property, which was historically used as salt evaporation pond (Bank Parcel). The project includes associated construction and long-term operation and maintenance activities of the mitigation bank.

The District is proposing a PMPA to incorporate the Bank Parcel into the District's Port Master Plan (PMP) and assign a land use designation of wetlands. The creation of the wetland mitigation bank, as well as the incorporation and land use designation of the wetland mitigation bank into the PMP, is evaluated at a "project level" in this report.

Construction Schedule and Workforce

Construction of the proposed project is anticipated to take approximately 17 months. Construction would start following certification of the environmental impact report and issuance of a finding of no significant impact by the U.S. Fish and Wildlife Service, final design engineering, and receipt of all applicable permits. It is anticipated these would be complete by early 2021, and construction would commence in 2021. The estimated duration of each construction activity is summarized in Table 2-1.

Construction would occur during daytime hours, Monday through Saturday from 7 a.m. to 4 p.m. Work restrictions may occur because of exceptionally high tides or delays due to rain or post rain until the ground is dry enough for earth-moving equipment to travel safely. A construction crew of approximately 14 people would be on site for the majority of construction, with up to 24 personnel on site for approximately 6 months during mass grading and 4 months during fine grading. The peak number of personnel on site during landscaping activities would be 36 people. Construction is anticipated to commence in early 2021, with clearing and grubbing which would occur in April and May and utilize 40 hauling trucks per day for 2 months. Mass grading would occur June through November and utilize 80 hauling trucks per day for 6 months. Fine grading would occur in December and January and utilize 10 to 15 hauling trucks per day for 2 to 3 weeks.

Table 2-1. Proposed Construction Schedule

Activity	Estimated Duration (Months)
Clearing and grubbing	2
Mass grading	6
Fine grading	4
Landscaping	4
Breech excavation/opening	1

Construction Equipment

A variety of equipment and vehicles would be used during construction. Table 2-2 lists the construction equipment and vehicles and their estimated schedule during construction. Hauling trucks would be double trailers.

Table 2-2. Construction Equipment and Duration of Use

Type of Equipment	Quantity	Estimated Schedule (Months)
Excavator	2	7
Graders	2	4
Scrapers	1	4
Bull dozers	3	11

Table 2-2. Construction Equipment and Duration of Use

Type of Equipment	Quantity	Estimated Schedule (Months)
Loaders	4	10
Backhoes	2	3
Water trucks	2	15
Hauling trucks	20 to 80	10

Operation

Once construction of the wetland mitigation bank is complete, a 5-year monitoring program would begin. During this 5-year period, one vehicle would visit the project site monthly to monitor performance standards and success criteria. After all performance standards have been met, the long-term maintenance and monitoring phase would begin, which assumes one vehicle would visit the site annually. Long-term management may be needed for maintenance of:

- Invasive species monitoring and removal;
- Trash removal;
- Maintenance of site control measures (e.g., fencing); or
- Restoration of any damage from human or maintenance activities or natural phenomenon.

2.2.2 Program-Level Components – Parcels A, B, and C Port Master Plan Amendment

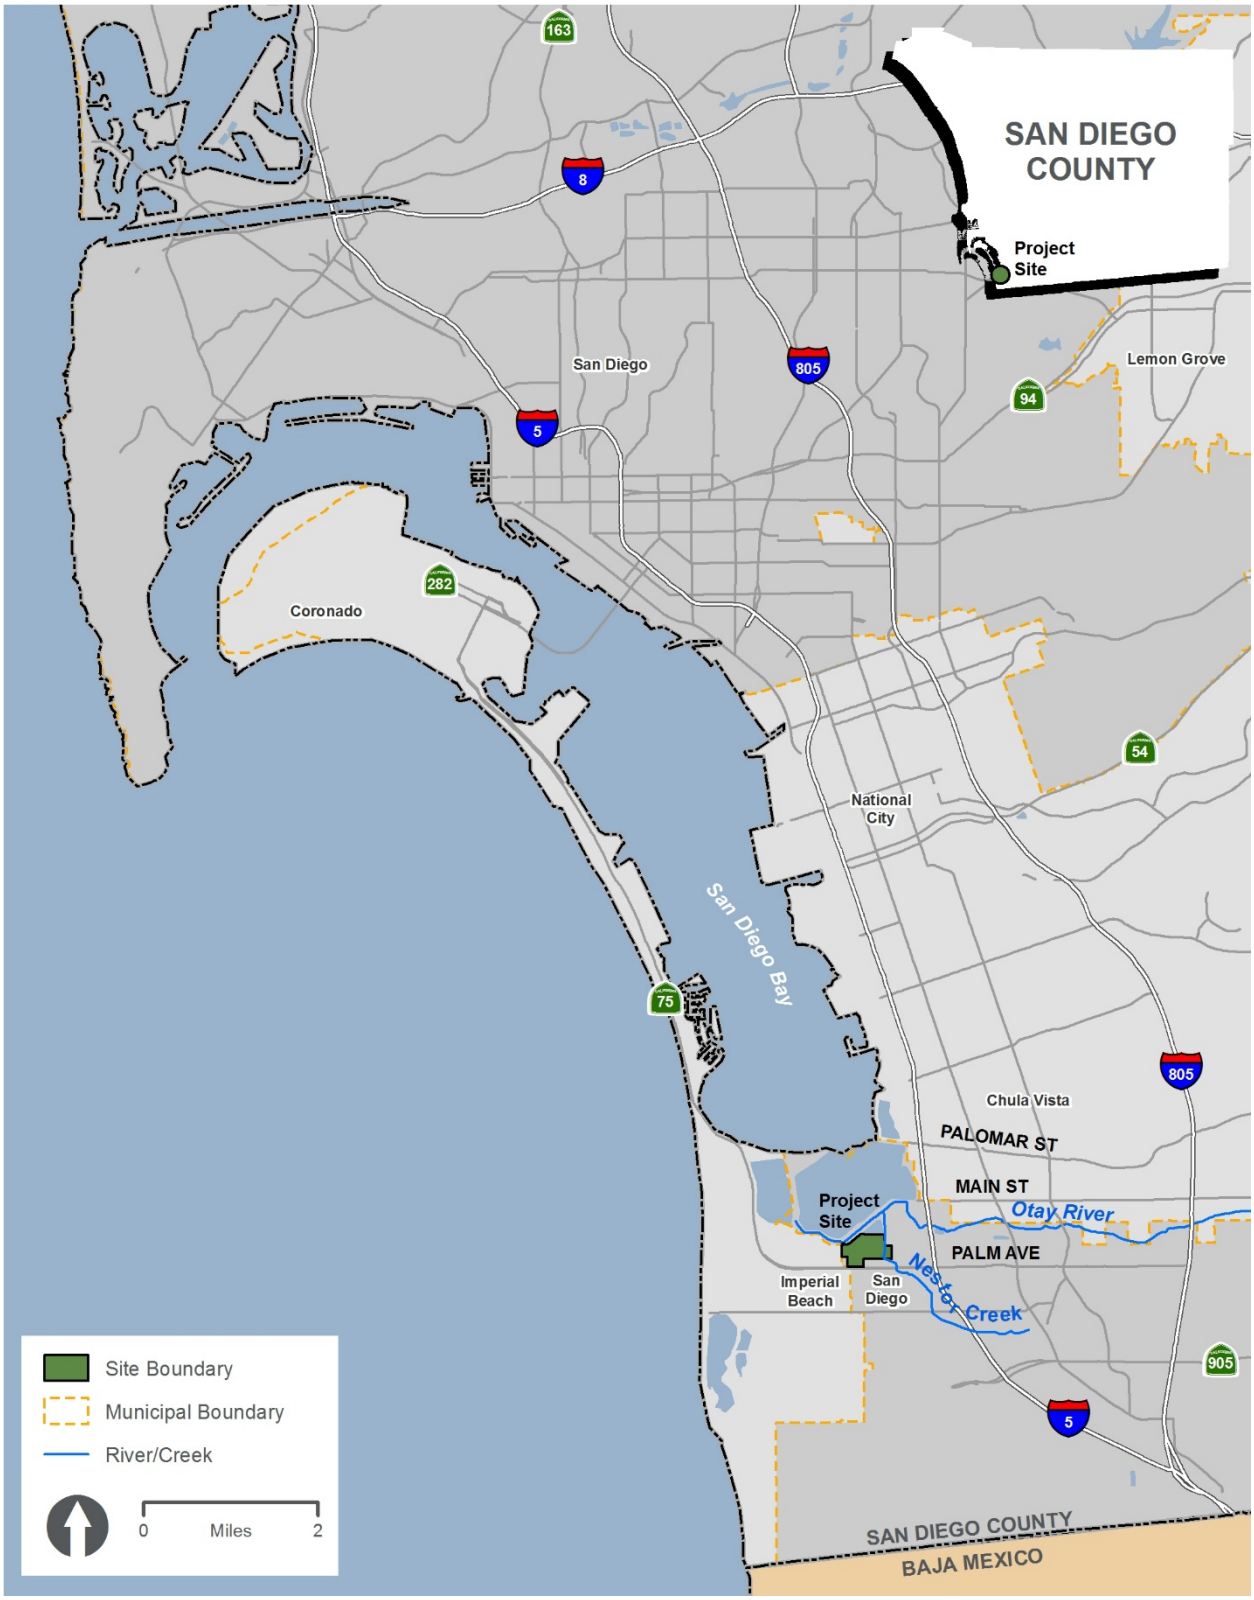

As part of the PMPA, the District is proposing to incorporate Parcels A, B, and C into the District's PMP and assign land use designations. The Bank Site and Parcels A, B, and C are under California Coastal Commission jurisdiction and are District-owned property; however, these areas are not currently incorporated into the PMP. Parcels A, B, and C would be assigned a commercial recreation designation. Incorporation of Parcels A, B, and C is evaluated at a "program level," and the incorporation of the Bank Site is evaluated at a "project level" in this report.

The program-level analysis of Parcels A, B, and C evaluates the reasonable development scenario. No construction is proposed on these parcels at this time; however, the analysis considers reasonable development assumptions:

- Parcel A – maximum commercial development of 25,000 square feet and two stories
- Parcel B – maximum commercial development of 5,000 square feet and two stories
- Parcel C – maximum commercial development of 75,000 square feet and two stories

This analysis assumes construction of future commercial development would occur after the construction of the wetland mitigation bank. No projects have been identified on Parcels A, B, and C, and any future project-level commercial development proposals would require discretionary approvals from the District, such as but not limited to a CDP and project approval, and any additional CEQA compliance.

3 Acoustic and Vibration Terminology

3.1 Acoustic Terminology

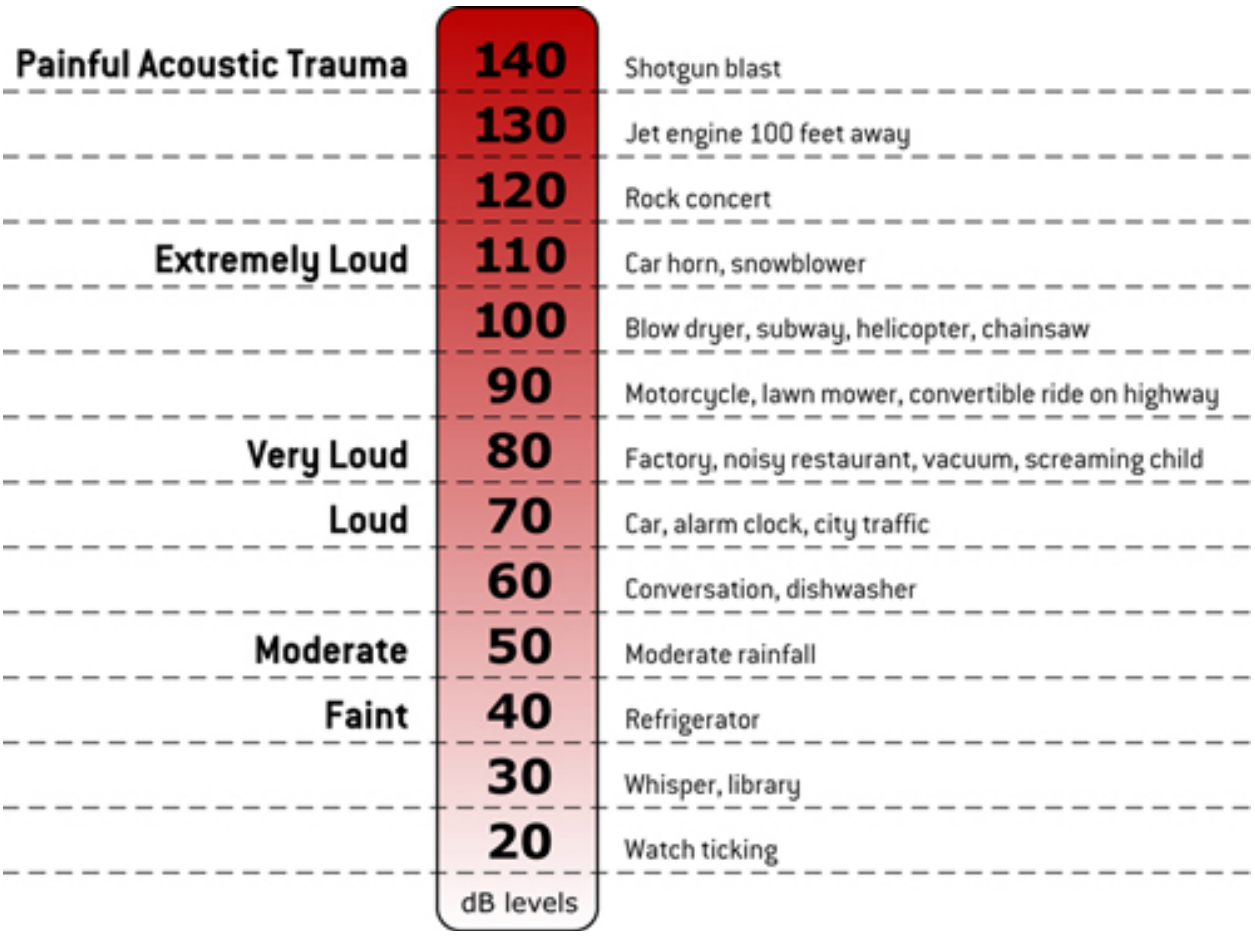

Noise levels are presented on a logarithmic scale to account for the large pressure response range of the human ear and are expressed in units of decibels (dB). A dB is defined as the ratio between a measured value and a reference value usually corresponding to the lower threshold of human hearing defined as 20 micropascals. Typically, a noise analysis examines 11 octave (or 33 1/3 octave) bands ranging from 16 hertz (low) to 16,000 hertz (high), which encompasses the human audible frequency range. Since the human ear does not perceive every frequency with equal loudness, spectrally varying sounds are often adjusted with a weighting filter. The A-weighted filter is applied to compensate for the frequency response of the human auditory system, known as A-weighted decibels (dBA).

An inherent property of the logarithmic dB scale is that the sound pressure levels of two separate sources are not directly additive. For example, if a sound of 50 dBA is added to another sound of 50 dBA in the proximity, the result is a 3-dB increase (or 53 dBA), not an arithmetic doubling to 100 dBA. With respect to how the human ear perceives changes in sound pressure level relative to changes in loudness, scientific research demonstrates the following general relationships between sound level and human perception for two sound levels with the same or very similar frequency characteristics:

- 1 dBA is the practical limit of accuracy for sound measurement systems and corresponds to an approximate 10 percent variation in the sound pressure level. A 1 dBA increase or decrease is a nonperceptible change in sound.
- 3 dBA increase or decrease is a doubling (or halving) of acoustic pressure level, and it corresponds to the threshold of change in loudness perceptible in a laboratory environment. In practice, the average person is not able to distinguish a 3 dBA difference in environmental sound outdoors.
- 5 dBA increase or decrease is described as a perceptible change in sound level and is a discernible change in an outdoor environment.
- 10 dBA increase or decrease is a tenfold increase or decrease in acoustic pressure level but is perceived as a doubling or halving in loudness (i.e., the average person will judge a 10 dBA change in sound level to be twice or half as loud).

Estimations of common noise sources and outdoor acoustic environments, and the comparison of relative loudness, are presented on Figure 3-1.

Figure 3-1. Relative Loudness

Noise levels can be measured, modeled, and presented in various formats. The noise metrics that were employed in this analysis have the following definitions:

- ***Equivalent sound level (L_{eq}):*** Conventionally expressed in dBA, the L_{eq} is the energy-averaged, A-weighted sound level over a specified time period. It is defined as the steady, continuous sound level over a specified time, which has the same acoustic energy as the actual varying sound levels over the specified period.
- ***Maximum sound level (L_{max}):*** The maximum A-weighted sound level, as determined during a specified measurement period. It can also be described as the maximum instantaneous sound pressure level generated by a piece of equipment or during a construction activity.
- ***Day-night average noise level (L_{dn}):*** The L_{dn} is the average hourly A-weighted L_{eq} for a 24-hour period with a 10 dB penalty added to sound levels occurring during evening hours (7:00 p.m. to 10:00 p.m.) to account for individuals' increased sensitivity to noise levels during nighttime hours.

- ***Community noise equivalent level (CNEL):*** CNEL is another average A-weighted L_{eq} sound level measured over a 24-hour period; however, this noise scale is adjusted to account for some individuals' increased sensitivity to noise levels during the evening and nighttime hours. A CNEL noise measurement is obtained after adding 5 dB to sound levels occurring during evening hours (7:00 p.m. to 10:00 p.m.) and 10 dB to noise levels occurring during nighttime hours (10:00 p.m. to 7:00 a.m.).

3.2 Vibration Terminology

According to the Federal Transit Administration (FTA) *Transit Noise and Vibration Impact Assessment Manual* (FTA 2018), construction activities can be a source of ground-borne vibration. Activities such as pile driving and operation of heavy equipment may cause ground-borne vibration while constructing the proposed project. Vibration is an oscillatory motion which can be described in terms of displacement, velocity, or acceleration (FTA 2018). Two descriptors are frequently used when discussing quantification of vibration, the peak particle velocity (PPV) and the root mean square:

- **PPV:** The maximum instantaneous positive or negative peak of the vibration signal (FTA 2018).
- **Root mean square:** The square root of the average of the squared amplitude of the vibration signal, typically calculated over a one-second period (FTA 2018).

The California Department of Transportation (Caltrans) construction vibration guidance is used in this assessment (Caltrans 2013). This guidance includes a human response equivalent based on the PPV instead of using root mean square.

This page is intentionally blank.

4 Regulatory Framework

This section provides an overview of federal, state, and local regulations related to noise issues applicable to the proposed project.

4.1 Federal

4.1.1 Occupational Safety and Health Administration

The Occupational Health and Safety Administration (OSHA) established standards for occupational noise exposure under 29 Code of Federal Regulations 1910.95. This standard establishes mandates to protect employees from excessive noise exposure and requires a Hearing Conservation Program when routine exposure to high noise levels would occur. The standard identifies permissible daily noise exposures and stipulates that personal protection against the impacts of noise exposure must be provided if those levels are exceeded.

4.1.2 United States Environmental Protection Agency

Information on Levels of Environmental Noise Requisite to Protect Public Health and Welfare with an Adequate Margin of Safety (U.S. Environmental Protection Agency [EPA] 550/9-74-004) was published in 1974 and identifies safe levels of environmental noise exposure and is intended to "provide State and Local governments as well as the Federal Government and the private sector with an informational point of departure for the purpose of decision making." While the U.S. EPA has no regulation governing environmental noise, the agency has conducted several extensive studies to identify the impacts of noise level on public health and welfare. In residential areas, the U.S. EPA an outdoor L_{dn} limit of 55 dBA and an indoor L_{dn} limit of 45 dBA (Table 4-1). In nonresidential areas, where limited amounts of time are spent, the U.S. EPA recommends a 24-hour L_{eq} limit of 55 dBA (both indoors and outdoors). These levels are identified as desirable to protect against speech interference and sleep disturbance for residential, educational, and healthcare areas. In commercial and industrial areas, the U.S. EPA recommends a 24-hour L_{eq} limit of 70 dBA (both outdoors and indoors) to protect the population against hearing damage.

This publication is considered an authoritative study on protective noise levels based on its large sampling of community reaction to noise. The U.S. EPA noise level guidelines do not provide an absolute measure of noise impact, but rather a reasonable estimate of potential activity interference, human health and welfare impacts, and annoyance. Since these protective levels were derived without concern for technical or economic feasibility and contain a margin of safety to ensure their protective value, they should not be viewed as standards, criteria, regulations, or goals. Rather, they should be viewed as levels below which there is no reason to suspect that the general population would be at risk from any of the identified impacts of noise. The U.S. EPA guideline limits are summarized in Table 4-1.

Table 4-1. Summary of Environmental Protection Agency Cause and Effect Noise Levels

Location	Level	Effect
All public accessible areas with prolonged exposure	70 dBA $L_{eq(24)}$	Safety
Outdoor at residential structure and other noise sensitive receptors where a large amount of time is spent	55 dBA L_{dn}	Protection against annoyance and activity interference
Outdoor areas where limited amounts of time are spent, e.g., park areas, school yards, golf courses, etc.	55 dBA $L_{eq(24)}$	
Indoor residential	45 dBA L_{dn}	
Indoor nonresidential	55 dBA $L_{eq(24)}$

Notes:
dBA=A-weighted decibel; L_{eq}=equivalent sound level; L_{dn}=day-night average noise level

4.2 State

4.2.1 California Department of Health Services

In 1987, the California Department of Health Services published guidelines for the noise element of local general plans (Office of Planning and Research 2017). These guidelines include a noise level/land use compatibility chart that categorizes various outdoor L_{dn} ranges into four compatibility categories (normally acceptable, conditionally acceptable, normally unacceptable, and clearly unacceptable) depending on land use. For many land uses, the chart shows exterior L_{dn} ranges for two or more compatibility categories. The noise element guidelines chart identifies the normally acceptable range for low-density residential uses as less than 60 dBA, while the conditionally acceptable range is 60-70 dBA. The normally acceptable range for high-density residential uses is identified as L_{dn} values below 65 dBA, while the conditionally acceptable range is identified as 65-70 dBA. For educational and medical facilities, L_{dn} values below 60 dB are considered normally acceptable, while Ldn values of 60-70 dBA are considered conditionally acceptable. For office and commercial land uses, Ldn values below 67.5 dBA are considered normally acceptable, while L_{dn} values of 67.5-77.5 dBA are categorized as conditionally acceptable.

These normally and conditionally acceptable L_{dn} ranges are intended to indicate that local conditions (existing noise levels and community attitudes toward dominant noise sources) should be considered in evaluating land use compatibility at specific locations. These guidelines are used by many agencies, environmental planners, and acoustical specialists as a starting point to evaluate the potential for noise impact on and by a project. The guidelines are also employed to evaluate methods for achieving noise compatibility with respect to nearby existing uses. Table 4-2 summarizes these guidelines for the normally and conditionally acceptable L_{dn} exposures.

Table 4-2. California Department of Health Services Noise Guidelines

Land Use Category	Community Noise Exposure (L_{dn} or CNEL, dBA)	
	Normally Acceptable	Conditionally Acceptable
Residential – low density	50 - 60	60 - 70
Residential – high density	50 - 65	65 - 70
Transient lodging – motels, hotels	50 - 65	65 – 70
Schools, libraries, churches, hospitals, nursing homes	50 – 60	60 - 65
Auditoriums, concert halls, amphitheaters	—	50 - 70
Sports arenas, outdoor spectator sports	—	50 - 75
Playgrounds, neighborhood parks	50 – 67.5	—
Golf courses, riding stables, water recreation, cemeteries	50 - 70	—
Office buildings, business commercial and professional	50 – 67.5	67.5 – 77.5
Industrial, manufacturing, utilities, agriculture	50 - 70	70 - 80

Source: Office of Planning and Research 2017
Notes:
dBA=A-weighted decibel; CNEL=community noise equivalent level; L_{dn}=day-night average noise level

4.2.2 California Division of Occupational Health and Safety

The California Division of Occupational Safety and Health (Cal/OSHA) administers industrial safety regulations in California, including occupational noise standards. Cal/OSHA regulations establish a time-weighted noise exposure limit of 90 dBA averaged over 8 hours (California Code of Regulations, Title 8, Group 15, Article 105, Sections 5095-5100). Noise source controls, administrative procedures, or worker hearing protection must be provided if worker noise exposure would exceed the 90 dBA limit.

4.3 Local

While the District is not required to apply the City of Imperial Beach or the City of San Diego's thresholds, sensitive land uses that may be impacted by the project are located in the City of Imperial Beach and City of San Diego. Therefore, local city regulations are included below.

4.3.1 Port of San Diego Port Master Plan

The proposed project is within the jurisdiction of the District. The PMP is the governing land use document for physical development within the District (Port of San Diego 2017). The PMP includes noise-related policies described below. Section II, Planning Goals, contains the following goal:

- **Goal VII.** The Port District will enhance and maintain the bay and tidelands as an attractive physical and biological entity. Establish guidelines and standards facilitating the retention and development of an aesthetically pleasing tideland environment free of noxious odors, excessive noise, and hazards to the health and welfare of the people of California.

4.3.2 City of Imperial Beach General Plan Noise Element

The City of Imperial Beach General Plan Noise Element requires all habitable rooms including hotel/motel rooms must meet an interior noise level of 45 dBA CNEL. A 65 dBA CNEL exterior noise exposure generally allows the criteria standard to be met as long as windows can normally be closed to shut out the noise.

4.3.3 City of Imperial Beach Municipal Code

Section 9.32.020 of the City of Imperial Beach's Municipal Code includes the following noise limits on construction activities:

- The use of any tools, power machinery or equipment so as to cause noises disturbing to the comfort and repose of any person residing or working in the vicinity, or in excess of 75 decibels, between the hours of 10 p.m. and 7 a.m., except when the same is necessary for emergency repairs required for the health and safety of any member of the community

4.3.4 City of San Diego General Plan Noise Element

The City of San Diego General Plan Noise Element requires future noise-sensitive land uses should have a sufficient spatial separation or incorporate site design and construction techniques to ensure compatibility with noise-generating uses (City of San Diego 2015). The City of San Diego uses the Land Use Compatibility Guidelines, shown on Figure 4-1, when reviewing proposed land use development projects to determine compatibility of various land uses with different noise exposures, defined using the CNEL.

Figure 4-1. City of San Diego Land Use Noise Compatibility Guidelines

Land Use Category	Exterior Noise Exposure (dBA CNEL) 60	65	70	75
Parks and Recreational				
Parks, Active and Passive Recreation

4.3.5 City of San Diego Municipal Code

Noise Ordinance 59.5.0401

The City of San Diego municipal code provides guidelines on the allowed noise level limits for varying land uses and shown in Table 4-3. The planning of future noise-sensitive land uses should have a sufficient spatial separation or incorporate site design and construction techniques to ensure compatibility with noise-generating uses. For areas that have varying allowed land uses, the arithmetic mean of the two districts is considered the maximum (City of San Diego 2010).

Table 4-3. City of San Diego Municipal Code Noise Limits

Land Use	Time of Day	One-Hour Average Sound Level (dBA L_{eq})
Single-family residential	7 a.m. to 7 p.m.	50
	7 p.m. to 10 p.m.	45
	10 p.m. to 7 a.m.	40
Multifamily residential (up to a maximum density of 1/2000)	7 a.m. to 7 p.m.	55
	7 p.m. to 10 p.m.	50
	10 p.m. to 7 a.m.	45
All other residential	7 a.m. to 7 p.m.	60
	7 p.m. to 10 p.m.	55
	10 p.m. to 7 a.m.	50
Commercial	7 a.m. to 7 p.m.	65
	7 p.m. to 10 p.m.	60
	10 p.m. to 7 a.m.	60
Industrial or agricultural	Anytime	75

Notes:
dBA=A-weighted decibels; L_{eq}=equivalent sound level

Construction Noise 59.5.0404

The City of San Diego also maintains restrictions on noise limits for construction that occurs within the city. Construction can be another major, although typically short term, source of noise. Construction is of most concern when it takes place near noise-sensitive land uses, occurs at night, or in early morning hours. Noise from construction can also affect nearby wildlife by interfering with the ability to establish territory, vocalize, or successfully reproduce. Construction is limited to 7:00 a.m. to 7:00 p.m., and restricts noise levels to less than an average of 75 dB beyond the property line limits of any property zoned residential (City of San Diego 2010).

4.3.6 City of San Diego CEQA Significance Determination Thresholds

The City of San Diego developed CEQA Significance Determination Thresholds (City of San Diego 2016) to evaluate potential noise impacts resulting from construction and operations of development projects in the city. While the District is not required to apply the City of San Diego's thresholds, sensitive land uses that may be impacted by the project are located in the City of San Diego.

Traffic Noise Impacts

The City of San Diego's traffic noise significance thresholds are provided in Table 4-4.

Table 4-4. Traffic Noise Significance Thresholds (A-weighted Decibel Community Noise Equivalent Level)

Structure or Proposed Use that would be Impacted by Traffic Noise	Interior Space	Exterior Useable Space[a]	General Indication of Potential Significance
Single-family detached	45	65	Structure or outdoor useable area[b] is < 50 feet from the center of the closest (outside) lane on a street with existing or future average daily traffic > 7500.
Multifamily, schools, libraries, hospitals, daycare, hotels, motels, parks, convalescent homes	Development Services Department ensures 45 dBA, pursuant to Title 24	65	
Offices, churches, business, professional uses	—	70	Structure or outdoor usable area is < 50 feet from the center of the closest lane on a street with existing or future average daily traffic > 20,000
Commercial, retail, industrial, outdoor spectator sports uses	—	75	Structure or outdoor usable area is < 50 feet from the center of the closest lane on a street with existing or future average daily traffic > 40,000

Source: City of San Diego 2016

Notes:

[a] If a project is currently at or exceeds the significance thresholds for traffic noise described above and noise levels would result in less than a 3 dB increase, then the impact is not considered significant.

[b] Exterior usable areas do not include residential front yards or balconies, unless the areas such as balconies are part of the required usable open space calculation for multi-family units.

dBA=A-weighted decibel

Noise from Adjacent Stationary Uses (Noise Generators)

A project which would generate noise levels at the property line that exceed the city's Noise Ordinance Standards is considered potentially significant (e.g., a carwash, projects operating generators, noisy equipment).

If a nonresidential use, such as a commercial, industrial, or school use, is proposed to abut an existing residential use, the dB level at the property line should be the arithmetic mean of the dB levels allowed for each use, as set forth in Section 59.5.0401 of the Municipal Code. The city's Municipal Code noise limits are listed in Table 4-3.

Temporary Construction Noise

Construction noise levels measured at or beyond the property lines of any property zoned residential shall not exceed an average sound level greater than 75 dBA during the 12-hour period from 7:00 a.m. to 7:00 p.m. In addition, construction activity is prohibited between the hours of 7:00 p.m. of any day and 7:00 a.m. of the following day, or on legal holidays as specified in Section 21.04 of the San Diego Municipal Code, with exception of Columbus Day and Washington's Birthday, or on Sundays, unless a permit has been applied for and granted beforehand by the Noise Abatement and Control Administrator, in conformance with San Diego Municipal Code Section 59.5.0404. Additionally, where temporary construction noise would substantially interfere with normal business communication, or affect sensitive receptors, such as day care facilities, a significant noise impact may be identified.

Noise/Land Use Compatibility

Noise is one factor to be considered in determining whether a land use is compatible. Land use compatibility noise factors are presented in Table 4-5. The transition zone between compatible and incompatible should be evaluated by the environmental planner to determine whether the use would be acceptable based on all available information and the extent to which the noise from the proposed project would affect the surrounding uses.

Table 4-5. City of San Diego Noise Land Use Compatibility Chart

Land Use		Annual Community Noise Equivalent Level (dB)

CNEL=community noise equivalent level

5 Methodology

Noise is defined as unwanted or excessive sound. Sound becomes unwanted when it interferes with normal activities, such as sleep, work, speech, or recreation. Vehicle noise is a combination of the noise produced by the engine, exhaust, and tires. Noise levels from highway traffic are affected by three factors: the volume of the traffic, the speed of the traffic, and the number of trucks in the flow of traffic. Generally, traffic noise increases commensurate with these three factors.

Noise is measured in dB on a logarithmic scale. Human hearing is not equally sensitive to all frequencies of sound; therefore, certain frequencies of sound are given more weight. This process is known as weighting, and the human response is represented by A-weighting. All noise levels referred to in this report are stated as hourly L_{eq} in terms of dBA. The L_{eq} is defined as the time energy averaged (in this case, hourly) noise level. Ambient noise level changes of 3 dBA are considered to be at the threshold of perceptible change for most adults with normal hearing, as shown in Table 5-1. Construction noise levels were predicted using the Federal Highway Association (FHWA) *Roadway Construction Noise Model* (FHWA 2006).

Table 5-1. Logarithmic Nature of Sound

Change in L_{eq} Sound Level	Perceived Loudness in the Natural Environment
+/- 3 dBA	Barely perceptible change
+/- 5 dBA	Readily perceptible change
+/- 10 dBA	Considered twice or half as loud

Note:
dbA=A-weighted decibels; L_{eq}=equivalent sound level

5.1 Models

Construction noise levels were predicted using the FHWA Roadway Construction Noise Model. Construction vibration levels were calculated using the methodologies and reference levels contained within the Caltrans Construction Induced Vibration Guidance Manual (2013).

5.2 Thresholds of Significance

Appendix G of the CEQA Guidelines contain significance criteria for evaluation of noise and vibration impacts of a project. Impacts would be considered significant if the project would result in any of the following:

1. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;
2. Generation of excessive groundborne vibration or groundborne noise levels; or
3. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels.

As discussed in Section 4, the District has not adopted its own specific thresholds of impact for potential noise and vibration impacts; therefore, where appropriate, utilizes the applicable standards and guidelines of other agencies, such as the City of San Diego, would apply.

6 Affected Environment

6.1 Sensitive Land Uses

Land uses sensitive to high noise levels include single- and multifamily residences, schools, churches, hotels, motels, and parks. The proposed project is located within a residential area near a wildlife refuge. The nearest off-site sensitive land uses to the proposed project site are the residential communities located to the east, south, and west of the project site. These sensitive land uses are located within 50 to 100 feet of the project boundary, as depicted on Figure 2-2. The remaining land uses in the project area consist of commercial developments.

6.2 Overview of the Existing Noise Environment

The primary existing noise sources in the project area are transportation facilities. Traffic along Palm Avenue and I-5 is the dominant source contributing to area ambient noise levels. Noise from motor vehicles is generated by engine vibrations, the interaction between the tires and the road, and the exhaust system. FHWA Highway Traffic Noise Prediction Model (FHWA RD-77-108) was used to evaluate highway traffic-related noise conditions along the roadway segments in the project vicinity. Existing traffic volumes included in the traffic study prepared for the project (Chen Ryan Associates 2020) were used to assess the existing traffic noise levels. A typical vehicle mix for Southern California was used. These noise levels represent the reasonable scenario, which assumes that no shielding is provided between traffic and the location where the noise contours are drawn. Table 6-1 summarizes the existing traffic volumes within the project area.

Table 6-1. Existing Traffic Volumes

Roadway Segment	Average Daily Traffic	Centerline to 70 CNEL (feet)	Centerline to 65 CNEL (feet)	Centerline to 60 CNEL (feet)	CNEL (dBA) 50 feet from Centerline of Outermost Lane
Palm Avenue					
Between Florida Street and 13th Street	34,228	103	324	1025	70.7
Between 13th Street and 16th Street	39,249	118	372	1175	71.3
Between 16th Street and Saturn Boulevard	42,922	129	406	1285	71.7
Between Saturn Boulevard and I-5 southbound off-ramp	63,032	189	597	1887	73.4
Between I-5 southbound off ramp and I-5 northbound on-ramp	23,516	53	166	525	68.5
Between I-5 northbound on-ramp and Hollister Street	20,672	<50	146	462	67.9

Table 6-1. Existing Traffic Volumes

Roadway Segment	Average Daily Traffic	Centerline to 70 CNEL (feet)	Centerline to 65 CNEL (feet)	Centerline to 60 CNEL (feet)	CNEL (dBA) 50 feet from Centerline of Outermost Lane
13th Avenue					
North of Palm Avenue	3,910	<50	<50	<50	58.4
Saturn Boulevard					
North of Palm Avenue	22,430	<50	79	250	66.0

Notes:
CNEL=community noise equivalent level; dBA=A-weighted decibels; I=Interstate

7 Environmental Consequences

Noise generated by the proposed project would consist of short duration noise resulting from construction activities and noise during normal facility operations. Vibration from the proposed project would only result during construction. Construction activities would take place only during daytime hours. An evaluation was performed of expected noise and vibration and then compared to regulatory requirements.

Airborne noise dissipates with increasing distance from the noise source. The distances involved depend primarily on the intensity of the noise generated by the source, terrain, and ground cover between source and receiver, and partly on weather conditions, such as wind speed and direction, the height and strength of temperature inversions, and the height of cloud cover. Temperature inversions and cloud cover can reflect or refract sound that is radiated upwards; this effect can increase noise levels at locations that receive the reflected or refracted sound. Such reflection and refraction effects are important primarily for high intensity sounds and for the calculation of sound propagation over large distances. For noise sources such as construction activity and vehicle traffic, the region of influence is typically less than 0.5 mile from the noise source. Temperature inversions and cloud cover are not accounted for in this analysis.

The region of interest for noise and vibration issues is typically localized. Ground-borne vibrations generally attenuate rapidly with increasing distance from the vibration source. The distances involved depend primarily on the intensity of the vibrations generated by the source and partly on soil and geologic conditions. Detectable vibrations will travel the greatest distance through solid rock and the least distance through loose, unconsolidated soils or saturated soils. For vibration sources such as construction activity and vehicle traffic, the region of influence is typically less than 1,000 feet from the vibration source.

7.1 Impact Analysis

Threshold (1) ***Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?***

7.1.1 Project Level – Wetland Mitigation Bank

Construction

Construction noise, although temporary, can potentially affect nearby sensitive receptors, such as residences. Construction of the wetland mitigation bank would require the use of heavy equipment that may be periodically audible at off-site locations. Received noise levels would fluctuate, depending on the construction activity, equipment type, and distance between noise source and receiver. Additionally, noise from construction equipment would vary dependent on the construction phase and the number and type of equipment at a location at any given time. There would be five phases of construction for the proposed project that would use heavy equipment:

1. Mobilization and grubbing
2. Mass grading

3. Fine grading
4. Landscaping
5. Breech excavation/opening

The variation in power and usage of the various equipment types creates complexity in characterizing construction noise levels. Expected equipment types for each phase of construction are presented in Table 7-1 and were used to screen for potential construction noise impacts. Each phase identified would require different types of construction equipment. The estimated composite site noise level is based on the assumption that all equipment would operate at a given usage load factor, for a given hour (i.e., front end loaders are assumed to be used for up to 40 percent of one hour, or 24 minutes), to calculate the composite average daytime hourly L_{eq}. The load factor accounts for the fraction of time that the equipment is in use over the specified time period; the default for which are built into the FHWA Roadway Construction Noise Model. The composite noise level from several pieces of equipment operating during the same phase is obtained from dB addition of the L_{eq} of each individual unit. Although it is not possible for all the construction equipment to operate at one point simultaneously, the screening level analysis represented in Table 7-1 conservatively assumes concurrent operation of equipment.

The nearest sensitive receptors to the project site are the residences located immediately south of the Bank Parcel. The City of Imperial Beach does not have a specific construction noise threshold, and the City of San Diego's construction noise threshold is averaged over a 12-hour period. Construction activity would not operate exclusively along the boundary of the site. Rather, stationary construction activity would occur at various locations on the project site, and mobile-construction equipment would operate throughout the site, which is approximately 80 acres. Given the Bank Parcel's significant size, construction would occur within 250 feet of residential receptors for only a limited period of time and only as necessary to complete project construction. While sensitive residential receptors are located at the southern boundary of the Bank Parcel, the majority of the site on which construction would occur is located beyond 250 feet from those receptors, which by virtue of distance alone would substantially reduce construction noise at the receptors. Therefore, the average distance, not the closest distance, is used in this analysis. The average distance from the construction activities to these sensitive land uses is approximately 250 feet. Construction noise would attenuate with increased distance from the noise sources. Composite L_{eq} noise levels at 250 feet given in Table 7-1 were evaluated assuming spherical free-field spreading. As shown, the noise levels would not exceed the City of San Diego's 75 dBA L_{eq} construction noise threshold. Therefore, impacts from construction noise are considered less than significant.

Table 7-1. Project Construction Noise Levels by Phase

Phase	Equipment[a]			Composite Sound Level (L_{eq})[c]	
	Type	Quantity	L_{max} at 50 feet [b]	50 feet	250 feet
Mobilization and grubbing	Dozers	3	81.7	84.3	70.3
	Backhoes	4	77.6		
Mass grading	Excavators	2	80.7	88.5	74.5
	Graders	2	85.0		
	Dozers	3	81.7		
	Scrapers	1	83.6		
	Backhoes	4	77.6		
Fine grading	Excavators	2	80.7	88.5	74.5
	Graders	2	85.0		
	Dozers	3	81.7		
	Scrapers	1	83.6		
	Backhoes	4	77.6		
Landscaping	Excavators	2	80.7	84.5	70.5
	Dozers	2	81.7		
	Backhoes	3	77.6		
Breech excavation	Excavators	2	80.7	84.1	70.1
	Dozers	2	81.7		
	Backhoes	2	77.6		

Notes:

a Equipment mix obtained from the California Emissions Estimator Model emission calculations prepared for the *Air Quality and Greenhouse Gas Study* (HDR 2020).

b Measured L_{max} at given reference distance obtained from the FHWA Roadway Construction Noise Model (FHWA 2006).

c Distance factors determined by the inverse square law defined as 6 dBA per doubling of distance as sound travels away from an idealized point.

L_{eq}=equivalent sound level; L_{max}=maximum sound level

Traffic noise associated with construction of the wetland mitigation bank is not anticipated to be a significant source of noise. As discussed in Section 3.1, a 3 dBA increase is a doubling of acoustic pressure level. Therefore, for traffic noise to increase by 3 dBA, the traffic volume must also double. The project construction is anticipated to require up to 40 truck trips and 72 worker trips per day. If all of the construction vehicles were to use a single access road, the construction activities would contribute up to 53 dBA CNEL at a distance of 50 feet. When added to the existing traffic conditions listed in Table 6-1, the increase in construction-related traffic noise would be less than 3 dBA. In addition, as there is currently no traffic on Boundary Avenue, the construction traffic noise level would be 53 dBA CNEL at a distance of 50 feet. This noise level is less than 65 dBA CNEL recommended for exterior noise at residential properties. Therefore, the noise from construction traffic would be less than significant.

Operation

As described in Section 2.2.1, very minimal maintenance would be required for operation of the facility amounting to only a few employee-related trips to the facility monthly for 5 years and then once annually in the long term. Therefore, the maintenance activities would have a negligible impact on the long-term noise levels in the project area. Impacts from operation of the wetland mitigation bank would be less than significant.

7.1.2 Program Level – Parcels A, B, and C Port Master Plan Amendment

At this time, no construction or operation of commercial development is proposed on Parcels A, B, or C; however, the land use designation of commercial recreation would allow for commercial development of these parcels. This impact analysis evaluates the reasonable development scenario for Parcels A, B, and C, which is a future commercial land use.

Construction

Construction noise, although temporary, can potentially affect nearby sensitive receptors, such as residences. Construction of the future commercial developments would require the use of heavy equipment that may be periodically audible at off-site locations. Received noise levels would fluctuate, depending on the construction activity, equipment type, and distance between noise source and receiver. Additionally, noise from construction equipment would vary dependent on the construction phase and the number and type of equipment at a location at any given time. The potential impacts were estimated using 105,000 square feet of commercial development on all 3 parcels. There would be five phases of construction that would use heavy equipment:

1. Site preparation
2. Grading
3. Building construction
4. Architectural coating
5. Paving

The variation in power and usage of the various equipment types creates complexity in characterizing construction noise levels. Expected equipment types for each phase of construction are presented in Table 7-2 and were used to screen for potential construction noise impacts. Each phase identified

would require different types of construction equipment. Pile driving, which would generate the greatest maximum noise level, may not be required; however, pile driving was included for a conservative analysis. The estimated composite site noise level is based on the assumption that all equipment would operate at a given usage load factor for a given hour (e.g., front end loaders are assumed to be used for up to 40 percent of one hour, or 24-minutes) to calculate the composite average daytime hourly L_{eq}. The load factor accounts for the fraction of time that the equipment is in use over the specified time period; the default for which are built into the FHWA Roadway Construction Noise Model. The composite noise level from several pieces of equipment operating during the same phase is obtained from dB addition of the L_{eq} of each individual unit. Although it is not possible for all the construction equipment to operate at one point simultaneously, the screening level analysis represented in Table 7-2 conservatively assumes concurrent operation of equipment.

The nearest sensitive receptors to the project site are the residences located immediately adjacent to Parcels A, B, and C. The City of Imperial Beach does not have a specific construction noise threshold, and the City of San Diego's construction noise threshold is averaged over a 12-hour period. Therefore, the average distance, not the closest distance, is used in this analysis. The average distance from the construction activities to a sensitive receptor near these sites is assumed to be approximately 100 feet based upon the size of the parcels, the mix of construction equipment, and the fact that construction operations are generally not singularly located in a specific area for a long period of time. Construction noise would attenuate with increased distance from the noise sources. Composite L_{eq} noise levels at 100 feet, shown in Table 7-2, were evaluated assuming spherical free-field spreading. As shown in Table 7-2, the noise levels would exceed the City of San Diego's 75 dBA L_{eq} construction noise threshold for sensitive residential receptors located within 100 feet of the noise source. This would be a significant impact. Refer to Section 8.1 for proposed mitigation. The type of temporary noise barriers would be evaluated on a case-by-case basis by considering the distance to noise-sensitive receptors. However, even with pile driving shielding, noise would be reduced by 5 to 6 dBA to a maximum noise level of 83 dBA Leq for some construction phases. As this noise level would continue to exceed the City of San Diego's 75 dBA L_{eq} construction noise threshold.

It should nevertheless be noted that, as with the wetland mitigation bank site, construction of Parcels A, B, and C would occur across the entirety of those parcels and construction equipment would be located beyond 100 feet from residential receptors for a significant portion of the construction phase. Moreover, construction would comply with the City of San Diego's noise ordinance, which limits construction activities from 7:00 a.m. to 7:00 p.m. daily. These hours generally do not coincide with residential uses sensitive noise activities, such as sleeping, and the urban environment is noisier during the allowable construction hours.

Notes:

a Equipment mix obtained from the California Emissions Estimator Model emission calculations prepared for the *Air Quality and Greenhouse Gas Study* (HDR 2020).

b Measured Lmax at given reference distance obtained from the FHWA Roadway Construction Noise Model (FHWA 2006).

c Distance factors determined by the inverse square law defined as 6 dBA per doubling of distance as sound travels away from an idealized point.

L_{eq}=equivalent sound level; L_{max}=maximum sound level

As discussed in Section 3.1, a 3 dBA increase is a doubling of acoustic pressure level. Therefore, for traffic noise to increase by 3 dBA, the traffic volume must also double. Based on the modeling that was conducted for the *Air Quality and Greenhouse Gas Study for Wetland Mitigation Bank at Pond 20 and Port Master Plan Amendment Project* (HDR 2020), construction is anticipated to require up to 34 truck trips and 68 worker trips per day and would not overlap with the construction of the wetland mitigation bank. If all of the construction vehicles were to use a single access road, the construction

activities would contribute up to 53 dBA CNEL at a distance of 50 feet. When added to the existing traffic conditions listed in Table 6-1, the increase in construction-related traffic noise would be less than 3 dBA. In addition, as there is currently no traffic on Boundary Avenue, the construction traffic noise level would be 53 dBA CNEL at a distance of 50 feet. This noise level is less than 65 dBA CNEL recommended for exterior noise at residential properties. Therefore, the noise from construction traffic would be less than significant.

Operation

Traffic Noise Impacts

Long-term vehicular trip increases from future commercial development are anticipated to be minimal when distributed to adjacent street segments. As discussed in Section 3.1, a 3 dBA increase or decrease is a doubling (or halving) of sound pressure level, and it corresponds to the threshold of change in loudness perceptible in a laboratory environment. In practice, the average person is not able to distinguish less than a 3 dBA difference in environmental sound outdoors. Therefore, an increase of 3 dBA or more is considered to be a significant off-site traffic noise impact requiring mitigation.

Table 7-3 provides the existing traffic noise level associated with the program-level conditions on the roadways in the project area. The volumes on Boundary Avenue are based on the projected traffic increase along Saturn Boulevard. As shown, the program-related traffic noise level increase would be 1.0 dBA or less for all analyzed roadway segments. In addition, the traffic noise along Boundary Avenue would remain below the 65 dBA CNEL exterior noise standard for residential developments. Therefore, no significant off-site traffic noise impacts would occur under existing year conditions.

Table 7-3. Existing with Program-Level Traffic Volumes

Roadway Segment	Average Daily Traffic	Centerline to 70 CNEL (feet)	Centerline to 65 CNEL (feet)	Centerline to 60 CNEL (feet)	CNEL (dBA) 50 feet from Centerline of Outermost Lane	Project-Related Increase CNEL (dBA)

Boundary Avenue						
West of Saturn Boulevard	2,960	<50	<50	<50	57.2	N/A

Notes:
CNEL=community noise equivalent level; dBA=A-weighted decibels; I=Interstate

Additionally, future commercial development on-site land uses and buildings would be designed to meet the city's interior and exterior noise standards, listed in Table 4-4 in Section 4.3.6. Therefore, no additional mitigation measures would be required.

Stationary Noise Impacts

On-site stationary noise could include building heating, ventilation, and air conditioning systems; parking lot usage, including door closing/slamming, horn honking, and car alarms; and on-site truck movements. Heating, ventilation, and air conditioning systems typically result in noise levels that average between 50 and 60 dBA L_{max} at 50 feet from the equipment. Parking lots typically generate noise levels of up to 70 dBA L_{max} at 50 feet. Truck movements typically generate noise levels of up to 75 dBA L_{max} at 50 feet. Any proposed future commercial developments would be designed to comply with Noise Ordinance 59.5.0401 of the City of San Diego's Municipal Code, which requires that all stationary noise sources meet specific daytime and nighttime noise levels to ensure no significant noise impacts would occur on the adjacent residential developments.

7.1.3 Project-Level and Program-Level Buildout

Construction

The activities associated with the construction of the proposed wetland mitigation bank would not overlap with the construction of the future commercial development. Therefore, the construction activities within one of the areas would not contribute to noise generated within the other.

Operation

The proposed wetland mitigation bank would be completed prior to the opening day of the future commercial development. However, as there are no long-term operational noise sources within or associated with the wetland mitigation bank, it would not contribute to the noise generated within future commercial development.

Threshold (2) Would the project result in generation of excessive groundborne vibration or groundborne noise levels?

7.1.4 Project Level – Wetland Mitigation Bank

Construction

Vibration associated with construction of the wetland mitigation bank has the potential to be an annoyance to nearby land uses.

The City of San Diego does not have adopted limits for determining significance of vibration impacts to structures or persons. Caltrans and FTA have developed two of the decisive works in the assessment of vibrations from transportation and construction sources (Caltrans 2013; FTA 2018). The District has determined the Caltrans and FTA vibration limits to be appropriate significance thresholds to analyze project impacts. The Caltrans vibration limits are reflective of standard practice for analyzing vibration impacts to structures from continuous and intermittent sources.

The Caltrans *Construction Induced Vibration Guidance Manual* identifies two impact criteria for buildings and humans. Table 7-4 describes impact criteria for buildings, and Table 7-5 describes impact criteria for humans.

Table 7-4. California Department of Transportation Vibration Damage Potential Threshold Criteria

Structure and Condition	Maximum PPV (inch/second)	
	Transient Sources	Continuous/Frequent Intermittent Sources
Extremely fragile historic buildings, ruins, ancient monuments	0.12	0.08
Fragile buildings	0.2	0.1
Historic and some old buildings	0.5	0.25
Older residential structures	0.5	0.3
New residential structures	1.0	0.5

Table 7-4. California Department of Transportation Vibration Damage Potential Threshold Criteria

Structure and Condition	Maximum PPV (inch/second)	
	Transient Sources	Continuous/Frequent Intermittent Sources
Modern industrial/commercial buildings	2.0	0.5

Source: Caltrans 2013

Notes:

Transient sources create a single isolated vibration event, such as blasting or drop balls. Continuous/frequent intermittent sources include impact pile drivers, pogo-stick compactors, crack-and-seat equipment, vibratory pile drivers, and vibratory compaction equipment.

PPV=peak particle velocity

Table 7-5. California Department of Transportation Guideline Vibration Annoyance Potential

Human Response	Maximum PPV (inch/second)	
	Transient Sources	Continuous/Frequent Intermittent Sources
Barely perceptible	0.04	0.01
Distinctly perceptible	0.25	0.04
Strongly perceptible	0.9	0.10
Severe	2.0	0.4

Source: Caltrans 2013

Note:

Transient sources create a single isolated vibration event, such as blasting or drop balls. Continuous/frequent intermittent sources include impact pile drivers, pogo-stick compactors, crack-and-seat equipment, vibratory pile drivers, and vibratory compaction equipment.

Construction activities generate ground-borne vibration when heavy equipment travels over unpaved surfaces or when it is engaged in soil movement. The impacts of ground-borne vibration include discernable movement of building floors, rattling of windows, shaking of items on shelves or hanging on walls, and rumbling sounds. Vibration-related problems generally occur due to resonances in the structural components of a building because structures amplify ground-borne vibration.

Table 7-6 lists the vibration source amplitudes for construction equipment. As pile driving is not required, the highest reference PPV for the proposed project would be 0.089 inch per second (inch/second), associated with on-site dozers.

Table 7-6. Vibration Source Levels for Construction Equipment

Equipment	PPV at 25 feet (inch/second)	Approximate Lv[a] at 25 feet (velocity in dB)
Pile driver (impact) – upper range	1.518	112
Pile driver (impact) – typical	0.644	104
Pile drive (sonic) – upper range	0.734	105
Pile drive (sonic) – typical	0.170	93
Clam shovel drop (slurry wall)	0.202	94
Hydromill (slurry wall) – in soil	0.008	66
Hydromill (slurry wall) – in rock	0.017	75
Vibratory roller	0.210	94
Hoe ram	0.089	87
Large bulldozer	0.089	87
Caisson drilling	0.089	87
Loaded trucks	0.076	86
Jackhammer	0.035	79
Small bulldozer	0.003	58

Source: FTA 2018: Table 7-4
Notes:
[a] root mean square velocity in dB re 1 micro-inch/second
dB=decibel; PPV=peak particle velocity

The residential structures to the south of the project site would be located approximately 50 feet from project construction areas that would require the use of large bulldozers. Unlike the noise threshold discussed under Threshold (1), which is based on an average 12-hour work day, vibration thresholds are based on a single event. The FTA vibration guidance provides the following equation to calculate PPV at sensitive receptors:

$PPV_{equipment} = PPV_{Ref} (25/D)^n$ (inch/second)

Where:

PPVRef = reference PPV at 25 feet

D = distance from equipment to the receiver in feet

n = 1.5 is a value related to the vibration attenuation rate through ground

Distance attenuation would reduce the construction vibration levels from the creation of the wetland mitigation bank to 0.03 inch/second. This level is much lower than the 0.3 inch/second threshold listed in Table 7-4 for older residential structures. In addition, this level is below the distinctly perceptible level of 0.04 inch/second for vibration annoyance.

Construction activity is prohibited between the hours of 7:00 p.m. of any day and 7:00 a.m. of the following day; on legal holidays, as specified in Section 21.04 of the San Diego Municipal Code, with exception of Columbus Day and Washington's Birthday; or on Sundays. Construction Activity during these times would create disturbing, excessive, or offensive noise unless a permit has been applied for and granted beforehand by the Noise Abatement and Control Administrator, in conformance with San Diego Municipal Code Section 59.5.0404. Compliance with the city's Noise Ordinance would ensure that construction vibration impacts are reduced to the greatest extent feasible and limited to daytime hours. The construction vibration impact would be less than significant.

Operation

As described in Section 2.2.1, very minimal maintenance would be required for operation of the facility, amounting to only a few employee-related trips to the facility monthly for 5 years and then once annually in the long term. Therefore, once construction has been completed, the wetland mitigation bank would not result in vibration emissions.

7.1.5 Program Level – Parcels A, B, and C Port Master Plan Amendment

At this time, no construction or operation of commercial development is proposed on Parcels A, B, or C; however, the land use designation of commercial recreation would allow for commercial development of these parcels. This impact analysis evaluates the reasonable development scenario for Parcels A, B, and C, which is a future commercial land use.

Construction

As with the proposed mitigation bank, the construction activities would occur within 50 feet of the off-site sensitive land uses. Table 7-6 lists the vibration-source amplitudes for construction equipment. As pile driving may be required, the highest reference PPV for the proposed project would be 0.644 inch per second.

The FTA vibration guidance provides the following equation to calculate PPV at sensitive receptors:

$$PPV_{equipment} = PPV_{Ref} (25/D)^{n} \text{ (in/sec)}$$

Where:

PPV_{Ref} = reference PPV at 25 feet

D = distance from equipment to the receiver in feet

n = 1.5 is a value related to the vibration attenuation rate through ground

Distance attenuation would reduce the construction vibration levels from pile driving to 0.23 inch/second. This level is lower than the 0.3 inch/second threshold listed in Table 7-4 for older residential structures. However, this level is above the distinctly perceptible level of 0.04 inch/second for vibration annoyance. While pile driving would only occur for a few days during the duration of

construction, if pile driving occurs within 50 feet of the off-site sensitive land uses, then impacts would be significant. Refer to Section 8.1 for proposed mitigation.

Operation

The PMP allows for the following uses under the commercial recreation land use designation: hotels, restaurants, convention center, recreational vehicle parks, specialty shopping, pleasure craft marinas, water-dependent educational and recreational program facilities and activities, dock and dine facilities, and sportfishing. These allowable land uses are not considered sources of vibration emissions. Therefore, once construction has been completed, the future commercial development would not result in vibration emissions.

7.1.6 Project-Level and Program-Level Buildout

Construction

The activities associated with the construction of the proposed wetland mitigation bank would not overlap with the construction of future commercial development. Therefore, groundborne noise and vibration within one of the areas would not contribute to groundborne noise and vibration generated within the other.

Operation

The proposed wetland mitigation bank would be completed prior to the opening day of future commercial development. However, as there are no long-term vibration emissions associated with the wetland mitigation bank, it would not contribute to the vibration generated within the future commercial development.

Threshold (3) ***For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?***

7.1.7 Project Level – Wetland Mitigation Bank

The project site is over 10 miles from the San Diego International Airport; however, the project site is located within 2 miles of the Naval Outlying Landing Field. The project site is not located within the 65 dBA CNEL noise contour of the San Diego International Airport or the Naval Outlying Landing Field. Therefore, the project would not expose people residing or working in the project area to excessive noise levels, and no impact would occur, and no mitigation measures would be required.

7.1.8 Program Level – Parcels A, B, and C Port Master Plan Amendment

As discussed under wetland mitigation bank above, the project site is not located within the 65 dBA CNEL noise contour of the San Diego International Airport or the Naval Outlying Landing Field. Therefore, the project would not expose people residing or working in the project area to excessive noise levels and no impact would occur and no mitigation measures would be required.

8 Mitigation Measures

8.1 Construction Noise and Vibration

MM NOI-1 **Employ Noise Reducing Measures During Construction.** Construction of the future commercial development on Parcels A, B, and/or C shall be required to comply with the following measures:

a) Construction activity is prohibited between the hours of 7:00 p.m. of any day and 7:00 a.m. of the following day, or on legal holidays as specified in Section 21.04 of the San Diego Municipal Code, with exception of Columbus Day and Washington's Birthday, or on Sundays, that would create disturbing, excessive, or offensive noise unless a permit has been applied for and granted beforehand by the Noise Abatement and Control Administrator, in conformance with San Diego Municipal Code Section 59.5.0404. No noise variance permit would be sought and construction would adhere to the times identified above.

b) The contractor shall equip all internal combustion engines with the manufacturer-recommended muffler and shall not operate any internal combustion engine on the job site without the appropriate muffler.

c) The contractor shall prepare a detailed construction plan identifying the schedule for major noise-generating construction activities. The construction plan shall identify a procedure for coordination with adjacent residential land uses so that construction activities can be scheduled to minimize noise disturbance

d) When construction activities are projected to exceed 75 dBA L_{eq} during the 12-hour period from 7:00 a.m. to 7:00 p.m., equipment generating the noise shall be acoustically shielded with temporary noise barriers or pile driving shielding. The need for and feasibility of temporary noise barriers would be evaluated on a case-by-case basis by considering the distance to noise-sensitive receptors, available space at the construction location, safety, and proposed project operations.

8.2 Operational Noise

No mitigation measures are required for the long-term operation of the proposed project.

1.0 Introduction

The purpose of this Transportation Impact Study (TIS) is to identify and document any significant transportation related impacts (Based on California Senate Bill 743) associated with the development of the proposed Wetland Mitigation Bank at Pond 20 and Port Master Plan Amendment Project (Proposed Project), and to recommend mitigation measures for identified impacts, as necessary.

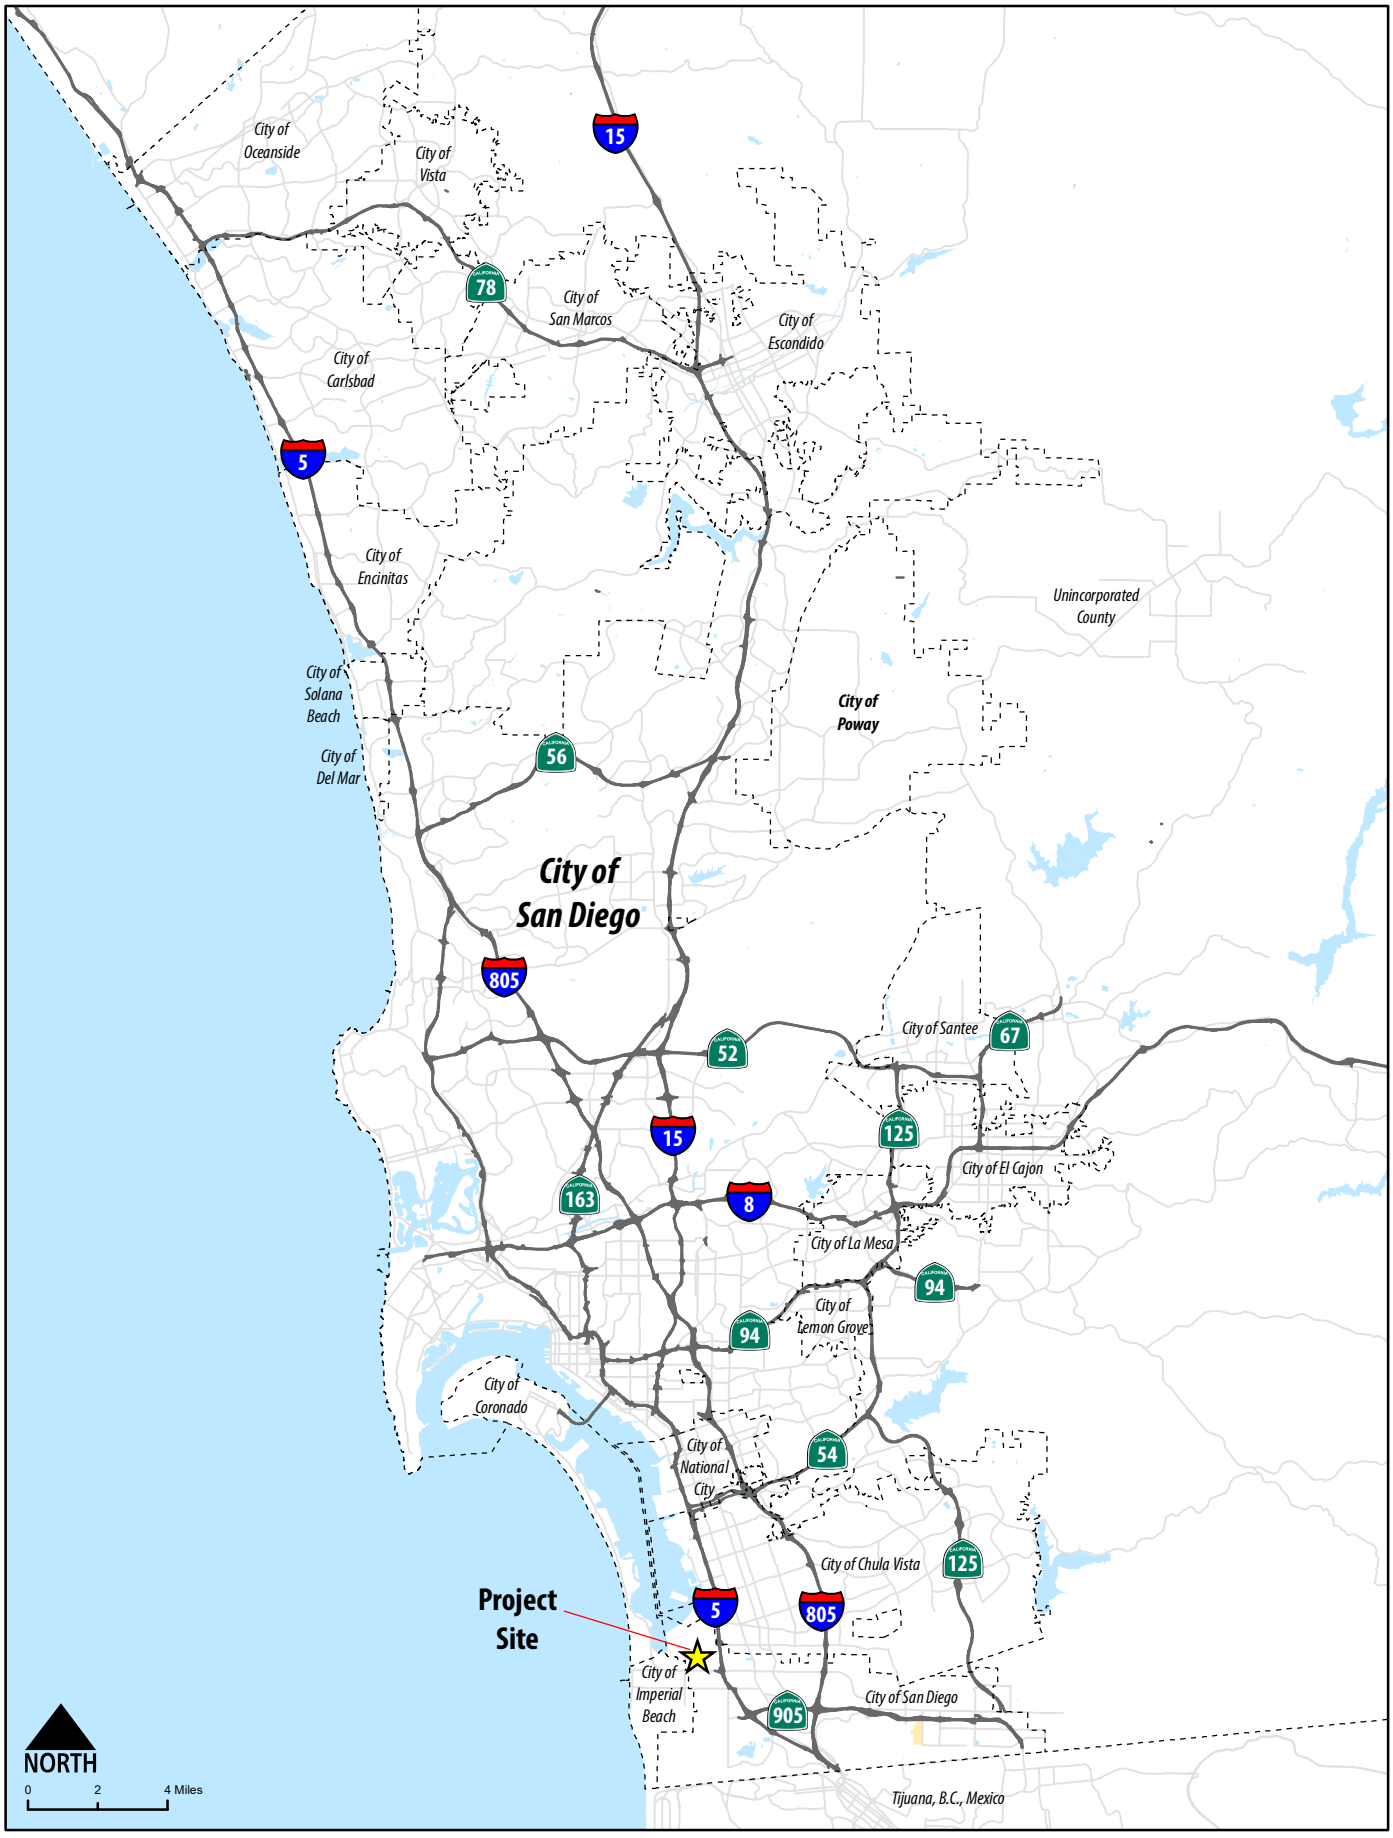

1.1 Project Description

The proposed Wetland Mitigation Bank at Pond 20 and Port Master Plan Amendment (PMPA) Project encompasses the construction of a wetland mitigation bank within the District-owned portion of Pond 20 (Bank Site) and the PMPA for Parcels A, B, and C to incorporate these District-owned land parcels into the PMP and assign a land use designation of "commercial recreation" and/or "wetlands".

The Mitigation Bank Site is approximately 80 acres in size and currently comprised of disturbed upland salt flats and isolated hypersaline pools perched on fill material. The project objective of the mitigation bank restoration is to establish tidal influence and create coastal wetlands from San Diego Bay to encourage forage and nesting habitat for native bird species, maintain or improve existing levels of flood protection, provide long term Bank Site protection.

In addition to the Wetland Mitigation Bank, the Proposed Project also includes a PMPA to incorporate the three parcels directly adjacent to the mitigation bank into the PMP (PMPA for Parcels A, B, and C). Currently, Parcels A, B, and C are open space; however, the southern portion of Parcel B is a paved and fenced lot. Since the PMPA will only be to incorporate the parcels into the PMP and assign a land use designation, and there is currently no development project planned on them at this time, the analysis for this component of the project will be conducted at the program level and analyze commercial/retail development. Details of the site such as opening year, phasing, parking spaces, and site access are unknown at this time. However, this analysis considers reasonable development assumption: Parcel A maximum of 25,000 square feet, Parcel B maximum 5,000 square feet, and Parcel C maximum 75,000 square feet. A foreseeable land use for these three parcels is retail, so "Specialty Retail / Strip Commercial" was analyzed based on the size of the parcels and the anticipated trip making characteristics. Consequently, additional, project level, CEQA documentation may be required prior to the development of these parcels.

In this report, the analysis of the mitigation bank will be identified as "Wetland Mitigation Bank" and the Parcels A, B, and C will be identified as "PMPA for Parcels A, B, and C". The regional location of the proposed project is displayed in **Figure 1-1**. **Figure 1-2** displays the location of each of project components.

1.2 Project Trip Generation

Trip generation estimates for the Proposed Project was developed using trip generation rates outlined in the *SANDAG Not so Brief Guide to Vehicular Traffic Generation Rates* (April 2002). Table 1.1 displays daily, as well as AM and PM Peak hour trip generations for the Proposed Project.

Table 1.1 PMPA for Parcels A, B. and C Trip Generation

						AM					PM			
Parcel	Land Use	Units	Trip Rate	ADT	%	Trips	Split	In	Out	%	Trips	Split	In	Out
Parcel A	Specialty Retail / Strip Commercial	25,000 SF	40/KSF	1,000	3%	30	(6:4)	18	12	9%	90	(5:5)	45	45
Parcel B	Specialty Retail / Strip Commercial	5,000 SF	40/KSF	200	3%	6	(6:4)	4	2	9%	18	(5:5)	9	9
Parcel C	Specialty Retail / Strip Commercial	75,000 SF	40/KSF	3,000	3%	90	(6:4)	54	36	9%	270	(5:5)	135	135
	Total	**105,000 SF**		**4,200**		**126**		**76**	**50**		**378**		**189**	**189**

Source: City of San Diego Trip Generation Manual

Notes:
SF = Square feet
KSF = Thousand Square Feet
ADT = Average Daily Traffic

As shown in Table 1.1, the PMPA for Parcels A, B, and C would generate a total of 4,200 daily trips, including 126 (76-in / 50-out) trips during the AM peak hour and 378 trips (189-in / 189-out) during the PM peak hour.

1.3 Project Setting

Access to the Proposed Project from the regional transportation network will be provided via Interstate 5, Palm Avenue, Saturn Boulevard, and 13th Street. These roadways will either provide a direct connection to Proposed Project, via project driveways or will provide a critical link between the Proposed Project and the regional transportation network. Descriptions of these transportation network facilities are described below:

Palm Avenue – Adjacent to the project site, Palm Avenue is primarily a six-lane major arterial with a raised median, but narrows to a four-lane arterial at the I-5 overpass. West of the project site, Palm Avenue is fronted by single family residences, but east of 13th Street, it provides access to small shopping centers, as well as the major shopping center on the northwest corner of the I-5 interchange. Posted speed limit near the project area is 45 MPH. Within the study area, parking is generally prohibited on both sides of the roadway, with the exception of the segment between 16th Street and Saturn Boulevard, which allows parking on the north side of the roadway.

Pedestrian facilities are located throughout the corridor with exception of the segment between Saturn Boulevard and I-5 Northbound Ramps in the eastbound direction. Class II bicycle facilities are also present throughout Palm Avenue within the project study area.

The Palm Avenue Trolley Station located at the Palm Avenue and Hollister Street intersection approximately a mile east from the project site. It serves as a stop for the Blue Line Trolley, as well as bus routes 933 and

934 that operate along the Palm Avenue corridor. The bus stops along the study corridor are located at the following intersections:

Bus Route 933 - westbound

- Palm & 12th
- Palm & 13th
- Palm & 16th
- Palm & Thermal Avenue
- Palm & 18th
- Palm & Saturn Boulevard

Bus Route 934 - eastbound

- Palm & 12th
- Palm & 13th
- Palm & 16th
- Palm & Thermal Avenue
- Palm & Saturn Boulevard

Saturn Boulevard – East of the project site, Saturn Boulevard is a divided four-lane roadway between Palm Avenue and Southland Plaza Driveway and transitions to a two-lane undivided roadway north of the Southland Plaza Driveway to the northern terminus. There are no posted speed limits on Saturn Boulevard between the northern terminus and Palm Avenue; however, divided four-lane roadways with fronting commercial typically have speed limits of 30 MPH. Parking is not permitted on either side of Saturn Boulevard between Palm Avenue and the northern terminus.

Sidewalks are present on both sides of Saturn Boulevard north of Palm Avenue, and bicycle lanes are provided intermittently throughout the segment.

13th Street – Within the project study area, 13th Street is an undivided two-lane roadway. 30 MPH posted speed limit signs are present along 13th Street. Parking is permitted on both sides of the roadway. Sidewalks are present on both sides of the roadway. North of Palm Avenue 13th Street is classified as a bicycle route according to the City of Imperial Beach Bicycle Transportation Plan and SANDAG's Regional Bicycle Plan, however, no signage or sharrows are present.

One significant regional corridor runs through the Otay Mesa-Nestor community, Interstate 5.

Interstate 5 (I-5) is a north-south freeway that traverses the United States from the Mexican to the Canadian border through the states of California, Oregon, and Washington. Within California, I-5 connects the major metropolitan areas of San Diego, Los Angeles, Sacramento and the eastern portion of the San Francisco Bay Area. I-5 bisects the study community and can be accessed via the Palm Avenue interchange.

1.4 Report Organization

Following this Introduction chapter, this report is organized into the following sections:

2.0 *Analysis Methodology* – This chapter describes the methodologies and standards utilized to analyze and identify the transportation related impacts associated with the Proposed Project.

3.0 *Transportation Related Impacts and Mitigation* – This chapter derives and analyzes the projected Vehicle Miles Traveled (VMT) that will be generated by the Proposed Project. This chapter also identifies if the Proposed Project's VMT would create a significant project related impact, as it relates to the standards outlined in the California Environmental Quality Act (CEQA). Finally, the chapter provides recommendations for mitigation measures to reduce the identified transportation related impacts to less than significant levels, and evaluates the feasibility of the proposed mitigation measures.

2.0 Analysis Methodology and Threshold

This TIS was conducted in accordance with the California Environmental Quality Act (CEQA) Statutes and Guidelines.

2.1 Background (SB-743)

On September 27, 2013, Governor Edmund G. Brown, Jr. signed SB-743 into law, starting a process that is expected to fundamentally change the way transportation impact analysis is conducted under CEQA. Within the State's CEQA Guidelines, these changes will include elimination of auto delay, level of service (LOS), and similar measurements of vehicular roadway capacity and traffic congestion as the basis for determining significant impacts.

On December 2018, the Resources Agency certified and adopted the CEQA Guidelines update package, which included the California Natural Resources Agency Guidelines for the Implementation of the California Environmental Quality Act. As a result, the California Governor's Office of Planning and Research (OPR) updated and released the *Technical Advisory on Evaluating Transportation Impacts in CEQA (Technical Advisory) in December 2018.* According to the updated guidelines, lead agencies will have until July 1, 2020 to comply with the updated CEQA revision.

2.2 Analysis Guidelines and Significance Thresholds

In response to the implementation of SB-743, the District is anticipated to utilize the standards and thresholds recommended by ORP in the Technical Advisory to determine transportation related impacts. For land use development projects that have a customer component, such as the Proposed Project's PMPA for Parcels A, B, and C, OPR recommends using Total VMT to determine if a project has a significant transportation related impact.

Detailed descriptions of the VMT methodology is provided Appendix A.

2.3 Analysis Methodology - CEQA

The following section describes the analysis methods outlined in the *OPR Technical Advisory (December 2018)* which transportation related impacts are analyzed and identified.

2.3.1 Analysis Metrics

For land use development projects that has a customer component, OPR requires that the following metric be analyzed to determine if a project has a significant transportation related impact:

- *Total VMT:* the net increase in VMT generated by retail uses.

Table 2.1 categorizes each component of the Proposed Project and with the appropriate evaluation criteria and impact threshold.

Table 2.1 Proposed Project's Land Use Impact Threshold

Proposed Project's Land Use Component	Evaluation Criteria and Impact Threshold		
	Land Use	Evaluation Criteria	Impact Threshold
Mitigation Bank	Mitigation Bank	N/A[1]	N/A
PMPA for Parcels A, B, and C	Retail (sq ft)	VMT with vs. without proposed retail change	No increase in regional VMT

Note:
[1]The Mitigation Bank will not be accessible to the public and is therefore not anticipated to generate any additional VMT. Therefore, no impact threshold is appropriate.

As noted in Section 1.1, the Proposed Project consists of assigning land use designations for the three parcels (Parcels A, B and C) as "commercial recreation," which would include commercial/retail land uses. As described in the "Project Description" section, "Specialty Retail / Strip Commercial" was analyzed based on the size of the parcels and the anticipated trip making characteristics. Therefore, the only impact threshold required for the Proposed Project transportation analysis is "No increase in total regional VMT."

3.0 Transportation Impact & Mitigation

This chapter derives and analyzes the projected VMT that will be generated by the Proposed Project. This chapter also identifies if the Proposed Project's VMT would create significant project related impact, as it relates to the standards outlined in the California Environmental Quality Act (CEQA) and the *OPR Technical Advisory*. Finally, the chapter provides recommendations for mitigation measures that may reduce the Proposed Project's impacts to less than significant levels, and evaluates the feasibility of the proposed mitigation measures.

3.1 VMT Impact Analysis

To calculate the total VMT that is anticipated to be generated by the Proposed Project, the anticipated daily trips generated (calculated in Table 1.1) was multiplied by the average trip length for the Proposed Project land uses, as shown in **Table 3.1.** Both the trip generation rate and the average trip length were derived from the *SANDAG Not so Brief Guide to Vehicular Traffic Generation Rates* (April 2002).

Table 3.1 VMT Analysis Results Impact Analysis

Land Use[1]	Quantity	Trip Generation Rate	ADT	Average Trip Length (Miles)[2]	Daily VMT Generated
Specialty Retail / Strip Commercial	105,000 SF	40/KSF	4,200	4.3	18,060

Notes:
[1]As noted in Table 2.2, the Mitigation Bank will not be accessible to the public and is therefore not anticipated to generate any additional VMT.
[2]Source: SANDAG Not so Brief Guide to Vehicular Traffic Generation Rates (April 2002).

Since the PMPA is assigning the land use designations of Parcels A, B and C and no specific details have been identified or determined regarding the specific stores and/or uses that will be implemented on the Proposed Project site, at this time it is not known if the retail uses contained within the Proposed Project are anticipated to be locally serving[1]. Therefore, to be conservative, is assumed that the retail uses that will be implemented on the project site will not be local serving, and therefore, all VMT generated by these uses (18,060 miles) would be considered a *significant impact*.

3.2 Mitigation

As noted in Section 3.1, the VMT generated by the Proposed Project's retail uses would result in a significant impact. In order to reduce the Proposed Project VMT to a less than significant level, Transportation Demand Management (TDM) measures would need to be implemented to reduce the Proposed Project related net VMT to zero. Therefore, a TDM analysis was conducted using the SANDAG Mobility Management VMT Reduction Calculator Tool to provide an understanding of the types and magnitude of TDM related features the Proposed Project would need to implement to reduce these impacts to less than significant levels.

The Mobility Management VMT Reduction Calculator Tool estimates the percent reduction in vehicle miles traveled (VMT) resulting from the application of mobility management strategies. This Excel-based tool is

[1] Locally serving retail is not assumed to have an impact on regional VMT since it generally reduces trip lengths, as patrons will be drawn to the closest location.

intended to act as a resource for identifying and evaluating the impacts of mobility management strategies as part of the development review and transportation analysis process. The tool supports the goals of SB 743 by providing jurisdictions and developers with a resource to quantify VMT reductions resulting from implementation of a variety of mitigation strategies at various scales. The tool also supports local government planning efforts including implementation of general and community plans, TDM ordinances, and climate action plans.

It should be noted that the Mobility Management VMT Reduction Calculator Tool does not include every potential TDM measure that could potentially reduce Proposed Project related VMT. However, it does provide a series of TDM measures and strategies and who's reductions can be quantifiable via peer reviewed studies. To be conservative, this analysis will only assume that the measures included in the Mobility Management VMT Reduction Calculator Tool would be available as mitigation measures to the Proposed Project, resulting in a less than significant impact. This assumption is made because these are the only measures in which the District has agreed upon both their effectiveness and the way in which their reduction is quantified. It should be noted that the Proposed Project will implement a TDM plan that includes measures that were not included in the Mobility Management VMT Reduction Calculator Tool, but the impact analysis will not take credit for these measures because the method used to calculate their associated VMT reduction has not been agreed upon by the District at this time.

Table 3.2 reviews each of the TDM measures included in the Mobility Management VMT Reduction Calculator Tool, identifies if the TDM measure would be applicable to the Proposed Project, and quantifies the potential reduction in VMT that the Proposed Project would experience with the implementation of the measure. The purpose of this assessment is to calculate the potential reduction in Proposed Project VMT that is feasible through quantifiable and accepted TDM measures. If the Proposed Project is not able to reduce its total VMT by 100% (See Table 3.1), then its impacts will remain significant and will become unavoidable.

Table 3.2 Potential TDM and VMT Reduction Measures

TDM Measures	Description	Feasible for the Proposed Project to Implement?	Potential Reduction
1A. Voluntary Employer Commute Program	Employer offers a voluntary employer commute trip reduction program. The program may include a carpool or vanpool program, subsidized or discounted transit passes, bike amenities, commute trip reduction marketing, and preferential parking permit program. This strategy encompasses strategies 1C (Employer Carpool Program), 1D (Employer Transit Pass Subsidy), and 1E (Employer Vanpool Program) and cannot be analyzed in combination with these strategies. Unlike strategy 1B (Mandatory Employer Commute Program), this strategy does not require monitoring, reporting, or performance standards. If this strategy is selected, strategy 1B cannot be analyzed as part of the total VMT reduction.	Yes - This measure is feasible, but the District could mandate the future project applicants to implement a Mandatory Employer Commute Program instead of Voluntary. See Strategy 1B.	See 1B
1B. Mandatory Employer Commute Program	Employer offers a mandatory employer commute trip reduction program. The program may include a carpool or vanpool program, subsidized or discounted transit passes, bike amenities, encouragement for telecommuting and alternative work schedules, commute trip reduction marketing, and preferential parking permit program. This strategy encompasses strategies 1C, 1D, and 1E and cannot be analyzed in combination with these strategies. Unlike strategy 1A (Voluntary Employer Commute Program), this strategy would be contractually required of the developer or property owner and is accompanied by a regular performance monitoring and reporting program. If this strategy is selected, strategy 1A cannot be analyzed as part of the total VMT reduction.	Yes – The District could mandate future project applicants to implement a commute program as part of their lease.	2.6%
1C. Employer Carpool Program	Employers can encourage carpooling by providing ridematching assistance to employees; providing priority parking for carshare vehicles; and providing incentives for carpooling.	Yes - This measure is feasible for the Proposed Project to implement.	Included as part of Strategy 1B
1D. Employer Transit Pass Subsidy	Employers can encourage employees to take transit by subsidized or discounted daily or monthly public transit passes to employees.	Yes - This measure is feasible for the Proposed Project to implement.	Included as part of Strategy 1B
1E. Employer Vanpool Program	Vanpooling is a flexible form of public transportation that provides groups of 5–15 people with a cost-effective and convenient rideshare option for commuting. An employer can encourage ridesharing by subsidizing vanpooling for employees that have a similar origin and destination and by providing priority parking for employees that vanpool. The SANDAG Vanpool Program provides a subsidy of up to $400 per month to offset the vehicle lease cost.	Yes - This measure is feasible for the Proposed Project to Implement.	Included as part of Strategy 1B.

Table 3.2 Potential TDM and VMT Reduction Measures

TDM Measures	Description	Feasible for the Proposed Project to Implement?	Potential Reduction
1F. Employer Telework Program	A telework program enables employees to work from home or a remote location on a periodic basis. Depending on the nature of the work, schedules can range from full-time, specific days of the week, or as needed. The VMT impacts of telework are similar to a flexible work schedule program, which enables employees to work long hours in exchange for one day off every week or two.	No – The majority, if not all, of the jobs that are anticipated to be within the Proposed Project would be service based (i.e. in person); therefore, this measure would not be applicable.	Does Not Apply
2A. Transit Oriented Development	Transit Oriented Development (TOD) refers to projects built in compact, walkable areas that have easy access to public transit, ideally in a location with a mix of uses, including housing, retail, offices, and community facilities. TODs are generally described as places within a 10-minute walk of a high-frequency rail transit station (e.g. SPRINTER, COASTER, Trolley). They should, at a minimum, incorporate bike and pedestrian access to transit, thereby encouraging transit use and reducing vehicle travel.	No – The proposed Project is not located within a 10-minute walk of a high frequency transit station. The Palm Avenue is slightly less than a mile away from the project site, which is too far to constitute as a TOD.	Does Not Apply
2B. Mixed Use Development	Mixed use projects incorporate a range of complementary land uses that provide a balanced development approach relative to the surrounding neighborhood and encourage transportation alternatives. This could include co-location residential development, office space, retail shops, and others. Land use mix is measured using an entropy index. An index of 0 indicates a single land use while an index of 1 indicates equal distribution of all land uses. For ease of use, the strategy is calculated using only two land use types - residential (number of residents) and commercial (number of jobs).	No – Residential units are not permitted in the Tidelands area.	Does Not Apply
3A. Parking Pricing	Priced parking can be implemented on- or off-street and helps to effectively manage the parking supply. Priced parking works best in areas where on-street parking is managed (e.g., priced parking, residential permit programs, time limits, etc.) to reduce unintended consequences of parking in adjacent neighborhoods.	No - The Proposed Project could potentially charge for parking, but it is uncertain at this time if paid parking will be implemented. Therefore, this strategy has not been included.	Does Not Apply
3B. Parking Cash Out	Employers can offer employees who are provided free parking the option to take the cash value of the space in lieu of the space itself. California state law (AB 2109, Katz) requires that certain employers who provide subsidized parking for their employees offer a cash allowance in lieu of a parking space. This strategy is only applicable where employers pay for or rent parking for their employees. Parking cash-out is most successful when paired with incentives or programs that encourage the use of transportation alternatives.	No - The Proposed Project could potentially charge for parking, but it is uncertain at this time if paid parking will be implemented. Therefore, this strategy has not been included.	Does Not Apply

Table 3.2 Potential TDM and VMT Reduction Measures

TDM Measures	Description	Feasible for the Proposed Project to Implement?	Potential Reduction
4A. Street Connectivity Improvement	A connected and complete street network improves accessibility, safety, and livability of the community. Traditional grid street patterns with short blocks offer a high degree of connectivity compared to street networks with curvilinear designs and cul-de-sacs. This strategy uses intersection density as a proxy for street connectivity improvements, which help to facilitate a greater number of short trips. Example projects that increase intersection density would be building a new street network in a subdivision or retrofitting an existing street network to improve connectivity (e.g. cul-de-sacs converted to grid streets).	No - The Proposed Project will not increase the average intersection / square mile ratio within the city.	Does Not Apply
4B. Pedestrian Facility Improvement	Enhancing pedestrian facilities (e.g. streetscape and pedestrian crossing improvements) within the jurisdiction or community helps to encourage walking and reduce the reliance on the single occupancy vehicle. This strategy applies to sidewalk enhancements that improve the existing streetscape and is not inclusive of greenfield developments with new roadways.	No - Public sidewalks near the Proposed Project are already constructed to City standards.	Does Not Apply
4C. Bikeway Network Expansion[1]	A bikeway network includes an interconnected system of bike lanes, bike paths, and cycle tracks (Class I, Class II, and Class IV facilities). Bike facilities may share the roadway with vehicles or provide a dedicated pathway that separates bikes from cars or pedestrians. Increasing the network of bike facilities help to encourage biking as a safe and convenient alternative to driving. If this strategy is selected, strategy 4D (Bike Facility Improvement) cannot be analyzed as part of the total VMT reduction.	Yes - The Proposed Project connects to the Bayshore Bikeway that is a regional bicycle facility that extends 24 miles around San Diego Bay. However, due to the Proposed Project location, the proposed bikeway network expansion would not have a significant effect on project VMT.	0.0%[1]
4D. Bike Facility Improvement	If a comprehensive bikeway network expansion (strategy 4C) is not feasible, the addition of a single bike lane (Class II), bike path (Class I), or protected bikeway (Class IV) to an existing bikeway network helps to improve biking conditions within an area. Class I facilities are bike paths that are physically separated from motor vehicle traffic. Class II facilities are striped bicycle lanes that provide exclusive use to bicycles on a roadway. Class IV facilities are protected on-street bikeways, also called cycle tracks. Consider local or state bike width standards when implementing facility improvements. If this strategy is selected, strategy 4C (Bikeway Network Expansion) cannot be analyzed as part of the total VMT reduction.	No - Bike Facility Improvements are already assumed under 4C.	Does Not Apply

Table 3.2 Potential TDM and VMT Reduction Measures

TDM Measures	Description	Feasible for the Proposed Project to Implement?	Potential Reduction
4E. Bikeshare	Bikeshare programs help to reduce traffic congestion and demand for parking by providing users with on-demand access to bikes for short-term rental. Bikeshare systems that feature electrified vehicles (scooters, e-bikes) help increase the range of the bike trip, making these services convenient and attractive to users. Providing discounted bikeshare memberships or dedicated bikeshare parking can encourage users and improve the user experience.	No - This VMT reduction, as this measure is intended to be a city-wide measure.	Does Not Apply
4F. Carshare	Carsharing offers people with convenient access to a vehicle for personal or commuting purposes. Carsharing helps to encourage transportation alternatives by reducing vehicle ownership. Roundtrip carshare providers require members to return the vehicle to a designated location. One-way carshare (i.e., free-floating) providers allow members to pick up the vehicle in one place and end their trip in another. Discounted carshare memberships and priority parking for carsharing vehicles help to encourage use of carsharing services.	No - The Proposed Project cannot offer a car share program. Should a car share company want to locate a carshare on the property, the Proposed Project would be open to the idea.	Does Not Apply
4G. Community-Based Travel Planning	Community-based travel planning (CBTP) is a residential-based approach to outreach that provides households with customized information, incentives and support to encourage the use of transportation alternatives. The approach involves a team of trained 'Travel Advisors' engaging residents at home or in their communities to offer information, incentives, and advice about how members of households can travel in alternative ways that meet their needs. Teams of trained Travel Advisors visit all households within a targeted geographic area, have tailored conversations about residents' travel needs, and educate residents about the various transportation options available to them. Due to the personalized outreach method, communities are typically targeted in phases.	No – The Proposed Project does not include residential units.	Does Not Apply
5A. Transit Service Expansion	Expanding the transit network increases the transit system's ability to accommodate existing and future travel demand, particularly for peak period commute trips. This strategy provides an effective alternative to congested freeways and roadways for travelers and can reduce vehicle miles traveled by increasing transit ridership. Transit network service improvements should be coordinated closely with the operating transit agency.	No – The operation and deployment of transit routes within the project area is under the jurisdiction of MTS. Therefore, the District does not have the authority to expand the transit network. MTS does not have plan to increase the transit services or transit frequency for Route 933, which is the closet transit service	Does Not Apply

Table 3.2 Potential TDM and VMT Reduction Measures

TDM Measures	Description	Feasible for the Proposed Project to Implement?	Potential Reduction
5B. Transit Frequency Improvements	Transit frequency improvements can be implemented system-wide or on individual routes. Frequency improvements increase transit ridership by reducing travel times, which improve the user experience and increase the attractiveness of transit service. Transit network service improvements should be coordinated closely with the operating transit agency.	No – The operation and deployment of transit routes within the project area is under the jurisdiction of MTS. Therefore, the District does not have the authority to expand the transit network.	Does Not Apply
5C. Transit-Supportive Treatments	Roadway infrastructure and/or traffic signal modifications can improve transit travel times and reliability, leading to mode shift to transit. Treatments can include transit signal priority, bus-only signal phases, queue jumps, curb extensions to speed passenger loading, and dedicated bus lanes. Transit-supportive treatments should be coordinated closely with the operating transit agency.	No – Palm Avenue, where these types of improvements would be deployed, is under the jurisdiction of the City of San Diego. Therefore, the District would not have the authority to implement Transit Supportive Treatments along this roadway.	Does Not Apply
5D. Transit Fare Reduction	Transit pricing strategies are designed to reduce the costs associated with using transit, thereby creating incentives for people to shift from other traveling modes. Fare reductions can be implemented system-wide, in specific fare-free or reduced fare zones. This strategy varies from Employer Transit Pass Subsidy (Strategy 1D) which can be offered through employer-based benefits programs in which the employer fully or partially pays the employee's cost of transit.	No – The operation and deployment of transit routes within the project area is under the jurisdiction of MTS. Therefore, the City nor the project applicant have the authority to change transit fairs.	Does Not Apply

Source: SANDAG; Chen Ryan Associates, October 2019

Note:
[1] The Proposed connection would provide a bicycle connection from the Proposed Project to the regional bike network. However, actual effect on VMT reduction is negligible.

As shown in Table 3.2, the following TDM measures included in the Mobility Management VMT Reduction Calculator Tool were identified to be feasible for the Proposed Project to implement:

1B. Mandatory Employer Commute Program
1C. Employer Carpool Program
1D. Employer Transit Subsidy Pass
1E. Employer Vanpool Program
4C. Bikeway Network Expansion

The total VMT reduction that would be associated with these measures would be 2.6%. This is well below the 100% reduction of project related VMT that is required to reduce the identified impact to less than significant. Therefore, the Proposed Project would still have *significant and unavoidable transportation related impact* for CEQA purposes.

3.3 Construction Analysis

Construction workers VMT is not newly generated; instead, it is redistributed throughout the regional roadway network based on the different work sites in which workers travel to each day. Therefore, construction workers are not generating new VMT each day, only redistributing it. It is important to note that construction traffic is temporary and not expected to significantly increase VMT in the region. This redistribution is considered to be nominal and momentary. Consequently, it is assumed that the transportation impacts would be *less than significant* during the construction of the Proposed Project.

Appendix A
VMT Methodology

SB 743 VMT METHODOLOGY AND GUIDELINES

In response to the implementation of SB-743, the District is anticipated to adopt new transportation impact study guidelines and standards prior to the mandatory implementation of SB-743 (July 1, 2020). The SB-743 framework was developed for the Port Master Plan Update (PMPU) Environmental Impact Report (EIR) and would also be applied for other District projects.

1.1.1 Analysis Metrics

For land use development projects, OPR requires that the following two metrics be analyzed to determine if a project has a significant transportation related impact:

- *VMT/Capita* Includes all vehicle-based person trips grouped and summed to the home location of individuals who are drivers or passengers on each trip. It includes both home-based and non-home-based trips. The VMT for each home is then summed for all homes in a particular census tract and divided by the population of that census tract to arrive at Resident VMT/Capita. However, since residential land uses are not permitted within the District, this metric was not utilized for the analysis contained within this report.
- *VMT/Employee* Includes all vehicle-based person trips grouped and summed to the work location of individuals on the trip. This includes all trips, not just work-related trips. The VMT for each work location is then summed for all work locations in a particular census tract and then divided by the total number of employees of that census tract to arrive at the VMT/Employee.
- *Total VMT* the sum of all vehicle trips generated in an area multiplied by their associated trip lengths. This total includes all the generated vehicle miles for Internal-to-Internal (I-I), Internal-to-External (I-E), and External-to-Internal (E-I) in the area. For this analysis, the Total VMT was calculated per Districts.

1.1.2 Analysis Tool

The SANDAG Series 13 Activity Based Model (ABM) was customized for the Port District's jurisdictional area and to incorporate the land use and transportation network changes proposed by the Port Master Plan Update. The ABM is a travel demand forecasting model that incorporates census data and travel surveys to inform the algorithms of the model's projections. It uses a simulated population based on existing and projected demographics to match residents to employment and forecasts the daily travel on the regional transportation network. In addition, the model is able to track the daily travel of individuals in the simulated population, including origins, destinations, travel distances and mode choices. The Series 13 ABM has four (4) forecast scenarios: 2012, 2020, 2035, and 2050. The different components of the PMPU are projected to be implemented over a period of time, so the most appropriate year to conduct the VMT/Capita and VMT/Employee is for 2050.

To calculate both the VMT/Employee and the total VMT generated within each planning district, the PMPU land uses were coded into their respective Transportation Analysis Zones (TAZ) and transportation network changes were also coded throughout the Tidelands. Select Zone Assignments were then conducted for the TAZs located in each planning district, to track origin and destination pairings, as well as the routes choices for vehicular trips coming to and from the Districts land uses. The total VMT generated within the planning district was calculated based on the total number of trips (all trip types) generated between the by District land uses then multiplying by the route distance between them. VMT/Employee was calculated by summing the total VMT generated specifically by employees within each planning district and then divided by the total number of jobs within the same planning district.

A detailed description of how the SANDAG Model calculates VMT is provided at the following location: https://www.sandag.org/uploads/2050RTP/F2050RTPTA15.pdf

1.2 Determination of Significance – CEQA

The CEQA Guidelines recommend use of automobile VMT, as the preferred CEQA transportation metric, along with the elimination of auto delay/LOS for CEQA purposes statewide. For land use projects, the Technical Advisory reports that research has shown that automobile VMT/Capita at the project level should be fifteen percent (15%) below those of existing development. This section presents the transportation significance criteria that are based on the thresholds identified in the OPR Technical Advisory.

Section 15064.3 (4) of the *CEQA Guidelines* state:

> A lead agency has discretion to choose the most appropriate methodology to evaluate a project's vehicle miles traveled, including whether to express the change in absolute terms, per capita, per household or in any other measure. A lead agency may use models to estimate a project's vehicle miles traveled, and may revise those estimates to reflect professional judgment based on substantial evidence. Any assumptions used to estimate vehicle miles traveled and any revisions to model outputs should be documented and explained in the environmental document prepared for the project. The standard of adequacy in Section 15151 shall apply to the analysis described in this section.

To follow onto this standard, Section E.2 of the *OPR Technical Advisory* (pages 16 and 17) provides recommended thresholds for the following applicable District land uses[1]:

> Office: A PMPU exceeding a level of 15 percent below existing regional VMT per employee may indicate a significant transportation impact.
>
> Retail: A net increase in total VMT may indicate a significant transportation impact. Because new retail development typically redistributes shopping trips rather than creating new trips, estimating the total change in VMT (i.e., the difference in total VMT in the area affected with and without the project) is the best way to analyze a retail project's transportation impacts.
>
> Other Land Uses: Of land use projects, residential, office, and retail projects tend to have the greatest influence on VMT. For that reason, OPR recommends the quantified thresholds described above for purposes of analysis and mitigation. Lead agencies, using more location-specific information, may develop their own more specific thresholds, which may include other land use types. In developing thresholds for other project types, or thresholds different from those recommended here, lead agencies should consider the purposes described in section 21099 of the Public Resources Code and regulations in the *CEQA Guidelines* on the development of thresholds of significance (e.g., CEQA Guidelines, § 15064.7).
>
> Transportation Projects*:* The *CEQA Guidelines* indicate that a VMT analysis should be conducted for roadway capacity projects and the *OPR Technical Advisory* refers to the potential for induced travel, and its associated effects. Induced travel occurs when improvements to a roadway facility enhance traffic operations and/or relieve congestion to the point at which travelers have a higher incentive to make a vehicular trip in lieu of a different mode of travel, or not taking the trip at all. Appendix 2 of the OPR *Technical Advisory* identifies the following five factors that contribute to overall induced travel:
>
> 1. *Changes in Trip Length*: Roadway capacity could result in the ability to travel a longer distance in a shorter period of time, thereby making farther away destinations more attractive and resulting in longer trip lengths and more VMT.
> 2. *Changes in Mode Choice*: Roadway capacity could result in reduced automobile travel time, causing people to shift to automobile use from other travel modes, resulting in more auto trips and increased VMT.
> 3. *Route Changes*: Faster travel time may attract more drivers to a route with expanded capacity, which can increase or decrease vehicle travel depending on whether it shortens or lengthens trips.
> 4. *Newly Generated Trips*: Increasing travel speeds from added roadway capacity could induce additional vehicle trips, resulting in increased VMT.

[1] It should be noted that the *OPR Technical Advisory* also provides threshold recommendations for residential land uses; however, since the District is prohibited from allowing residential land uses, the recommendations were excluded from this framework.

5. *Land Use Changes*: Faster travel times from added roadway capacity could lead to land development farther out on the corridor, leading to a long-term incremental increase in trip lengths, resulting in increased VMT.

Additionally, there are several lands uses within the Tidelands that are not covered in the thresholds outlined above. Using the guidance provided under Other Land Uses, it is recommended that the District implement thresholds for the following user group:

Non-Commercial Employees: This would include all employees within the Tidelands that do not work within commercial offices or retail (which are both covered by the *OPR Technical Advisory*). Since the District has a diverse employment base, it would be difficult to categorize each employment group and compare their associated VMT/Employee rate to a comparable rate at the regional level. Additionally, most of the employment groups within the District have very similar travel patterns and trip generation rates (i.e. most employment is industrial or service based). Therefore, the average VMT/Employee for these uses were compared to the average non-commercial VMT/Employee rate at the regional level. If the District's average VMT/Employee rate is less than 15 percent below existing regional VMT/Employee rate, it may indicate a significant transportation related impact. See Table 2.1 for clarification on which land use would be applicable for this category.

Freight: Both the SB-743 legislation and the OPR Technical Advisory are silent on thresholds associated with freight. Since freight VMT is based upon the supply and demand of various goods throughout the nation, freight VMT typically cannot be lowered based upon standard TDM measures, local land use patterns, or other smart growth measures. Therefore, it is recommended that VMT related impacts for freight be based an increase in VMT by Cargo, either by ton or unit, from the current conditions and compliance with the *California Sustainable Freight Action Plan*, July 2016. These criteria will help to maintain the current freight conditions and emphasize the use of zero emission vehicles and alternative modes, such as rail and pipelines, whenever possible.

The *California Sustainable Freight Action Plan* sets the following vision for the State's future freight transportation system[2]:

> Utilize a partnership of federal, State, regional, local, community, and industry stakeholders to move freight in California on a modern, safe, integrated, and resilient system that continues to support California's economy, jobs, and healthy, livable communities. Transporting freight reliably and efficiently by zero emission equipment everywhere feasible, and near-zero emission equipment powered by clean, low-carbon renewable fuels everywhere else.

Executive Order B-32-15 directed the State agencies to establish targets to improve freight efficiency, transition to zero emission technologies, and increase the competitiveness of California's freight transport system. Below are the Targets set forth by the *California Sustainable Freight Action Plan* to meet this direction and track California's progress toward meeting the Vision and Guiding Principles of the Plan. It should be noted that the Targets are not mandates, but rather aspirational measures of progress toward sustainability for the State to meet and try

[2] Source: Section I.B. of the *California Sustainable Freight Action Plan*

to exceed. The State agencies will measure and report progress on the following statewide Targets, and will evaluate the Targets to determine necessary adjustments in 2019:

System Efficiency Target - Improve freight system efficiency 25 percent by increasing the value of goods and services produced from the freight sector, relative to the amount of carbon that it produces by 2030.

Transition to Zero Emission Technology Target - Deploy over 100,000 freight vehicles and equipment capable of zero emission operation and maximize near-zero emission freight vehicles and equipment powered by renewable energy by 2030.

Increased Competitiveness and Economic Growth Targets - Establish a target or targets for increased State competitiveness and future economic growth within the freight and goods movement industry based on a suite of common-sense economic competitiveness and growth metrics and models developed by a working group comprised of economists, experts, and industry. These targets and tools will support flexibility, efficiency, investment, and best business practices through State policies and programs that create a positive environment for growing freight volumes and jobs, while working with industry to mitigate potential negative economic impacts. The targets and tools will also help evaluate the strategies proposed under the Action Plan to ensure consideration of the impacts of actions on economic growth and competitiveness throughout the development and implementation process.

Table 1.1 provides a summary of the PMPU land uses, the recommended metric that would be used to evaluate their potential transportation related impact, and the recommended impact threshold.

Table 1.1: Evaluation Criteria & Impact Threshold

Land Use	Evaluation Criteria	Covered By OPR?	Impact Threshold
LAND			
Hotel Only (rooms)	VMT / Employee &	No	15% below regional average
Hotel w/ R&R (rooms)	VMT / Employee	No	15% below regional average
Retail (sq ft)	VMT with vs. without proposed retail change	Yes	No increase in total Planning District VMT

MEMORANDUM

TO: Jenny Vick, HDR, Inc.
FROM: Dale Domingo & Stephen Cook, PE, Chen Ryan Associates
DATE: July 6, 2020
RE: South San Diego Bay Wetland Mitigation Bank and Port Master Plan Amendment – Traffic Analysis and Volume Memorandum

The purpose of this technical memorandum is to document forecasted daily and peak hour volumes and provide a preliminary assessment of the traffic conditions associated with the South San Diego Bay Wetland Mitigation Bank and Port Master Plan Amendment (PMPA) Project (Proposed Project).

PROJECT DESCRIPTION

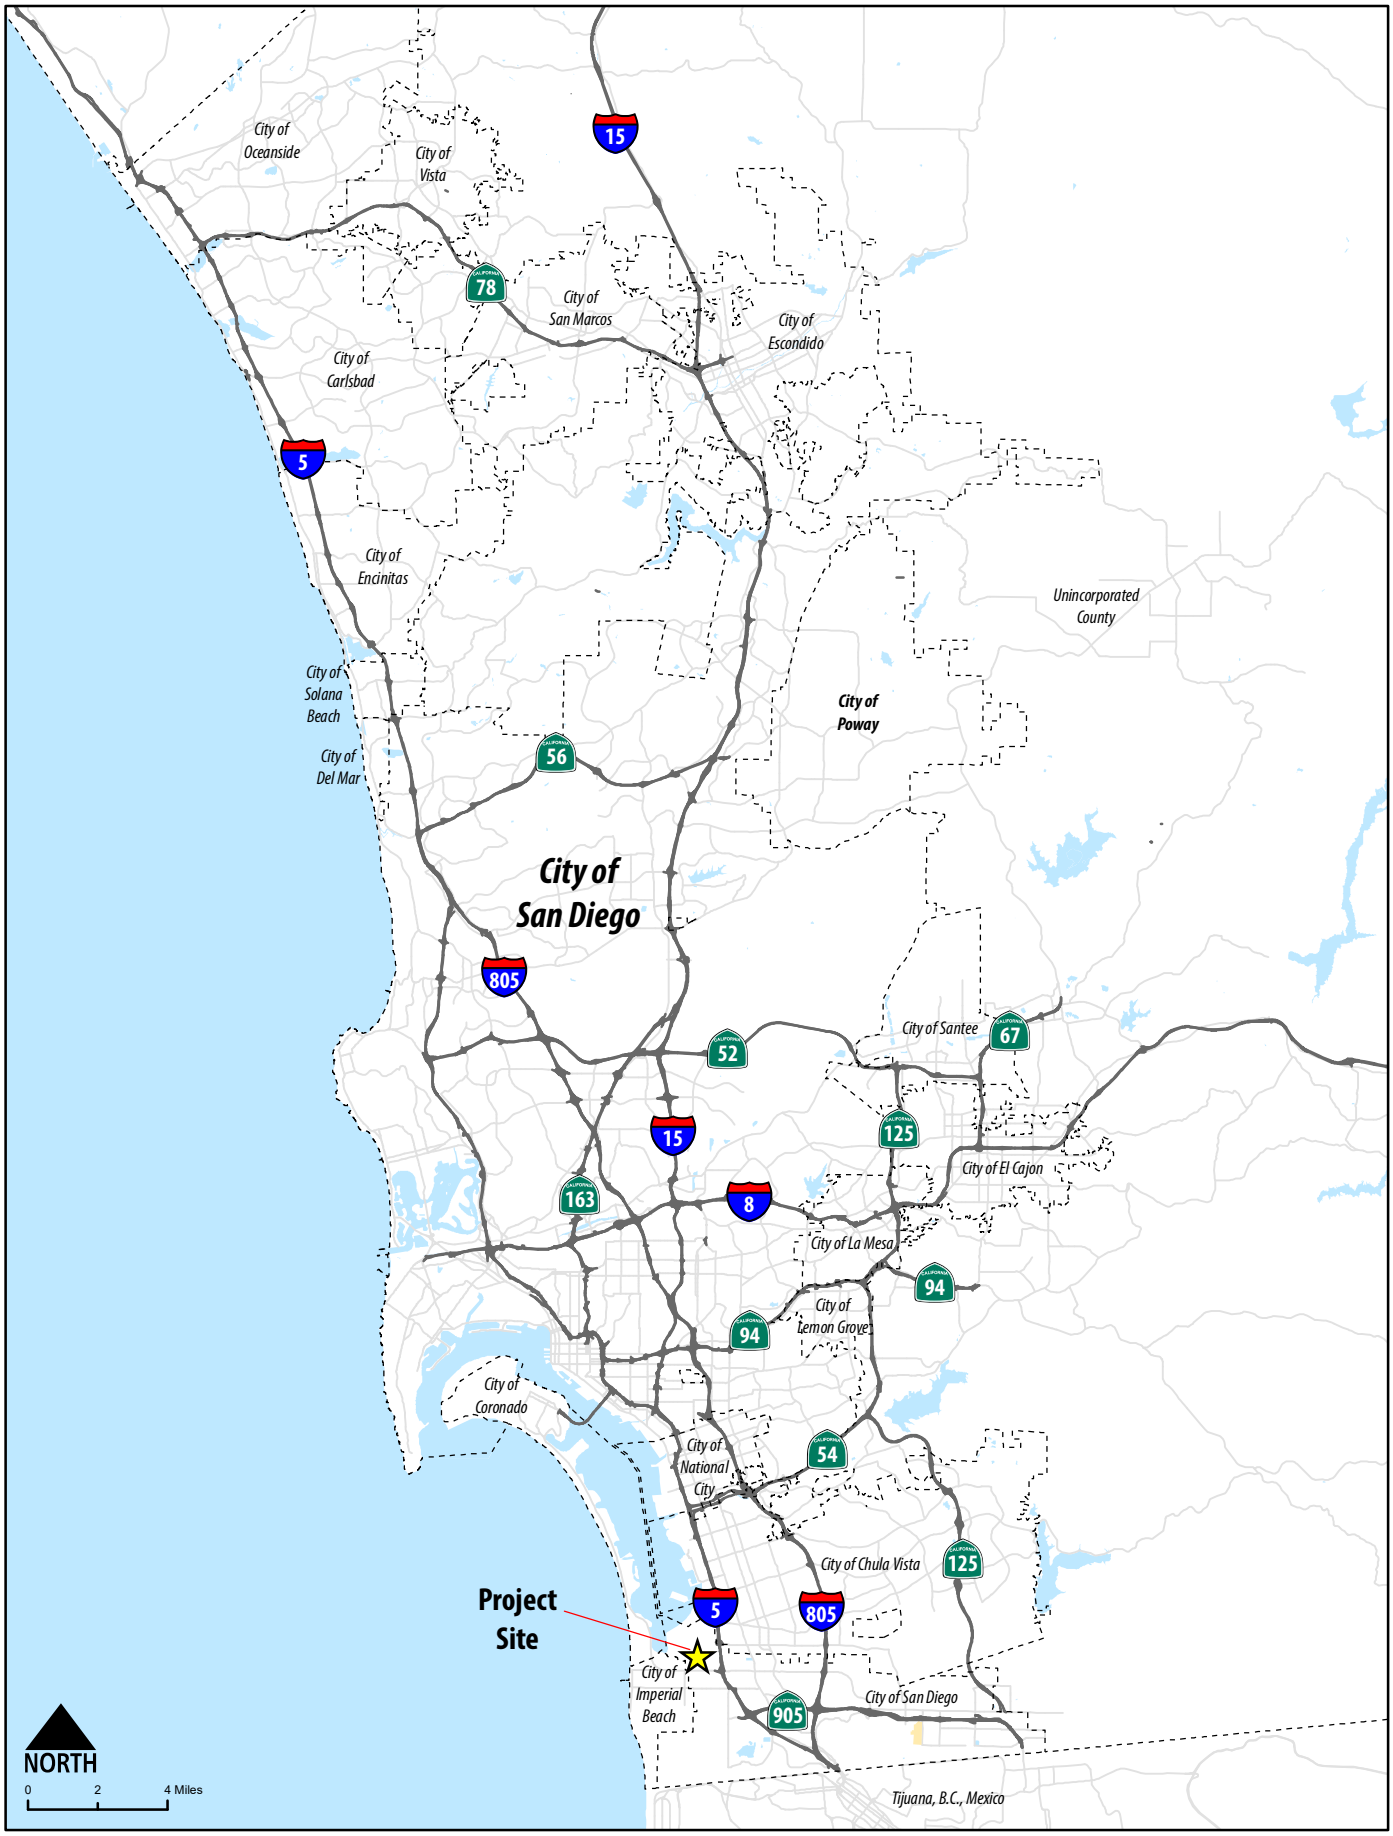

The Proposed Project encompasses the construction of a wetland mitigation bank within a portion of District-owned Pond 20 (Bank Site) and the PMPA for three port own land parcels with commercial/retail land use. The regional location of the Proposed Project is displayed in **Figure 1**.

The Mitigation Bank Site is 80 acres in size and currently comprised of disturbed upland salt flats and isolated hypersaline pools perched on fill material. The project objective of the mitigation bank restoration is to establish tidal influence and create coastal wetlands from San Diego Bay to encourage forage and nesting habitat for native bird species, maintain or improve existing levels of flood protection, provide long term Bank Site protection. In addition to the wetland restoration, the Proposed Project also includes a PMPA for three port owned land parcels with commercial/retail land use located directly adjacent to the mitigation bank. The three parcels will be referred to as Parcel A, B, and C. Currently, Parcels A and B are open space, while Parcel C includes an existing used car dealership.

The Mitigation Bank is not anticipated to generate trips after construction; therefore, an analysis was performed based on traffic generated by construction. A staging site will be needed for preparation of project material, equipment storage, and access for hauling trucks. Two potential staging sites and the truck haul routes associated with them have been identified by Unified Port District of San Diego at the following locations and depicted in **Figure 2**.

- Staging Area #1 – Palm Avenue Staging Area (Parcel B) utilizing Route 1
- Staging Area #2 – Nestor Creek Staging Area (Parcel C) utilizing Route 2

Existing conditions was analyzed with and without the PMPA. Additionally, existing conditions was analyzed with and without the traffic generated by construction for the Mitigation Bank.

ANALYSIS METHODOLGY

Level of Service Definition

Level of Service (LOS) is a quantitative measure describing operational conditions within a traffic stream, and the motorist's and/or passengers' perception of operations. A LOS definition generally describes these conditions in terms of such factors as delay, speed, travel time, freedom to maneuver, interruptions in traffic flow, queuing, comfort, and convenience. **Table 1** describes generalized definitions of the various LOS categories (A through F) as applied to roadway operations.

Table 1 LOS Definitions

LOS	Definition
A	This LOS represents a completely free-flow condition, where the operation of vehicles is virtually unaffected by the presence of other vehicles and only constrained by the geometric features of the highway and by driver preferences.
B	This LOS represents a relatively free-flow condition, although the presence of other vehicles becomes noticeable. Average travel speeds are the same as in LOS A, but drivers have slightly less freedom to maneuver.
C	At this LOS the influence of traffic density on operations becomes marked. The ability to maneuver within the traffic stream is clearly affected by other vehicles.
D	At this LOS, the ability to maneuver is notably restricted due to traffic congestion, and only minor disruptions can be absorbed without extensive queues forming and the service deteriorating.
E	This LOS represents operations at or near capacity. LOS E is an unstable level, with vehicles operating with minimum spacing for maintaining uniform flow. At LOS E, disruptions cannot be dissipated readily thus causing deterioration down to LOS F.
F	At this LOS, forced or breakdown of traffic flow occurs, although operations appear to be at capacity, queues form behind these breakdowns. Operations within queues are highly unstable, with vehicles experiencing brief periods of movement followed by stoppages.

Roadway Segment LOS Standards and Thresholds

Roadway segment LOS standards and thresholds provide the basis for analysis of arterial roadway segment performance. The analysis of roadway segment LOS is based on the functional classification of the roadway, the maximum capacity, roadway geometrics, and existing or forecast Average Daily Traffic (ADT) volumes. **Table 2** presents the roadway segment capacity and LOS standards utilized to analyze roadways evaluated in this report.

Table 2 City of San Diego Roadway Classifications and LOS Standards

Roadway Classification	LOS A	LOS B	LOS C	LOS D	LOS E
Expressway	30,000	42,000	60,000	70,000	80,000
Primer Arterial	25,000	35,000	50,000	55,000	60,000
Major Arterial (6-lane, divided)	< 20,000	< 28,000	< 40,000	**< 45,000**	< 50,000
Major Arterial (4-lane, divided)	< 15,000	< 21,000	< 30,000	**< 35,000**	< 40,000
Secondary Arterial / Collector (4-lane w/ center lane)	< 10,000	< 14,000	< 20,000	**< 25,000**	< 30,000
Collector (4-lane w/o center lane)	< 5,000	< 10,000	< 13,000	**< 15,000**	< 20,000
Collector (2-lane w/ continuous left-turn lane)	< 5,000	< 10,000	< 13,000	**< 15,000**	< 20,000
Collector (2-lane no fronting property)	< 4,000	< 5,500	< 7,500	**< 9,000**	< 10,000
Collector (2-lane commercial-industrial fronting)	<2,500	< 3,500	< 5,000	**< 6,500**	< 8,000
Collector (2-lane multi-family)	<2,500	< 3,500	< 5000	**< 6,500**	< 8,000
Sub-Collector (2-lane single family)	-	-	2,200	-	-

Source: City of San Diego, Traffic Impact Study Manual, July 1998

Note:
Bold numbers indicate the ADT thresholds for acceptable LOS.

These standards are generally used as long-range planning guidelines to determine the functional classification of roadways. The actual capacity of a roadway facility varies according to its physical attributes. Typically, the performance and LOS of a roadway segment is heavily influenced by the ability of its intersections to accommodate peak hour traffic volumes. For the purposes of this traffic analysis, LOS D is considered acceptable for the analyzed roadway segments.

Peak Hour Intersection LOS Standards and Thresholds

This section presents the methodologies used to perform peak hour intersection capacity analysis for signalized intersections. The following assumptions were utilized in conducting all intersection LOS analyses:

- *Pedestrian Calls per Hour*: 10 calls per hour for each pedestrian movement was assumed.
- *Signal Timing*: Based on existing signal timing plans.
- *Peak Hour Factor*: Based on existing peak hour count data for existing conditions.

Signalized Intersection Analysis

The analysis of signalized intersections utilized the operational analysis procedures as outlined in the *2010 Highway Capacity Manual* (HCM). This method defines LOS in terms of delay, or more specifically, average stopped delay per vehicle. Delay is a measure of driver and/or passenger discomfort, frustration, fuel consumption and lost travel time. This technique uses 1,900 vehicles per hour per lane (VPHPL) as the maximum saturation volume of an intersection. This saturation volume is adjusted to account for lane width, on-street parking, pedestrians, traffic composition (i.e., percentage trucks) and shared lane movements (i.e. through and right-turn movements originating from the same lane). The LOS criteria used for this technique are described in **Table 3**. The computerized analysis of intersection operations was performed utilizing the *Synchro 10* traffic analysis software.

Table 3 Signalized Intersection LOS Criteria

Average Stopped Delay Per Vehicle (seconds)	Level of Service (LOS) Characteristics
<10.0	*LOS A* describes operations with very low delay. This occurs when progression is extremely favorable, and most vehicles do not stop at all. Short cycle lengths may also contribute to low delay.
10.1 – 20.0	*LOS B* describes operations with generally good progression and/or short cycle lengths. More vehicles stop than for LOS A, causing higher levels of average delay.
20.1 – 35.0	*LOS C* describes operations with higher delays, which may result from fair progression and/or longer cycle lengths. Individual cycle failures may begin to appear at this level. The number of vehicles stopping is significant at this level, although many still pass through the intersection without stopping.
35.1 – 55.0	*LOS D* describes operations with high delay, resulting from some combination of unfavorable progression, long cycle lengths, or high volumes. The influence of congestion becomes more noticeable, and individual cycle failures are noticeable.
55.1 – 80.0	*LOS E* is considered the limit of acceptable delay. Individual cycle failures are frequent occurrences.
>80.0	*LOS F* describes a condition of excessively high delay, considered unacceptable to most drivers. This condition often occurs when arrival flow rates exceed the LOS D capacity of the intersection. Poor progression and long cycle lengths may also be major contributing causes to such delay.

Source: Highway Capacity Manual 2010

Freeway/State Highway Level of Service Standards and Thresholds

Freeway LOS analysis is based upon procedures developed by Caltrans District 11. The procedure for calculating freeway LOS involves estimating a peak hour volume to capacity (V/C) ratio. Peak hour volumes are estimated from the application of design hour ("K"), directional ("D") and truck ("T") factors to Average Daily Traffic (ADT) volumes. The base capacities were assumed to be 2,350 passenger-cars per hour per main lane (pc/h/ln) and 1,410 pc/h/ln for auxiliary lanes. A 0.95 peak-hour factor (PHF) is utilized for this analysis.

The resulting V/C ratio is then compared to acceptable ranges of V/C values corresponding to the various levels of service for each facility classification, as shown in **Table 4**. The corresponding level of service represents an approximation of existing or anticipated future freeway operating conditions in the peak direction of travel during the peak hour. LOS D or better is used in this study as the threshold for acceptable freeway operations based upon Caltrans and the SANDAG Regional Growth Management Strategy (RGMS) requirements.

Table 4 Caltrans District 11 Freeway Segment Level of Service Definitions

LOS	V/C	Congestion/Delay	Traffic Description
Used for freeways, expressways and conventional highways			
"A"	<0.41	None	Free flow.
"B"	0.42-0.62	None	Free to stable flow, light to moderate volumes.
"C"	0.63-0.79	None to minimal	Stable flow, moderate volumes, freedom to maneuver noticeably restricted.
"D"	0.80-0.92	Minimal to substantial	Approaches unstable flow, heavy volumes, very limited freedom to maneuver.
"E"	0.93-1.00	Significant	Extremely unstable flow, maneuverability and psychological comfort extremely poor.
Used for conventional highways			
"F"	>1.00	Considerable	Forced or breakdown flow. Delay measured in average travel speed (MPH). Signalized segments experience delays >60.0 seconds/vehicle.
Used for freeways and expressways			
“F0”	1.01–1.25	Considerable (0-1 hour delay)	Forced flow, heavy congestion, long queues form behind breakdown points, stop and go.
“F1”	1.26-1.35	Severe (1-2 hour delay)	Very heavy congestion, very long queues.
“F2”	1.36-1.45	Very severe (2-3 hour delay)	Extremely heavy congestion, longer queues, more numerous breakdown points, longer stop periods.
“F3”	>1.46	Extremely severe (3+ hours of delay)	Gridlock.

PMPA TRIP GENERATION

Parcel A, Parcel B, and Parcel C are 2.7 acres, 1.0 acres, and 8.2 acres, respectively, for a combined total of 11.9 acres. Parcel A is located on the west side of the project site along 13th Street. Parcel B is located on the south side of the site along Palm Avenue, and Parcel C is located on east side of the site along Boundary Avenue. Trip generation rates for the PMPA was developed utilizing *City of San Diego Trip Generation Manual* (May 2003). **Table 5** displays daily, as well as AM and PM peak hour PMPA trip generation.

Table 5 - PMPA Trip Generation

					AM Peak Hour					PM Peak Hour				
Project	Land Use	Units	Trip Rate	ADT	%	Trips	Split	In	Out	%	Trips	Split	In	Out
Parcel A	Specialty Retail/Strip Commercial	2.7 Acres	400/Acre	1,080	3%	33	(6:4)	20	13	9%	98	(5:5)	49	49
Parcel B		1.0 Acres		400	3%	12	(6:4)	7	5	9%	36	(5:5)	18	18
Parcel C		8.2 Acres		3,280	3%	99	(6:4)	59	40	9%	296	(5:5)	148	148
Total		**11.9 Acres**		**4,760**		**144**		**86**	**58**		**430**		**215**	**215**

Source: City of San Diego Trip Generation Manual, Chen Ryan Associates; November 2018

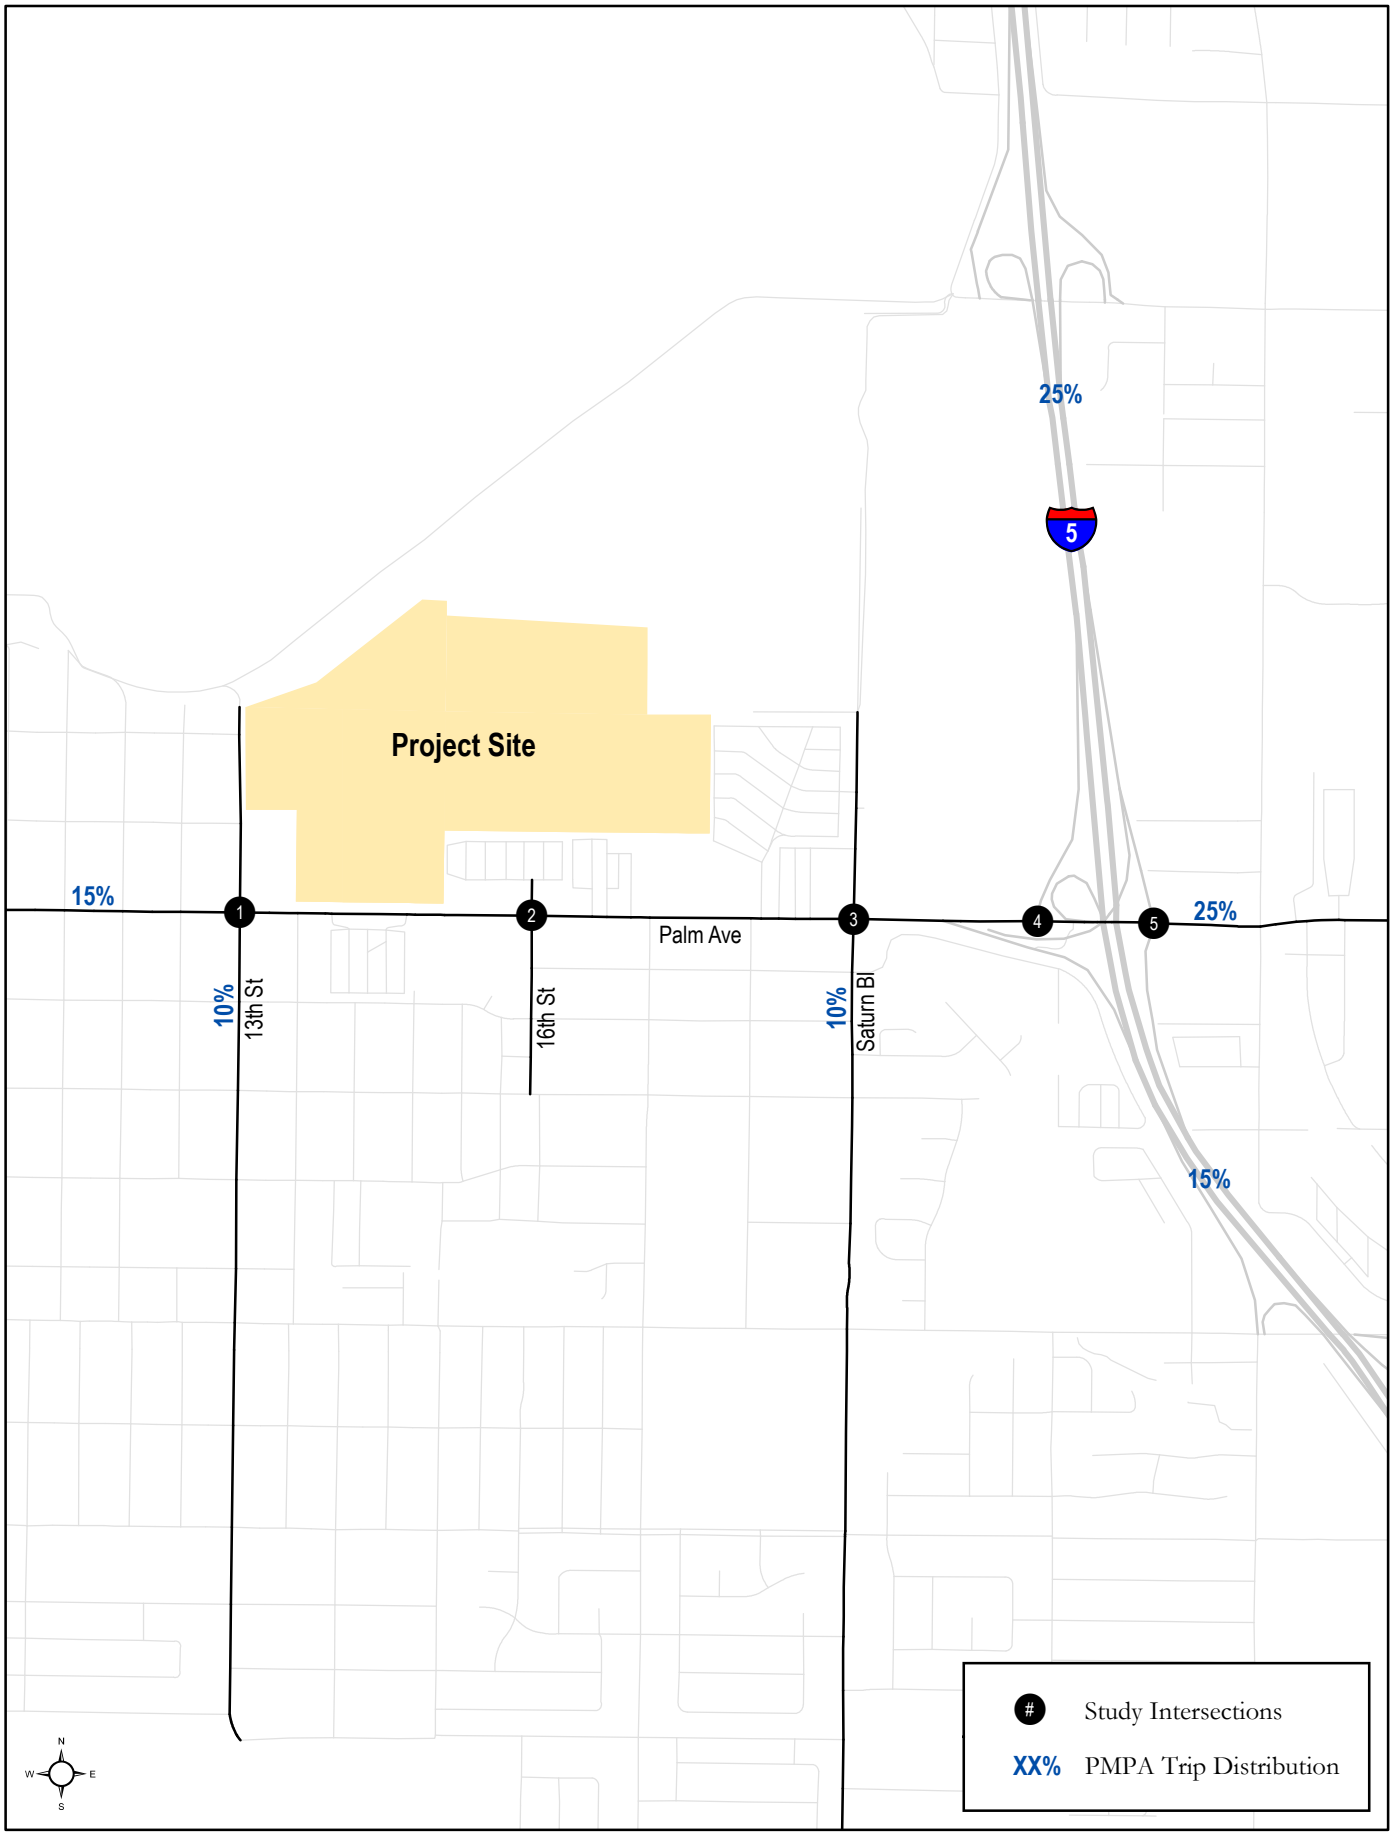

As shown in Table 5, the PMPA would generate a total of 4,760 daily trips, including 144 (86-in / 58-out) trips during the AM peak hour and 430 trips (215-in / 215-out) during the PM peak hour.

PMPA TRIP DISTRIBUTION

The PMPA trip distribution was developed based on the geographical location of the project, the characteristic of the proposed land use, nearest freeway facilities, location of residential neighborhoods, and location of other major shopping centers. The assumed project trip distribution is displayed in **Figure 3**.

PMPA TRIP ASSIGNMENT

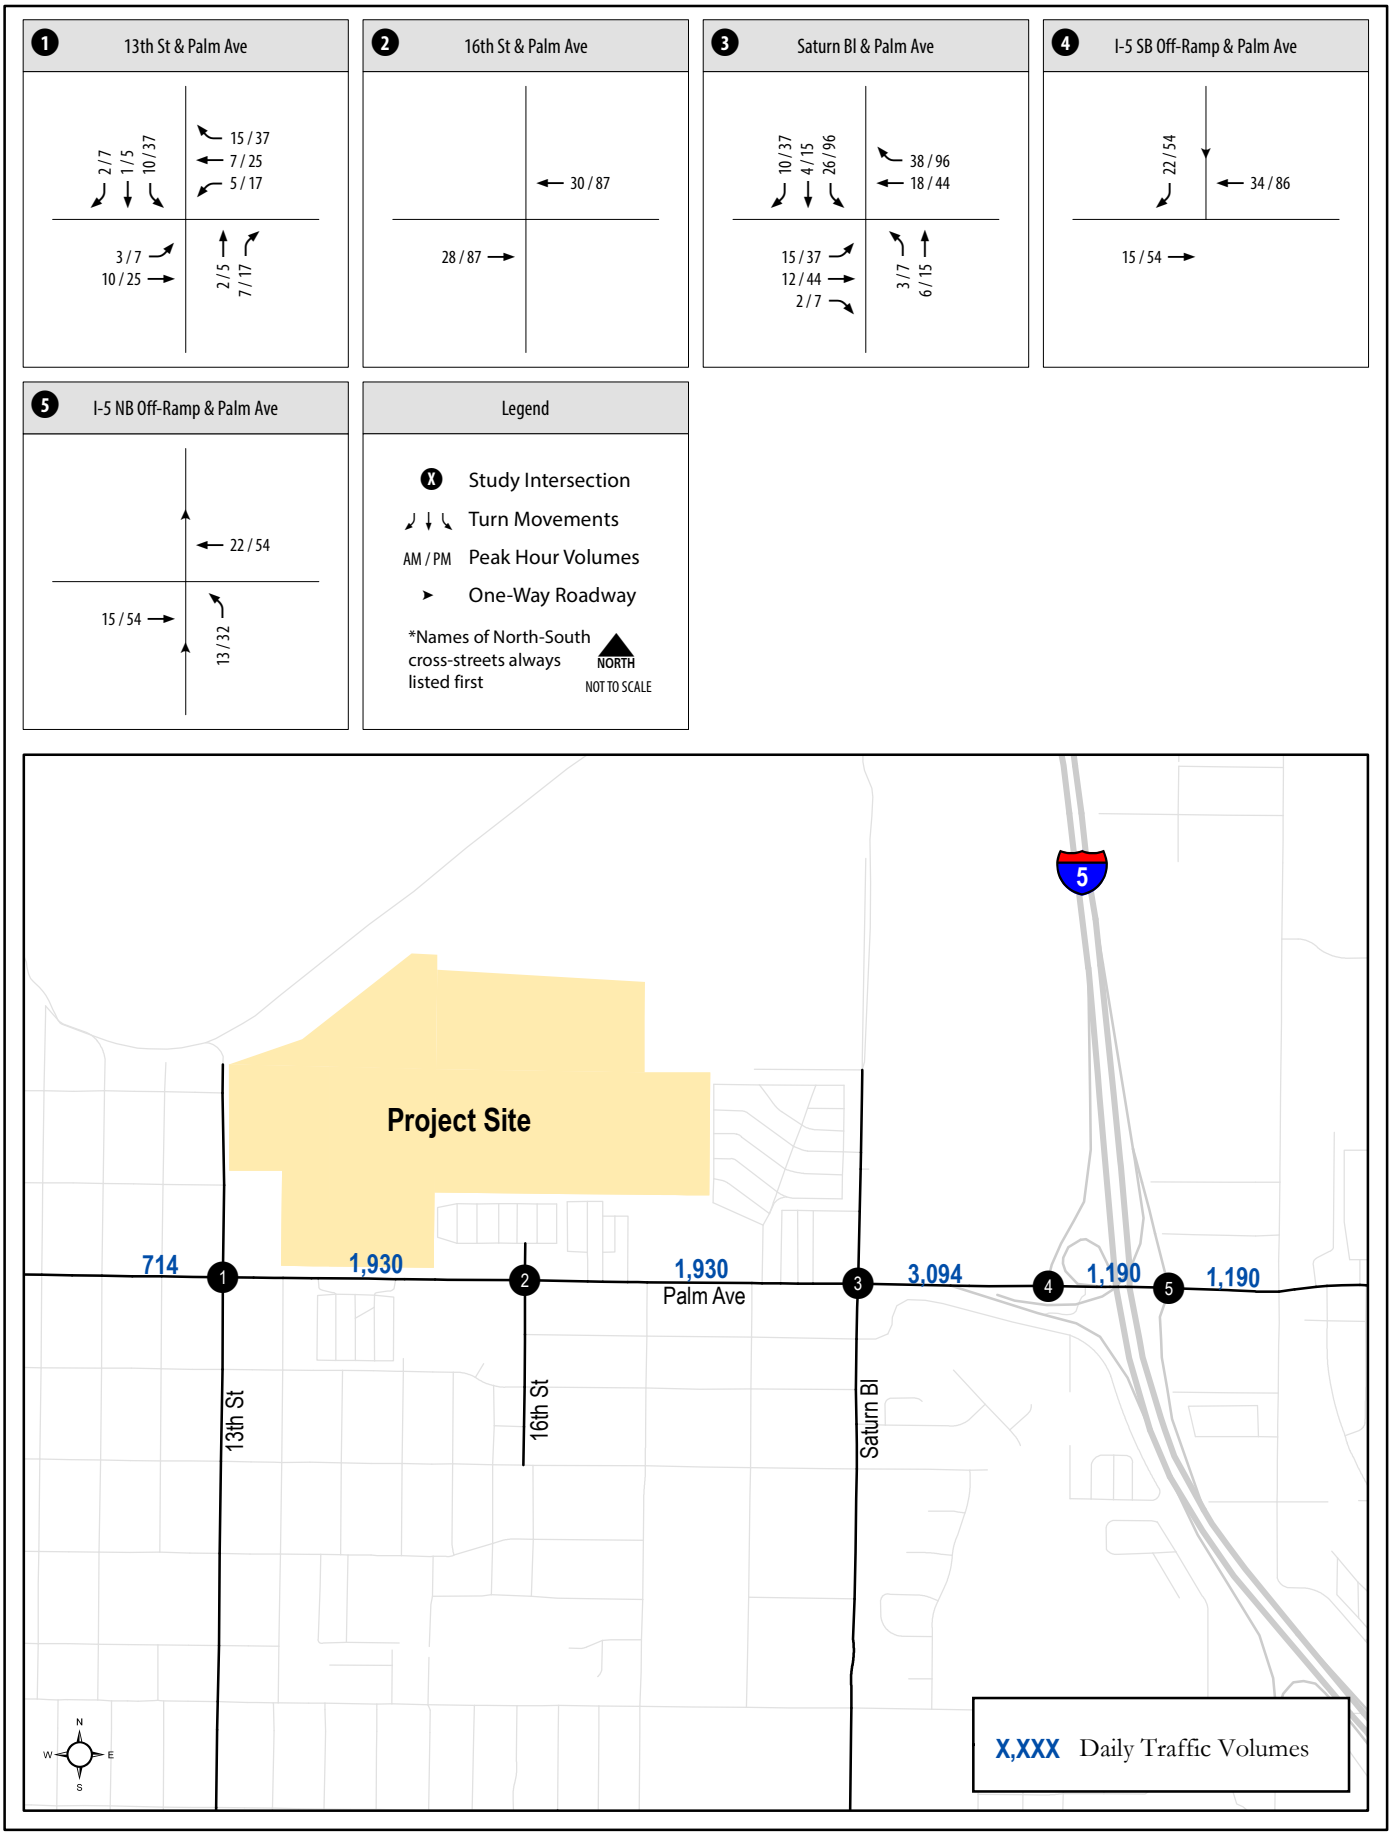

Based upon the assumed PMPA trip distribution, daily and AM/PM peak hour project trips were assigned to the adjacent roadway network, as displayed in **Figure 4**.

PROJECT STUDY AREA

Study Roadway Segments

Based on the project trip assignment and input from Port District staff, the following six (6) key study area roadway segments were analyzed:

Palm Avenue between:

- Florida Street & 13th Street
- 13th Street & 16th Street
- 16th Street & Saturn Boulevard
- Saturn Boulevard & I-5 SB Ramps
- I-5 SB Ramps & I-5 NB Ramps
- I-5 NB Ramps & Hollister Street

Freeway Segments

Based on the project trip assignment, the two following freeway segments were analyzed:

Interstate 5 (I-5) between:

- Main Street and Palm Avenue
- Palm Avenue and Coronado Avenue

Study Intersections

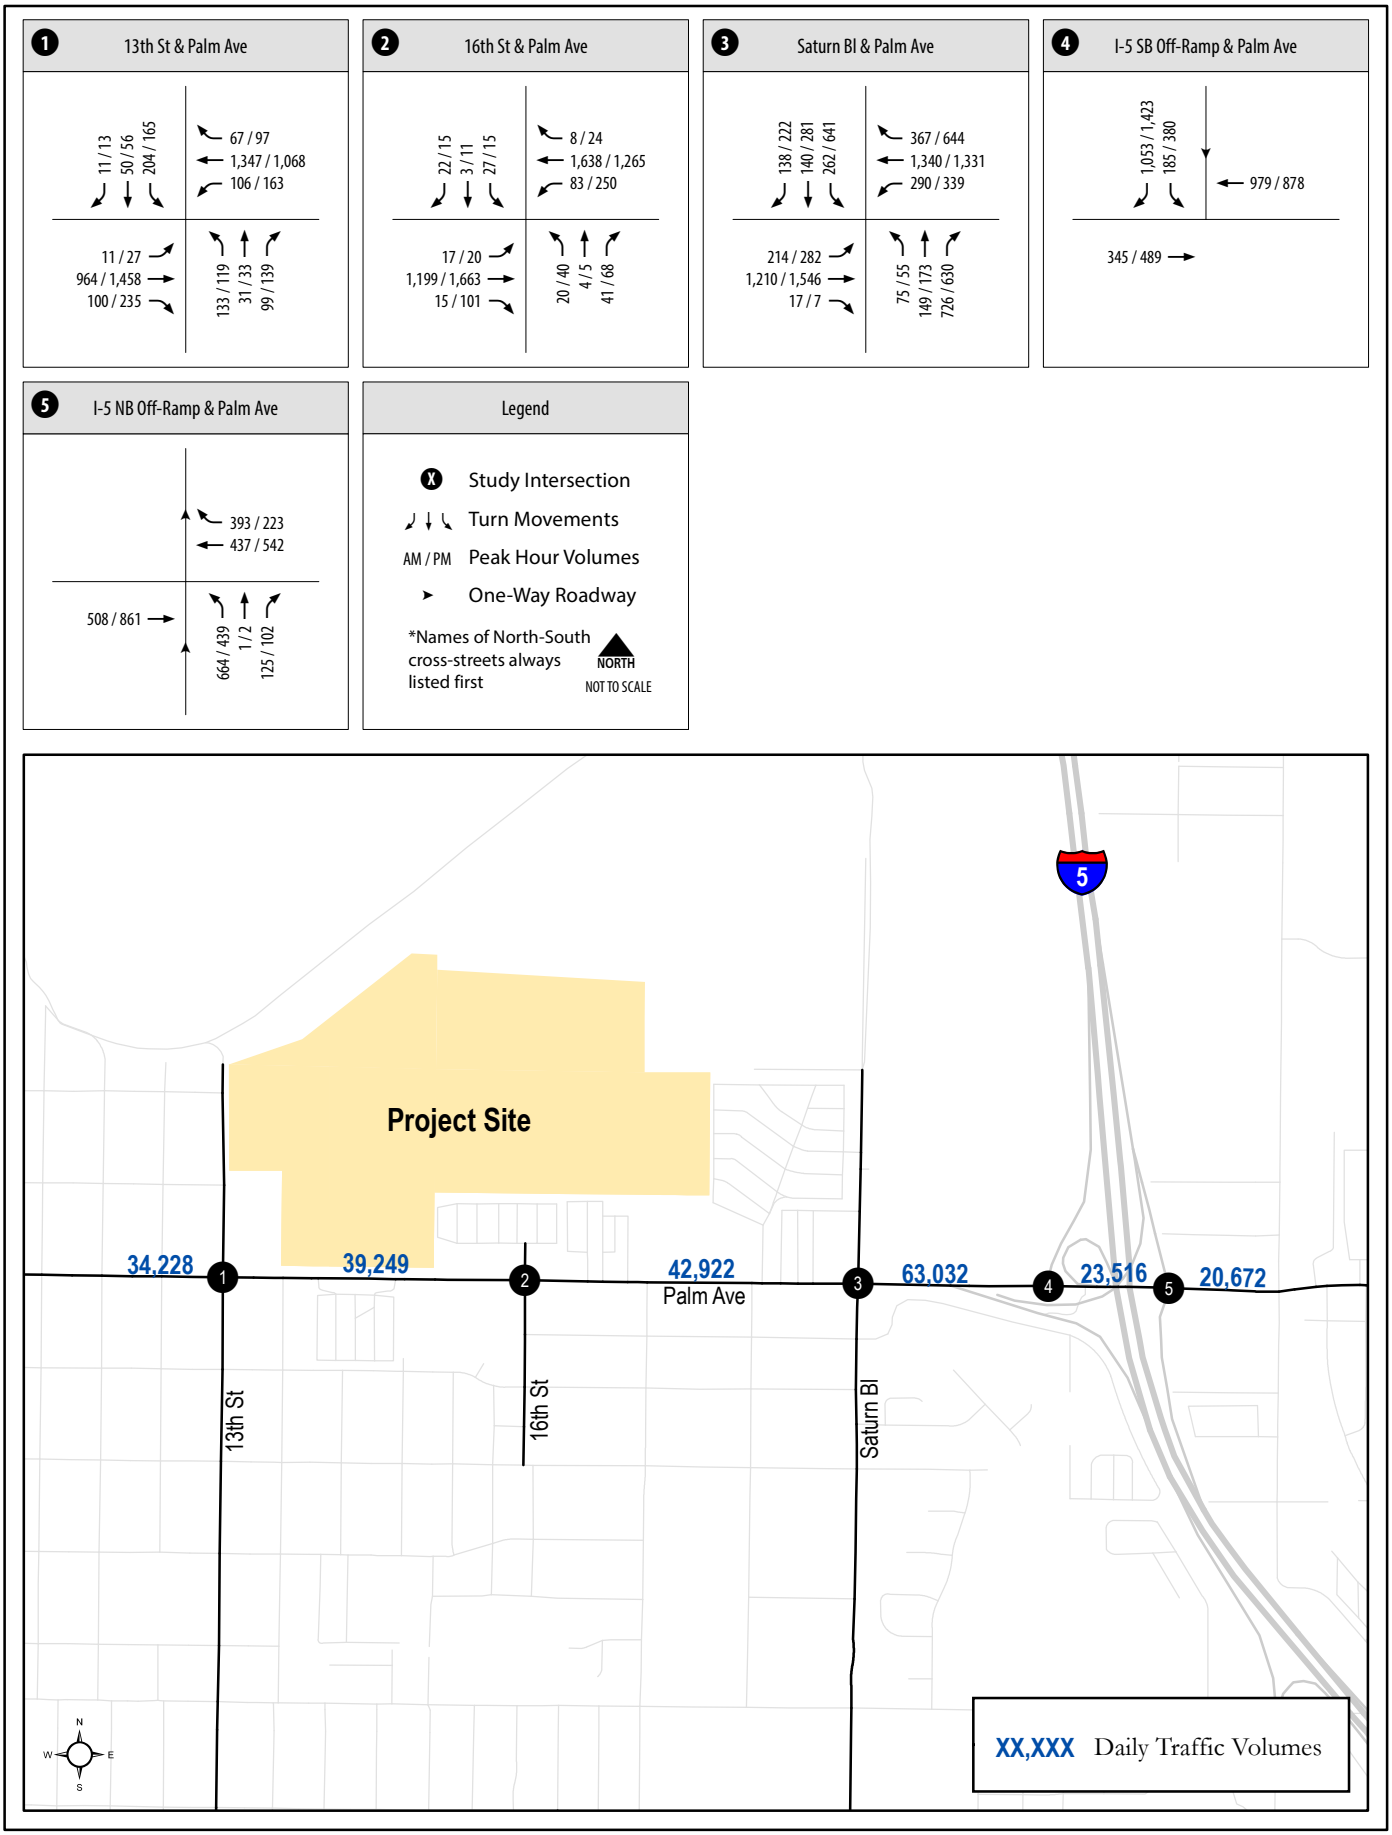

Based on the project trip assignment and input from Port District staff, the following five (5) key study area intersections were analyzed:

1. Palm Avenue / 13th Street
2. Palm Avenue / 16th Street
3. Palm Avenue / Saturn Boulevard
4. Palm Avenue / I-5 SB Ramps
5. Palm Avenue / I-5 NB Ramps

PMPA TRAFFIC VOLUMES

The existing ADT volumes for study area roadway segments and the AM/PM peak hour turning movement volumes for the key study area intersections are displayed in **Figure 5**. The roadway segment and study area intersection traffic counts were conducted in January and February of 2015; however, 2016 and 2017 daily roadway counts on Palm Avenue were reviewed and showed nominal growth (i.e. less than two percent) throughout the corridor. Therefore, the 2015 counts were deemed sufficient to use in this analysis.

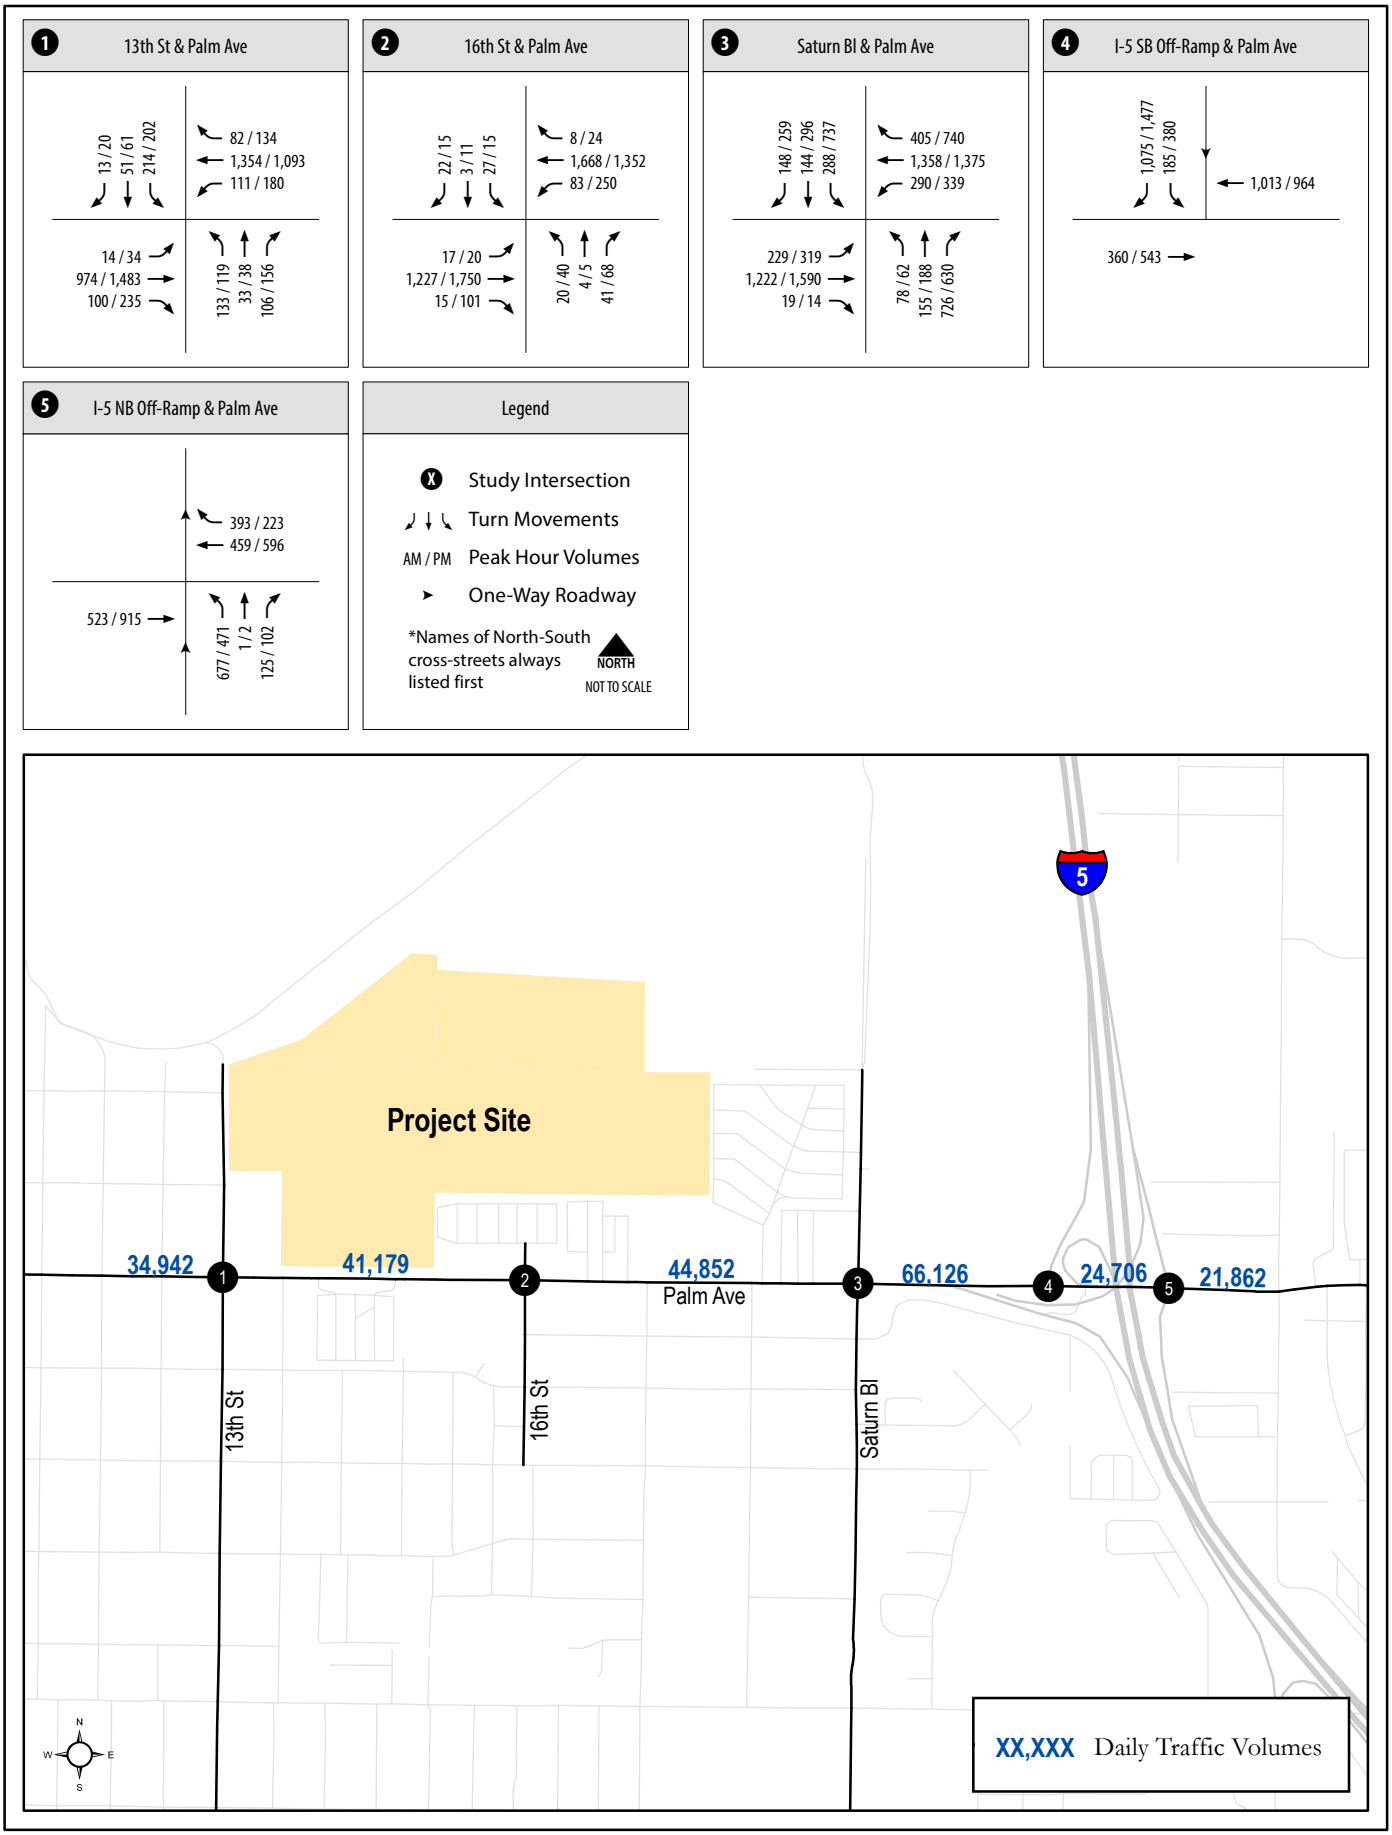

Existing plus PMPA traffic volumes were derived by combining the existing traffic volumes (displayed in Figure 5) and the PMPA trip assignment volumes (displayed in Figure 4). Daily and peak hour volumes for this scenario and are displayed in **Figure 6**.

CONSTRUCTION TRIP GENERATION

At the peak of construction, it is anticipated that 80 hauling trucks will be required to access the project site on a daily basis and 36 personnel on site during landscaping activities. A construction crew of 14 people would be on site for the majority of construction, with up to 24 personnel on site for approximately six (6) months during mass grading and four (4) months during fine grading. As a worst-case scenario, it was assumed that all workers would drive individual vehicles to the project site and would arrive and depart during the AM and PM peak hours, respectively. It was also assumed that the hauling trucks would arrive and depart evenly throughout the 8-hour workday. **Table 9** displays the assumed vehicle trip generation during the peak of construction.

Table 9 Construction Trip Generation

Use	Units	Vehicle Conversion Rate	Rate	Daily Vehicle Trips	AM Peak Hour		PM Peak Hour	
					In	Out	In	Out
On Site Personnel Worker Traffic	36	1	2 / Worker	72	36	0	0	36
Hauling Truck	80	3	2 / Truck	480	24	24	24	24
Total				**552**	**60**	**24**	**24**	**60**

Source: Chen Ryan Associates; January 2020

As shown, construction is anticipated to generate approximately 552 daily trips including 84 trips (60 in / 24 out) during AM Peak Hour and 84 trips (24 in / 60 out) during the PM peak hour.

CONSTRUCTION TRIP DISTRIBUTION

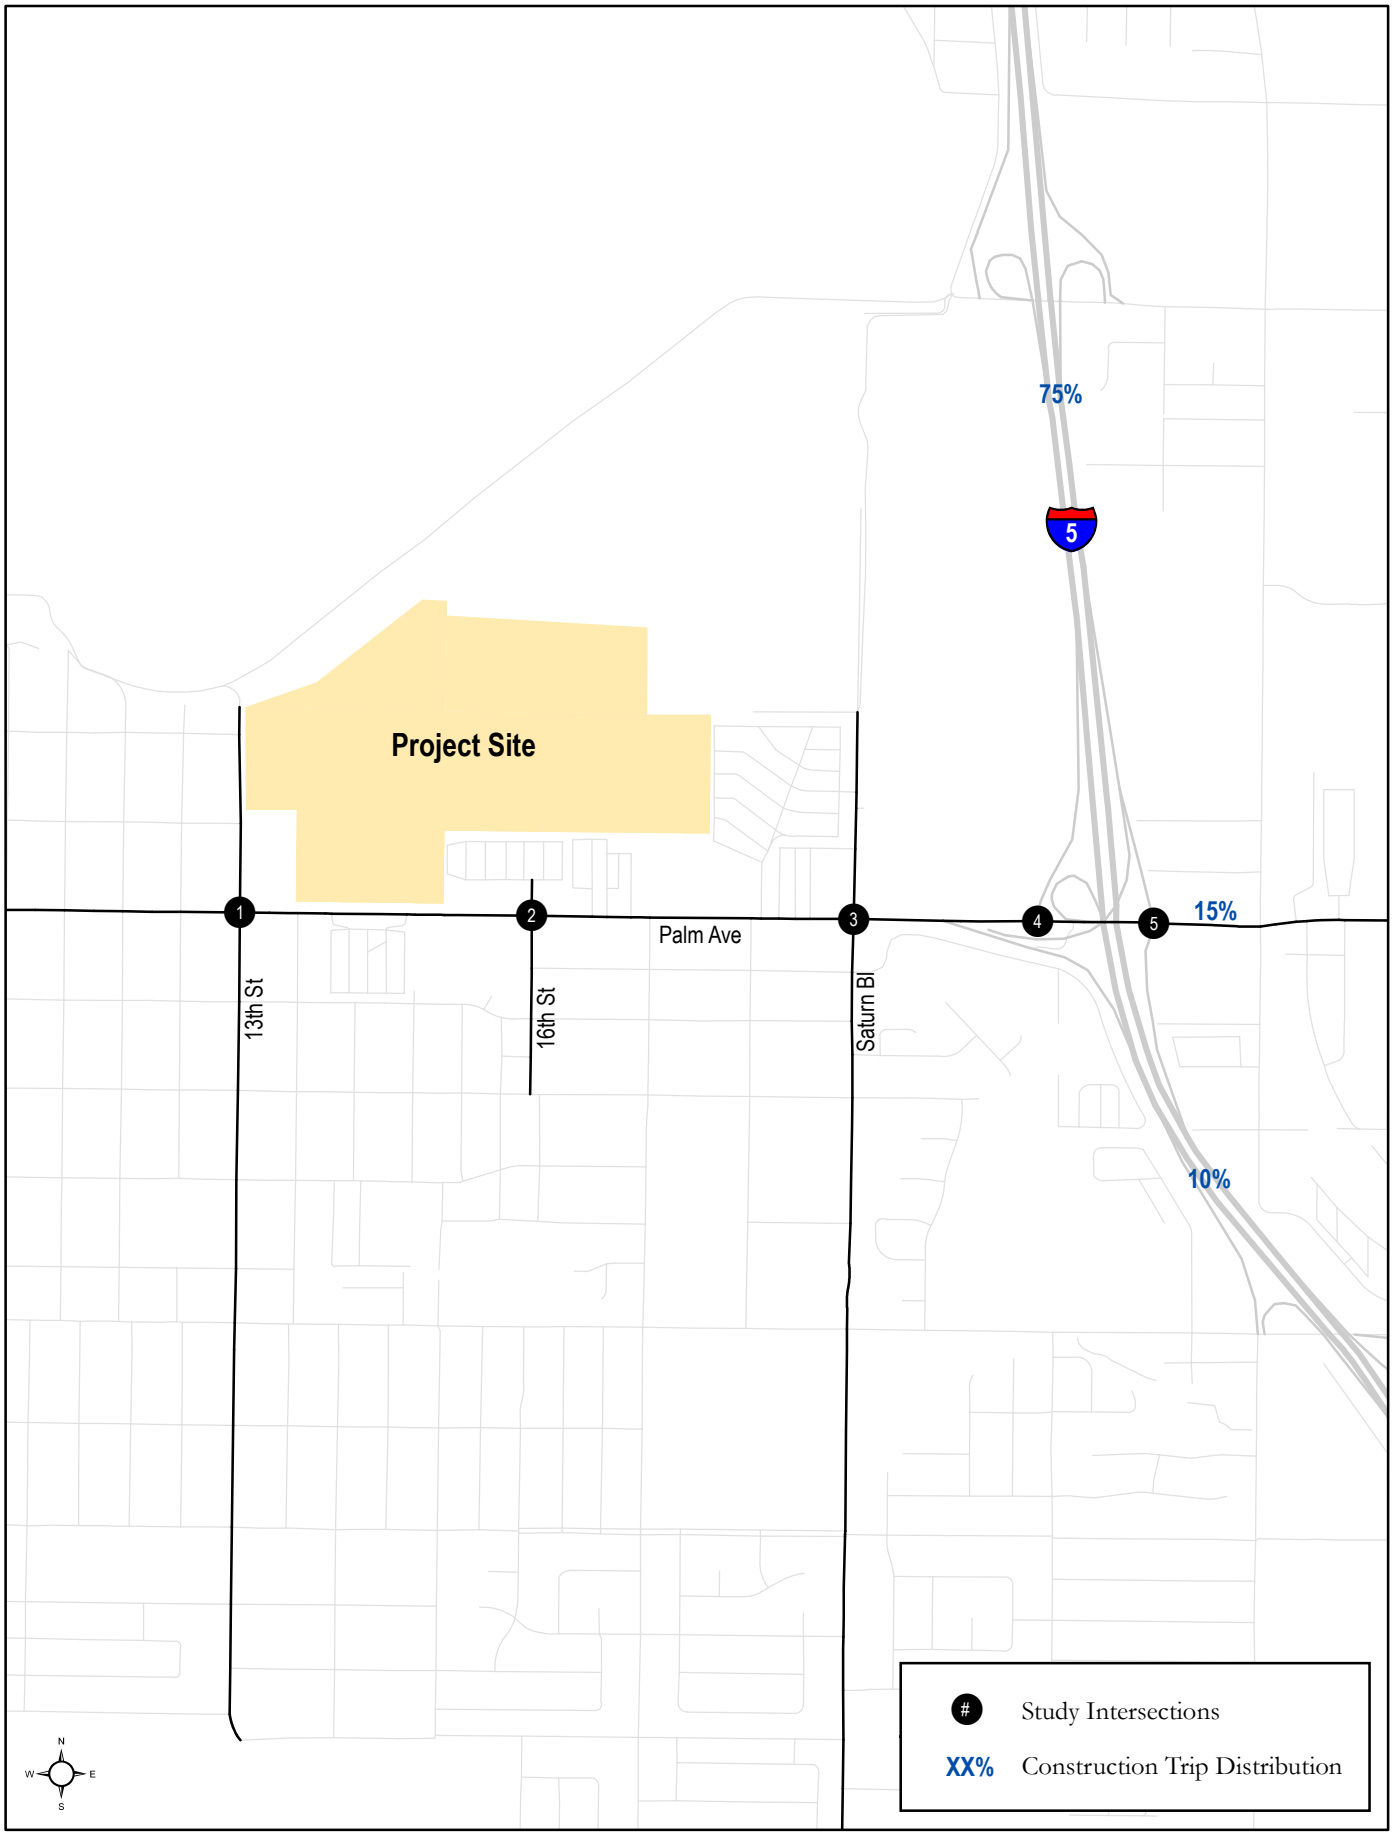

The construction trip distributions were developed based on the potential haul routes identified by Unified Port District of San Diego. The assumed project trip distribution is displayed in **Figure 7.**

CONSTRUCTION TRIP ASSIGNMENT

Based upon the assumed construction trip distribution, daily and AM/PM peak hour project trips were assigned to the adjacent roadway network per route alternative, as displayed in **Figure 8** for the two proposed routes.

CONSTRUCTION TRAFFIC VOLUMES

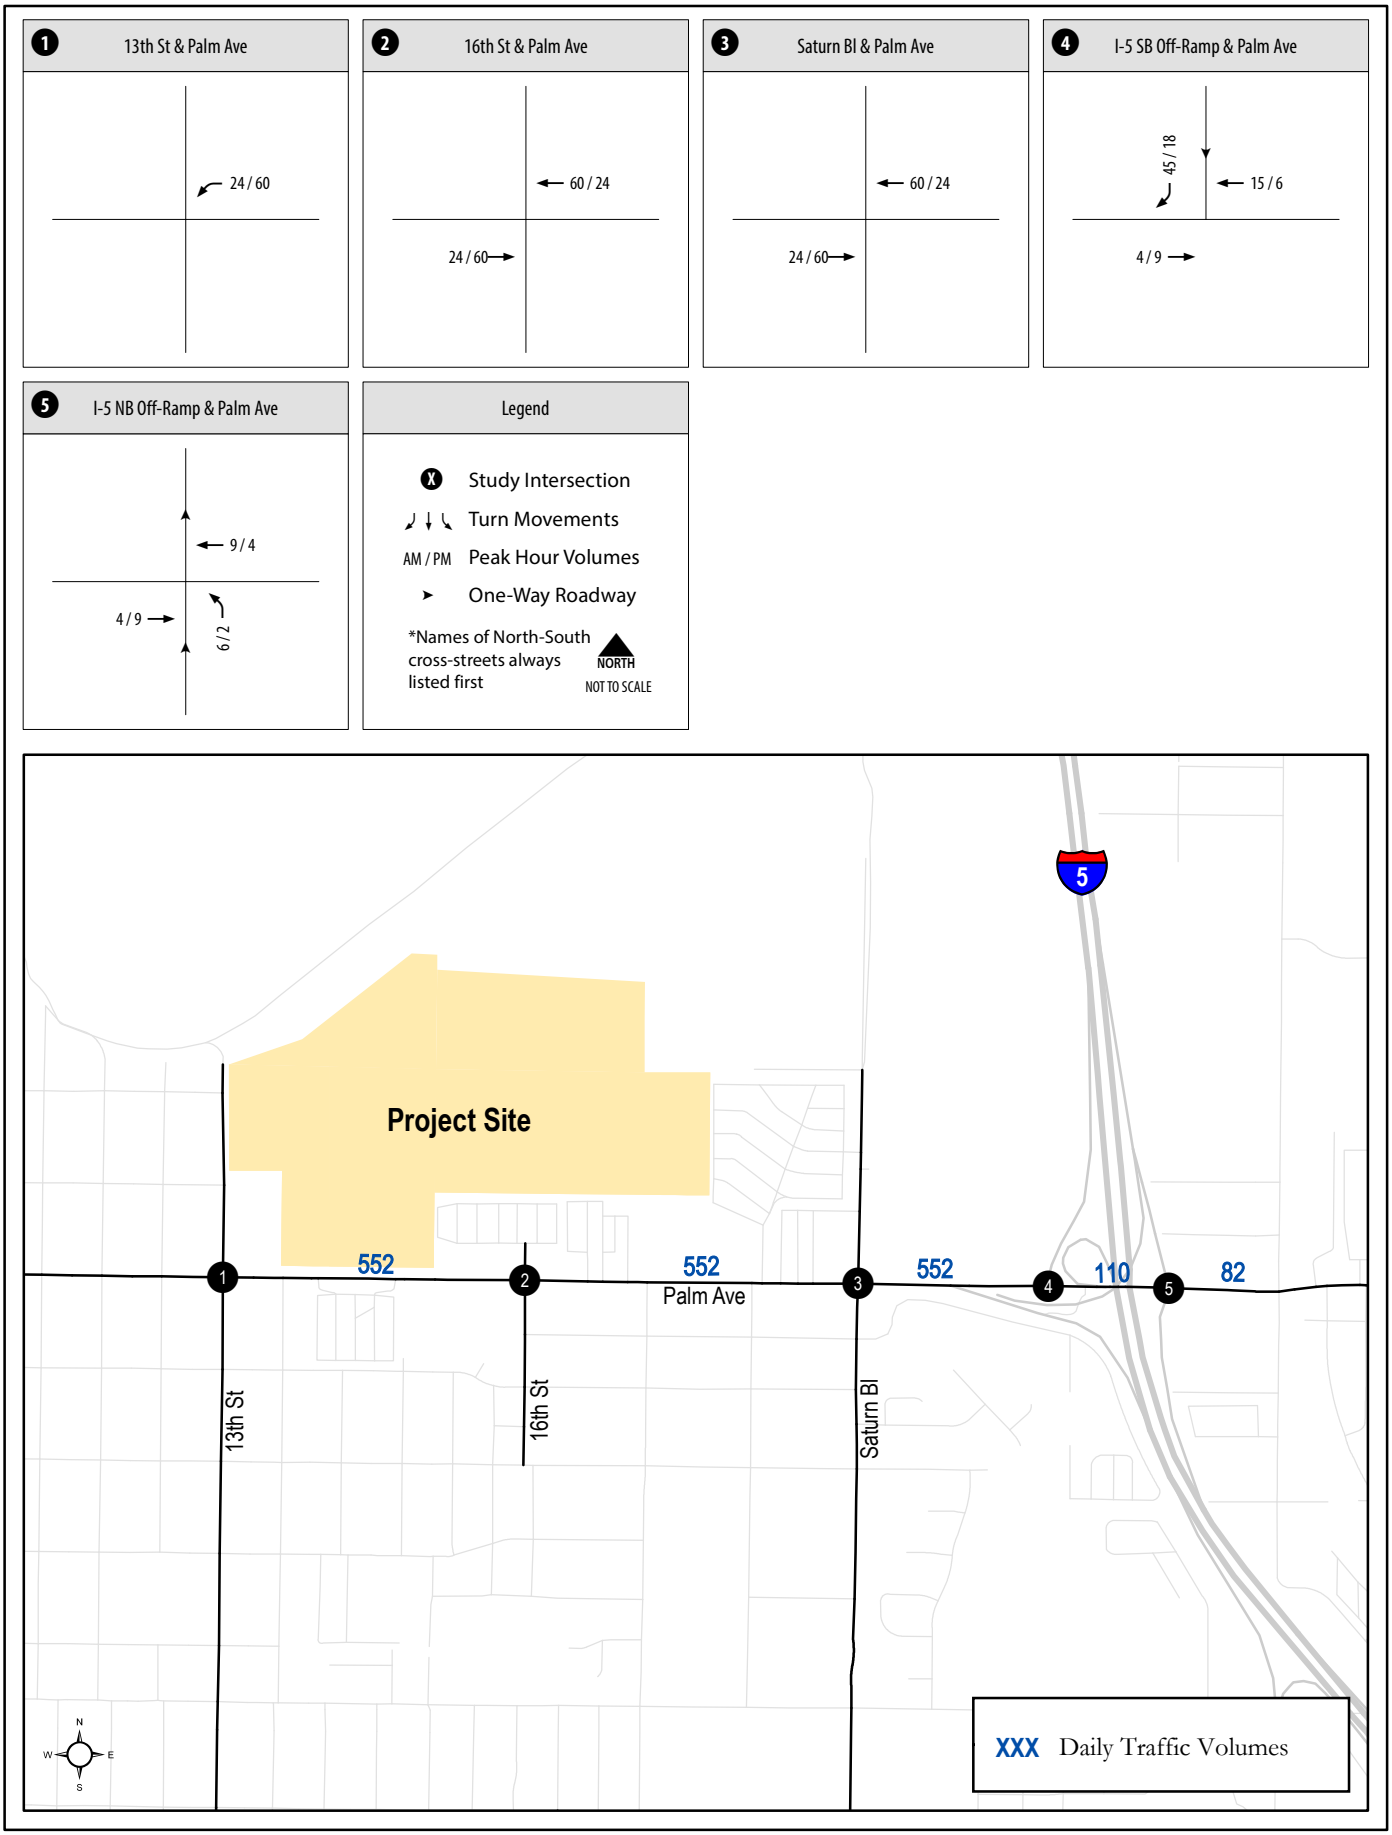

Existing plus construction traffic volumes were derived by combining the existing traffic volumes (displayed in Figure 5) and the construction trip assignment volumes (displayed in Figure 8). Daily and peak hour volumes for this scenario and are provided in **Attachment A**.

Notes:
Bold letter indicates LOS E or F.

As shown, all key study area intersections are projected to operate at LOS D or better with the exception of:

- Palm Avenue / Saturn Boulevard (LOS F – PM) (Routes 1 and 2)

CONSRUCTION FREEWAY SEGMENT ANALYSIS

Table 13 displays the freeway segment LOS analysis results for key freeway segments in the vicinity of the Otay Mesa-Nestor Community under Existing with construction traffic conditions the two route alternatives.

As shown, all key freeway segments are projected to operate at LOS D or better under Existing with construction traffic conditions.

CHEN RYAN

Table 13 Freeway Segment LOS Results - Existing Plus Construction Conditions

Freeway	Segment	Heavy Vehicle	Dir	Lanes	Capacity	Peak Hr %	Split	Existing				Existing Plus Project				Δ
								ADT	Peak Hr Vol	V/C	LOS	ADT	Peak Hr Vol	V/C	LOS	
I-5	Main St to Palm Ave	3.7%	NB	4M + 1A	10,810	8.5%	60.3%	160,000	8,600	0.796	D	160,414	8,700	0.805	D	0.01
