RB Case Number:	9UT3892
Local Agency:	Not reported
File Location:	Regional Board
Local Case Number:	Not reported
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	On July 2, 1998 product piping was upgraded at the site. Soil samples collected during upgrades indicated elevated level of petroleum hydrocarbons. As a result, Unauthorized Release H21118-001 was opened. Please see submitted ESI data for further details.

Property History:	Between 1 December 1916 and 21 July 1975 the Navy acquired a total of 544.8 acres primarily from the City of San Diego and private parties in fee, condemnation, exchange, transfer, and donation. The Naval Training Station officially opened as a Naval recruit training station on 1 June 1923. Currently, the Naval Training Station (renamed Naval Training Center (NTC) in 1944) continues to provide basic training (including firearms and combat training) and specialized schooling (e.g., mess specialists and interior communications) to sailors recruited in the western United States. The Navy constructed numerous buildings and service facilities on the site, including: barracks, Bachelor Officer Quarters/Bachelor Enlisted Quarters (BOQs/BEQs); recruit training classrooms; 11th Naval District administrative and logistical offices; Morale Welfare Recreation (MWR) service facilities; mess hall; post exchange; and gasoline station. On 2 February 1971, the Navy transferred by quitclaim deed 12.33 acres to the City of San Diego. The disposed Navy property is on the waterfront of San Diego Bay and is within an area of 130.53 acres gained by filling in tidelands and re-establishing the pierhead line. The reclaimed property was provided to the Navy by deed (dated 3 August 1933) from the City of San Diego. The 12.33-acre NTC disposal was part of a 20.87-acre transfer to the City of San Diego, of which 8.54 acres was disposed of by the adjacent Marine Corps Recruit Depot (Marine Corps Base DERP-FUDS Site No. J09CA 712300). The 12.33-acre site is located south of Harbor Drive, southeast of the current NTC property boundary line, and north of Harbor Island. No buildings were known to have been constructed on the disposed property by the Navy during DOD ownership and no training activities are known to have occurred there. The disposed property has been developed into a portion of the City of San Diego’s Spanish Landing Park and accompanying parking lot. Not reported

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/27/2022

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/25/2021

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control’s (DTSC’s) Site Mitigation and Brownfields Reuse Program’s (SMBRP’s) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region’s active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Target Property Map:	12016554 POINT LOMA, CA
Version Date:	2018

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

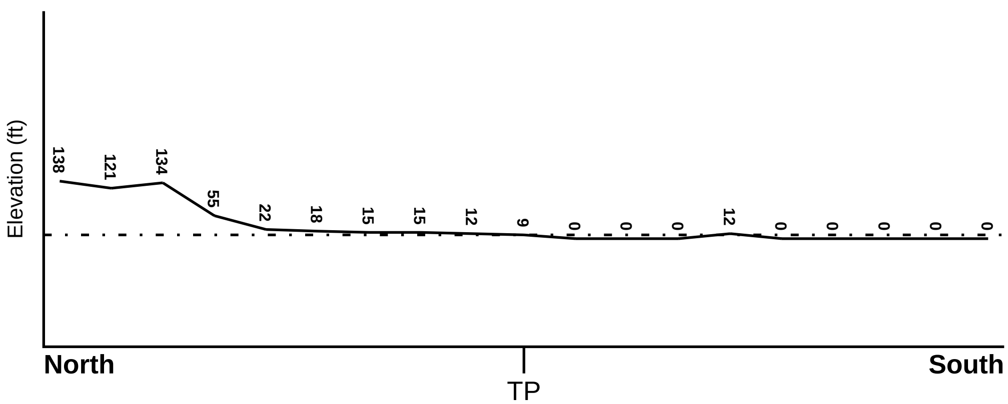
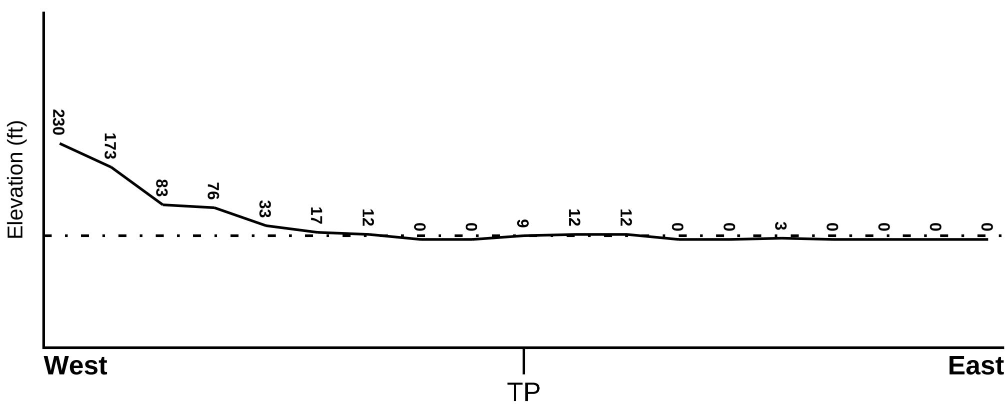
SURROUNDING TOPOGRAPHY: ELEVATION PROFILES





Target Property Elevation: 9 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06073C1880G	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
Not Reported	

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
POINT LOMA	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
C57	1/4 - 1/2 Mile NW	Not Reported
1G	1/4 - 1/2 Mile NW	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Tertiary
Series:	Pliocene
Code:	Tp *(decoded above as Era, System & Series)*

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	variable	Not reported	Not reported	Max: Min:	Max: Min:

Soil Map ID: 2

Soil Component Name: Water

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 3

Soil Component Name: MARINA

Soil Surface Texture: loamy coarse sand

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		Soil Reaction (pH)
1	0 inches	9 inches	loamy coarse sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.4
2	9 inches	57 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.4
3	57 inches	59 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.4

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5’ Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5’ Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW[R] Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture’s (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations

TABLE OF CONTENTS

LIST OF DRAWING AND TABLES

EXECUTIVE SUMMARY

This report presents the findings of our soil and bay sediment characterization performed at Fisherman's Village, located at 4904 North Harbor Drive in San Diego, California (Drawing 1). This characterization included collecting three bay sediment samples from the piers, drilling seven soil borings, and analyzing soil samples from the subject site.

Three bay sediment samples, PIER-5, PIER-6, and PIER-7, were collected from three separate piers on July 10, 1992. Seven soil borings B-1 through B-7 were drilled and sampled on June 11, 1992 (Drawing 2). Soil samples collected from each boring and bay sediment samples collected from the piers were subsequently submitted for laboratory analysis. A summary of laboratory results is presented in Table 1 and on Drawing 3.

Soil samples were screened in the field using a photoionization detector (PID) to assist in designating samples for laboratory analysis at Analytical Technologies, Incorporated (ATI). Bay sediment samples were analyzed for priority pollutant metals, tributyltin (TBT), dibutyltin (DBT), and monobutyltin (MBT). Selected soil samples collected from each boring were analyzed for total petroleum hydrocarbons (TPH), in accordance with EPA Test Method 8015 Modified; total recoverable hydrocarbons (TRH); in accordance with EPA Test Method 418.1; benzene, toluene, ethylbenzene, and total xylenes (BTEX), in accordance with EPA Test Method 8020; chlorinated aromatic hydrocarbons, in accordance with EPA Test Method 8240; and organic lead, in accordance with the DHS Method.

TPH, TRH, and BTEX were detected in the soil samples collected from borings B-1 and B-3. These analytes were not detected in the soil samples collected from the remaining borings. TBT, DBT, and MBT were detected in each of the bay sediment samples collected from Pier 5, Pier 6, and Pier 7. Priority pollutant metals were not detected above the Total Threshold Limit Concentration (TTLC) in any of the bay sediment samples.

Based on the results of our subsurface characterization, it appears that TPH-impacted soil and groundwater exists in the northern portion of the subject site. The lateral extent of the TPH-impacted soil and groundwater has not been fully defined. The source of the TPH is assumed to be an unauthorized release from an UST on the adjacent property to the north.

Based on the findings of the seven initial borings, three additional borings are recommended.

1.0 INTRODUCTION

This report presents the results of the subsurface characterization conducted by Converse Environmental West (CEW) during June 1992. This report was prepared to evaluate potential contamination at the subject site and in the bay adjacent to the subject site.

Background Information

The site is located on the eastern portion of Commercial Basin, which is located in the northwestern portion of in San Diego Bay, San Diego, California (Drawing 1). The site is located at an approximate elevation of 10 feet above mean sea level (msl). The adjacent property to the northwest is occupied by a boat yard, and the adjacent property to the northeast is occupied by a U.S. Navy fleet sonar school. The remaining property is bordered by the San Diego Bay. The site is relatively level, with drainage apparently toward the San Diego Bay.

The site is currently utilized by Fisherman's Village, a commercial sport fishing complex including piers and a restaurant. The Fisherman's Village complex was constructed in 1986. The existing piers were constructed prior to 1953. A detailed history of the site is presented in CEW's "Preliminary Environmental Site Assessment Report" (Reference 3).

2.0 SCOPE OF WORK

The scope of work completed for this phase of exploration consisted of the following tasks to assess potential soil contamination on the subject site and in the bay sediments adjacent to the piers.

- ◇ Completed seven soil borings on the subject site
- ◇ Collected soil samples for laboratory analysis
- ◇ Collected three bay sediment samples for laboratory analysis
- ◇ Submitted samples for laboratory analysis
- ◇ Prepared this report

3.0 FIELD ACTIVITIES

3.1 Soil Borings and Soil Sampling

Seven soil borings, B-1 through B-7, were advanced on June 11, 1992, at the locations indicated on Drawing 2. Soil borings B-1 through B-7 were advanced to depths of approximately 5 to 6.5 feet below ground surface (bgs). The borings were advanced using a stainless-steel hand auger. Soil samples were collected at approximately two and one-half foot intervals. Samples were also collected at a depth assumed to be immediately above the groundwater table in each boring. Soil samples were placed in laboratory-supplied glass jars, sealed, labeled, and stored in a cooler with ice. Soil samples were subsequently transported to ATI, a state-certified laboratory, for analysis. The samples were evaluated in the field using a MicroTip photoionization detector (PID), and were logged according to the Unified Soil Classification System (Visual Manual Method). The boring logs are presented in Appendix A.

Sampling equipment was decontaminated between sampling intervals using an alconox solution and a distilled water rinse. Soil cuttings generated during drilling were stored on site in a labeled, DOT-approved, 55-gallon drum, which is currently awaiting proper disposal.

Subsequent to hand augering and soil sampling, the borings were backfilled with hydrated bentonite chips and capped with Rapid Set cement.

3.2 Bay Sediment Sampling

Bay sediment samples were collected from Piers 5, 6, and 7 at the locations indicated on Drawing 2. The bay sediment samples were collected utilizing a brass clam shell sampler. The clam shell sampler was lowered from the pier until it came to rest on the bay floor. A sediment sample was retained in the clam shell sampler as it was lifted from the bay floor. The bay sediment samples were placed in laboratory-supplied glass jars, labeled, stored in an ice-cooled, insulated container, and were transported to ATI. The bay sediment samples that were analyzed for TBT were transported to Quality Assurance Laboratories (QAL), a state-certified laboratory.

4.0 GEOLOGY

The subject site is situated in the vicinity of the eastern boundary of the San Diego Embayment within the Peninsular Range Province. The embayment is a stratigraphic sequence of Late Cretaceous, Tertiary, and Quaternary sedimentary deposits overlying crystalline basement rock. The basement complex consists of Jurassic, metavolcanic and metasedimentary rocks and Cretaceous, igneous rocks of the Southern California Batholith.

As encountered during our site characterization, the subject site is underlain by fill soils consisting of olive gray, light gray, and light brown, fine- to medium-grained sand. The fill soils appeared to be derived from former beach sand. Locally, the asphalt was underlain by up to two feet of imported, gravelly, base material.

5.0 GROUNDWATER

The site lies within the Point Loma Hydrologic Area of the Pueblo San Diego Hydrologic Unit (Reference 4). The San Diego Region of the California Regional Water Quality Control Board (RWQCB) has classified this area as not having beneficial groundwater uses for municipal, agricultural, and industrial purposes. The RWQCB generally sets groundwater clean-up levels in the area of the subject site in order to prevent further degradation of the San Diego Bay.

Surface run-off appears to flow to the southwest towards the San Diego Bay. Based on observations of soil conditions, the soil borings were terminated at what was assumed to be the base of the capillary fringe. Groundwater was therefore assumed to be at a depth of 5.5 to 7 feet bgs. Due to the lack of groundwater monitoring wells, site-specific groundwater flow direction is uncertain. Based on data obtained from previous groundwater characterizations in the area, the assumed groundwater flow direction is towards the San Diego Bay. Due to the subject sites' proximity to San Diego Bay, a tidal influence is anticipated to affect groundwater elevation, gradient, and flow direction.

6.0 LABORATORY TEST RESULTS

6.1 Soil Sample Analysis

On the basis of visual observations and sample depth, selected soil samples from borings B-1 through B-7 were analyzed for TPH using EPA Method 8015 Modified, for TRH using EPA Test Method 418.1, for BTEX using EPA Method 8020, for chlorinated hydrocarbons using the EPA Test Method 8240, and for organic lead using the DHS Method. A summary of sample results is presented in Table 1. Laboratory results indicated that TPH and TRH were not detected above the laboratory reported detection limit in the soil samples collected from borings B-2 and B-4 through B-7, inclusive. The soil sample collected at a depth of 6.5 feet bgs from boring B-1 contained 87,000 milligrams per kilogram (mg/kg) of TPH characterized as gasoline, and 650 mg/kg of TPH characterized as diesel. BTEX and organic lead were measured in concentrations of 220 mg/kg, 1,300 mg/kg, less than 13 mg/kg, 2,500 mg/kg, and 0.9 mg/kg, respectively. Other volatile organics were not detected above the laboratory detection limits in this soil sample. The soil sample collected at a depth of 6.5 feet bgs in boring B-3 contained 5.2 mg/kg, 0.3 mg/kg, 0.66 mg/kg, less than 0.05 mg/kg, and 0.80 mg/kg of TPH and BTEX, respectively.

Bay sediment samples collected from Piers 5, 6, and 7 contained TBT concentrations ranging from 12.0 to 15.0 μg/kg, DBT concentrations ranging from 32.0 to 50.0 μg/kg, and MBT concentrations ranging from 1.4 to 3.0 μg/kg. Priority pollutant metals were not detected above the TTLC in the bay sediment samples.

7.0 CONCLUSIONS

Based on a review of existing data and our additional subsurface characterization, the following conclusions can be made:

TPH-impacted soil was encountered in the northern portion of the subject site. The source of TPH contamination is potentially a result of an unauthorized release from USTs on the adjacent site to the west.

The potential for the groundwater at the subject site to be impacted by TPH contamination detected in the soil is considered high. The extent of soil and groundwater contamination in the northwestern portion of the subject site has not been fully defined.

Bay sediment samples collected from Piers 5, 6, and 7 did not contain priority pollutant metals above the TTLC.

Bay sediment samples collected from Piers 5, 6, and 7 contained TBT, DBT, and MBT concentrations of 17.0 μg/kg, 50.0 μg/kg, and 3.0 μg/kg, respectively.

8.0 RECOMMENDATIONS

CEW recommends that a minimum of three additional soil borings be drilled east of boring B-1 in order to define the lateral extent of TPH- impacted soil. If soil contamination is detected in any of these borings, then additional borings may be recommended until the lateral extent of TPH-impacted soil is defined. The locations of additional borings will be selected by "stepping out" approximately 10 to 15 feet from previously drilled borings that contained TPH-impacted soil.

CEW recommends that the 55-gallon drum containing soil cuttings from Boring B-1 be properly disposed of in accordance with local, state, and federal regulatory agency requirements.

8.0 LIMITATIONS

This report has been prepared for the exclusive use of Driscoll Incorporated as it pertains to the property located at 4904 North Harbor Drive in San Diego, California. Our services have been performed in accordance with applicable county ordinances and generally accepted practices in the geosciences. No other warranty, either express or implied, is made.

Converse Environmental West is not responsible or liable for any claims or damages associated with interpretation of available information. This report should not be regarded as a guarantee that no further contamination, beyond that which was detected during our observations is present beneath the property. In the event that changes in the nature of the property occur, or additional, relevant information about the property is brought to our attention, the conclusions and recommendations contained in this report may not be valid unless these changes and additional relevant information are reviewed, and the conclusions of this report are modified or verified in writing.

We appreciate this opportunity to provide services to Driscoll Incorporated. Please call if you have any questions.

Sincerely,
CONVERSE ENVIRONMENTAL WEST

Rod Reeve

ATI STANDARD DISPOSAL PRACTICE

The sample(s) from this project will be disposed of in twenty-one (21) days from the date of this report. If an extended storage period is required, please contact our sample control department before the scheduled disposal date.

QUALITY CONTROL TERMINOLOGY

•LCS – LABORATORY CONTROL STANDARD. REPORTED AS % RECOVERY OF AN INDEPENDENT STANDARD CARRIED THROUGH ALL SAMPLE PREPARATION PROCEDURES TO VERIFY METHOD PERFORMANCE. ACCEPTABLE RANGE IS BASED ON HISTORICAL LABORATORY CONTROL DATA, BUT IS GENERALLY WITHIN A 80%–120% RECOVERY RANGE.
•SPIKE – ENVIRONMENTAL SAMPLE IS MATRIX SPIKED WITH METHOD COMPOUNDS AND % RECOVERY OF CONCENTRATION SPIKED INTO SAMPLE IS CALCULATED. REPORTED AS % RECOVERY. ACCEPTABLE RANGE FOR "NORMAL MATRIX SAMPLE" IS BASED ON HISTORCCAL LABORATORY CONTROL DATA, BUT IS GENERALLY WITHIN A 75%–125% RECOVERY RANGE.
•SURROGATES – COMPOUNDS REPRESENTATIVE OF A GROUP OF COMPOUNDS. SURROGATES ARE SPIKED INTO ENVIRONMENTAL SAMPLES AND % RECOVERY OF CONCENTRATION SPIKED IS CALCULATED AND REPORTED. ACCEPTABLE RANGE VARIES DEPENDING ON SAMPLE MATRIX AND ANALYSIS METHOD.

Public Records Request Number: PR6-060722-02
Location(s): 4900-4930 North Harbor Drive, San Diego, California

Dear Requestor:

On June 7, 2022, the Department of Toxic Substances Control (DTSC) received your email of June 7, 2022, requesting records under the Public Records Act. After a thorough review of our files, no site records were found at the San Diego office pertaining to the sites/facilities reference above.

A large number of our records are available on EnviroStor, an online database that provides non-confidential, public access to DTSCs data management system. It tracks our cleanup, permitting, enforcement, and investigation efforts at hazardous waste facilities and sites with known or suspected contamination issues. EnviroStor is available 24/7, 365 days a year. The data reflects the latest updates as they are entered in the system. Access it from your computer or smartphone, the local library – anywhere Internet access is available. Just go to www.envirostor.dtsc.ca.gov. You'll find a step-by-step tour of EnviroStor under the "How to Use EnviroStor" menu on the website.

If you have any questions or would like further information regarding your request, please contact me at (619) 516-1982 or via email at sandiegofileroom@dtsc.ca.gov.

Sincerely,

Beatriz Davila

National City, CA 91950

Dear Mr. Hays, Mr. Driscoll, and Mr. Lloyd:

UNDERGROUND STORAGE TANK (UST) CASE #H16749-001
FORMER BAY CITY MARINE
4960 N. HARBOR DRIVE, SAN DIEGO, CA

This letter confirms the completion of a site investigation and corrective action for the underground storage tanks formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tanks is greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tanks site is in compliance with the requirements of subdivisions (a) and (b) of Section 25299.37 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.77 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required.

This notice is issued pursuant to subdivision (h) of Section 25299.37 of the Health and Safety Code. Please contact Donn Li Pera (619) 338-2244 if you have questions regarding this matter.

Sincerely,

Chris Gonaver

PNA's (Total)	N/A	N/A	.03552	.03552					

Comments:

The release consisted primarily of gasoline with some diesel fuel and created free product on groundwater that seeped into San Diego Bay through the rip-rap along the water. Several remedial actions conducted included: Removal of 500 cubic yards of soil at time of tank removal; installation of free product recovery trenches; removal of rip-rap and 2000 cubic yards of fuel-contaminated soil; installation of a high density polyethylene barrier wall to prevent further impacts to the bay; and removal of the HDPE barrier wall and 15,000 cubic yards of fuel-contaminated soil as the final remedial action.

The consultant estimates that two residual pockets of soil affected with fuels remains: 400 cubic yards along the northeast corner of the property, and 92 cubic yards along the northwest corner. The residual contaminated soil represents only 3% of the original volume of affected soil, 97% has been removed and properly disposed or treated offsite.

Six groundwater monitor wells were placed around and within the remedial excavation. Free product has not appeared during the three monitoring and sampling events conducted from July 1999 to January 2000. Sampling results show very low concentrations of dissolved fuel compounds.

The remaining soil and groundwater contamination does not appear to pose a risk to public health, the environment, or the Bay based on the current and proposed site use.

Case Closure Summary

MONITORING WELL AND BORING CONSTRUCTION AND DESTRUCTION PERMIT

SITE NAME: FISHERMAN'S VILLAGE

SITE ADDRESS: 4918 N. HARBOR DR, SAN DIEGO, CA 92101

PERMIT FOR: 1 BORING

PERMIT APPROVAL DATE: 08/03/92

PERMIT EXPIRES ON: 11/30/92

PERMIT CONDITIONS:

1. All borings must be destroyed in accordance with Department of Water Resources Bulletin 74-81 and 74-90.

2. All wash water must be contained and disposed of properly.

3. Submit complete laboratory data for both soil and groundwater with the well logs.

4. Submit all the information specified in the SA/M Manual in:

   Section 1, C., 4., c).

5. All water and soil that is placed in drums must be labeled and stored as specified in the SA/M Manual in:

   Section 1, C., 5.

6. This office must be given 48 hour notice of any drilling activity on this site.

7. This office must be given advanced notification of drilling cancellation.

PERMIT APPLICATION SUPPLEMENT
GROUND WATER AND VADOSE MONITORING WELLS

1. Well design, logging and construction must be supervised by a geologist, Engineering Geologist or Civil Engineer who is registered or certified by the State of California.

2. Provide verification of a well Drilling C-57 license

3. Provide a plot plan giving location of existing improvements such as structures, underground tanks, underground utilities, underground piping, and the proposed monitoring and/or observation wells.

4. What is the proposed purpose of the well? N/A HYDROPUNCH TO OBTAIN Ground WATER SAMPLE TO ASSESS FOR HYDROCARBON CONSTITUENTS. ALSO SOIL SAMPLES WILL BE COLLECTED FOR ANALYSIS.

5. What procedures will be used to prevent the well from providing an avenue to contamination during construction?

   UTILIZATION OF HOLLOW STEM AUGER DRILLING EQUIPMENT SEALING THE BOREHOLE WITH BENTONITE GROUT

6. What field procedures will be utilized to determine if contamination exists?

   VISUAL - ALL SAMPLES WILL BE RETAINED AND TRANSPORTED TO THE LABORATORY

7. What procedures will be used to determine whether samples will be sent for laboratory testing or archiving?

   QUALIFIED FIELD GEOLOGISTS IN THE EMPLOY OF A RCE WILL BE PRESENT TO OBTAIN SAMPLES AND ENSURE THEY ARE PROPERLY HANDLED AND DELIVERED TO THE LABORATORY.

8. What constituents will be monitored and tested?

   EPA 418.1 & HEAVY METALS (SOIL)

9. How will samples be transported and preserved? SAMPLES WILL BE PACKAGED IN GLASS JARS WITH TEFLON CAPS OR BRASS TUBES WITH TEFLON LINED CAPS, PLACED IN ICE CHEST w/ ICE & TRANSPORTED ON THE SAME DAY TO LOCAL LAB.

10. What sampling methods will be used?

DRIVE SAMPLES BY 140# HAMMER, 30" DROP w/ 6" LONG 2" DIA. BRASS TUBES (SOIL); HYDROPUNCH w/ S.S. BAILER (GW)

11. Are you proposing a variation from the methods and/or procedures presented in the Requirements for the construction of vadose and Ground Water Monitoring Wells (dated January 1992) If yes, specify these variations?

NO

12. What procedures will be used to insure no contamination will be introduced by the drilling equipment?

STEAM CLEANING ALL DRILLING EQUIPMENT AND INSPECTION FOR FLUID LEAKS FROM DRILL RIG.

13. What methods will be used to clean sampling equipment? STEAM CLEANING & TSP, WASH BETWEEN BORINGS; TWO TSP WASHES AND 2 RINSES (DISTILLED WATER) BETWEEN SAMPLES.

14. What cleaning method will be used to clean casing and screen prior to installation?

N/A

ENGINEERING SCIENCE APPLICATIONS

PROJECT NO. 7508
October 6, 1992

Hydrogeologist, Site Assessment
& Mitigation Program, County of San Diego,
Department of Health Services,
Environmental Health Services (HMMD),
P.O. Box 85261
San Diego, CA 92186-5261

Attention: Mr. Kevin Heaton

SUBJECT: BORING LOGS AND LABORATORY DATA, 4904-4922 NORTH HARBOR DRIVE, SAN DIEGO, CA. PERMIT NO. W92940.

Dear Mr. Heaton:

In accordance with permit requirements for groundwater and vadose monitoring wells, we are hereby submitting copies of our boring logs, plot plans, and laboratory data for the subject site. The address of the property is 4904-4922 North Harbor Drive, San Diego, California. The Assessor Parcel number is 706-004-26. The latitude and longitude of the site is 32° 43'40" and 117° 13'15".

Subsurface explorations E-1 thru E-6 were excavated using a CME 75 Truck Mounted Rotary Auger Drilling Rig equipped with 3¼ inch I.D. Hollow Stem Auger. Exploration Locations 1 thru 6 were advanced to respective depths of 6.5, 6, 6, 6, 8, and 6 feet. Each of the borings were terminated prior to encountering groundwater with the exception of boring No. E-5. Representative soil samples were retrieved by means of a California Split Spoon Sampler driven into the soil mass with impact loads from a 140-lb hammer falling 30 inches.

In addition to soil sampling, a groundwater sample was obtained at boring location E-5 utilizing the hydropunch method. The borehole was advanced to the water table, at which point, the hydropunch was driven below the water table into the saturated zone of soil by means of a 140-lb hammer falling 30 inches.

Upon completion of our subsurface investigation, the test borings were backfilled with a bentonite grout prior to leaving the site. Also, all drill cuttings were stored on site in sealed 55-gallon drums. The drums were appropriately labeled as possibly containing contaminated material. No monitoring wells were installed at the site.

8534 Commerce Ave., Suite B • San Diego, California 92121 • 619-271-1770

PROJECT NO. 7508
October 6, 1992

We have enclosed copies of our boring logs, results of laboratory analyses and a plot plan showing boring locations. Information contained on the boring logs include: date logged and sampled; lithologic description; and static water level.

Should you have questions, or require additional information, please do not hesitate to contact our office. This opportunity to be of service is appreciated.
Respectively submitted,

On the above date an inspection of your business/facility was conducted in order to determine compliance with the California Health and Safety Code (H&S) Chapters 6.5, 6.7, 6.95; Titles 19, 22 and 23 of the California Code of Regulations (CCR); and the San Diego County Code (SDCC). The following remarks are intended to provide guidance to correct the violations noted on the attached violation report.

PROCESSED 1/11/96 NSC

DEC 20 1995

Office Use Only

1 R / W

~~R319 W~~

~~R232 W~~

~~R118 W~~

Routine Inspection.
- HMMD [HEALTH PERMIT expiration date 5-31-96]
- Site inspection conducted.
- Verified hazardous waste streams.
- Reviewed hazardous waste disposal manifest.

OBSERVATION:
* OBSERVED 4 X 55 gallon drums stored in waste oil storage area. 3 of the 55 gal. drums are empty and 1 X 55 gal. drum and a 30 gal plastic container contains unknown materials. (liquid sub.)

TO comply:
→ CA. Code of Regulations, Title 22, section 66262.34 states that a material is a waste if not adequately labeled within 10 days of it's discovery.
1. Determine the contents of the 55 gal. drum & 30 gal. plastic container.
2. LABEL the material of it's contents.
3. If determined as hazardous waste, dispose of them as a hazardous waste: label container and keep haz. waste disposal manifest on site

BUSINESS ADDRESS: 4904 N. HARBOR DR. SD, 92106

VIOLATION REPORT: The items checked below refer to specific section numbers of Titles 19/22/23 of the California Code of Regulations (CCR), Chapters 6.5, 6.7, 6.95 of the Health and Safety Code (HSC), and/or the San Diego County Code (SDCC).

I HAZARDOUS WASTE REQUIREMENTS:

RECORD KEEPING

- [ ] Health Permit not obtained SDCC 68.905 — V0108 W____
- [ ] No EPA Identification Number 66262.12 — V0105 W____
- 1 [X] Waste Manifests/Receipts not on-site for 3 years 66262.40 — V0118 W____
- [ ] Manifest not properly completed 66262.23 — V0120 W____
- [ ] Manifest copy not sent to CAL-EPA 66262.23 — V0115 W____
- [ ] TSDF signed-manifest not on-site 66262.40 — V0121 W____
- [ ] Biennial report not sent to CAL-EPA 66262.41 — V0122 W____
- [ ] LDR Documentation not available 66268.7 — V0123 W____
- [ ] Exception Rpt. not filed with CAL-EPA 66262.42 — V0116 W____
- [ ] Operating TSDF without authorization 25201 — V0124 W____

STORAGE AND HANDLING

- [ ] Waste stored longer than 90 days 66262.34 — V0221 W____
- [ ] Waste container missing/improperly labeled 66262.34 — V0222 W____
- 2 [X] Haz Materials not properly labeled 25124 — V0223 W____
- [ ] Waste container not kept closed 66265.173 — V0202 W____
- [ ] Waste container in poor condition 66265.171 — V0205 W____
- [ ] Waste container(s) not properly managed 66265.173 — V0210 W____
- [ ] Damaged container not repackaged 66265.171 — V0226 W____
- [ ] Container incompatible with waste 66265.172 — V0207 W____
- [ ] Incompatibles in the same container 66265.177 — V0224 W____
- [ ] Incompatibles not stored separately 66265.177 — V0213 W____
- [ ] Ignitible Wastes less than 50 feet 66265.176 — V0214 W____
- [ ] Ignitible Wastes not grounded 66265.31 — V0215 W____
- 3 [X] Storage area not inspected weekly 66265.174 — V0216 W____

DISPOSAL AND TRANSPORTATION

- [ ] Unauth. disposal of waste to ________ 25189.5 — V0313 W____
- [ ] Waste determination not made 66262.11 — V0319 W____
- [ ] Unlawful transport of haz. waste 25163 — V0315 W____
- [ ] Waste transported without manifest 66262.20 — V0316 W____
- [ ] No Extremely Haz. Waste Permit 67430.1 — V0317 W____

TRAINING, CONTINGENCY PLAN & EMERGENCY PROCEDURES

- [ ] Training records unavailable 66265.16 — V0405 W____
- [ ] Training program not adequate 66265.16 — V0406 W____
- [ ] Facility not designed to minimize release 66265.31 — V0501 W____
- [ ] Spill control equip not available 66265.32 — V0508 W____
- [ ] Aisle space is obstructed 66265.35 — V0509 W____
- [ ] Contingency plan not prepared and/or on file 66265.51, 66265.53 — V0609 W____

MISCELLANEOUS

- [ ] Waste oil contaminated 25250.7 — V0225 W____
- [ ] Used oil filters improperly managed 66266.130 — V0701 W____
- [ ] Damaged batteries improperly managed 66266.81 — V0702 W____

II UNDERGROUND STORAGE TANK (UST) REQUIREMENTS:

GENERAL UST REQUIREMENTS

- [ ] Health Permit not obtained 68.1005, 25284 — V3002 T____
- [ ] Repair/modify/close permit not obtained 68.1005 — V3007 T____
- [ ] UST Permit Application not submitted 25286(a) — V3010 T____
- [ ] Operating permit conditions violated 2712 — V3011 T____
- [ ] Failed to notify HMMD of changes 25284 — V3012 T____
- [ ] No owner/operator agreement 25293 — V3005 T____
- [ ] No records of financial coverage 25292.2 — V3013 T____
- [ ] No maint/monit/calib records available 2712(b), 2641i — V3001 T____

MONITORING REQUIREMENTS (SINGLE WALL)

- [ ] Leak Detection Method does not meet performance standards 2643 — V3014 T____
- [ ] Annual Integrity test not conducted 25292 — V3015 T____
- [ ] Copy of tank test not submitted to HMMD within 30 days 2643 — V3016 T____
- [ ] Manual tank gauging (<2000 gal) 2645 not done properly — V3017 T____
- [ ] Reconciliation not done properly 2646 — V3018 T____
- [ ] Reconciliation not approved for facility 2646 — V3019 T____
- [ ] Dispenser meter(s) not calib annually 2646 — V3020 T____
- [ ] Improper liquid measurements 2646 — V3021 T____
- [ ] Stick in poor condition 2646 — V3022 T____
- [ ] Improper monthly reconciliation 2646 — V3023 T____
- [ ] Failed to report excessive variation 2646 — V3024 T____
- [ ] Pressurized Product Piping Leak Device not tested annually 25292 — V3025 T____

MONITORING REQUIREMENTS (DOUBLE WALL)

- [ ] Monitoring system not functional 2632 — V3026 T____
- [ ] No written monitoring procedure 2632 — V3027 T____
- [ ] Written response plan not available 2632 — V3028 T____
- [ ] Spill/Overfill equip. not maintained or installed 2635 — V3029 T____

RELEASE REPORTING

- [ ] Failure to report an unauthorized release 25295 — V3009 T____
- [ ] Release record log not available 2651, 2650 — V3030 T____
- [ ] No leak report/investigation/action 2652 — V3031 T____

CLOSURE

- [ ] Temporary closure req. not completed 2671 — V3006 T____
- [ ] Abandoned tank not properly closed 25298 — V3032 T____
- [ ] Permanent closure req. not completed 2672 — V3033 T____

III HAZARDOUS MATERIALS BUSINESS PLAN REQUIREMENTS:

RECORD KEEPING

- [ ] Health Permit not obtained SDCC 68.1105 — V2001 W____
- [ ] Business Plan not established/implemented 25503.5 — V2002 W____
- [ ] Business Plan not submitted to HMMD 25505 — V2007 W____
- 4 [X] Business Plan not amended 25505 — V2003 W____
- [ ] Personnel Training Records not available 2732 — V2302 W____

RELEASE REPORTING

- [ ] Failure to report a release/threatened release 25507 — V2008 W____

BUSINESS PLAN ELEMENTS

- [ ] Emergency Response Plan inadequate 25504 — V2201 W____
- [ ] Emergency Contacts not provided/current 25509 — V2203 W____
- [ ] Personnel Training Program inadequate 25504 — V2301 W____
- [ ] Inventory is incomplete 25504 — V2005 W____
- [ ] Site Map is not sufficient 25509 — V2202 W____
- [ ] Acutely Haz. Mat. not registered 25533 — V2009 W____

An inspection summary report will be mailed shortly. All violations must be corrected. Please call (619) 338-2222 if you have any questions.

On the above date an inspection of your business/facility was conducted in order to determine compliance with the California Health and Safety Code (H&S) Chapters 6.5, 6.7, 6.95; Titles 19, 22 and 23 of the California Code of Regulations (CCR); and the San Diego County Code (SDCC). The following remarks are intended to provide guidance to correct the violations noted on the attached violation report.

RTC: 1-30-98 unt file

JAN 27 1998

Office Use Only

- Routine Inspection conducted with Kristan
- Health Permit valid until 5-31-98
- Hazardous Materials Business Plan was updated during inspection
- Hazardous Waste Receipts / Manifests for Past Three years are on site

1. Observation: Tank used for storage of used oil does NOT have a Hazardous Waste label.

Corrective Action: With in 5 days affix a ~~#~~ complete Hazardous Waste label to the Tank.

2. Observation: Employee Training Records are unavailable.

Corrective Action: With in 30 days complete + document employee training. See your Hazardous Materials Business Plan for Topics.

On the above date, an inspection of your business/facility was conducted in order to determine compliance with the California Health and Safety Code (H&S) Chapters 6.5, 6.7, 6.95; Titles 19, 22 and 23 of the California Code of Regulations (CCR); and the San Diego County Code (SDCC). The following remarks are intended to provide guidance to correct the violations noted on the attached violation report.

Office Use Only

FEB 14 2001

Routine Inspection

No violations observed at this time.

Remarks:
1) Health Permit is current and posted on site. Permit expires 5/31/01.
2). Business Plan accepted on 1/27/98 is on site. Business Plan updated today. Triennial Certification form filled out on 2/6/01
3). Training documentation regarding Hazardous Materials/waste as outlined in the business plan, is on site and performed yearly.
4). All waste oil is hauled off site by Asbury Environmental. Pickup receipts on site for the last 3 years.
5). No hazardous materials of reportable quantities at this time observed on site.

SUBJECT: RESPONSE TO THE REGULATORY INSPECTION OF THE MARINE BIOLOGY LAB (H-34185)

Dear Mr. Trainor:

On March 6, 1996 you conducted the annual regulatory inspection of the City's Metropolitan Wastewater Department's Marine Biology Lab located at 4918 North Harbor Drive, San Diego. This letter addresses the one violation noted during the inspection.

The waste paint thinner and epoxy containers were labeled with a completed yellow hazardous waste label. These waste items will be disposed within 90 days of the accumulation start date.

If you have any questions regarding the actions taken to resolve the violation noted, please contact me at 573-1277.

Sincerely,

Juvilyn Deomampo
Hazardous Materials Inspector

P: 4/09/96 (initials)

Office Use Only

R W

Violation: MAR 15 1996

1) Several cans of waste (3 one gallon metal cans of thinner waste and 4 small cans of epoxy/paint) are not labeled as "hazardous waste" and with other required information (generator name/address & start date).

• To Comply: Label hazardous waste containers when first used. For expired/unwanted materials, label containers when material is first determined to be a hazardous waste. Dispose of waste within 90 days of start accumulation date.

Remarks:

• Employee training records and hazardous materials business plan were reviewed on site.

[Recommend you document transfer of waste oil from servicing boats. Include date, quantity and where waste is transported. (3/96 M. Trainor)]

• Hazardous waste manifests and log of acid neutralizations were reviewed on site.

SECTION B - INVENTORY OF HAZARDOUS MATERIALS

A "hazardous substance" is a chemical, compound, or product for which a manufacturer or producer is required by law to prepare a Material Safety Data Sheet (MSDS) for that substance. An MSDS is a document (usually 2 or 3 pages) which contains chemical composition information, fire and explosive data, health hazard data, reactivity data, spill or leak procedures, special protection information and special precaution information. An MSDS for a hazardous substance can be obtained from the supplier of that substance. Hazardous substances also include materials requiring placard warnings during transportation.

1. Does your establishment use or handle hazardous substances in quantities equal to or greater than 55 gallons, 500 pounds, or 200 cubic feet of compressed gas at any one time?
   Yes [ ] No [X]

2. Review the health hazards data or health and safety section of the Material Safety Data Sheets (MSDS) to see if any chemicals or substances you use are designated as a cancer-causing substance (carcinogen) or substance which may cause birth defects, miscarriages, or damage to the human reproductive system (reproductive toxin). Does your establishment use or handle carcinogens or reproductive toxins? Yes [X] No [ ]

3. Does your establishment use or handle gases with Threshold Limit Values (TLV) or Time Weighted Average (TWA) of 10 parts per million or less?
   Yes [ ] No [X]

If you have answered "Yes" to any of the above questions (1, 2, or 3), you do use or handle hazardous materials that are subject to inventory requirements and a permit from the San Diego County Department of Health Services is required. Continue with Section C of the questionnaire.

SECTION C - UNDERGROUND STORAGE TANKS

An "underground storage tank" is a tank, including piping, which holds hazardous wastes (as defined in Section A) or hazardous substances (as defined in Section B, regardless of volume) and has 10% or more of the total volume located below grade.

Does your business have underground storage tanks as defined above? Yes [ ] No [X]
If you answered "yes" a permit from the San Diego County Department of Health Services is required.

Underground storage tanks may not be installed, removed, destroyed, repaired or operated without permits from this Department.

Continue with the Hazardous Materials Summary on page 4.

PLEASE RETURN THIS SECTION.

H34182

HAZARDOUS MATERIALS SUMMARY

Complete the following information regarding the handling of hazardous materials at your business or service. Check one statement.

[X] This business or service does generate hazardous waste, handles hazardous materials subject to the inventory requirements and/or has underground storage tanks that requires a permit from the San Diego County Department of Health Services.

[ ] I have determined that this business or service does not generate hazardous waste, handle hazardous materials subject to the inventory requirements or has underground storage tanks requiring permits from the San Diego County Department of Health Services.

I declare under penalty of perjury that to the best of my knowledge and belief the statements made herein are correct and true. I consent to all necessary inspections allowed by law and incidental to the issuance of required permit(s) and the operation of this business.

Signature [signature] Title Sr Marine Biologist

Date 4/16/93 Phone 692-4939

Type of Business Municipal Govt Laboratory

Please complete the business information on the reverse of this page and return this questionnaire to the San Diego County Department of Health Services in the pre-addressed return envelope or mail using the following address.

SAN DIEGO COUNTY DEPARTMENT OF HEALTH SERVICES
ENVIRONMENTAL HEALTH SERVICES
HAZARDOUS MATERIALS MANAGEMENT DIVISION
P O BOX 85261
SAN DIEGO CA 92138-5261

If a San Diego County Hazardous Materials Management Permit is required for your business or service a representative of this Department will complete an inspection of your business. Permit fees will be determined from the inspection and a billing statement will be mailed.

NOTE: If you do not use hazardous materials, generate hazardous waste, or have underground storage tanks you are still required to return this form.

A representative of the San Diego County Department of Health Services may contact you to verify the information provided on this questionnaire.

COMPLIANCE INSPECTION REPORT

BUSINESS NAME SDCTY MARINE BIOLOGY LAB
ADDRESS 4918 N HARBOR DR #101
CITY/ZIP SAN DIEGO 92106

On the above date an inspection of your business/facility was conducted in order to determine compliance with the California Health and Safety Code (H&S) Chapters 6.5, 6.7, 6.95; Titles 19, 22 and 23 of the California Code of Regulations (CCR); and the San Diego County Code (SDCC). The following remarks are intended to provide guidance to correct the violations noted on the attached violation report.

Office Use Only

COMPLIANCE INSPECTION REPORT

EST. NUMBER H 34185
DATE 7/10/97
PAGE 2 OF 2

BUSINESS ADDRESS: 4918 N HARBOR DR #101 SAN DIEGO 92106

VIOLATION REPORT: The items checked below refer to specific section numbers of Titles 19/22/23 of the California Code of Regulations (CCR), Chapters 6.5, 6.7, 6.95 of the Health and Safety Code (HSC), and/or the San Diego County Code (SDCC).

I HAZARDOUS WASTE REQUIREMENTS:

RECORD KEEPING
[ ] Health Permit not obtained SDCC 68.905 V0108 W____
[ ] No EPA Identification Number 66262.12 V0105 W____
[ ] Waste Manifests/Receipts not on-site for 3 years 66262.40 V0118 W____
[ ] Manifest not properly completed 66262.23 V0120 W____
[ ] Manifest copy not sent to DTSC 66262.23 V0115 W____
[ ] TSDF signed-manifest not on-site 66262.40 V0121 W____
[ ] Biennial report not sent to DTSC 66262.41 V0122 W____
[ ] LDR Documentation not available 66268.7 V0123 W____
[ ] Exception Rpt. not filed with DTSC 66262.42 V0116 W____
[ ] Operating TSDF without authorization 25201 V0124 W____

STORAGE AND HANDLING
[ ] Waste stored longer than 90, 180, or 270 days 66262.34 V0221 W____
[ ] Failure to clean up hazwaste off of floor surface 66262.10b V0313 W____
[ ] Waste container missing/improperly labeled 66262.34 V0222 W____
[ ] Haz Materials not properly labeled 25124 V0223 W____
[ ] Waste container not kept closed 66265.173 V0202 W____
[ ] Waste container in poor condition 66265.171 V0205 W____
[ ] Waste container(s) not properly managed 66265.173 V0210 W____
[ ] Damaged container not repackaged 66265.171 V0226 W____
[ ] Container incompatible with waste 66265.172 V0207 W____
[ ] Incompatibles in the same container 66265.177 V0224 W____
[ ] Incompatibles not stored separately 66265.177 V0213 W____
[ ] Ignitible Waste less than 50 feet 66265.176 V0214 W____
[ ] Ignitible Waste not grounded 66265.31 V0215 W____
[ ] Storage area not inspected weekly 66265.174 V0216 W____

DISPOSAL AND TRANSPORTATION
[ ] Unauth. disposal of waste to ________ 25189.5 V0313 W____
[ ] Waste determination not made 66262.11 V0319 W____
[ ] Unlawful transport of haz. waste 25163 V0315 W____
[ ] Waste transported without manifest 66262.20 V0316 W____
[ ] Extremely Haz Waste Permit not obtained 25205.7 V0317 W____

TRAINING, CONTINGENCY PLAN & EMERGENCY PROCEDURES
[ ] Training records unavailable 66265.16 V0405 W____
[ ] Training program not adequate 66265.16 V0406 W____
[ ] Facility not designed to minimize release 66265.31 V0501 W____
[ ] Spill control equip not available 66265.32 V0508 W____
[ ] Aisle space is obstructed 66265.35 V0509 W____
[ ] Contingency plan not prepared and/or on file 66265.51, 66265.53 V0609 W____

MISCELLANEOUS
[ ] Waste oil contaminated 25250.7 V0225 W____
[ ] Used oil filters improperly managed 66266.130 V0701 W____
[ ] Damaged batteries improperly managed 66266.81 V0702 W____
[ ] Facility has failed to notify local CUPA and DTSC of onsite treatment of hazardous waste (tiered pemitting) V0125 W____
[ ] Onsite treatment of waste without authorization 25201 V0125 W____

II UNDERGROUND STORAGE TANK (UST) REQUIREMENTS:

GENERAL UST REQUIREMENTS
[ ] Health Permit not obtained 68.1005, 25284 V3002 T____
[ ] Repair/modify/close permit not obtained 68.1005 V3007 T____
[ ] UST Permit Application not submitted 25286(a) V3010 T____
[ ] Operating permit conditions violated 2712 V3011 T____
[ ] Failed to notify HMMD of changes 25284 V3012 T____
[ ] No owner/operator agreement 25284 V3005 T____
[ ] No records of financial coverage 25292.2 V3013 T____
[ ] No maint/monit/calib records available 2712(b), 2641(j) V3001 T____
[ ] Monitoring Equip. not tested annually 2630, 2641 V3003 T____

MONITORING REQUIREMENTS (SINGLE WALL)
[ ] Leak Detection Method does not meet performance standards 2643 V3014 T____
[ ] Integrity test not conducted 25292 V3015 T____
[ ] Copy of tank test not submitted to HMMD within 30 days 2643 V3016 T____
[ ] Manual tank gauging (<2000 gal) 2645 not done properly V3017 T____
[ ] Reconciliation not done properly 2646 V3018 T____
[ ] Reconciliation not approved for facility 2646 V3019 T____
[ ] Dispenser meter(s) not calib annually 2646 V3020 T____
[ ] Improper liquid measurements 2646 V3021 T____
[ ] Stick in poor condition 2646 V3022 T____
[ ] Improper monthly reconciliation 2646 V3023 T____
[ ] Failed to report excessive variation 2646 V3024 T____
[ ] Pressurized Product Piping Leak Device not tested annually 25292 V3025 T____
[ ] No written monitoring procedure 2641 V3027 T____
[ ] No written emergency response plan 2641 V3027 T____
[ ] SIR reporting incorrectly done 2646.1 V3004 T____

MONITORING REQUIREMENTS (DOUBLE WALL)
[ ] Monitoring system not functional 2632 V3026 T____
[ ] No written monitoring procedure 2632 V3027 T____
[ ] Written emergency response plan not available 2632 V3028 T____
[ ] Spill/Overfill equip. not maintained or installed 2635 V3029 T____

RELEASE REPORTING
[ ] Failure to report an unauthorized release 25295 V3009 T____
[ ] Release record log not available 2651, 2650 V3030 T____
[ ] No leak report/investigation/action 2652 V3031 T____

CLOSURE
[ ] Temporary closure req. not completed 2671 V3006 T____
[ ] Unused tank not properly closed 25298 V3032 T____
[ ] Permanent closure req. not completed 2672 V3033 T____
[ ] Failed to apply for temporary closure 25298 V3008 T____

III HAZARDOUS MATERIALS BUSINESS PLAN REQUIREMENTS:

RECORD KEEPING
[ ] Health Permit not obtained SDCC 68.1105 V2001 W____
[ ] Business Plan not established/implemented 25503.5 V2002 W____
[ ] Business Plan not submitted to HMMD 25505 V2007 W____
[ ] Business Plan not amended 25505 V2003 W____
[ ] Personnel Training Records not available 19 CCR 2732 V2302 W____

RELEASE REPORTING
[ ] Failure to report a release/threatened release 25507 V2008 W____

BUSINESS PLAN ELEMENTS
[ ] Emergency Response Plan inadequate 25504 V2201 W____
[ ] Emergency Contacts not provided/current 25509 V2203 W____
[ ] Personnel Training Program inadequate 25504 V2301 W____
[ ] Inventory is incomplete 25504 V2005 W____
[ ] Site Map is not sufficient 25509 V2202 W____
[ ] Acutely Haz. Mat. not registered 25533 V2009 W____

ALL VIOLATIONS MUST BE CORRECTED. PLEASE CALL (619) 338-2222 OR YOUR INSPECTOR IF YOU HAVE ANY QUESTIONS.

INSPECTION REPORT FOR GENERATORS
Permit by Rule, Conditionally Authorized, and Conditionally Exempt Facilities

FACILITY NAME: SDCTY-MARINE BIOLOGY LAB
PHYSICAL ADDRESS: 4918 N HARBOR DR #101 SAN DIEGO 92106
FACILITY CONTACT-NAME: RON VELARDE PHONE: (619) 692-4939
SIC CODES(S): 9511
*GENERATOR: CESQG X SQG ___ LQG ___
NOTIFIED UNIT COUNT: PBR ___ CA ___ CESW ___ CESQT 1 CEL ___ TOTAL 1
CORRECT UNIT COUNT: PBR ___ CA ___ CESW ___ CESQT 1 CEL ___ TOTAL 1

This checklist and inspection report identifies violations of State law regarding onsite treaters of hazardous waste, operating under an onsite permitting tier. This inspection verifies compliance with information provided on form 1772. It also covers generator requirements, although a separate checklist may be used for those requirements. A checkmark indicates a violation of the law, which is explained in more detail on the attached inspection sheets. The governing laws are the Health and Safety Code (HSC) and Title 22 of the California Code of Regulations (22 CCR).

DEC 28 1999

GENERATOR STANDARDS:

	NO		
V0609	___	1.	**Contingency plan** has been prepared (adequately minimizes releases, has alarm/communication system, lists emergency equipment, name and phone numbers of emergency coordinators).
V0405	___	2.	**Written training documents** and records prepared for employees handling hazardous waste.
V0210	___	3.	**Meet container management standards** (storage time limits, closed, labeled, compatibility, inspected weekly, in good condition, with ignitables/reactives 50 feet from property line).
V0804	___	4.	**Meet tank management standards** (either secondary containment or integrity assessments, plus storage time limits, labeled, compatibility, inspected daily, in good condition, with ignitables/reactives 50 feet from property line).
V0319	___	5.	**Hazardous waste determination** (hazardous by testing the waste or applying knowledge of characteristics).
V0105	___	6.	**EPA identification number** (generator has an EPA identification number).**
V0509	___	7.	**Aisle space** is maintained to allow for the unobstructed movement of personnel, fire protection equipment, spill control equipment, and the decontamination equipment in an emergency.
V0221	___	8.	**Accumulation of hazardous waste** is appropriate for the time allowed. (LQG <90 days; SQG 180 or 270 days or less if the waste for transportation >200 miles, and waste on site <6000 kg at any time; CESQG, 90 days clock starts when 100 kg of hazardous waste or 1 kg of acutely hazardous waste is accumulated).
V0118	___	9.	**Manifest standards** (copies of manifest on site for at least 3 years, within 30 days of each shipment submit to the Department a legible copy of each manifest used, generator and waste sections completed, transported hazardous waste without/ incomplete manifest).
V0216	___	10.	**Inspection standards** for hazardous waste accumulation area (container-weekly and tanks-daily).

e #H 34185

NO

V0118	______	11.	**Milk run standards** (generator has retained copies of shipping paper/receipt for 3 years, retained copies of used oil/oil filters/photo processing waste/antifreeze/automotive cleaning parts solvents receipts for 3 years.
V0123	______	12.	**Land disposal restrictions standards** (LDR), (generator has determined whether waste is restricted for land disposal, notified for LDR waste, retained LDR notification/certification).
V0122	______	13.	**Biennial Report / exception report** submitted to the Department and retained for 3 years. (Biennial report for LQG generators of RCRA hazardous waste only)

Treatment Items-Facility Wide; (*Facility must submit a revised Form 1772 to correct errors or omissions.)*

V0806	______	14.	All units under PBR, CA, and CE are properly indicated on Form DTSC 1772. (Add any new units with unit sheets or correct tier on the unit sheet.)
V0807	______	15.	All generator identification information on Form DTSC 1772 is correct.
V0808	______	16.	The submitted plot plan/map adequately shows the location of all regulated units.
V0809	______	17.	There are records documenting compliance with sewer agency **pretreatment standards** and industrial waste discharge requirements, where applicable.

For CA or PBR notifiers:

V0833	______	18.	The generator has an annual **waste minimization** certification. (PBR submit with renewals.)

* CESQG: Generating <100 kg of hazardous waste or 1 kg of acutely hazardous waste in a calendar month.
* SQG: Generating <1000 kg of hazardous waste in a calendar month.
* LQG: Generating >1000 kg of hazardous waste in a calendar month.

** No EPA I.D. number required for generators who generate <100 kg/month of hazardous waste and are engaged solely in used oil & solvents milk run activities in California.

INSPECTION REPORT FOR GENERATORS,
Permit by Rule, Conditionally Authorized, and Conditionally Exempt Facilities
UNIT SHEET

Complete one unit sheet for each unit either listed in the notification or identified during the inspection.

Unit Number: N/
Unit Name: PH NEUTRALIZATION
Notified Tier: CESQT
Correct Tier: CESQT
Notified Device Count: Tanks ____ Containers 1
Correct Device Count: Tanks ____ Containers 1

For all Units:

	NO		
V0810		19.	All hazardous wastes treated are **generated onsite.**
V0811		20.	The unit notification information is accurate as to the number of **tank(s) or container(s).**
V0812		21.	The estimated notification **monthly treatment volume** is appropriate for the indicated tier.
V0813		22.	The **waste identification/evaluation** is appropriate for the tier indicated.
V0814		23.	The **wastestream(s)** given on the notification form are appropriate for the tier.
V0815		24.	The **treatment process(es)** given on the notification form are appropriate for the tier.
V0816		25.	The **residuals management** information on the form is correct and document for the unit.
V0818		26.	The indicated **basis for not needing a federal permit** on the notification form is correct.
V0819		27.	There are **written operating instructions** and a record of the dates, volumes, residual management, and types of wastes treated in the unit.
V0820		28.	There is a **written inspection schedule** (containers-weekly and tanks-daily).
V0821		29.	There is a written inspection log of the inspections conducted.
V0822		30.	If the unit has been closed, the generator **has notified DTSC and the local agency of the closure.**

For each CA or PBR unit:

V0823		31.	The generator has **secondary containment** for treatment in containers and tanks (due by 1/24/98).
V0729		32.	**Financial Assurance** for closure cost estimates (due by 10/1/96) & submit by (1/1/97).
V0730		33.	**Phase I Environmental Assessment Checklist** (due by 1/1/97) or within one year of the date when facility is authorized to operate, whichever is later.

For each PBR unit:

V0731		34.	**The exterior of each unit is marked** with name of owner/operator, facility **identification number and an individual serial number.**
V0824		35.	There is a written **waste analyis plan.**
V0825		36.	There are **waste analysis records.**
V0826		37.	There is a written **closure plan** for the unit.

Unit Comments/Observations: (If this is a unit that was not included on the notification form, the violation is operating without a permit-HSC 25201(a).)

INSPECTION REPORT FOR GENERATORS,
Permit by Rule, Conditionally Authorized, and Conditionally Exempt Facilities
SIGNATURE SHEET

Onsite Recycling: *Only answer if this facility recycles ≥100 kilograms/month of hazardous waste onsite.*

V0827 V0736	______ 38.	The appropriate local agency has been notified.
	______ 39.	All Activities claimed under the onsite **recycling exemption or exclusions are appropriate**.

Releases: YES

V0828	______ 40.	Within the last three years, were there any **unauthorized or accidental releases to the environment** of hazardous waste or hazardous waste constituents **from onsite treatment units**?
V0829	______ 41.	Within the last three years, were there any **unauthorized or accidental releases to the environment** of hazardous waste or hazardous waste constituents **from any location at this facility**?

For purposes of a Tiered Permitting inspection, a release to the environment is unauthorized or accidental and does not include spills contained within containment systems.

12,000 25244.15

Source Reduction: *Only answer if this facility generates ≥~~5,000~~ kilograms/year of hazardous waste onsite.*

V0832 V0831	______ 42.	Generator is subject to **SB14** and has failed to prepare and retain current **source reduction documents**, or compliance checklist for small businesses as applicable, or make them available to the inspector within (5) days.
	______ 43.	**Source Reduction Evaluation Review and Plan** failed to contain, at a minimum, of the following five required elements: certification, amounts of wastes generated, process description, block diagrams, and implementation schedule of selected source reduction measures.

This report identifies conditions observed this date that are violations of one or more sections of the California Health an Safety Code (HSC) or the California Code of Regulations, Title 22 (22 CCR) relating to the management of hazardous waste. The violations my be described in more detail on the attached sheets. If any violations are noted, the facility is required to submit a signed Certification of Return to Compliance with 30 days, unless otherwise specified. If any corrections are needed to the initial notification, the facility must submit a revised notification within 30 days to the Department of Toxic Substances Control (DTSC) and to the County of San Diego Hazardous Materials Management Division. The County of San Diego may reinspect, at any time, to verify compliance with this Notice to Comply.

Dear Mr. Paredes:

Subject: Revised Business Plan for the Marine Biology Laboratory (H-34185)

Enclosed is the revised business plan for the Metropolitan Wastewater Department's Marine Biology Laboratory located at 4918 North Harbor Drive, San Diego, CA 92106. The site map revisions reflect the expansion of the Toxicity Lab into Suite 106A.

If you have any questions, please contact me at (858) 573-1280.

Sincerely,

KIRK GALARNEAU
Hazardous Materials Inspector

San Diego, CA 92112-9261

Dear Mr. Paredes:

Subject: Removal of Alvarado Combined Laboratory (H-21479) and Marine Biology Laboratory (H-34185) from Tiered Permitting Program

The Alvarado Combined Laboratory and the Marine Biology Laboratory are currently under permit for onsite neutralization of acidic wastes. The Alvarado Laboratory is permitted under the Conditionally Exempt-Specified Wastestream tier and the Marine Biology Laboratory is permitted under the Conditionally Exempt-Small Quantity Treatment tier.

On December 8 & 10, 1999, you conducted Tiered Permitting Inspections of the Marine Biology Laboratory and Alvarado Combined Laboratory respectively. During these inspections, you indicated that each site may qualify for an exemption from tiered permitting regulations pursuant to Health and Safety Code, Section 25200.3.1(c). After review of this exemption, I have determined that the Marine Biology Laboratory and the Alvarado Combined Laboratory both qualify for this exemption. Therefore, I would like to request both sites be removed from the Tiered Permitting Program.

Enclosed is a table indicating the units to be deactivated at each location. If you require any additional information to process this request, please contact me at (858) 573-1280.

Sincerely,

Kirk Galarneau

☐	☑	Chemical inventory current ☐ Updated today	☑	☐	Waste containers in good condition

ROUTINE INSPECTION

NOTICE TO COMPLY:

1 THE FORMALIN SOLUTION REMAINING IN THE SEDIMENT SAMPLE IS RINSED WITH WATER AND THEN THE RINSATE IS DISCARDED TO THE SEWER. THIS ACTION IS TREATMENT OF A HAZARDOUS WASTE.
- CORRECTIVE ACTION: WITHIN 30 DAYS, SUBMIT NOTIFICATION TO THE DEH* REGARDING YOUR INTENTIONS/ACTIONS TO TREAT HAZARDOUS WASTE ONSITE.

2 SEVERAL HAZARDOUS MATERIALS CONTAINERS LOCATED INSIDE THE FLAMMABLE STORAGE LOCKER OF ROOM 107 (BOAT MAINTENANCE SUPPLY CABINET) ARE DAMAGED AND DO NOT APPEAR TO BE SOUND.
- CORRECTIVE ACTION: WITHIN 96 HOURS, REPACKAGE THE HAZARDOUS MATERIALS INTO SOUND LEAKPROOF CONTAINERS FOR REUSE OR MANAGE THEM AS A HAZARDOUS WASTE AND USE A REGISTERED HAULER FOR THEIR PROPER DISPOSAL.

REMARK: UPGRADE LARRY'S TRAINING.

☒ This is an annual certification that the Hazardous Materials Business Plan (inventory, emergency contacts, emergency response plan, and employee training plan) is current and includes all the information required in the H&SC and is maintained at the site where hazardous materials are stored.

D. E. H.
MAILROOM

July 18, 2002

Michael Mann, R.E.H.S
San Diego Department of Environmental Health
Hazardous Materials Division
P.O. Box 129261
San Diego, CA 92112-9261

Dear Mr. Mann:

Subject: Marine Biology Lab Regulatory Inspection (H-34185)

This letter is to document the actions taken since the May 30, 2002 County regulatory inspection at the Marine Biology Lab. Based on multiple telephone and in person conversations with the DEH over the past month and a half, this letter summarizes the City's findings and our agreed upon resolution of the formaldehyde issue.

Notice to comply: The formalin solution remaining in the sediment sample is rinsed with water and then the rinsate is discarded to the sewer. This action is treatment of a hazardous waste.
Analytical results show the formaldehyde concentration in the sediment rinsate to be 95 mg/L. This concentration is well below the 500 mg/L hazardous waste regulatory threshold limit noted in the "Formaldehyde Treatment Technologies Re-Certification Evaluation Report" written by the DTSC in August 3, 2001.

Therefore, the City concludes the sediment rinsate is not a hazardous waste.

The laboratory process that generates this waste consists of an "ocean floor sediment sample" which has been fixed with formaldehyde (note: prior to fixing, the sample is sieved to remove particles less than 1 mm in size).

The initial fixing solution, containing higher concentrations of formaldehyde, is poured off and handled as hazardous waste. The sediment sample is rinsed with tap water, which removes any formaldehyde solution remaining in the pore spaces of the sediment. This tap water rinsate was the focus of the "Notice to comply".

Environmental Protection Division • Environmental Services Department
9601 Ridgehaven Court, Suite 310 • San Diego, CA 92123
Tel (858) 492-5051 Fax (858) 492-5041

Notice to comply: Several hazardous materials containers located inside the flammable storage locker of Room 107 (boat maintenance supply cabinet) are damaged and do not appear sound.
Facility staff has determined that the contents were waste. The contents have been disposed of by our hazardous waste disposal contractor.

If you have any questions or need further information, please contact me at (858) 492-5043.

Sincerely,

Susan Chin

For facility located at:

4918 N HARBOR DR #101
SAN DIEGO, CA 92101

Authorization Date: 03/03/94

Dear Conditionally Exempt Small Quantity Treatment Facility:

ACKNOWLEDGEMENT OF UNITS OPERATING UNDER CONDITIONAL EXEMPTION FOR SMALL QUANTITY TREATMENT

The Department of Toxic Substances Control (DTSC) has received your facility specific notification (form DTSC 1772) and form for Conditionally Exempt Small Quantity Treatment (form DTSC 1772A). Your notifications are administratively complete, but have not been reviewed for technical adequacy. A technical review of your notifications will be conducted when an inspection is performed. At any time, you may be inspected and will be subject to penalty if violations of laws or regulations are found.

The Department acknowledges receipt of your completed notification for the treatment unit(s) listed on the last page of this letter. These units operating under Conditional Exemption are authorized by California law without additional Department action, pursuant to Health and Safety Code sections 25201.5. Your authorization to operate continues until you notify DTSC that you have stopped treating waste and have fully closed the unit(s). You will be charged annual fees calculated on a calendar year basis for each year you operate and have not notified DTSC that the units have been closed.

You must notify the DTSC 60 days before first treating hazardous wastes in any new unit. You must also notify the DTSC whenever information you provided in these notifications changes. To revise information, mail a cover letter to the above address explaining the changes, attach just the pages of your notification package that have changed, and sign and date at the signature space on page 3 of form 1772.

Your status to operate under Conditional Exemption-Small Quantity Treatment is contingent upon the accuracy of information submitted by you in the notification mentioned above, and your compliance with all applicable requirements in the Health and Safety Code. Any misrepresentation or any failure to fully disclose all relevant facts shall render your authorization to operate null and void. If at any time, the total volume of hazardous waste treated in any month exceeds 55 gallons or 500 pounds, you will be in violation of the conditions of this category. This category also prohibits you from holding any other hazardous waste facility permits or other grants of authorization. If you subsequently obtain any other hazardous waste permits or other grants of authorization, you must convert to a different onsite treatment tier.

You are also required to properly close any treatment unit. Additional guidance on closure will be issued and distributed to all authorized onsite facilities later this year.

If you have any questions regarding this letter, or have questions on operating requirements for your facility, please contact the nearest DTSC regional office, or this office at the letterhead address or phone number.

Sincerely,

Michael S. Horner, Chief
Onsite Hazardous Waste Treatment Unit

ONSITE HAZARDOUS WASTE TREATMENT NOTIFICATION FORM

FACILITY SPECIFIC NOTIFICATION

For Use by Hazardous Waste Generators Performing Treatment
Under Conditional Exemption and Conditional Authorization,
and by Permit By Rule Facilities

[X] Initial
[ ] Revised

Please refer to the attached Instructions before completing this form. You may notify for more than one permitting tier by using this notification form, DTSC 1772. You must attach a separate unit specific notification form for each unit at this location. There are different unit specific notification forms for each of the four categories and an additional notification form for transportable treatment units (TTU's). You only have to submit forms for the tier(s) that cover your unit(s). Discard or recycle the other unused forms. Number each page of your completed notification package and indicate the total number of pages at the top of each page at the 'Page __ of __'. Put your EPA ID Number on each page. Please provide all of the information requested; all fields must be completed except those that state 'if different' or 'if available'. Please type the information provided on this form and any attachments.

The notification will not be considered complete without payment of the appropriate fee for each tier under which you are operating. (Please note that the fee is per TIER not per UNIT. For example, if you operate 5 units but they are all Conditionally Authorized, you only owe $1,140, NOT 5 times $1,140. If you operate any Permit by Rule units and any units under Conditional Authorization you owe $2,280.) Checks should be made payable to the Department of Toxic Substances Control and be stapled to the top of this form. Please write your EPA ID Number on the check. Fill in the check number in the box above.

I. NOTIFICATION CATEGORIES

Indicate the number of units you operate in each tier. This will also be the number of unit specific notification forms you must attach. Conditionally Exempt Small Quantity Treatment operations may not operate units under any other tier.

Number of units and attached unit specific notifications				Fee per Tier (not per unit)
A.	1	Conditionally Exempt-Small Quantity Treatment	(Form DTSC 1772A)	$ 100
B.	____	Conditionally Exempt-Specified Wastestream	(Form DTSC 1772B)	$ 100
C.	____	Conditionally Authorized	(Form DTSC 1772C)	$1,140
D.	____	Permit by Rule	(Form DTSC 1772D)	$1,140
	1	Total Number of Units	Total Fee Attached	$ 100

II. GENERATOR IDENTIFICATION

EPA ID NUMBER CA L 0 0 0 0 9 8 7 4 9 BOE NUMBER (if available) H__HQ________

NAME (Company or Facility) (DBA–Doing Business As): SDCTY- WATER, Marine Biology Lab

PHYSICAL LOCATION: 4918 N. Harbor Drive, Suite 101

CITY: San Diego CA ZIP 92101 -____

For DTSC Use Only
Region 4

COUNTY: San Diego

CONTACT PERSON: Patricia (First Name) Vainik (Last Name) PHONE NUMBER (619) 692 - 4939

MAILING ADDRESS, IF DIFFERENT

COMPANY NAME (DBA) SDCTY-Water, Marine Biology Lab

STREET 4077 N. Harbor Drive

CITY San Diego STATE CA ZIP 92101 - 1065

COUNTRY ______
(only complete if not USA)

CONTACT PERSON Patricia (First Name) Vainik (Last Name) PHONE NUMBER (619) 692 - 4939

III. TYPE OF COMPANY: STANDARD INDUSTRIAL CLASSIFICATION (SIC) CODE:

Use either one or two SIC codes (a four digit number) that best describe your company's products, services, or industrial activity.

Example: *7384 Photofinishing lab* *3672 Printed circuit boards*

First: 9511 Air, Water, Solid Waste Management Second: ______

IV. PRIOR PERMIT STATUS: *Check yes or no to each question:*

YES	NO		
[ ]	[X]	1.	Did you file a PBR Notice of Intent to Operate (DTSC Form 8462) in 1992 for this location?
[ ]	[X]	2.	Do you now have or have you ever held a state or federal hazardous waste facility full permit or interim status for any of these treatment units?
[ ]	[X]	3.	Do you now have or have you ever held a state or federal full permit or interim status for any other hazardous waste activities at this location?
[ ]	[X]	4.	Have you ever held a variance issued by the Department of Toxic Substances Control for the treatment you are now notifying for at this location?
[X]	[ ]	5.	Has this location ever been inspected by the state or any local agency as a hazardous waste generator?

V. PRIOR ENFORCEMENT HISTORY: *Not required from generators only notifying as conditionally exempt.*

YES	NO	
[ ]	[ ]	Within the last three years, has this facility been the subject of any convictions, judgments, settlements, or final orders resulting from an action by any local, state, or federal environmental, hazardous waste, or public health enforcement agency?

(For the purposes of this form, a notice of violation does not constitute an order and need not be reported unless it was not corrected and became a final order.)

[ ] If you answered Yes, check this box and attach a listing of convictions, judgments, settlements, or orders and a copy of the cover sheet from each document. (See the Instructions for more information)

VI. ATTACHMENTS:

[X] 1. A plot plan/map detailing the location(s) of the covered unit(s) in relation to the facility boundaries.

[X] 2. A unit specific notification form for each unit to be covered at this location.

VII. CERTIFICATIONS: *This form must be signed by an authorized corporate officer or any other person in the company who has operational control and performs decision-making functions that govern operation of the facility (per title 22, California Code of Regulations (CCR) section 66270.11). All three copies must have original signatures.*

Waste Minimization I certify that I have a program in place to reduce the volume, quantity, and toxicity of waste generated to the degree I have determined to be economically practicable and that I have selected the practicable method of treatment, storage, or disposal currently available to me which minimizes the present and future threat to human health and the environment.

Tiered Permitting Certification I certify that the unit or units described in these documents meet the eligibility and operating requirements of state statutes and regulations for the indicated permitting tier, including generator and secondary containment requirements. I understand that if any of the units operate under Permit by Rule or Conditional Authorization, I will also be required to provide required financial assurances by January 1, 1994, and conduct a Phase I environmental assessment by January 1, 1995.

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those directly responsible for gathering the information, the information is, to the best of my knowledge and belief, true, accurate, and complete.

I am aware that there are substantial penalties for submitting false information, including the possibility of fines and imprisonment for knowing violations.

Date Signed

OPERATING REQUIREMENTS:

Please note that generators treating hazardous waste onsite are required to comply with a number of operating requirements which differ depending on the tier(s) under which one operates. These operating requirements are set forth in the statutes and regulations, some of which are referenced in the Tier-Specific Factsheets.

SUBMISSION PROCEDURES:

You must submit two copies of this completed notification by certified mail, return receipt requested, to:

Department of Toxic Substances Control
Form 1772
Onsite Hazardous Waste Treatment Unit
400 P Street, 4th Floor (walk in only)
P.O. Box 806
Sacramento, CA 95812-0806.

You must also submit one copy of the notification and attachments to the local regulatory agency in your jurisdiction as listed in the instruction materials. You must also retain a copy as part of your operating record.

All three forms must have original signatures, not photocopies.

Submit to HMMD

CONDITIONALLY EXEMPT-SMALL QUANTITY TREATMENT

UNIT SPECIFIC NOTIFICATION

(pursuant to Health and Safety Code Section 25201.5(a))

UNIT NAME pH Neutralization UNIT ID NUMBER N1

NUMBER OF TREATMENT DEVICES: ____ Tank(s) 1 Container(s)

Please Note: Generators operating units under Conditionally Exempt Small Quantity Treatment may not operate any other units under other permitting tiers or hold any other state or federal hazardous waste permit or authorization for this facility.

Each unit must be clearly identified and labeled on the plot plan attached to Form 1772. Assign your own unique number to each unit. The number can be sequential (1, 2, 3) or you may use any system you choose.

This category is only available to generators that treat less than 55 gallons or 500 pounds of hazardous waste in any calendar month in ALL units at this facility and that are not otherwise required to obtain a hazardous waste facilities permit. This volume limit applies to the TOTAL hazardous waste treated onsite in any calendar month, and is NOT a limit for each wastestream or unit separately. The wastestreams treated must be limited to those listed in title 22, CCR, section 67450.11, which are also listed below.

Enter the estimated monthly total volume of hazardous waste treated by this unit. This should be the maximum or highest amount treated in any month. Indicate in the narrative (Section II) if your operations have seasonal variations.

I. WASTESTREAMS AND TREATMENT PROCESSES:

Estimated Monthly Total Volume Treated: ________ pounds and/or 5 gallons

The following are the eligible wastestreams and treatment processes. Please check all applicable boxes:

1. Aqueous wastes containing hexavalent chromium may be treated by the following process:

☐ a. Reduction of hexavalent chromium to trivalent chromium with sodium bisulfite, sodium metabisulfite, sodium thiosulfate, ferrous sulfate, ferrous sulfide or sulfur dioxide provided both pH and addition of the reducing agent are automatically controlled.

2. Aqueous wastes containing metals listed in Title 22, CCR, section 66261.24 (a)(2), including silver from photofinishing, and/or fluoride salts may be treated by the following technologies:

☐ a. pH adjustment or neutralization.

☐ b. Precipitation or crystallization.

☐ c. Phase separation by filtration, centrifugation, or gravity settling.

☐ d. Ion exchange.

☐ e. Reverse osmosis.

☐ f. Metallic replacement.

☐ g. Plating the metal onto an electrode.

☐ h. Electrodialysis.

☐ i. Electrowinning or electrolytic recovery.

☐ j. Chemical stabilization using silicates and/or cementitious types of reactions.

☐ k. Evaporation.

☐ l. Adsorption.

CONDITIONALLY EXEMPT-SMALL QUANTITY TREATMENT
UNIT SPECIFIC NOTIFICATION
(pursuant to Health and Safety Code Section 25201.5(a))

3. Aqueous wastes with total organic carbon less than ten percent as measured by EPA Method 9060 and less than one percent total volatile organic compounds as measured by EPA Method 8240 may be treated by the following technologies:

☐ a. Phase separation by filtration, centrifugation or gravity settling, but excluding super critical fluid extraction.

☐ b. Adsorption.

☐ c. Distillation.

☐ d. Biological processes conducted in tanks or containers and utilizing naturally occurring microorganisms.

☐ e. Photodegradation using ultraviolet light, with or without the addition of hydrogen peroxide or ozone, provided the treatment is conducted in an enclosed system.

☐ f. Air stripping or steam stripping.

4. Sludges, dusts, solid metal objects and metal workings which contain or are contaminated with metals listed in title 22, CCR, section 66261.24 (a)(2) and/or fluoride salts may be treated by the following technologies:

☐ a. Chemical stabilization using silicates and/or cementitious types of reactions.

☐ b. Physical processes which change only the physical properties of the waste such as grinding, shredding, crushing, or compacting.

☐ c. Drying to remove water.

☐ d. Separation based on differences in physical properties such as size, magnetism or density.

5. Alum, gypsum, lime, sulfur or phosphate sludges may be treated by the following technologies:

☐ a. Chemical stabilization using silicates and/or cementitious types of reactions.

☐ b. Drying to remove water.

☐ c. Phase separation by filtration, centrifugation or gravity settling.

6. Wastes identified in title 22, CCR, section 66261.120, that meet the criteria and requirements for special waste classification in title 22, CCR, section 66261.122 may be treated by the following technologies:

☐ a. Chemical stabilization using silicates and/or cementitious types of reactions.

☐ b. Drying to remove water.

☐ c. Phase separation by filtration, centrifugation or gravity settling.

☐ d. Screening to separate components based on size.

☐ e. Separation based on differences in physical properties such as size, magnetism or density.

CONDITIONALLY EXEMPT-SMALL QUANTITY TREATMENT
UNIT SPECIFIC NOTIFICATION
(pursuant to Health and Safety Code Section 25201.5(a))

7. Wastes, except asbestos, which have been classified by the Department as special wastes pursuant to title 22, CCR, section 66261.124, may be treated by the following technologies:

- [ ] a. Chemical stabilization using silicates and/or cementitious types of reactions.
- [ ] b. Drying to remove water
- [ ] c. Phase separation by filtration, centrifugation or gravity settling.
- [ ] d. Magnetic separation.

8. Inorganic acid or alkaline wastes may be treated by the following technology:

- [x] a. pH adjustment or neutralization.

9. Soils contaminated with metals listed in title 22, CCR, section 66261.24 (a)(2), (Persistent and Bioaccumulative Toxic Substances) may be treated by the following technologies:

- [ ] a. Chemical stabilization using silicates and/or cementitious types of reactions.
- [ ] b. Screening to separate components based on size.
- [ ] c. Magnetic separation.

10. Used oil, unrefined oil waste, mixed oil, oil mixed with water and oil/water separation sludges may be treated by the following technologies:

- [ ] a. Phase separation by filtration, centrifugation or gravity settling, but excluding super critical fluid extraction.
- [ ] b. Distillation.
- [ ] c. Neutralization.
- [ ] d. Separation based on differences in physical properties such as size, magnetism or density.
- [ ] e. Reverse osmosis.
- [ ] f. Biological processes conducted in tanks or containers and utilizing naturally occurring microorganisms.

11. Containers of 110 gallons or less capacity which are not constructed of wood, paper, cardboard, fabric, or any other similar absorptive material, which have been emptied as specified in Title 40 of the Code of Federal Regulations (CFR), section 261.7 or inner liners removed from empty containers that once held hazardous waste or hazardous material and which are not excluded from regulation may be treated by the following technologies provided the treated containers and rinseate are managed in compliance with applicable requirements:

- [ ] a. Rinsing with a suitable liquid capable of dissolving or removing the hazardous constituents which the container held.
- [ ] b. Physical processes such as crushing, shredding, grinding or puncturing, that change only the physical properties of the container or inner liner, provided the container or inner liner is first rinsed and the rinseate is removed from the container or inner liner.

12. Multi-component resins may be treated by the following process:

- [ ] a. Mixing the resin components together in accordance with the manufacturer's instructions.

CONDITIONALLY EXEMPT-SMALL QUANTITY TREATMENT
UNIT SPECIFIC NOTIFICATION
(pursuant to Health and Safety Code Section 25201.5(a))

II. NARRATIVE DESCRIPTIONS: *Provide a brief description of the specific waste treated and the treatment process used.*

1. SPECIFIC WASTE TYPES TREATED: Acidic Wastewater from glassware cleaning procedure.

2. TREATMENT PROCESS(ES) USED: Biologist uses neutralizing agent to adjust pH of acidic wastewater in container to above 5.0 and below 11.0.

III. RESIDUAL MANAGEMENT: *Check Yes or No to each question as it applies to all residuals from this treatment unit.*

YES	NO	
[X]	[ ]	1. Do you discharge non-hazardous aqueous waste to a publicly owned treatment works (POTW)/sewer?
[ ]	[X]	2. Do you discharge non-hazardous aqueous waste under an NPDES permit?
[ ]	[X]	3. Do you have your residual hazardous waste hauled offsite by a registered hazardous waste hauler? If you do, where is the waste sent? *Check all that apply.*

- [ ] a. Offsite recycling
- [ ] b. Thermal treatment
- [ ] c. Disposal to land
- [ ] d. Further treatment

YES	NO	
[ ]	[X]	4. Do you dispose of non-hazardous solid waste residues at an offsite location?
[ ]	[X]	5. Other method of disposal. Specify: ______

IV. BASIS FOR NOT NEEDING A FEDERAL PERMIT:

In order to demonstrate eligibility for one of the onsite treatment tiers, facilities are required to provide the basis for determining that a hazardous waste permit is not required under the federal Resource Conservation and Recovery Act (RCRA) and the federal regulations adopted under RCRA (Title 40, Code of Federal Regulations (CFR)).

Choose the reason(s) that describe the operation of your onsite treatment units:

- [ ] 1. The hazardous waste being treated is not a hazardous waste under federal law although it is regulated as a hazardous waste under California state law.
- [ ] 2. The waste is treated in wastewater treatment units (tanks), as defined in 40 CFR Part 260.10, and discharged to a publicly owned treatment works (POTW)/sewering agency or under an NPDES permit. 40 CFR 264.1(g)(6) and 40 CFR 270.2.

CONDITIONALLY EXEMPT-SMALL QUANTITY [redacted]ATMENT
UNIT SPECIFIC NOTIFICATION
(pursuant to Health and Safety Code Section 25201.5(a))

IV. BASIS FOR NOT NEEDING A FEDERAL PERMIT: (continued)

[X] 3. The waste is treated in elementary neutralization units, as defined in 40 CFR Part 260.10, and discharged to a POTW/sewering agency or under an NPDES permit. 40 CFR 264.1(g)(6) and 40 CFR 270.2.

[ ] 4. The waste is treated in a totally enclosed treatment facility as defined in 40 CFR Part 260.10; 40 CFR 264.1(g)(5).

[ ] 5. The company generates no more than 100 kg (approximately 27 gallons) of hazardous waste in a calendar month and is eligible as a federal conditionally exempt small quantity generator. 40 CFR 260.10 and 40 CFR 261.5.

[ ] 6. The waste is treated in an accumulation tank or container within 90 days for over 1000 kg/month generators and 180 or 270 days for generators of 100 to 1000 kg/month. 40 CFR 262.34, 40 CFR 270.1(c)(2)(i), and the Preamble to the March 24, 1986 Federal Register.

[ ] 7. Recyclable materials are reclaimed to recover economically significant amounts of silver or other precious metals. 40 CFR 261.6(a)(2)(iv), 40 CFR 264.1(g)(2), and 40 CFR 266.70.

[ ] 8. Empty container rinsing and/or treatment. 40 CFR 261.7.

[ ] 9. Other: Specify: ______________________________

____

V. TRANSPORTABLE TREATMENT UNIT: *Check Yes or No. Please refer to the Instructions for more information.*

YES	NO	
[ ]	[X]	Is this unit a Transportable Treatment Unit?

If you answered yes, you must also complete and attach Form 1772E to this page.

The Tier-Specific Factsheets contain a summary of the operating requirements for this category. Please review those requirements carefully before completing or submitting this notification package.

On the above date, an inspection of your business/facility was conducted in order to determine compliance with the California Health and Safety Code (H&S) Chapters 6.5, 6.7, 6.95; Titles 19, 22 and 23 of the California Code of Regulations (CCR); and the San Diego County Code (SDCC). The following remarks are intended to provide guidance to correct the violations noted on the attached violation report.

Office Use Only

NOV 19 1999

New Business: complaint insp.

OBSERVATION:

- Business is operating without a valid Health PERMIT.*

HAZ. WASTE and HAZ. MAT. INVENTORY verified during this inspection. HAZ WASTE is generated from servicing the boat engines + bilge water.

- HEALTH PERMIT APPLICATION completed during this inspection*.
- Reviewed HAZARDOUS waste disposal MANIFEST, TRAINING Records and EPA ID number.

Comply with the following HAZ. WASTE / MATERIAL Requirements:

1. Establish + Implement a HAZARDOUS MATERIALS Business Plan. Submit a completed plan to this Dept. to my attention w/in 30 days.
2. LABEL HAZ. WASTE Containers + HAZ. MAT containers as to it's contents.

Initials of Business Representative ______

Type of inspection(s) conducted this date:

Routine

Permission to conduct inspection, collect samples and take photographs was granted by Cynthia Price, Sec..

General Comments/Remarks

* Observed 2 x white, plastic containers in the hazardous waste storage area. One container had old thinner written on it, the other was unlabeled. Abandoned waste (both solid and hazardous) is a problem that management has addressed.
* Be advised that any absorbant material contaminated with waste oil is by definition a hazardous waste and must be managed and disposed of accordingly (specifically addressing the carpet used around the waste oil tank).
* You may want to participate in the CESQG (Conditionally Exempt Small Quantity Generator) Program for the abandoned waste. Refer to the CESQG flyer provided for more information.
* Suggest that all containers larger than 5-gallons be labeled as EMPTY or designate a storage area with signage stating that it is an empty container storage area. This is to provide easy identification of containers for First Reponders in an emergency.
* Contact Hazardous Materials Division (HMD) Permit Clerks for a duplicate Unified Program Facility Permit if the original is not found @ 619 338-2251.
* Submit copies of disposal receipts for white containers if they are not waste oil.

The following form(s) were provided:

* Conditionally Exempt Small Quantity Generator (CESQG) (CESQG Flyer)

No violations noted during this inspection.

RE: Compliance Inspection

Dear Margarita:

Regarding the violation for not having waste receipts for the used oily absorbents, I have contacted Asbury and they have no record of any manifest for this waste, although we did dispose the waste through this transporter. For all future pick ups of this nature or any kind of hazardous materials all documentation will be kept on file. We currently have three properly labeled hazardous containers located in our yard. We have always used Asbury for the disposal of all our hazardous waste and have always disposed of used absorbents within regulations. My contact at Asbury Environmental is Ellen, she can be reached at 619-463-1126.

Let me know if you need anything further. If you have any questions, please feel free to contact me.

Sincerely,

Cynthia Price

CONVERSATION/MINUTES ** Re: Driscoll's Wharf, 4918 N. Harbor Dr. San Diego CA 92106, UPFP#202243. Disposal of Oily Solids (absorbents (Kitty Litter &/or rags)

Per E. Graves of Asbury (AES), she contacted the Treatment Storage & Disposal facility (TSDF) they use for disposal of oily solids. The TSDF had no records for Driscoll's Wharf for disposal between 2006 and the present. E. Graves stated that "either Driscoll's Wharf used another "vendor" or they did not dispose of oily absorbents during the time frame in question." E. Graves stated she processes the manifests for AES

Hello Cynthia,

I was checking on past inspections in my reports and found that I have not received the corrective actions to return your facility to compliance following my 5/16/08 inspection for hazardous waste/hazardous materials. If you sent them previously, I didn't get them. I am faxing over a Corrective Action form to complete and to use as a cover page for attachments documenting your corrections. Please get this back to me within the next two weeks so that I can get your file updated and avoid re-inspection (which has a Reinspection Fee associated).

Feel free to contact me if you have any questions regarding the items listed on your 5/16/08 inspection report.

Thanks much,

Margarita Mogollón

ROUTINE HAZMAT / HAZWASTE (HW) INSPECTION:
- I conducted a complete inspection today authorized by Catherine Driscoll, Vice President & also facilitated by Cynthia Price, Office Mgr

RECEIVED JUL 2 1 2008

Observations / Violations / Notice To Comply*:
① The HMBP was not up-to-date to reflect changes in Emergency Coordinator Info and to include propane on-site today (2 x 8 gal cylinders = 587 cft.) + used/waste fuel.
* CORRECTIVE ACTION: Site map was updated today to include propane; - 587 cft will be added and 70 gal waste fuel to inventory. Note: Propane tanks must be secured to prevent release by chaining tanks against a wall or in a cart. Submit documentation that the propane cylinders have been secured w/i 30 days to this office.
② Disposal records for used/oil absorbents & pads ~~were~~ were not available for the last 3 years.
* CORRECTIVE ACTION: Submit most recent disposal receipts for used absorbents w/oil to this office w/i 30 days.

☐ This is an annual certification that the Hazardous Materials Business Plan (inventory, emergency contacts, emergency response plan, and employee training plan) is current and includes all the information required in the H&SC and is maintained at the site where hazardous materials are stored. | Initials of Business Representative

SUPPLEMENTAL COMPLIANCE INSPECTION REPORT

PERMIT # 202243
DATE 5/16/08
PAGE 2 OF 3

BUSINESS ADDRESS: 4918 N. Harbor Dr. #203   ZIP CODE: 92106

Remarks:
(3) Dates of start of accumulation for waste oil tank were not visible upon 1st inspection but were revealed by end of inspection so violation was removed.

(4) Battery receipts from PowerStride were avail. - dispose of approx. 20 batteries/year = ~40 lbs. Store properly on pallet.

(5) Universal Waste - (Used Fluor. bulbs) have been disposed through City of SD office on-site. No prev. receipts kept but will begin keeping receipts for 3 years from now on.

(6) Observed approx. 100 gal. max above ground tank/processing equipment for dipping lobster cages into tar. If this eqp. will no longer be used - conduct a waste determination to show that the tar is not hazardous waste or dispose of the tar per Haz Waste laws & Regulations.

(7) Photos from previous inspection (2006) corrective action were received today. Photos were taken/corrections done on 6/26/06

HAZARDOUS MATERIALS BUSINESS PLAN CERTIFICATION

The California Health & Safety Code (H&SC), Division 20, Chapter 6.95, Section 25505 provides for the following:
The San Diego County, Department of Environmental Health, Hazardous Materials Division (HMD), as the administering agency, requires a business that handles hazardous materials to submit the hazardous materials inventory, a list of emergency contacts, and a site plan, **in lieu of a complete Hazardous Materials Business Plan (HMBP),** only after the initial submittal of a complete HMBP. The business must certify that a complete HMBP has been prepared and is maintained at the site where the hazardous materials are stored. A complete HMBP includes the items to be submitted to the HMD and an Emergency Response Plan and Employee Training Plan, as established in H&SC Section 25504. The business must also annually certify that the HMBP is current and maintained on site. See Back for instructions and further clarification.

II. CERTIFICATION STATEMENT

☐ **CARCINOGEN/REPRODUCTIVE TOXIN ANNUAL RENEWAL WITHOUT CHANGES: This is an annual renewal to certify that the list of carcinogens and/or reproductive toxins last provided is a current list as specified in the San Diego County Code of Regulatory Ordinances Section 68.1113.**

Check only one of the following boxes:

☐ **INITIAL CERTIFICATION: This is to certify (H&SC Section 25505(e)(1)) that a complete HMBP, which includes the hazardous materials inventory, a list of emergency contacts, a site plan, emergency response plan, and employee training plan, has been prepared and is maintained at the site where the hazardous materials are stored.**

☐ **ANNUAL CERTIFICATION WITHOUT CHANGES: This is an annual certification (H&SC Section 25505(d)&(e)(2)) that the HMBP, which includes the hazardous materials inventory, a list of emergency contacts, a site plan, emergency response plan, and employee training plan, is current and includes all the information required in H&SC Section 25504, and 25509, and is maintained at the site where the hazardous materials are stored.**

☒ **CERTIFICATION OF CHANGES/REVISIONS: This is to certify that the HMBP has been reviewed (H&SC Section 25505(c) & 25510) and all necessary changes/revisions have been made. The HMBP is current and is maintained at the site where the hazardous materials are stored. Attached are changes to the hazardous materials inventory and/or list of emergency contacts. For site map revisions, submit only the pages that have a change or revision and attach to this certification. This submittal satisfies annual certification requirements specified in H&SC Section 25505(d)&(e)(2).**

As an Authorized Representative, I certify under the penalty of law, that I have personally examined and am familiar with the information submitted and believe the information is true, accurate, and complete. By checking any of the boxes above I also certify that : a)The information contained in the hazardous materials inventory most recently submitted to the CUPA or Administrative Agency is complete, accurate, and up to date; b) There has been no change in the quantity of hazardous materials reported in the most recently submitted inventory; and c) All hazardous materials subject to inventory requirements are listed on the most recently submitted inventory.

** If HIRT box is checked, follow HIRT policy to indicate on the inventory forms which hazardous materials make this a HIRT site.

DEH:HM-953 (05-06) NCR

Distribution: White – HMD; Yellow - Business Retains

ATTENTION: HAZARDOUS MATERIALS HANDLER

Chapter 6.95 of the California Health & Safety Code (H&SC) establishes minimum standards for Hazardous Materials Business Plans (HMBP). Each business shall prepare a HMBP if that business uses, handles, or stores a hazardous material/waste in quantities greater than or equal to the following:

- 55 gallons of a liquid.
- 500 pounds of a solid substance.
- 200 cubic feet of compressed gas.
- A toxic compressed gas (TLV $\leq$ 10 ppm) in any amount.
- Extremely hazardous substances in quantities equal to or greater than the Threshold Planning Quantities.

A complete HMBP consists of the following elements as established in H&SC Section 25504:

- Hazardous Materials Inventory
- Site Plan
- List of Emergency Contacts
- Emergency Response Plan
- Employee Training Plan

The San Diego County, Department of Environmental Health, Hazardous Materials Division (HMD), as the administering agency and with the concurrence of all the local fire jurisdictions, requires a business that handles hazardous materials to submit the hazardous materials inventory, a list of emergency contacts, and a site plan, <u>in lieu of a complete HMBP,</u> only after the initial submittal of a complete HMBP.

The business must certify that a complete HMBP has been prepared and is maintained at the site where the hazardous materials are stored and must also annually certify that the HMBP is current and maintained on site.

Substantial changes as listed below must be submitted to the HMD within 30 days of the change along with a certification that the HMBP is current and maintained on site:

- **A 100% or greater increase or decrease in the quantity of any hazardous material on the inventory**
- **Addition or deletion of a hazardous material to the inventory**
- **Changes in the storage, location, or use of hazardous materials**
- **Any change in business name, ownership, or address**
- **Any change in Emergency Coordinator/Contact information**

Instructions for Completing the Hazardous Materials Business Plan Certification

Note: The numbering of the instructions follows the data element numbers that are on Statewide reporting forms. These data element numbers are used for electronic submission and are the same as the numbering used in 27 CCR, Appendix C.

1. FACILITY ID NUMBER - Enter the 6 character Permit Number from your Permit. If you do not have a Permit, leave this blank.

3. BUSINESS NAME - Enter the full legal name of the business. This is the same as the terms "Facility Name" or "DBA" – Doing Business As.

103. BUSINESS SITE ADDRESS - Enter the street address where the facility is located. No post office box numbers are allowed.

104. CITY - Enter the city or unincorporated area in which business site is located.

105. ZIP CODE - Enter the zip code of business site. The extra 4-digit zip may also be added.

CARCINOGEN/REPRODUCTIVE TOXIN ANNUAL RENEWAL WITHOUT CHANGES - Any business which is required to submit a HMBP and handles a material which is a carcinogen or reproductive toxin, is required to submit a list of each such material handled during the previous year to the Director of the Department of Environmental Health. The list must include all carcinogens and reproductive toxins handled in quantities less than 55 gallons or 500 pounds. The list of such materials handled shall be renewed each year. Check this box to certify that the information previously submitted is still correct and no changes, additions or deletions are necessary. See <u>http://www.sdcounty.ca.gov/deh/hmd/forms_hmd.html</u> and review HM-9243 (Disclosure of Hazardous Materials Information Bulletin) to find out if you are required to submit this list.

INITIAL CERTIFICATION: Check this box if you are submitting a new HMBP.

ANNUAL CERTIFICATION WITHOUT CHANGES: Check this box if you are submitting an annual certification on an existing plan.

CERTIFICATION OF CHANGES/REVISIONS: Check this box if you are submitting changes to the hazardous materials inventory, list of emergency contacts, or the site plan. All pages should include the new submittal date. For multi-page site maps, include all pages with new submittal date.

On the above date, the County inspected your facility under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). **This report serves as a Notice to Comply (H&SC 25187.8 & 25404.1.2) for any minor violations as defined in H&SC 25404 and 25117.6.** This report may contain both minor and more significant (Class II) violations. Minor violations do not include repeat violations or violations remaining uncorrected for more than 30 days (or as specified below). Minor violations do not include knowing, willful, intentional, or chronic violations; nor do they include violations showing a pattern of neglect or disregard. The remarks below are intended to provide guidance to correct any violations indicated on the attached violation report. You must submit a written response to this report within 30 days (or as specified below) demonstrating that all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. Prompt correction can protect you from penalties for a "minor violation". Penalties can be imposed for each day in violation for all other violations even if they are corrected promptly. However, correction within 30 days (or as specified below) will make a penalty less likely.

NOTE: Reinspection fees will be charged if additional inspections are required to determine compliance.

On the above date, the County inspected your facility under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). **This report serves as a Notice to Comply (H&SC 25187.8 & 25404.1.2) for any minor violations as defined in H&SC 25404 and 25117.6.** This report may contain both minor and more significant (Class II) violations. Minor violations do not include repeat violations or violations remaining uncorrected for more than 30 days (or as specified below). Minor violations do not include knowing, willful, intentional, or chronic violations; nor do they include violations showing a pattern of neglect or disregard. The remarks below are intended to provide guidance to correct any violations indicated on the attached violation report. You must submit a written response to this report within 30 days (or as specified below) demonstrating that all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. Prompt correction can protect you from penalties for a "minor violation". Penalties can be imposed for each day in violation for all other violations even if they are corrected promptly. However, correction within 30 days (or as specified below) will make a penalty less likely.

NOTE: Reinspection fees will be charged if additional inspections are required to determine compliance.

ON 8/5/13, THE COUNTY CONDUCTED A ROUTINE INSPECTION ON THE FACILITY ABOVE TO DETERMINE COMPLIANCE FOR HANDLING, STORAGE AND DISPOSAL OF HAZARDOUS SUBSTANCES. CONSENT TO INSPECT WAS GRANTED BY MS. JESSICA KIRKPATRICK, OFFICE MANAGER AND I WAS ACCOMPANIED BY MR DAVID BASSHAM, DOCKMASTER DURING THE WALK-THROUGH

THE FOLLOWING ITEMS WERE OBSERVED DURING INSPECTION:
- 1 X 375 GAL AST FOR USED OIL
- 2 X 55 GAL DRUM FOR USED ABSORBENT
- 1 X 55 GAL DRUM FOR USED DRAINED FILTERS
- 2 X 272 CUFT OF PROPANE IN CYLINDERS
- 1 X 30 GAL DRUM FOR WASTE GASOLINE

REMARKS
- TWO (2) X 55 GAL DRUM FOR DRAINED USED OIL FILTERS LABELED WITH ACCUMULATION START DATE DURING INSPECTION
- REVIEWED DISPOSAL RECEIPTS/MANIFESTS FROM ASBURY. RETAIN ON FILE FOR 3 YEARS.

☑ **This is an annual certification that the Hazardous Materials Business Plan (inventory & site map, emergency contacts, emergency response plan, and employee training plan) is current and includes all the information required in the H&SC and is maintained at the site where hazardous materials are stored.** — **Initials of Facility Representative** JD

CONSENT TO CONDUCT INSPECTION GRANTED BY: Mary Kuhn TITLE: Operations Manager

INTRODUCTION:
I conducted an inspection of this facility today. Consent for this inspection, photos, and samples was verbally granted by the inspection contact. The scope of this inspection was Hazardous Materials Business Plan (HMBP) requirements and hazardous waste generator requirements.

During this inspection I observed the following hazardous materials and/or hazardous wastes:

2 x 55 Gallon Drums for used oil
2 x 55 Gallon Drums for soiled rags/absorbent
1 x 55 gallon with unknown red liquid, possible anti-freeze
40 gallons of propane
Mixed waste cylinders of oxygen, acetylene, and unknown. All assumed to be non-empty.

VIOLATION # 1
1010008 HMBP not certified annually as complete and accurate in CERS. HSC 25508.2

Classification: Minor

Observations:
Your HMBP must be certified at least annually to be complete and accurate in the California Environmental Reporting System. Records show it has been more than 12 months since an HMBP was submitted in CERS including up-to-date facility information, hazardous materials inventory, and emergency response and training plans sections as required by HSC.

Corrective Action Due By: 03/03/2016
This violation must be corrected online by logging into the facility account in CERS, reviewing the facility information, hazardous materials/waste inventory, and emergency response/training plans sections, and submitting them electronically. For assistance, visit our CERS Information webpage for guides and videos or call our CERS help line at (858) 505-6990 for one-on-one guidance.

VIOLATION # 2
1010005 Site map not submitted in CERS or not sufficient. HSC 25505(a)(2) and 25508(a)(1)(A)

Classification: Minor

Observations:
An adequate hazardous materials business plan (HMBP) site map with all required symbols has bot been submitted by this facility through he California Environmental Reporting System (CERS).

Update your site map to include all wastes and materials generated and/or stored on site. Include the location of emergency equipment on the site map.

Corrective Action Due By: 03/03/2016
This violation must be corrected online by logging into the facility account in CERS and uploading and submitting an up-to date site map with all required symbols. A sample map, instructions, and symbols legend can be found at http://www.sandiegocounty.gov/content/dam/sdc/deh/hmd/pdf/hmbp/forms/Site_Map_Handout_2-11.pdf

---

VIOLATION # 3
3030007 Failed to properly label/date hazardous waste container and/or tank. 22 CCR 66262.34(f)

Classification: Minor

Observations:
Observed 1 x 55 gallon drum (white plastic) that was not properly labeled as hazardous waste. The container(s) and/or tank was missing a label to identify its contents. Hazardous waste containers must be labeled with the following: The words "Hazardous Waste", the name and address of the generator, the composition and physical state of the waste, the hazardous properties of the waste, and the accumulation start date.

Additionally, manage the compressed gas cylinders by having them removed or labeling them with the appropriate description, including: Type of gas and if it is empty or not.

Corrective Action Due By: 03/03/2016
Immediately begin labeling the container(s) and/or portable tank(s) with the required labeling. Within 30 days, submit documentation to the HMD that this violation was corrected.

On the above date, the County inspected your facility under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). **This report serves as a Notice to Comply (H&SC 25187.8 & 25404.1.2) for any minor violations as defined in H&SC 25404 and 25117.6.** This report may contain both minor and more significant (Class II) violations. Minor violations do not include repeat violations or violations remaining uncorrected for more than 30 days (or as specified below). Minor violations do not include knowing, willful, intentional, or chronic violations; nor do they include violations showing a pattern of neglect or disregard. The remarks below are intended to provide guidance to correct any violations indicated on the attached violation report. You must submit a written response to this report within 30 days (or as specified below) demonstrating that all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. Prompt correction can protect you from penalties for a "minor violation". Penalties can be imposed for each day in violation for all other violations even if they are corrected promptly. However, correction within 30 days (or as specified below) will make a penalty less likely.

NOTE: Reinspection fees will be charged if additional inspections are required to determine compliance.

CONSENT TO CONDUCT INSPECTION GRANTED BY: Max Maher TITLE: Marina Manager

INTRODUCTION:
Today I conducted a routine inspection of Driscoll's Wharf to verify compliance with hazardous materials and hazardous waste regulations. Consent to conduct this inspection and take photos was granted by Max Maher, Marina Manager. This facility is a marina for commercial fishermen.

This facility is subject to Hazardous Materials Business Plan (HMBP) and hazardous waste generator requirements for storing reportable amounts of hazardous materials (55 gallons, 500 pounds, 200 cubic feet) and for generating hazardous waste. This facility appears to be a small quantity generator (SQG) of hazardous waste. Based on manifests / disposal receipts this facility appears to be a small quantity generator of hazardous waste for generating less than 1000 kg / 270 gallons of hazardous waste in a month.

I observed the following during inspection:
- 2 x 8 gallon cylinders and 1 x 5 gallon cylinder of propane
- 2 x 55 gallon drums designated for used oil (empty)
- 1 x 55 gallon drum designated for metal filters (empty and recycled)
- 1 x 55 gallon drum designated for oily absorbent (empty)
- 1 x trailer mounted diesel generator (capacity unknown)

VIOLATION # 1
HMD0138 Manifest signed by the TSDF not available for inspection. 22 CCR 66262.40(a); HSC 25185(a)(4)

Classification: Minor

Observations:
Manifest #016757088 dated 3/7/17 was missing Treatment Storage Disposal Facility signature. Max contacted the waste hauler during the inspection but was unable to retrieve the signed copy from the TSDF before the end of the inspection.

Corrective Action Due By:04/28/2018
Within 30 days, submit the TSDF signed copy of the above manifest to me at rajkumar.devasirvatham@sdcounty.ca.gov. Ensure that TSDF signed copies are retrieved from the TSDF within 35 days of diposal and that manifests are maintained on site for 3 years.

INSPECTION REMARKS:
Minor Violation Corrected During Inspection:

- EPA ID Number CAL000004624 was inactive as of 6/30/17. I assisted Max Maher in completing DTSC Form 1358 and submitting it to DTSC. Upon receipt of an electronic verification email from DTSC, ensure the electronic verification questionnaire (EVQ) is completed to reactive this facility's EPA ID Number. Ensure the EVQ is completed annually at https://evq.dtsc.ca.gov/Home.aspx to maintain an active EPA ID Number.

I assisted the business in annual recertification of HMBP, which was due in April 2018, and in updating federal hazard categories of inventory items in CERS. Ensure HMBP is renewed annually or within 30 days of significant changes by logging into CERS, verifying accuracy of Facility Information, Hazardous Materials Inventory, and Emergency Response Plans; and submitting all three sections.

Training records were reviewed dating back 3 years. Per Max Maher, he is normally the only employee onsite, but HMBP employee training is conducted annually through Unified Port of San Diego Stormwater BMP Training for other employees who may work here a few days a year.

I observed manifests / disposal receipts for 2017. World Oil / Asbury is the registered waste hauler for this facility. Per Max Maher and DTSC, no hazardous waste was generated / disposed in 2016. Per Max Maher, no hazardous waste has been generated yet in 2018.

Within 30 days, determine the capacity for the diesel generator stored on the offload pier. If the capacity is 55 gallons or more, add diesel as an inventory item in CERS and resubmit the Hazardous Materials Inventory section. Contact the CERS Help Desk at 858-505-6990 for assistance. See attached photo.

I provided Max Maher with a guidance document on Paint Care via email.

Per Max Maher, the business plans to relocated office suites within the same building in the next few months, but operations will remain at the same locations. Please remember to update the business' address in CERS within 30 days of moving suites.

☐ 1010014	Failure to submit emergency response plan in CERS, when not meeting agricultural handler exemption. HSC 25507.1(a) and 25508(a)(1)(A); 19 CCR 2670, 2671
☐ 1010015	Failure to submit employee training plan in CERS, when not meeting agricultural handler exemption. HSC 25507.1(a) and 25508(a)(1)(A)
☐ 1010016	HMBP not established or submitted in CERS, when not meeting the remote site exemption. HSC 25507.2 and 25508(a)(1)(A)
☐ 1020001	Employee training and/or plan for safety procedures in the event of a release or threatened release of a hazardous material not adequate, not established or not submitted in CERS. HSC 25505(a)(4) and 25508(a)(1)(A); 19 CCR 2659(a)
☐ 1020002	Initial &/or annual employee training not conducted in safety procedures for a hazardous material release or threatened release &/or employee training records not available or not maintained for 3 years. HSC 25505(a)(4); 19 CCR 2659(b)
☐ 1040001	Hazardous materials release or threatened release not immediately reported to the CUPA and OES upon discovery. HSC 25510(a); 19 CCR 2631(a)
☐ HMD1001	Unified Program Facility permit not obtained for hazardous materials. SDCC 68.905; 68.906, 68.907
☐ HMD1005	Emergency contact not provided or current in CERS. HSC 25508.1(f); SDCC 68.904(b)
☐ HMD1007	Highly toxic gas (TLV<10 ppm) not disclosed in CERS. SDCC 68.1113(a)
☐ HMD1008	Annual carcinogen/reproductive toxin list not submitted in CERS. SDCC 68.1113(b)
☐ 1010017	HMBP not readily available to facility personnel or the CUPA. HSC 25505(c)

HAZARDOUS WASTE REQUIREMENTS FOR SQGS ONLY

#	VIOLATION DESCRIPTION
☐ HMD0226	Did not accumulate waste in a container or tank. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(2)
☐ 3030007	Failed to properly label/date hazardous waste container &/or tank. 22 CCR 66262.34(f)
☐ 3030010	Accumulated waste too long (>180 or 270 days) or (>90 days). HSC 25201(a), 25123.3(h)(1); 22 CCR 66262.34(d); 40 CFR 262.34(e) and/or (f)
☐ 3030013	Failed to accumulate hazardous waste in a container that is in good condition. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(2), 265.171
☐ 3030015	Failed to accumulate or store hazardous waste in a lined &/or compatible container. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(2), 265.172
☐ 3030017	Failed to properly close hazardous waste container(s). 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(2), 265.173
☐ 3030019	Failed to inspect hazardous waste storage area at least weekly. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(2), 265.174
☐ 3030022	Failed to properly separate incompatible waste. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(2), 265.177
☐ 3030030	Failed to maintain &/or operate facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(4), 265.31
☐ 3030036	Failed to maintain adequate aisle space. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(4), 265.35
☐ 3010022	Failed to post, next to the telephone, emergency information containing the location of emergency equipment, contact names and phone numbers. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(5)(ii)
☐ 3020001	Failure to ensure employees are thoroughly familiar with proper waste handling and emergency procedures during normal facility operations and emergencies. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(5)(iii)
☐ 3030032	Failed to maintain the following emergency response equipment or equivalent: 1) An internal communication or alarm system; 2) A communication device, such as a telephone; 3) Portable fire extinguishers, fire/spill control equipment and decontamination equipment; and 4) Water at adequate volume and pressure. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(4), 265.32
☐ 3030039	Failed to have an emergency coordinator on the premises or on call, and available during an emergency. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(5)(i)
☐ HMD0412	Failed to implement and/or coordinate emergency response measures during an emergency, spill/release. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(5)(iv)

HAZARDOUS WASTE TANK SYSTEMS FOR SQGS ONLY

#	VIOLATION DESCRIPTION
☐ 3030024	Failed to operate uncovered tank to ensure at least 2 ft. of freeboard to prevent overtopping, unless the tank is equipped with a containment structure, a drainage control system, or a diversion structure with a capacity that equals or exceeds the volume of the top 2 ft. of the tank. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(3), 265.201(b)(c)

- ☐ 3030025 Failed to provide an overfill protection device on continuously fed hazardous waste tank(s). 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(3), 265.201(b)(4)
- ☐ 3030027 Failed to conduct daily tank inspection of discharge control system, monitoring equipment and waste level. 22 CCR 66262.34(d)(2); 40 CFR 265.201(c)(1-3), 262.34(d)(3)
- ☐ 3030028 Failed to conduct weekly hazardous waste tank inspection(s) to detect signs of leakage and ensure that the construction materials, fixtures and surrounding areas of the tank are in good condition. 22 CCR 66262.34(d)(2); 40 CFR 265.201(c)(4 & 5), 262.34(d)(3)
- ☐ 3050007 Failed to properly remove all waste upon closure, decontaminate, and document the closure of a hazardous waste tank system. 22 CCR 67383.3; 40 CFR 262.34(d)(3), 265.201(f)
- ☐ HMD1612 Hazardous waste improperly stored in a tank system causing leaks, corrosion, or failure. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(3), 265.201(b)
- ☐ HMD1614 Failed to pre-notify the CUPA in writing prior to closing a hazardous waste tank system. 22 CCR 67383.3(a)(1)
- ☐ HMD1615 Failed to properly accumulate ignitable or reactive waste in a tank system. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(3), 265.201(g)

HAZARDOUS WASTE REQUIREMENTS FOR SQGS AND LQGS

RECORD KEEPING/OPERATIONAL REQUIREMENTS

#		VIOLATION DESCRIPTION
	☐ HMD0131	Unified Program Facility Permit not obtained &/or maintained for the generation of hazardous waste. SDCC 68.905
	☐ HMD0150	Failed to submit complete and accurate Facility Information in CERS. 27 CCR 15188(b-c); SDCC 68.904(b)
	☐ 3030053	Failed to maintain waste analysis records, analytical records &/or waste determination results for at least 3 years. 22 CCR 66262.40(c)
	☐ 3010002	Failed to obtain &/or maintain an active EPA ID Number. 22 CCR 66262.12(a)
	☐ 3010008	Failed to properly complete a uniform hazardous waste manifest. 22 CCR 66262.23(a)
	☐ 3010009	Failed to submit an Exception Report to DTSC for hazardous waste manifest. HSC 25123.3(h)(2); 22 CCR 66262.42(b), (c), &/or (d)
	☐ 3010010	Failed to maintain copies of Uniform Hazardous Waste Manifest, consolidated manifest, or Bills of Lading for 3 years. HSC 25160.2(b)(3), 25185(a)(4); 22 CCR 66262.40(a), 66262.23(a)(3)
	☐ 3010011	Failed to send copy of the uniform hazardous waste manifest to DTSC within 30 days of shipment. 22 CCR 66262.23(a)(4)
	☐ 3010013	Failed to meet the consolidated manifesting requirements for waste shipment. HSC 25160.2(b)(3) &/or (c)
	☐ 3010014	Failed to retain at the generator's place of business disposal records of spent lead-acid batteries for at least 3 years. 22 CCR 66266.81(a)(4)(A) &/or (B)
	☐ 3030006	Failed to determine if a hazardous waste is restricted or prohibited from land disposal and has to be treated. 22 CCR 66268.7(a)(1)
	☐ 3010016	Failure of recycler who recycles more than 100 kilograms per month of a recyclable material to submit the biennial Recyclable Materials Report (RMR) in CERS when claiming exclusion or exemption. HSC 25143.10(a), (c) &/or (d)
	☐ HMD0149	Failed to keep disposal receipts for drained used oil filters and/or drained fuel filters for 3 years. HSC 25250.22; 22 CCR 66266.130(c)(5)
	☐ HMD0152	Failed to report &/or update the required inventory information for hazardous waste(s) generated at the facility in CERS. SDCC 68.904(a)(2)
	☐ HMD0140	Failed to have Land Disposal Restriction documentation onsite for 3 years. 22 CCR 66268.7(a)(8)
	☐ 3250005	Failed to obtain a Treatment, Storage and Disposal Facility (TSDF) permit or authorization to store/treat/dispose of hazardous waste. HSC 25201(a)
	☐ 3050005	Failed to have adequate records demonstrating claim of exemption or exclusion for recyclable materials. HSC 25143.2(f)
	☐ HMD0142	Failed to notify the CUPA in CERS for onsite hazardous waste treatment/tiered permitting. HSC 25201(a)
1	☒ HMD0138	Manifest signed by the TSDF not available for inspection. 22 CCR 66262.40(a); HSC 25185(a)(4)

DISPOSAL AND TRANSPORTATION

#		VIOLATION DESCRIPTION
	☐ 3010007	Failed to prepare a hazardous waste manifest for the transport of a waste for off-site transfer, treatment, storage, or disposal. HSC 25160(b)(1) or (2), 25160.2(b)(9); 22 CCR 66262.20(a)
	☐ 3030005	Failed to make a proper waste determination. 22 CCR 66262.11, 66262.40(c)
	☐ 3050001	Failed to use a DTSC registered hazardous waste transporter to transport hazardous waste. HSC 25163(a)
	☐ 3050002	Failed to properly dispose of hazardous waste at an authorized facility. HSC 25189.5(a)
	☐ HMD0308	Impermissible dilution of hazardous waste. 22 CCR 66268.3(a)
	☐ HMD0305	Disposed of used oil illegally. HSC 25250.5(a), 25189.5(a)
	☐ HMD0306	Failed to properly dispose of oil-based paint &/or hazardous waste latex paint liquid. HSC 25217.1, 25189.5(a)

STORAGE AND HANDLING

#		VIOLATION DESCRIPTION
	☐ 3030001	Failed to meet the management requirements when handling or storing spent lead-acid batteries. 22 CCR 66266.81(a)
	☐ 3030003	Failed to properly manage 'damaged' spent lead acid batteries so as to minimize the release of acid and lead and to protect the handlers and the environment 22 CCR 66266.81(b)
	☐ 3030004	Failed to properly manage, store, label &/or recycle used oil filters &/or used fuel filters. HSC 25250.22; 22 CCR 66266.130
	☐ 3050004	Generator intentionally contaminated used oil with another hazardous waste other than minimal amounts of fuel. HSC 25250.7(a), (c)
	☐ HMD0222	Failed to properly label Excluded Recyclable Materials (ERM) accumulated in a container or tank. HSC 25143.9(a)
	☐ HMD0216	Failed to label hazardous material container within 10 days after the container was discovered to be mislabeled or inadequately labeled. HSC 25124(b)(3)(A); 22 CCR 66262.34(f)
	☐ HMD0217	Failed to repackage and properly label damaged/deteriorated hazardous material container within 96 hours. HSC 25124(b)(3)(B); 22 CCR 66262.34(f)
	☐ HMD0219	Failed to properly segregate used oil &/or fuel drained from filters. HSC 25250.22(b)(4); 22 CCR 66266.130(c)(6)
	☐ 3030057	Failed to comply with hazardous waste satellite container regulation. 22 CCR 66262.34(e)
	☐ HMD0023	Failed to properly empty container, failed to manage non-empty container, or inner liner removed from a container. 22 CCR 66261.7(b), (d), (e) &/or (r)
	☐ 3030058	Failed to mark date on empty container larger than 5 gallons &/or manage it within one year. 22 CCR 66261.7(f)
	☐ 3030059	Failure of the owner or operator managing laboratory hazardous waste in a laboratory accumulation area to comply with the quantity limitations, management, training, or documentation requirements. HSC 25200.3.1(b)

On the above date, the County inspected your facility under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). **This report serves as a Notice to Comply (H&SC 25187.8 & 25404.1.2) for any minor violations as defined in H&SC 25404 and 25117.6.** This report may contain both minor and more significant (Class II) violations. Minor violations do not include repeat violations or violations remaining uncorrected for more than 30 days (or as specified below). Minor violations do not include knowing, willful, intentional, or chronic violations; nor do they include violations showing a pattern of neglect or disregard. The remarks below are intended to provide guidance to correct any violations indicated on the attached violation report. You must submit a written response to this report within 30 days (or as specified below) demonstrating that all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. Prompt correction can protect you from penalties for a "minor violation". Penalties can be imposed for each day in violation for all other violations even if they are corrected promptly. However, correction within 30 days (or as specified below) will make a penalty less likely.

NOTE: Reinspection fees will be charged if additional inspections are required to determine compliance.

CONSENT TO CONDUCT INSPECTION GRANTED BY: Valerie Law TITLE: Marina Manager

INTRODUCTION:
This was a routine Certified Unified Program Agency (CUPA) compliance inspection conducted on March 18, 2021 by Environmental Health Specialist, Danielle Ceniceros at Driscoll's Wharf for the on-site management of Hazardous Materials and Hazardous Waste. The scope of this inspection includes the following: 1) Hazardous Materials Business Plan 2) Hazardous Waste Management requirements.

Consent was granted by: Valerie Law, Marina Manager for the following:

-conduct the inspection

This facility is a boating business that offers pierside, maintenance, and marine repair services.

<u>Inspection Summary:</u>

NOTE: the inspection was conducted on March 18, 2021. The inspection report was issued to the facility on March 18, 2021.

<u>Hazardous Materials Business Plan (HMBP):</u>

- Annual employee training records were available and reviewed for 2018, 2019, and 2020. Per Valerie Law, Marina Manager, the annual training for 2021 has not been completed, yet, but will be in the future.

- The HMBP was available for review on-site. The HMBP was submitted on March 17, 2021. Per the submittal, the facility is subject to the Hazardous Materials Business Plan and Hazardous Waste Generator requirements.

Hazardous Waste Generator Requirements:

- At the time of inspection, based on waste manifests and observations, this facility appears to be a small quantity generator [SQG] of hazardous waste.

- Per Valerie Law, Marina Manager, the hazardous waste storage area is inspected every morning at 6:00 am and at the end of the day, every day.

- Contingency Plan/Emergency information accessible via the HMBP.

- Per Hazardous Waste Tracking System, this facility's EPA ID # CAL000004624 and was active at the time of this inspection.

- Waste disposal records were available for review during the inspection. Based on records, this facility is using Asbury Environmental Services, Inc. DBA World Oil as their waste hauler. They average a waste pick up every month or as needed.

INSPECTION REMARKS:

This report was reviewed with Valerie Law, Marina Manager, during a phone call and was not signed due to current Public Health Orders and COVID-19 restrictions.

Local information and updates about COVID-19 are available online at:

HAZARDOUS WASTE REQUIREMENTS FOR SQGS ONLY

#	VIOLATION DESCRIPTION
☐ HMD0226	Did not accumulate waste in a container or tank. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(2)
☐ 3030007	Failed to properly label/date hazardous waste container &/or tank. 22 CCR 66262.34(f)
☐ 3030010	Accumulated waste too long (>180 or 270 days) or (>90 days). HSC 25201(a), 25123.3(h)(1); 22 CCR 66262.34 (b), 66262.34(d); 40 CFR 262.34(e) and/or (f)
☐ 3030013	Failed to accumulate hazardous waste in a container that is in good condition. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(2), 265.171
☐ 3030015	Failed to accumulate or store hazardous waste in a lined &/or compatible container. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(2), 265.172
☐ 3030017	Failed to properly close hazardous waste container(s). 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(2), 265.173
☐ 3030019	Failed to inspect hazardous waste storage area at least weekly. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(2), 265.174
☐ 3030022	Failed to properly separate incompatible waste. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(2), 265.177
☐ 3030030	Failed to maintain &/or operate facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(4), 265.31
☐ 3030036	Failed to maintain adequate aisle space. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(4), 265.35
☐ 3010022	Failed to post, next to the telephone, emergency information containing the location of emergency equipment, contact names and phone numbers. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(5)(ii)
☐ 3020001	Failure to ensure employees are thoroughly familiar with proper waste handling and emergency procedures during normal facility operations and emergencies. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(5)(iii)
☐ 3030032	Failed to maintain the following emergency response equipment or equivalent: 1) An internal communication or alarm system; 2) A communication device, such as a telephone; 3) Portable fire extinguishers, fire/spill control equipment and decontamination equipment; and 4) Water at adequate volume and pressure. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(4), 265.32
☐ 3030039	Failed to have an emergency coordinator on the premises or on call, and available during an emergency. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(5)(i)
☐ HMD0412	Failed to implement and/or coordinate emergency response measures during an emergency, spill/release. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(5)(iv)

HAZARDOUS WASTE TANK SYSTEMS FOR SQGS ONLY

#	VIOLATION DESCRIPTION

- [ ] 3030024 Failed to operate uncovered tank to ensure at least 2 ft. of freeboard to prevent overtopping, unless the tank is equipped with a containment structure, a drainage control system, or a diversion structure with a capacity that equals or exceeds the volume of the top 2 ft. of the tank. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(3), 265.201(b)(c)
- [ ] 3030025 Failed to provide an overfill protection device on continuously fed hazardous waste tank(s). 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(3), 265.201(b)(4)
- [ ] 3030027 Failed to conduct daily tank inspection of discharge control system, monitoring equipment and waste level. 22 CCR 66262.34(d)(2); 40 CFR 265.201(c)(1-3), 262.34(d)(3)
- [ ] 3030028 Failed to conduct weekly hazardous waste tank inspection(s) to detect signs of leakage and ensure that the construction materials, fixtures and surrounding areas of the tank are in good condition. 22 CCR 66262.34(d)(2); 40 CFR 265.201(c)(4 & 5), 262.34(d)(3)
- [ ] 3050007 Failed to properly remove all waste upon closure, decontaminate, and document the closure of a hazardous waste tank system. 22 CCR 67383.3; 40 CFR 262.34(d)(3), 265.201(f)
- [ ] HMD1612 Hazardous waste improperly stored in a tank system causing leaks, corrosion, or failure. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(3), 265.201(b)
- [ ] HMD1614 Failed to pre-notify the CUPA in writing prior to closing a hazardous waste tank system. 22 CCR 67383.3(a)(1)
- [ ] HMD1615 Failed to properly accumulate ignitable or reactive waste in a tank system. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(3), 265.201(g)

HAZARDOUS WASTE REQUIREMENTS FOR SQGS AND LQGS

RECORD KEEPING/OPERATIONAL REQUIREMENTS

\# VIOLATION DESCRIPTION

- [ ] HMD0131 Unified Program Facility Permit not obtained &/or maintained for the generation of hazardous waste. SDCC 68.904; 68.905; 68.907.1
- [ ] HMD0150 Failed to submit complete and accurate Facility Information in CERS. 27 CCR 15188(b-c); SDCC 68.904(b)
- [ ] 3030053 Failed to maintain waste analysis records, analytical records &/or waste determination results for at least 3 years. 22 CCR 66262.40(c)
- [ ] 3010002 Failed to obtain &/or maintain an active EPA ID Number. 22 CCR 66262.12(a)
- [ ] 3010008 Failed to properly complete a uniform hazardous waste manifest. 22 CCR 66262.23(a)
- [ ] 3010009 Failed to submit an Exception Report to DTSC for hazardous waste manifest. HSC 25123.3(h)(2); 22 CCR 66262.42(b), (c), &/or (d)
- [ ] 3010010 Failed to maintain copies of Uniform Hazardous Waste Manifest, consolidated manifest, or Bills of Lading for 3 years. HSC 25160.2(b)(3), 25185(a)(4); 22 CCR 66262.40(a), 66262.23(a)(3)
- [ ] 3010011 Failed to send copy of the uniform hazardous waste manifest to DTSC within 30 days of shipment. 22 CCR 66262.23(a)(4)
- [ ] 3010013 Failed to meet the consolidated manifesting requirements for waste shipment. HSC 25160.2(b)(3) &/or (c)
- [ ] 3010014 Failed to retain at the generator's place of business disposal records of spent lead-acid batteries for at least 3 years. 22 CCR 66266.81(a)(4)(A) &/or (B)
- [ ] 3030006 Failed to determine if a hazardous waste is restricted or prohibited from land disposal and has to be treated. 22 CCR 66268.7(a)(1)
- [ ] 3010016 Failure of recycler who recycles more than 100 kilograms per month of a recyclable material to submit the biennial Recyclable Materials Report (RMR) in CERS when claiming exclusion or exemption. HSC 25143.10(a), (c) &/or (d)
- [ ] HMD0149 Failed to keep disposal receipts for drained used oil filters and/or drained fuel filters for 3 years. HSC 25250.22; 22 CCR 66266.130(c)(5)
- [ ] HMD0152 Failed to report &/or update the required inventory information for hazardous waste(s) generated at the facility in CERS. SDCC 68.904(a)(2)
- [ ] HMD0140 Failed to have Land Disposal Restriction documentation onsite for 3 years. 22 CCR 66268.7(a)(8)
- [ ] 3250005 Failed to obtain a Treatment, Storage and Disposal Facility (TSDF) permit or authorization to store/treat/dispose of hazardous waste. HSC 25201(a)
- [ ] 3050005 Failed to have adequate records demonstrating claim of exemption or exclusion for recyclable materials. HSC 25143.2(f)
- [ ] HMD0142 Failed to notify the CUPA in CERS for onsite hazardous waste treatment/tiered permitting. HSC 25201(a)
- [ ] HMD0138 Manifest signed by the TSDF not available for inspection. 22 CCR 66262.40(a); HSC 25185(a)(4)
- [ ] 3010035 Failure to annually submit notification of generator's intent to remotely consolidate hazardous waste. HSC 25110.10(d)

DISPOSAL AND TRANSPORTATION

\# VIOLATION DESCRIPTION

- [ ] 3010007 Failed to prepare a hazardous waste manifest for the transport of a waste for off-site transfer, treatment, storage, or disposal. HSC 25160(b)(1) or (2), 25160.2(b)(9); 22 CCR 66262.20(a)
- [ ] 3030005 Failed to make a proper waste determination. 22 CCR 66262.11, 66262.40(c)
- [ ] 3050001 Failed to use a DTSC registered hazardous waste transporter to transport hazardous waste. HSC 25163(a)
- [ ] 3050002 Failed to properly dispose of hazardous waste at an authorized facility. HSC 25189.5(a)
- [ ] HMD0308 Impermissible dilution of hazardous waste. 22 CCR 66268.3(a)
- [ ] HMD0305 Disposed of used oil illegally. HSC 25250.5(a), 25189.5(a)
- [ ] HMD0306 Failed to properly dispose of oil-based paint &/or hazardous waste latex paint liquid. HSC 25217.1, 25189.5(a)

STORAGE AND HANDLING

\# VIOLATION DESCRIPTION

- [ ] 3030001 Failed to meet the management requirements when handling or storing spent lead-acid batteries. 22 CCR 66266.81(a)
- [ ] 3030003 Failed to properly manage 'damaged' spent lead acid batteries so as to minimize the release of acid and lead and to protect the handlers and the environment 22 CCR 66266.81(b)
- [ ] 3030004 Failure to properly manage used oil filters and/or fuel filters in accordance with the requirements. HSC 25250.22; 22 CCR 66266.130
- [ ] 3050004 Generator intentionally contaminated used oil with another hazardous waste other than minimal amounts of fuel. HSC 25250.7(a), (c)
- [ ] HMD0222 Failed to properly label Excluded Recyclable Materials (ERM) accumulated in a container or tank. HSC 25143.9(a)
- [ ] HMD0216 Failed to label hazardous material container within 10 days after the container was discovered to be mislabeled or inadequately labeled. HSC 25124(b)(3)(A); 22 CCR 66262.34(f)
- [ ] HMD0217 Failed to repackage and properly label damaged/deteriorated hazardous material container within 96 hours. HSC 25124(b)(3)(B); 22 CCR 66262.34(f)
- [ ] HMD0219 Failed to properly segregate used oil &/or fuel drained from filters. HSC 25250.22(b)(4); 22 CCR 66266.130(c)(6)
- [ ] 3030057 Failed to comply with hazardous waste satellite container regulation. 22 CCR 66262.34(e)
- [ ] HMD0023 Failed to properly empty container, failed to manage non-empty container, or inner liner removed from a container. 22 CCR 66261.7(b), (d), (e) &/or (r)

- [ ] 3030058 Failed to mark date on empty container larger than 5 gallons &/or manage it within one year. 22 CCR 66261.7(f)
- [ ] 3030060 Failure of the owner or operator managing laboratory hazardous waste in a laboratory accumulation area to comply with the accumulation, storage, management, training, and/or record-keeping requirements. HSC 25200.3.1(b) and/or (c)

UNIVERSAL WASTE HANDLER REQUIREMENTS

VIOLATION DESCRIPTION

- [ ] 3010004 Failed to obtain a California ID Number from DTSC or federal ID Number from USEPA prior to accumulating 5,000 kgs or more of Universal Waste. 22 CCR 66273.32(a-b)
- [ ] HMD0151 Failed to maintain universal waste handler training records for 3 years. 22 CCR 66273.36(c),(d)
- [ ] 3020003 Failed to properly train handlers of universal waste in universal waste management and response procedures. 22 CCR 66273.36(a),(b)
- [ ] 3030008 Failed to properly label or mark Universal Waste container, package, or pallet (excluding CESQUWG) 22 CCR 66273.34
- [ ] 3030011 Failed to properly dispose of Universal Waste within one year. 22 CCR 66273.35(a) &/or (b)
- [ ] HMD0147 Failed to keep records of offsite Universal Waste shipment(s) available for inspection for 3 years. 22 CCR 66273.39(c),(d)(2)
- [ ] 3030051 Failed to meet accumulation, labeling, marking, &/or containment standards for Universal Waste aerosol containers. HSC 25201.16(f)
- [ ] 3040004 Failed to manage universal waste in a manner to prevent release(s) to the environment. 22 CCR 66273.33; 66273.33.5
- [ ] HMD0307 Disposal of universal waste (UW) to an unauthorized point. HSC 25189.5(a); 22 CCR 66273.31(a), 66273.8(b)
- [ ] 3010005 Failure of a universal handler of electronic devices or CRTs from an offsite source to notify DTSC 30 days prior to acceptance. 22 CCR 66273.32(c)
- [ ] 3010020 Failure of a universal waste handler to submit an annual report that includes all required information to DTSC by February 1 of every year . 22 CCR 66273.32(d)
- [ ] 3010006 Failure of the universal waste handler who sends electronic devices or CRTs to any foreign destination to notify DTSC 60 days prior to export and send a copy to the CUPA. 22 CCR 66273.40(a)(3)

CERTIFIED APPLIANCE RECYCLER REQUIREMENTS

VIOLATION DESCRIPTION

- [ ] 3010033 Failure to obtain Certified Appliance Recycler certification (CAR) from DTSC. HSC 25211.4
- [ ] 3010034 Failure of certified appliance recycler (CAR) to provide documentation that all materials that require special handling (MRSH) have been properly removed and managed. HSC 25211.2, 25211.3
- [ ] 3030055 Failure of certified appliance recycler (CAR) to properly remove and dispose of all materials that require special handling (MRSH). HSC 25211.3, 25212 (a), (b), and/or (c)

SAMPLING PLAN FOR DETERMINING SUITABILITY OF COMMERCIAL BASIN SEDIMENTS FOR UPLAND DISPOSAL

Dear Mr. Haynie,

Clean-Up and Abatement Order Nos. 88-78, 88-79, 88-86, and 89-31 require clean-up of sediments within leasehold regions of the Commercial Basin to levels of 530 mg/kg - dry weight copper and 4.8 mg/kg - dry weight mercury (Figure 1). Affected sediment extends to a depth of approximately three feet at Mauricio & Sons, two feet at Kettenburg Marine and Driscoll Custom Boats, and four feet at Bay City Marine. The cleanup action is proposed to be accomplished by dredging to remove the affected sediment. The dredge permit application will request an additional two-foot overdredge allowance at all sites. It is anticipated the proposed dredging operation will consist of mechanical clam shell dredging and depositing the material onto a barge. The barge will transport the dredged materials to a shore facility for disposal at an appropriate upland site.

As a result of the anticipated process, the entire soil column within the dredged mass will be thoroughly mixed. To provide an accurate characterization of the soils in this condition, samples will be collected from the affected areas and mixed together. Figures two through four indicate the approximate location of core samples within each leasehold. Two core samples will be collected from each leasehold and combined into one analytical sample per leasehold.

The composite sediment samples will be analyzed for hazardous waste substances as defined by California Code of Regulations, Title 22, Section 662619.24. Previous testing of sediments from the affected areas indicates that metals are the only substances of concern. Volatile organic compounds were not detected. One PCB (Aroclor 1254) was found in trace amounts. Since dioxin is historically not a problem in the San Diego Bay region and local laboratories can not provide dioxin analysis, we will not test for the presence of dioxin.

2608 SHELTER ISLAND DRIVE — SUITE 200 — SAN DIEGO, CA 92106
TELEPHONE (619) 222-0016 — FACSIMILE (619) 222-5736

In addition to the above described testing, Greenfield Environmental is investigating the feasibility of physically separating the sand from the metal-bearing particles. If physical separation is feasible the volume of metal contaminated material would be reduced. Disposal options for the separated material would be determined after material characterization.

Costs for the proposed sampling program are attached. The cost for obtaining eight vibracore samples assumes that the work can be done immediately after the sampling team completes a current project. It is anticipated sampling will be performed either April 2 or 3. If sampling can not be done then the field work cost must be renegotiated.

If you have any questions please do not hesitate to call me at (619) 222-0016.

Cordially,

Jean A. Nichols, Ph.D.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1903 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EXHIBIT B

DESCRIPTION OF PERSONAL PROPERTY

All of Grantor's estate, right, title and interest in, to and under any of the personal property and fixtures in, on, upon, relating to or arising out of the real property described in the foregoing Exhibit A:

INCLUDING all easements, rights, privileges, tenements, hereditaments and appurtenances thereunto belonging or in anywise appertaining, and all of the estate, right, title, interest, claim, demand, reversion or remainder whatsoever of Grantor therein or thereto, either at law or in equity, in possession or expectancy, now or hereafter acquired, including, without limitation, all and singular the ways, water, water courses, water rights and powers, liberties, privileges, sewers, pipes, conduits, wires and other facilities furnishing the utility or other services to the property (collectively, the "Land");

TOGETHER with all of the right, title and interest of Grantor in and to all buildings, structures and improvements now or hereafter erected on the Land including all plant equipment, apparatus, machinery and fixtures of every kind and nature whatsoever now or hereafter located on or forming part of said buildings, structures and improvements (collectively, the "Improvements"; the Land and Improvements being hereinafter collectively referred to as the "Premises");

TOGETHER with all of the right, title and interest of Grantor in and to the land lying in the bed of any street, road, highway or avenue in front of or adjoining the Premises;

TOGETHER with all goods, equipment, machinery, furniture, furnishings, fixtures, appliances, inventory, building materials, chattels and articles of personal property, including any interest therein affixed to, attached to or used in any way in connection with or to be incorporated at any time into the Premises or placed on any part thereof wheresoever located, whether or not attached to or incorporated in the Premises, together with any and all replacements thereof, appertaining and adapted to the complete and compatible use, enjoyment, occupancy, operation or improvement of the Premises (collectively, the "Chattels");

TOGETHER with all leases of the Premises or the Chattels or any part thereof now or hereafter entered into and all right, title and interest of Grantor thereunder, including, without limitation, cash or securities deposited thereunder to secure performance by the lessees of their obligations thereunder (whether such cash or securities are to be held until the expiration of the terms of such leases or applied to one or more of the installments of rent coming due immediately prior to the expiration of such terms), all rights to all insurance proceeds and unearned insurance premiums arising from or relating to the Premises, all other rights and easements of Grantor now or hereafter existing pertaining to the use and enjoyment of the Premises and all right, title and interest of Grantor in and to all declaration of covenants, conditions and restrictions as may affect or otherwise relate to the Premises;

TOGETHER with all permits, plans, licenses, specifications, subdivision rights, security interests, ~~Contracts (as defined in the Purchase Agreement described below)~~, contract rights, public utility deposits, prepaid sewer and water hook-up charges, or other rights as may affect or otherwise relate to the Chattels or the Premises;

TOGETHER with all rents, issues, profits, prepaid municipal and utility fees, bonds, revenues, income and other benefits to which Grantor may now be entitled from, or which are derived from, the Premises or the Chattels; and

WITHOUT LIMITING THE GENERALITY OF THE FOREGOING, TOGETHER with all Intangibles, Personal Property and Subleases (as such terms are defined in that certain Purchase Agreement and Escrow Instructions dated as of May 6, 1992, as amended (the "Purchase Agreement"), between Grantor, as "Seller," and Grantee, as "Buyer").

EXHIBIT B

or improvement of the Premises (collectively, the "Chattels");

TOGETHER with leases of the Premises or the Chattels or any part thereof now or hereafter entered into and all right, title and interest of Grantor thereunder, including, without limitation, cash or securities deposited thereunder to secure performance by the lessees of their obligations thereunder (whether such cash or securities are to be held until the expiration of the terms of such leases or applied to one or more of the installments of rent coming due immediately prior to the expiration of such terms), all rights to all insurance proceeds and unearned insurance premiums arising from or relating to the Premises, all other rights and easements of Grantor now or hereafter existing pertaining to the use and enjoyment of the Premises and all right, title and interest of Grantor in and to all declaration of covenants, conditions and restrictions as may affect or otherwise relate to the Premises;

TOGETHER with all permits, plans, licenses, specifications, subdivision rights, security interests, contracts, contract rights, public utility deposits, prepaid sewer and water hook-up charges, or other rights as may affect or otherwise relate to the Chattels or the Premises;

TOGETHER with all rents, issues, profits, prepaid municipal and utility fees, bonds, revenues, income and other benefits to which Grantor may now be entitled from, or which are derived from, the Premises or the Chattels.

EDR Property Tax Map Report

Environmental Data Resources, Inc.'s EDR Property Tax Map Report is designed to assist environmental professionals in evaluating potential environmental conditions on a target property by understanding property boundaries and other characteristics. The report includes a search of available property tax maps, which include information on boundaries for the target property and neighboring properties, addresses, parcel identification numbers, as well as other data typically used in property location and identification.

Thank you for your business.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Kleinfelder, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

1 INTRODUCTION AND BACKGROUND

On behalf of the San Diego Unified Port District (SDUPD / Port District), Kleinfelder has prepared this *Limited Phase II Environmental Site Assessment Report* (Report) for 4900-4930 North Harbor Drive, San Diego, California (the Subject Property; Figures 1 and 2). This Report was prepared pursuant to Task Authorization No. 11, dated October 4, 2022, under the As-Needed Environmental Investigation Services Agreement No. 20-2020MA between Kleinfelder and the Port District.

The Port District requested a Limited Phase II Environmental Site Assessment (ESA) of the Subject Property to evaluate selected Recognized Environmental Conditions (RECs) identified in the *Phase I Environmental Site Assessment* (Kleinfelder, 2022). This report documents the field activities performed to complete the Limited Phase II ESA pursuant to the *Limited Phase II Environmental Site Assessment Work Plan (Work Plan)*, dated January 18, 2023 (Kleinfelder, 2023).

The Subject Property is assigned as San Diego County Assessor Parcel Number 760-004-42-00 and is located between 4900 and 4930 North Harbor Drive in San Diego, California (Figures 1 and 2). The northern corner of the Subject Property is located approximately 325 feet south of North Harbor Drive. The Subject Property consists of approximately 100,000-square feet of land area, 300,000-square feet of adjacent San Diego Bay (Bay), 35,000-square feet of commercial office space, five fixed-structure piers, a 750-foot-long concrete walkway, and a paved access road and parking lot. Three commercial buildings are located on the Subject Property and have addresses of 4904, 4918, and 4922 North Harbor Drive, from northwest to southeast, respectively. The Subject Property is bound by public restrooms and a sewer pump station to the north, multi-tenant commercial properties and boat docks further to the northwest, Naval Base Point Loma military facility generally to the east, and San Diego Bay (America's Cup Harbor) generally to the west.

1.1 PREVIOUS ENVIRONMENTAL ASSESSMENTS

Converse Environmental West, Report of Soil and Bay Sediment Characterization

An environmental investigation was performed on the Subject Property and adjacent property to the north in June 1992 on behalf of Driscoll Incorporated. The purpose of the investigation was to assess potential contamination on the Subject Property. Three Bay sediment samples were collected, and four soil borings were drilled on the Subject Property. Three additional soil borings were drilled to the north of the Subject Property. Soil samples were collected from 2.5 feet below ground surface (bgs) and from approximately 5 to 6 feet bgs from each soil boring. The soil samples collected on the Subject Property were only analyzed for total petroleum hydrocarbons (TPH) by USEPA Method 8015. The soil samples collected north of the Subject Property were analyzed for TPH as well as volatile organic compounds (VOCs). Based on the laboratory analytical results, TPH was not detected in the soil samples collected on the Subject Property. TPH, benzene, toluene, and xylenes were detected in soil samples collected approximately 150 to 300 feet north of the Subject property.

The Bay sediment samples were analyzed for metals, tributyltin (TBT), dibutyltin (DBT), and monobutyltin (MBT). Copper was detected up to 262 milligrams per kilogram (mg/kg), lead was detected up to 62.6 mg/kg, mercury was detected up to 2.9 mg/kg, and zinc was detected up to 253 mg/kg. Additionally, TBT was detected up to 17 micrograms per kilogram (µg/kg), DBT was detected up to 50 µg/kg, and MBT was detected up to 3 µg/kg. The copper, lead, and zinc concentrations detected in sediment on the Subject Property exceeded their respective Effects Range-Low (ERL) value and mercury exceeded the ERL and Effects Range-Medium (ERM) value (Long et al, 1995).

Engineering Science Applications, Boring Logs and Laboratory Data

On October 6, 1992, Engineering Science Applications submitted a *Boring Logs and Laboratory Data* report to the San Diego County Department of Environmental Health, in association with a soil and groundwater investigation at the Subject Property. The Subject Property address was listed as 4904–4922 North Harbor Drive and the name of the Subject Property at the time of the investigation was "Fisherman's Village." The purpose of the investigation was to assess petroleum hydrocarbon contamination; however, the source of contamination was not identified. The investigation included drilling six soil borings, throughout the Subject Property, to depths ranging from 6 to 8 feet bgs. A slight diesel odor was reported between approximately 0 and 3 feet bgs at the boring located southeast of 4904 North Harbor Drive. The laboratory analytical results indicate that total recoverable petroleum hydrocarbons (TRPH) were detected at 24 and 51 mg/kg in soil samples composited from multiple locations and depths. Additionally, in the boring located southeast of 4904 North Harbor Drive, TRPH was detected at 90 mg/kg at 2 feet bgs and at 1.7 milligrams per liter in groundwater.

Kleinfelder, Phase I Environmental Site Assessment

A *Phase I Environmental Site Assessment* (ESA) for the Subject Property was performed by Kleinfelder to identify historic use and environmental concerns (Kleinfelder, 2022). Among the RECs identified in the Phase I ESA, the following RECs were evaluated as part of this Limited Phase II ESA:

REC A, Lead Battery Reclamation – The Port District indicated that lead battery reclamation has occurred on the Subject Property. This activity may have impacted the subsurface on the Subject Property. The location(s) where lead battery reclamation occurred on the Subject Property is (are) unknown.

REC B, Lobster Cage Tar – The Port District and the San Diego County Department of Environmental Health indicated that lobster cages were dipped into tar on the Subject Property. This activity may have impacted the subsurface on the Subject Property. The location(s) where lobster cages were dipped into tar on the Subject Property is (are) unknown.

REC C, Concrete Staining in Hazardous Materials Storage Shed – Kleinfelder identified staining on the concrete floor of the hazardous materials storage shed during the Phase I ESA site reconnaissance. The hazardous material storage shed is used to store petroleum waste, therefore, the subsurface may be impacted in this area.

REC D, Oil-soaked carpet around former waste oil aboveground storage tank (AST) – The County of San Diego Department of Environmental Health reported the oil-soaked carpet in 2005 in the former hazardous waste storage area. The evidence of leakage near the former waste oil AST could indicate impacts to the subsurface in this area.

REC E, Oily debris below former waste oil AST – The County of San Diego Department of Environmental Health reported the oily debris in 2008 in the former hazardous waste storage area. The evidence of leakage near the former waste oil AST could indicate impacts to the subsurface in this area.

REC F, Contaminated Bay Sediment - Copper, lead, zinc, mercury, TBT, DBT, and MBT have been detected in Bay sediment within the Subject Property. The copper, lead, and zinc concentrations exceeded their respective ERL value and mercury exceeded the ERL and ERM value (Long et al, 1995). Leaching of metals from hull paints, overwater hull maintenance and other overwater boat maintenance activities within the wharf may have contributed to these sediment impacts.

REC G, Trench drain and storm drain outfall – Kleinfelder observed a trench drain at the entrance to the Chula Seafood restaurant on the Subject Property. The discharge location of this trench drain is unknown. Additionally, the storm drain catch basins on the Subject Property are connected to an outfall that discharges directly to the Bay (America's Cup Harbor). There is a potential that contaminants, originating near the trench drain and/or storm drain catch basins, could have been discharged to the Bay through the storm drain system and could have impacted Bay sediments within the waterside portion of the Subject Property.

REC H, Waste oil underground storage tank (UST) – Kleinfelder identified a waste oil UST on a 1984 site plan of the Subject Property. To assist with future site demolition or rehabilitation, the Port District has requested Kleinfelder to evaluate if the waste oil UST is still present on the Subject Property.

2 PURPOSE AND SCOPE

This report summarizes the findings of a limited soil, sediment, and groundwater assessment performed at the Subject Property for the purposes of evaluating impacts from past uses.

The Port District requested a Limited Phase II ESA of the Subject Property be performed to evaluate selected RECs identified in the *Phase I Environmental Site Assessment* (Kleinfelder, 2022). The Work Plan (Kleinfelder, 2023) was prepared to describe the planned soil, groundwater and sediment sampling activities to address the selected RECs. The purpose of this report is to summarize the Limited Phase II field activities and laboratory results, evaluate the selected RECs from the Phase I ESA based on the field observations and laboratory results, and provide conclusions and recommendations.

The scope of the Limited Phase II ESA activities included the following (a complete sampling methodology is detailed in Section 6):

- Pre-field activities including obtaining a County of San Diego Department of Environmental Health and Quality boring permit and underground service alert notification;
- Collection of soil and groundwater samples from four direct-push borings (B-1 through B-4) to evaluate RECs A through E, as identified previously in Section 1.1;
- Collection of one surficial sediment grab sample next to each of the five piers (Pier 4 through Pier 8) to evaluate REC F;
- Collection of one surficial sediment grab sample on the shoreline (OF-1), below the storm drain outfall, and performance of a storm drain pipeline survey to evaluate REC G;
- Analysis of soil, groundwater, and sediment samples for one or more of the following constituents of potential concern (COPCs) including total metals; polycyclic aromatic hydrocarbons (PAHs); polychlorinated biphenyls (PCBs); TPH as gasoline, diesel, and oil; organotins; and volatile organic compounds (VOCs); and
- Performance of a geophysical survey to evaluate REC H for the presence of an underground storage tank.

The approximate sampling locations are provided in Figure 2. Figure 2 also identifies which RECs were addressed by each sampling location.

3 PHYSICAL SETTING

The following sections summarize available information regarding geographic, geologic, and hydrogeologic conditions of the Subject Property.

3.1 SITE GEOGRAPHY

In general, the Subject Property is fairly level at an elevation of approximately 10 to 11 feet mean lower low water. The Subject Property includes an asphalt parking area, buildings, storage areas, five piers, and rip rap filled shoreline.

3.2 REGIONAL GEOLOGIC SETTING

San Diego County resides within the southern portion of California's Peninsular Ranges Geomorphic Province (California Geologic Survey, 2002; Norris and Webb, 1990). This province is characterized by an assemblage of north- to northwest-trending, high-relief mountain ranges stretching south from the Santa Monica Mountains in Los Angeles, through San Diego County, and into Baja California.

San Diego County encompasses 3 geomorphic sub-zones of the Peninsular Ranges Geomorphic Province set in a series of north to northwest trending belts, roughly parallel to the coastline. From west to east, these zones are comprised of a relatively narrow, low-relief coastal plain, a central, high-relief mountainous zone, and a low-lying desert zone.

The Subject Property is located within the coastal plain sub-zone which is dominated by a westward-thickening wedge of sedimentary units that were deposited on the Cretaceous- to Jurassic-age igneous and metamorphic bedrock material that outcrop in the central portion of San Diego County. These sedimentary units consist of a variety of claystone, siltstone, sandstone, and conglomerate deposited between the late Cretaceous-time and discontinuously through the Quaternary, the most recent geologic period.

3.3 SITE GEOLOGY

Lithology encountered during this investigation primarily consisted of a silty sand and gravel fill material and fine to coarse sands (Appendix A). The asphalt at the surface was approximately 3 inches thick.

3.4 REGIONAL HYDROGEOLOGIC SETTING

The Subject Property is not located within a named groundwater basin. Areas to the west of Interstate 5 do not have designated beneficial uses for groundwater and are excepted from the sources of drinking water policy (San Diego Regional Water Quality Control Board [SDRWQCB], 1994).

3.5 SITE HYDROGEOLOGY

Groundwater was encountered during this investigation at depths between approximately 7 feet and 8 feet bgs. The anticipated direction of groundwater flow in the vicinity of the Subject Property is to the southwest and southeast, toward America's Cup Harbor and San Diego Bay.

4 STORM DRAIN PIPELINE SURVEY

Atlas Technical Consultants (Atlas) performed a storm drain pipeline survey on the Subject Property on May 3 and May 4, 2023. The survey was conducted to identify and map storm drain inlet, outfall, and conveyance pipeline locations at the Subject Property. Atlas recorded a closed-circuit television video (CCTV) of the existing storm drain conveyance pipeline of the Subject Property. The CCTV video file of the storm drain line was submitted to the Port District separately.

The storm drain survey was conducted by initially walking the entire Site to identify potential storm drain inlets. If a suspected inlet was identified (e.g. surface grate, vault, catch basin), then Atlas visually inspected the feature to evaluate whether it could be a potential storm drain. Atlas identified three storm drain inlets (Inlets #1-3) and one outfall at the Subject Property (Figure 3). Atlas then performed a geophysical survey to map the subsurface locations of the storm drain conveyance pipeline between the inlets and outfall. Based on the survey, the three storm drain inlets were connected to the same storm drain conveyance pipeline and drained to the outfall located on the shoreline (Figure 3). In addition, Inlet #2 was connected to a pipeline leading from the adjacent Naval Base Point Loma military facility (Figure 3). No storm drain Best Management Practices (i.e. fiber rolls, filter fabric, etc.) were observed in or around the storm drain inlets.

Atlas attempted to record CCTV video of the storm drain conveyance pipelines between the inlets and the outfall. The full length of the conveyance pipeline between Inlet #2 and Inlet #3 was recorded. Only approximately 18 feet of pipeline was recorded from Inlet #2 towards Inlet #1 due to sediment and debris blockage within the pipeline (Figure 3). Additionally, during visual inspection above the inlet, Inlet #1 appeared to be clogged with sediment and debris (Figure 3), therefore the CCTV equipment was unable to be deployed below this inlet. Approximately 40 feet of pipeline was recorded from Inlet #2 toward the outfall and approximately 22 feet of pipeline was recorded from the outfall towards Inlet #2 (Figure 3). Atlas was unable to push the CCTV equipment past these distances due to obstructions (i.e. grout or lips in the concrete) on the bottom of the pipeline.

Kleinfelder's Phase I ESA identified a trench drain located at Chula Seafood (Figure 3), which had the potential to drain to the Bay. However, upon visual inspection, it did not appear that the trench drain was connected to a storm drain conveyance pipeline or the Bay outfall on the Subject Property. Although runoff was not observed by Kleinfelder, it is likely that this drain is used to collect runoff from inside the Chula Seafood loading area and has (or had) a sanitary sewer connection not identified during the visual inspection.

5 WASTE OIL UNDERGROUND STORAGE TANK GEOPHYSICAL SURVEY

Atlas performed a geophysical survey of the suspected waste oil UST area on the Subject Property on May 3 and May 4, 2023. Atlas conducted the geophysical survey using various geophysical instruments including ground penetrating radar, magnetic gradiometer, and electromagnetic devices to identify subsurface features that may indicate the presence of a UST or of a backfilled excavation that may indicate the historical presence of a UST. The results of the geophysical survey performed by Atlas is included in Appendix C.

The results of the geophysical survey conducted across the survey area (Figure 3) did not indicate the presence of a UST or of a backfilled excavation. Atlas identified various electromagnetic responses within the survey area, however they appear to be associated with building elements such as metal fencing, the metallic canopy/boat repair rack, and miscellaneous metal structures or equipment stored at the Subject Property.

6 SOIL, GROUNDWATER, AND SEDIMENT SAMPLING

Direct-push drilling and sampling was performed by H&P Mobile Geochemistry, Inc. (H&P) with oversight from Kleinfelder on May 4, 2023. Sample locations were selected to address RECs presented in Section 1.1 (Figure 2).

6.1 PRE-FIELD ACTIVITIES

The boring locations were marked out and Underground Service Alert of Southern California was notified at least 48 hours in advance of field work to mark out underground public utilities. Each sampling location was recorded using a hand-held Trimble Global Positioning System unit (Table 6-1). Kleinfelder also received boring construction permit LMWP-005880 from the San Diego County Department of Environmental Health and Quality prior to work being performed. A copy of the permit is included in Appendix A.

6.2 DIRECT PUSH SOIL AND GROUNDWATER SAMPLING AND ANALYSIS

Under Kleinfelder's supervision, H&P advanced four (4) borings (B-1 through B-4, Figure 2) using a direct-push drill rig. Soil samples were collected directly from the acetate sleeve provided by H&P and placed into laboratory-supplied glass jars. The acetate sleeves were advanced using a MacroCore™ sampler. Soil samples were collected at depths of approximately 0.5 foot, 3 feet, and 7 or 8 feet bgs.

Groundwater samples were collected from each boring through a 1-inch diameter slotted polyvinyl chloride (PVC) casing that was placed into the open boring. A new PVC casing was used for each boring. A disposable bailer was used to collect groundwater and decant into laboratory-supplied sample containers.

Soil and groundwater samples collected for environmental analysis were placed in appropriate laboratory-provided containers and stored in coolers with ice. The samples were transported by courier to Enthalpy Analytical in Orange, California under chain-of-custody documentation. Soil and groundwater samples were analyzed for California Code of Regulations (CCR) Title 22 metals by United States Environmental Protection Agency (USEPA) Methods 6010B/7471A/7470A, PAHs by USEPA Method 8270C-Selective Ion Monitoring (SIM), TPH as gasoline, oil, and diesel by USEPA Method 8015B and 8015M, and VOCs by USEPA Method 8260B.

The borings were also logged according to the Unified Soil Classification System and those logs are included as Appendix A. A photo-ionization detector was also used to screen the soil for potential volatile organic compounds.

6.3 SEDIMENT SAMPLING AND ANALYSIS

Bay sediment samples were collected at each of the five (5) pier locations (Figure 2) (Pier 4 through Pier 8). These samples were collected from the bottom of the Bay using a spring-loaded dredge sampler attached to a rope. The sampler was brought to the surface and the sample was placed into a stainless-steel bowl for processing. Sediment from the bowl was placed into glass jars with care taken not to include shell fragments, debris, sea grass, or kelp.

The Work Plan for this Limited Phase II ESA included collecting a sediment sample from within the storm drain pipe at the outfall on the shoreline of the Subject Property. However, no sediment was observed within the storm drain pipe at the outfall. Therefore, a sediment sample (OF-1) was collected from the shoreline, immediately below the outfall. The sediment sample was collected between the rip-rap boulders along the shoreline, approximately 12 inches directly below the opening of the outfall. OF-1 was collected using a disposable plastic trowel.

All sediment samples were placed in glass jars, labeled, and stored in coolers with ice. The sediment samples were transported by courier to Enthalpy Analytical in Orange, California under chain-of-custody documentation. Sediment samples were analyzed for CCR Title 22 metals by USEPA methods 6010B/7471A, PAHs by USEPA Method 8270C-SIM, PCBs by USEPA Method 8082, and organotins by Eurofins Calscience SOP-M422 (GC/MS-SIM). Organotin analysis was subcontracted by Enthalpy Analytical to Eurofins Calscience in Orange, California.

6.4 INVESTIGATIVE-DERIVED WASTE

Investigative-derived waste was not produced during the field activities performed.

6.5 60-DAY BORING COMPLETION REPORT

The 60-day boring completion report is included in Appendix A.

7 DATA MANAGEMENT AND QUALITY CONTROL

The following section summarizes the quality assurance (QA) and quality control (QC) program and data quality assessment. The data assessment follows the data quality objectives and the precision, accuracy, representativeness, comparability, and completeness criteria as presented in the Work Plan (Kleinfelder, 2023). The data quality assessment process consisted of a review, verification, validation, and evaluation of the analytical data generated during the project. The limited data quality assessment was performed using the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review (USEPA, 2010) as a reference.

A total of 12 soil samples, four (4) groundwater samples, and six (6) sediment samples were collected and submitted to Enthalpy Analytical and Eurofins Calscience for one or more of the following analyses:

- CCR Title 22 metals USEPA Method 6010B/7471A/7470A;
- TPH gasoline, diesel, and oil range organics by USEPA Method 8015B and 8015M;
- PAHs by USEPA Method 8270C-SIM;
- VOCs by USEPA Method 8260B;
- Organotins by Eurofins Calscience SOP-M422 (GC/MC-SIM).

One hundred percent of the data generated for this project underwent a limited data quality review by Kleinfelder. Two Level II data deliverable reports were evaluated during the data quality assessment, which consisted of evaluating the following parameters:

- Technical holding times and temperature;
- Chain-of-Custody forms;
- Sample results and analytical methods selected;
- Laboratory blanks;
- Laboratory control sample spike results; and,
- Matrix spike and matrix spike duplicate results.

Field and laboratory personnel implemented QA/QC procedures consistent with the QA criteria specified in the Work Plan. Laboratory QC samples were also analyzed consistent with the analytical method requirements.

During the data quality assessment, no quality discrepancies were observed. Based on the data quality assessment, data that have been qualified as estimated ("J" or "UJ" qualified) were retained. Based on the results of the data quality assessment, the project achieved a sample and analytical completeness goal of 100%. The data are acceptable for the intended use of the Project.

The outfall sediment sample (OF-1) did not meet the sample objective outlined in the Work Plan. The objective of sample OF-1 was to sample and analyze sediment from within the outfall to assess potential sediment contamination in the outfall from upland sources. However, since there was no sediment in the outfall at the time of sampling, a sediment sample was collected from the shoreline, immediately below the outfall. Therefore, the results may not be representative of contamination originating from upland sources via the storm drain conveyance system. Instead, the results of OF-1 may be representative of both upland and Bay sources (see further discussion in Sections 9.2.3 and 9.2.4).

8 LABORATORY ANALYTICAL RESULTS

Select analytical results for the soil, sediment, and groundwater samples are presented in Tables 8-1 through 8-5, Figures 4 through 6, and the laboratory analytical reports are included in Appendix B. A summary of the soil, sediment, and groundwater sample results is presented below.

8.1 SOIL SAMPLE RESULTS

Soil samples were collected from four (4) soil borings at the Subject Property (B-1 through B-4). The results of the soil sample analyses for metals are presented in Table 8-1 and for TPH are presented in Table 8-2 and are summarized below.

8.1.1 Metals

The results of the soil sample analyses for metals are presented in Table 8-1. The concentration ranges for metals are summarized below. The location and sample depth with the maximum concentration are included in parentheses:

- Antimony – Not detected
- Arsenic – 1.9 to 6.4 mg/kg (B-3 at 0.5 feet bgs)
- Barium – 27 to 150 mg/kg (B-4 at 8 feet bgs)
- Beryllium – Not detected to 0.51 mg/kg (B-1 at 0.5 feet bgs)
- Cadmium – Not detected
- Chromium – 11 to 24 mg/kg (B-1 at 0.5 feet bgs)
- Cobalt – 2.7 to 10 mg/kg (B-1 at 0.5 feet bgs)
- Copper - 8 to 48 mg/kg (B-1 at 3 feet bgs)
- Lead – 3.5 to 30 mg/kg (B-4 at 0.5 feet bgs)
- Mercury – Not detected to 0.26 mg/kg (B-4 at 8 feet bgs)
- Molybdenum – Not detected to 1.6 mg/kg (B-4 at 8 feet bgs)
- Nickel – 4 to 18 mg/kg (B-4 at 8 feet bgs)
- Selenium – Not detected

- Silver – Not detected
- Thallium – Not detected
- Vanadium – 25 to 53 mg/kg (B-1 at 0.5 feet bgs)
- Zinc – 38 to 58 mg/kg (B-3 at 7 feet bgs)

8.1.2 Total Petroleum Hydrocarbons

The results of the soil sample analyses for TPH are presented in Table 8-2 and on Figure 4. The concentration ranges for TPH are summarized below. The location and sample depth with the maximum concentration are included in parentheses:

- TPH as gasoline – Not detected
- TPH as diesel – Not detected to 260 mg/kg (B-4 at 8 feet bgs)
- TPH as oil – Not detected to 600 mg/kg (B-4 at 8 feet bgs)

8.1.3 Volatile Organic Compounds

Soil results for VOCs are included in the laboratory reports in Appendix B. One VOC analyte was detected in the soil samples analyzed: xylene at 0.5-foot bgs from B-3, at a concentration of 1.5 µg/kg.

8.1.4 Polycyclic Aromatic Hydrocarbons

Soil results for PAHs are included in the laboratory reports in Appendix B. PAHs were not detected above the laboratory reporting limits in the soil samples analyzed.

8.2 SEDIMENT SAMPLE RESULTS

Six (6) surficial sediment grab samples were collected from Bay sediment off of Piers 4 through 8 and at the shoreline outfall location (OF-1). The results of the sediment sample analyses for metals are presented in Table 8-3 and for organotins are presented in Table 8-4 and are summarized below.

8.2.1 Metals

The results of the sediment sample analyses for metals are presented in Table 8-3. The metals results that exceed ERLs are shown on Figure 5. The concentration ranges for metals are summarized below. The location with the maximum concentration is included in parentheses:

- Antimony – Not detected
- Arsenic – 2.6 to 4.8 mg/kg (Pier 6)
- Barium – 22 to 160 mg/kg (OF-1)
- Beryllium – Not detected
- Cadmium – Not detected
- Chromium – 11 to 57 mg/kg (Pier 4)
- Cobalt – 1.7 to 3.9 mg/kg (Pier 6)
- Copper - 59 to 170 mg/kg (Pier 4)
- Lead – 15 to 49 mg/kg (OF-1)
- Mercury – Not detected to 0.7 mg/kg (Pier 5)
- Molybdenum – Not detected to 3.9 mg/kg (Pier 4)
- Nickel – 3.1 to 25 mg/kg (Pier 4)
- Selenium – Not detected
- Silver – Not detected
- Thallium – Not detected
- Vanadium – 16 to 37 mg/kg (Pier 6)
- Zinc – 67 to 170 mg/kg (Pier 4)

8.2.2 Organotins

The results of the sediment sample analyses for organotins are presented in Table 8-4. The concentration ranges for organotins are summarized below. The location with the maximum concentration is included in parentheses:

- Tributyltin – Not detected to 4.4 ug/kg (Pier 8)
- Dibutyltin – Not detected to 7.4 ug/kg (OF-1)
- Monobutyltin – Not detected

8.2.3 Polycyclic Aromatic Hydrocarbons

Sediment results for PAHs are included with laboratory results in Appendix B. One PAH analyte was detected in the sediment samples analyzed: benzo(b)fluoranthene at Pier 5, at a concentration of 11 µg/kg.

8.2.4 Polychlorinated Biphenyls

Sediment results for PCBs are included with laboratory results in Appendix B. PCBs were not detected above laboratory reporting limits in the sediment samples analyzed.

8.3 GROUNDWATER SAMPLE RESULTS

One grab groundwater sample was collected from each of the four soil borings (B-1 through B-4). The results of the groundwater sample analyses for metals are summarized below and the results for TPH are presented in Table 8-5 and are summarized below.

8.3.1 Metals

The concentration ranges for metals are summarized below. The location with the maximum concentration is included in parentheses:

- Antimony – Not detected to 0.048 milligrams per liter (mg/L) (B-3)
- Arsenic – 0.17 to 1.1 mg/L (B-4)
- Barium – 1.8 to 4.8 mg/L (B-3)
- Beryllium – 0.0063 to 0.025 mg/L (B-4)
- Cadmium – 0.012 to 0.027 mg/L (B-4)
- Chromium – 0.6 to 1.6 mg/L (B-3)
- Cobalt – 0.16 to 0.57 mg/L (B-4)

- Copper – 2.3 to 9 mg/L (B-4)
- Lead – 1 to 6.8 mg/L (B-3)
- Mercury – Not detected to 1.5 ug/L (B-2)
- Molybdenum – 0.045 to 0.37 mg/L (B-4)
- Nickel – 0.26 to 1.3 mg/L (B-3 and B-4)
- Selenium – Not detected to 0.057 mg/L (B-3)
- Silver – Not detected to 0.02 mg/L (B-3)
- Thallium – Not detected
- Vanadium – 1.1 to 3.4 mg/L (B-3)
- Zinc – 3.4 to 13 mg/L (B-4)

8.3.2 Total Petroleum Hydrocarbons

The results of the groundwater sample analyses for TPH are presented in Table 8-5 and shown on Figure 6. The concentration ranges for TPH are summarized below. The location with the maximum concentration is included in parentheses:

- TPH as gasoline – Not detected
- TPH as diesel – Not detected to 4.6 J mg/L (B-4)
- TPH as oil – Not detected to 11 J mg/L (B-3 and B-4)

The "J" qualifier, as denoted above, designates an estimated concentration below the laboratory reporting limit. The laboratory noted possible matrix interference with all four groundwater samples because of the dark color of the sample extracts. The laboratory had to dilute the groundwater samples to test for TPH as diesel and oil because of the matrix interference (matrix interference can be caused by elevated concentrations of contamination within the sample). The laboratory reported the following dilution factors for each groundwater sample: 9.4 for B-1, 1.9 for B-2, 94 for B-3, and 94 for B-4. The higher dilution factors for samples B-3 and B-4 indicate higher levels of matrix interference (i.e. contamination) compared to samples B-1 and B-2.

8.3.3 Polycyclic Aromatic Hydrocarbons

Groundwater results for PAHs are included with laboratory results in Appendix B. PAHs were not detected above laboratory reporting limits in the groundwater samples analyzed.

8.3.4 Volatile Organic Compounds

Groundwater results for VOCs are included with laboratory results in Appendix B. VOCs were not detected above laboratory reporting limits in the groundwater samples analyzed.

9 DISCUSSION OF SAMPLING RESULTS

This section includes a discussion of the sampling results which consists of comparing the results to regulatory screening levels and evaluating the Phase I ESA RECs in light of the results of this Limited Phase II ESA.

9.1 COMPARISON TO REGULATORY SCREENING LEVELS

The sampling results from this Limited Phase II ESA were evaluated by comparing the sample concentrations to applicable regulatory screening levels as described below.

9.1.1 Soil

The soil concentrations were compared to California Department of Toxic Substances Control (DTSC)-modified Screening Levels (DTSC-SLs) for commercial/industrial soil (DTSC, 2022) and USEPA Regional Screening Levels (RSLs) for industrial soil (USEPA, 2023). TPH in soil was also compared to San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) Environmental Screening Levels (ESLs) for commercial/industrial soil (SFBRWQCB, 2019) as described below.

9.1.1.1 Metals

No metals, except arsenic, exceeded the DTSC-SLs or USEPA RSLs. Arsenic in soil exceeded the DTSC-SL for commercial/industrial soil of 0.36 mg/kg in all 12 soil samples analyzed from B-1 through B-4. Arsenic in soil also exceeded the USEPA RSL for industrial soil of 3 mg/kg in 8 of 12 soil samples analyzed. Although the concentrations of arsenic exceed the DTSC-SL and USEPA RSL, the concentrations were below the generally accepted California upper-bound background arsenic concentration of 12 mg/kg (DTSC, 2020). There are no suspected historical sources of arsenic at the Subject Property and the concentrations of arsenic detected at the Subject Property are generally uniform and likely representative of background conditions.

9.1.1.2 Total Petroleum Hydrocarbons

The TPH results in soil are depicted on Figure 4. TPH as gasoline was not detected above the laboratory reporting limits in any of the soil samples. TPH as diesel did not exceed the USEPA RSL or SFBRWQCB ESL.

TPH as oil did not exceed the USEPA RSL for high aliphatic TPH of 3,500,000 mg/kg in any of the soil samples. TPH as oil did exceed the USEPA RSL for high aromatic TPH of 220 mg/kg in B-3 at 7 feet bgs and in B-4 at 8 feet bgs (Figure 4). However, USEPA RSLs for TPH are established for aliphatic and aromatic fractions, which cannot be differentiated based on the laboratory testing that was completed. The actual screening level is considered between the aliphatic and aromatic screening levels (DTSC, 2021). Therefore, TPH concentrations have been compared to SFBRWQCB ESLs for commercial/industrial soil. Neither TPH as diesel nor TPH as oil exceeded the commercial/industrial SFBRWQCB ESLs of 1,200 mg/kg and 180,000 mg/kg, respectively.

9.1.1.3 VOCs

Only one VOC was detected: xylene at 0.5-foot bgs from B-3, at a concentration of 1.5 µg/kg. This concentration is below the USEPA RSL of 2,500,000 µg/kg.

9.1.1.4 PAHs

PAHs were not detected above the laboratory reporting limits in the soil samples analyzed.

9.1.2 Sediment

The sediment concentrations (in-Bay and on shoreline) were compared to ERL and ERM thresholds for adverse biological effects in a marine environment (Long et al., 1995) as described below.

9.1.2.1 Metals

Sediment results for metals that exceed ERLs are presented on Figure 5. Copper exceeded the ERL of 34 mg/kg and mercury exceeded the ERL of 0.15 mg/kg in all samples collected at the piers (Pier 4 through Pier 8), nickel exceeded the ERL of 20.9 mg/kg at Pier 4 and zinc exceeded the ERL of 150 mg/kg at Pier 4, Pier 5, and Pier 6. Copper exceeded the ERL of 34 mg/kg and lead exceeded the ERL of 46.7 mg/kg in the shoreline sediment sample (OF-1). None of the metals in any sediment sample exceeded the ERMs.

9.1.2.2 Organotins

No ERLs or ERMs have been established for organotins. Although no ERLs or ERMs have been established for organotins, TBT has been identified by the SDRWQCB as a contaminant that requires cleanup in sediment within San Diego Bay. According to SDRWQCB Cleanup and Abatement Order No. R9-2012-0024 for the Shipyard Sediment Site in San Diego Bay (SDRWQCB, 2012), a cleanup goal of 22 ug/kg was established for TBT for that site (22 ug/kg was also considered the background sediment chemistry level for that site). TBT was detected at 3.9 ug/kg at OF-1 and at 4.4 ug/kg at Pier 8. These concentrations are below the cleanup goal level of 22 ug/kg established at the Shipyard Sediment Site.

9.1.2.3 PAHs

One PAH, benzo(b)fluoranthene, was detected at Pier 5 at a concentration of 11 µg/kg. This concentration is below the DTSC-SL for commercial/industrial soil of 13,000 µg/kg.

9.1.2.4 PCBs

PCBs were not detected above laboratory reporting limits in the sediment samples analyzed.

9.1.3 Groundwater

The groundwater concentrations were compared to SFBRWQCB ESLs (SFBRWQCB), 2019) for gross contamination in groundwater as described below.

9.1.3.1 Metals

No metals exceeded the SFBRWQCB ESLs for gross contamination.

9.1.3.2 Total Petroleum Hydrocarbons

Groundwater results for TPH are presented on Figure 6. TPH as gasoline was not detected above laboratory reporting limits. A SFBRWQCB ESL for gross contamination has not been established for TPH as oil.

TPH as diesel exceeded the SFBRWQCB ESL for gross contamination of 2.5 mg/L at B-4. Additionally, in response to the matrix interference, the laboratory increased the reporting limits for TPH as diesel and as oil. The reporting limit for TPH as diesel for sample B-3 was 4.4 mg/L, which is greater than the SFBRWQCB ESL of 2.5 mg/L. TPH as diesel was not detected in B-3 at a concentration greater than 4.4 mg/L, however, it may still be present in the sample at a concentration greater than the ESL of 2.5 mg/L.

The SFBRWQCB ESL for gross contamination is based on the solubility threshold concentration of a given contaminant in water. A concentration above the ESL for gross contamination may indicate that a contaminant has reached its solubility threshold and therefore, may be present as a non-aqueous phase liquid (NAPL) at the sampling location. Because TPH as diesel at B-4 and potentially at B-3 exceeded the ESL for gross contamination, there is a potential for TPH as diesel to be present as NAPL (or at concentrations close to the solubility threshold of TPH as diesel) near the sample locations.

9.2 EVALUATION OF RECOGNIZED ENVIRONMENTAL CONDITIONS

The RECs described in Section 1.1 were evaluated based on the results of this Limited Phase II ESA as described below.

9.2.1 REC A Lead Battery Reclamation and REC B Lobster Cage Tar

REC A, Lead Battery Reclamation – The Port District indicated that lead battery reclamation has occurred on the Subject Property. This activity may have impacted the subsurface on the Subject Property. The location(s) of where lead battery reclamation occurred on the Subject Property is (are) unknown.

REC B, Lobster Cage Tar – The Port District and the San Diego County Department of Environmental Health indicated that lobster cages were dipped into tar on the Subject Property. This activity may have impacted the subsurface on the Subject Property. The location(s) of where lobster cages were dipped into tar on the Subject Property is (are) unknown.

Soil and groundwater samples were collected and analyzed at borings B-1 and B-2 to assess potential contamination associated with the lead battery reclamation and lobster cage tar operations, for which the locations were unknown, but were expected to have occurred in that general area of the Subject Property. Soil samples collected from borings B-1 and B-2 were analyzed for metals (in particular lead), which could indicate contamination from lead battery reclamation. Concentrations of lead reported in the soil samples collected from borings B-1 and B-2 were below the DTSC-SL of 500 mg/kg and USEPA RSL of 800 mg/kg for commercial/industrial soil and were generally low, ranging between 3.8 and 20 mg/kg. No other metals, other than arsenic (which was below the background level), exceeded DTSC-SL or USEPA RSLs in B-1 and B-2. In addition, the metals concentrations in groundwater were not elevated.

Soil and groundwater samples collected from borings B-1 and B-2 were analyzed for PAHs, which can indicate the presence of tar, as was used for the lobster cages at the Subject Property. However, no PAHs were detected above their respective laboratory reporting limits in soil or groundwater.

Based on the limited soil and groundwater sampling performed as part of this investigation, evidence of RECs A and B were not clearly identified in the subsurface, however, since the locations of RECs A and B are unknown, impacts from these RECS may be present elsewhere on the Subject Property.

9.2.2 REC C Hazardous Materials Storage Shed, REC D Oil-Soaked Carpet Below Former Waste Oil AST, and REC E Oily Debris Below Former Waste Oil AST

REC C, Concrete Staining in Hazardous Materials Storage Shed – Kleinfelder identified staining on the concrete floor of the hazardous materials storage shed during the Phase I ESA site reconnaissance. The hazardous material storage shed is used to store petroleum waste, therefore, the subsurface may be impacted in this area.

REC D, Oil-soaked carpet around former waste oil aboveground storage tank (AST) – The County of San Diego Department of Environmental Health reported the oil-soaked carpet in 2005 in the former hazardous waste storage area. The evidence of leakage near the former waste oil AST could indicate impacts to the subsurface in this area.

REC E, Oily debris below former waste oil AST – The County of San Diego Department of Environmental Health reported the oily debris in 2008 in the former hazardous waste storage area. The evidence of leakage near the former waste oil AST could indicate impacts to the subsurface in this area.

Soil and groundwater samples were collected and analyzed at borings B-3 and B-4 to assess the concrete staining in the hazardous materials storage shed and oil-soaked carpet and oily debris around and below the former waste oil AST on the Subject Property. Borings B-3 and B-4 were located approximately 40 feet and 50 feet, respectively, from San Diego Bay. The soil and groundwater samples at B-3 and B-4 were analyzed for TPH and VOCs, which would indicate contamination to the subsurface originating from the hazardous material storage shed and former waste oil AST. The sampling results indicated that the highest concentrations of TPH as diesel and oil in soil on the Subject Property were detected at B-3 and B-4. Additionally, the only detection of VOCs (xylene) in soil at the Subject Property were detected at B-3. Furthermore, the highest concentrations of TPH as diesel and oil in groundwater detected at the Subject Property were also detected at B-3 and B-4. As mentioned in Section 9.1.3.2, the concentration of TPH as diesel in groundwater at B-4 may indicate the presence of NAPL at that location. Based on the elevated concentrations of TPH in soil and groundwater at B-3 and B-4 and the detection of xylene in soil at B-3, the leakage of petroleum products within the hazardous material storage shed and the former waste oil UST appear to have impacted the Subject Property and warrants consultation with an appropriate regulatory agency (e.g. SDRWQCB).

9.2.3 REC F, Contaminated Bay Sediment

REC F, Contaminated Bay Sediment - Copper, lead, zinc, mercury, TBT, DBT, and MBT have been detected in sediment on the Subject Property. The copper, lead, and zinc concentrations exceeded their respective ERL value and mercury exceeded the ERL and ERM value (Long et al, 1995). Leaching of metals from hull paints, overwater hull maintenance and other overwater boat maintenance activities within the wharf may have contributed to these sediment impacts.

Bay sediment samples were collected and analyzed for metals and organotins to evaluate impacts to Bay sediments from activities on the Subject Property. Metals in Bay sediment may be associated with marine-related activities such as boat hull painting and coating, hull maintenance, and other over water boat maintenance activities as well as non-marine related upland activities such as from automobile brakes, paint and building coatings, galvanized steel and vehicle exhaust. Sources for organotins in Bay sediment are associated almost exclusively with antifouling coatings on marine vessels.

One or more metals including copper, mercury, nickel, and zinc exceeded their respective ERLs in the Bay sediment samples collected at all piers (Piers 4 through 8). The metals concentrations exhibit a generally decreasing trend in concentration from northwest (Pier 4) to southeast (Pier 8). However, overall, the concentrations of each metal do not vary widely between each Bay sediment sample. Because of this uniformity in concentrations, it is likely that the metals contamination in Bay sediment is the result of overwater marine activity on the Subject Property as opposed to a point source such as discharges from OF-1. This finding appears to be supported by the results of the shoreline sediment sample (OF-1), which had a different metals concentrations signature (higher barium and lead concentrations and lower copper and mercury concentrations) than the Bay sediment samples, indicating that the contamination on the shoreline includes material from upland sources via the storm drain outfall.

The organotins DBT and TBT were detected in the Bay sediment samples collected at Pier 7 and Pier 8. DBT and TBT were also detected in the shoreline sediment sample (OF-1). Because Pier 7 and Pier 8 are located farther from the shoreline sediment sample than Piers 4 through 6, and no DBT or TBT were detected at Piers 4 through 6, these results appear to suggest there are likely organotin sources associated with both overwater marine-related activities and upland marine-related activities on the Subject Property.

It is important to note that OF-1 was not collected from within the outfall pipe, therefore, the OF-1 sample may be representative of both upland sediment discharges and Bay sediment conditions. Consultation with an appropriate regulatory agency (e.g. SDRWQCB) is recommended.

Based on the Bay sediment sample results, this investigation confirms that this REC represents an impact to Bay sediments from marine-related activities on the Subject Property. Consultation with an appropriate regulatory agency (e.g. SDRWQCB) is recommended.

9.2.4 REC G, Trench Drain and Storm Drain Outfall

REC G, Trench drain and storm drain outfall – Kleinfelder observed a trench drain at the entrance to the Chula Seafood restaurant on the Subject Property. The discharge location of this trench drain is unknown. Additionally, the storm drain catch basins on the Subject Property are connected to an outfall that discharges directly to San Diego Bay (America's Cup Harbor). There is a potential that contaminants, originating near the trench drain and/or storm drain catch basins, could have been discharged to San Diego Bay through the storm drain system and could have impacted bay sediments within the waterside portion of the Subject Property.

As described in Section 4, the trench drain identified during the Phase I ESA, at the entrance to the Chula Seafood restaurant, did not appear to be connected to the Bay outfall on the Subject Property. Therefore, no additional investigation of the trench drain is warranted.

Also as described in Section 4, the storm drain outfall was determined to be connected to three storm drain inlets in the parking lot of the Subject Property. In addition, one of the inlets (Inlet #2) appeared to be connected to a storm drain system originating from the adjacent Naval Base Point Loma military facility. Sediment was sampled approximately 12 inches directly below the opening of the outfall (sample OF-1) on the surface of the shoreline. The elevated concentrations of metals and organotins detected at OF-1 indicate that there are likely upland sources for these contaminants (e.g., Subject Property and Naval Base Point Loma); however, because this sample was not collected directly from the outfall it could also be representative of both upland sediment discharges and Bay sediment conditions.

Because elevated metals and organotins were detected on the shoreline of the Subject Property below the outfall, and at concentrations that suggest upland sources of contamination, this investigation has confirmed that this REC represents an impact to the Subject Property from upland and/or Bay sources. Consultation with an appropriate regulatory agency (e.g. SDRWQCB) is recommended.

9.2.5 REC H, Waste Oil Underground Storage Tank

REC H, Waste oil underground storage tank (UST) – Kleinfelder identified a waste oil UST on a 1984 site plan of the Subject Property. To assist with future site demolition or rehabilitation, the Port District has requested Kleinfelder to evaluate if the waste oil UST is still present on the Subject Property.

As described in Section 5, the geophysical UST survey did not identify evidence of a current UST or of a backfilled excavation that would indicate the former presence of a UST within the suspected waste oil UST area on the Subject Property. Therefore, this REC does not appear to have impacted the Subject Property and no further investigation is warranted in association with this REC.

10 CONCLUSIONS AND RECOMMENDATIONS

Kleinfelder performed this Limited Phase II ESA to evaluate selected RECs identified in the Phase I ESA (Kleinfelder, 2022). Based on the results of this investigation, the following REC was considered to not have impacted the Subject Property:

- REC H, Waste Oil UST – REC considered to not have impacted the Subject Property based on the results of the geophysical UST survey, which did not identify evidence of a current UST or of a backfilled excavation that would indicate the former presence of a UST.

The following RECs were considered to have impacted, or have the potential to impact, the Subject Property:

- REC A, Lead Battery Reclamation – Based on the limited soil and groundwater sampling performed as part of this investigation, evidence of the lead battery reclamation activity was not clearly identified in the subsurface. Since the location of the lead battery reclamation activitiy is unknown, impacts from this REC may be present elsewhere on the Subject Property.
- REC B, Lobster Cage Tar – Based on the limited soil and groundwater sampling performed as part of this investigation, evidence of the lobster cage tar activity was not clearly identified in the subsurface. Since the location of the lobster cage tar activity is unknown, impacts from this REC may be present elsewhere on the Subject Property.
- REC C, Hazardous Materials Storage Shed – This REC is considered to have impacted the Subject Property due to elevated concentrations of TPH in soil and groundwater. Consultation with an appropriate regulatory agency (e.g. SDRWQCB) is recommended.
- REC D, Oil-Soaked Carpet Around Former Waste Oil AST - This REC is considered to have impacted the Subject Property due to elevated concentrations of TPH in soil and groundwater. Consultation with an appropriate regulatory agency (e.g. SDRWQCB) is recommended.
- REC E, Oily Debris Below Former Waste Oil AST – This REC is considered to have impacted the Subject Property due to elevated concentrations of TPH in soil and groundwater. Consultation with an appropriate regulatory agency (e.g. SDRWQCB) is recommended.
- REC F, Contaminated Bay Sediment – This REC is considered to have impacted the Subject Property due to the presence of organotins and elevated concentrations of metals in Bay

sediment from marine-related and non-marine-related activities on the Subject Property. Consultation with an appropriate regulatory agency (e.g. SDRWQCB) is recommended.

- REC G, Trench Drain and Storm Drain Outfall – This REC is considered to have impacted the Subject Property due to the presence of organotins and elevated concentrations of metals in the shoreline sediment below the storm drain outfall. The trench drain did not appear to discharge into the storm drain. Consultation with an appropriate regulatory agency (e.g. SDRWQCB) is recommended.

During future redevelopment of the Subject Property, there will be a potential for construction workers to encounter contaminated soil, groundwater, and sediment. This Limited Phase II ESA did not fully characterize the nature and extent of impacted media at the Subject Property. Kleinfelder recommends that future development plans be reviewed with respect to the findings of this investigation. Additional investigation may be necessary if the Port District needs to estimate the quantity and potential costs associated with handling and disposal of impacted media encountered during construction and to assess worker health and safety requirements. In addition, preparation of an Excavated Materials Management Plan prior to the start of construction activities is recommended. The plan should include methodologies and procedures for stockpiling, sampling, analyzing, profiling, handling and appropriately disposing of contaminated materials encountered during construction and to minimize contaminated sediment disturbance during in-Bay construction activities. The plan should include sampling methodologies based on volumes of soil excavated and identify potential landfills for disposition.

In addition, clogging of one of the storm drain inlets (Inlet #1) and within the conveyance pipeline was observed by Kleinfelder. Cleaning of the inlet and conveyance pipeline is recommended as well as installation of BMPs in and around the storm drain inlets.

11 LIMITATIONS

This report was prepared in a manner consistent with that level of care and skill ordinarily exercised by other members of Kleinfelder's profession practicing in the same locality, under similar conditions and at the date the services are provided. Our conclusions, opinions and recommendations are based on a limited number of observations and data. It is possible that conditions could vary between or beyond the data evaluated. Kleinfelder makes no other representation, guarantee or warranty, express or implied, regarding the services, communication (oral or written), report, opinion, or instrument of service provided.

This report may be used only by the SDUPD and the registered design professional in responsible charge and only for the purposes stated for this specific engagement within a reasonable time from its issuance, but in no event later than two (2) years from the date of the report.

The scope of services described here is not intended to be inclusive, to identify all potential concerns, or to eliminate the possibility of other environmental problems. Within current technology, no level of assessment can show conclusively that a property or its structures are completely free of hazardous substances. Therefore, Kleinfelder cannot offer a certification that the property is free of environmental liability. Kleinfelder will assume no responsibility or liability whatsoever for any claim, loss of property value, damage, or injury which results from pre-existing hazardous materials being encountered or present on the project site, or from the discovery of such hazardous materials.

Kleinfelder offers various levels of investigative and engineering services to suit the varying needs of different clients. It should be recognized that definition and evaluation of geologic and environmental conditions are a difficult and inexact science. Judgments leading to conclusions and recommendations are generally made with incomplete knowledge of the subsurface conditions present due to the limitations of data from field studies. Although risk can never be eliminated, more-detailed and extensive studies yield more information, which may help understand and manage the level of risk. Since detailed study and analysis involves greater expense, our clients participate in determining levels of service that provide adequate information for their purposes at acceptable levels of risk. More extensive studies, including subsurface studies or field tests, should be performed to reduce uncertainties. Acceptance of this report will indicate that the SDUPD has reviewed the document and determined that it does not need or want a greater level of service than provided.

The information included on graphic representations in this report has been compiled from a variety of sources and is subject to change without notice. Kleinfelder makes no representations or warranties, express or implied, as to the accuracy, completeness, timeliness, or rights to the use of such information. These documents are not intended for use as a land survey product nor are they designed or intended as a construction document. The use or misuse of the information contained on these graphic representations is at the sole risk of the party using or misusing the information.

APPENDIX A
60-DAY BORING COMPLETION REPORT

October 3, 2023
Kleinfelder Project No. 20210261.011A

Mr. Jon Senaha
Monitoring Well Permit Department
County of San Diego, Department of Environmental Health and Quality
PO Box 129261
San Diego, California 92112-9261

SUBJECT: **60-DAY REPORT**
4900-4930 NORTH HARBOR DRIVE
SAN DIEGO, CALIFORNIA
PERMIT NO. LMWP-005880

Dear Mr. Senaha:

Kleinfelder, Inc. (Kleinfelder), on behalf of the San Diego Unified Port District (Port), conducted an environmental investigation at Driscoll's Wharf located at 4900-4930 North Harbor Drive, San Diego, California (Site). Prior to our work at the Site, Kleinfelder obtained MonitoringThe borings were drilled on May 4, 2023. H and P Mobile Geochemistry drilled the borings with a truck-mounted Geoprobe drill rig. The borings were advanced to approximately 8 feet below ground surface and then backfilled with bentonite granules and completed with cold patch asphalt at the surface. The borings were abandoned consistent with the California Well Standards Bulleting 74-90, Part III, Section 19.D. Soil samples were collected at depths of approximately 0.5 foot, 3 feet, and 7 or 8 feet bgs and grab groundwater samples were collected from each soil boring. The soil and groundwater samples were analyzed for California Code of Regulations (CCR) Title 22 metals by United States Environmental Protection Agency (USEPA) Methods 6010B/7471A/7470A, PAHs by USEPA Method 8270C-Selective Ion Monitoring (SIM), TPH-gas, -oil, and -diesel by USEPA Method 8015B and 8015M, and VOCs by USEPA Method 8260B. The laboratory analytical report is included in Appendix C.

Well Construction Permit #LMWP-005880 from the County Department of Environmental Health and Quality (DEHQ) to perform four soil borings. A Site map of the boring locations is presented as Figure 1. Copies of the boring logs and well construction permit have been enclosed for your reference in Appendix A and B, respectively.

Please contact Jake Lippman at 619.831.4600 if you have any questions.

Sincerely,

KLEINFELDER

BORING CONSTRUCTION PERMIT

SITE NAME: 4900 NORTH HARBOR DRIVE

SITE ADDRESS: 4900-4930 NORTH HARBOR DRIVE, SAN DIEGO, CA 92106

PERMIT FOR: **CONSTRUCTION OF SOIL BORINGS (4)**

PERMIT APPROVAL DATE: 04/25/2023

PERMIT EXPIRES ON: 08/25/2023

RESPONSIBLE PARTY: SAN DIEGO UNIFIED PORT DISTRICT (PAUL BROWN)

PERMIT TERMS:

1. All borings must be sealed from the bottom of the boring to the ground surface with an approved sealing material as specified in California Well Standards Bulletin 74-90, Part III, Section 19.D. **Drill cuttings are not an acceptable fill material. Bentonite slurries are not an acceptable fill material in the unsaturated zone.**

2. All borings must be properly destroyed within 24 hours of drilling.

3. Placement of any sealing material at a depth greater than 30 feet must be done using the tremie method.

4. This work is not connected to any known unauthorized release of hazardous substances. Any contamination found in the course of drilling and sampling must be reported to the DEHQ. All water and soil resulting from the activities covered by this permit must be managed, stored and disposed of as specified in the SAM Manual in Section 5, II, D-4. In addition, drill cuttings must be properly handled and disposed in compliance with the Stormwater Best Management Practices of the local jurisdiction.

5. Within 60 days of completing work, submit a well construction report, including all well and/or boring logs and laboratory data to the Well Permit Desk. This report must include all items required by the SAM Manual, Section 5, Pages 6 & 7.

6. This office must be given 24-hour notice of any drilling activity on this site and advanced notification of drilling cancellation. Please contact the Well Permit Desk at (858) 505-6688.

NOTE: **This permit does not constitute approval of a work plan as defined in Section 2722 of Article 11 of C.C.R., Title 23. Work plans are required for all unauthorized release investigations in San Diego County.**

Case Narrative

Kleinfelder		Lab Job Number:	484619
550 West C Street, Suite 1200		Project No:	DRISCOLLS WHARF
San Diego, CA 92101		Location:	Driscoll's Wharf, 20210261.011A
Jake Lippman		Date Received:	05/05/23

This data package contains sample and QC results for thirteen soil samples and four water samples, requested for the above referenced project on 05/05/23. The samples were received cold and intact.

TPH-Extractables by GC (EPA 8015B) Water:

- Lab numbers 484619-004, 484619-008, 484619-012 and 484619-016 were diluted due to the dark color of the sample extracts. Extract color and/or viscosity are used as indicators of possible matrix interference. Elevated reporting limits were due to the necessary dilution. The water TPH-DRO/ORO results were reported down to the MDLs in order to show lower limits.
- No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015M) Soil:

- B-1-3.0 (lab # 484619-002), B-3-7.0 (lab # 484619-011), and B-4-8.0 (lab # 484619-015) were diluted due to the dark color of the sample extracts. Extract color and/or viscosity are used as indicators of possible matrix interference. Elevated reporting limits were due to the necessary dilution.
- No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B) Water:
No analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B) Soil:
No analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM) Water:
No analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM) Soil:

- Responses exceeding the instrument's linear range were observed for nitrobenzene-d5, 2-fluorobiphenyl, and terphenyl-d14 in the method blank for batch 313474; affected data was qualified with "E".
- Lab numbers 484619-001, 484619-002, 484619-003 and 484619-006 were diluted due to the dark and viscous nature of the sample extracts. Extract color and/or viscosity are used as indicators of possible matrix interference. Elevated reporting limits were due to the necessary dilution.
- No other analytical problems were encountered.

PCBs (EPA 8082):
No analytical problems were encountered.

Metals (EPA 6010B and EPA 7470A) Water:

- Low recoveries were observed for antimony in the MS/MSD of B-1-GW (lab # 484619-004); the LCS was within limits, and the associated RPD was within limits.
- No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A) Soil:

- Antimony RSD between exposures exceeds limit in the CCV analyzed 05/10/23 11:03; affected data was qualified with "b". Only the soil MS/MSD batch QC samples in batch 313440 were impacted. All associated soil sample results did not have Antimony detected at or above the RL.
- Low recoveries were observed for lead and antimony in the MS/MSD for batch 313849; the parent sample was not a project sample, the LCS was within limits, and the associated RPDs were within limits.
- Low recoveries were observed for antimony in the MS/MSD for batch 313440; the parent sample was not a project sample, the LCS was within limits, and the associated RPD was within limits. High recoveries were observed for copper; the LCS was within limits, and the associated RPD was within limits.
- No other analytical problems were encountered.

Organic Tin (Organotin):

Eurofins Southwest in Tustin, CA performed the analysis (see sublab report section for certifications). Please see the Eurofins Southwest case narrative.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Kleinfelder　　　Project: Driscolls Wharf

Date Received: 5/5/23　　　Sampler's Name Present: ☒ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☒ Yes, How many? 1　☐ No (skip section 2)　　Sample Temp (°C) (No Cooler): ______

Sample Temp (°C), One from each cooler: #1: 10.5 #2: ______ #3: ______ #4: ______

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: ______

Section 3

Was the cooler packed with: ☒ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other ______

Cooler Temp (°C): #1: 5.0 #2: ______ #3: ______ #4: ______

Section 4	YES	NO	N/A
Was a COC received?	X		
Are sample IDs present?	X		
Are sampling dates & times present?	X		
Is a relinquished signature present?	X		
Are the tests required clearly indicated on the COC?	X		
Are custody seals present?		X	
If custody seals are present, were they intact?			X
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			X
Did all samples arrive intact? If no, indicate in Section 4 below.	X		
Did all bottle labels agree with COC? (ID, dates and times)	X		
Were the samples collected in the correct containers for the required tests?	X		
Are the containers labeled with the correct preservatives?	X		
Is there headspace in the VOA vials greater than 5-6 mm in diameter?		X	
Was a sufficient amount of sample submitted for the requested tests?	X		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal　PM Initials: ______ Date/Time ______
☐ Email　(email sent to/on): ______ / ______

Project Manager's response:

Completed By: [signature]　　Date: 5/5/23

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Calscience Project Manager.

Authorization

Table of Contents

Definitions/Glossary

Client: Enthalpy Analytical LLC
Project/Site: 484619

Job ID: 570-137785-1

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative
570-137785-1

Receipt
The sample was received on 5/9/2023 5:00 PM. Unless otherwise noted below, the sample arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.4°C

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	N/A	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Analytical Report *prepared for:*

Jake Lippman
Kleinfelder
550 West C Street, Suite 1200
San Diego, CA 92101

Project: DRISCOLLS WHARF - Driscoll's Wharf, 20210261.011A

Authorized for release by:

Patty Mata, Project Manager
patty.mata@enthalpy.com

This data package has been reviewed for technical correctness and completeness. Release of this data has been authorized by the Laboratory Manager or the Manager's designee, as verified by the above signature which applies to this PDF file as well as any associated electronic data deliverable files. The results contained in this report meet all requirements of NELAP and pertain only to those samples which were submitted for analysis. This report may be reproduced only in its entirety.

Case Narrative

Kleinfelder		Lab Job Number:	484619
550 West C Street, Suite 1200		Project No:	DRISCOLLS WHARF
San Diego, CA 92101		Location:	Driscoll's Wharf, 20210261.011A
Jake Lippman		Date Received:	05/05/23

This data package contains sample and QC results for thirteen soil samples and four water samples, requested for the above referenced project on 05/05/23. The samples were received cold and intact.

TPH-Extractables by GC (EPA 8015B) Water:

- Lab numbers 484619-004, 484619-008, 484619-012 and 484619-016 were diluted due to the dark color of the sample extracts. Extract color and/or viscosity are used as indicators of possible matrix interference. Elevated reporting limits were due to the necessary dilution. The water TPH-DRO/ORO results were reported down to the MDLs in order to show lower limits.
- No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015M) Soil:

- B-1-3.0 (lab # 484619-002), B-3-7.0 (lab # 484619-011), and B-4-8.0 (lab # 484619-015) were diluted due to the dark color of the sample extracts. Extract color and/or viscosity are used as indicators of possible matrix interference. Elevated reporting limits were due to the necessary dilution.
- No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B) Water:
No analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B) Soil:
No analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM) Water:
No analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM) Soil:

- Responses exceeding the instrument's linear range were observed for nitrobenzene-d5, 2-fluorobiphenyl, and terphenyl-d14 in the method blank for batch 313474; affected data was qualified with "E".
- Lab numbers 484619-001, 484619-002, 484619-003 and 484619-006 were diluted due to the dark and viscous nature of the sample extracts. Extract color and/or viscosity are used as indicators of possible matrix interference. Elevated reporting limits were due to the necessary dilution.
- No other analytical problems were encountered.

PCBs (EPA 8082):
No analytical problems were encountered.

Metals (EPA 6010B and EPA 7470A) Water:

- Low recoveries were observed for antimony in the MS/MSD of B-1-GW (lab # 484619-004); the LCS was within limits, and the associated RPD was within limits.
- No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A) Soil:

- Antimony RSD between exposures exceeds limit in the CCV analyzed 05/10/23 11:03; affected data was qualified with "b". Only the soil MS/MSD batch QC samples in batch 313440 were impacted. All associated soil sample results did not have Antimony detected at or above the RL.
- Low recoveries were observed for lead and antimony in the MS/MSD for batch 313849; the parent sample was not a project sample, the LCS was within limits, and the associated RPDs were within limits.
- Low recoveries were observed for antimony in the MS/MSD for batch 313440; the parent sample was not a project sample, the LCS was within limits, and the associated RPD was within limits. High recoveries were observed for copper; the LCS was within limits, and the associated RPD was within limits.
- No other analytical problems were encountered.

Organic Tin (Organotin):

Eurofins Southwest in Tustin, CA performed the analysis (see sublab report section for certifications). Please see the Eurofins Southwest case narrative.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Kleinfelder Project: Driscolls Wharf

Date Received: 5/5/23 Sampler's Name Present: ☒ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☒ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): ____

Sample Temp (°C), One from each cooler: #1: 10.5 #2: ____ #3: ____ #4: ____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: ____

Section 3

Was the cooler packed with: ☒ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other ____

Cooler Temp (°C): #1: 5.0 #2: ____ #3: ____ #4: ____

Section 4	YES	NO	N/A
Was a COC received?	X		
Are sample IDs present?	X		
Are sampling dates & times present?	X		
Is a relinquished signature present?	X		
Are the tests required clearly indicated on the COC?	X		
Are custody seals present?		X	
If custody seals are present, were they intact?			X
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			X
Did all samples arrive intact? If no, indicate in Section 4 below.	X		
Did all bottle labels agree with COC? (ID, dates and times)	X		
Were the samples collected in the correct containers for the required tests?	X		
Are the containers labeled with the correct preservatives?	X		
Is there headspace in the VOA vials greater than 5-6 mm in diameter?		X	
Was a sufficient amount of sample submitted for the requested tests?	X		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: ____ Date/Time ____
☐ Email (email sent to/on): ____ / ____

Project Manager's response:

Completed By: [signature] Date: 5/5/23

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Calscience Project Manager.

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative
570-137785-1

Receipt

The sample was received on 5/9/2023 5:00 PM. Unless otherwise noted below, the sample arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.4°C

GC/MS Semi VOA

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	N/A	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Case Narrative

Kleinfelder		Lab Job Number:	484707
550 West C Street, Suite 1200		Project No:	DRISCOLLS WHARF
San Diego, CA 92101		Location:	Driscoll's Wharf, 20210261.011A
Jake Lippman		Date Received:	05/08/23

This data package contains sample and QC results for five soil samples, requested for the above referenced project on 05/08/23. The samples were received cold and intact.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):

- High response was observed for benzo(b)fluoranthene in the CCV analyzed 05/11/23 10:04; affected data was qualified with "b". Associated samples include lab numbers 484707-001, 484707-002, 484707-005, and QC samples BLANK QC1064699, LCS QC1064700, MS QC1064701, and MSD QC1064702.
- No other analytical problems were encountered.

PCBs (EPA 8082):

- Lab numbers 484707-001, 484707-002, 484707-003, 484707-004 and 484707-005 were diluted due to the color of the sample extracts. Extract color and/or viscosity are used as indicators of possible matrix interference. Elevated reporting limits were due to the necessary dilution.
- No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):

- Low recoveries were observed for antimony in the MS/MSD of PIER8-050523 (lab # 484707-001); the LCS was within limits, and the associated RPD was within limits.
- No other analytical problems were encountered.

Organic Tin (Organotin):

Eurofins Southwest in Tustin, CA performed the analysis (see sublab report section for certifications). Please see the Eurofins Southwest case narrative.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Kleinfelder   Project: Driscoll's Wharf

Date Received: 5/8/23   Sampler's Name Present: ☒ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☒ Yes, How many? 1 ☐ No (skip section 2)   Sample Temp (°C) (No Cooler): ______

Sample Temp (°C), One from each cooler: #1: 0.5 #2: ______ #3: ______ #4: ______

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: ______

Section 3

Was the cooler packed with: ☒ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other ______

Cooler Temp (°C): #1: 0.3 #2: ______ #3: ______ #4: ______

Section 4	YES	NO	N/A
Was a COC received?	X		
Are sample IDs present?	X		
Are sampling dates & times present?	X		
Is a relinquished signature present?	X		
Are the tests required clearly indicated on the COC?	X		
Are custody seals present?		X	
If custody seals are present, were they intact?			X
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			X
Did all samples arrive intact? If no, indicate in Section 4 below.	X		
Did all bottle labels agree with COC? (ID, dates and times)	X		
Were the samples collected in the correct containers for the required tests?	X		
Are the containers labeled with the correct preservatives?			X
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			X
Was a sufficient amount of sample submitted for the requested tests?	X		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: ______ Date/Time ______

☐ Email (email sent to/on): ______ / ______

Project Manager's response:

Completed By: [signature]   Date: 5/8/23

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Calscience Project Manager.

Authorization

Table of Contents

Definitions/Glossary

Client: Enthalpy Analytical LLC
Project/Site: 484707

Job ID: 570-137787-1

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 570-137787-1

Laboratory: Eurofins Calscience

Narrative

Job Narrative
570-137787-1

Receipt

The samples were received on 5/9/2023 5:00 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.4°C

GC/MS Semi VOA

Method Organotins_SIM: Surrogate recovery for the following samples were outside control limits: PIER8-050523 (570-137787-1) and PIER6-050523 (570-137787-3). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Client Sample ID: PIER8-050523

Lab Sample ID: 570-137787-1

Analyte	Result	Qualifier	RL		Unit	Dil Fac	D	Method	Prep Type

Accreditation/Certification Summary

Laboratory: Eurofins Calscience

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
California	State	3082	07-31-24

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Organotins SIM	Organotin Prep	Solid	Dibutyltin
Organotins SIM	Organotin Prep	Solid	Monobutyltin
Organotins SIM	Organotin Prep	Solid	Tributyltin

Authority	Program	Identification Number	Expiration Date
Oregon	NELAP	4175	02-02-24

Method	Method Description	Protocol	Laboratory
Organotins SIM	Organotins (GC/MS SIM)	Lab SOP	EET CAL 4
Organotin Prep	Extraction (Organotins)	None	EET CAL 4

Protocol References:

Lab SOP = Laboratory Standard Operating Procedure

None = None

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	N/A	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Subject: Geophysical Evaluation
Driscoll's Wharf
San Diego, California

Dear Mr. Lippman:

In accordance with your authorization, Atlas is pleased to submit this data report pertaining to our geophysical evaluation for a portion of the property located at 4900 North Harbor Drive in San Diego, California. The purpose of our evaluation was to assess the presence of buried underground storage tanks (USTs) and/or backfilled excavations associated with UST removal. Additionally, we performed a Closed-Circuit Television (CCTV) inspection of the existing storm drain inlets and evaluated the presence of detectable underground utilities in the study area and in the vicinity of five proposed borehole locations at the project site. Our services were conducted on May 3 and 4, 2023. This report presents the study methodology, equipment used, analysis, and results from our study.

We appreciate the opportunity to be of service on this project. Should you have any questions, please contact the undersigned at your convenience.

Respectfully submitted,
Atlas Technical Consultants LLC

1. INTRODUCTION

In accordance with your authorization, Atlas is pleased to submit this data report pertaining to our geophysical evaluation for a portion of the property located at 4900 North Harbor Drive in San Diego, California (Figure 1). The purpose of our evaluation was to assess the presence of buried underground storage tanks (USTs) and/or backfilled excavations associated with UST removal. Additionally, we performed a Closed-Circuit Television (CCTV) inspection of the existing storm drain inlets and evaluated the presence of detectable underground utilities in the study area and in the vicinity of five proposed borehole locations at the project site. Our services were conducted on May 3 and 4, 2023. This report presents the study methodology, equipment used, analysis, and results from our study.

2. SCOPE OF SERVICES

Our scope of services included:

- Performance of a geophysical evaluation for a portion of the subject property.
- Site reconnaissance, including field mapping of surface structures at and near the study area.
- CCTV and clearance of five boreholes.
- Compilation and analysis of the data collected.
- Preparation of this report presenting our findings, conclusions, and recommendations.

3. SITE DESCRIPTION

The project site is located southwest of the intersection between North Harbor Drive and America's Cup Way in San Diego, California (Figure 1). Specifically, our UST study area was located south of the abandoned parking lot of the Chula Seafood Wholesale facility in San Diego, California. The limits of our UST study area were defined by you as depicted in Figure 2. Figures 2 and 3 depict the result of our study and the general site conditions in the study area. Based on our discussions with you, records indicate that the site was once occupied by a waste oil reservoir and that USTs were once utilized at the site; however, details regarding size, purpose, location, or removal are unknown.

4. GEOPHYSICAL INSTRUMENTATION AND APPLICATIONS

Our evaluation included the use of a Geonics model EM61-MK2 time-domain instrument, GSSI SIR 3000 Ground Penetrating Radar (GPR) unit using a 400 MHz transducer Schonstedt GA-52 magnetic gradiometer, Fisher M-Scope TW-6 pipe, and cable locator, Vivax vLoc3-Pro line tracer and GPS Stonex S5HA. These instruments provide real-time results and facilitate the delineation of subsurface features.

The EM61 instrument is a high-resolution, electromagnetic (EM) time-domain device for detecting buried conductive objects. It consists of a powerful transmitter that generates a pulsed primary magnetic field when its coils are energized, which induces eddy currents in nearby conductive objects. The decay of the eddy currents, following the input pulse, is measured by the coils, which in turn serve as receiver coils. The decay rate is measured for two coils, mounted concentrically, one above the other. By making the measurements at a relatively long-time-interval (measured in milliseconds) after the termination of the primary pulse, the response is nearly independent of the electrical conductivity of the ground. Thus, the instrument is a very sensitive metal detector. Due to its unique coil arrangement, the response curve is a single well-defined positive peak directly over a buried conductive object. This facilitates quick and accurate location of targets. Conductive objects to a depth of approximately 11 feet generally can be detected.

The GPR instrument beams energy into the ground from its transducer/antenna, in the form of electromagnetic waves. A portion of this energy is reflected back to the antenna at boundaries in the subsurface across which there is an electrical contrast. The recorder continuously makes a record of the reflected energy as the antenna is moved across the ground surface. The greater the electrical contrast, the higher the amplitude of the returned energy. The EM wave travels at a velocity unique to the material properties of the ground being studied, and when these velocities are known, or closely estimated from ground conductivity values and other information, two-way travel times can be converted to depth. Penetration into the ground and resolution of the GPR images produced are a function of ground electrical conductivity and dielectric constant. Images tend to be graphic, even at considerable depth, in sandy soils, but penetration and resolution may be limited in more conductive clayey moist ground.

The magnetic gradiometer has two fluxgate magnetic fixed sensors that are passed close to and over the ground. When not in close proximity to a magnetic object, that is, only in the earth's field, the instrument emits an audible signal at a low frequency. When the instrument passes over buried iron or steel objects (so that the field is significantly different at the two sensors) the frequency of the emitted sound increases. Frequency is a function of the gradient between the two sensors.

The M-Scope TW-6 device energizes the ground by producing an alternating primary magnetic field with alternating current (AC) in the transmitting coil. If conducting materials (including soils) are within the area of influence of the primary field, AC eddy currents are induced to flow in the conductors. A receiving coil senses the secondary magnetic field produced by these eddy currents and outputs an audio response. The strength of the secondary field is a function of the conductivity of the object, its size, and its depth and position relative to the instrument's two coils. Conductive objects to a depth of approximately 10 feet are sensed. Also, the device is somewhat focused, that is, it is more sensitive to conductors below (and above) the instrument than to conductors off to the side.

Where risers are present, the Vivax vLoc3-Pro utility locator transmitter can be connected to the object, and a current is impressed on the conductor pipe or cable. The receiver unit is tuned to this same frequency, and it is used to trace the pipe's surface projection away from the riser. The transmitter and receiver can also be used in a non-connect (induction) mode, whereby the transmitter is positioned on the ground and an electromagnetic signal is emitted. In the presence of buried metal pipes and wires, a discrete signal will be induced on the conductor which can be sensed by the receiver. In addition, the instrument may be used in the passive mode, whereby radio and 60 Hz electromagnetic signals produced by communication and live electric lines are detected.

5. STUDY METHODOLOGY

In order to facilitate the collection of EM61 data, a grid measuring approximately 65 feet by 80 feet was established. Data was collected at 0.6-foot intervals along northwest-southeast-oriented traverses spaced approximately 5 feet apart across accessible portions of the study area. The limits of our study area were defined by you at the time of our evaluation (Figure 2). GPR traverses were conducted along roughly northwest-southeast and southwest-northeast profiles spaced approximately 3 to 5 feet apart, access permitting. GPR traverses were also performed along random profiles across and near detected features. Traverses with the M-Scope were conducted along profiles spaced approximately 5 feet apart, and the line tracer was used in passive, direct connect, and inductive modes to delineate the presence of underground utilities within the study area. The recorded EM61 data was downloaded to a portable computer in the field for preliminary analysis. Significant anomalies, as well as detectable underground utilities, were marked on the ground surface with paint and reported to you at the end of our field study.

6. RESULTS, CONCLUSIONS, AND RECOMMENDATIONS

As previously discussed, the purpose of our evaluation was to assess the presence of buried underground storage tanks (USTs) and/or backfilled excavations associated with UST removal. Additionally, we performed a CCTV inspection of the existing storm drain inlets and evaluated the presence of detectable underground utilities in the study area and in the vicinity of five proposed borehole locations at the project site. The results of our EM study did not clearly reveal the presence of USTs, however, a couple of unidentified lines and a fairly large regional EM responses were detected at the site (Figure 2). The results of GPR traverses conducted across the study area and in the vicinity of detected EM responses did not indicate the existence of USTs. Large EM responses appear to be associated with the building elements such as metal fencing, metallic canopy/boat repair rack, and stored metallic surface obstructions at the site.

Our study utilized industry-standard equipment (i.e., GPR, electromagnetic, and magnetic instruments), and was conducted in general accordance with current practice. It should be noted that the presence of the aforementioned existing structures and surface objects may have potentially limited the study. Where obstructions were present, subsurface data could not be collected. Moreover, EM/magnetic responses produced by metal surface objects, reinforced concrete, and underground lines can potentially obscure subsurface features. Radar penetration at the site was approximately 3 to 4 feet below the ground surface; therefore, objects below this depth would not have been detected with GPR. It should be noted that all but one of the storm drains in the study area were clogged with soil, and access to the CCTV inspection equipment was limited. In order to inspect these lines, some sort of cleaning measures will be necessary. CCTV data was provided in digital format.

7. LIMITATIONS

The field evaluation and geophysical analyses presented in this report have been conducted in general accordance with current practice and the standard of care exercised by consultants performing similar tasks in the project area. No warranty, express or implied, is made regarding the conclusions and opinions presented in this report. There is no evaluation detailed enough to reveal every subsurface condition. Variations may exist, and conditions not observed or described in this report may be present. Uncertainties relative to subsurface conditions can be reduced through additional subsurface evaluation and/or exploration. Additional subsurface evaluations can be performed upon request.

Please also note that our evaluation was limited to the detection of USTs and backfilled tank excavations, as well as the presence of detectable underground lines. “USA” or “Dig Alert” should also be contacted prior to conducting subsurface exploration activities. In addition, we recommend that available utility plans/drawings of the project site be reviewed as appropriate.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Atlas should be contacted if the reader requires additional information or has questions regarding the content, interpretations presented, or completeness of this document. This report is intended exclusively for use by the client. Any use or reuse of this report by parties other than the client is undertaken at said parties’ sole risk.

1 INTRODUCTION

On behalf of the San Diego Unified Port District (District), Kleinfelder has prepared this *Preliminary Conceptual Site Model Report – Landside Impacts* for 4900-4930 North Harbor Drive, San Diego, California (the Site; Figures 1 and 2). This report was prepared pursuant to Task Authorization No. 11, dated October 4, 2022, under the As-Needed Environmental Investigation Services Agreement No. 20-2020MA between Kleinfelder and the District.

To evaluate existing conditions of the Site, the District requested Kleinfelder to conduct a Phase I Environmental Site Assessment (Kleinfelder, 2022). Based on the findings of the Phase I Environmental Site Assessment, the District requested Kleinfelder to evaluate select Recognized Environmental Conditions as part of a Limited Phase II Environmental Site Assessment (Kleinfelder, 2023). These reports were submitted to the San Diego Regional Water Quality Control Board (SDRWQCB) for review. Based on the SDRWQCB's review, the SDRWQCB opened a GeoTracker case (Global ID T10000022442) and requested that a Preliminary Conceptual Site Model (CSM) Report be prepared for the Site (SDRWQCB, 2025).

To facilitate assessment of landside versus Bayside areas, the District is submitting separate Preliminary CSM Reports for landside and Bayside impacts. The Preliminary CSM for landside impacts, presented herein, includes a graphical illustration of sources of contamination and transport pathways (Figure 2), a flow chart showing sources of contamination, release mechanisms, and sensitive receptors (Figure 3), and a discussion of data gaps associated with our understanding of sources and the nature and extent of contamination at the Site.

2 PRELIMINARY CONCEPTUAL SITE MODEL

Based on the results of the Limited Phase II Environmental Site Assessment (Kleinfelder, 2023), graphical illustration of the preliminary CSM (Figure 2) and a preliminary sensitive receptor flow chart (Figure 3) have been prepared for landside impacts at the Site.

2.1 PRELIMINARY CONCEPTUAL SITE MODEL ILLUSTRATION

The preliminary CSM illustration presented on Figure 2 identifies sources of landside contamination and transport pathways of contamination through the environment at the Site. The following is a summary of the preliminary CSM illustration for landside impacts.

Former Waste Oil Aboveground Storage Tank/Current Hazardous Waste Storage Shed

During the Phase I ESA conducted in 2022 (Kleinfelder, 2022), a hazardous waste storage shed was observed on the Site and contained four 55-gallon drums: one drum of waste oil, one drum of oily water, one drum of waste oil and gasoline filters, and one drum of oily rags and absorbents. Heavily stained concrete in the hazardous waste storage shed was also observed. According to historical aerial photographs, the shed appears to have been constructed between 2012 and 2016. Prior to the existence of the hazardous materials storage shed, the same area was used for outdoor hazardous material storage. According to County of San Diego Department of Environmental Health compliance inspection reports between 1995 and 2016, hazardous material storage in this area included 55-gallon drums of waste oil and one 375-gallon waste oil aboveground storage tank (AST). The inspection records indicated that oily debris was observed on the secondary containment surrounding the AST.

Although the precise direction of groundwater flow is unknown at the Site, the general direction of groundwater flow is anticipated to be southwest-ward, towards San Diego Bay, and is likely tidally influenced. Soil and groundwater below and downgradient of the hazardous waste storage shed was sampled during Kleinfelder's Limited Phase II ESA (Kleinfelder, 2023). Soil boring B-3 was located below the hazardous waste storage shed and soil boring B-4 is considered downgradient of the shed. Select figures and tables of analytical results from the Limited Phase II ESA are included in Appendix A of this report. In soil, results from the Phase II ESA (Kleinfelder, 2023) indicate that total petroleum hydrocarbons (TPH) as diesel and oil were detected below and downgradient from the hazardous waste storage shed and m,p-xylene was detected downgradient from the hazardous waste storage shed. m,p-Xylene was detected in one sample at 16 micrograms per kilogram (µg/kg) at 0.5 feet below ground surface (bgs), TPH as diesel was detected at a maximum concentration of 260 milligrams per kilogram (mg/kg) at 8 feet bgs, and TPH as oil was detected up to a maximum concentration of 600 mg/kg at 8 feet bgs.

The TPH as diesel and TPH as oil concentrations in soil do not exceed the San Francisco Bay Regional Water Quality Control Board Environmental Screening Levels (ESLs) for commercial/industrial soil of 1,200 mg/kg and 180,000 mg/kg, respectively. Additionally, the concentration of xylene in soil does not exceed the United States Environmental Protection Agency Regional Screening Level for industrial soil of 2,500,000 µg/kg.

In groundwater, results from the Phase II ESA (Kleinfelder, 2023) indicate that TPH as diesel was detected below the hazardous waste storage shed and TPH as oil was detected below and downgradient from the hazardous waste storage shed. In groundwater, TPH as diesel was detected at 4.6 milligrams per liter (mg/L) and TPH as oil was detected at 11 mg/L. Both of these results were "j-flagged" by the analytical laboratory (estimated concentration between the laboratory method detection limit and laboratory reporting limit).

In the groundwater sample collected below the hazardous waste storage shed (sample location B-4), the TPH as diesel concentration of 4.6 mg/L exceeded the San Francisco Bay Regional Water Quality Control Board Environmental Screening Level for gross contamination of 2.5 mg/L. Sample location B-4 is located approximately 60 feet from San Diego Bay. Additionally, although TPH as diesel was not detected in the groundwater sample collected downgradient of the hazardous waste storage shed (sample location B-3), the laboratory reporting limit for this sample was 4.4 mg/L, which is greater than the gross contamination ESL. The gross contamination ESL is based on the solubility threshold concentration for TPH as diesel in water, therefore a concentration above the ESL indicates that TPH as diesel may be present as a non-aqueous phase liquid. Sample location B-3 is located approximately 40 feet from San Diego Bay.

As depicted on Figure 2, contamination in the area of the former waste oil AST/current hazardous waste storage shed has percolated into the surrounding soil and groundwater (No. 1). There is a potential for this contaminated groundwater to migrate towards and impact San Diego Bay (No. 2). There is also potential for the contaminated soil and groundwater to result in contaminated vapor emissions (No. #3).

Historic AST Containing Tar

The Phase I ESA (Kleinfelder, 2022) identified records of one 100-gallon AST containing tar historically present on-site and that lobster cages were dipped into the AST. The precise on-site location of the AST, time period that the AST existed, and methods used to dip the lobster cages into the AST are unknown.

The historical presence of the AST and the activity of dipping the lobster cages into the tar had the potential to be sources of contamination to the Site.

Two borings (B-1 and B-2) were drilled on the Site during the Phase II ESA (Kleinfelder, 2023) to evaluate potential contamination from the historical AST containing tar. Although the precise location of the AST is unknown, Kleinfelder selected sampling locations near the piers where miscellaneous equipment was being stored, and therefore could have been where the historical AST was located. The other areas of the Site were either occupied by commercial buildings, vehicle parking lots, or were not accessible due to equipment storage. This target area is rectangular and roughly 4,000 square feet in area (200 feet by 20 feet), or less than 0.1 acres, and is generally consistent with the information provided in the Phase I ESA.

At these two boring locations, the sampling results did not identify the presence of polycyclic aromatic hydrocarbons, which would indicate contamination from tar. Although there is potential for landside impacts from the AST to exist elsewhere within this small target area, the Limited Phase II ESA has further constrained the area that might have been impacted. Based on the small target area, the absence of any documented release, the presence of pavement across the Site, and the findings of the Limited Phase II ESA, this historical feature and activity are considered sufficiently investigated at this time and *de minimis*, and are not identified as a data gap.

Lead Battery Reclamation

The Phase I ESA reported that lead battery reclamation had been witnessed on the Site, generally in the outdoor area between the building at 4904 North Harbor Drive and the building at 4918 North Harbor Drive. This was based on a single report from a witness, the witness report did not specify that a release had occurred, and there is no evidence that this was a sustained or large-scale activity. The precise on-site location of the reclamation, time period that this activity occurred, and the methods used to reclaim the lead batteries are unknown. This activity had the potential to be a source of contamination to the Site.

Two borings (B-1 and B-2) were drilled on the Site during the Phase II ESA (Kleinfelder, 2023) to evaluate potential contamination from lead battery reclamation, in areas where this activity may have been present. Although the precise location of lead battery reclamation activity is unknown, Kleinfelder selected sampling locations within the unpaved area near the piers where miscellaneous equipment was being stored, and therefore could have been where this activity was located. The other areas of the Site were either occupied by commercial buildings, vehicle parking lots, or were not accessible due to equipment storage. This target area is rectangular and roughly 4,000 square feet in area (200 feet by 20 feet), or less than 0.1 acres, and is consistent with the information provided in the Phase I ESA.

At these two boring locations, the sampling results did not identify the presence of elevated concentrations of metals, which would indicate contamination from lead battery reclamation in soil. Although there is potential for landside impacts from lead battery reclamation to exist elsewhere within this small target area, these findings from the Limited Phase II ESA have further constrained the area that might have been impacted. Based on the small target area, the singular nature of the witness report, the absence of any documented release, the presence of pavement across the Site, and the findings of the Limited Phase II ESA, this activity is considered sufficiently investigated at this time and *de minimis*, and is not identified as a data gap.

2.2 PRELIMINARY SENSITIVE RECEPTOR FLOW CHART

The preliminary sensitive receptor flow chart presented on Figure 3 identifies sources of contamination, the release mechanisms from these sources to the environment, and exposure routes of contamination to sensitive receptors. The following is a summary of the sensitive receptor flow chart for landside impacts.

Former Waste Oil Aboveground Storage Tank/Current Hazardous Waste Storage Shed

Spills/leaks have been identified in the area of the former waste oil AST and current hazardous waste storage shed. Subsurface percolation from the spills/leaks have impacted soil and groundwater with xylene and TPH as diesel and oil. The contaminated soil and groundwater have the potential to create an exposure pathway to future construction workers who may encounter the affected media through direct exposure or through inhalation of soil gas. Contaminated soil gas may also pose an indoor air exposure risk, through vapor intrusion, to occupants of the Site. In addition, the contaminated groundwater has the potential to migrate to San Diego Bay and create an exposure pathway to marine organisms.

3 DATA GAPS

This section describes current data gaps associated with landside CSM. The data gaps we have identified are highlighted on the sensitive receptor flow chart (Figure 3).

3.1 SOURCE IDENTIFICATION

Former Waste Oil Aboveground Storage Tank/Current Hazardous Waste Storage Shed

The former waste oil AST and current hazardous waste storage shed are known primary sources, therefore, no data gaps were identified.

3.2 RELEASE MECHANISMS

Former Waste Oil Aboveground Storage Tank/Current Hazardous Waste Storage Shed

No data gaps were identified in relation to primary and secondary release mechanisms. The tertiary release mechanism (migration to Bay) is described in Section 3.4.

3.3 NATURE AND EXTENT OF CONTAMINATION

Former Waste Oil Aboveground Storage Tank/Current Hazardous Waste Storage Shed

In soil, the lateral extents of xylene and TPH as diesel and oil, and the vertical extents of TPH as diesel and oil are unknown in the area of the former waste oil AST and current hazardous waste storage shed. In groundwater, the lateral extents of TPH as diesel and oil contamination are unknown. In addition, because soil gas has not been sampled at the Site, it is unknown whether soil gas has been impacted by vapors from xylene or petroleum hydrocarbons in soil. Petroleum contaminated soil may produce vapors that pose a vapor intrusion risk to Site occupants or an inhalation risk to future construction workers.

3.4 THREATS TO SAN DIEGO BAY

Former Waste Oil Aboveground Storage Tank/Current Hazardous Waste Storage Shed

Groundwater has been contaminated with TPH as diesel and oil in this area, therefore due to the proximity of the groundwater contamination to San Diego Bay, there is a potential that this contamination may impact San Diego Bay. However, it is unknown whether the groundwater contamination has migrated to San Diego Bay or if San Diego Bay has been impacted.

3.5 SUMMARY OF DATA GAPS

This preliminary CSM report has identified the following investigative data gaps in association with contamination at the Site:

1. The lateral extent of xylene contamination in soil, associated with the former waste oil AST and current hazardous waste storage area, is unknown.
2. The lateral and vertical extent of TPH as diesel and oil contamination in soil and groundwater, associated with the former waste oil AST and current hazardous waste storage area, are unknown.
3. It is unknown whether the TPH as diesel and oil contamination in groundwater has migrated to and impacted San Diego Bay.
4. Soil gas has not been assessed at the Site, therefore, it is unknown whether soil gas has been impacted from the subsurface xylene and/or petroleum hydrocarbons.

4 LIMITATIONS

This report was prepared in a manner consistent with that level of care and skill ordinarily exercised by other members of Kleinfelder's profession practicing in the same locality, under similar conditions and at the date the services are provided. Our conclusions, opinions and recommendations are based on a limited number of observations and data. It is possible that conditions could vary between or beyond the data evaluated. Kleinfelder makes no other representation, guarantee or warranty, express or implied, regarding the services, communication (oral or written), report, opinion, or instrument of service provided.

This report may be used only by the District, the registered design professional in responsible charge, and the San Diego Regional Water Quality Control Board, and only for the purposes stated for this specific engagement within a reasonable time from its issuance, but in no event later than two (2) years from the date of the report.

Kleinfelder offers various levels of investigative and engineering services to suit the varying needs of different clients. It should be recognized that definition and evaluation of geologic and environmental conditions are a difficult and inexact science. Judgments leading to conclusions and recommendations are generally made with incomplete knowledge of the subsurface conditions present due to the limitations of data from field studies. Although risk can never be eliminated, more-detailed and extensive studies yield more information, which may help understand and manage the level of risk. Since detailed study and analysis involves greater expense, our clients participate in determining levels of service that provide adequate information for their purposes at acceptable levels of risk. More extensive studies, including subsurface studies or field tests, should be performed to reduce uncertainties. Acceptance of this report will indicate that the District has reviewed the document and determined that it does not need or want a greater level of service than provided.

The information included on graphic representations in this report has been compiled from a variety of sources and is subject to change without notice. Kleinfelder makes no representations or warranties, express or implied, as to the accuracy, completeness, timeliness, or rights to the use of such information. These documents are not intended for use as a land survey product nor are they designed or intended as a construction document. The use or misuse of the information contained on these graphic representations is at the sole risk of the party using or misusing the information.

1 INTRODUCTION

On behalf of the San Diego Unified Port District (District), Kleinfelder has prepared this *Preliminary Conceptual Site Model Report – Bayside Impacts* for 4900-4930 North Harbor Drive, San Diego, California (the Site; Figures 1 and 2). This report was prepared pursuant to Task Authorization No. 11, dated October 4, 2022, under the As-Needed Environmental Investigation Services Agreement No. 20-2020MA between Kleinfelder and the District.

To evaluate existing conditions of the Site, the District requested Kleinfelder to conduct a Phase I Environmental Site Assessment (Kleinfelder, 2022). Based on the findings of the Phase I Environmental Site Assessment, the District requested Kleinfelder to evaluate select Recognized Environmental Conditions as part of a Limited Phase II Environmental Site Assessment (Kleinfelder, 2023). These reports were submitted to the San Diego Regional Water Quality Control Board (SDRWQCB) for review. Based on the SDRWQCB's review, the SDRWQCB opened GeoTracker case (Global ID T10000022442) and requested that a Preliminary Conceptual Site Model (CSM) Report be prepared for the Site (SDRWQCB, 2025).

To facilitate assessment of landside versus Bayside areas, the District is submitting separate Preliminary CSM Reports for landside and Bayside impacts. The Preliminary CSM for Bayside impacts, presented herein, includes a graphical illustration of sources of contamination and transport pathways (Figure 2), a flow chart showing sources of contamination, release mechanisms, and sensitive receptors (Figure 3), and a discussion of data gaps associated with our understanding of sources and the nature and extent of contamination at the Site.

2 PRELIMINARY CONCEPTUAL SITE MODEL

Based on the results of the Limited Phase II Environmental Site Assessment (Kleinfelder, 2023) a graphical illustration of the preliminary CSM (Figure 2) and a preliminary sensitive receptor flow chart (Figure 3) has been prepared for Bayside impacts at the Site.

2.1 PRELIMINARY CONCEPTUAL SITE MODEL ILLUSTRATION

The preliminary CSM illustration presented on Figure 2 identifies sources of Bayside contamination and transport pathways of contamination through the environment at the Site. The following is a summary of the preliminary CSM illustration for Bayside impacts.

Results from the Limited Phase II ESA (Kleinfelder, 2023) indicate that the uppermost Bay sediment on the Site has been impacted by copper, mercury, nickel, lead, and zinc. Select figures and tables of analytical results from the Limited Phase II ESA are included in Appendix A of this report. Maximum concentrations of these constituents were detected as follows: copper at 170 milligrams per kilogram (mg/kg), mercury at 0.70 mg/kg, nickel at 25 mg/kg, lead at 49 mg/kg, and zinc at 170 mg/kg. Each of these metals exceeded the Effects-Range Low (ERL) threshold for adverse biological effects in a marine environment (Long et al., 1995). Potential sources of metals contamination to Bay sediment at the Site are summarized below.

Paint on Moored Boat Hulls/Overwater Maintenance

As part of the Limited Phase II ESA, one sample of surficial sediment was collected off of each of the five on-Site piers, in the immediate vicinity of areas heavily frequented by boats (Kleinfelder, 2023). Each of these five samples exceeded the respective ERLs for copper and for mercury. Three samples also exceeded the ERL for zinc, and one of these also exceeded the ERL for nickel. There were no exceedances of any ERMs. The site has been used for commercial fishing boat mooring since at least 1992. Hull paints are known to contain metals, and these constituents from painted boat hulls have been shown to impact Bay sediment (Conway and Locke, 1994). Paint on moored boat hulls and overwater maintenance activities at the Site have likely impacted Bay sediments (depicted as No. 1 on Figure 2).

Upland Sources

As part of the Phase II ESA, one sample of surficial sediments (sample OF-1) was collected immediately in front of an on-site storm drain outfall (Kleinfelder, 2023). Copper and lead concentrations in this sample exceeded their respective ERLs, but did not exceed their respective ERMs. This was the only sample of surficial sediments that exceeded the lead ERL, it contained the lowest copper concentration of any of the sediment samples, and it was the only sample that did not exceed the mercury ERL. Taken together, these differences suggest that sample OF-1 may represent a somewhat different condition than the other sediment samples, likely associated with its proximity to the on-Site storm drain outfall. Upland sources have likely impacted Bay sediments via stormwater runoff conveyed through the storm drain system and discharged to the Bay from the on-Site outfall. Three catch basins (inlets) drain the Site and discharge into the Bay via the on-Site outfall (No. 2A on Figure 2). The system also includes a storm drain pipeline coming from the adjacent and further upland Naval Base Point Loma military facility (No. 2B on Figure 2). In addition to contributions from these system-specific upland sources, other upland sources associated with urban environments (No. 2C on Figure 2) may contribute to the system, and include automobile brake dust/exhaust, degraded building paint, and degraded galvanized steel (Pitt et. al, 2005 and Weston Solutions, 2009).

2.2 PRELIMINARY SENSITIVE RECEPTOR FLOW CHART

The preliminary sensitive receptor flow chart presented on Figure 3 identifies sources of contamination, the release mechanisms from these sources to the environment, and exposure routes of contamination to sensitive receptors. The following is a summary of the sensitive receptor flow chart for Bayside impacts.

Paint on Moored Boat Hulls/Overwater Maintenance

Degradation of paint from on-site moored boat hulls, hull cleaning, and discharges from overwater maintenance introduce chemicals into Bay water. Some of these result in dissolved-phase discharges, with subsequent adsorption onto Bay sediment, while others discharge particles into the water column, where they settle out and impact Bay sediments. Impacted Bay sediments create a potentially complete exposure pathway to Bay organisms via ingestion or dermal contact. Dissolved-phase discharges that do not subsequently adsorb onto Bay sediments create a potentially complete exposure pathway to Bay organisms via ingestion, dermal contact, or adsorption through the gills.

Upland Sources

Upland sources from on-site and in the vicinity of the Site have been entrained in stormwater runoff, conveyed via the storm drain system, and discharged to the Bay, impacting Bay water and Bay sediment. Impacted Bay sediments create a potentially complete exposure pathway to Bay organisms via ingestion or dermal contact. Dissolved-phase discharges that do not subsequently adsorb onto Bay sediments create a potentially complete exposure pathway to Bay organisms via ingestion, dermal contact, or adsorption through the gills.

3 DATA GAPS

This section describes current data gaps associated with Bayside contamination at the Site. The data gaps identified are highlighted on the sensitive receptor flow chart (Figure 3).

3.1 SOURCE IDENTIFICATION

Paint on Moored Boat Hulls/Overwater Maintenance

Paint on moored boat hulls/overwater maintenance is a known primary source, therefore, no data gaps were identified.

Upland Sources

Upland sources are known primary sources, therefore, no data gaps were identified.

3.2 RELEASE MECHANISMS

Paint on Moored Boat Hulls/Overwater Maintenance

The extent of degradation and leaching of metals from hull paints and the amount of hull cleaning and overwater maintenance discharging into the Bay are unknown.

Upland Sources

The amount of upland sources present on the land surface and available to be entrained in stormwater runoff is unknown. Discharge volumes and concentrations of chemicals and particulate matter in stormwater runoff at the Site are unknown.

3.3 NATURE AND EXTENT OF CONTAMINATION

Metals contamination has been detected in the uppermost Bay sediment on the Site, however, the overall lateral and vertical extent of contamination is not delineated. The relative contributions from identified sources are not understood. Bay water likely acts as a transport medium, carrying contaminants in dissolved-phase and as particulates from the identified sources to the surficial sediments. However, because Bay water has not been sampled at the Site, the nature and extent of dissolved chemicals and impacted particulate matter in Bay water at the Site are unknown.

Paint on Moored Boat Hulls/Overwater Maintenance

Leaching of metals from boat hull paints, hull cleaning, and overwater maintenance activities at the Site have likely impacted Bay sediments. These impacts appear to be relatively similar laterally across the sediment samples collected from alongside the piers, and the influence of these impacts appears reduced in the immediate vicinity of the storm drain outfall, as represented by sample OF-1, but the full lateral and vertical extents of these impacts are not understood.

Upland Sources

Stormwater runoff has likely impacted Bay sediments. The lateral extent where stormwater runoff impacts on Bay sediment are dominant appears limited by sample Pier 5, but the vertical extent is not understood.

3.4 THREATS TO SAN DIEGO BAY

Paint on Moored Boat Hulls/Overwater Maintenance

Bay sediment contamination has been detected adjacent to the piers, at concentrations in excess of ERLs, but not above ERMs; therefore, there is a possibility that Bay organisms are affected by contamination identified in sediments.

Upland Sources

Bay sediment contamination has been detected directly in front of the storm drain outfall, at concentrations in excess of ERLs, but not above ERMs; therefore, there is a possibility that Bay organisms are affected by contamination identified in sediments.

3.5 SUMMARY OF DATA GAPS

This preliminary CSM report has identified the following investigative data gaps in association with contamination at the Site:

1. The nature and extent (lateral and vertical extent) of sediment contamination is unknown.
2. The relative contributions to sediment contamination from paint on moored boats/overwater maintenance and upland sources is unknown.

4 LIMITATIONS

This report was prepared in a manner consistent with that level of care and skill ordinarily exercised by other members of Kleinfelder’s profession practicing in the same locality, under similar conditions and at the date the services are provided. Our conclusions, opinions and recommendations are based on a limited number of observations and data. It is possible that conditions could vary between or beyond the data evaluated. Kleinfelder makes no other representation, guarantee or warranty, express or implied, regarding the services, communication (oral or written), report, opinion, or instrument of service provided.

This report may be used only by the District and the registered design professional in responsible charge, and the San Diego Regional Water Quality Control Board, and only for the purposes stated for this specific engagement within a reasonable time from its issuance, but in no event later than two (2) years from the date of the report.

Kleinfelder offers various levels of investigative and engineering services to suit the varying needs of different clients. It should be recognized that definition and evaluation of geologic and environmental conditions are a difficult and inexact science. Judgments leading to conclusions and recommendations are generally made with incomplete knowledge of the subsurface conditions present due to the limitations of data from field studies. Although risk can never be eliminated, more-detailed and extensive studies yield more information, which may help understand and manage the level of risk. Since detailed study and analysis involves greater expense, our clients participate in determining levels of service that provide adequate information for their purposes at acceptable levels of risk. More extensive studies, including subsurface studies or field tests, should be performed to reduce uncertainties. Acceptance of this report will indicate that the District has reviewed the document and determined that it does not need or want a greater level of service than provided.

The information included on graphic representations in this report has been compiled from a variety of sources and is subject to change without notice. Kleinfelder makes no representations or warranties, express or implied, as to the accuracy, completeness, timeliness, or rights to the use of such information. These documents are not intended for use as a land survey product nor are they designed or intended as a construction document. The use or misuse of the information contained on these graphic representations is at the sole risk of the party using or misusing the information.

Coastal Hazards Assessment

Shelter Island Commercial Fishing Wharf Redevelopment Project

Coastal Hazards Assessment

Prepared for: Ascent Environmental and the Port of San Diego

21 May 2025

→ The Power of Commitment

Contents

Figure Index

Appendices

1. Introduction

The Shelter Island Commercial Fishing Wharf leasehold is located within Port tidelands in San Diego Bay (Bay) at 4918 North Harbor Drive (Figure 1). The site is within the Port's Shelter Island Planning District.

The Shelter Island Commercial Fishing Wharf Redevelopment Project (Project) proposes the removal of the existing fish offloading pier, four floating docks, and four accessways to accommodate the development of a new pier and dock configuration. The new configuration includes four floating docks and gangway access points, construction of a new pile-supported pier, and construction of a floating wave attenuator (Figure 2). The proposed Project features were grouped into fixed and floating categories for this assessment due to having similar vulnerabilities and adaptation options. These Project features are further described below:

- Fixed Structures
    - Construction of new, pile-supported pier (2,800 sq. ft.) on 14 concrete piles. The deck elevation of Pier 4 is yet to be determined per the plans, but was assumed to be 10.07 ft (NAVD88) as directed by the project engineer. This structure will feature a jib crane and lighting.
    - Construction of four new concrete accessway platforms with a top elevation of 10.07 ft (NAVD88) and 15 new piles. These platforms connect the proposed gangways and loading ramp to Regatta Walk.
- Floating Structures
    - Installation of four new floating docks connected by a main walk with seventy-four new guide piles. Floating docks were designed to have 1.5 ft of freeboard and will feature lighting powered by cables fed through conduit in a pull box under the decks.
    - Installation of three new gangways and one loading ramp to access floating docks.
    - Installation of one 270 foot-long floating wave attenuator with 30 guide piles. The wave attenuator is roughly intended to provide approximately 30 percent attenuation on a design wave height and was designed to have 1.75 ft of freeboard. This structure will also feature lighting powered by cables fed through conduit in a pull box under the deck.

Though the Project does not propose any improvements to the adjacent Regatta Walk, it was included in the assessment due the importance of its connection with the improvements. No topographic survey has been performed yet as part of the engineering design. Landside buildings and a surface parking lot exist north of Regatta Walk, but no improvements are proposed for these structures so they were not included in this assessment.

The goal of this study is to assess the potential current and future coastal hazard vulnerabilities, specifically associated with sea level rise (SLR), across all the Project structures' projected lifespans (i.e. 50 years). Our understanding is that the Project requires this assessment for its CEQA review to determine if the Project may exacerbate SLR impacts in the area and whether adaptation measures are necessary mitigate any potential impacts. This analysis was performed consistent with the California Coastal Commission's (CCC) Update to the Sea Level Rise Policy Guidance (CCC 2024) as well as the recently adopted State of California Sea Level Rise Guidance: 2024 Science and Policy Update (OPC 2024).

Figure 1. Project Location

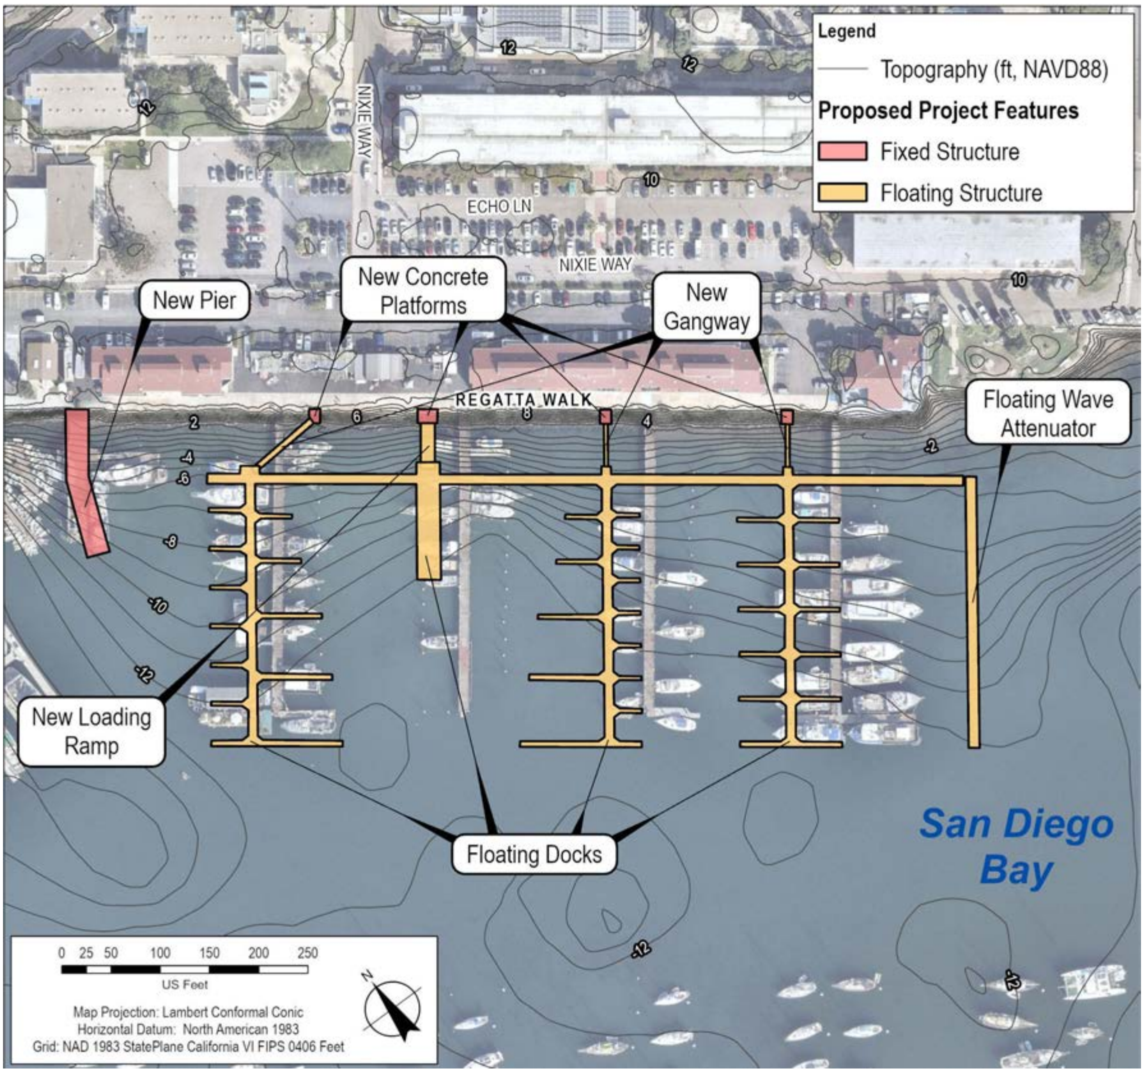

Figure 2. Proposed Project Features

1.1 Scope of Work

The scope of this assessment is as follows:

1. Prepare the Coastal Hazards Assessment in accordance with the California Coastal Commission (CCC) Sea-Level Rise (SLR) Policy Guidance, as well as the recently adopted State of California Sea Level Rise Guidance: 2024 Science and Policy Update from the Ocean Protection Council (OPC).
2. Coastal hazards, such as flooding, will be evaluated for each of the selected SLR scenarios using existing regional and local studies.
3. Coastal hazard limits may be mapped and described for existing and projected future conditions which will include both day-to-day conditions (i.e., current and future tidal inundation) as well as extreme conditions (e.g., flooding associated with extreme tides and storm events).
4. Adaptation strategies or an adaptive pathway may be suggested based on the Project's sensitivity to coastal hazards and SLR to avoid or minimize impacts.

2. Background

2.1 Sea Level Rise

In November 2024, the California Coastal Commission (CCC) adopted the Sea Level Rise Policy Guidance 2024 Update that formally replaced the 2018 Sea Level Rise Policy Guidance. This 2024 update refers to the Ocean Protection Council's (OPC) recently adopted California Sea Level Rise Guidance: 2024 Science and Policy Update as the "best available science" on SLR projections in California. These projections are recommended by the CCC for planning, permitting, and other coastal management decisions.

Within this revised policy guidance, SLR projections are provided for 14 active tide gauges along the coast of California. This document formally replaced the pre-existing 2018 California Sea-Level Rise Guidance to reflect the previous five years of scientific research on SLR projections, including the IPCC's Sixth Assessment Report (2021) and NOAA's national report, Global and National Sea Level Rise Scenarios for the United States (Sweet et al. 2022). NOAA's 2022 report (Sweet et al. 2022) developed a set of five sea level scenarios for the U.S. with a range of plausible changes through 2150 based on the modelled projections in the IPCC AR6 (OPC 2024). The framework and approach for these five scenarios (Low, Intermediate-Low, Intermediate, Intermediate-High, and High) were adopted and regionalized to apply to California-specific scenarios. Unlike the OPC (2018) guidance that provided probabilistic projections corresponding with risk aversion scenarios, the scenarios under the 2024 Update span the plausible range of future SLR in consideration of emissions and global development futures and eliminate the need to select single emission futures for sea level planning (OPC 2024).

A notable advance in the update is the increased understanding of how low confidence processes (e.g., ice-shelf disintegration, marine ice-sheet-ice-cliff instability, and faster-than-projected changes in surface-mass balance) are anticipated to affect sea levels near the end of the century (OPC 2024). While this has allowed the H++ scenario to be determined as no longer physically realistic this Century, the other 2018 risk aversion scenarios are consistent with the OPC (2024) scenarios.

It is important to consider risk tolerance, risk aversion, and design life when evaluating SLR scenarios and the effects of SLR on various coastal hazards. The OPC defines risk tolerance as the level of comfort associated with the consequences of SLR and associated hazards in project planning and design whereas risk aversion is defined as the strong inclination to avoid taking risks in the face of uncertainty (OPC 2024). The OPC (2024) guidance recommends a precautionary approach, when feasible, through an evaluation of the Intermediate, Intermediate-High, and High scenarios to inform appropriate SLR planning and project decisions. These scenarios are defined below:

> **Intermediate Scenario:** The Intermediate scenario should be included in technical analyses for development with low risk aversion, i.e., development that would have limited consequences or a higher ability to adapt, such as some ancillary development or public access amenities. This scenario represents a reasonable estimate for the upper bound of the most likely sea level rise in 2100 (OPC 2024).
>
> **Intermediate-High Scenario:** The Intermediate-High scenario should be included in technical analyses for development with medium-high risk aversion, i.e., development that would experience greater consequences and/or have a lower ability to adapt, such as most residential and commercial structures. This scenario is representative of a world where rapid ice sheet loss processes contribute to SLR, associated with intermediate to high future emissions, and high warming (OPC 2024). This corresponds to scientific estimates for plausible high-end SLR projections by 2100.
>
> **High Scenario:** The High scenario should be included in technical analyses for development with extreme risk aversion, i.e., development with little to no adaptive capacity that would be irreversibly destroyed or significantly costly to repair, and/or would have considerable public health, public safety, or environmental impacts should that level of sea level rise occur, such as most critical infrastructure. This scenario is representative of rapid ice sheet loss processes due to high future emissions and high warming, and should be utilized with careful caution and consideration (OPC 2024). The large uncertainties and ambiguity associated with this scenario reflect a worst case toward 2100 and beyond. The likelihood of this occurrence is not possible to state, but it is based on a combination of high emissions and low confidence processes.

The appropriate SLR planning scenario for this Project is the Intermediate-High because it is a commercial structure that has a lower ability to adapt. The three scenarios selected for analysis within this study considered SLR projections for 2050, 2070, and 2100. These SLR projections for the San Diego Bay tide gauge are presented below in Table 1. Based on this 2100 planning horizon being utilized, approximately 95% of OPC's SLR projections across all planning scenarios are accounted for in this assessment, as shown in Figure 3. This would indicate that this assessment provides a thorough analysis of the most plausible SLR scenarios.

Table 1 Sea Level Rise Projections for San Diego Bay (OPC 2024)

	Sea Level Rise Planning Scenarios (ft)		
	Intermediate	Intermediate-High*	High
2030	0.4	**0.5**	0.5
2050	0.8	**1.1**	1.3
2070	1.4	**2.3**	3.0
2100	3.2	**4.9**	6.7

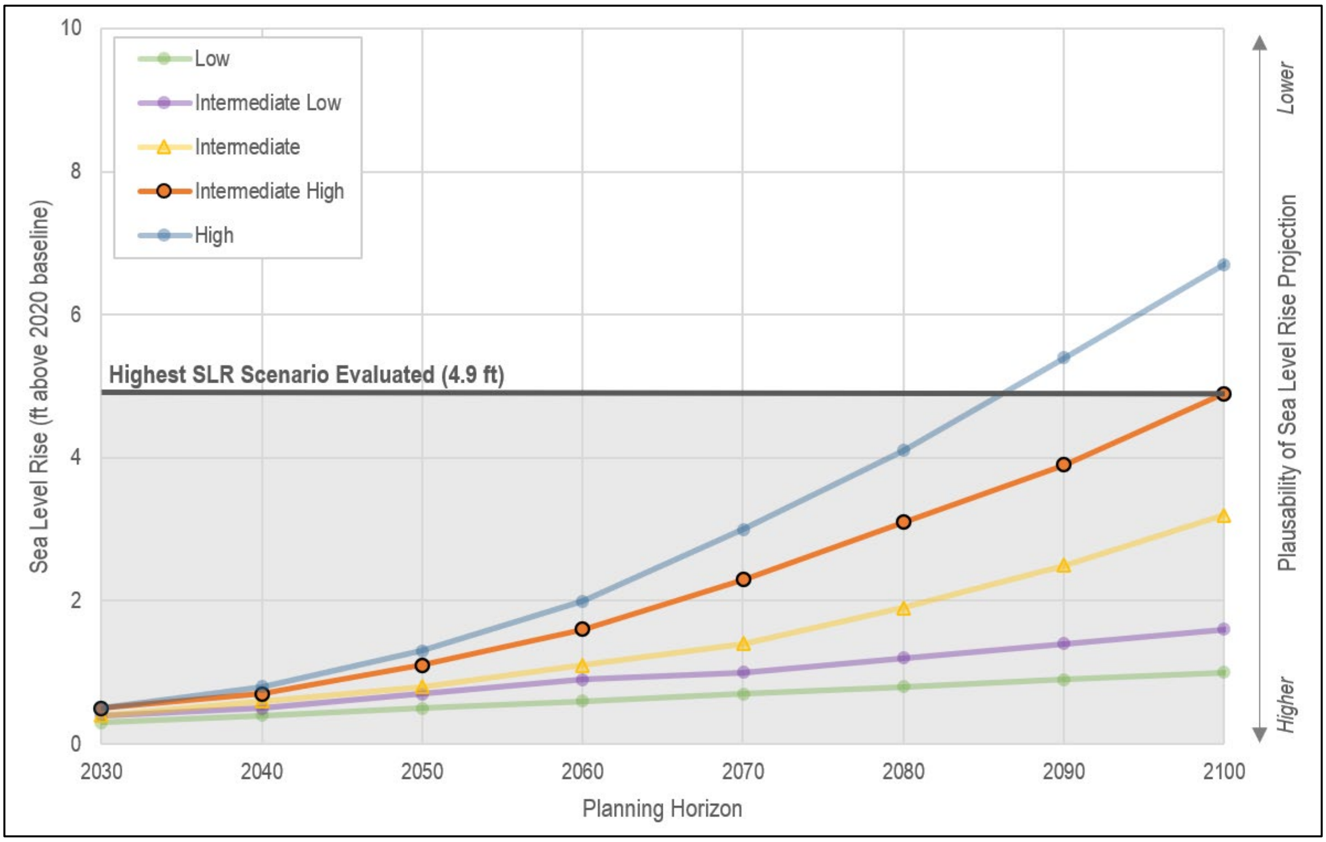

Figure 3. Sea Level Rise Projections, San Diego (OPC 2024)

2.2 Port of San Diego Sea Level Rise Vulnerability Assessment Review (2019)

Coastal flood hazards for the Project site were previously examined in the Port of San Diego Sea Level Rise Vulnerability Assessment and Coastal Resiliency Report (Port of San Diego 2019). This assessment was initially based on the 2018 SLR projections adopted by OPC, which have since been updated according to new science. This assessment did not specifically evaluate SLR impacts to marine structures such as the existing gangways, fish offloading pier, and floating docks at the Project site. However, the assessment determined that walkways and landside buildings are considered likely to be impacted by potential projected SLR inundation under normal tidal conditions at 4.9 ft of SLR (Port of San Diego 2019). The assessment had also evaluated the vulnerabilities of walkways and landside buildings to temporary coastal flooding from a 100-year storm event. These structures were projected to experience severe coastal flooding under this scenario with 4.9 ft of SLR in this assessment (Port of San Diego 2019).

This assessment provides a site-specific analysis that supersedes this prior Port-wide assessment as it analyses the area in greater detail and is based on the best-available SLR science.

2.3 USGS Coastal Storm Modeling System

A screening-level assessment of coastal hazards was also conducted of the Project site using the U.S. Geological Survey's (USGS) Coastal Storm Modeling System (CoSMoS). CoSMoS provides regional scale predictions of coastal hazards via an online mapping tool. The CoSMoS flood projections include various SLR scenarios as well as SLR coupled still water levels and storms, the intensity of which is designated by storm frequency (e.g., no storm, 100-yr storm). The estimated flood extents are based upon a minimum duration of flooding specified in the model simulations. Actual flooding may vary depending on the site topography, hydraulic connectivity and ecology (e.g., soil characteristics/permeability, vegetation, precipitation, fluvial forces, etc.).

CoSMoS results are provided for increments of 0.25 meters from 0 to 3 meters (9.8 ft), and an extreme scenario of 5 meters (16.4 ft). These scenarios allow the tool to be used independent of SLR science as it continues to evolve. The CoSMoS SLR scenarios most similar to the selected OPC projections for the Project are compared below in Table 2.

The CoSMoS flood potential extents for each of these scenarios for both daily tidal and 100-year storm events are provided in Figure 4 and Figure 5, respectively. These flood projections are typically utilized as a first order of analysis due to the regional scale of the model, which makes it difficult for it to resolve site-specific details. Based on the model outputs, the Regatta Walk would expect to experience flooding under a 100-year storm event with 2.5 ft of SLR. Since the Project entirely consists of overwater features, these flood projections do not contribute to the understanding of how the proposed structures may be exposed to flood hazards. However, CoSMoS was utilized to inform how access to these features could be impaired under this vulnerability assessment.

Table 2 OPC (2024) SLR Projections for San Diego Bay relative to CoSMoS

	OPC 2024 SLR Scenario (Intermediate-High)	Relevant CoSMoS Scenarios
2050	1.1	0.8
2070	2.3	2.5
2100	4.9	4.9

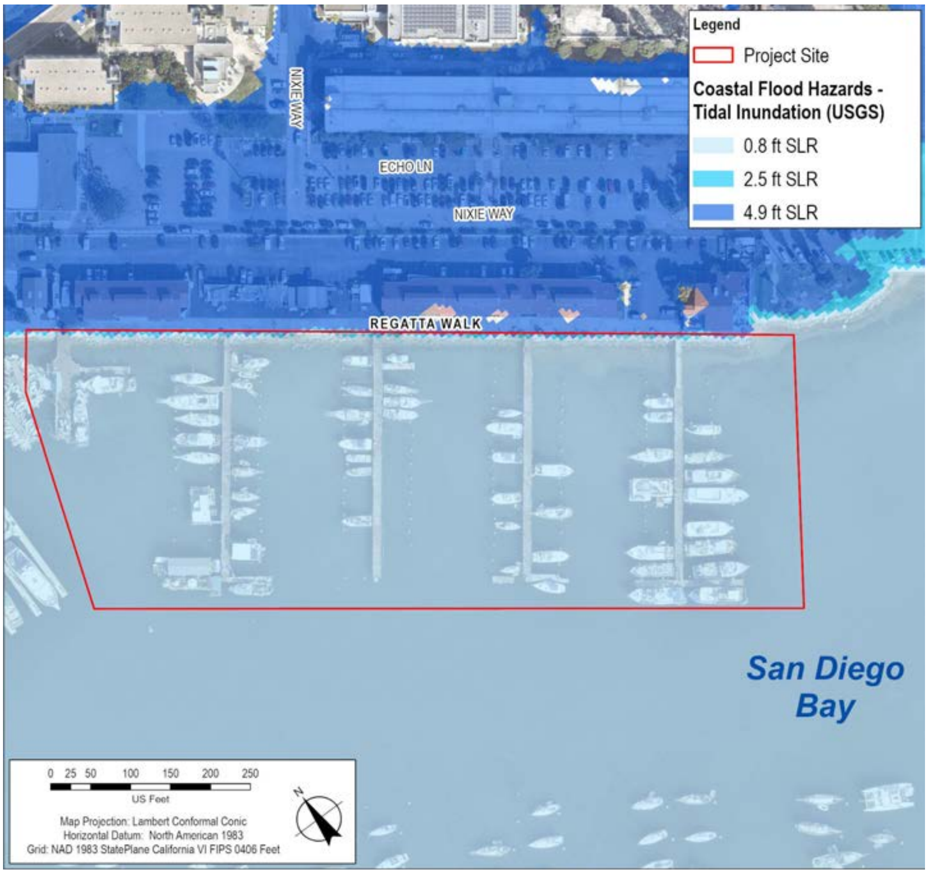

Figure 4. USGS CoSMoS flood projections under daily tidal conditions with SLR

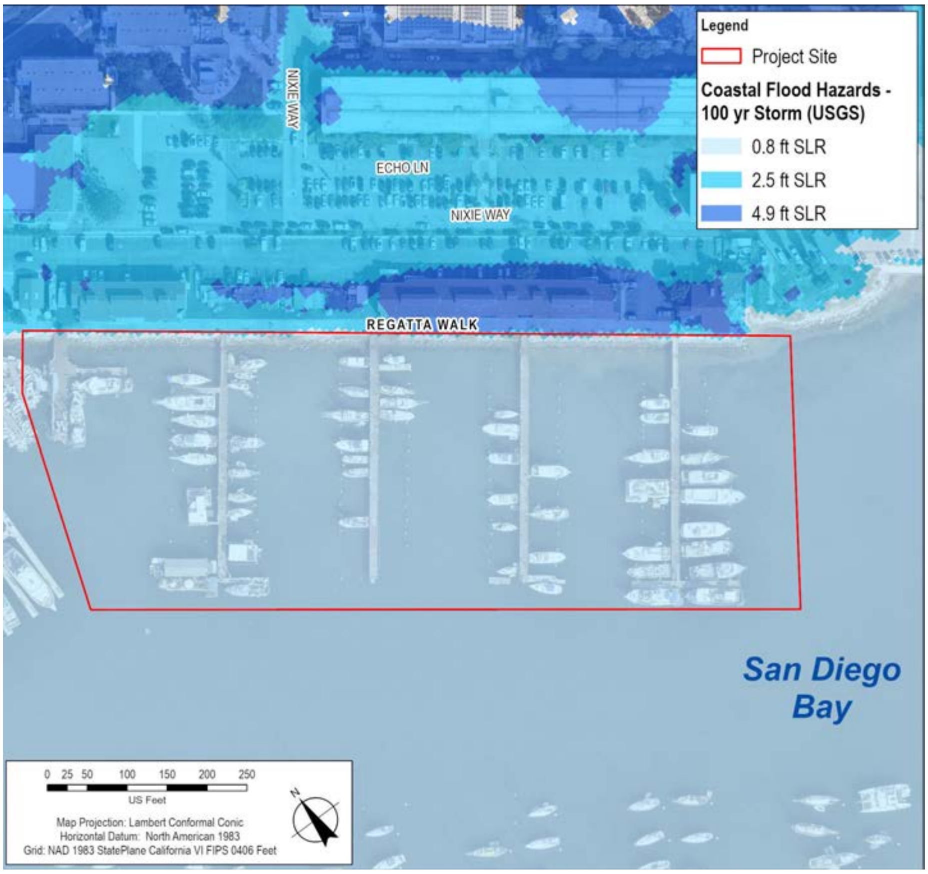

Figure 5. USGS CoSMoS flood projections under 100-year storm conditions with SLR

3. Coastal Hazards

3.1 Tides

The tides in southern California are mixed semi-diurnal, meaning there are two unequal low and high tides each lunar day, which is approximately 25-hours. The National Oceanic and Atmospheric Administration (NOAA) operates tide stations globally and the nearest station to the Project site is located at the end of Broadway Pier, approximately 1,800 ft south of the Project site. This station has a data repository as far back as 1906 and is representative of high-water levels at the Project site. The tidal datums for the San Diego Bay relative to NAVD88 (the datum used for this study) is shown in Table 3.

Table 3 Tidal Datums for the San Diego Bay (NOAA Station 9410170)

Datum	Elevation (ft, NAVD88)
Highest Observed Tide (11/25/2015)	7.81
Highest Astronomical Tide (HAT)	7.19
Mean Higher High Water (MHHW)	5.29
Mean High Water (MHW)	4.56
Mean Sea Level (MSL)	2.51
NAVD88	0.00
Mean Low Water (MLW)	0.51
Mean Lower Low Water (MLLW)	-0.43
Lowest Astronomical Tide (LAT)	-2.49
Lowest Observed Tide (12/17/1937)	-3.52

3.2 Extreme Water Levels

Water levels have the potential to increase under normal astronomical tide ranges, water level anomalies, and the influence of waves. The combination of these events can lead to abnormally high water levels, referred to as extreme water levels in this assessment. These water levels can be divided into two categories, static and dynamic. Static water levels include still water levels (SWL) under normal astronomical tide ranges and tidal anomalies. Dynamic water levels are those which include wave components (wave setup and runup). These extreme water levels are further described in this section.

3.3 Still Water Levels

Still water levels are the water surface elevations resulting from astronomical tides and storm surge but do not include wave heights and runup (FEMA 2016). Ocean water levels typically vary within predictable astronomical tide ranges. However, sea level anomalies may occur that increase water levels above the predicted tides. These anomalies may occur during low atmospheric pressure, abnormally warm water temperatures and meteorological conditions that can lead to storm surge (piling up of water along a coastline).

Extreme water levels are provided by NOAA's Center for Oceanographic Products (NOAA CO-OPS) for annual occurrence probabilities of 1%, 10%, 50%, and 99% for tidal stations with adequate data records. These probabilities correspond to an annual return period of 100-years, 10-years, 2-years, and 1-year; respectively. The extreme water levels at the San Diego Bay stations are shown in Table 4 and are representative of extreme still water levels (ESWLs) for the Project site.

Table 4 Extreme Still Water Levels for San Diego Bay (NOAA Station 9410170)

Annual Exceedance Probability	Return Period (years)	Elevation (ft, NAVD88)
1%	100	7.9

Annual Exceedance Probability	Return Period (years)	Elevation (ft, NAVD88)
10%	10	7.7
50%	2	7.4
99%	1	7.0

3.4 Dynamic Water Levels

Dynamic water levels are the water surface elevations including still water levels plus static and dynamic wave setup (FEMA 2016). Static wave setup is the increase in water level due to wave breaking, or when a wave becomes unstable and collapses. Whereas, dynamic wave setup accounts for wave action, which involves the overall movement and behavior of waves. Within the Bay, two sources are identified as the primary origin of waves around the Project site. Boat wakes are produced from the movement of boats that propagate outward from the boat's path. Wind generated waves are created as wind blows across the surface of the water, and dependent upon the available fetch, result in waves.

3.4.1 Boat Wakes

The North San Diego Bay supports a variety of boating activities which would potentially expose the Project site to boat wakes from passing vessels. As vessels travel through the water, diverging and traversing waves are produced from the stern and bow of the vessel, respectively (Figure 6). The wave height and period produce from a passing vessel is complex and highly dependent on the shape of the hull and speed of the vessel. Thus, the waves produced will vary widely based on the specific ships and predicting such waves would require a comprehensive assessment of the vessel traffic and modeling of wake waves.

The Project site is located approximately 2,700 ft from the federal navigation channel within the America's Cup Harbor Moorage area along the north end of the Bay. However, waves generated by passing vessels are not considered in this study as the assumed magnitude of wake waves are less than that of wind waves. A study completed by GHD (2023) examined recreational and commercial fishing vessel wakes at various locations within the Bay, finding that a 63 ft long fishing vessel drafting at 10.2 ft and traveling a speed of 10.6 knots produced a 0.8 ft wave height. This 0.8 ft wave height also assumed the vessel was 2,650 ft from the shoreline, which is a comparable distance from the federal navigation channel to the Project site. Based on a wind wave analysis completed herein, the maximum wind wave height under extreme conditions was 0.8 ft. Therefore, the dynamic water level that includes wind waves captures the potential boat wakes which may impact the site. Additionally, the moorage area is considered to have a speed limit of 5 mph according to the San Diego Unified Port District Code 4.30, at which speed it is unlikely that a sizable wake wave will be produced within the marina behind the wave attenuator. For this reason, boat wakes were not specifically studied in this coastal hazard assessment.

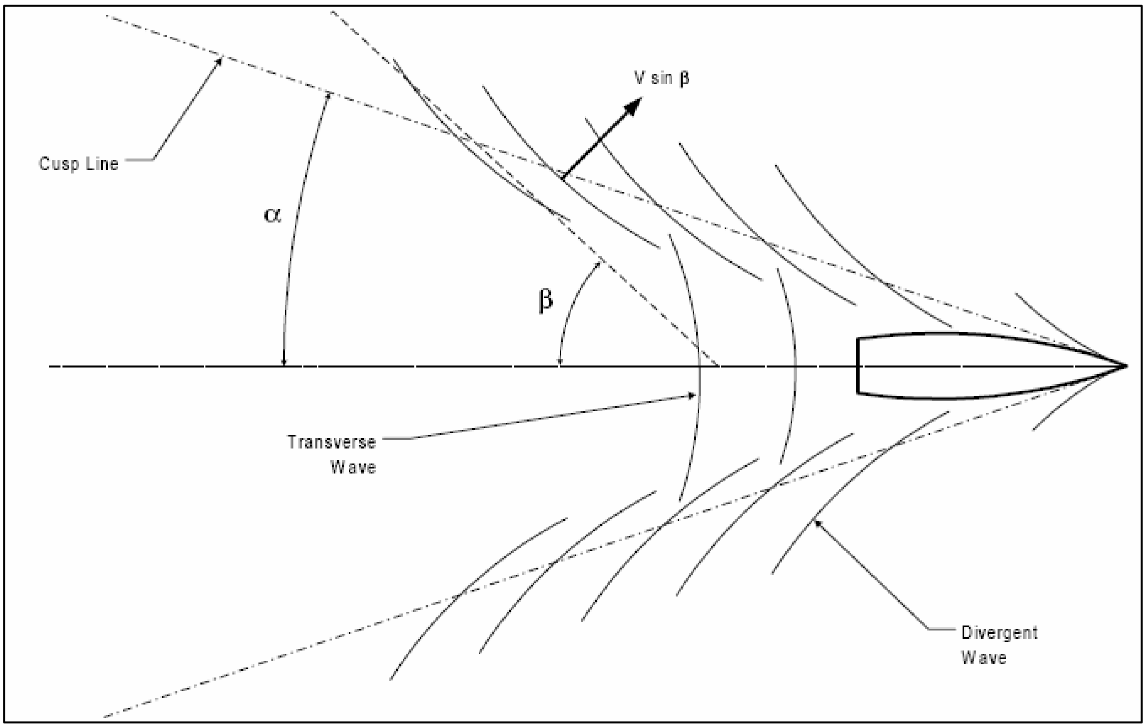

Figure 6. Vessel generated wave schematic (Ghani, Pauzi & Rahim, M. 2008)

3.4.2 Wind Waves

Given the Project site's exposure to wind generated waves, there is potential for the wave components to result in dynamic water levels higher than those listed in Table 4. Because of this, a wind wave analysis was performed to calculate the expected dynamic water levels at the site. The wind wave analysis was conducted for the primary directional bin approaching the site with the longest fetch, which was directly from the East (at 105 degrees north). This analysis examined the potential significant wave heights and periods from this primary dominant wind direction (Figure 7). This analysis considered two scenarios: the extreme wind events (100-year winds) and the typical (average) wind conditions. To accomplish this, an extreme value analysis was performed using the peak over threshold method from a wind data record collected from the San Diego Airport from 1999 to 2025. This method allowed for the extraction of extreme wind speeds from the West that were associated with 1-, 10-, 25-, 50-, and 100-year return periods (Table 5). It should be noted that the 100-year return periods have a higher uncertainty than the return periods of 50 years and below due to the extrapolation of the 26-year wind data record. More detailed methodology for the extreme value analysis may be found in Appendix A.

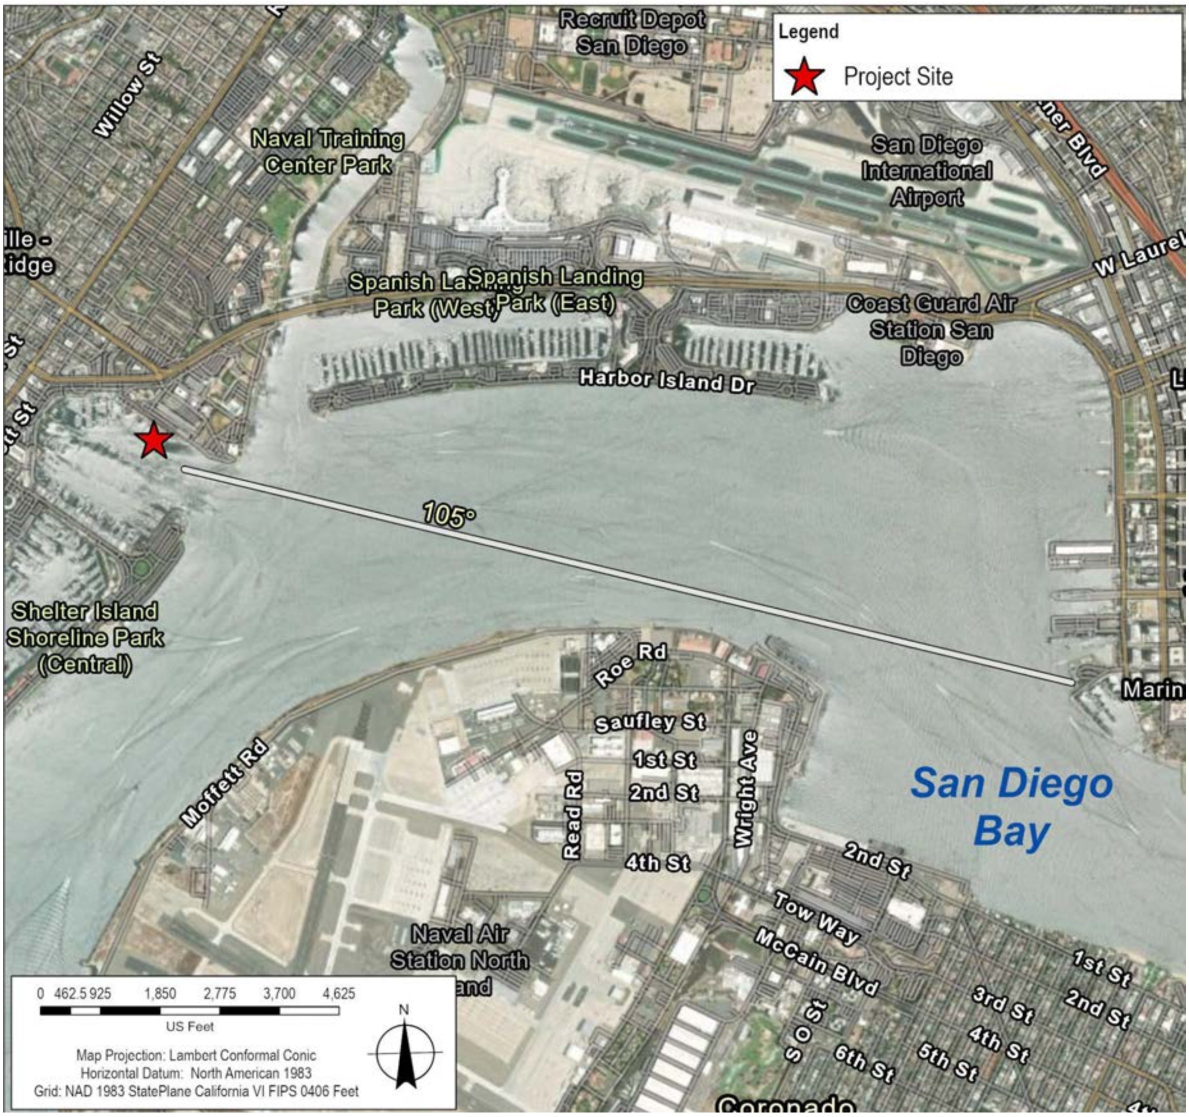

Figure 7. Fetch Radial Used for the Wind Wave Calculations

Wave heights from the West were calculated using the equations for fetch limited wave growth detailed in the Coastal Engineering Manual (CEM). The calculated wave heights and periods from this analysis is shown in Table 5.

Table 5 Calculated Wave Heights for Average Conditions and a 100-year Return Period Wind Event

Fetch Length (ft)	Average Water Depth (ft)	Offshore Wave Height, Hs (ft)		Wave Period, Tp (s)	
		Average Conditions	100-Year	Average Conditions	100-Year
14,146	-39.39	0.3	1.1	1.2	1.9

The results of this analysis allow for the calculation of the dynamic water level elevation by assuming that only 70% of the offshore wave height lies above the SWL (FEMA 2023). This would indicate that the maximum significant wave height above the SWL would be expected to reach approximately 0.8 ft. However, it is important to note the low probability occurrence of a 100-year wind event and its simultaneous occurrence with an extreme water level is unlikely. Therefore, the dynamic water levels being assessed under this analysis will be calculated based on the occurrence of a 100-year wind event under average daily tidal conditions (i.e., MHHW).

The Project involves the installation of a floating wave attenuator, designed to provide approximately 30 percent attenuation of wave heights. To incorporate the attenuation in this SLR assessment, the 100-year offshore wave heights have been further reduced by 30 percent (to 0.6 ft) and are applied to the dynamic water levels assessed in this analysis.

3.5 Coastal Hazards Scenarios

For this analysis, four water level scenarios were investigated across the three selected SLR time horizons (i.e. 2050, 2070, and 2100). The four water level scenarios include: Scenario 1: SLR + average daily tide (i.e. MHHW), Scenario 2: SLR + average daily tide (i.e. MHHW) + 100-yr Wind Waves (dynamic water level) (according to wave attenuation), Scenario 3: SLR + 1-yr ESWL, and Scenario 4: SLR + 100-yr ESWL. These coastal hazard scenarios are shown below in Table 6. Scenario 1 (SLR + average daily tide) is intended to represent the expected frequent, daily inundation around the Project site. Scenario 2 (dynamic water level) is the unlikely coincidence of a frequent high tide with a 100-yr wind wave event from the East after being reduced by the proposed wave attenuator. This scenario involves waves reaching heights of 0.6 ft, which represent infrequent wetting of the asset rather than full submergence or inundation. Scenario 3 (SLR + 1-yr ESWL) is representative of the infrequent occurrence of an extreme still water level with a 99% annual occurrence probability. This scenario is likely to occur at least three to four times within a given year although it would be short in duration (about 1 hour). Scenario 4 (SLR+100-yr ESWL) is representative of the unlikely occurrence of an extreme still water level with a 1% annual occurrence probability. This extreme still water level would be short in duration (about 1 hour).

Table 6 Coastal Hazard Water Level Scenarios

Year	OPC 2024 SLR Scenario (Intermediate-High)	Scenario 1	Scenario 2	Scenario 3	Scenario 4
		Tides (MHHW) + SLR*	Dynamic Water Level (MHHW) + 100-yr Waves + SLR*	1-yr ESWL + SLR*	100-yr ESWL + SLR*
2025	0.0	5.3	5.9	7.0	7.9
2050	1.1	6.4	7	8.1	9.0
2070	2.3	7.6	8.2	9.3	10.2
2100	4.9	10.2	10.8	11.9	12.8

*Elevations provided relative to ft, NAVD88

4. Vulnerability Assessment

Vulnerability is evaluated based on the proposed Project's exposure, sensitivity, and adaptive capacity in response to coastal hazards. The vulnerability of a feature increases with both exposure and sensitivity, while it decreases based on its adaptive capacity. To identify when the proposed Project's features are expected to be vulnerable to SLR, water level build-up calculations are used to provide an asset-specific analysis. This involves the development of cross sections that show the water level scenarios relative to the proposed Project features.

The vulnerability assessment was separated into an evaluation of fixed and floating Project features and is presented in this section.

4.1 Fixed Structures

4.1.1 Pier

According to the most recent plans for the Project, the proposed pier's deck elevation and thickness are yet to be determined (Figure 8). However, as advised by the Project's Engineer of Record for this assessment, the deck elevation was assumed to be 10.07 ft (NAVD88) with a thickness of approximately 1.67 ft, placing the soffit at 8.40 ft (NAVD88). These pier deck elevations were used as thresholds to identify when the structure may be exposed to flooding (Table 7). Based on these assumed elevations, there is potential for the pier deck to be exposed to extreme water levels during its projected 50 year lifespan. It is likely to experience infrequent partial submergence near the end of its design life around 2070 under a 1-year ESWL. Under the unlikely 100-year extreme conditions in combination with an Intermediate-High SLR scenario, the pier deck could experience partial submergence before 2050 and inundation by 2070. Any hanging utilities serving lighting and a jib crane underneath the pier deck would become directly exposed to these elevated water levels. This exposure would subject the pier to increased hydrodynamic forces and buoyancy effects, but these low probability occurrences would be limited to a few hours at the peak of the tidal cycle. Also, assuming that the Regatta Walk remains in its current condition, it is likely that these backlands could experience temporary flooding near 2070 based on CoSMoS 100-year storm projections, thereby limiting access and use of the Pier (Figure 5). However, beyond the structures' design life near 2100, the deck is projected to experience daily tidal inundation that becomes exacerbated under dynamic water level and extreme conditions.

If the Pier is anticipated to remain in service for a 50-year design life, it is recommended that it be designed to accommodate 2.3 ft of SLR, in accordance with OPC 2024 guidance projections for the 2070 Intermediate-High planning scenario. To accommodate this elevation change, a ramp will likely be needed to transition into the existing Regatta Walk.

Table 7 Water Level Scenarios compared to the Proposed Pier Structure

Water Level Scenario	Time Horizon	Sea Level Rise Projection (ft)	Coastal Hazards Scenario*	Pier Freeboard (ft) (Deck Elevation Minus Coastal Hazard Scenario)	
				Top of Deck (10.07 ft)	Soffit of Deck (8.40 ft)
Tides (MHHW) + SLR	Existing	**0**	**5.3**	4.8	3.1
	2050	**1.1**	**6.4**	3.7	2.0
	2070	**2.3**	**7.6**	2.5	0.8
	2100**	**4.9**	**10.2**	-0.1	-1.8
Dynamic Water Level (MHHW) + 100-yr Waves + SLR	Existing	**0**	**5.9**	4.2	2.5
	2050	**1.1**	**7.0**	3.1	1.4
	2070	**2.3**	**8.2**	1.9	0.2
	2100**	**4.9**	**10.8**	-0.7	-2.4
1-yr ESWL + SLR	Existing	**0**	**7.0**	3.1	1.4

**Time horizon beyond design life of structure

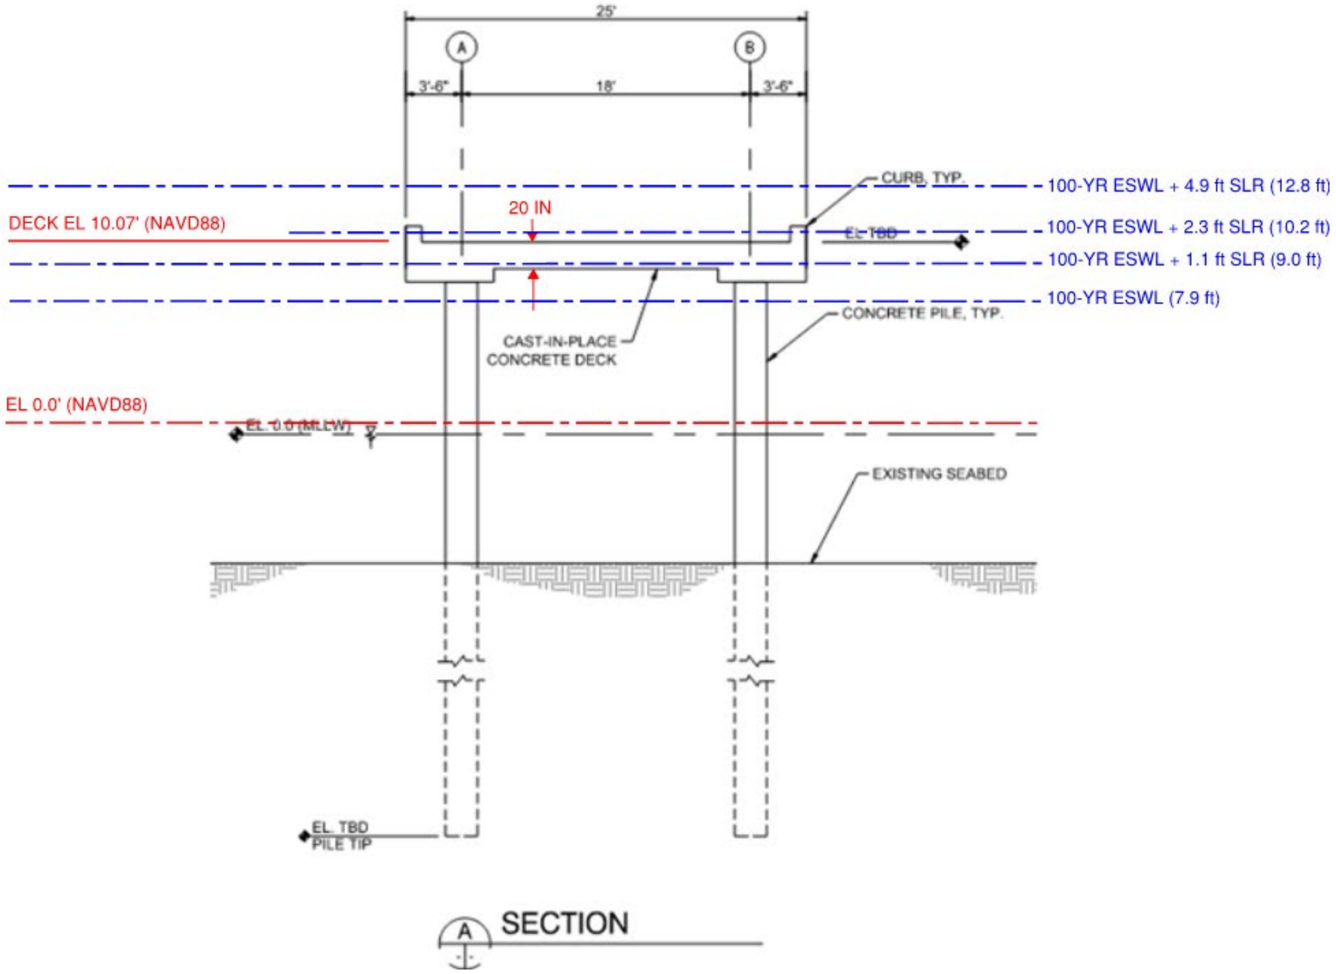

Figure 8. Pier 4 Project Flood hazards cross section for 100-yr ESWL for SLR scenarios

4.1.2 Concrete Platforms

While the finish grade elevations (FG) for each of the four individual concrete platforms are not specifically identified on the Project plans provided by the Port, a typical section identifies the FG as 10.07 ft (NAVD88) with a thickness of approximately 0.83 ft, placing the soffit at 9.24 ft (Figure 9). Based on these thresholds, the concrete platforms could be exposed to flooding before 2070 when in combination with an extreme water level and Intermediate-High SLR scenario (Table 8). Any hanging utilities serving lighting underneath the platforms would become directly exposed to these elevated water levels. While this would subject the platform to increased hydrodynamic forces and buoyancy effects, this low probability occurrence would be limited to a few hours at the peak of the tidal cycle. This would limit the effect of these elevated water level interactions with the concrete pier deck, thereby reducing its vulnerability to SLR over its design life. Also, assuming that the Regatta Walk remains in its current condition, it is likely that these backlands could experience temporary flooding near 2070 based on CoSMoS 100-year storm projections, thereby limiting access and use of the Pier (Figure 5). However, beyond the structures' design life near 2100, the platforms are projected to experience daily tidal inundation that becomes exacerbated under dynamic water level and extreme conditions.

If the concrete platforms are anticipated to remain in service for a 50-year design life, it is recommended that they be designed to accommodate 2.3 ft of SLR, in accordance with OPC 2024 guidance projections for the 2070 Intermediate-High planning scenario. To accommodate this elevation change, a ramp will likely be needed to transition into the existing Regatta Walk.

Table 8 Water Level Scenarios compared to the Proposed Concrete Platforms

Water Level Scenario	Time Horizon	Sea Level Rise Projection (ft)	Coastal Hazards Scenario*	Pier Freeboard (ft) (Deck Elevation Minus Coastal Hazard Scenario)	
				Top of Platform (10.07 ft)	Soffit of Platform (9.24 ft)
Tides (MHHW) + SLR	Existing	**0**	**5.3**	4.8	3.9
	2050	**1.1**	**6.4**	3.7	2.8
	2070	**2.3**	**7.6**	2.7	1.6
	2100**	**4.9**	**10.2**	-0.1	-1.0

*Elevations provided relative to ft, NAVD88

** Time horizon beyond design life of structure

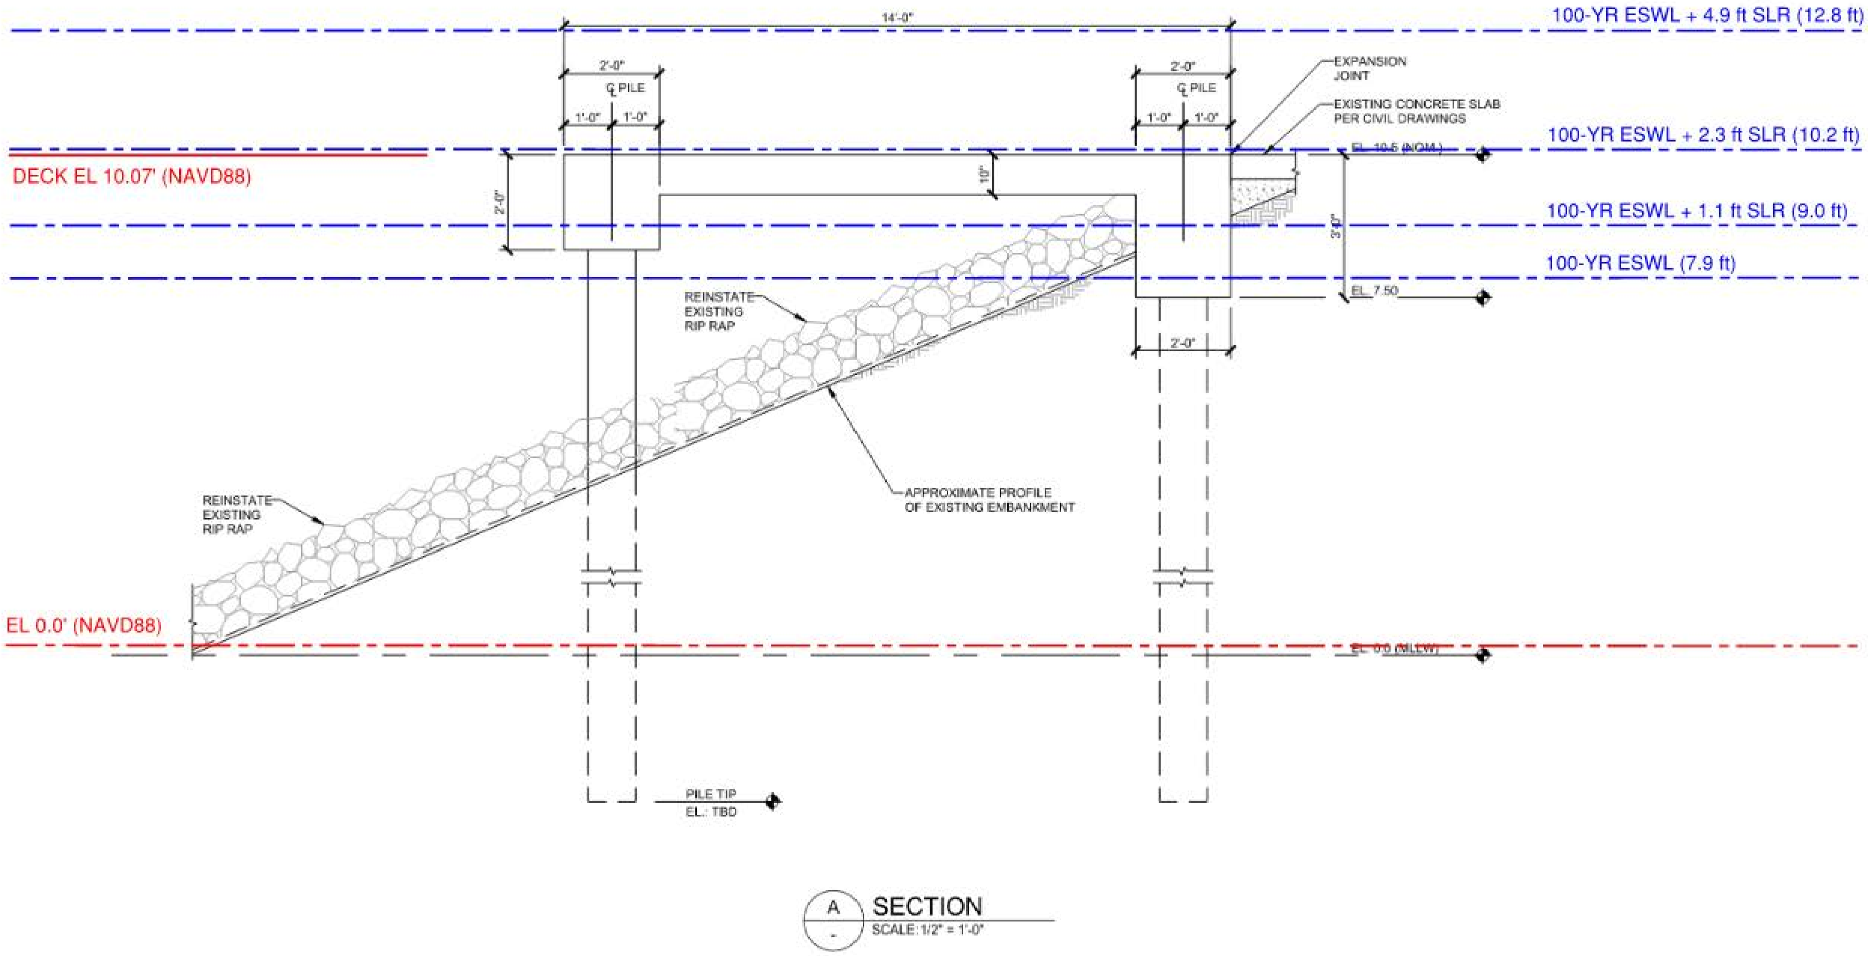

Figure 9. Proposed Concrete Platform Typical Section

4.1.3 Regatta Walk

Though no changes are proposed to the existing Regatta Walk promenade, vulnerability was assessed due to the Project's critical connections with the feature. This promenade varies in elevation from about 8.5 ft to 11 ft (NAVD88) and is armored with a revetment shoreline (Photo 1). This configuration is intended to limit undermining and erosion of the path, however, landside runoff from adjacent buildings and surface drainage are observed to be causing scouring underneath the concrete walkway (Kleinfelder 2022). Based on CoSMoS projections, Regatta Walk could begin to experience temporary flooding near 2070 under 100-year storm conditions and regular tidal inundation by the end of the century (Figure 4; Figure 5). However, the probability of this temporary flooding occurrence is low and would be limited to a few hours at the peak of the tidal cycle, resulting in minimal flooding at this time horizon. Therefore, temporary access and use of the proposed Project may be affected during these rare events towards the end of the Project's 50-year lifespan.

If the Regatta Walk is anticipated to remain in service for the Project's 50-year design life, it is recommended that it be designed to accommodate 2.3 ft of SLR, in accordance with OPC 2024 guidance projections for the 2070 Intermediate-High planning scenario. This could involve increasing the crest of the revetment with an enhanced core or the addition of a floodwall along the seaward side of the promenade to add flood protection and resilience. However, we understand that no improvements are proposed to the Regatta Walk as part of this Project.

Photo 1. Existing Regatta Walk promenade

4.2 Floating Structures

4.2.1 Floating Wave Attenuator

The proposed floating wave attenuator, with a 1.75 ft freeboard, is designed to provide approximately 30 percent wave attenuation, moving vertically with water level changes along 30 new guide piles. These guides piles are designed with a pile cap elevation of 13.57 ft (NAVD88), with their pile guides flush with the deck of the attenuator. Based on these elevations, it is very unlikely the floating wave attenuator would reach the vertical limit of the piles over the next 50 years given the projected exposed pile length above the guide under 2070 water levels (Table 9). Only under extreme conditions in combination with an Intermediate-High SLR scenario in 2100, beyond this structure's design life, would the attenuator be expected to exceed this pile cap elevation.

No design changes or adaptation options are recommended for the floating wave attenuator based on the proposed structure's projected lifespan of 50 years.

Table 9 Water Level Scenarios compared to the Proposed Floating Wave Attenuator

Water Level Scenario	Time Horizon	Sea Level Rise Projection (ft)	Coastal Hazards Scenario*	Projected Exposed Pile Length Above Guide (ft)
				Pile Cap Elevation (13.57 ft) Minus Projected Deck Elevation
Tides (MHHW) + SLR	Existing	**0**	**5.3**	6.5
	2050	**1.1**	**6.4**	5.4
	2070	**2.3**	**7.6**	4.2
	2100**	**4.9**	**10.2**	1.6
Dynamic Water Level (MHHW) + 100-yr Waves + SLR	Existing	**0**	**6.1**	5.9
	2050	**1.1**	**7.2**	4.8
	2070	**2.3**	**8.4**	3.6
	2100**	**4.9**	**11.0**	1.0
1-yr ESWL + SLR	Existing	**0**	**7.0**	4.8
	2050	**1.1**	**8.1**	3.7
	2070	**2.3**	**9.3**	2.5
	2100**	**4.9**	**11.9**	-0.1
100-yr ESWL + SLR	Existing	**0**	**7.9**	3.9
	2050	**1.1**	**9.0**	2.8
	2070	**2.3**	**10.2**	1.6
	2100**	**4.9**	**12.8**	-1.0

*Elevations provided relative to ft, NAVD88

** Time horizon beyond design life of structure

4.2.2 Floating Docks

The proposed floating docks are designed with a 1.5 ft freeboard and can move vertically with water level changes aided by the installed guide piles. The proposed guide piles are designed with a pile cap elevation of 13.57 ft (NAVD88), and pile guides flush with the deck of the docks. Based on these elevations, it is unlikely that the floating docks would reach the vertical limit of the piles over its projected 50 year lifespan given the projected exposed pile length above the guide under 2070 water levels (Table 10). The floating docks would only be expected to become dislodged or damaged under extreme conditions in combination with an Intermediate-High SLR scenario by 2100 as the vertical limit of the guide pile would be exceeded by 0.7 ft. The dock's guide pile elevation of 13.57 ft (NAVD88) would not be exceeded in any of the other coastal hazard scenarios evaluated, thereby supporting the floating docks through the Project's lifespan.

No design changes or adaptation options are recommended for the floating docks based on the proposed structure's projected lifespan of 50 years.

Table 10 Water Level Scenarios compared to the Proposed Floating Dock

Water Level Scenario	Time Horizon	Sea Level Rise Projection (ft)	Coastal Hazards Scenario*	Projected Exposed Pile Length Above Guide (ft)
				Pile Cap Elevation (13.57 ft) Minus Projected Deck Elevation
Tides (MHHW) + SLR	Existing	**0**	**5.3**	6.8
	2050	**1.1**	**6.4**	5.7
	2070	**2.3**	**7.6**	4.5

Water Level Scenario	Time Horizon	Sea Level Rise Projection (ft)	Coastal Hazards Scenario*	Projected Exposed Pile Length Above Guide (ft)
				Pile Cap Elevation (13.57 ft) Minus Projected Deck Elevation
	2100**	**4.9**	**10.2**	1.9
Dynamic Water Level (MHHW) + 100-yr Waves + SLR	Existing	**0**	**6.1**	6.2
	2050	**1.1**	**7.2**	5.1
	2070	**2.3**	**8.4**	3.9
	2100**	**4.9**	**11.0**	1.3

	2050	**1.1**	**9.0**	3.1
	2070	**2.3**	**10.2**	1.9
	2100**	**4.9**	**12.8**	-0.7

*Elevations provided relative to ft, NAVD88

** Time horizon beyond design life of structure

4.2.3 Gangways and Loading Ramp

Due to the substantial increase in water levels and floating structure deck elevations anticipated under the 2050, 2070, and 2100 water level scenarios, the gangways' and loading ramp's appropriate tidal operating windows could be exceeded during the Project's 50 year lifespan. These elevated water levels would place the connection points for these features attached to the concrete platforms and floating docks under increased stress, potentially resulting in their damage. Based on the coastal hazard scenarios evaluated, the gangways and loading ramp could experience inversion before 2050 under extreme conditions combined with an Intermediate-High SLR scenario, requiring improvements to the features at that time. It should be noted that this projected inversion is based on the assumed FG of the concrete platforms at 10.07 ft (NAVD88) that the gangways and loading ramp are attached to. If these platforms are raised higher to accommodate 2.3 ft of SLR as recommended, this could mitigate the expected inversion.

If the gangways and loading ramp are anticipated to remain in service for a 50-year design life, it is recommended that they be designed to accommodate 2.3 ft of SLR, in accordance with OPC 2024 guidance projections for the 2070 Intermediate-High planning scenario.

5. Conclusions

This SLR analysis examined the proposed Project's vulnerability to SLR scenarios across three-time horizons, consistent with OPC 2024 guidance, resulting in the assessment of 1.1 ft, 2.3 ft, and 4.9 ft of SLR. These SLR scenarios were evaluated under projected daily tidal, dynamic water level, and 100-year ESWL conditions. Dynamic water levels were representative of the unlikely concurrence of a 100-year wind event alongside a high average tide (MHHW). The 1-year ESWL conditions are representative of the infrequent occurrence of a 1-year extreme water level during the short duration of a high tide about three to four times per year. The 100-year ESWL conditions are representative of the very unlikely occurrence of a 100-year extreme water level during the short duration of a high tide. Based on these coastal hazard scenarios, the results of the vulnerability assessment are provided below for the fixed and floating Project features. The following recommendations for the Project features are based on a 50-year design life, anticipating 2.3 ft of SLR under the Intermediate-High scenario by 2070. This projection accounts for the Intermediate scenario estimates for the period between 2080 and 2090. No adaptation strategies are proposed given the limit vulnerabilities over the Project's lifespan. It is recommended that beyond the design life of the Project's features, the Port can evaluate the state of SLR science along with empirical evidence to determine if they are at risk of flooding.

Fixed Structures

- **Pier:** If the Pier is anticipated to remain in service for a 50-year design life, it is recommended that it be designed to accommodate 2.3 ft of SLR, in accordance with OPC 2024 guidance projections for the 2070 Intermediate-High planning scenario. To accommodate this elevation change, a ramp will likely be needed to transition into the existing Regatta Walk.
- **Concrete Platforms:** If the platforms are anticipated to remain in service for a 50-year design life, it is recommended that it be designed to accommodate 2.3 ft of SLR, in accordance with OPC 2024 guidance projections for the 2070 Intermediate-High planning scenario. To accommodate this elevation change, a ramp will likely be needed to transition into the existing Regatta Walk.
- **Regatta Walk:** If the Regatta Walk is anticipated to remain in service for the Project's 50-year design life, it is recommended that it be designed to accommodate 2.3 ft of SLR, in accordance with OPC 2024 guidance projections for the 2070 Intermediate-High planning scenario. This could involve increasing the crest of the revetment with an enhanced core or the addition of a floodwall along the seaward side of the promenade to add flood protection and resilience. However, we understand that no improvements are proposed to the Regatta Walk as part of this Project.

Floating Structures

- **Floating Wave Attenuator and Floating Docks**: No design changes or adaptation options are recommended for the floating wave attenuator and floating docks, given the minimal risk anticipated across its projected lifespan of 50 years.
- **Gangways and Loading Ramp:** If the gangways and loading ramp are anticipated to remain in service for a 50-year design life, it is recommended that they be designed to accommodate 2.3 ft of SLR, in accordance with OPC 2024 guidance projections for the 2070 Intermediate-High planning scenario.

Extreme Value Analysis Calculations – Wind Data

Extreme Value Analysis Calculations – Winds

Extreme Value Analysis (EVA) is a statistical method used to assess and quantify the risk of extreme, rare events. In the context of wind wave analysis, EVA is particularly useful for several reasons. This is necessary for the coastal zone, where the strongest events occur during intense single events. EVA is based on the Generalized Extreme Value (GEV) theory, which is designed to deal with rare events. This makes it suitable for studying phenomena like extreme wind speeds, which do not occur frequently but can have significant impacts.

A sufficiently long time series of data is necessary to accurately extrapolate the data to longer return periods. It is not recommended that the data be extrapolated more than 2-3 times its length, as the uncertainty increases significantly. The wind data used for this analysis was taken from the San Diego International Airport, which has been collecting data since 1997 and is located about 2 miles east of the Project site. A wind rose for this station is shown in Figure 1.

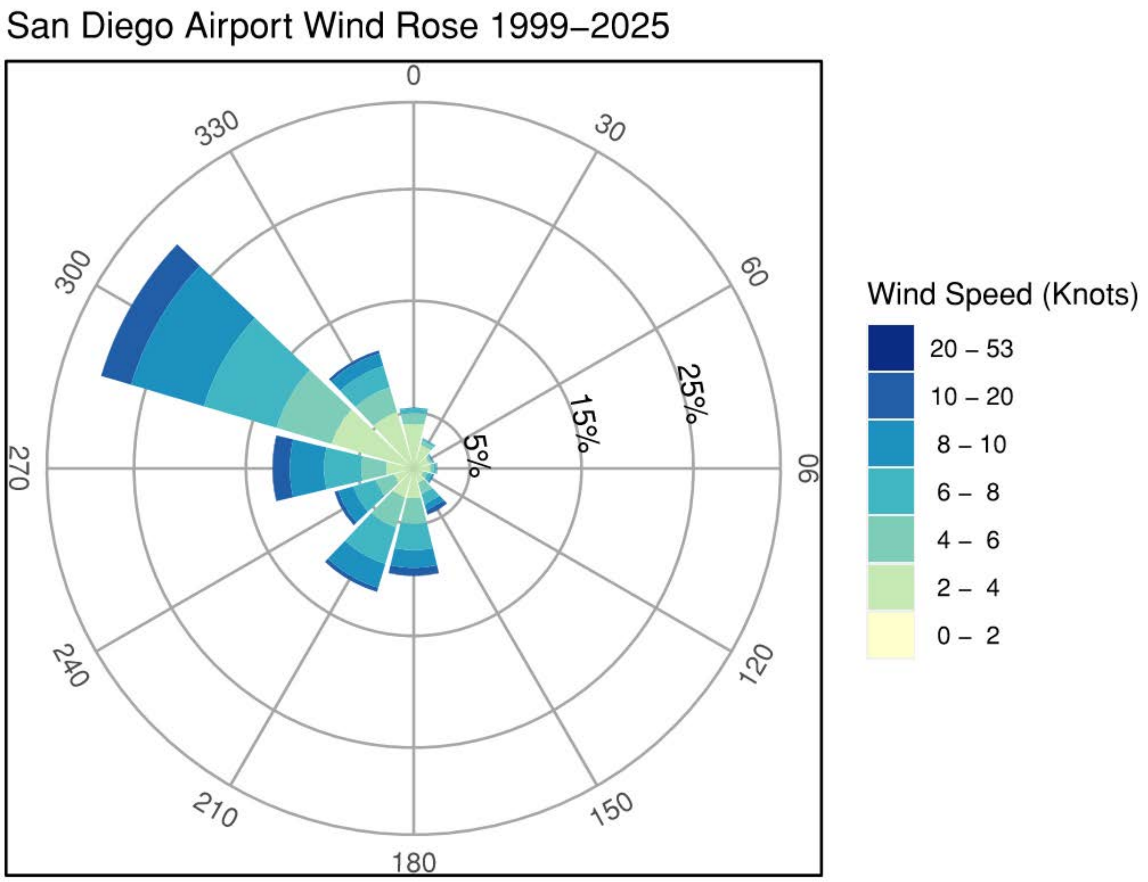

Figure 1. San Diego Airport Wind Station Wind Data from 1999-2025

The San Diego International Airport dataset was inspected for completeness and the outliers were checked for plausibility. The data from 1997 to 1998 contained large gaps of data for multiple months, so these data were not included in the EVA. The few outliers were evaluated by assessing their continuity with the timeseries. From 1999 to 2016, the data was recorded hourly, and from 2016 to 2025, data is 5-minute averaged recorded every hour. For the analysis to appropriately assess the wind dataset, only hourly recorded data was used to perform the EVA.

The peak over threshold method was used, which uses a threshold to seclude values considered extreme from the rest of the data and create a model for the extreme values by modeling the tail of all the values that exceed this threshold. Since wave conditions were only needed from the East (at 105 degrees north) direction, the EVAs were conducted in a 30-degee directional sector where waves could approach the Project site from 90-120 degrees north. The data was declustered by storm duration to capture the peak value of each storm and not sample the same event. A duration of 24 hours was iterated to inspect the time series and make sure that multiple values did not come from the same storm, which was noted by the peaks in the data. Then a threshold was chosen by iterating to a value that resulted in the average number of storms per year being around 2-4, per CEM guidelines.

Figure 2 and Figure 3 show the peak over threshold (POT) method graphically for the East directional sector and a threshold of 7 knots.

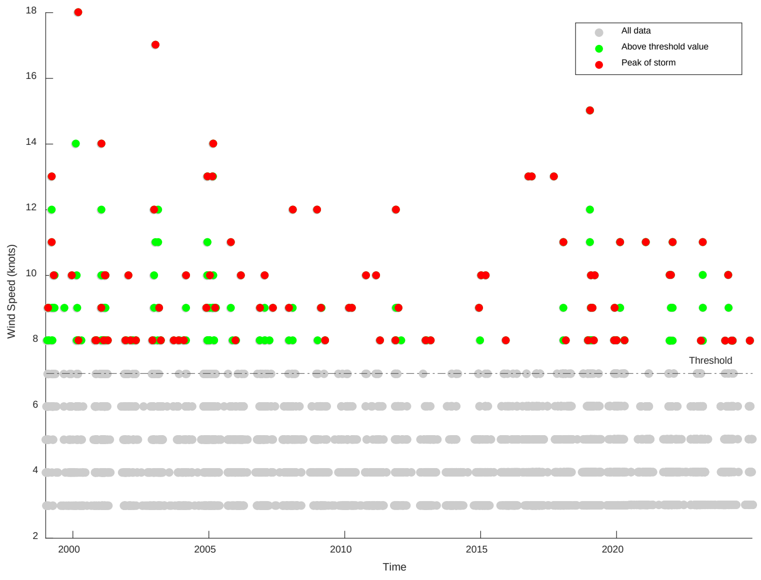

Figure 2. POT Method for the West Direction (All wind speed data shown in grey, directionally filtered values shown in green, and POT values for the directional sector shown in red.)

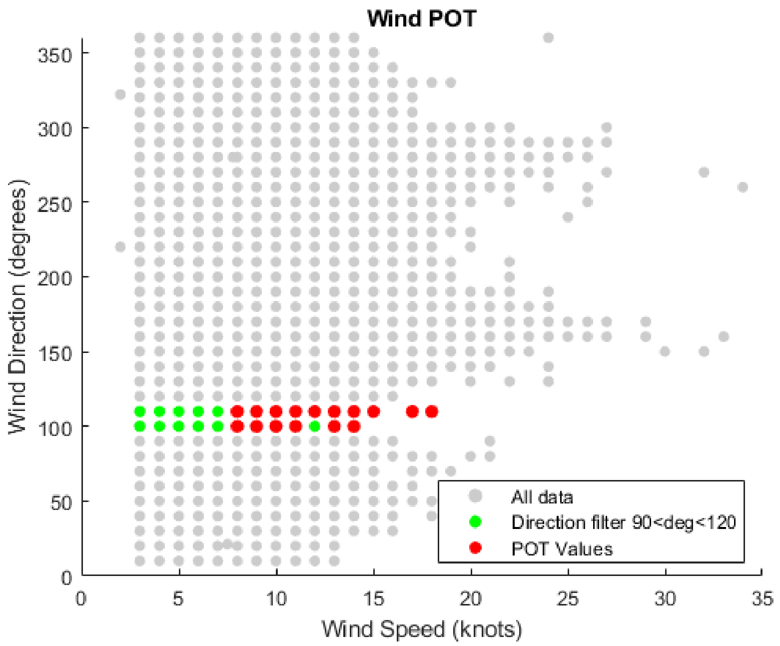

Figure 3. POT Method for the West Direction (All wind speed data shown in grey, directionally filtered values shown in green, and POT values for the directional sector shown in red.)

Once peak values were selected, the return period of the data are given by:

$$R = \frac{n+1}{m}$$

When *n* is the number of years on record and *m* is the rank of the observed occurrence when arranged in descending order. To extrapolate to return periods past the length of the data record, the data must be fit to a distribution. MATLAB's distribution fitter was used to find the best fit, which iterates to a best fit using maximum likelihood estimators. Multiple distributions were fit to the data, but the Generalized Pareto Distribution (GPD) showed the best fit for the data in the relevant directional sector. The probability density function (PDF) of the GPD is defined by:

$$F_{\xi}(x) = 1 - (1 + \frac{k(x-\mu)}{\sigma})^{\frac{-1}{k}}$$

Where σ is the scale parameter, μ is the location parameter (or threshold), and k is the shape parameter. Table 1 presents the parameters for the best fit GPDs in the relevant directional sector. Figure 4 shows the peak over threshold data for the West direction fitted to a GPD for return periods up to 100 years. From this directional sector, the return periods were extracted at 1, 10, 25, 50, and 100 years. The return periods are presented in Table 2. It should be noted that the 100-year return periods have a higher uncertainty than the return periods of 50 years and below due to the longer extrapolation of the wind data.

Table 1 GPD Parameters for Relevant Directional Sector

Wind Direction (degrees)	Shape, k	Scale, σ	Threshold, μ
105	-0.23	3.38	7

Grey cells are intermediate calculations performed by the model.
Green cells are data to present in a written analysis (output).

Project Name: Shelter Island Project

STEP 1: Determine units in which to perform calculation.

— If vibration decibels (VdB), then use Table A and proceed to Steps 2A and 3A.
— If peak particle velocity (PPV), then use Table B and proceed to Steps 2B and 3B.

STEP 2A: Identify the vibration source and enter the reference vibration level (VdB) and distance.

STEP 3A: Select the distance to the receiver.

Table A. Propagation of vibration decibels (VdB) with distance

Noise Source/ID	Reference Noise Level			Attenuated Noise Level at Receptor		
	vibration level (VdB)	@	distance (ft)	vibration level (VdB)	@	distance (ft)
Vibratory Roller	94	@	25	63	@	280
Hoe Ram	87	@	25	57	@	250

The Lv metric (VdB) is used to assess the likelihood for vibration to result in human annoyance.

Land Use Category	Human Annoyance Criteria GBV Impact Levels (VdB re 1 micro-inch/sec) Frequent Events	Occacional Events	Infrequent Events
Category 1: Buildings where vibration would interfere with interior operations.	65 VdB	65 VdB	65 VdB
Category 2: Residences and buildings where people normally sleep.	72 VdB	75 VdB	80 VdB
Category 3: Institutional land uses with primarily daytime use.	75 VdB	78 VdB	83 VdB

Source: Federal Transit Administration, pg 126

STEP 2B: Identify the vibration source and enter the reference peak particle velocity (PPV) and distance.

STEP 3B: Select the distance to the receiver.

Table B. Propagation of peak particle velocity (PPV) with distance

Noise Source/ID	Reference Noise Level			Attenuated Noise Level at Receptor		
	vibration level (PPV)	@	distance (ft)	vibration level (PPV)	@	distance (ft)
Pile Driver (impact - upper range)	1.518	@	25	0.040	@	282
Pile Driver (Sonic - upper range)	0.734	@	25	0.040	@	175
Pile Driver (impact - upper range)	1.518	@	25	0.500	@	52
Pile Driver (Sonic - upper range)	0.734	@	25	0.500	@	32

The PPV metric (in/sec) is used for assessing the likelihood for the potential of structural damage.

Construction Vibration Damage Criteria Building/Structural Category	PPV, in/sec	Approximate Lv
I. Reinforced-concrete, steel or timber (no plaster)	0.5	102
II. Engineered concrete and masonry (no plaster)	0.3	98
III. Non-engineered timber and masonry buildng	0.2	94
IV. Buildings extremely susceptible to vibration damage	0.12	90

Source: Federal Transit Administration, pg 186

Notes:
- Computation of propagated vibration levels is based on the equations presented on pg. 185 of FTA 2018.
- Estimates of attenuated vibration levels do not account for reductions from intervening underground barriers or other underground structures of any type, or changes in soil type.
- Frequenct Events are defined as more than 70 events per day; occasional events as 30--70 events per day; and infrequent events as fewer than 30 events per day

1.0 Introduction

The purpose of this Transportation Impact Study (TIS) is to identify and document any significant transportation related impacts associated with the Shelter Island Commercial Fishing Wharf Project (Proposed Project), and to recommend mitigation measures for any identified impacts, as necessary.

1.1 Project Description

The Proposed Project entails the modernization of the wharf and marina through improved water facilities capable of supporting modern commercial fishing operations. This includes the demolition of landside structures including Building E and the hazardous materials storage shed, and the replacement of waterside structures Piers 4 through 8. The Proposed Project is located within the Driscoll's Wharf leasehold located at 4918 North Harbor Drive in San Diego, California. The site is accessed via Nixie Way from North Harbor Drive. The project location is displayed in **Figure 1.1** and the Proposed Project site plan is displayed in **Figure 1.2**.

1.2 Report Organization

Following this Introduction chapter, this report is organized into the following sections:

2.0 *Analysis Methodology* – This chapter describes the methodologies and standards utilized to analyze and identify the transportation related impacts associated with the Proposed Project.

3.0 *Transportation Related Impacts and Mitigation* – This chapter derives and analyzes the projected Vehicle Miles Traveled (VMT) that will be generated by the Proposed Project. This chapter also identifies if the VMT generated by the Proposed Project would result in a significant project related impact, as it relates to the standards outlined in the California Environmental Quality Act (CEQA). Finally, the chapter provides recommendations for mitigation measures to reduce the identified transportation related impacts, if necessary, and evaluates the feasibility of the proposed mitigation measures. This chapter also evaluates the parking demand for the Proposed Project and determines if sufficient parking will be provided on-site.

4.0 *Construction Analysis* - This chapter evaluates the potential transportation related impacts that may be associated with the construction of the Proposed Project. Recommendations for mitigation measures to reduce any identified transportation related impacts to less than significant levels are provided, if necessary.

Project Site Plan

2.0 Analysis Methodology

2.1 Background (SB-743)

On September 27, 2013, Governor Edmund G. Brown, Jr. signed California Senate Bill 743 (SB-743) into law, starting a process that would fundamentally change the way transportation impact analysis is conducted under CEQA. Within the State's CEQA Guidelines, these changes included elimination of auto delay, level of service (LOS), and similar measurements of vehicular roadway capacity and traffic congestion as the basis for determining significant impacts.

On December 2018, the Resources Agency certified and adopted the CEQA Guidelines update package, which included the California Natural Resources Agency Guidelines for the Implementation of the California Environmental Quality Act. As a result, the California Governor's Office of Planning and Research (OPR) released the *Technical Advisory on Evaluating Transportation Impacts in CEQA* (Technical Advisory) in December 2018[1]. Based on these updated guidelines, lead agencies had until July 1, 2020 to comply with the updated CEQA revision. Therefore, all lead agencies are now required to comply with the December 2018 CEQA guidelines, as well as the requirements outlined under SB-743.

2.2 CEQA Guidelines Section 15064.3

Section 15064.3(b) of the CEQA Guidelines outlines how transportation related impacts should be evaluated and identified under CEQA. This section was included within the December 2018 update to implement the demand outlined within SB-743:

(1) *Land Use Projects.* Vehicle miles traveled exceeding an applicable threshold of significance may indicate a significant impact. Generally, projects within one-half mile of either an existing major transit stop[2] or a stop along an existing high quality transit corridor[3] should be presumed to cause a less than significant transportation impact. Projects that decrease vehicle miles traveled in the project area compared to existing conditions should be presumed to have a less than significant transportation impact.

As outlined in the section, VMT must be used to evaluate the transportation related impacts associated with land use projects, except for projects located within a half-mile major transit stop that are presumed to have a less than significant impact.

2.3 VMT Metrics

For land use development projects, the Technical Advisory requires that the following metric be analyzed to determine if the project has a significant transportation related impact:

- *VMT/Employee* includes all vehicle-based person trips grouped and summed to the work location of individuals on the trip. This includes all trips, not just work-related trips. The VMT for each work location is then summed for all work locations in a particular census tract or traffic analysis zone (TAZ) and then divided by the total number of employees of the respective area to arrive at the VMT/Employee.

[1] https://opr.ca.gov/docs/20190122-743_Technical_Advisory.pdf

[2] Pub. Resources Code, § 21064.3 ("'Major transit stop' means a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.").

[3] Pub. Resources Code, § 21155 ("For purposes of this section, a high-quality transit corridor means a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.").

3.0 Transportation Related Impacts & Mitigation

This chapter identifies if the Proposed Project related VMT/Employee would create significant project related impact, as it relates to the standards outlined in CEQA.

3.1 Trip Generation and VMT Production

The improvements included within the Proposed Project are only demolishing and/or replacing existing deficient facilities and structures that already exist on the Proposed Project site. The Proposed Project's operation will continue to support commercial fishing uses and there would be no increase in vessel berths. Additionally, no new landside buildings would be constructed. The current maximum number of existing employees on-site is 70 employees, and no additional employees are anticipated with the Proposed Project. Therefore, since the Proposed Project is not changing the number of employees that access the facilities on a daily basis, nor are they anticipated to increase the number of visitors, deliveries, or other services to the facility, the implementation of the Proposed Project is not anticipated to increase or change the travel patterns within the area nor is it anticipated to increase or affect the VMT/Employee or overall daily VMT in which the Proposed Project currently generates. As such, implementation of the Proposed Project will have a *less-than-significant transportation-related impact.*

3.2 Parking

As noted above, the improvements included within the Proposed Project are not anticipated to change the number of employees that access the commercial fishing facilities on a daily basis. As such, no additional parking demand is anticipated with the implementation of the Proposed Project. Therefore, implementation of the Proposed Project will have a *less than significant parking related impact.*

4.0 Construction Analysis

Construction of the various project components is anticipated to occur over a 48-month period as follows:

- Landside Demolition – 4 months duration starting April 2026
- Waterside Demolition Part 1 – 4 months duration starting August 2026
- Waterside Construction Part 1 – 4 months duration starting December 2026
- Waterside Demolition Part 2 – 2 months duration starting April 2027
- Waterside Demolition and Construction Part 2 – 16 months duration starting June 2027

The anticipated construction schedule is approximate and is provided for analysis purposes. The actual start and end dates for construction of the project components may vary, but the duration is not anticipated to change. The construction staging area would be located on-site. During landside demolition, construction staging would be located in the parking area east of the project site immediately adjacent to Building E that comprises of 36 parking spaces. Following the demolition of Building E, the cleared area would be used as construction staging for the remaining duration of the project, including waterside demolition and reconstruction. Pedestrian access to the shoreline at all pier locations would be maintained. During the demolition activities associated with the removal of Piers 4 through 8, pedestrian access would be closed temporarily. To accommodate for alternate pedestrian routes, a pedestrian walkway would be provided with appropriate signage to direct pedestrians around the construction area.

4.1 Construction Trip Generation

Construction would include a maximum of approximately 16 temporary construction workers per day. To be conservative, it is assumed that all construction workers would drive their own vehicles to the Proposed Project site and arrive during the AM peak hour and depart during the PM peak hour. It is assumed that truck trips would occur throughout the typical workday and outside of the typical commute peak hours. It is estimated that approximately 530 one-way truck trips (224 haul and 326 delivery) will occur over the 600 working-day construction period, with the peak truck activity occurring with 268 one way delivery truck trips occurring during the 280 workday period of the Waterside Construction Part 2. During this peak period, it is assumed that there will be two one-way truck trip per day (268 daily one-way trucks trips / 280 workdays = 0.96 one-way truck trips – rounded up to one inbound and one outbound trip per day).

Table 4.1 displays the daily and peak hour trip generation that is anticipated to be associated with Proposed Project construction.

Table 4.1 Proposed Project Construction Trip Generation

Type	Units	Trip Rate	PCE	ADT	AM Peak Hour		PM Peak Hour	
					In	Out	In	Out
Workers	16	3 trips per worker	1.0	48	48	0	0	48
Truck Trips	2	1 trip per truck	3.0	6	0	0	0	0
			Total	**54**	**48**	**0**	**0**	**48**

Note:
PCE: Passenger Car Equivalent – since the truck size is not known at this time, the maximum rate of 3.0 was used.

4.2 Construction VMT Analysis

Construction workers VMT is not newly generated; instead, it is redistributed throughout the network based on their travel to different work sites each day; therefore, the construction workers are not generating new VMT each day, only redistributing it. It is important to note that construction traffic is temporary and not expected to significantly increase VMT or permanently degrade operations of a roadway facility. This redistribution is considered to be nominal and momentary.

Additionally, per OPR's Technical Advisory, SB 743's intent is to plan for "long term climate goals", so projects with temporary affects to VMT and the transportation system are not deemed to be significant. Furthermore, Section 15064.3(a) of the CEQA Guidelines states, "For the purposes of this section, 'vehicle miles traveled' refers to the amount and distance of automobile travel attributable to a project.", which indicates that the term "automobile" refers to on-road passenger vehicles, specifically cars and light trucks per the Technical Advisory; therefore, larger on-road vehicles such as heavy-duty trucks do not fall within the categories of cars and light trucks and do not need to be considered in calculation of trips or VMT. Consequently, transportation impacts would be less than significant during the construction of the Proposed Project.

4.3 Construction Parking

Construction worker parking would be located on-site on adjacent surface lots during construction activities. As noted in Section 4.1, a maximum of 16 construction workers are anticipated to access the site on a daily basis. As such, the anticipated parking demand during Proposed Project construction would be 16 parking spaces. Additionally, construction staging would remain within the site lay down area, and all deliveries would be coordinated with vendors prior to delivery. During the demolition of Building E, the construction staging area would take place at the adjacent 36 parking spaces to Building E, and upon completion of the demolition, construction would move in the newly cleared area for the remainder of construction.

There are currently 194 parking spaces on the project site. Conservatively assuming that each of the existing/proposed 70 employees drive to the site alone would yield a surplus of 124 parking spaces (194 parking spaces – 70 employee parking = 124 parking spaces). Therefore, the *Proposed Project would not cause a construction parking deficiency* as there would be a sufficient parking supply to serve the visitors, delivery trucks, 16 construction workers, as well as the 36 parking spaces that will be temporarily displaced during demolition of Building E.
