Notice of Preparation

NOTICE OF PREPARATION
of a
DRAFT ENVIRONMENTAL IMPACT REPORT
and
NOTICE of PUBLIC SCOPING MEETING

PROJECT TITLE: **SHELTER ISLAND COMMERICAL FISHING WHARF PROJECT (UPD #EIR-2024-104)**

APPLICANT: Driscoll Marina, Ltd. (Demolition Component);
San Diego Unified Port District (Waterside Development Component)

LOCATION: 4918 North Harbor Drive in San Diego, in San Diego County, California

REFERENCE: California Code of Regulations, Title 14, Sections 15082(a), 15103, 15375

The San Diego Unified Port District (District) will be the Lead Agency in preparing an Environmental Impact Report (EIR) for the project identified above (project). The District is soliciting input and feedback from various agencies, stakeholders, and the public pertaining to the scope and content of the environmental information that will be included in the EIR. For certain agencies, this may be germane to statutory responsibilities in connection with the proposed project. An agency may need to use the proposed project's EIR when considering its permit or other approval for the project. The project description, location, and possible environmental effects of the proposed project are contained in the attached materials.

Due to the time limits mandated by state law, your comments must be sent at the earliest possible date but no later than 30 days after issuance of this notice. **Comments regarding environmental concerns will be accepted until 5:00 p.m. on Friday, January 24, 2025,** and should be mailed to: San Diego Unified Port District, Planning Department, Attn: Lily Tsukayama, 3165 Pacific Highway, San Diego, CA 92101 or emailed to: **ltsukayama@portofsandiego.org**.

A virtual public scoping meeting regarding the proposed EIR will be held via Microsoft Teams on Wednesday, January 15, 2025, at 5:30 p.m. Click here to join the virtual meeting on Wednesday, January 15, or contact Lily Tsukayama for the link to the virtual meeting. For questions on this notice, contact Lily Tsukayama at (619) 686-8199 or ltsukayama@portofsandiego.org.

For questions on this Notice of Preparation, please contact Lily Tsukayama, Program Manager, Planning Department, at (619) 686-8199.

San Diego, CA 92101

NOTICE OF PREPARATION
of a
DRAFT ENVIRONMENTAL IMPACT REPORT
for the
SHELTER ISLAND COMMERICAL FISHING WHARF PROJECT
(UPD #EIR-2024-104)

The proposed project is the modernization of the existing commercial fishing marina at the existing Driscoll's Wharf (Driscoll's) leasehold area. Proposed actions would include a demolition component, which is a condition of the lease with the existing tenant (Driscoll Marina Ltd.), and a waterside development component. The demolition component would remove Piers 4, 5, 6, 7, and 8; demolish Building E and a small hazardous material storage shed; and remove all soil, groundwater, and sediment contaminants from the leased premises. The tenant, Driscoll Marina Ltd., is responsible for all of the demolition component as part of the end-of-lease obligations, except removal of Pier 4, for which the District is the project proponent. The District is the project proponent for the waterside development component. The District proposes to reconstruct and operate Piers 4, 5, 6, 7, and 8, which would also include new gangways, headwalks connecting piers, and a floating wave attenuator to the east of the existing leasehold. Coastal Development Permits (CDPs) are required to implement the proposed project.

Publication of this Notice of Preparation (NOP) initiates the District's environmental review and analysis of the project pursuant to the California Environmental Quality Act (CEQA). The NOP is the first step in the CEQA process. It describes the project and is distributed to responsible agencies, trustee agencies, involved federal agencies, and the general public. As stated in CEQA Guidelines Section 15375, the purpose of the NOP is "to solicit guidance from those agencies as to the scope and content of the environmental information to be included" in the Environmental Impact Report (EIR). The NOP provides an opportunity for agencies and the general public to comment on the scope and content of the environmental analysis of a project.

PROJECT LOCATION AND EXISTING SETTING

The project site is within and directly adjacent to the Driscoll's Wharf leasehold, located on District property, at 4918 North Harbor Drive in San Diego, California. The leasehold encompasses 2.9 acres of landside area, and 5.7 acres of waterside area. The portion of the project site that is directly adjacent to the Driscoll's Wharf leasehold area is an approximately 0.7 -acre area where the floating wave attenuator is proposed. Figure 1 provides a project vicinity map.

The Driscoll's Wharf leasehold is bordered to the north by Nixie Way on Naval Base Point Loma Harbor Drive Annex, and the water-side area is located within the northeast area of America's Cup Harbor. Access to the project site is provided via Nixie Way from North Harbor Drive.

The project site is one of two commercial fishing wharves in San Diego Bay. The landside portions of the project site include surface parking, office buildings, outdoor storage areas, and other facilities related to the commercial fishing industry. The waterside portion of the project site includes a loading and offloading commercial fishing wharf (Pier 4) and a marina (Piers 5, 6, 7, and 8) for commercial fishing vessels.

LAND AND WATER USE DESIGNATIONS

The District's Port Master Plan (PMP) governs the land and water uses on District Tidelands that the State Legislature has granted to the District, as trustee, and for which the District has regulatory duties and proprietary responsibilities. The PMP establishes 10 planning districts covering approximately 5,500 acres of District jurisdiction. The project site is within Planning District 1 (Shelter Island). The Planning District 1 water designations include, but are not limited to, Recreational Boat Berthing, Marine Services and Sportfishing Berthing, Commercial Fishing Berthing, and Open Bay/Water. Land use designations include, but are not limited to, Commercial Recreation, Marine Sales and Services, Commercial Fishing, Sportfishing, Open Space, Park/Plaza, and Promenade. The designations within the project site are Commercial Fishing (land), Commercial Fishing Berthing (water) and Navy Small Craft Berthing (water).

BACKGROUND

The project site is currently and was historically used as a wharf for commercial fishing and recreational vessels. It was constructed in the early 1950's, and Driscoll Marina Ltd. has leased the project area from the District since 1992.

Commercial fishing is identified as a high-priority use under the California Coastal Act (Sections 30234 and 30234.5), and "fisheries" are one of the five Public Trust uses that the District is charged with promoting under the Public Trust Doctrine and the San Diego Unified Port District Act (Port Act).

The project is needed to address deficiencies related to the age and condition of structures. Most of the existing structures have reached the end of their useful life (e.g., Piers 5, 6, 7, and 8; Building E) and modernization of the wharf is needed if commercial fishing operations are to continue on the project site.

BRIEF PROJECT DESCRIPTION

The project is designed to address existing deficiencies related to the age and condition of structures, and outdated operational conditions at the existing piers. Specifically, the project includes the following components: the Demolition Component and the Waterside Development Component, as described more below.

The Demolition Component consists of the following:

- Demolition of the fish offloading pier (Pier 4);
- Demolition of Piers 5 though 8;
- Demolition of one landside building (Building E, also known as Building 4922);
- Demolition of a hazardous materials storage shed; and
- Removal of soil, groundwater, and sediment contaminants in various areas throughout site, as needed.

Figure 2 is an aerial photo that identifies the existing project site and the areas that are part of the Demolition Component.

The Waterside Development Component consists of the following:

- Reconstruction of up to three floating dock piers (Piers 5, 7, and 8) and associated structures, such as new gangways and headwalks connecting the piers;
- Construction of a floating platform to replace the existing Pier 6 for vessel loading and unloading;
- Reconstruction of Pier 4 for unloading of fish, seafood, and related equipment; and
- Installation of a floating wave attenuator east of the marina (outside of the existing leasehold).

Figure 3 provides a site plan for the proposed Waterside Development Component.

ENVIRONMENTAL CONSIDERATIONS

Probable Environmental Effects to be Addressed in the EIR

Based on the initial study environmental checklist analysis (Attachment A), the District has determined that the following environmental topics will be included and analyzed in the EIR:

- Air Quality
- Biological Resources
- Cultural Resources
- Energy
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Noise
- Transportation

The EIR would also address feasible mitigation measures, a reasonable range of alternatives, and additional mandatory sections as required by CEQA. The District would also prepare a mitigation monitoring and reporting program to address the potential significant impacts of the project.

Effects Determined to be Less than Significant During Preparation of the Initial Study

Based on the initial study environmental checklist analysis (Attachment A), it has been determined that implementation of the project would not have the potential to result in significant impacts to the following resource areas:

- Aesthetics
- Agriculture and Forestry Resources
- Geology/Soils
- Mineral Resources
- Population and Housing
- Public Services
- Recreation
- Tribal Cultural Resources
- Utilities and Service Systems
- Wildfire

NOTICE OF PREPARATION COMMENTS

The Notice of Preparation is available for a 30-day public review period that starts on **Thursday, December 19, 2024 and ends at 5:00 p.m. on Friday, January 24, 2025**. Written comments will be accepted until 5:00 p.m. on Friday, January 24, 2025. Comments regarding the scope and content of the environmental information that should be included in the EIR and other environmental concerns should be mailed to:

San Diego Unified Port District
Attn: Lily Tsukayama, Planning Department
3165 Pacific Highway
San Diego, CA 92101
or emailed to: ltsukayama@portofsandiego.org

PUBLIC SCOPING MEETING

A virtual public scoping meeting regarding the proposed EIR will be held via Microsoft Teams on **Wednesday, January 15, 2025, at 5:30 p.m**. Click here to join the virtual meeting on Wednesday, January 15, or contact Lily Tsukayama for the link to the virtual meeting. For questions on this notice, contact Lily Tsukayama at (619) 686-8199 or ltsukayama@portofsandiego.org

The District, as Lead Agency pursuant to CEQA, will review the public comments on the NOP to determine which issues should be addressed in the EIR.

Other opportunities for the public to comment on the environmental effects of the project include, but are not limited to, the following.

- A minimum 45-day public review period for the Draft EIR
- A public hearing where the Board of Port Commissioners will consider certification of the EIR and issuance of the CDP

For questions regarding this Notice of Preparation, please contact Lily Tsukayama at (619) 686-8199 or ltsukayama@portofsandiego.org.

NATIVE AMERICAN HERITAGE COMMISSION

December 31, 2024

Lily Tsukayama
San Diego Unified Port District
3165 Pacific Highway
San Diego CA 92101

Re: 2024120926 Shelter Island Commercial Fishing Wharf Project, San Diego County

Dear Ms. Tsukayama:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements**. If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:

- **a.** A brief description of the project.
- **b.** The lead agency contact information.
- **c.** Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).
- **d.** A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).

- **a.** For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:

- **a.** Alternatives to the project.
- **b.** Recommended mitigation measures.
- **c.** Significant effects. (Pub. Resources Code §21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:

- **a.** Type of environmental review necessary.
- **b.** Significance of the tribal cultural resources.
- **c.** Significance of the project's impacts on tribal cultural resources.
- **d.** If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:

- **a.** Whether the proposed project has a significant impact on an identified tribal cultural resource.
- **b.** Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:

a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or

b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:

a. Avoidance and preservation of the resources in place, including, but not limited to:

i. Planning and construction to avoid the resources and protect the cultural and natural context.

ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.

b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:

i. Protecting the cultural character and integrity of the resource.

ii. Protecting the traditional use of the resource.

iii. Protecting the confidentiality of the resource.

c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.

d. Protecting the resource. (Pub. Resource Code §21084.3 (b)).

e. Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).

f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.

b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.

c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf.

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
    - **a.** The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
    - **b.** Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/.

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (https://ohp.parks.ca.gov/?page_id=30331) for an archaeological records search. The records search will determine:
    - **a.** If part or all of the APE has been previously surveyed for cultural resources.
    - **b.** If any known cultural resources have already been recorded on or adjacent to the APE.
    - **c.** If the probability is low, moderate, or high that cultural resources are located in the APE.
    - **d.** If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
    - **a.** The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
    - **b.** The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:

a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.

b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.

a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.

b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.

c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@NAHC.ca.gov.

Sincerely,

Andrew Green

Hi Lily,

I just wanted to pass along the potential for facility owners/operators to install shore power per the California Air Resources Board (CARB) Commercial Harbor Craft regulation. A copy of the regulation can be found here: https://ww2.arb.ca.gov/sites/default/files/barcu/regact/2021/chc2021/chcfro.pdf

Thanks,

Eric Luther

Subject: [External] NOP & Upcoming Scoping Meeting - EIR for the Shelter Island Commercial Fishing Wharf

To All Interested Parties,

Notice is hereby given that the San Diego Unified Port District (SDUPD), as lead agency under the California Environmental Quality Act (CEQA), has prepared a Notice of Preparation (NOP) of a Draft Environmental Impact Report (EIR) for the "**Shelter Island Commercial Fishing Wharf**." The NOP is available for a public review period that ends at **5:00 pm on Friday, January 24, 2025**. Comments regarding the scope and content of the environmental information that should be included in the EIR and other environmental concerns should be sent via email or mail, as follows:

Email
ltsukayama@portofsandiego.org

Mail
San Diego Unified Port District
Planning Dept, c/o Lily Tsukayama
3165 Pacific Highway
San Diego, CA 92101

The NOP, which includes an Initial Study, is attached to this email and also available for download by clicking this link, or copying and pasting the link into your internet browser: https://www.portofsandiego.org/public-records/port-updates/notices-disclosures/ceqacoastal-act-notices *[NOTE: the file available online has a larger file size and better resolution than the file attached to this email.]*

A **public scoping meeting** to solicit comments on the scope and content of the EIR **will be held via Microsoft Teams on Wednesday, January 15, 2025, at 5:30 p.m**. Click here to join the virtual meeting on Wednesday, January 15, or contact Lily Tsukayama for the link to the virtual meeting.

Questions? Please call Lily Tsukayama at (619) 686-6199.

Thank you,
Lily

SHELTER ISLAND COMMERICIAL FISHING WHARF
NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT STATEMENT
SCH #2024120926

Dear Ms. Tsukayama:

The California Department of Fish and Wildlife (Department) received a Notice of Preparation (NOP) of a Draft Environmental Impact Statement (DEIR) from the San Diego Unified Port District (District) for the Shelter Island Commercial Fishing Wharf Project (Project), pursuant the California Environmental Quality Act (CEQA) and CEQA Guidelines.[1]

Thank you for the opportunity to provide comments and recommendations regarding those activities involved in the Project that may affect California fish and wildlife. Likewise, we appreciate the opportunity to provide comments regarding those aspects of the Project that the Department, by law, may be required to carry out or approve through the exercise of its own regulatory authority under the Fish and Game Code.

DEPARTMENT ROLE

The Department is California's Trustee Agency for fish and wildlife resources and holds those resources in trust by statute for all the people of the state. (Fish & G. Code, section 711.7, subd. (a) & 1802; Pub. Resources Code, section 21070; CEQA Guidelines section 15386, subd. (a).) The Department, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species. (*Id.*, section 1802.) Similarly for purposes of CEQA, the Department is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect fish and wildlife resources. The Department is also responsible for

[1] CEQA is codified in the California Public Resources Code in section 21000 et seq. The "CEQA Guidelines" are found in Title 14 of the California Code of Regulations, commencing with section 15000.

marine biodiversity protection under the Marine Life Protection Act in coastal marine waters of California, and ensuring fisheries are sustainably managed under the Marine Life Management Act.

PROJECT DESCRIPTION SUMMARY

Proponent: San Diego Unified Port District and Driscoll Marina, Ltd.

Objective: The objective of the Project is to modernize the existing commercial fishing marina at the Driscoll's Wharf leasehold area by demolishing and reconstructing parts of the marina to address deficiencies related to the age and condition of structures. The Project's demolition component would remove Piers 4, 5, 6, 7, and 8; demolish building E and a small hazardous material storage shed; and remove all soil, groundwater, and sediment contaminants from the leased premises. The Project's waterside development component includes the reconstruction and operation of Piers 4,5, 6, 7, and 8. The Project is proposing to reconstruct up to three floating dock piers (Piers 5, 7, and 8) and associated gangways and headwalks connecting the piers; construct a floating platform to replace the existing Pier 6 for vessel loading and unloading; reconstruct Pier 4 for unloading fish, seafood, and related equipment; and install a floating wave attenuator to the east of the marina which is outside of the existing leasehold.

The tenant, Driscoll Marina Ltd., is responsible for the demolition component as part of the end-of-lease obligations, except for the removal of Pier 4. The District is the project proponent for the removal of Pier 4 and for the waterside development component.

Location: The Project site is located at 4918 North Harbor Drive in San Diego, California, which is within and directly adjacent to the Driscoll's Wharf leasehold located on District property.

BIOLOGICAL SIGNIFICANCE

Discussion and Comment: San Diego Bay waters support many resident and migratory fish and special status wildlife such as seabirds, marine mammals, and sea turtles. Important marine plants such as eelgrass (*Zostera marina*) support those fish and wildlife species and may be present throughout shallow coastal environments in the Harbor. Eelgrass is important as fish nursery habitat and supports juvenile and adult fish. San Diego Bay waters also support commercially and recreationally important fish and invertebrate species such as California halibut (*Paralichthys californicus*), California spiny lobster (*Panulirus interruptus*), and the Northern anchovy (*Engraulis mordax*), which is an important forage fish.

COMMENTS AND RECOMMENDATIONS

The Department offers the comments and recommendations below to assist the District in adequately identifying and/or mitigating the Project's significant, or potentially significant, direct, and indirect impacts on fish and wildlife resources.

Native Eelgrass Impacts

Comments: The NOP notes that eelgrass is a species that is present within the Project area where pile removal and pile driving impacts may occur, and where floating docks, piers, and a floating wave attenuator may be constructed. Native eelgrass species create large beds beneficial for fish habitat and have been identified as special aquatic sites and given protections by the Clean Water Act. The Magnuson-Stevens Fishery Conservation and Management Act (MSA) identifies eelgrass as a Habitat Area of Special Concern. Additionally, the importance of eelgrass protection and restoration, as well as the marine ecological benefits of eelgrass, is identified in Pub. Resources Code section 35630. The Department uses the California Eelgrass Mitigation Policy (CEMP) (NOAA 2014, Attachment 1), developed by the National Marine Fisheries Service (NMFS), for guidance on surveying eelgrass, avoiding and minimizing impacts to eelgrass, assessing eelgrass impacts, eelgrass mitigation measures and compensation, and for identifying appropriate eelgrass mitigation and donor sites.

Recommendations: The Department recommends that plans should be developed to avoid and minimize potential impacts to eelgrass to the maximum extent feasible if eelgrass beds or patches are identified within or adjacent to the Project area. The proposed Project should be developed consistent with the CEMP to avoid and minimize disturbance, damage, and losses of eelgrass. This includes avoiding impacts to eelgrass associated with pile pulling and pile driving; construction of overwater structures; bottom disturbances; demolition and construction turbidity; sedimentation, shading, and falling debris; and shading and anchoring within eelgrass habitat associated construction barges and vessels. Additional details are in the CEMP, but the Department recommends at least the following should eelgrass beds or patches be identified within or adjacent to the Project area:

- To avoid direct eelgrass impacts, pile driver barges and vessels, and all barge anchoring should be located outside of eelgrass habitat;
- To avoid scouring of eelgrass and potential eelgrass habitat, anchor chain designs, and locations of barge and vessel moorings should avoid eelgrass habitat impacts;
- To avoid and minimize eelgrass impacts from demolition and construction debris, the District should use Best Management Practices (BMPs) such as perimeter debris booms. If debris is observed falling into the San Diego Bay water, retrieve debris as soon as possible; and

- To minimize eelgrass impacts from water turbidity and sedimentation, install silt curtains around pile driving or demolition areas if applicable. Restrict the turbidity plumes to the smallest possible area during all phases of in water construction.

Comprehensive pre-construction surveys, for eelgrass beds or patches should be conducted consistent with the CEMP. Additionally, post-construction eelgrass surveys should be conducted consistent with the CEMP if eelgrass is identified in the Project area. If any unavoidable eelgrass impacts occur, these impacts should be mitigated for using guidance described within the CEMP. Indirect eelgrass impacts such as shading from new piles or overwater structures should also be avoided. Pile driving work conducted outside of the peak eelgrass growing period may reduce shading impacts when eelgrass beds may have died back. Consequently, pile location and time of year for pile driving should be considered to avoid impacts to eelgrass and other fish and wildlife generated by pile driving.

If eelgrass harvest and transplanting is required for mitigation, a Scientific Collecting Permit (SCP) from the Department will be required prior to harvest and transplanting activities. The SCP may include permit conditions such as donor eelgrass surveys, submittal of an eelgrass harvest and transplant plan, limits on number of turions collected, methods for collection and transplanting, notification of activities, and reporting requirements. Please visit the Department's SCP webpage for more information: https://wildlife.ca.gov/Licensing/Scientific-Collecting.

Pile Driving and Sound Criteria

Comments: According to the NOP, the Project's construction would involve the use of impact and/or vibratory pile driving. Underwater noise associated with pile driving and pulling activities may cause temporary or permanent impacts to fish, such as temporary movement out of the Project area, barotrauma injury, or mortality. The Department relies on guidance from the Fisheries Hydroacoustic Working Group to set safe sound pressure level (SPL) criteria for pile driving and pulling activities (Fisheries Hydroacoustic Working Group 2008, Attachment 2). The SPL dual criteria include a peak level of 206 dB and a cumulative sound exposure (SEL) level of 187 dB for fish 2 grams and heavier or a cumulative SEL of 183 dB for fish less than 2 grams. Additionally, if hydraulic jetting or an impact hammer is used for pile driving, this may impact water quality, releasing contaminants from sediments into the water and/or creating turbidity that could harm fish and shade or smother eelgrass beds.

Recommendations: The Department recommends using a vibratory hammer for pile driving to the greatest extent feasible, or an alternative technology that produces the least amount of noise. If an impact hammer must be used (e.g., due to pile material, refusal at bedrock), multiple minimization measures may be used to reduce sound levels. The Department recommends the following:

- A sound attenuation and monitoring plan should be submitted to the resource agencies for review prior to initiating pile driving activities;

- A wood, or similar material, cushion block should be used between the pile and hammer during all pile driving using an impact hammer;
- A bubble curtain should be used, where feasible, during all impact pile driving to further reduce sound below levels that have been shown to cause injury and/or mortality to fish and marine mammals; and
- Underwater sound level monitoring should be conducted during pile driving. If SPLs and SELs exceed agreed upon levels as per the Interim Criteria for Injury to Fish, additional steps should be taken to reduce the underwater noise to acceptable levels.

The Department recommends the use of a silt curtain to control turbidity during high turbidity generating activities. Additionally, high turbidity generating activities should be conducted when there are no strong outgoing tides since this could exacerbate turbid conditions and negatively impact marine life.

Marine Mammal and Sea Turtle Monitoring

Comments: Harbor seals (*Phoca vitulina*), California sea lions (*Zalophus californianus*), other species of marine mammals, and sea turtles may be present or occur within the Project area. Construction activities, such as pile driving, within the Project area have the potential to impact these animals if they are present.

Recommendations: The Department recommends that the District prepare and implement a marine mammal and sea turtle monitoring plan that includes, but is not limited to:

- Establishment of an underwater exclusion zone as a designated focus area for species protection to allow animals to evacuate the area prior to commencement of construction activities;
- Pile driving activities should not occur while marine mammals or sea turtles are present within the exclusion zone;
- Pre-construction monitoring to update the occurrence and use of the area by marine mammals and turtles; and
- Monitoring of marine mammals and sea turtles by an experienced observer immediately prior to and during all construction activities.

The Department recommends that the District consult with NMFS regarding the above recommendation and any other necessary avoidance and mitigation measures to reduce impacts to marine mammals and sea turtles.

Floating Debris and Spill and Prevention Plan

Comments: The Project's proposed demolition activities have the potential to generate debris and cause material spills that may pollute the Project site's surrounding waters and impact important marine species and habitats.

Recommendation: The Department recommends that the District place a drop net over the waterway to catch debris during demolition construction activities. The collected debris should be removed as soon as possible and disposed of in an appropriate least impactful manner. The Department recommends that the District prepares and implements a spill and prevention plan to minimize and/or prevent discharge of spilled material at the Project site. This plan should include measures to prevent and control spills, contain the spill, clean the spill, and dispose of contaminated materials.

Invasive Species Impacts

Comments: Disturbance of the bottom sediments from pile construction and anchoring may redistribute non-native species that compete with native species. This could cause widespread adverse impacts to eelgrass and marine ecology. The invasive alga *Caulerpa taxifolia* is listed as a federal noxious weed under the U.S. Plant Protection Act and while deemed eradicated in 2006 is monitored for potential future emergence. Another invasive alga species found recently in Newport Bay and San Diego Bay is *Caulerpa prolifera*, which is also a potential threat to growth and expansion of native eelgrass beds and other native algae. *Caulerpa prolifera* can grow as deep as 50 meters and appears to be more tolerant of low light environments than most other macroalgae. Additionally, since all *Caulerpa* species pose a serious risk in harming native marine life, Fish and Game Code Section 2300 was amended in 2023 so that no person shall sell, possess, import, transport, transfer, release alive in the state, or give away without consideration all species of the genus *Caulerpa*, with the exception of bona fide scientific research upon authorization by the Department.

Recommendations: The Department recommends conducting pre-construction *Caulerpa spp.* surveys to identify potential existence of invasive *Caulerpa spp.* in accordance with the Caulerpa Control Protocol https://media.fisheries.noaa.gov/2021-12/caulerpa-control-protocol-v5.pdf (October 2021). Any sightings of *Caulerpa spp.* should be reported within 24 hours to the Department (Caulerpa@wildlife.ca.gov), and NMFS at 562-980-4037 (nmfs.wcr.caulerpa@noaa.gov).

ENVIRONMENTAL DATA

CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database which may be used to make subsequent or supplemental environmental determinations. (Pub. Resources Code, section 21003, subd. (e).) Accordingly, please report any special status species and natural communities detected during Project surveys to the California Natural Diversity Database (CNDDB). The CNNDB field survey form can be filled out and submitted online at the following link: https://wildlife.ca.gov/Data/CNDDB/Submitting-Data. The types of information reported to CNDDB can be found at the following link: https://www.wildlife.ca.gov/Data/CNDDB/Plants-and-Animals.

ENVIRONMENTAL DOCUMENT FILING FEES

The Project, as proposed, would have an impact on fish and/or wildlife, and assessment of environmental document filing fees is necessary. Fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by the Department. Payment of the environmental document filing fee is required for the underlying project approval to be operative, vested, and final. (Cal. Code Regs, tit. 14, section 753.5; Fish & G. Code, section 711.4; Pub. Resources Code, section 21089.)

CONCLUSION

The Department appreciates the opportunity to comment on the NOP to assist the District in identifying and mitigating Project impacts on biological resources. Questions regarding this letter or further coordination should be directed to Leslie Hart, Environmental Scientist at R7CEQA@wildlife.ca.gov.

Sincerely,

Craig Shuman, D. Env

I. National Marine Fisheries Service's (NMFS) California Eelgrass Mitigation Policy

A. Policy Statement

It is NMFS' policy to recommend **no net loss of eelgrass habitat function** in California.

For all of California, compensatory mitigation should be recommended for the loss of existing eelgrass habitat function, but only after avoidance and minimization of effects to eelgrass have been pursued to the maximum extent practicable. Our approach is congruous with the approach taken in the federal Clean Water Act guidelines under section 404(b)(1) (40 CFR 230). In absence of a complete functional assessment, eelgrass distribution and density should serve as a proxy for eelgrass habitat function. Compensatory mitigation options include comprehensive management plans, in-kind mitigation, mitigation banks and in-lieu-fee programs, and out-of-kind mitigation. While in-kind mitigation is preferred, the most appropriate form of compensatory mitigation should be determined on a case-by-case basis.

Further, it is the intent of this policy to ensure that there is no loss associated with delays in establishing compensatory mitigation. This should be accomplished by creating a greater amount of eelgrass than is lost, if the mitigation is performed contemporaneously or after the impacts occur. To achieve this, NMFS, in most instances, should recommend compensatory mitigation for vegetated and unvegetated eelgrass habitat be successfully completed at a ratio of at least 1.2:1 mitigation area to impact area. This ratio is based on present value calculation[1] using a discount rate of 0.03 (NOAA-DARP 1999). This ratio assumes that restored eelgrass habitat achieves habitat function comparable to existing eelgrass habitat within a period of three years or less (Hoffman 1986, Evans & Short 2005, Fonseca *et al.* 1990).

For ongoing projects, once mitigation has been successfully implemented to compensate for the loss of eelgrass habitat function within a specified footprint, NMFS should not recommend additional mitigation for subsequent loss of eelgrass habitat if 1) ongoing project activities result in subsequent loss of eelgrass habitat function within the same footprint for which mitigation was completed and 2) the project applicant can document that no new area of eelgrass habitat is impacted by project activities.

This policy does not address mitigation for potential eelgrass habitat. NMFS recognizes impacts to potential eelgrass habitat may preclude eelgrass movement or expansion to suitable unvegetated areas in the future, potentially resulting in declines in eelgrass abundance over time. In addition, it does not address other shallow water habitats. Regulatory protections in the estuarine/marine realm typically focus on wetlands and submerged aquatic vegetation. Mudflats, sandflats, and other superficially bare habitats do not garner the same degree of recognition and

---

[1] Present Value (PV) is a calculation used in finance to determine the present day value of an amount that is received at a future date. The premise of the equation is that receiving something today is worth more than receiving the same item at a future date; $PV = C_1/(1+r)^n$ where C_1= resource at period 1, r= interest or discount rate, n=number of periods.

concern, even though these are some of the most productive and fragile ecosystems (Reilly *et al*. 1999). NMFS will continue to collaborate with federal and state partners on these issues.

B. Eelgrass Background and Information

Eelgrass species (*Zostera marina* L. and *Z. pacifica*) are seagrasses that occur in the temperate unconsolidated substrate of shallow coastal environments, enclosed bays, and estuaries. Eelgrass is a highly productive species and is considered to be a "foundation" or habitat forming species. Eelgrass contributes to ecosystem functions at multiple levels as a primary and secondary producer, as a habitat structuring element, as a substrate for epiphytes and epifauna, and as sediment stabilizer and nutrient cycling facilitator. Eelgrass provides important foraging areas and shelter to young fish and invertebrates, food for migratory waterfowl and sea turtles, and spawning surfaces for invertebrates and fish such as the Pacific herring. Eelgrass also provides a significant source of carbon to the detrital pool which provides important organic matter in sometimes food-limited environments (*e.g.*, submarine canyons). In addition, eelgrass has the capacity to sequester carbon in the underlying sediments and may help offset carbon emissions. Given the significance and diversity of the functions and services provided by seagrass, Costanza *et al.* (2007) determined seagrass ecosystems to be one of Earth's most valuable.

California supports dynamic eelgrass habitats that range in extent from less than 11,000 acres to possibly as much as 15,000 acres statewide. This is inclusive of estimates for poorly documented beds in smaller coastal systems as well as open coastal and insular areas. While among the most productive of habitats, the overall low statewide abundance makes eelgrass one of the rarest habitats in California. Collectively just five systems, Humboldt Bay, San Francisco Bay, San Diego Bay, Mission Bay and Tomales Bay support over 80 percent of the known eelgrass in the state. The uneven distribution of eelgrass resources increases the risk to this habitat and also contributes to its dynamic nature. Further, the narrow depth range within which eelgrass can occur further places this habitat at risk in the face of global climate change and sea level rise predictions.

Seagrass habitat has been lost from temperate estuaries worldwide (Duarte 2002, Lotze *et al.* 2006, Orth *et al.* 2006). While both natural and human-induced mechanisms have contributed to these losses, impacts from human population expansion and associated pollution and upland development is the primary cause (Short and Wyllie-Echeverria 1996). Human activities that affect eelgrass habitat distribution and abundance, including, but not limited to, urban development, harbor development, aquaculture, agricultural runoff, effluent discharges, and upland land use associated sediment discharge (Duarte 2008) occur throughout California. For example, dredging and filling; shading and alteration of circulation patterns; and watershed inputs of sediment, nutrients, and unnaturally concentrated or directed freshwater flows can directly and indirectly destroy eelgrass habitats. Conversely, in many areas great strides have been made at restoring water quality and expanding eelgrass resources through directed efforts at environmental improvements and resource enhancement. While improvements in eelgrass management have occurred overall, the importance of eelgrass both ecologically and economically, coupled with ongoing human pressure and potentially increasing degradation and losses associated with climate change, highlight the need to protect, maintain, and where feasible, enhance eelgrass habitat.

C. Purpose and Need for Eelgrass Mitigation Policy

Eelgrass warrants a strong protection strategy because of the important biological, physical, and economic values it provides, as well as its importance to managed species under the Magnuson-Stevens Fishery Conservation and Management Act (MSA). Vegetated shallows that support eelgrass are also considered special aquatic sites under the 404(b)(1) guidelines of the Clean Water Act (40 C.F.R. § 230.43). The National Oceanic and Atmospheric Administration's (NOAA) National Marine Fisheries Service (NMFS) developed this policy to establish and support a goal of protecting this resource and its habitat functions, including spatial coverage and density of eelgrass habitats. This NMFS policy and implementing guidelines are being shared with agencies and the public to ensure there is a clear and transparent process for developing eelgrass mitigation recommendations.

Pursuant to the MSA, eelgrass is designated as an essential fish habitat (EFH) habitat area of particular concern (HAPC) for various federally-managed fish species within the Pacific Coast Groundfish Fishery Management Plan (FMP) (PFMC 2008). An HAPC is a subset of EFH that is rare, particularly susceptible to human-induced degradation, especially ecologically important, and/or located in an environmentally stressed area. HAPC designations are used to provide additional focus for conservation efforts.

This policy and guidelines support but do not expand upon existing NMFS authorities under the MSA, the Fish and Wildlife Coordination Act (FWCA), and the National Environmental Policy Act (NEPA). Pursuant to the EFH provisions of the MSA, FWCA, and obligations under the NEPA as a responsible agency, NMFS annually reviews and provides recommendations on numerous actions that may affect eelgrass resources throughout California. Section 305(b)(1)(D) of the MSA requires NMFS to coordinate with, and provide information to, other federal agencies regarding the conservation and enhancement of EFH. Section 305(b)(2) requires all federal agencies to consult with NMFS on all actions or proposed actions authorized, funded, or undertaken by the agency that may adversely affect EFH. Under section 305(b)(4) of the MSA, NMFS is required to provide EFH Conservation Recommendations to federal and state agencies for actions that would adversely affect EFH (50 C.F.R. § 600.925). NMFS makes its recommendations with the goal of avoiding, minimizing, or otherwise compensating for adverse effects to EFH. When impacts to NMFS trust resources are unavoidable, NMFS may recommend compensatory mitigation to offset those impacts. In order to fulfill its consultative role, NMFS may also recommend, among other things, the development of mitigation plans, habitat distribution maps, surveys and survey reports, progress milestones, monitoring programs, and reports verifying the completion of mitigation activities.

Eelgrass impact management and mitigation throughout California has historically been undertaken without a statewide strategy. Federal actions with impacts to eelgrass require considerable NMFS staff time for project review, coordination and development of conservation recommendations. As federal staff resources vary with budgets, and threats to aquatic resources remain steady or increase, regulatory streamlining and increased efficiency are crucial for continued protection of important coastal habitats, including eelgrass. The California Eelgrass Mitigation Policy (CEMP) is meant to increase efficiency of existing regulatory authorities in a programmatic manner, provide transparency to federal agencies and action proponents, and ensure that unavoidable impacts to eelgrass habitat are fully and appropriately mitigated. It is the intent of NMFS to collaborate with other federal, state, and local agencies charged with the protection of marine resources to seek a unified approach to actions affecting eelgrass such that consistency across agencies with respect to this resource may be enhanced.

D. Relevance to Other Federal and State Policies

Based on our understanding of existing federal and state policies regarding aquatic resource conservation, the CEMP does not conflict with existing policies and complements the federal and state wetland policies as described below. NMFS does not intend to make any recommendations, which, if adopted by the action agency and carried out, would violate other federal, state, or local laws. The CEMP also complements the NOAA Aquaculture Policy and National Shellfish Initiative and builds upon the NOAA Seagrass Conservation Guidelines and the Southern California Eelgrass Mitigation Policy.

1. Corps/EPA Mitigation Rule and supporting guidance

In 2008, the Environmental Protection Agency (EPA) and the U.S. Army Corps of Engineers (Corps) issued revised regulations governing compensatory mitigation for authorized impacts to wetlands, streams, and other waters of the U.S. under Section 404 of the Clean Water Act. The regulations emphasize avoiding impacts to wetlands and other water resources. For unavoidable impacts, the rule incorporates Natural Resource Council recommendations to improve planning, implementing and managing wetland replacement projects, including: science-based assessment of impacts and compensation measures, watershed assessments to drive mitigation sites and plans, measurable and enforceable ecological performance standards for evaluating mitigation projects, mitigation monitoring to document whether the mitigation employed meets ecological performance standards, and complete compensation plans. The regulations also encourage the expansion of mitigation banking and in lieu fee agreements to improve the quality and success of compensatory mitigation projects.

The NMFS policy to recommend no net loss of eelgrass function and the eelgrass mitigation guidelines offered herein align with the provisions of the EPA and Corps mitigation rule, but provide more specific recommendations on how to avoid and minimize impacts to eelgrass and how to implement eelgrass surveys, assessments, mitigation, and monitoring.

2. State of California Wetland Conservation Policies

The 1993 State of California Wetlands Conservation Policy established a framework and strategy to ensure no overall net loss and long-term gain in the quantity, quality, and permanence of wetlands acreage and values in California in a manner that fosters creativity, stewardship, and respect for private property, reduce procedural complexity in administration of state and federal wetlands conservation programs, and encourage partnerships to make landowner incentive programs and cooperative planning efforts the primary focus of wetlands conservation and restoration.

The State of California is also developing a Wetland and Riparian Area Protection Policy. The first phase of this effort was published as the "Preliminary Draft Wetland Area Protection Policy" with the purpose of protecting all waters of the State, including wetlands, from dredge and fill discharges. It includes a wetland definition and associated delineation methods, an assessment framework for collecting and reporting aquatic resource information, and requirements applicable to discharges of dredged or fill material. The draft specifies that dredge or fill projects will provide for replacement of existing beneficial uses through compensatory mitigation. The preliminary policy includes a determination that compensatory mitigation will sustain and improve the overall abundance, diversity and condition of aquatic resources in a project watershed area.

Based on the definition of wetlands included in these state wetland policies, the policies do not directly apply to subtidal eelgrass habitat, but may apply to intertidal eelgrass habitat. The NMFS policy of recommending no net loss to eelgrass habitat function and recommendations for compensatory mitigation for eelgrass impacts complement the state protection policies for wetlands.

3. NOAA Aquaculture Policy and National Shellfish Initiative

In 2011, NOAA released the National Marine Aquaculture Policy and the National Shellfish Initiative. The Policy encourages and fosters sustainable aquaculture development that provides domestic jobs, products, and services and that is in harmony with healthy, productive, and resilient marine ecosystems, compatible with other uses of the marine environment, and consistent with the National Policy for the Stewardship of the Ocean, our Coasts, and the Great Lakes (National Ocean Policy). The goal of the Initiative is to increase populations of bivalve shellfish in our nation's coastal waters—including oysters, clams, abalone, and mussels—through both sustainable commercial production and restoration activities. The Initiative supports shellfish industry jobs and business opportunities to meet the growing demand for seafood, while protecting and enhancing habitat for important commercial, recreational, and endangered and threatened species and species recovery. The Initiative also highlights improved water quality, nutrient removal, and shoreline protection as benefits from shellfish production and restoration. Both the Policy and the Initiative seek to improve interagency coordination for permitting commercial and restoration shellfish projects, as well as support research and other data collection to assess and refine conservation strategies and priorities.

The regulatory efficiencies, transparency, and compensation for impacts to eelgrass promoted by the CEMP directly support the National Aquaculture Policy statements and National Shellfish Initiative through: (1) protection of eelgrass, an important component of productive and resilient coastal ecosystems in California and habitat for wild species, and (2) improved coordination with federal partners regarding planning and permitting for commercial shellfish projects. Furthermore, research conducted under the direction of the National Shellfish Initiative could be informed by and also inform NMFS consultations regarding eelgrass impacts and mitigation in California.

4. NOAA Seagrass Conservation Guidelines

The NOAA publication, "Guidelines for the Conservation and Restoration of Seagrasses in the United States and Adjacent Waters" (1998) was developed by Mark Fonseca of NOAA's Beaufort Laboratory along with Jud Kenworthy and Gordon Thayer and was funded by NOAA's Coastal Ocean Program. The document presents an overview of seagrass conservation and restoration in the United States, discusses important issues that should be addressed in planning seagrass restoration projects, describes different planting methodologies, proposes monitoring criteria and means for evaluation success, and discusses issues faced by resource managers. The CEMP considers information presented in the Fonseca *et al*. document, but deviates in some cases in order to provide reasonable and practicable guidelines for eelgrass conservation in California.

5. Southern California Eelgrass Mitigation Policy

In southern and central California, eelgrass mitigation has been addressed in accordance with the Southern California Eelgrass Mitigation Policy applied by NMFS, US Fish & Wildlife Service, California Department of Fish and Wildlife, California Coastal Commission, US Army Corps of Engineers, and other resource and regulatory agencies since 1991, and which has generally been effective at ensuring eelgrass impacts are mitigated in most circumstances. Given the success of the Southern California Eelgrass Mitigation Policy over its 20-year history, this policy reflects an expansion of the application of the Southern California policy with minor modifications to ensure a high standard of statewide eelgrass management and protection. This policy will supersede the Southern California Eelgrass Mitigation Policy for all areas of California upon its adoption.

II. Implementing Guidelines for California

This policy and guidelines will serve as the guidance for staff and managers within NMFS for developing recommendations concerning eelgrass issues through EFH and FWCA consultations and NEPA reviews throughout California. This policy will inform NMFS's position on eelgrass issues for California in other roles as a responsible, advisory, or funding agency or trustee. In addition, this document provides guidance to assist NMFS in performing its consultative role under the statutes described above. Finally, pursuant to NMFS obligation to provide information to federal agencies under Section 305(b)(1)(D) of the MSA, this policy serves that role by providing information intended to further the conservation and enhancement of EFH. Should this policy or guidelines be inconsistent with any formally-promulgated NMFS regulations, those formally-promulgated regulations will take precedence over any inconsistent provisions of this policy.

While many of the activities impacting eelgrass are similar across California, eelgrass stressors and growth characteristics differ between southern California (U.S./Mexico border to Pt. Conception), central California (Point Conception to San Francisco Bay entrance), San Francisco Bay, and northern California (San Francisco Bay to the California/Oregon border). The amount of scientific information available to base management decisions on also differs among areas within California, with considerably more information and history with eelgrass habitat management in southern California than the other regions. Gaps in region-specific scientific information do not override the need to be protective of eelgrass habitat while relying on the best information currently available from areas within and outside of California. Although the primary orientation of this policy is toward statewide use, where indicated below, specific elements of this policy may differ between southern California, central California, northern California and San Francisco Bay.

NMFS will continue to explore the science of eelgrass habitat and improve our understanding of eelgrass habitat function, impacts, assessment techniques, and mitigation efficacy. Approximately every 5 years, NMFS intends to evaluate monitoring and survey data collected by federal agencies and action proponents per the recommendations of these guidelines. NMFS managers will determine if updates to these guidelines are appropriate based on information evaluated during the 5-year review. Updates to these guidelines and supporting technical information will be available on the NMFS website.

The information below serves as a common starting place for NMFS recommendations to achieve no net loss of eelgrass habitat function. NMFS employees should not depart from the guidelines provided herein without appropriate justification and supervisory concurrence. However, the recommendations that NMFS ultimately makes should be provided on a case-by-case basis to provide flexibility when site specific conditions dictate. In the EFH context, NMFS recommendations are provided to the action agency, which has final approval of the action; in accordance with the MSA, the action agency may take up NMFS recommendations or articulate its reasons for not following the recommendations. In the FWCA context, NMFS makes recommendations which must be considered, but the action agency is ultimately responsible for the wildlife protective measures it adopts (if any). For these reasons, neither this policy nor its implementing guidelines are to be interpreted as binding on the public.

A. Eelgrass Habitat Definition

Eelgrass distribution fluctuates and can expand, contract, disappear, and recolonize areas within suitable environments. Vegetated eelgrass areas can expand by as much as 5 meters (m) and contract by as much as 4 m annually (Donoghue 2011). Within eelgrass habitat, eelgrass is expected to fluctuate in density and patch extent based on prevailing environmental factors (*e.g.*, turbidity, freshwater flows, wave and current energy, bioturbation, temperature, etc.). To account for seagrass fluctuation, Fonseca *et al.* (1998) recommends that seagrass habitat include the vegetated areas as well as presently unvegetated spaces between seagrass patches.

In addition, there is an area of functional influence, where the habitat function provided by the vegetated cover extends out into adjacent unvegetated areas. Those functions include detrital enrichment, energy dampening and sediment trapping, primary productivity, alteration of current or wave patterns, and fish and invertebrate use, among other functions. The influence of eelgrass on the local environment can extend up to 10 m from individual eelgrass patches, with the distance being a function of the extent and density of eelgrass comprising the bed as well as local biologic, hydrographic, and bathymetric conditions (Bostrom and Bonsdorff 2000, Bostrom *et al*. 2001, Ferrell and Bell 1991, Peterson *et al*. 2004, Smith *et al.* 2008, van Houte-Howes *et al.* 2004, Webster *et al*. 1998). Detrital enrichment will generally extend laterally as well as down slope from the beds, while fish and invertebrates that utilize eelgrass beds may move away from the eelgrass core to areas around the bed margins for foraging and in response to tides or diurnal cycles (Smith *et al*. 2008).

To encompass fluctuating eelgrass distribution and functional influence around eelgrass cover, for the purposes of this policy and guidelines, eelgrass habitat is defined as areas of vegetated eelgrass cover (any eelgrass within 1 m^2 quadrat and within 1 m of another shoot) bounded by a 5 m wide perimeter of unvegetated area (See Attachment 1 for a graphical depiction of this definition). Unvegetated areas may have eelgrass shoots a distance greater than 1 m from another shoot, and may be internal as well as external to areas of vegetated cover. For isolated patches and on a case-by-case basis, it may be acceptable to include an unvegetated area boundary less than or greater than 5 m wide. The definition excludes areas of unsuitable environmental conditions such as hard bottom substrates, shaded locations, or areas that extend to depths below those supporting eelgrass. Suitable depths can vary substantially depending upon site-specific conditions. In general, eelgrass does not extend deeper than 12 feet mean lower low water (MLLW) in most protected bays and harbors in Southern California, and is more limited in Central and Northern California embayments. However, eelgrass can grow much deeper in entrance channels and offshore areas

B. Surveying Eelgrass

NMFS may recommend action agencies conduct surveys of eelgrass habitat to evaluate effects of a proposed action. Eelgrass habitat should be surveyed using visual or acoustic methods and mapping technologies and scales appropriate to the action, scale, and area of work. Surveys should document both vegetated eelgrass cover as well as unvegetated areas within eelgrass habitat (See section II.A. for definition). Assessing impacts to eelgrass habitat relies on the completion of quality surveys and mapping. As such, inferior quality of surveys and mapping (*e.g.*, completed at an inappropriate scale or using inappropriate methods) may make proper evaluation of impacts impossible, and may result in a recommendation from NMFS to re-survey and re-map project areas. Also, to account for fluctuations in eelgrass habitat due to environmental variations, a reference site(s) should be incorporated into the survey (See section V.B.4 below for more details).

1. Survey Parameters

Because eelgrass growth conditions in California vary, eelgrass mapping techniques will also vary. Diver transects or boundary mapping may be suited to very small scale mapping efforts, while aerial and/or acoustic survey with ground-truthing may be more suited to larger survey areas. Aerial and above-water visual survey methods should be employed only where the lower limit of eelgrass is clearly visible or in combination with methods that adequately inventory eelgrass in deeper waters.

The survey area should be scaled as appropriate to the size of the potential action and the potential extent and distribution of eelgrass impacts, including both direct and indirect effects. The resolution of mapping should be adequate to address the scale of effects reasonably expected to occur. For small projects, such as individual boat docks, higher mapping resolution is appropriate in order to detect actual effects to eelgrass at a scale meaningful to the project size. At larger scales, the mapping resolution may be less refined over a larger area, assuming that minor errors in mapping will balance out over the larger scale. Survey reports should provide a detailed description of the survey coverage (*e.g.*, number, location, and type of samples) and any interpolation methods used in the mapping.

While many parameters may be useful to describe eelgrass habitat condition (*e.g.*, plant biomass, leaf length, shoot:root ratios, epiphytic loading), many are labor intensive and may be impractical for resource management applications on a day-to-day basis. For this reason, four parameters have been identified for use in eelgrass habitat surveys and assessment of effects of an action on eelgrass. These parameters that should be articulated in eelgrass surveys are: 1) spatial distribution, 2) areal extent, 3) percentage of vegetated cover, and 4) the turion (shoot) density.

a) Spatial Distribution

The spatial distribution of eelgrass habitat should be delineated by a contiguous boundary around all areas of vegetated eelgrass cover extending outward a distance of 5 m, excluding gaps within the vegetated cover that have individual plants greater than 10 m from neighboring plants. Where such separations occur, either a separate area should be defined, or a gap in the area should be defined by extending a line around the void along a boundary defined by adjacent plants and including the 5 meter perimeter. The boundary of the eelgrass habitat should not extend into areas where depth, substrate, or existing structures are unsuited to supporting eelgrass habitat.

b) Aerial Extent

The eelgrass habitat aerial extent is the quantitative area (*e.g.*, square meters) of the spatial distribution boundary polygon of the eelgrass habitat. The total aerial extent should be broken down into extent of vegetated cover and extent of unvegetated habitat. Areal extent should be determined using commercially available geo-spatial analysis software. For small projects, coordinate data for polygon vertices could be entered into a spreadsheet format, and area could be calculated using simple geometry.

c) Percent Vegetated Cover

Eelgrass vegetated cover exists when one or more leaf shoots (turions) per square meter is present. The percent bottom cover within eelgrass habitat should be determined by totaling the area of vegetated eelgrass cover and dividing this by the total eelgrass habitat area. Where substantial differences in bottom cover occur across portions of the eelgrass habitat, the habitat could be subdivided into cover classes (*e.g.*, 20% cover, 50% cover, 75% cover).

d) Turion (Shoot) Density

Turion density is the mean number of eelgrass leaf shoots per square meter within mapped eelgrass vegetated cover. Turion density should be reported as a mean ± the standard deviation of replicate measurements. The number of replicate measurements (n) should be reported along with the mean and deviation. Turion densities are determined only within vegetated areas of eelgrass habitat and therefore, it is not possible to measure a turion density equal to zero. If different cover classes are used, a turion density should be determined for each cover class.

2. Eelgrass Mapping

For all actions that may directly or indirectly affect eelgrass habitat, an eelgrass habitat distribution map should be prepared on an accurate bathymetric chart with contour intervals of not greater than 1 foot (local vertical datum of MLLW). Exceptions to the detailed bathymetry could be made for small projects or for projects where detailed bathymetry may be infeasible. Unless region-specific mapping format and protocols are developed by NMFS (in which case such region-specific mapping guidance should be used), the mapping should utilize the following format and protocols:

a) Bounding Coordinates

Horizontal datum - Universal Transverse Mercator (UTM), NAD 83 meters, Zone 11 (for southern California) or Zone 10 (for central, San Francisco Bay, and northern California) is the preferred projection and datum. Another projection or datum may be used; however, the map and spatial data should include metadata that accurately defines the projection and datum.

Vertical datum - Mean Lower Low Water (MLLW), depth in feet.

b) Units

Transects, grids, or scale bars should be expressed in meters. Area measurements should be in square meters.

c) File Format

A spatial data layer compatible with readily available commercial geographic information system software producing file formats compatible with ESRI® ArcGIS software should be sent to NMFS when the area mapped supports at least 10 square meters of eelgrass. For those areas supporting less than 10 square meters of eelgrass, a table may alternatively be provided giving the vertices bounding x, y coordinates of the eelgrass areas in a spreadsheet or an ASCII file format. In addition to a spatial layer and/or table, a hard-copy map should be included with the survey report. The projection and datum should be clearly defined in the metadata and/or an associated text file.

Eelgrass maps should, at a minimum, include the following:

- A graphic scale bar, north arrow, legend, horizontal datum and vertical datum;
- A boundary illustrating the limits of the area surveyed;
- Bathymetric contours for the survey area, including both the action area(s) and reference site(s) in increments of not more than 1 foot;
- An overlay of proposed action improvements and construction limits;
- The boundary of the defined eelgrass habitat including an identification of area exclusions based on physical unsuitability to support eelgrass habitat; and

- The existing eelgrass cover within the defined eelgrass habitat at the time of the survey.

3. Survey Period

All mapping efforts should be completed during the active growth period for eelgrass (typically March through October for southern California, April through October for central California, April through October for San Francisco Bay, and May through September for northern California) and should be considered valid for a period of 60 days to ensure significant changes in eelgrass distribution and density do not occur between survey date and the project start date. The 60 day period is particularly important for eelgrass habitat survey conducted at the very beginning of the growing season, if eelgrass habitat expansion occurs as the growing season progresses. A period other than 60 days could be warranted and should be evaluated on a case-by-case basis, particularly for surveys completed in the middle of the growing season. However, when the end of the 60-day validity period falls outside of the region-specific active growth period, the survey could be considered valid until the beginning of the next active growth period. For example, a survey completed in southern California in the August-October time frame would be valid until the resumption of the active growth phase (i.e., in most instances, March 1). In some cases, NMFS and the action agency may agree to surveys being completed outside of the active growth period. For surveys completed during or after unusual climatic events (*e.g.*, high fluvial discharge periods, El Niño conditions), NMFS staff should be contacted to determine if any modifications to the common survey period are warranted.

4. Reference Site Selection

Eelgrass habitat spatial extent, aerial extent, percent cover and turion density are expected to naturally fluctuate through time in response to natural environmental variables. As a result, it is necessary to correct for natural variability when conducting surveys for the purpose of evaluating action effects on eelgrass or performance of mitigation areas. This is generally accomplished through the use of a reference site(s), which is expected to respond similarly to the action area in response to natural environmental variability. It is beneficial to select and monitor multiple reference sites rather than a single site and to utilize the average reference site condition as a metric for environmental fluctuations. This is especially true when a mitigation site is located within an area of known environmental gradients, and reference sites may be selected on both sides of the mitigation site along the gradient. Environmental conditions (*e.g.*, sediment, currents, proximity to action area, shoot density, light availability, depth, onshore and watershed influences) at the reference site(s) should be representative of the environmental conditions at the impact area (Fonseca *et al*. 1998). Where practical, the reference site(s) should be at least the size of the anticipated impact and/or mitigation area to limit the potential for minor changes in a reference site (*e.g.*, propeller scarring or ray foraging damage) overly affecting mitigation needs. The logic for site(s) selection should be documented in the eelgrass mitigation planning documents.

C. Avoiding and Minimizing Impacts to Eelgrass

This section describes measures to avoid and minimize impacts to eelgrass caused by turbidity, shading, nutrient loading, sedimentation and alteration of circulation patterns. Not all measures are equally suited to a particular project or condition. Measures to avoid or minimize impacts should be focused on stressors where the source and control are within the purview of the permittee and action agency. Action agencies in coordination with NMFS should evaluate and establish impact avoidance and minimization measures on a case-by-case basis depending on the action and site-specific information, including prevailing current patterns, sediment source, characteristics, and quantity, as well as the nature and duration of work.

1. Turbidity

To avoid and minimize potential turbidity-related impacts to eelgrass:
- Where practical, actions should be located as far as possible from existing eelgrass; and
- In-water work should occur as quickly as possible such that the duration of impacts is minimized.

Where proposed turbidity generating activities must occur in proximity to eelgrass and increased turbidity will occur at a magnitude and duration that may affect eelgrass habitat, measures to control turbidity levels should be employed when practical considering physical and biological constraints and impacts. Measures may include:
- Use of turbidity curtains where appropriate and feasible;
- Use of low impact equipment and methods (*e.g.*, environmental buckets, or a hydraulic suction dredge instead of clamshell or hopper dredge, provided the discharge may be located away from the eelgrass habitat and appropriate turbidity controls can be provided at the discharge point);
- Limiting activities by tide or day-night windows to limit light degradation within eelgrass habitat;
- Utilizing 24-hour dredging to reduce the overall duration of work and to take advantage of dredging during dark periods when photosynthesis is not occurring; or
- Other measures that an action party may propose and be able to employ to minimize potential for adverse turbidity effects to eelgrass.

NMFS developed a flowchart for a stepwise decision making process as guidance for action agencies to determine when to implement best management practices (BMPs) for minimizing turbidity from dredging actions as part of a programmatic EFH consultation in San Francisco Bay. The parameters considered in the flow chart are relevant to all marine areas of California. This document is posted on the NMFS West Coast Region web page (http://www.westcoast.fisheries.noaa.gov/habitat/habitat_types/seagrass_info/california_eelgrass.html) and may be used to evaluate avoidance and minimization measures for any project that generates increased turbidity.

2. Shading

A number of potential design modifications may be used to minimize effects of shading on eelgrass. Boat docks, ramps, gangways, and similar structures should avoid eelgrass habitat to the maximum extent feasible. If avoidance of eelgrass or habitat is infeasible, impacts should be minimized by utilizing, to the maximum extent feasible, design modifications and construction materials that allow for greater light penetration. Action modifications should include, but are not limited to:

- Avoid siting over-water or landside structures in areas where shading of eelgrass habitat would occur;
- Maximizing the north-south orientation of the structure;
- Maximizing the height of the structure above the water;
- Minimizing the width and supporting structure mass to decrease shade effects;
- Relocating the structure in deeper water and limiting the placement of structures in shallow areas where eelgrass occurs to the extent feasible; and
- Utilizing light transmitting materials in structure design.

Construction materials used to increase light passage beneath the structures may include, but are not limited to, open grating or adequate spacing between deck boards to allow for effective illumination to support eelgrass habitat. The use of these shade reducing options may be appropriate where they do not conflict with safety, ADA compliance, or structure utility objectives.

NMFS developed a stepwise key as guidance for action agencies to determine which combination of modifications are best suited for minimizing shading effects from overwater structures on eelgrass as part of a programmatic EFH consultation in San Francisco Bay. The parameters considered in the flow chart are relevant to all marine areas of California. This document is posted on the West Coast Region web page (http://www.westcoast.fisheries.noaa.gov/habitat/habitat_types/seagrass_info/california_eelgrass.html) and may be used to evaluate avoidance and minimization measures for any project that results in shading.

3. Circulation patterns

Where appropriate to the scale and nature of potential eelgrass impacts, action parties should evaluate if and how the action may alter the hydrodynamics of the action area such that eelgrass habitat within or in proximity to the action area may be adversely affected. To maintain good water flow and low residence time of water within eelgrass habitat, action agencies should ensure actions:

- Minimize scouring velocities near or within eelgrass beds;
- Maintain wind and tidal circulation to the extent practical by considering orientation of piers and docks to maintain predominant wind effects;
- Incorporate setbacks on the order of 15 to 50 meters from eelgrass habitat where practical to allow for greater circulation and reduced impact from boat maneuvering, grounding, and propeller damage, and to address shading impacts; and
- Minimize the number of piles and maximize pile spacing to the extent practical, where piles are needed to support structures.

For large-scale actions in the proximity of eelgrass habitats, NMFS may request specific modeling and/or field hydrodynamic assessments of the potential effects of work on characteristics of circulation within eelgrass habitat.

4. Nutrient loading

Where appropriate to the scale and nature of potential eelgrass impacts, the following measures should be considered for implementation to reduce the potential for excessive nutrient loading to eelgrass habitat:

- diverting site runoff from landscaped areas away from discharges around eelgrass habitat;
- implementation of fertilizer reduction program;
- reduction of watershed nutrient loading;
- controlling local sources of nutrients such as animal wastes and leach fields; and
- maintaining good circulation and flushing conditions within the water body.

Reducing nutrient loading may also provide opportunities for establishing eelgrass as mitigation for project impacts.

5. Sediment loading

Watershed development and changes in land use may increase soil erosion and increase sedimentation to downstream embayments and lagoons.

- To the extent practicable, maintain riparian vegetation buffers along all streams in the watershed.
- Incorporate watershed analysis into agricultural, ranching, and residential/commercial development projects.
- Increase resistance to soil erosion and runoff. Sediment basins, contour farming, and grazing management are examples of key practices.
- Implement best management practices for sediment control during construction and maintenance operations (*e.g.,* Caltrans 2003).

Reducing sediment loading may also provide opportunities for establishing eelgrass as mitigation for project impacts in systems for which sedimentation is a demonstrable limiting factor to eelgrass.

D. Assessing Impacts to Eelgrass Habitat

If appropriate to the statute under which the consultation occurs, NMFS should consider both direct and indirect effects of the project in order to assess whether a project may impact eelgrass. NMFS is aware that many of the statutes and regulations it administers may have more specific meanings for certain terms, including "direct effect" and "indirect effect", and will use the statutory or regulatory meaning of those terms when conducting consultations under those statutes.[2] Nevertheless, it is useful for NMFS to consider effects experienced

[2] In the EFH context, adverse effects include any impact that reduces quality and/or quantity of EFH, including direct or indirect physical, chemical, or biological alterations of the waters or substrate (50 CFR 600.910). The Council of Environmental Quality (CEQ) regulations regarding NEPA implementation (40 CFR 1508.8(a)) define direct and indirect impacts of an action for the purposes of NEPA. Other NMFS statutes provide their own definitions regarding effects.

contemporaneously with project actions (both at the project site and away from the project site) and which might occur later in time.

Generally, effects to eelgrass habitat should be assessed using pre- and post-project surveys of the impact area and appropriate reference site(s) conducted during the time period of maximum eelgrass growth (typically March through October for southern California, April through October for central California, April through October for San Francisco Bay, and May through September for northern California). NMFS should consider the likelihood that the effects would occur before recommending pre- and post-project eelgrass surveys. The pre-construction survey of the eelgrass habitat in the action area and an appropriate reference site(s) should be completed within 60 days before start of construction. After construction, a post-action survey of the eelgrass habitat in the action area and at an appropriate reference site(s) should be completed within 30 days of completion of construction, or within the first 30 days of the next active growth period following completion of construction that occurs outside of the active growth period. Copies of all surveys should be provided to the lead federal agency, NMFS, and other interested regulatory and/or resource agencies within 30 days of completing the survey. The recommended timing of surveys is intended to minimize changes in eelgrass habitat distribution and abundance during the period between survey completion and construction initiation and completion. For example, a post-action survey completed beyond 30 days following construction or outside of the active growing season may show declines in eelgrass habitat as a result of natural senescence rather than the action.

The lead federal agency and NMFS should consider reference area eelgrass performance, physical evidence of impact, turbidity and construction activities monitoring data, as well as other documentation in the determination of the impacts of the action undertaken. Impact analyses should document whether the impacts are anticipated to be complete at the time of the assessment, or whether there is an anticipation of continuing eelgrass impacts due to chronic or intermittent effects. Where eelgrass at the impact site declines coincident with and similarly to decline at the reference site(s), the percentage of decline at the reference site should be deducted from the decline at the impact site. However, if eelgrass expands within the reference site(s), the impact site should only be evaluated against the pre-construction condition of the reference site and not the expanded condition. If an action results in increased eelgrass habitat relative to the reference sites, this increase could potentially be considered (subject to the caveats identified herein) by NMFS and the action agency as potential compensation for impacts to eelgrass habitat that occur in the future (see Section II. E. 3). An assessment should also be made as to whether impacts or portions of the impact are anticipated to be temporary. Information supporting this determination may be derived from the permittee, NMFS, and other resource and regulatory agencies, as well as other eelgrass experts.

For some projects, environmental planning and permitting may take longer than 60 days. To accommodate longer planning schedules, it may also be necessary to do a preliminary eelgrass survey prior to the pre-construction survey. This preliminary survey can be used to anticipate potential impacts to eelgrass for the purposes of mitigation planning during the permitting process. In some cases, preliminary surveys may focus on spatial distribution of eelgrass habitat only or may be a qualitative reconnaissance to allow permittees to incorporate avoidance and minimization measures into their proposed action or to plan for future mitigation needs. The pre-and post- project surveys should then verify whether impacts occur as anticipated, and if planned mitigation is adequate. In some cases, a preliminary survey could be completed a year or more in advance of the project action.

1. Direct Effects

Biologists should consider the potential for localized losses of eelgrass from dredging or filling, construction-associated damage, and similar spatially and temporally proximate impacts (these effects could be termed “direct”). The actual area of the impact should be determined from an analysis that compares the pre-action condition of eelgrass habitat with the post-action conditions from this survey, relative to eelgrass habitat change at the reference site(s).

2. Indirect Effects

Biologists should also consider effects caused by the action which occur away from the project site; furthermore, effects occurring later in time (whether at or away from the project site) should also be considered. Biologists should consider the potential for project actions to alter conditions of the physical environment in a manner that, in turn, reduce eelgrass habitat distribution or density (*e.g.*, elevated turbidity from the initial implementation or later operations of an action, increased shading, changes to circulation patterns, changes to vessel traffic that lead to greater groundings or wake damage, increased rates of erosion or deposition).

For actions where the impact cannot be fully determined until a substantial period after an action is taken, an estimate of likely impacts should be made prior to implementation of the proposed action based on the best available information (*e.g.*, shading analyses, wave and current modeling). A monitoring program consisting of a pre-construction eelgrass survey and three post-construction eelgrass surveys at the impact site and appropriate reference site(s) should be performed. The action party should complete the first post-construction eelgrass survey within 30 days following completion of construction to evaluate any immediate effects to eelgrass habitat. The second post-construction survey should be performed approximately one year after the first post-construction survey during the appropriate growing season. The third post-construction survey should be performed approximately two years after the first post-construction survey during the appropriate growing season. The second and third post-construction surveys will be used to evaluate if indirect effects resulted later in time due to altered physical conditions; the time frames identified above are aligned with growing season (attempting a survey outside of the growing season would show inaccurate results).

A final determination regarding the actual impact and amount of mitigation needed, if any, to offset impacts should be made based upon the results of two annual post-construction surveys, which document the changes in the eelgrass habitat (areal extent, bottom coverage, and shoot density within eelgrass) in the vicinity of the action, compared to eelgrass habitat change at the reference site(s). Any impacts determined by these monitoring surveys should be mitigated. In the event that monitoring demonstrates the action to have resulted in greater eelgrass habitat impacts than initially estimated, additional mitigation should be implemented in a manner consistent with these guidelines. In some cases, adaptive management may allow for increased success in eelgrass mitigation without the need for additional mitigation.

E. Mitigation Options

The term mitigation is defined differently by various federal and State laws, regulations and policies. In a broad sense, mitigation may include a range of measures from complete avoidance of adverse effects to compensation for adverse effects by preserving, restoring or creating similar resources at onsite or offsite locations. The Corps and EPA issued regulations governing compensatory mitigation to offset unavoidable adverse effects to waters of the United States authorized by Clean Water Act section 404 permits and other permits issued by the Corps (73 FR 19594; April 10, 2008). For those regulations (33 CFR 332.2 and 40 CFR 230.92, respectively), the Corps and EPA, define "compensatory mitigation" as "the restoration (re-establishment or rehabilitation), establishment (creation), enhancement, and/or in certain circumstances preservation of aquatic resources for the purposes of offsetting unavoidable adverse effects which remain after all appropriate and practicable avoidance and minimization has been achieved."

When impacts to eelgrass would occur, the action agency should develop a mitigation plan to achieve no net loss in eelgrass function following the recommended steps in this policy. If NMFS determines a mitigation plan is needed, and it was not included with the EFH Assessment for the proposed action, NMFS may recommend, either as comments on the EFH Assessment or as an EFH Conservation Recommendation, that one be provided. Potential mitigation options are described below. The action agency should consider site specific conditions when determining the most appropriate mitigation option for an action.

1. Comprehensive management plans

NMFS supports the development of comprehensive management plans (CMPs) that protect eelgrass resources within the context of broader ecosystem needs and management objectives. Recommendations different from specific elements described below for in-kind mitigation may be appropriate where a CMP (*e.g.,* an enforceable programmatic permit, Special Area Management Plan, harbor plan, or ecosystem-based management plan) exists that is considered to provide adequate population-level and local resource distribution protections to eelgrass. One such CMP under development at the time these guidelines were developed is *City of Newport Beach Eelgrass Protection Mitigation Plan for Shallow Water in Lower Newport Bay: An Ecosystem Based Management Plan.* If satisfactorily completed and adopted, it is anticipated the protection measures for eelgrass within this area would be adequate to meet the objectives of this policy.

In general, it is anticipated that CMPs may be most appropriate in situations where a project or collection of similar projects will result in incremental but recurrent impacts to a small portion of local eelgrass populations through time (*e.g.*, lagoon mouth maintenance dredging, maintenance dredging of channels and slips within established marinas, navigational hazard removal of recurrent shoals, shellfish farming, and restoration or enhancement actions). In order to ensure that these alternatives provide adequate population-level and local resource distribution protections to eelgrass and that the plan is consistent with the overall conservation objectives of this policy, NMFS should be involved early in the plan's development.

2. In-kind mitigation

In-kind compensatory mitigation is the creation, restoration, or enhancement of habitat to mitigate for adverse impacts to the same type of habitat. In most cases in-kind mitigation is the preferred option to compensate for impacts to eelgrass. Generally, in-kind mitigation should achieve a final mitigation ratio of 1.2:1 across all areas of the state, independent of starting mitigation ratios. A starting mitigation ratio is the ratio of mitigation area to impact area when mitigation is initiated. The final mitigation ratio is the ratio of mitigation area to impact area once mitigation is complete. The 1.2:1 ratio assumes: (1) there is no eelgrass function at the mitigation site prior to mitigation efforts, (2) eelgrass function at the mitigation site is achieved within three years, (3) mitigation efforts are successful, and (4) there are no landscape differences (*e.g.*, degree of urban influence, proximity to freshwater source), between the impact site and the mitigation site. Variations from these assumptions may warrant higher or lower mitigation ratios. For example, a higher ratio would be appropriate for an enhancement project where the mitigation site has some level of eelgrass function prior to the mitigation action.

Typically, in-kind eelgrass mitigation involves transplanting or seeding of eelgrass into unvegetated habitat. Successful in-kind mitigation may also warrant modification of physical conditions at the mitigation site to prepare for transplants (*e.g.*, alter sediment composition, depth, etc.). In some areas, other in-kind mitigation options such as removing artificial structures that preclude eelgrass growth may be feasible. If in-kind mitigation that does not include transplants or seeding is proposed, post-mitigation monitoring as described below should be implemented to verify that mitigation is successful.

Information provided below in Section II.F includes specific recommendations for in-kind mitigation, including site selection, reference sites, starting mitigation ratios, mitigation methods, mitigation monitoring and performance criteria. Many of the recommendations provided in these guidelines for eelgrass assessments, surveys, and mitigation may apply throughout the state even if a non-transplant mitigation option is proposed.

3. Mitigation banks and in-lieu-fee programs

In 2006 and 2011, the NMFS Southwest Region (merged with the Northwest Region in 2013 to form the West Coast Region) signed interagency Memorandum of Understandings that established and refined a framework for developing and using combined or coordinated approaches to mitigation and conservation banking and in-lieu-fee programs in California. Other signatory agencies include: the California Resources Agency, California Department of Fish and Wildlife, the Corps, the US Fish &Wildlife Service, the EPA, the Natural Resource Conservation Service, and the State Water Resources Control Board.

Under this eelgrass policy, NMFS supports the use of mitigation bank and in-lieu fee programs to compensate for impacts to eelgrass habitat, where such instruments are available and where such programs are appropriate to the statutory structure under which mitigation is recommended. Mitigation banks and in-lieu fee conservation programs are highly encouraged by NMFS in heavily urbanized waters. Credits should be used at a ratio of 1:1 if those credits have been established for a full three-year period prior to use. If the bank credits have been in place for a period less than three years, credits should be used at a ratio determined through application of the wetland mitigation calculator (King and Price 2004).

At the request of the action party, and only with approval of NMFS and other appropriate resource agencies and subject to the caveats below, surplus eelgrass area that, after 60-months, exceeds the mitigation needs, as defined in section II.F.6 Mitigation Monitoring and Performance Milestones, has the potential to be considered for future mitigation needs. Additionally, only with the approval of NMFS and other appropriate resource agencies and subject to the caveats below, eelgrass habitat expansion resulting from project activities, and that otherwise would not have occurred, has the potential to be considered for future mitigation needs. Exceeding mitigation needs does not guarantee or entitle the action party or action agency to credit such mitigation to future projects, since every future project must be considered on a case-by-case basis (including the location and type of impact) and viewed in light of the relevant statutory authorities.

4. Out-of-kind mitigation

Out-of-kind compensatory mitigation means the adverse impacts to one habitat type are mitigated through the creation, restoration, or enhancement of another habitat type. In most cases, out-of-kind mitigation is discouraged, because eelgrass is a rare, special-status habitat in California. There may be some scenarios, however, where out-of-kind mitigation for eelgrass impacts is ecologically desirable or when in-kind mitigation is not feasible. This determination should be made based on an established ecosystem plan that considers ecosystem function and services relevant to the geographic area and specific habitat being impacted. Any proposal for out-of-kind mitigation should demonstrate that the proposed mitigation will compensate for the loss of eelgrass habitat function within the ecosystem. Out-of-kind mitigation that generates services similar to eelgrass habitat or improves conditions for establishment of eelgrass should be considered first. NMFS and the federal action agency should be consulted early when out-of-kind mitigation is being proposed in order to determine if out-of-kind mitigation is appropriate, in coordination with other relevant resource agencies (e.g., California Department of Fish and Wildlife, California Coastal Commission, U.S. Fish and Wildlife Service)

F. In-kind Mitigation for Impacts to Eelgrass

As all mitigation project specifics will be determined on a case-by-case basis, circumstances may exist where NMFS staff will need to modify or deviate from the recommended measures described below before providing their recommendation to action agencies.

1. Mitigation Site Selection

Eelgrass habitat mitigation sites should be similar to the impact site. Site selection should consider distance from action, depth, sediment type, distance from ocean connection, water quality, and currents. Where eelgrass that is impacted occurs in marginally suitable environments, it may be necessary to conduct mitigation in a preferable location and/or modify the site to be better suited to support eelgrass habitat creation. Mitigation site modification should be fully coordinated with NMFS staff and other appropriate resource and regulatory agencies. To the extent feasible, mitigation should occur within the same hydrologic system (*e.g.*, bay, estuary, lagoon) as the impacts and should be appropriately distributed within the same ecological subdivision of larger systems (*e.g.*, San Pablo Bay or Richardson Bay in San Francisco Bay), unless NMFS and the action agency concur that good justification exists for altering the distribution based on valued ecosystem functions and services.

In identifying potentially suitable mitigation sites, it is advisable to consider the current habitat functions of the mitigation site prior to mitigation use. In general, conversion of unvegetated subtidal areas or disturbed uplands to eelgrass habitats may be considered appropriate means to mitigate eelgrass losses, while conversion of other special aquatic sites (*e.g.*, salt marsh, intertidal mudflats, and reefs) is unlikely to be considered suitable. It may be necessary to develop suitable environmental conditions at a site prior to being able to effectively transplant eelgrass into a mitigation area. Mitigation sites may need physical modification, including increasing or lowering elevation, changing substrate, removing shading or debris, adding wave protection or removing impediments to circulation.

2. Mitigation Area Needs

In-kind mitigation plans should address the components described below to ensure mitigation actions achieve no net loss of eelgrass habitat function. Alternative contingent mitigation should be specified and included in the mitigation plan to address situations where performance milestones are not met.

a) Impacts to Areal Extent of Eelgrass Habitat

Generally, mitigation of eelgrass habitat should be based on replacing eelgrass habitat extent at a 1.2 (mitigation) to 1 (impact) mitigation ratio for eelgrass throughout all regions of California. However, given variable degrees of success across regions and potential for delays and mitigation failure, NMFS calculated *starting* mitigation ratios using "The Five-Step Wetland Mitigation Ratio Calculator" (King and Price 2004) developed for NMFS Office of Habitat Conservation. The calculator utilizes methodology similar to Habitat Equivalency Analysis (HEA), which is an accepted method to determine the amount of compensatory restoration needed to provide natural resource services that are equivalent to loss of natural resource services following an injury (http://www.darrp.noaa.gov/economics/pdf/heaoverv.pdf). HEA is commonly used by NOAA during damage assessment cases, including those involving seagrass. Similar to HEA, the mitigation calculator is based on the "net present value" approach to asset valuation, an economics concept used to compare values of all types of investments, and then modified to incorporate natural resource services. Using the calculator allows for consistency in methodology for all areas within California, avoids arbitrary identification of size of the mitigation area, and avoids cumulative loss to eelgrass habitat that would likely occur with a standard 1:1 ratio (because of the complexity of eelgrass mitigation and the time for created eelgrass to achieve full habitat function).

The calculator includes a number of metrics to determine appropriate ratios that focus on comparisons of quality and quantity of function of the mitigation relative to the site of impact to ensure full compensation of lost function. (see Attachment 4). Among other metrics, the calculator employs a metric of likelihood of failure within the mitigation site based on regional mitigation failure history. As such, the mitigation calculator identifies a recommended starting mitigation ratio (the mitigation area to eelgrass impact area) based on regional history of success in eelgrass mitigation. Increased initial mitigation site size should be considered to provide greater assurance that the performance milestones, as specified in Section II.F.6, will be met. This is a common practice in the eelgrass mitigation field to reduce risk of falling short of mitigation needs (Thom 1990). Independent of starting mitigation ratio utilized for a given mitigation action, mitigation success should generally be evaluated against a ratio of 1.2:1.

The elevated starting mitigation ratio should be applied to the area of impact to vegetated eelgrass cover only. For unvegetated eelgrass habitat, a starting mitigation ratio of 1.2:1 is appropriate.

To determine the recommended starting mitigation ratio for each region, the percentage of transplant successes and failures was examined over the history of transplanting in the region. NMFS staff examined transplants projects over the past 25 years in all mitigation regions (see Attachment 6). Eelgrass mitigation in Southern California has a 35-year history with 66 transplants performed over that period. In the past 25 years, a total of 47 eelgrass transplants for mitigation purposes have been conducted in Southern California. Forty-three of these were established long enough to evaluate success for these transplants. The overall failure rate, with failure defined as not meeting success criteria established for the project, was 13 percent. Eelgrass mitigation within central California has a better history of successful completion than within southern California, San Francisco Bay, and northern California. However, the number of eelgrass mitigation actions conducted in this region is low and limited to areas within Morro Bay. While the success of eelgrass mitigation in central California has been high, the low number of attempts makes mitigation in this region uncertain. Eelgrass habitat creation/restoration in San Francisco Bay and in northern California has had varied success.

In all cases, best information available at the time of this policy's development was used to determine the parameter values entered into the calculator formula. As regional eelgrass mitigation success changes and the results of ongoing projects become available, the starting mitigation ratio may be updated. Updates in mitigation calculator inputs should not be made on an individual action basis, because the success or lack of success of an individual mitigation project may not reflect overall mitigation success for the region. Rather NMFS should re-evaluate the regional transplant history approximately every 5 years, increasing the record of transplant success in 5 year increments for new projects implemented after NMFS' adoption of these guidelines. If the 5-year review shows that new efforts are more successful than those from the beginning of the 25-year period, NMFS staff should consider removing early projects (*e.g.*, those completed 20 years prior) from the analysis.

On a case-by-case basis and in consultation with action agencies, NMFS may consider proposals with different starting mitigation ratios where sufficient justification is provided that indicates the mitigation site would achieve the no net loss goal. In addition, CMPs could consider different starting mitigation ratios, or other mitigation elements and techniques, as appropriate to the geographic area addressed by the CMP.

Regardless of starting mitigation ratio, eelgrass mitigation should be considered successful, if it meets eelgrass habitat coverage over an area that is 1.2 times the impact area with comparable eelgrass density as impacted habitat. Please note, delayed implementation, supplemental transplant needs, or NMFS and action agency agreement may result in an altered mitigation area. In the EFH consultation context, NMFS may recommend an altered mitigation area during implementation of the federal agency's mitigation plan following EFH consultation or NEPA review, or as an EFH Conservation Recommendation if the federal agency re-initiates EFH consultation.

(1) Southern California (Mexico border to Pt. Conception)

For mitigation activities that occur concurrent to the action resulting in damage to existing eelgrass habitat, a starting ratio of 1.38 to 1 (transplant area to vegetated cover impact area) should be recommended to counter the regional failure risk. That is, for each square meter of vegetated eelgrass cover adversely impacted, 1.38 square meters of new habitat with suitable conditions to support eelgrass should be planted with a comparable bottom coverage and eelgrass density as impacted habitat.

(2) Central California (Point Conception to mouth of San Francisco Bay).

For mitigation activities that occur concurrent to the action resulting in damage to existing eelgrass habitat, a starting ratio of 1.20 to 1 (transplant area to vegetated cover impact area) should be recommended based on a 0 percent failure rate over the past 25 years (4 transplant actions). It should however be noted that all of these successful transplants included a greater area of planting than was necessary to achieve success such that the full mitigation area would be achieved, even with areas of minor transplant failure.

(3) San Francisco Bay (including south, central, San Pablo and Suisun Bays).

For mitigation activities that occur concurrent to the action resulting in damage to the existing eelgrass bed resource, a ratio of 3.01 to 1 (transplant area to vegetated cover impact area) should be recommended based on a 60 percent failure rate over the past 25 years (10 transplant actions). That is, for each square meter adversely impacted, 3.01 square meters of new habitat with suitable conditions to support eelgrass should be planted with a comparable bottom coverage and eelgrass density as impacted habitat.

(4) Northern California (mouth of San Francisco Bay to Oregon border).

For mitigation activities that occur concurrent to the action resulting in damage to the existing eelgrass habitat, a starting ratio of 4.82 to 1 (transplant area to vegetated cover impact area) should be recommended based on a 75 percent failure rate over the past 25 years (4 transplant actions). That is, for each square meter of eelgrass habitat adversely impacted, 4.82 square meters of new habitat with suitable conditions to support eelgrass should be planted with a comparable bottom coverage and eelgrass density as impacted habitat.

b) *Impacts to Density of Eelgrass Beds*

Degradation of existing eelgrass habitat that results in a permanent reduction of eelgrass turion density greater than 25 percent, and that is a statistically significant difference from pre-impact density, should be mitigated based on an equivalent area basis. The 25 percent and statistically significant threshold is believed reasonable based on supporting information (Fonseca *et al.* 1998, WDFW 2008), and professional practice under SCEMP. In these cases, eelgrass remains present at the action site, but density may be potentially affected by long-term chronic or intermittent effects of the action. Reduction of density should be determined to have occurred when the mean turion density of the impact site is found to be statistically different (α=0.10 and β=0.10) from the density of a reference and at least 25 percent below the reference mean during two annual sampling events following implementation of an action. The number of samples taken to describe density at each site (*e.g.*, impact and reference) should be sufficient to provide for appropriate statistical power. For small impact areas that do not allow for a sample size that provides statistical power, alternative methods for pre- and post- density comparisons could be considered. Mitigation for reduction of turion density without change in eelgrass habitat area should be on a one-for-one basis either by augmenting eelgrass density at the impact site or by establishing new eelgrass habitat comparable to the change in density at the impact site. For example, a 25 percent reduction in density of 100-square meters (100 turions/square meter) of eelgrass habitat to 75 turions/square meter should be mitigated by the establishing 25 square meters of new eelgrass habitat with a density at or above the 100 turions/square meter pre-impact density.

3. Mitigation Technique

In-kind mitigation technique should be determined on a case-by-case basis. Techniques for eelgrass mitigation should be consistent with the best available technology at the time of mitigation implementation and should be tailored to the specific needs of the mitigation site. Eelgrass transplants have been highly successful in southern and central California, but have had mixed results in San Francisco Bay and northern California. Bare-root bundles and seed buoys have been utilized with some mixed success in northern portions of the state. Transplants using frames have also been used with some limited success. For transplants in southern California, plantings consisting of bare-root bundles consisting of 8-12 individual turions each have proven to be most successful (Merkel 1988).

Donor material should be taken from the area of direct impact whenever practical, unless the action resulted in reduced density of eelgrass at the area of impact. Site selections should consider the similarity of physical environments between the donor site and the transplant receiver site and should also consider the size, stability, and history of the donor site (*e.g.*, how long has it persisted and is it a transplant site). Plants harvested should be taken in a manner to thin an existing bed without leaving any noticeable bare areas. For all geographic areas, no more than 10 percent of an existing donor bed should be harvested for transplanting purposes. Ten percent is reasonable based on recommendations in Thom *et al.* (2008) and professional practice under SCEMP. Harvesting of flowering shoots for seed buoy techniques should occur only from widely separated plants.

It is important for action agencies to note that state laws and regulations affect the harvesting and transplantation of donor plants and permission from the state, where required, should be obtained; for example, California Department of Fish and Wildlife may need to provide written authorization for harvesting and transplanting donor plants and/or flowering shoots.

4. Mitigation Plan

NMFS should recommend that a mitigation plan be developed for in-kind mitigation efforts. During consultation, NMFS biologists should request that mitigation plans be provided at least 60 days prior to initiation of project activities to allow for NMFS review. When feasible, mitigation plans should be developed based on preliminary or pre-project eelgrass surveys. When there is uncertainty regarding whether impacts to eelgrass will occur, and the need for mitigation is based on comparison of pre- and post-project eelgrass surveys, NMFS biologists should request that the mitigation plan be provided no more than 60 days following the post-project survey to allow for NMFS review and minimize any delay in mitigation implementation.

At a minimum, the mitigation plan should include:

- Description of the project area
- Results of preliminary eelgrass survey and pre/post-project eelgrass surveys if available (see Section II.B.1 and II.B.2)
- Description of projected and/or documented eelgrass impacts
- Description of proposed mitigation site and reference site(s) (see Section II.B.4)
- Description of proposed mitigation methods (see Section II.F.3)
- Construction schedule, including specific starting and ending dates for all work including mitigation activities. (see Section II.F.5)
- Schedule and description of proposed post-project monitoring and when results will be provided to NMFS
- Schedule and description of process for continued coordination with NMFS through mitigation implementation
- Description of alternative contingent mitigation or adaptive management should proposed mitigation fail to achieve performance measures (see Section II.F.6)

5. Mitigation Timing

Mitigation should commence within 135 days following the initiation of the in-water construction resulting in impact to the eelgrass habitat, such that mitigation commences within the same eelgrass growing season as impacts occur. If possible, mitigation should be initiated prior to or concurrent with impacts. For impacts initiated within 90 days prior to, or during, the low-growth period for the region, mitigation may be delayed to within 30 days after the start of the following growing season, or 90 days following impacts, whichever is longer, without the need for additional mitigation as described below. This timing avoids survey completion during the low growth season, when results may misrepresent progress towards performance milestones.

Delays in eelgrass mitigation result in delays in ultimate reestablishment of eelgrass habitat functions, increasing the duration and magnitude of project impacts to eelgrass. To offset loss of eelgrass habitat function that accumulates through delay, an increase in successful eelgrass mitigation is needed to achieve the same compensatory habitat function. Because habitat function is accumulated over time once the mitigation habitat is in place, the longer the delay in initiation of mitigation, the greater the additional habitat area needed (i.e., mitigation ratio increasingly greater than 1.2:1) to offset losses. Unless a specific delay is authorized or dictated by the initial schedule of work, federal action agencies should determine whether delays in mitigation initiation in excess of 135 days warrant an increased final mitigation ratio. If increased mitigation ratios are warranted, NMFS should recommend higher mitigation ratios (see Attachment 7). Where delayed implementation is authorized by the action agency, the increased mitigation ratio may be determined by utilizing the Wetlands Mitigation Calculator (King and Price 2004) with an appropriate value for parameter D (See Attachment 4). Examples of delay multipliers generated using the Wetlands Mitigation Calculator are provided in Attachment 5.

Conversely, implementing mitigation ahead of impacts can be used to reduce the mitigation needs by achieving replacement of eelgrass function and services ahead of eelgrass losses. If eelgrass is successfully transplanted three years ahead of impacts, the mitigation ratio would drop from 1.2:1 to 1:1. If mitigation is completed less than three years ahead of impacts, the mitigation calculator can be used to determine the appropriate intermediate mitigation ratio.

6. Mitigation Monitoring and Performance Milestones

In order to document progress and persistence of eelgrass habitat at the mitigation site through and beyond the initial establishment period, which generally is three years, monitoring should be completed for a period of five years at both the mitigation site and at an appropriate reference site(s) (Section II.B.4. Reference Site Selection). Monitoring at a reference site(s) may account for any natural changes or fluctuations in habitat area or density. Monitoring should determine the area of eelgrass and density of plants at 0, 12, 24, 36, 48, and 60 months after completing the mitigation. These intervals will provide yearly updates on the establishment and persistence of eelgrass during the growing season. These monitoring recommendations are consistent with findings of the National Research Council (NRC 2001), the Corps requirements for compensatory mitigation (33 CFR 332.6(b)), and other regional resource policies (Corps 2010, Evans and Leschen 2010, SFWMD 2007).

All monitoring work should be conducted during the active eelgrass growth period and should avoid the recognized low growth season for the region to the maximum extent practicable (typically November through February for southern California, November through March for central California, November through March for San Francisco Bay, and October through April for northern California). Sufficient flexibility in the scheduling of the 6 month surveys should be allowed in order to ensure the work is completed during this active growth period. Additional monitoring beyond the 60-month period may be warranted in those instances where the stability of the proposed mitigation site is questionable, where the performance of the habitat relative to reference sites is erratic, or where other factors may influence the long-term success of mitigation. Mitigation plans should include a monitoring schedule that indicates when each of the monitoring events will be completed.

The monitoring and performance milestones described below are included as eelgrass transplant success criteria in the SCEMP. These numbers represent milestones and associated timelines typical of successful eelgrass habitat development based on NMFS' experience with: (1) conducting eelgrass surveys and monitoring and (2) reviewing mitigation monitoring results for projects implemented under SCEMP. Restored eelgrass habitat is expected to develop through an initial 3 year monitoring period such that, within 36 months following planting, it meets or exceeds the full coverage and not less than 85 percent of the density relative to the initial condition of affected eelgrass habitat. Restored eelgrass habitat is expected to sustain this condition for at least 2 additional years.

Monitoring events should evaluate the following performance milestones:

Month 0 – Monitoring should confirm the full coverage distribution of planting units over the initial mitigation site as appropriate to the geographic region.

Month 6 – Persistence and growth of eelgrass within the initial mitigation area should be confirmed, and there should be a survival of at least 50 percent of the initial planting units with well-distributed coverage over the initial mitigation site. For seed buoys, there should be demonstrated recruitment of seedlings at a density of not less than one seedling per four (4) square meters with a distribution over the extent of the initial planting area. The timing of this monitoring event should be flexible to ensure work is completed during the active growth period.

Month 12–The mitigation site should achieve a minimum of 40 percent coverage of eelgrass and 20 percent density of reference site(s) over not less than 1.2 times the area of the impact site.

Month 24–The mitigation site should achieve a minimum of 85 percent coverage of eelgrass and 70 percent density of reference site(s) over not less than 1.2 times the area of the impact site.

Month 36–The mitigation site should achieve a minimum of 100 percent coverage of eelgrass and 85 percent density of reference site(s) over not less than 1.2 times the area of the impact site.

Month 48–The mitigation site should achieve a minimum of 100 percent coverage of eelgrass and 85 percent density of reference site(s) over not less than 1.2 times the area of the impact site.

Month 60–The mitigation site should achieve a minimum of 100 percent coverage of eelgrass and 85 percent density of reference site(s) over not less than 1.2 times the area of the impact site.

Performance milestones may be re-evaluated or modified if declines at a mitigation site are also demonstrated at the reference site, and therefore, may be a result of natural environmental stressors that are unrelated to the intrinsic suitability of the mitigation site. In the EFH consultation context, NMFS should provide recommendations regarding modification of performance milestones as technical assistance during interagency coordination as described in the mitigation plan or as EFH Conservation Recommendations if the federal action agency re-initiates EFH consultation.

7. Mitigation Reporting

NMFS biologists should request monitoring reports and spatial data for each monitoring event in both hard copy and electronic version, to be provided within 30 days after the completion of each monitoring period to allow timely review and feedback from NMFS. These reports should clearly identify the action, the action party, mitigation consultants, relevant points of contact, and any relevant permits. The size of permitted eelgrass impact estimates, actual eelgrass impacts, and eelgrass mitigation needs should be identified, as should appropriate information describing the location of activities. The report should include a detailed description of eelgrass habitat survey methods, donor harvest methods and transplant methods used. The reports should also document mitigation performance milestone progress (see II.F.6. Mitigation Monitoring and Performance Milestones). The first report (for the 0-month post-planting monitoring) should document any variances from the mitigation plan, document the sources of donor materials, and document the full area of planting. The final mitigation monitoring report should provide the action agency and NMFS with an overall assessment of the performance of the eelgrass mitigation site relative to natural variability of the reference site to evaluate if mitigation responsibilities were met. An example summary is provided in Attachment 3.

8. Supplemental Mitigation

Where development of the eelgrass habitat at the mitigation site falls short of achieving performance milestones during any interim survey, the monitoring period should be extended and supplemental mitigation may be recommended to ensure that adequate mitigation is achieved. In the EFH consultation context, NMFS should provide recommendations regarding extended monitoring as technical assistance during interagency coordination as described in the mitigation plan or as EFH Conservation Recommendations if the federal action agency re-initiates EFH consultation. In some instances, an adaptive management corrective action to the existing mitigation area may be appropriate. In the event of a mitigation failure, the action agency should convene a meeting with the action party, NMFS, and applicable regulatory and/or resource agencies to review the specific circumstances and develop a solution to achieve no net loss in eelgrass habitat function.

As indicated previously, while in-kind mitigation is preferred, the most appropriate form of compensatory mitigation should be determined on a case-by-case basis. In cases where it is demonstrated that in-kind replacement is infeasible, out-of-kind mitigation may be appropriate over completion of additional in-kind mitigation. The determination that an out-of-kind mitigation is appropriate will be made by NMFS, the action agency, and the applicable regulatory agencies, where a regulatory action is involved.

G. Special Circumstances

Depending on the circumstances of each individual project, NMFS may make recommendations different from those described above on a case by case basis. For the scenarios described below, for example, NMFS could recommend a mitigation ratio or 1:1 or for use of out-of-kind mitigation. Because NMFS needs a proper understanding of eelgrass habitat in the project area and potential impacts of the proposed project to evaluate the full effects of authorized activities, NMFS should not make recommendations that diverge from these guidelines if they would result in surveys, assessments or reports inferior to those which might be obtained through the guidance in Section II. The area thresholds described below are taken from the SCEMP and/or reflect recommendations NMFS staff have repeatedly made during individual EFH consultations. These thresholds minimize impacts to eelgrass habitat quality and quantity, based on NMFS' experience with: (1) conducting eelgrass surveys and monitoring and (2) reviewing project monitoring results for projects implemented under SCEMP. The special circumstance included for shellfish aquaculture longlines is supported by Rumrill and Poulton (2004) and the NMFS Office of Aquaculture.

1. Localized Temporary Impacts

NMFS may consider modified target mitigation ratios for localized temporary impacts wherein the damage results in impacts of less than 100 square meters and eelgrass habitat is fully restored within the damage footprint within one year of the initial impact (e.g., placement of temporary recreational facilities, shading by construction equipment, or damage sustained through vessel groundings or environmental clean-up operations). In such cases, the 1.2:1 mitigation ratio should not apply, and a 1:1 ratio of impact to recovery would apply. A monitoring program consisting of a pre-construction eelgrass survey and three post-construction eelgrass surveys at the impact site and appropriate reference site(s) should be completed in order to demonstrate the temporary nature of the impacts. NMFS should recommend that surveys be completed as follows: 1) the first post-construction eelgrass survey should be completed within 30 days following completion of construction to evaluate direct effects of construction, 2) the second and third post-construction surveys should be performed approximately one year after the first post-construction survey, and approximately two years after the first post-construction survey, respectively, during the appropriate growing season to confirm no indirect, or longer term effects resulted from construction. A compelling reason should be demonstrated before any reduced monitoring and reporting recommendations are made.

2. Localized Permanent Impacts

a) If both NMFS and the authorizing action agencies concur, the compensatory mitigation elements of this policy may not be necessary for the placement of a single pipeline, cable, or other similar utility line across existing eelgrass habitat with an impact corridor of no more than 1 meter wide. NMFS should recommend the completion of pre- and post-action surveys as described in section II.B. and II.D. The actual area of impact should be determined from the post-action survey. NMFS should recommend the completion of an additional survey (after 1 year) to ensure that the action or impacts attributable to the action have not exceeded the 1-meter corridor width. NMFS should recommend that, if the post-action or 1 year survey demonstrates a loss of eelgrass habitat greater than the 1-meter wide corridor, mitigation should be undertaken.

b)) If both NMFS and the authorizing action agencies concur that the spacing of shellfish aquaculture longlines does not result in a measurable net loss of eelgrass habitat in the project area, then mitigation associated with local losses under longlines may not be necessary. NMFS should recommend the completion of pre- and post-action surveys as described in section II.B. and II.D. NMFS should recommend the completion of additional post-action monitoring surveys (to be completed approximately 1 year and 2 years following implementation of the action) to ensure that the action or impacts attributable to the action have not resulted in net adverse impacts to eelgrass habitat. NMFS should recommend that, if the 1-year or 2-year survey demonstrates measurable impact to eelgrass habitat, mitigation should be undertaken. c) NMFS should consider mitigation on a 1:1 basis for impacts less than 10 square meters to eelgrass patches where impacts are limited to small portions of well-established eelgrass habitat or eelgrass habitat that, despite highly variable conditions, generally retain extensive eelgrass, even during poor years. A reduced mitigation ratio should not be considered where impacts would occur to isolated or small eelgrass habitat areas within which the impacted area constitutes more than 1% of the eelgrass habitat in the local area during poor years.

c) If NMFS concurs and suitable out-of-kind mitigation is proposed, compensatory mitigation may not be necessary for actions impacting less than 10 square meters of eelgrass.

III. Glossary of Terms

Except where otherwise specified, the explanations of the following terms are provided for informational purposes only and are described solely for the purposes of this policy; where a NMFS statute, regulation, or agreement requires a different understanding of the relevant term, that understanding of the term will supplant these explanations provided below.

Compensatory mitigation – restoration, establishment, or enhancement of aquatic resources for the purposes of offsetting unavoidable authorized adverse impacts which remain after all appropriate and practicable avoidance and minimization has been achieved.

Ecosystem – a geographically specified system of organisms, the environment, and the processes that control its dynamics. Humans are an integral part of an ecosystem.

Ecosystem function – ecological role or process provided by a given ecosystem.

Ecosystem services – contributions that a biological community and its habitat provide to the physical and mental well-being of the human population (*e.g.*, recreational and commercial opportunities, aesthetic benefits, flood regulation).

Eelgrass habitat – areas of vegetated eelgrass cover (any eelgrass within 1 square meter quadrat and within 1 m of another shoot) bounded by a 5 m wide perimeter of unvegetated area

Essential fish habitat (EFH) – EFH is defined in the MSA as "...those waters and substrate necessary to fish for spawning, breeding, feeding, or growth to maturity."

EFH Assessment – An assessment as further explained in 50 C.F.R. § 600.920(e).

EFH Consultation – The process explained in 50 C.F.R. § 600.920

EFH Conservation Recommendation – provided by the National Marine Fisheries Service (NMFS) to a federal or state agency pursuant to section 305(b)(4)(A) of the Magnuson-Stevens Act regarding measures that can be taken by that agency to conserve EFH. As further explained in 50 C.F.R. § 600.925, EFH Conservation Recommendations may be provided as part of an EFH consultation with a federal agency, or may be provided by NMFS to any federal or state agency whose actions would adversely affect EFH .

Habitat – environment in which an organism(s) lives, including everything that surrounds and affects its life, including biological, chemical and physical processes.

Habitat function – ecological role or process provided by a given habitat (*e.g.*, primary production, cover, food, shoreline protection, oxygenates water and sediments, etc.).

In lieu fee program – a program involving the restoration, establishment, and/or enhancement of aquatic resources through funds paid to a governmental or non-profit natural resources management entity to satisfy compensatory mitigation needs; an in lieu fee program works like a mitigation bank, however, fees to compensate for impacts to habitat function are collected prior to establishing an on-the-ground conservation/restoration project.

In-kind mitigation – mitigation where the adverse impacts to a habitat are mitigated through the creation, restoration, or enhancement of the same type of habitat.

Mitigation – action or project undertaken to offset impacts to an existing natural resource.

Mitigation bank – a parcel of land containing natural resource functions/values that are conserved, restored, created and managed in perpetuity and used to offset unavoidable impacts to comparable resource functions/values occurring elsewhere. The resource functions/values contained within the bank are translated into quantified credits that may be sold by the banker to parties that need to compensate for the adverse effects of their activities.

Out-of-kind mitigation – mitigation where the adverse impacts to one habitat type are mitigated through the creation, restoration, or enhancement of another habitat type

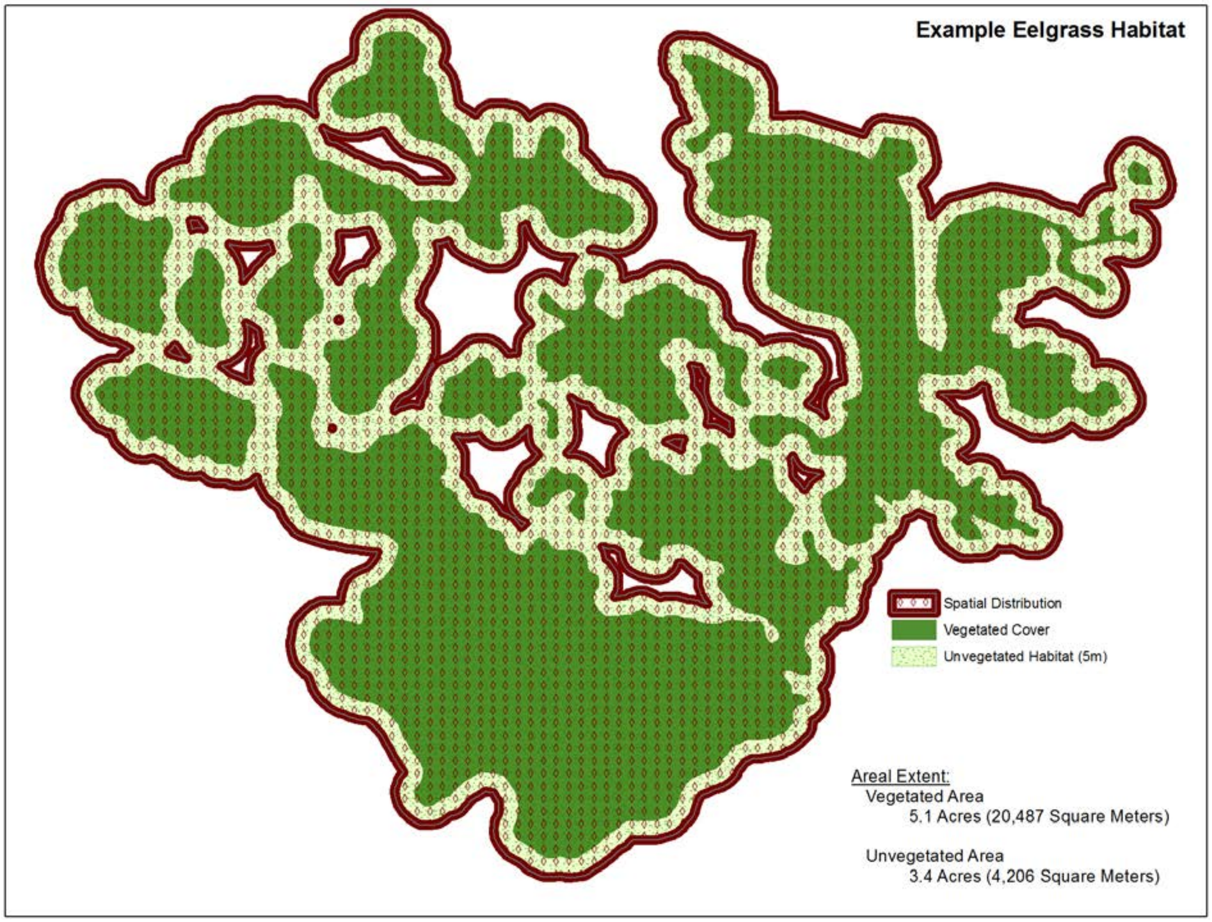
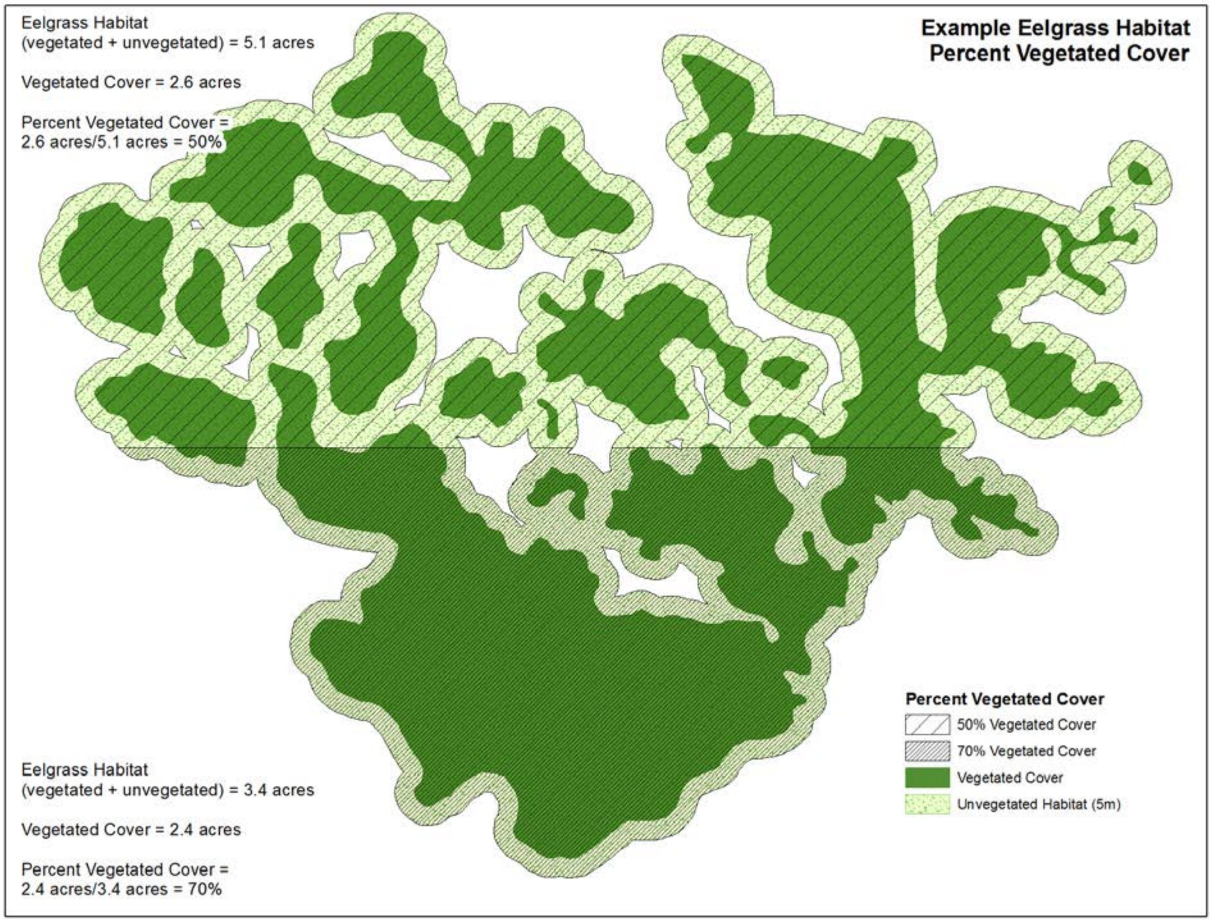
ATTACHMENT 1. Graphic depiction of eelgrass habitat definition including spatial distribution and aerial coverage of vegetated cover and unvegetated eelgrass habitat.

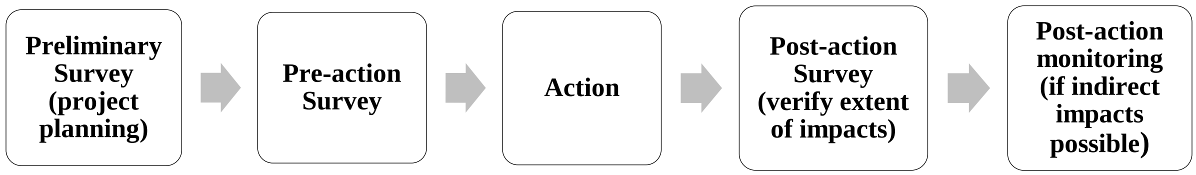


ATTACHMENT 2. Example Eelgrass Habitat Percent Vegetated Cover.



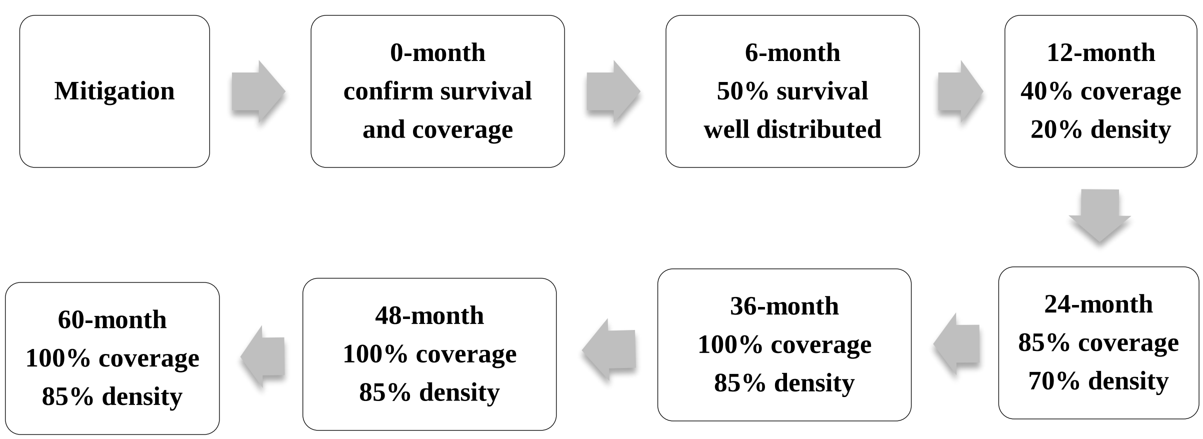
ATTACHMENT 3. Flow chart depicting timing of surveys and monitoring.

a) Eelgrass impact surveys



- All surveys should be completed during the growing season
- Surveys should be completed at the impact site and an appropriate reference site(s)
- A preliminary survey completed for planning purposes may be completed a year or more in advance of the action.
- Pre-action and post-action surveys should be completed within 60 days of the action.
- A survey is good for 60 days, or if that 60 day period extends beyond the end of growing season, until start of next growing season
- Two years of monitoring following the initial post-action monitoring event may be needed to verify lack or extent of indirect effects.
- Survey reports should be provided to NMFS and the federal action agency within 30 days of completion of each survey event

b) Eelgrass mitigation monitoring



- Mitigation should occur coincident or prior to the action
- All monitoring should be completed during the growing season
- Performance metrics for each monitoring event are compared to the 1.2:1 mitigation ratio
- Monitoring reports should be provided to NMFS and the federal action agency 30 days of completion of each monitoring event
- NMFS and action agency will evaluate if performance metrics met, and decide if supplemental mitigation or other adaptive management measures are needed

ATTACHMENT 4. Eelgrass transplant monitoring report.

In order to ensure that NMFS is aware of the status of eelgrass transplants, action agencies should provide or ensure that NMFS is provided a monitoring report summary with each monitoring report. For illustrative purposes only, an example of a monitoring report summary is provided below.

FINAL ASSESSMENT:

Was mitigation met?	
Were mitigation and monitoring performed timely?	
Were mitigation delay increases needed or were supplemental mitigation programs necessary?	

ATTACHMENT 5. Wetlands mitigation calculator formula and parameters.

Starting mitigation ratios for each region within California were calculated using "The Five-Step Wetland Mitigation Ratio Calculator" (King and Price 2004) developed for NMFS Office of Habitat Conservation. The discrete time equation this method uses to solve for the appropriate mitigation ratio is as follows:

$$R = \frac{\sum_{t=0}^{T_{max}} (1+r)^{-t}}{\left(B(1-E)(1+L)-A\right)\left[\sum_{t=-D}^{C-D-1} \frac{(t+D)}{C(1+r)^{t}} + \sum_{C-D}^{T_{max}} (1+r)^{-t}\right] + \left[\sum_{t=-D}^{T_{max}} \frac{\left(1-(1-k)^{(t+D)}\right)}{(1+r)^{(t+D)}}\right]\left(A(1+L)\right)}$$

The calculator parameters in the above equation and values used to calculate starting mitigation ratios for CEMP are as follows:

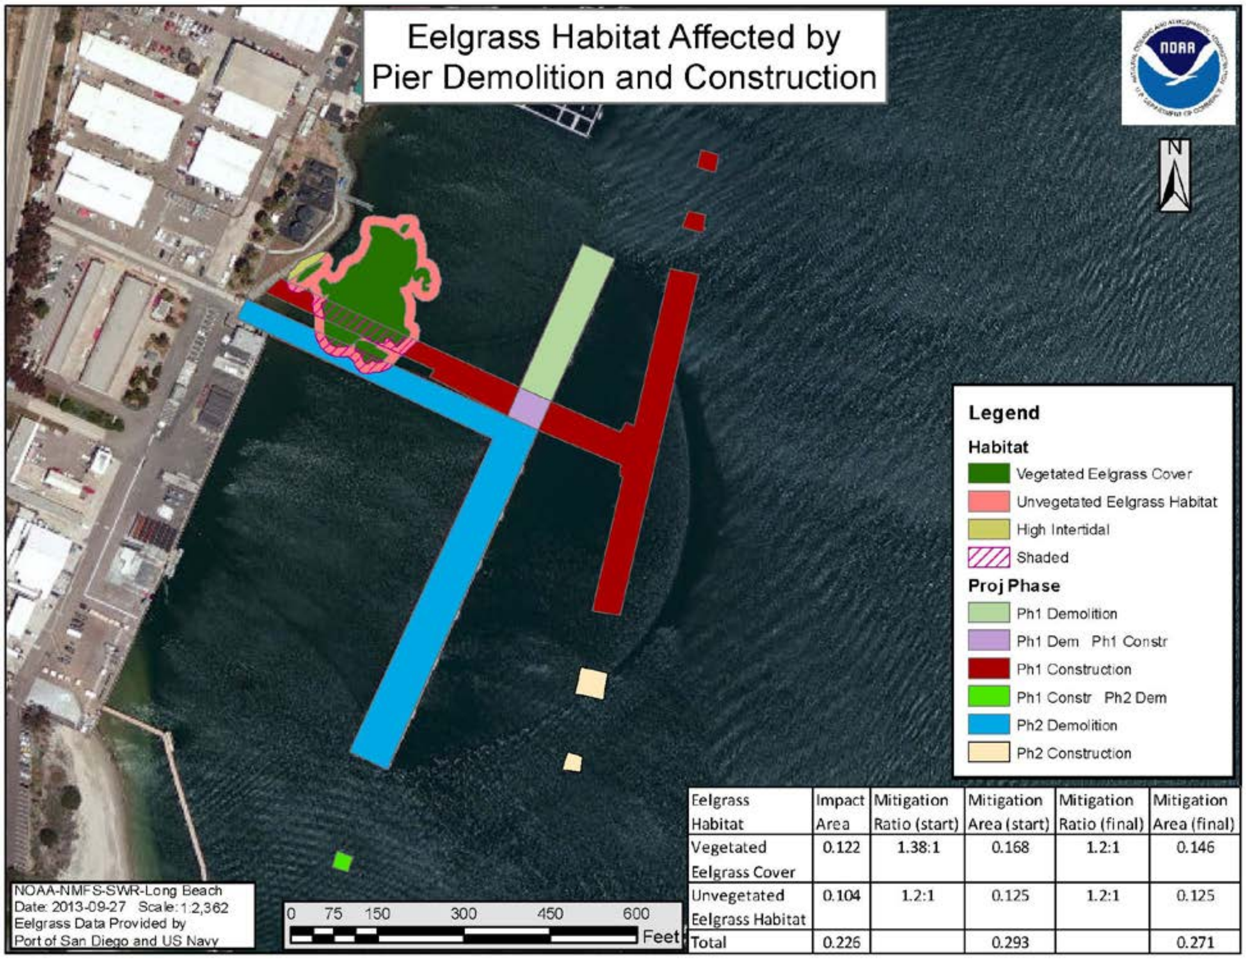
Symbol	Calculator Parameter	Value
A	The level of habitat function provided at the mitigation site prior to the mitigation project	0%
B	The maximum level of habitat function that mitigation is expected to attain, if it is successful	100%
C	The number of years after construction that the mitigation project is expected to achieve maximum function	3 yrs
D	The number of years before destruction of the impacted wetland that the mitigation project begins to generate habitat function	0 yrs
E	The percent likelihood that the mitigation project will fail and provide none of the anticipated benefits	various*
L	The percent difference in expected habitat function based on differences in landscape context of the mitigation site when compared with the impacted wetland	0%
k	The percent likelihood that the mitigation site, in the absence purchase or easement would be developed in any future year	0%
r	The discount rate used for comparing gains and losses that accrue at different times in terms of their present value	3%**
Tmax	The time horizon used in the analysis (chosen to maintain 1.2:1 ratio at E=100% and other parameter values listed above).	13 yrs

* The value for E was based on regional history of success in eelgrass mitigation and varied between regions (see Attachment X).

** NOAA suggests the use of a 3 percent real discount rate for discounting interim service losses and restoration gains, unless a different proxy for the social rate of time preference is more appropriate. (NOAA-DARP 1999) We use this value here, because it is based on best available information and is consistent with the NOAA Damage Assessment and Restoration Program.

ATTACHMENT 6. Example calculations for application of starting and final mitigation ratios for impacts to eelgrass habitat in southern California.

In this example, a pier demolition and construction would impact 0.122 acres of vegetated eelgrass habitat (dark green) and 0.104 acres of unvegetated habitat (pink). Area of impact is indicated by purple hatch mark. Application of recommended starting mitigation ratio for southern California (1.38:1) and final mitigation ratio (1.2:1) to compute starting and final mitigation area for this example are shown in the table.



Eelgrass Habitat	Impact Area	Mitigation Ratio (start)	Mitigation Area (start)	Mitigation Ratio (final)	Mitigation Area (final)
Vegetated Eelgrass Cover	0.122	1.38:1	0.168	1.2:1	0.146
Unvegetated Eelgrass Habitat	0.104	1.2:1	0.125	1.2:1	0.125
Total	0.226		0.293		0.271

ATTACHMENT 7. Example mitigation area multipliers for delay in initiation of mitigation activities.

Delays in eelgrass transplantation result in delays in ultimate reestablishment of eelgrass habitat values, increasing the duration and magnitude of project effects to eelgrass. The delay multipliers in the table below have been generated by altering the implementation start time within "The Five-Step Wetland Mitigation Ratio Calculator" (King and Price 2004).

MONTHS POST-IMPACT	**DELAY MULTIPLIER (Percent of Initial Mitigation Area Needed)**
0-3 mo	100%
4-6 mo	107%
7-12 mo	117%
13-18 mo	127%
19-24 mo.	138%
25-30 mo.	150%
31-36 mo	163%
37-42 mo.	176%
43-48 mo.	190%
49-54 mo.	206%
55-60 mo.	222%

ATTACHMENT 8. Summary of Eelgrass Transplant Actions in California

See table starting next page.

Northern California Eelgrass Success Rate (1982-2009, Inadequate History to Exclude Older Projects)								**25%**	**n=4**

* size in hectares
SP = sediment laden plug
** BR = bare root
*** success status is measured as yes, no, partial, pending, or unknown. Success rate is reported as percentage of sucessful over total completed within the past 25 years.
yes = 1, partial = 0.5, no = 0, and pending or unknown are not counted in either the numerator or denominator in determining success percentage.
**** + = net increase in eelgrass coverage, 0 = no change in eelgrass coverage, - = net decrease in eelgrass coverage

1 Transplant was initially adversely impacted by an unknown source of sediment and was deemed unsuitable.
2 The transplant declined initially and later recovered from what was determined to be a one time sedimentation event.
3 Transplant was experimental due to dense beds of the exotic muscle *Musculista senhousia*
which inhibited the growth of the transplant. Replacement transplant done elsewhere.
Transplant was completed in an area deemed unsuitable. Insufficient coverage required the construction of a remedial site.
Monitoring continues at both the initial and remedial sites.
4 Transplant was experimental.
5 Multiple sites.
6 Mitigation for marina at Princess Resort, project not built
7 Amount of eelgrass present within all basins as of 2000 mapping.
8 Regional eelgrass decline has resulted in die-offs both within restoration and reference areas equally full recovery had not occurred at the time of evaluation, yet project exceeds control-corrected requ
9 Original site was constructed as a plateau that was underfilled and anticipated to fall short of objectives. A supplemental
transplant was therefore completed when development began to exhibit shortfalls in area.
10 Shortfall mitigated by withdraw from established eelgrass mitigation bank.
11 Exception conditions from SCEMP requiring only replacement in place for unanticipated damage
12 Mitigated out-of-kind with non-eelgrass to satisfy permit requirements after shortfall in eelgrass mitigation.

MEMORANDUM

June 12, 2008

From: Fisheries Hydroacoustic Working Group

Subject: Agreement in Principle for Interim Criteria for Injury to Fish from Pile Driving Activities

To: Applicable Agency Staff

The signatory agencies, identified below, have agreed in principle to use the attached Interim Criteria for Injury to Fish from Pile Driving Activities. The agreement was concluded at a meeting in Vancouver, Washington on June 10-11, 2008 with key technical and policy staff from the Federal Highway Administration, NOAA Fisheries, U.S. Fish and Wildlife Service, the Departments of Transportation from California, Oregon, and Washington; and national experts on sound propagation activities that affect fish and wildlife species of concern. The agreed upon criteria identify sound pressure levels of 206 dB peak and 187 dB accumulated sound exposure level(SEL) for all listed fish except those that are less than 2 grams. In that case, the criteria for the accumulated SEL will be 183 dB.

These criteria will apply to all new projects beginning no later than 60 days from the date of this memorandum. During the interim 60 day period, the Transportation Agencies will work with the Services to identify projects currently in the consultation process and reach agreement on which criteria will be used to assess project effects.

The agencies agree to review the science periodically and revise the threshold and cumulative levels as needed to reflect current information. Behavioral impacts to fish and impacts to marine mammals are not addressed in this agreement. Sub-injurious effects will continue to be discussed in future meetings.

The respective agencies also agree to develop appropriate training for staff on these revised criteria, as well as a process to review and possibly refine the criteria, when appropriate.

For questions or concerns about the revised criteria, we recommend staff contact their agency environmental coordinator or agency expert on pile driving issues.

Carol G. Adkins

Federal Highway Administration*

*FHWA supports the use of these interim criteria in the states signing this agreement in principle. FHWA leaves the schedule for implementation to the discretion of the state DOTs in cooperation with their respective FHWA Division Offices and the Services.

Subject: UPD EIR 2024-104 - Shelter Island Commercial Fishing Wharf NOP

Ms Tsukayama:

As the Airport Land Use Commission (ALUC) for San Diego County, the Airport Authority appreciates notice of preparation of a draft Environmental Impact Report for the Shelter Island Commercial Fishing Wharf project at 4918 North Harbor Drive.

The project site is not located within the noise contours or safety zones of the San Diego International Airport (SDIA) Airport Land Use Compatibility Plan (ALUCP), so no determination of consistency with the SDIA ALUCP is required from our agency as the ALUC.

However, the project site is located within the airspace notification area in which notice of project construction is required to be given to the Federal Aviation Administration (FAA) unless the project meets shielding criteria, i.e., that it would be substantially shielded by existing taller structures in the immediate project vicinity such that it could not reasonably constitute a hazard to air navigation—including any temporary construction cranes employed to facilitate the project. ALUC staff recommends that the project sponsor certify any shielding status if that is invoked in lieu of FAA notice. Otherwise, a determination of no hazard to air navigation for any project structures and associated construction cranes should be solicited and obtained from the FAA through its Form 7460-1 submittal and review process prior to any construction of the project, including associated cranes, if applicable.

Thanks again for the notification of the project.

Subject: Notice of Preparation of a Draft Environmental Impact Report
Shelter Island Commercial Fishing Wharf Project
UPD #EIR-2024-104

Dear Ms. Manaois:

Thank you for the subject Notice of Preparation, which we received last month.

I was unable to locate any information on the proposed project on the Porty District's website, so it is assumed that cultural resources, both archaeological and built environment, will be addressed in the DEIR.

Regarding built environment, the typical approach would be to consider resources 45 or more years of age, not 50, to account for resources which might reach the 50-year threshold during the time the project is in processing.

Regarding archaeological resources, consideration should be given to the source and date of the fill placement in the project area, as it could potentially include historic material.

We look forward to reviewing the DEIR when the public review period begins. Please ensure that we receive notice at that time, and that a copy of the cultural resources technical report that has been edited for public distribution is available.

Sincerely,

James W. Royle, Jr.

ENVIRONMENTAL CHECKLIST

PROJECT INFORMATION

1.	Project Title:	Shelter Island Commercial Fishing Wharf Project
2.	Lead Agency Name and Address:	San Diego Unified Port District (District) 3165 Pacific Highway San Diego, CA 92101
3.	Contact Person and Phone Number:	Lily Tsukayama, (619) 686-8199
4.	Project Location:	The project site is within the existing Driscoll's Wharf leasehold, located on District property, at 4918 North Harbor Drive in San Diego, California. The leasehold encompasses 2.9 acres of landside area, and 5.7 acres of water-side area. The project site also includes an additional approximately 0.7-acre area where the floating wave attenuator is proposed. The proposed demolition activities would occur within the waterside area of the leasehold, as well as approximately 0.4-acre of the landside of the leasehold. Figure 1 of the NOP provides a project vicinity map.
5.	Project Sponsor's Name and Address:	San Diego Unified Port District (District) 3165 Pacific Highway San Diego, CA 92101 Driscoll Marina, Ltd, dba Driscoll's Wharf 4918 North Harbor Drive San Diego, CA 92106
6.	Port Master Plan Designation:	Commercial Fishing (land), Promenade (land), Commercial Fishing Berthing (water), and Navy Small Craft Berthing (water)

8. Description of Project:

The proposed project is the modernization of the existing commercial fishing marina at the existing Driscoll's Wharf (Driscoll's) leasehold area. Proposed actions would include a tenant (Driscoll Marina Ltd.) sponsored demolition component, which is a condition of the lease, and a San Diego Unified Port District (District) sponsored waterside development component. The demolition component would remove Piers 4, 5, 6, 7, and 8; demolish Building E and a small hazardous material storage shed; and remove all soil, groundwater, and sediment contaminants from the leased premises. The District proposes to reconstruct and operate Piers 4, 5, 6, 7, and 8, which would also include new gangways, headwalks connecting piers, and a floating wave attenuator to the east of the existing leasehold. Coastal Development Permits (CDPs) are required to implement the proposed project.

9. **Surrounding Land Uses and Setting:**
The project site is within and adjacent to the San Diego Bay in a commercialized area of the waterfront. Commercial land uses to the northwest of the project site include restaurants, yacht sales, and office land uses. Water uses to the west consist of marinas. Military land uses to the north, east, and southeast of the project site include Naval Base Point Loma Harbor Drive Annex. San Diego Bay is southeast of the project site. A vessel navigation corridor is located southwest of the project site. Land uses north of the project site across North Harbor Drive include hotel, residential, and commercial land uses. The nearest residence is approximately 950 feet northwest of the project site and is separated from the project site by North Harbor Drive and commercial uses.

10. **Other public agencies whose approval is required: (e.g., permits, financing approval, or participation agreement)**
The District is the primary approval authority for the project. District discretionary approvals would include the following:

- Adoption of the Environmental Impact Report
- Adoption of Findings of Fact
- Adoption of the Mitigation Monitoring and Reporting Program
- Approval of Coastal Development Permit for Demolition
- Approval of Coastal Development Permit for Construction
- Approval of the project

Additional subsequent approvals and other permits that may be required from local, regional, state, and federal agencies include, but are not limited to the following:

- U.S. Army Corps of Engineers (USACE) – Individual or Nationwide Permit, per the Clean Water Act (CWA) Section 404 Permit (33 U.S. Code Section 1341) and Rivers and Harbors Act Section 10 Permit
- San Diego Regional Water Quality Control Board (RWQCB) – Stormwater Construction General Permit and CWA Section 401 Water Quality Certification
- San Diego County Air Pollution Control District – Permits for diesel generators
- City of San Diego – Issuance of ministerial permits (e.g., demolition and grading)

11. **Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?**
No California Native American tribes have requested consultation pursuant to Public Resources Code section 21080.3.1.

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages. Where checked below, the topic with a potentially significant impact will be addressed in an environmental impact report.

☐ Aesthetics	☐ Agriculture and Forest Resources	☒ Air Quality
☒ Biological Resources	☒ Cultural Resources	☒ Energy
☐ Geology / Soils	☒ Greenhouse Gas Emissions	☒ Hazards / Hazardous Materials
☒ Hydrology / Water Quality	☒ Land Use / Planning	☐ Mineral Resources
☒ Noise	☐ Population / Housing	☐ Public Services
☐ Recreation	☒ Transportation	☐ Tribal Cultural Resources
☐ Utilities / Service Systems	☐ Wildfire	☒ Mandatory Findings of Significance

DETERMINATION (To be completed by the Lead Agency)

On the basis of this initial evaluation:

☐ I find that the proposed project could not have a significant effect on the environment, and a **NEGATIVE DECLARATION** will be prepared.

☐ I find that although the proposed project COULD have a significant effect on the environment, there WILL NOT be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A **MITIGATED NEGATIVE DECLARATION** will be prepared.

☒ I find that the proposed project **MAY** have a significant effect on the environment, and an **ENVIRONMENTAL IMPACT REPORT** is required.

☐ I find that the proposed project **MAY** have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An **ENVIRONMENTAL IMPACT REPORT** is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier **EIR** or **NEGATIVE DECLARATION** pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier **EIR** or **NEGATIVE DECLARATION**, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Agency	

EVALUATION OF ENVIRONMENTAL IMPACTS

1. A brief explanation is required for all answers except “No Impact” answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A “No Impact” answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A “No Impact” answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. “Potentially Significant Impact” is appropriate if there is substantial evidence that an effect may be significant. If there are one or more “Potentially Significant Impact” entries when the determination is made, an EIR is required.
4. “Negative Declaration: Less Than Significant With Mitigation Incorporated” applies where the incorporation of mitigation measures has reduced an effect from “Potentially Significant Impact” to a “Less Than Significant Impact.” The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from “Earlier Analyses,” as described in (5) below, may be cross-referenced).
5. Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:
    a) Earlier Analysis Used. Identify and state where they are available for review.
    b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
    c) Mitigation Measures. For effects that are “Less than Significant with Mitigation Measures Incorporated,” describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
6. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
7. Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
8. This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project’s environmental effects in whatever format is selected.
9. The explanation of each issue should identify:
    a) the significance criteria or threshold, if any, used to evaluate each question; and
    b) the mitigation measure identified, if any, to reduce the impact to less than significance.

AESTHETICS

ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
I. Aesthetics.				
Except as provided in Public Resources Code section 21099 (where aesthetic impacts shall not be considered significant for qualifying residential, mixed-use residential, and employment centers), would the project:				
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☒	☐
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☒	☐
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage points.) If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☒	☐
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☒	☐

Discussion

a) Have a substantial adverse effect on a scenic vista?

Less-than-significant impact. Within the District's jurisdiction, the District Port Master Plan (PMP) designates vista areas, which are defined as "points of natural beauty, photo vantage points, and other panoramas" (District 2024a). The PMP is intended to guide development within vista areas to preserve and enhance these areas of scenic and visual importance (District 2024a).

The project site is within Planning District 1 (Shelter Island) of the PMP, which contains seven vista areas:

1. A vista area located along the southwestern tip of the island, adjacent to the Japanese Friendship Bell and Public Art "Pearl of the Pacific" attractions, providing scenic vistas of San Diego Bay to the south, and is located approximately 1.2 miles southwest of the project site;
2. A vista area from the Shelter Island Pier, providing scenic vistas of San Diego Bay to the southeast, and is located approximately 0.83 miles southwest of the project site;
3. A vista area located along the northeastern tip of the island, adjacent to Shoreline Park and the restaurant Bali Hai, providing scenic vistas of San Diego Bay to the east, and is located approximately 0.2 miles southwest of the project site;
4. A vista area from the eastern terminus of Kellogg Street, providing scenic vistas of the inlet into the Shelter Island Yacht Basin and the southwestern tip of Shelter Island to the east, and is located approximately 1.32 miles southwest of the project site;
5. A vista area from the conjunction of Talbot Street and Anchorage Lane, providing scenic vistas of the Shelter Island Yacht Basin to the south, and is located approximately 0.58 miles southwest of the project site;

6. A vista area from a surface parking lot on the southwestern corner of Shelter Island Drive and Anchorage Lane, providing scenic vistas of the Shelter Island Yacht Basin, and is located approximately 0.36 miles southwest of the project site; and
7. A vista area from the eastern boundary of the Point Loma Marina and Driscoll Wharf (the project site), providing scenic vistas of the America's Cup Harbor, which includes a portion of the project site (District 2024a: Figure 4).

All of these vista areas provide views of the San Diego Bay, the Shelter Island Yacht Basin, or the southwestern tip of Shelter Island, and only one includes views of the project site. The vista area with a view of the project site is the vista area at the eastern boundary of the Point Loma Marina, within the project site, and northeasterly of America's Cup Harbor. This vista area provides a viewshed that includes the project site, as shown in Figure 4 of the PMP (District 2024a).

Within the Final Draft Port Master Plan Update (PMPU), the project site is within the Shelter Island Planning District. As shown in Final Draft PMPU Figure PD1.4, Coastal Access Views and Pathways, there are a total of 10 scenic vista areas within this planning district: Kellogg Beach, Yokohama Friendship Bell, Shelter Island Pier, Shelter Island Drive, Shelter Island Boat Launch, Shelter Island Roundabout, two views associated with America's Cup Habor, Point Loma Marina Park, Shelter Island Drive (entry segment), a view of the Shelter Island Yacht Basin, and a view of the La Playa Trail (District 2023a). Three of these scenic vista areas have viewsheds that overlap with the project site: two views of America's Cup Harbor, within the East Shelter Island Subdistrict, and one view associated with the Point Loma Marina Park (District 2023a: Figure PD1.4). In addition, the Final Draft PMPU includes five view corridor extensions down the following roadways and towards the bay within the Shelter Island Planning District: Bessemer Street, Nichols Street, McCall Street, Dickens Street, and Garrison Street. The project site is not located within any of the five view corridor extensions.

Existing views from the vista area [in the existing PMP] within the project site feature open water views of America's Cup Harbor punctuated by marine vessels moored to existing piers, an existing jib crane located on the offloading pier (Pier 4); and commercial fishing vessel loading and unloading activities.

During construction, the project would result in the temporary use of large construction equipment like pile drivers that could interrupt the view from the existing on-site scenic vista. However, construction activities would be temporary, transitory, and any obstruction of portions of the scenic vista would be short in duration (limited primarily to Pier 4, which already has a jib crane and frequent commercial fishing vessels docking at the pier).

During operation, commercial fishing operations would continue similar to existing conditions and reconstructed piers would not obstruct views of open water. Because the existing deteriorated piers would be replaced with new floating boat docks and slips, the quality of the existing view would be improved. Therefore, the project would not result in an adverse effect on a scenic vista. Impacts would be less than significant and further discussion in the EIR is not warranted.

b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

Less-than-significant impact. The project site is in an area that is urban and developed with maritime-related commercial uses (e.g., recreational marinas, yacht brokers, commercial fishing). There are no scenic rock outcroppings on the project site. There are trees in the parking lot, but none are designated as scenic resources. The nearest state scenic highway that is officially designated by the California Department of Transportation (Caltrans) is a portion of State Route (SR) 163 that travels north-south through Balboa Park, approximately 4 miles east of the project site; and the San Diego–Coronado Bridge (Coronado Bridge), which is a 1.4-mile segment on SR 75 located approximately 4 miles southeast of the project site (Caltrans 2024). Coronado Bridge spans the San Diego Bay, connecting the City of San Diego to the City of Coronado. For traveling motorists, Coronado Bridge offers views of the San Diego Bay and Downtown San Diego to the north, including high-rise residential, commercial, and urban developments. Due to the distance and intervening urban development and vegetation, the project site is not clearly visible from either scenic highway. Even during project construction, when large equipment such as cranes and pile drivers would be temporarily present within the project site, viewer sensitivity from the Coronado Bridge would be considered low because motorists would generally focus on the roadway and would have limited and momentary distant views of the project site. Following construction, the project site would be returned to a similar condition as the existing setting. Therefore, the project would not substantially damage scenic resources within a state scenic highway and impacts would be less than significant. Further discussion in the EIR is not warranted.

c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage points.) If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

Less-than-significant impact. The project site is in an urbanized area that is developed entirely with maritime-related commercial uses. The existing water and land use designations include Commercial Fishing Berthing and Navy Small Craft Berthing (water), and Promenade and Commercial Fishing (land), in the PMP (District 2024a). Within the Final Draft PMPU, the project site has a water and land use designation of Commercial Fishing Berthing (water) and Commercial Fishing (land), respectively (District 2024b).

The project would not expand the existing use of the project site or expand existing commercial fishing operations. In addition, the project would not require changes to existing land use designations under the current PMP or under the Final Draft PMPU. The PMP establishes general development standards for each land and water use designations, and for the Shelter Island Planning District identifies a maximum height of 41 feet above mean lower low water (approximately 26 feet above ground level). In addition, the PMP states that buildings in the Shelter Island Planning District should have low-profile silhouettes to maintain an inviting pedestrian scale, and that the location of all structures on the site should enhance the waterfront by accentuating the land-water interface. The project would not construct any new buildings landside, and would replace the waterside facilities with similar waterside facilities. The project would not conflict with policies identified in the PMP for preserving visual access and vista areas. Further, the project would not conflict with policies identified in the Final Draft PMPU that protect views and physical access and require public access within view corridor extensions and scenic vista areas, and along pathways to be maintained. Therefore, the project would not conflict with applicable zoning and other regulations governing scenic quality and impacts would be less than significant. Further discussion in the EIR is not warranted.

d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Less-than-significant impact. The project site is used as a wharf for commercial fishing boat mooring. Landside existing uses include surface parking, office buildings, outdoor storage areas, and other facilities associated with the commercial fishing industry; and waterside uses include piers and docks used to moor commercial fishing vessels. Existing light sources onsite include outdoor security lighting, lighting on commercial fishing vessels, onsite vehicles traveling to and from the project site, as well as spillover lighting from streetlamps, existing buildings adjacent to the project site, and vehicles from nearby roadways.

Construction work during night-time hours (between 7:00 p.m. and 7:00 a.m.) is not proposed. Additional temporary light sources may be required to illuminate work areas; however, this lighting would be directed onsite and would be of similar intensity to existing light sources throughout the project site and adjacent land uses. Following construction, the project site would be returned to a similar condition as the existing setting. The project proposes the installation of four new light poles, 14 feet in height at each concrete platform. Each slip would include the installation of a marina utility power pedestal, three feet in height, equipped with a low glare light that comes on in the evening. The proposed lighting would be similar in intensity and scale as the existing onsite lighting. Therefore, the project would not create substantial new sources of substantial light or glare that would adversely affect day or nighttime views in the area. Impacts would be less than significant. Further discussion in the EIR is not warranted.

AGRICULTURE AND FOREST RESOURCES

ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
II. Agriculture and Forest Resources.				
In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997, as updated) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board.				
Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒
b) Conflict with existing zoning for agricultural use or a Williamson Act contract?	☐	☐	☐	☒
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	☒
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e) Involve other changes in the existing environment, which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒

Discussion

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

No impact. According to the California Department of Conservation (DOC) Farmland Mapping and Monitoring Program, the project site is classified as Urban and Built-Up Land, and Water (DOC 2024a). There are no lands classified as Prime Farmland, Unique Farmland or Statewide Importance within the project site or adjacent area. Project construction and operation would be contained within the existing leasehold. Therefore, the project would not convert Important Farmland, Unique Farmland, or Farmland of Statewide Importance to non-agricultural use and there would be no impact. Further discussion in the EIR is not warranted.

b) Conflict with existing zoning for agricultural use or a Williamson Act contract?

No impact. The use designations for the project site are Commercial Fishing (land), Promenade (land), Commercial Fishing Berthing (water), and Navy Small Craft Berthing (water). The existing zoning/land use does not allow for agricultural use and no agricultural operations exist on the project site or adjacent areas. No Williamson Act contracts apply to the project site (DOC 2024b). Therefore, the project would not conflict with existing zoning for agricultural use or a Williamson Act contract and no impact would occur. Further discussion in the EIR is not warranted.

c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?

No impact. The use designations for the project site are Commercial Fishing (land), Promenade (land), Commercial Fishing Berthing (water), and Navy Small Craft Berthing (water). The project site is not zoned for forestland, timberland, or zoned Timberland Production. Further, there is no timberland present on or adjacent to the project site. Therefore, the project would not conflict with existing zoning/land use for forest land or timberland, and no impact would occur. Further discussion in the EIR is not warranted.

d) Result in the loss of forest land or conversion of forest land to non-forest use?

No impact. There is no forest land or timberland resources on or adjacent to the project site, which is in an urbanized portion of the City of San Diego. Therefore, the project would not result in the loss or conversion of forest land to non-forest use. No impact would occur.

e) Involve other changes in the existing environment, which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?

No impact. As discussed above, no agricultural, forest land, or timberland resources exist on or adjacent to the project site. Therefore, the project would not result in changes to the existing environment that could result in the conversion of farmland to non-agricultural use or conversion of forest land to non-forest use. No impact would occur. Further discussion in the EIR is not warranted.

AIR QUALITY

ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
III. Air Quality.				
Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☒	☐	☐	☐
c) Expose sensitive receptors to substantial pollutant concentrations?	☒	☐	☐	☐
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☒	☐

Discussion

a) Conflict with or obstruct implementation of the applicable air quality plan?

Less-than-significant impact. The San Diego Air Basin (SDAB) is currently designated as a "nonattainment" area with respect to the National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS) for ozone, and the CAAQS for particulate matter with an aerodynamic resistance diameter of 10 micrometers or less (PM_{10}) and particulate matter with an aerodynamic resistance diameter of 2.5 micrometers or less ($PM_{2.5}$). Air quality planning for San Diego County is under the jurisdiction of the San Diego Air Pollution Control District (SDAPCD).The San Diego Regional Air Quality Strategy (RAQS) outlines SDAPCD's plans and control measures designed to attain and maintain the state standards, while San Diego's portions of the SIP are designed to attain and maintain federal standards. The most recent state plan is the 2022 RAQS, was approved by the SDAPCD board on March 9, 2023. The most recent San Diego portion of the federal SIP is the 2020 Attainment Plan, which was approved by CARB on November 19, 2020 (SDAPCD 2024). Both the RAQS and SIP rely on emissions forecasts based on demographic and economic growth projections provided by city and county general plans, as well as the PMP. Projects whose growth is included in the projections used in the formulation of the RAQS and SIP are consistent with the RAQS and SIP and would not interfere with its implementation.

The proposed project would involve the demolition of the existing fish offloading pier (Pier 4) and Piers 5 through 8 followed by their reconstruction. Additionally, the project would include the demolition of Building E, which, after demolition, would remain undeveloped land under the proposed project with no future plans for redevelopment. No change in use would occur, no increase in commercial fishing operations would result, and the number of vessel slips within Piers 5-8 would not increase over the existing condition. Moreover, additional employees would not be needed once the project is operational. Thus, the project would not include components that would induce growth or change the use of the site. Because the proposed project would not modify land uses or result in an unanticipated increase in the residential population, the project would be consistent with the RAQS and SIP and potential impacts related to a conflict with applicable air quality plans would be less than significant.

Additionally, the District's Maritime Clean Air Strategy (MCAS) provides goals and objectives for the District's cargo terminals and shipyards located within the working waterfront, many of which focus on decreasing air emissions within the AB 617 Portside Community. None of the goals or objectives of the MCAS apply to the proposed project due to the type of use (commercial fishing wharf and marina) and its distant location from an AB 617 Portside Community. For the same reasons, the Community Emissions Reduction Program's (CERP's) goals and actions do not apply to the proposed project. Therefore, the proposed project would not conflict with the MCAS or CERP. Impacts would be less than significant and further discussion in the EIR is not warranted.

b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Potentially significant impact. The SDAB is designated as a "nonattainment" area with respect to the NAAQS and CAAQS for ozone, and the CAAQS for $PM_{2.5}$ and PM_{10}. The trigger levels developed by SDAPCD used as mass emission thresholds for purposes of this analysis are tied to attaining and maintaining health-based standards. Projects that exceed these thresholds would result in a cumulative, regional contribution (i.e., significant) to the nonattainment status of the SDAB and may also contribute to adverse health impacts affecting nearby sensitive receptors.

The proposed project includes demolition and construction activities that would occur over several months. Therefore, the proposed project would have the potential to exceed SDAPCD's trigger levels for one or more criteria pollutants. This issue will be discussed within the EIR.

c) Expose sensitive receptors to substantial pollutant concentrations?

Potentially significant impact. Sensitive receptors include land uses where exposure to pollutants could result in health-related risks to sensitive individuals, such as children or the elderly. Residential dwellings, schools, hospitals, playgrounds, and similar facilities are of primary concern because of the presence of individuals particularly sensitive to pollutants and the potential for increased and prolonged exposure of individuals to pollutants. The project is located within the Shelter Island Planning District of the PMP. The nearest sensitive receptors include personnel barracks at the Naval Base Point Loma Harbor Drive Annex. Due to its proximity to the proposed project site, construction-related emissions may expose sensitive receptors to substantial pollutant concentrations. This issue will be discussed within the EIR.

d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Less-than-significant impact. Project operations would be similar to existing commercial fishing operations. No change in existing odors associated with commercial fishing would occur. Additionally, no additional odor generating uses, such as wastewater treatment facilities, sanitary landfills, composting facilities, petroleum refineries, chemical manufacturing plants, are proposed. Therefore, operation of the project would not expose a substantial number of people to any new objectionable odors.

During construction activities, minor odors from the use of heavy-duty diesel equipment would be intermittent and temporary, and would dissipate rapidly from the source with an increase in distance. Therefore, project construction is not anticipated to result in an odor-related impact. Consequently, odor-related impacts would be less than significant and further discussion in the EIR is not warranted.

BIOLOGICAL RESOURCES

ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
IV. Biological Resources.				
Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or the U.S. Fish and Wildlife Service?	☒	☐	☐	☐
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations or by the California Department of Fish and Wildlife or the U.S. Fish and Wildlife Service?	☒	☐	☐	☐
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☒	☐	☐	☐
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☒	☐	☐	☐
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☒	☐	☐	☐
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☒	☐	☐	☐

Discussion

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or the U.S. Fish and Wildlife Service?

Potentially significant impact. The landside portion of the project site is fully developed and does not contain natural habitat suitable for special status plant species that would have the potential to be affected by project construction or operation. Project construction activities within the waterside portion of the project site would potentially cause substantial temporary noise from pile driving, increases in turbidity from sediment disturbance, and may have an increase in overwater coverage that could affect foraging habitat. Therefore, waterside construction- and operation-related activities would have the potential to significantly impact a sensitive species and will be discussed in the EIR.

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations or by the California Department of Fish and Wildlife or the U.S. Fish and Wildlife Service?

Potentially significant impact. The landside portion of the project site is entirely developed and does not contain any natural habitat. Therefore, no terrestrial sensitive natural communities or riparian habitat would be adversely affected as a result of project implementation. Eelgrass habitat, which is present within the water portion of the project site, is considered a sensitive habitat, and is managed by National Marine Fisheries Service (NMFS) as Essential Fish Habitat (EFH). Proposed in-water construction activities would have the potential to substantially effect eelgrass from pile installation, shading from overwater floating docks, and shading from construction-related barges. This issue will be discussed in the EIR.

c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Potentially significant impact. The landside portion of the project site is completely developed and does not contain any natural habitat, including state or federally protected wetlands. The waterside portion of the project site is located within San Diego Bay, which is considered a Water of the United States and State. Project implementation would not result in changes in operational activities and commercial fishing activities would continue; thus, project operation would not result in increased adverse effects on a Water of the U.S. or State relative to existing conditions.

However, construction of the in-water project elements may result in temporary turbidity from the disturbance of sediment from pile installation that could affect eelgrass habitat (see IV.b above). In addition, any fill or dredging within a Water of the United States or State would require approval by the USACE and Regional Water Board, respectively. This issue will be discussed within the EIR.

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Potentially significant impact. The landside portion of the project site is fully developed, does not contain natural terrestrial habitat that could function as a native wildlife nursery site, and is characterized by existing barriers to wildlife movement, including human-made structures. Moreover, it is surrounded by development and does not function as a wildlife movement corridor.

Aquatic wildlife, including fish, birds, and marine mammals, likely transit periodically through the marine environment in the project site to access foraging and resting habitat elsewhere in San Diego Bay or at sea. The project site also contains eelgrass, which is a nursery area for many commercially and recreationally important finfish and shellfish (Orth and Heck 2023). As discussed under IV a) and b), the proposed project has the potential to affect eelgrass, foraging habitat, and special-status wildlife species during construction. These impacts have the potential to substantially interfere with the movement of fish or other wildlife species or substantially impede the use of native wildlife nursery habitat and will be discussed in the EIR.

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Potentially significant impact. The applicable local land use plans, policies, ordinances, or regulations of the District, adopted for the purpose of protecting biological resources, are the PMP, San Diego Unified Port District Code, and the District's Integrated Natural Resource Management Plan (INRMP). The project would not result in any changes in existing uses of the project site. Rather, the project would result in the demolition of Piers 4-8, Building E, and the hazardous materials storage shed, followed by the reconstruction of Piers 4-8. Commercial fishing and commercial fishing vessel berthing would continue with the proposed project.

However, because there may be significant biological resource impacts, the proposed project would potentially conflict with the San Diego Bay INRMP. Therefore, this issue will be discussed in the EIR.

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

Potentially significant impact. As discussed under IV. e), the project has the potential to conflict with the INRMP. Therefore, this issue will be discussed in the EIR.

CULTURAL RESOURCES

ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
V. Cultural Resources.				
Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?	☒	☐	☐	☐
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?	☒	☐	☐	☐
c) Substantially disturb human remains, including those interred outside of dedicated cemeteries?	☐	☐	☒	☐

Discussion

a) Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?

Potentially significant impact. Buildings and structures located on the project site are over 50 years old and therefore may constitute a historical resource. A historical resources evaluation report will be prepared and this issue will be addressed in the EIR.

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

Potentially significant impact. Although the shoreline and majority of the project site above ground is underlain by artificial fill, a records search with the South Coastal Information Center (SCIC) identified archaeological sites within 0.5 miles of the project site. Therefore, this issue will be addressed in the EIR.

c) Substantially disturb human remains, including those interred outside of formal cemeteries?

Less-than-significant impact. There are no known cemeteries or burials on the project site or immediate area. The proposed project and surrounding area are either fully developed or in active waters, and there is no record of human remains being identified during development of the area. For these reasons, the potential for human remains to be present at the project site is extremely low. However, if human remains are discovered, California law recognizes the need to protect Native American human burials, skeletal remains, and items associated with Native American burials from vandalism and inadvertent destruction. The procedures for the treatment of Native American human remains are contained in California Health and Safety Code Section 7050.5 and California Public Resources Code Section 5097.

These statutes require that, if human remains are discovered, potentially damaging ground-disturbing activities in the area of the remains shall be halted immediately, and the County coroner shall be notified immediately. If the remains are determined by the coroner to be Native American, the Native American Heritage Commission (NAHC) shall be notified within 24 hours and the guidelines of the NAHC shall be adhered to in the treatment and disposition of the remains. Following the coroner's findings, the NAHC-designated Most Likely Descendant and the landowner shall determine the ultimate treatment and disposition of the remains and take appropriate steps to ensure that additional human interments, if present, are not disturbed. The responsibilities for acting upon notification of a discovery of Native American human remains are identified in Public Resources Code Section 5097.94.

Compliance with California Health and Safety Code Section 7050.5 and California Public Resources Code Section 5097 would provide an opportunity to avoid or minimize the disturbance of human remains, and to appropriately treat any remains that are discovered. Therefore, through compliance with existing regulations, the proposed project's demolition and construction activities would not disturb any human remains, including those interred outside of formal cemeteries. As such, impacts would be less than significant. Further discussion in the EIR is not warranted.

ENERGY

ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
VI. Energy.				
Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☒	☐	☐	☐
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☒	☐	☐	☐

Discussion

a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Potentially significant impact. Energy would be required to operate and maintain construction equipment and to transport construction materials. The one-time energy expenditure required to demolish and construct the existing facilities associated with the proposed project would be non-recoverable. Once operational, the proposed project would not consume any more energy than the existing condition. Therefore, while operation-related energy use would be less than significant, construction-related energy use would be potentially significant and will be discussed in the EIR.

b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency

Potentially significant impact. State and local renewable energy and energy efficiency plans that are applicable to the proposed project include California Title 24 energy efficiency standards, the State of California Energy Action Plan, the District's Climate Action Plan (CAP), which includes strategies to reduce GHG emissions, and SANDAG's Regional Energy Strategy, which establishes long-term energy goals in the region through 2050, including energy efficiency, renewable energy, distributed generation, transportation fuels, land use and transportation planning, border energy issues, and the green economy. The proposed project is required to comply with these plans, to the extent applicable, all of which are aimed at increasing energy efficiency and renewable energy development. This issue will be discussed in the EIR.

GEOLOGY AND SOILS

ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
VII. Geology and Soils.				
Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? (Refer to California Geological Survey Special Publication 42.)	☐	☐	☒	☐
ii) Strong seismic ground shaking?	☐	☐	☒	☐
iii) Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐
iv) Landslides?	☐	☐	☐	☒
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?	☐	☐	☒	☐
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994, as updated), creating substantial direct or indirect risks to life or property?	☐	☐	☐	☒
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☐	☐	☐	☒
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☐	☒	☐

Discussion

a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? (Refer to California Geological Survey Special Publication 42.)

Less-than-significant impact. Fault rupture impacts are limited to areas in the immediate vicinity of an earthquake fault line. According to the DOC, the project site is not located on or adjacent to an Alquist-Priolo Earthquake Fault Zone area (DOC 2022). The nearest fault is the Rose Canyon Fault Zone, the closest segment of which is named the Spanish Bight Fault, located 2 miles east of the project site (DOC 2022). Therefore, due to this distance, surface rupture from an earthquake is not anticipated to occur onsite. Construction and operation of the project would therefore not exacerbate the existing risk of fault rupture to the surrounding area. Further, the project site is not located within an Alquist-Priolo fault zone. Therefore, this impact would be less than significant. Further discussion in the EIR is not warranted.

ii) Strong seismic ground shaking?

Less-than-significant impact. The project site is located in southern California, which is known to be a seismically active area. The Spanish Bight Fault is located 2 miles east of the project site, and the landside portion of the project could be subjected to seismically induced ground shaking. However, the project does not include landside construction; instead, it would involve the demolition of Building E and a hazardous materials storage shed. The only components to be constructed on the project site would be within the waterside portion of the project site. However, adverse effects associated with seismic ground shaking would be managed through project design and the use of piled foundations for the proposed docks and supporting structures. The project would include modular concrete floating docks, anchored in place by prestressed concrete piles installed vertically through loose near-surface sandy bay deposits up to or in the underlying competent Bay Point Formation. The proposed docks would connect to the guide piles by freely sliding collars which restrain lateral movement but permit vertical displacement to accommodate water level changes. Therefore, the proposed dock system would be fully isolated from ground motion and the piles would have sufficient flexibility to deform laterally such that significant lateral loads would not transfer into the proposed dock system. Further, competent formational materials are known to exist at relatively shallow depths at the site and pile foundations would reduce seismically induced geotechnical hazards. Therefore, the project's potential to cause direct or indirect adverse effects, including risk of loss, injury, or death involving strong seismic ground shaking would be less than significant, and no further analysis in the EIR is warranted.

The project's construction work would adhere to the California Building Code (CBC [California Code of Regulations, Title 24, Part 2]), Chapter 16, Structural Design, which contains provisions for earthquake safety based on factors including occupancy type, soil and rock type, and probable strength of ground motion. Regulatory compliance with the CBC regarding seismic safety design requirements would ensure that project construction activities conform to current building codes and engineering practices. This would minimize the project's potential to cause direct or indirect adverse effects, including risk of loss, injury, or death involving strong seismic ground shaking. This impact is less than significant, and no further analysis in the EIR is warranted.

iii) Seismic-related ground failure, including liquefaction?

Less-than-significant impact. Liquefaction is a phenomenon that occurs when the seismic ground shaking of relatively loose, granular soils that are saturated or submerged cause soils to "liquefy" and temporarily behave as a dense fluid; this can lead to substantial damage to structures, causing them to sink, tilt, or both during seismic shaking. According to the Final Draft PMPU Program EIR (District 2024c), based on the granular nature of subsurface materials, the shallow depth to groundwater, and proximity to San Diego Bay and the Pacific Ocean, the entire Final Draft PMPU area (including the project site) has a high potential for liquefaction (District 2023b: Figure 4.5-9). The landside portion of the project site is therefore considered to be in a high potential liquefaction-prone area, due to shallow groundwater, major drainages, and hydraulic fills (District 2023b: Figure 4.5-9).

Landside structures within the project site include Building A, Building C-D, and Building E, all located north of the waterside area (see Figure 2-3 in Section 2, "Project Description"). The project proposes to demolish Building E and the existing hazardous materials storage shed. After demolition of Building E is completed, the cleared area would then be used as a construction laydown area for waterside demolition activities. The demolition of Building E and the hazardous materials storage shed would not result in exacerbating, worsening, or otherwise substantially affecting the existing liquefaction risk of the project site. In addition, no buildings are proposed as part of the project. Waterside construction activities would include the demolition and replacement of Piers 4, 5, 6, 7, and 8, and construction of a floating wave attenuator which would involve pile driving. The waterside project components would have the potential to exacerbate the existing risk of seismic-related ground failure, including liquefaction. However, the project site lies within the zone of marginal shoreline that has been changed by dredging and filling. The bay deposit soils that underlie the project site down to the Bay Point Formation are well-known and, although susceptible to seismically-induced liquefaction, the entire basin is deemed suitable for construction of marine-based facilities, similar to the project. The project includes the installation of piles to support the proposed docks. Typical methods for pile installation include jetting and driving, either with a vibratory hammer or impact hammer. Given the project's proximity to existing slopes that are underlain by loose sandy soils, the use of a vibratory hammer could liquefy portions of the underlying soils which could potentially impact the stability of the nearby slopes. The use of an impact hammer would lessen the potential for liquefaction. To further reduce the potential for vibration-induced liquefaction and lateral ground movement, jetting of the concrete piles through bay deposit soils up to or in the Bay Point Formation, with final penetration being achieved by driving, would be considered. Therefore, the project's potential to cause direct or indirect adverse effects, including risk of loss, injury, or death involving liquefaction would be less than significant. Further discussion in the EIR is not warranted.

iv) Landslides?

No impact. Landslide susceptibility is typically determined based on local terrain conditions and sometimes the volume of rainfall. According to DOC, the project site is not located within or adjacent to a landslide hazard area (DOC 2022). There are no steep slopes or sharp gradients on or adjacent to the project site, and both overwater and landside construction improvements would have no potential to impact any existing risk of landslides. Project construction and operation would have no impact, and no further analysis in the EIR is warranted.

b) Result in substantial soil erosion or the loss of topsoil?

Less-than-significant impact. For the landside component of construction activities, a total of 0.4 acre would be disturbed. Construction of the project would be required to implement Best Management Practices (BMPs), consistent with the District's Jurisdictional Runoff Management Plan (JRMP), to contain soil on the project site during stormwater runoff events. BMPs can include, but are not limited to, scheduling construction activity during dry weather, when possible; preservation of natural features, vegetation, soil, and buffers around surface waters; drainage swales or lined ditches to control stormwater flow; mulching or hydroseeding to stabilize disturbed soils; erosion control to protect slopes; protection of storm drain inlets (gravel bags or catch basin inserts); perimeter sediment control (perimeter silt fence, fiber rolls); sediment traps or sediment basins to retain sediment onsite; stabilized construction exists; and wind erosion control. Operation and maintenance of the project would not require additional soil disturbance and would not result in erosion or loss of topsoil. Adherence to District required BMPs would reduce potential project construction-related soil erosion impacts to a less-than-significant impact. Further discussion in the EIR is not warranted.

c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?

Less-than-significant impact. The project site is not located in areas prone to landsliding and does not have steep gradients or slopes that might otherwise trigger lateral spreading or collapse. Subsidence typically occurs when groundwater is over-pumped in agricultural areas, and the project site is not zoned for agricultural land uses, does not involve the operation of agricultural lands, and does not involve groundwater pumping. However, the project is located within a liquefaction hazard area. However, as described in Section 3.7 (iii), the project site lies within the zone of marginal shoreline that has been changed by dredging and filling. The bay deposit soils that underlie the project site down to the Bay Point Formation are well-known and, although susceptible to seismically-induced liquefaction, the entire basin is deemed suitable for construction of marine-based facilities, similar to the project. Therefore, this impact would be less than significant. Further discussion in the EIR is not warranted.

d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994, as updated), creating substantial direct or indirect risks to life or property?

No impact. Expansive soils properties have the ability to expand and contract (swell/shrink) based on moisture levels and can cause fatigue and cracks in structure foundations resulting in structural damage over time. Expansive soils are typically rich in clay minerals which have the capacity to absorb water and expand. As a result, proper engineering and construction techniques are required to minimize problems associated with expansive soils.

The project site is situated on artificial engineered fill that overlies late Holocene marine deposits, as shown in Figure 4.5-1, Geology Planning District 1 – Shelter Island, of the Final Draft PMPU Program EIR (District 2024c). Therefore, the project site would not be located on expansive soils and project implementation would not create substantial direct or indirect risks to life and property related to expansive soils. No impact would occur, and no further analysis in the EIR is warranted.

e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

No impact. The project site would include the continued operation of existing underground utilities, including electricity, water, and sewer. The project does not propose to redevelop these utility lines or construct septic tanks or alternative wastewater disposal systems. No impact would occur, and no further analysis in the EIR is warranted.

f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Less-than-significant impact. Paleontological resources are the remains or traces of prehistoric plant and animal life (e.g., fossil teeth and bones) exclusive of human remains. The project site is situated on artificial engineered fill, which overlies Holocene marine deposits (District 2023b). This underlying formation has a low paleontological sensitivity. Given that construction activities would predominantly be in-water, and the only landside component would be the demolition of Building E and the hazardous materials storage shed, both of which would not involve disturbance of the underlying formation, it is unlikely that paleontological resources would be encountered. Following construction, the project site would be returned to a similar condition as the existing setting. The project would not introduce new activities during operation that would have potential to disturb native soils. Therefore, the project would not destroy a unique paleontological resource or site or unique geologic feature. Impacts would be less than significant. Further discussion in the EIR is not warranted.

GREENHOUSE GAS EMISSIONS

ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
VIII. Greenhouse Gas Emissions.				
Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☒	☐	☐	☐
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☒	☐	☐	☐

Discussion

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Potentially significant impact. GHG emissions would result from construction activities associated with the proposed project, and thus there is the potential for the project to generate GHG emissions that would be considered significant. Once operational, the proposed project would generate GHG emissions similar to or less than the existing condition. Therefore, GHG emissions associated with construction will be quantified (to the extent feasible) and analyzed in the EIR.

b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Potentially significant impact. The project would result in construction-related GHG emissions. Once operational, the proposed project would generate GHG emissions similar to or less than the existing condition. Therefore, the EIR will analyze if construction-related GHG emissions would conflict with an applicable plan, policy, or regulation adopted to reduce GHG emissions.

HAZARDS AND HAZARDOUS MATERIALS

ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
IX. Hazards and Hazardous Materials.				
Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and/or accident conditions involving the release of hazardous materials into the environment?	☒	☐	☐	☐
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☒	☐
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☒	☐	☐	☐
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☒	☐
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?	☐	☐	☐	☒

Discussion

a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Less-than-significant impact. Construction of the project would involve the use of hazardous materials such as fuels, lubricants, and solvents for construction equipment operation and maintenance. These materials would be properly stored, handled, used, and disposed of in accordance with applicable regulations and laws, which include Resource Conservation and Recovery Act; U.S. DOT Hazardous Materials Regulations; California Health and Safety Code; and San Diego County Code, Title 6, Division 8. In addition, Occupational Safety and Health Administration provides specific standards for maintaining safe and healthy working conditions pertaining to hazardous materials in 29 CFR

1910 Subpart H. Project construction may also require the disposal of creosote-treated wood waste, which is regulated by Division 20, Chapter 6.5, and Title 22, Division 4.5 of the California Health and Safety Code. A licensed contractor would be responsible for the removal, transportation, and disposal of the removed piles in accordance with these regulations. Any accidental release of hazardous materials due to spills or leaks would be cleaned up in the normal course of business, consistent with the above-mentioned regulations. Compliance with the above-listed regulations would ensure the safe transport, use, and disposal of hazardous materials, such that construction-related hazardous materials impacts would be less than significant.

Following completion of construction, the project would continue commercial fishing operations currently operating onsite, and would not increase the project site's operational activities. Therefore, the proposed project would not increase the use of hazardous materials on the site. The transport, use, and disposal of any hazardous materials would continue to occur in compliance with the above-mentioned regulations. As such, operational impacts related to the routine transport, use, or disposal of hazardous materials would be less than significant and further discussion in the EIR is not warranted.

b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and/or accident conditions involving the release of hazardous materials into the environment?

Potentially significant impact. The proposed project would include construction work above and adjacent to the San Diego Bay and would disturb sediment that may be contaminated from historical uses. Therefore, this issue will be discussed in the EIR.

c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Less-than-significant impact. Nearby schools include Cabrillo Elementary (0.6 miles from the project site) and High Tech Elementary, Middle, High and Graduate Schools (0.6 miles from the project site). No schools are within 0.25 miles of the project site. Therefore, this impact would be less than significant and further discussion in the EIR is not warranted.

d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code §65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Potentially significant impact. The California Environmental Protection Agency lists the following data resources that provide information regarding facilities or sites identified in California Government Code 65962.5 (commonly referred to as the "Cortese List"):

- List of Hazardous Waste and Substances sites from the Department of Toxic Substances Control (DTSC) EnviroStor database,
- List of Leaking Underground Storage Tanks (LUST) sites from the State Water Resources Control Board (SWRCB) GeoTracker database,
- List of solid waste disposal sites identified by SWRCB with waste constituents above hazardous waste levels outside the waste management unit,
- List of "active" Cease and Desist Actions (CDO) and CAO from the SWRCB, and
- List of hazardous waste facilities subject to corrective action pursuant to Section 25187.5 of the Health and Safety Code, identified by DTSC.

Because the proposed project would include ground and sediment disturbance, the EIR will include review of all of these databases and provide a discussion of the project's potential to create a significant hazard to the public or the environment by disturbing an existing potential hazardous materials site. Therefore, this issue will be discussed in the EIR.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

Less-than-significant impact. The project site is approximately 1.5 miles from the San Diego International Airport (SDIA) and 1 mile from the Naval Air Station North Island (NASNI). The project site is located within the Airport Influence Area in the Airport Land Use Compatibility Plans for the SDIA and NASNI. However, the proposed project would not construct any buildings or facilities that would increase the potential for airport and aircraft related hazards to occur. For instance, there would be no reflective materials used, such as mirrored architectural features or extensive use of glass that may have high reflectivity. In addition, the project does not propose constructing any tall structures that may interfere with the flight path of aircraft. Moreover, the distance between the project site and either the SDIA or the NASNI is too far to hear any excessive noise from project construction activities like pile driving. Therefore, impacts associated with creating a safety hazard or excessive noise for people residing or working in the project area would be less than significant and further discussion in the EIR is not warranted.

f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Less-than-significant impact. The San Diego County Office of Emergency Services adopted its Emergency Operations Plan (EOP) in September 2022. Highways in proximity to the project site include I-5, I-15, and SR 75, which are identified in the EOP as primary evacuation routes in San Diego County (County of San Diego 2022). Project construction includes demolition of Building E and a small hazardous materials shed. In addition, Piers 4 through 8 would be demolished and reconstructed to modern standards. In addition, a wave attenuator will be installed in the water east of the leasehold. No construction would require closing roads or access to the area and there would be no encroachment into any evacuation routes. Therefore, emergency access to and from the project site along Harbor Drive and on designated evacuation routes would be maintained during project construction. Because project implementation would not expand the existing use of the site, the project would not result in permanent changes to emergency access following construction. Thus, the project would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. Impacts would be less than significant and further discussion in the EIR is not warranted.

g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?

No Impact. State law requires that all local jurisdictions identify very high fire hazard severity zones (VHFHSZ) within their areas of responsibility (California Government Code Section 51175–51189). Inclusion within these zones is based on vegetation density, slope severity, and other relevant factors that contribute to fire severity. The project site is within a local responsibility area and is designated by the California Department of Forestry and Fire Protection (CAL FIRE) as a non-VHFHSZ (CAL FIRE 2024). The nearest lands classified as VHFHSZ are several miles east of the project site (CAL FIRE 2024). Furthermore, the project site is in a developed urban area on and adjacent to the San Diego Bay. Therefore, the project would not expose people or structures to a significant risk of loss, injury, or death involving wildland fire. No impact would occur and further discussion in the EIR is not warranted.

HYDROLOGY AND WATER QUALITY

ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
X. Hydrology and Water Quality.				
Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?	☒	☐	☐	☐
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☒	☐
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i) Result in substantial on- or offsite erosion or siltation;	☐	☐	☒	☐
ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;	☐	☐	☐	☒
iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☐	☒
iv) Impede or redirect flood flows?	☒	☐	☐	☐
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☒	☐
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☒	☐	☐	☐

Discussion

a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?

Potentially significant impact. The project proposes features that would involve in-water construction and disturbance to the bay floor. Disturbance of the bay floor would cause sediment to be temporarily resuspended, thereby increasing turbidity and potentially lowering levels of dissolved oxygen, increasing salinity, increasing concentrations of suspended solids, and possibly releasing contaminants present in the sediment into the water column. This issue will be discussed in the EIR.

b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Less-than-significant impact. Construction activities would occur within the project site located within and adjacent to San Diego Bay. The project would not result in a net increase in impervious surfaces, such that the surface area for percolation of stormwater would be reduced. Furthermore, groundwater at the project site is saline from saltwater intrusion and is not used as a groundwater supply source.

The project would not require landside excavation and would not have the potential to encounter groundwater such that dewatering would be required. Furthermore, construction-related water use would represent a small demand on local and regional water supplies that could be accommodated by the existing water service provider. The project would not generate a permanent increase in water demand compared to existing conditions. Consequently, the project would not substantially decrease groundwater supplies or interfere with groundwater recharge. Impacts would be less than significant and further discussion in the EIR is not warranted.

c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

i) Result in substantial on- or offsite erosion or siltation;

Less-than-significant impact. The project site is entirely paved with no areas of exposed soil. Construction activities would include demolition of Building E and a small hazardous materials storage shed. In addition, Piers 4 through 8 would occur over water. Therefore, the project would have limited disturbance of landside soils, namely the grading of topsoil where the currently Building E is located. All soil disturbance would comply with the District's Stormwater Best Management Practices (BMPs), which would include minimizing stormwater runoff from the graded site. Therefore, the project is not anticipated to result in on- or off-site erosion or siltation. Impacts would be less than significant and further discussion in the EIR is not warranted.

ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;

No impact. The project would not increase impervious surface area and would not include any project features that would increase the rate or amount of surface runoff. On the contrary, Building E would be demolished, which would lead to an increase in pervious surface area and contribute to stormwater percolation. Therefore, the project is not anticipated to result in on- or off-site flooding. No impact would occur and further discussion in the EIR is not warranted.

iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or

No impact. The project would not substantially increase runoff to the existing storm drainage system. As described under X. i) and ii), the project would lead to an increase in pervious surface area and facilitate additional stormwater percolation once Building E is removed. Therefore, no impact would occur and further discussion in the EIR is not warranted.

iv) Impede or redirect flood flows?

Potentially significant impact. As described under X. i), ii), and iii), proposed construction on land would be limited to demolition of Building E and the small hazardous materials shed. Once Building E is demolished, the land underneath would be graded and BMPs would be incorporated, consistent with the District's JRMP. Moreover, the temporary presence of the construction-related equipment would not impede or redirect flood flows. As such, there would be no potential to impede or redirect flood flows.

However, although the project would not impede or redirect flood flows, the EIR will analyze whether the proposed project would have the potential to exacerbate risks from future sea level rise.

d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

Less-than-significant impact. The waterside portion of the project site is within Flood Zone AE and is subject to flooding during the 100-year storm event (FEMA 2024). In addition, the project site is within a tsunami hazard area, as delineated on the Tsunami Inundation Map for Emergency Planning for San Diego County (CalEMA, CGS, and USC 2009). Because the project site is situated on and adjacent to the San Diego Bay, it could also be susceptible to seiche. The project would include the replacement of in-water structures, demolition of Building E, and removal of a small hazardous materials shed. As such, the proposed project would reduce potential sources of pollutants onsite. Therefore, the project would not have potential to risk release of pollutants during a flood hazard event such as a tsunami or seiche. Impacts would be less than significant and further discussion in the EIR is not warranted.

e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Potentially significant impact. The water quality control plans that apply to the project site are the San Diego Basin Plan and the Water Quality Control Plan for Enclosed Bays and Estuaries: Part 1 Sediment Quality Objectives.

The proposed project does not propose any increase or expansion of the existing operations and therefore project operations would not conflict with or otherwise obstruct the Basin Plan or the Water Quality Control Plan for Enclosed Bays and Estuaries: Part 1 Sediment Quality Objectives.

In addition, the project proponent(s) would be required to comply with permit conditions imposed by USACE and the RWQCB during construction. Specifically, permits required include the CWA Section 401 Water Quality Certification issued by the RWQCB and the Section 10 Rivers and Harbors Permit issued by the USACE. These permits will provide specific conditions to ensure the proposed project does not violate the Clean Water Act, Porter Cologne Water Quality Control Act, and does not hinder implementation of or otherwise conflict with the RWQCB's Basin Plan and Water Quality Control Plan for Enclosed Bays and Estuaries. However, this issue will be discussed in the EIR because mitigation measures may be necessary to ensure no conflict would occur.

The groundwater basin, Coastal Plain of San Diego, is considered a low priority groundwater basin and is not overdrafted. As discussed in X. b), the project would not have potential to decrease groundwater supplies, impair groundwater quality, or affect groundwater recharge. Therefore, the project would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan and further discussion in the EIR is not warranted.

LAND USE AND PLANNING

ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XI. Land Use and Planning.				
Would the project:				
a) Physically divide an established community?	☐	☐	☐	☒
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☒	☐	☐	☐

Discussion

a) Physically divide an established community?

No impact. The project involves the demolition of Piers 4 through 8, Building E, and a small hazardous materials storage shed. Reconstruction of Piers 4 through 8 would also occur. All project construction would occur within the existing project leasehold with the exception of a floating wave attenuator, which would be located in the bay immediately east of the leasehold. Project construction would not expand the physical landside boundaries of the fishing wharf and marina or expand into any adjacent communities. The project would not result in the construction of any physical barriers or require any road closures that would disrupt access within the surrounding community. No impact would occur and further discussion in the EIR is not warranted.

b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Potentially significant impact. Several land and water use plans and regulations apply to the project site. Although not anticipated to conflict with any land use plan, policy or regulation adopted for the purpose of avoiding or mitigating an environmental effect, the EIR will include a conflict analysis with at least the following laws and plans: California Coastal Act, PMP, Final Draft PMPU, California Coastal Commission Sea Level Rise Policy Guidance, SDIA Airport Land Use Compatibility Plan (ALUCP), NASNI ALUCP, and San Diego Bay INRMP.

MINERAL RESOURCES

ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XII. Mineral Resources.				
Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	☐	☐	☐	☒

Discussion

a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

No impact. According to the City of San Diego's General Plan Conservation Element, the project site is located within an area designated as Mineral Resource Zone (MRZ) 1, indicating that no significant mineral deposits are present (City of San Diego 2024a: Figure CE-6; 2024b: 5-2). The existing project site is in a highly developed and urbanized area with marine-related land uses including commercial fishing berthing (water) and commercial fishing (land) that are incompatible with and preclude mineral extraction. Therefore, the project would not result in the loss of availability of locally important mineral resources and no impact would occur. Further discussion in the EIR is not warranted.

b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

No impact. According to the City of San Diego's General Plan Conservation Element, the project site is not designated as a locally important mineral resource recovery site. The project would not result in the loss of availability of a locally important mineral resources and therefore no impact would occur. Further discussion in the EIR is not warranted.

NOISE

ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XIII.Noise.				
Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies, or a substantial temporary or permanent increase in noise levels above existing ambient levels that could result in an adverse effect on humans?	☒	☐	☐	☐
b) Generation of excessive groundborne vibration or groundborne noise levels?	☒	☐	☐	☐
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☒	☐	☐	☐

Discussion

a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies, or a substantial temporary or permanent increase in noise levels above existing ambient levels that could result in an adverse effect on humans?

Potentially significant impact. Construction activities associated with the project would result in a temporary increase in noise. Operational noise would be similar to the existing condition because commercial fishing and vessel berthing would continue with the project. Therefore, operational noise would be less than significant and noise associated with construction will be quantified and discussed in the EIR.

b) Generation of excessive groundborne vibration or groundborne noise levels?

Potentially significant impact. Vibration assessments are generally separated into two distinct analyses: one that is concerned about the receiving land uses perception and associated level of annoyance to vibration-inducting activities, and the second which is concerned with the possibility of vibration-inducing activities to cause structural damage to nearby structures. Project construction would involve the use of ground vibration–intensive activities, such as impact and/or vibratory pile driving. Once operational, the project would not generate any excessive groundborne vibration or noise levels and levels would be similar to the existing condition. Therefore, construction activities that may result in vibration impacts will be analyzed in the EIR.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

Potentially significant impact. The SDIA and NASNI are the closest public and private airports, and their runways are both located approximately 1.5 miles and 1 mile, respectively, from the project site. Therefore, because these airports are within 2 miles of the project site, this issue will be discussed in the EIR.

POPULATION AND HOUSING

ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XIV. Population and Housing. Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☒	☐
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

Discussion

a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Less-than-significant impact. The growth inducing potential of a project would typically be considered significant if it fosters growth or a concentration of population in excess of what is assumed in applicable land use plans. Significant growth impacts could also occur if a project provides infrastructure or service capacity to accommodate levels of growth beyond levels currently permitted by local or regional plans or policies.

The project involves the demolition of two landside structures, construction of a floating wave attenuator, and removal and replacement of the existing piers to support ongoing commercial fishing operations within the project site. The project does not propose new homes or businesses that would directly induce population growth. In addition, the project does not include the expansion of existing infrastructure, including changes to existing fishing operations, that would indirectly induce population growth. Construction activities are anticipated to occur over a 48-month period, with a minimal number of construction workers present on the project site during the construction period. Construction workers are anticipated to commute from the surrounding area and would not likely require temporary local housing. Thus, the project would not induce substantial unplanned growth and impacts would be less than significant. Further discussion in the EIR is not warranted.

b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

No impact. The land use designation for the project site is Commercial Fishing (land), Promenade (land), Commercial Fishing Berthing (water), and Navy Small Craft Berthing (water). Further, residential uses are not allowed within District property. Therefore, the project would not displace any existing people or housing, or necessitate the construction of replacement housing elsewhere. Further discussion in the EIR is not warranted.

PUBLIC SERVICES

ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XV. Public Services.				
Would the project:				
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:				
Fire protection?	☐	☐	☒	☐
Police protection?	☐	☐	☒	☐
Schools?	☐	☐	☐	☒
Parks?	☐	☐	☐	☒
Other public facilities?	☐	☐	☐	☒

Discussion

a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:

Fire protection?

Less-than-significant impact. The San Diego Harbor Police (SDHP) and City of San Diego Fire Rescue Department (SDFRD) provide marine firefighting and firefighting services to the project site. The closest fire station is SDFRD Fire Station 22 at 1055 Catalina Blvd, San Diego, CA 92106, approximately 1.3 miles west of the project site. The project involves the demolition of Building E and a hazardous materials shed, the removal and replacement of Piers 4 through 8 within the leasehold, as well as the construction of a floating wave attenuator. The project construction period would involve a minimal number of workers over a 48-month period and would not result in a permanent population growth that would have the potential to affect performance objectives for SDFRD or the SDHP.

Project construction staging will occur within the project site, in the parking areas adjacent to Building E. Following the demolition of Building E, construction staging would continue to be contained within the leasehold, including the newly-cleared area, and would not require any road closures. In addition, project construction would result in negligible vehicle trips on surrounding roadways associated with worker commutes and haul trips (refer to Section 4.17 "Transportation," for more information). Therefore, project construction would not contribute to substantial congestion on surrounding roadways that would affect response times for SDHP or SDFRD.

The project would not result in an expansion of existing uses on the site, an increase in operations, or additional employees after construction is completed. Therefore, project operations would not affect response times for the

SDHP and SDFRD. Based on the above discussion, the project would not require the provision of new or physically altered fire protection facilities. Therefore, impacts would be less than significant. Further discussion in the EIR is not warranted.

Police protection?

Less-than-significant impact. The Port of San Diego Harbor Police Department (HPD) and the City of San Diego Police Department (SDPD) provide law enforcement services to the project site. The closest police station is the HPD Headquarters at 3380 North Harbor Drive, approximately 1.6 miles east of the project site.

As previously discussed in Section 3.14 "Population and Housing," the project would not create permanent population growth. The project would not expand existing uses or increase the number of employees on site. Project construction staging would be located within the project site. Pedestrian access would be temporarily closed during construction and rerouted. Since project construction does not require closure of nearby roads and would not contribute to substantial congestion on surrounding roadways, the project is not anticipated to hinder police response such that responses times for the HPD or SDPD would be affected. The project would not require the provision of new or physically altered police protection facilities. Therefore, impacts would be less than significant. Further discussion in the EIR is not warranted.

Schools?

No impact. The nearest schools to the project site are Cabrillo Elementary School approximately 0.6 mile west, and High Tech Elementary, Middle, High and Graduate Schools approximately 0.6 mile north. The project would not result in an expansion of the existing use of the site (i.e., an increase in commercial fishing operations), or additional employees, other than those needed during construction. Jobs generated during construction would be drawn from the local workforce which is served by existing school facilities, and would not result in an increased demand. As discussed in 3.14 "Population and Housing," the project would not result in permanent population growth. The project does not include residential uses that would increase the demand for school facilities or increase existing student to teacher ratios. Furthermore, project activities would be contained within the existing leasehold and would not encroach onto any school property. No impact would occur and further discussion in the EIR is not warranted.

Parks?

No impact. Refer to Section 3.16, "Recreation," for additional information. As previously discussed, the project would not result in permanent population growth that would generate additional demand for parks. Project construction would not require the closure of nearby parks and project operation would not encroach on park property. Therefore, the project would not require the provision of new or physically altered parks. No impact would occur and further discussion in the EIR is not warranted.

Other public facilities?

No impact. As discussed in Section 3.14, "Population and Housing," the project would not result in permanent population growth. Therefore, the project would not increase the demand for existing public facilities. Furthermore, project operations are not anticipated to expand nor include additional employees. Therefore, the project would not require the provision of new or physically altered public facilities. No impact would occur and further discussion in the EIR is not warranted.

RECREATION

ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XVI. Recreation.				
Would the project:				
a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐
b) Include recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment?	☐	☐	☐	☒

Discussion

a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Less-than-significant impact. An increase in the use of existing parks and recreational facilities typically results from an increase in the number of housing units or residences in the surrounding area. The project would not involve the construction of housing units or residences. As discussed in 3.14 "Population and Housing,", the construction workers for the project are anticipated to commute from the surrounding area and would not likely require temporary local housing and would not contribute to permanent population growth. The demand for short-term construction jobs would be met by the local work force, and it is anticipated that no outside labor would be needed. Further, the project would operate within the leasehold, would not expand existing operations, and would not increase the number of employees after construction. Thus, the project would not contribute to a permanent increase in population that would increase the use of existing recreational facilities including Point Loma Marina Park located approximately 600 feet northwest of the leasehold. Project activities would be contained within the existing leasehold and would not require closure of any parks or recreational facilities. Therefore, impacts would be less than significant. Further discussion in the EIR is not warranted.

b) Include recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment?

No impact. The project involves the demolition of Building E and a hazardous materials storage shed, removal and replacement of Piers 4 through 8, and construction of a floating wave attenuator. The project does not include recreational facilities or require the construction or expansion of recreational facilities that might result in an adverse physical effect on the environment. Therefore, no impact would occur. Further discussion in the EIR is not warranted.

TRANSPORTATION

ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XVII. Transportation.				
Would the project:				
a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	☒	☐	☐	☐
b) Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☒	☐	☐	☐
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐
d) Result in inadequate emergency access?	☐	☐	☒	☐

Discussion

a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?

Potentially significant impact. Implementation of the project is not anticipated to generate a substantial number of vehicle and truck traffic that could affect the circulation system, including transit, roadway, bicycle, and pedestrian access. Vehicular access to the project site would be provided by public roadway connections to the project site from North Harbor Drive. No new public streets are proposed to be constructed as part of the proposed project. Once construction activities are completed, the project site would be returned to a similar condition as the existing setting and would resemble the appearance and scale of existing conditions onsite. Nevertheless, during construction the project may have the potential to result in a temporary increase and redistribution of vehicle trips that could conflict with applicable plans, ordinances, and policies related to public transit, roadway, bicycle, and pedestrian facilities. This impact is potentially significant and will be further analyzed in the EIR.

b) Conflict or be inconsistent with CEQA Guidelines section 15064.3(b), which pertains to vehicle miles travelled?

Potentially significant impact. State CEQA Guidelines Section 15064.3 was added December 28, 2018, to address the new method of determining significance for transportation impacts. The new method requires that analysis is based on vehicle miles traveled (VMT) instead of congestion (such as level of service). A "VMT" is one vehicle traveling on a roadway for one mile. Regardless of how many people are traveling in the vehicle, each vehicle traveling on a roadway generates one VMT for each mile it travels. Therefore, VMT is an indicator of the amount of driving generated by a proposed project. The project proposes both landside and waterside components. The landside component proposes the demolition of Building E and the hazardous materials storage shed. The waterside component proposes the demolition and reconstruction of Piers 4 through 8 and associated docks, gangways, headwalks, as well as the construction of a floating wave attenuator, to address deficiencies related to the age and condition of structures, and to allow commercial fishing operations to continue within the marina. After construction is complete, operations at the project site would be similar to the existing operations/setting and would generally resemble the appearance and scale of existing conditions onsite once operational, construction activities may result in a temporary increase in VMT relating to construction worker trips to and from the project site as well as delivery trips for construction equipment and the hauling of construction and demolition debris offsite.

Along with the transportation analysis to determine the proposed project's consistency with transportation guidelines, circulation-related programs, plans, and policies, a VMT analysis will be prepared to address the proposed project's potential to substantially increase VMT using the California Governor's Office of Planning and Research (OPR) Technical Advisory on Evaluating Transportation Impacts in CEQA to inform the VMT analysis methodology and significance thresholds as applicable. The project site is located within a VMT efficient area; thus, it is not anticipated to have a significant VMT related impact, regardless of the results of the trip generation assessment. However, a VMT impact analysis will be included in the proposed project's Transportation Impact Study, regardless of whether it can be screened out due to small project size exemption. This impact is potentially significant and will be further analyzed in the EIR.

c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Less-than-significant impact. A significant impact may occur if a project includes new roadway design or introduces a new land use or features to an area with specific transportation requirements and characteristics that have not been previously experienced in that area, or if project site access was designed in such a way as to create hazardous conditions compared to existing conditions. The project would demolish two landside structures (Building E and the hazardous materials storage shed) and demolish and replace the existing waterside structures in order to address deficiencies related to the age and condition of structures, and to allow commercial fishing operations to continue within the marina. Construction activities would occur within the leasehold boundaries of the project site, and no unusual or hazardous design features would be constructed as a result of project implementation. Site deliveries and the staging of all construction equipment would be organized in the most efficient manner possible onsite to reduce any temporary impacts to the neighborhood and surrounding traffic. Construction activities would not encroach into the right-of-way along North Harbor Drive or into the parking lots of adjacent buildings due to the fencing that separates project site parking and adjacent use parking. Further, the project site would be returned to a similar condition as the existing setting and would resemble the appearance and scale of existing conditions onsite once operational. For these reasons, the project would not substantially increase hazards due to design features or incompatible uses. This impact would be less than significant. Further discussion in the EIR is not warranted.

d) Result in inadequate emergency access?

Less-than-significant impact. A significant impact may occur if a project's design would not provide emergency access or impede the ability of emergency vehicles to access the project site and serve the surrounding uses. Emergency access to the project site is provided via Nixie Way. As discussed, construction activities would occur within the leasehold boundaries of the project site. This would not substantially interfere with emergency response or evacuation. The project would not cause permanent alterations to vehicular circulation routes and patterns. The project would not include hazardous design features that could otherwise impede emergency access. For these reasons, the project would not result in inadequate emergency access. This impact would be less than significant. Further discussion in the EIR is not warranted.

TRIBAL CULTURAL RESOURCES

ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XVIII. Tribal Cultural Resources.				
Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?	☐	☐	☐	☒
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?	☐	☐	☐	☒

Discussion

AB 52, signed by the California Governor in September of 2014, established a class of resources under CEQA: "tribal cultural resources," defined in PRC Section 21074. Pursuant to PRC Sections 21080.3.1, 21080.3.2, and 21082.3, lead agencies undertaking CEQA review must, upon written request of a California Native American Tribe, begin consultation before the release of an EIR, negative declaration, or mitigated negative declaration. The District has not received any written requests for consultation from a California Native American Tribe.

A records search at SCIC was conducted for the project site and areas within a 0.25-mile radius to determine if tribal cultural resources are present within the project site. No tribal cultural resources that are listed in or eligible for listing in the CRHR were identified during the records search.

Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?

No impact. The SCIC records search resulted in the identification of no tribal cultural resources that are listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources, within the project site. Therefore, there would be no impact. Further discussion in the EIR is not warranted.

b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?

No impact. No California Native American tribes have requested to be informed of projects by the District; therefore, there is no trigger to begin consultation under AB 52, resulting in no resources identified as tribal cultural resources under Public Resources Code Section 21074. Therefore, there would be no impact. Further discussion in the EIR is not warranted.

UTILITIES AND SERVICE SYSTEMS

ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XIX. Utilities and Service Systems.				
Would the project:				
a) Require or result in the relocation or construction of construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunication facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☒	☐
b) Have insufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	☐	☐	☒	☐
c) Result in a determination by the wastewater treatment provider that serves or may serve the project that it has inadequate capacity to serve the project's projected demand, in addition to the provider's existing commitments?	☐	☐	☒	☐
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☒	☐
e) Fail to comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☒	☐

Discussion

a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunication facilities, the construction or relocation of which could cause significant environmental effects?

Less-than-significant impact. A significant impact may occur if a project would increase demands on infrastructure to such a degree that the construction and relocation of facilities currently serving the project site would be required and have the potential to cause significant environmental impacts.

The project includes landside and waterside components. The landside component proposes the demolition of Building E and a hazardous materials storage shed. The waterside component proposes the demolition and reconstruction of Piers 4 through 8 and associated docks, gangways, headwalks, and the construction of a floating wave attenuator, to address deficiencies related to the age and condition of structures, and to allow commercial fishing operations to continue within the marina. Existing utilities onsite include water, wastewater, and electricity. These utilities serve the existing buildings and piers onsite. Building E and the hazardous materials storage shed would be demolished as part of the project and would not be replaced or redeveloped. No other buildings or landside structures would be demolished or otherwise altered. Therefore, the project's landside use of water, wastewater, and electricity would ultimately decrease compared to existing conditions. Therefore, the project's landside use of existing utilities would not require the relocation or construction of new utility facilities.

In terms of waterside use of utilities, electrical connections to the piers would be removed as part of demolition of the existing piers and associated structures (i.e., docks, gangways, and headways); however, these piers and associated structures would be reconstructed similar to existing conditions onsite. Project implementation would not result in a change in demand on municipal systems. Therefore, the project would not increase demands on existing infrastructure such that new facilities would be required. Therefore, project implementation would not require or result in the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities. This impact would be less than significant. Further discussion in the EIR is not warranted.

b) Have insufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

Less-than-significant impact. As previously discussed in XIX a), the project includes landside and waterside components. Utility connections to the project site serve the landside buildings, one of which (Building E) would be demolished and not replaced or redeveloped. Therefore, the project's water usage would ultimately decrease compared to existing conditions. No other buildings would be demolished or otherwise altered. The waterside component would involve replacement of water lines on the new piers, similar to existing conditions onsite. Once operational, the project would operate similar to existing conditions and would not increase water demand compared to existing conditions. Therefore, sufficient water supplies would be available for the project. This impact would be less than significant. Further discussion in the EIR is not warranted.

c) Result in a determination by the wastewater treatment provider that serves or may serve the project that it has inadequate capacity to serve the project's projected demand, in addition to the provider's existing commitments?

Less-than-significant impact. As previously discussed in Section XIX a), utility connections to the project site serve the landside buildings and piers. The minimal wastewater generated from project construction would not exceed the requirements of any wastewater treatment facilities. As part of the project, Building E and the hazardous materials storage shed would be demolished and not replaced or redeveloped. Therefore, the project's wastewater usage would ultimately decrease compared to existing conditions. The project would not generate a permanent increase in demand for wastewater treatment compared to existing conditions. Therefore, since an increase in wastewater treatment is not anticipated from this project, this impact would be less than significant. Further discussion in the EIR is not warranted.

d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Less-than-significant impact. The project would require removal or demolition of existing structures and disposal of the subsequent debris. Non-hazardous construction trash and debris would be sent to approved recycling facilities in accordance with the City's Recycling Ordinance and Construction and Demolition (C&D) Debris Deposit Ordinance, which requires recycling of a minimum of 65 percent of the construction waste. Remaining non-hazardous construction trash and debris would be handled through the existing current trash hauler, and disposed at local landfills located outside the coastal zone. These landfills are anticipated to include Republic Services Sycamore and Otay Landfills in San Diego County, California.

Removal of the existing Piers 4 through 8 is anticipated to remove approximately six 14-inch creosote-treated timber piles. In conformance with California Department of Toxic Substances Control standards, the timber piles would be managed and manifested as hazardous waste and transported to a Class I hazardous waste landfill for disposal. If other hazardous waste is generated, it would be transported under a waste manifest to an authorized hazardous waste Treatment, Storage, and Disposal Facility.

No changes in operational generation of solid waste are anticipated. Operational solid waste generation would continue to comply with applicable statutes and regulations defined in Section 3.19.2(e) below, including AB 939 and AB 341 to support statewide goals of diverting solid waste from landfills. It is anticipated that local recycling facilities and landfills have adequate capacity to accommodate the solid waste that would be temporarily generated from construction activities. Therefore, impacts would be less than significant. Further discussion in the EIR is not warranted.

e) Fail to comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

Less-than-significant impact. The following statutes and regulations related to solid waste are applicable to local jurisdictions and solid waste collectors:

- AB 939 (1989) California Integrated Waste Management Act: Requires all California cities, counties, and approved regional solid waste management agencies to divert 25 percent of their solid waste by 1995 and 50 percent by 2000. AB 939 established the California Integrated Waste Management Board, which later became CalRecycle.
- AB 341 (2012) Mandatory Recycling: Increases California's waste diversion goal from 50 percent to 75 percent by 2020. AB 341 also includes mandatory commercial recycling to reduce greenhouse gas emissions. All commercial businesses that generate more than four cubic yards or more of solid waste per week are required to have a recycling program in place.
- AB 1594 (2014) Green Material Disposal: Effective January 1, 2020, jurisdictions can no longer count green material used as alternative daily cover (ADC) at landfills toward their recycling goals. Jurisdictions are required to develop plans to divert green material from landfills.
- Senate Bill (SB) 1383 (2016) Short-Lived Climate Pollutants – Organic Waste Methane Emissions Reductions: Requires a 50 percent reduction in the level of the statewide disposal of organic waste from the 2014 level by 2020 and a 75 percent reduction by 2025. SB 1383 also requires at least 20 percent of currently disposed edible food be recovered for human consumption by 2025. Jurisdictions, haulers, and generators are required to implement programs to comply with the law by January 1, 2022.
- Port of San Diego Climate Action Plan (District 2013): Part of the District's approved Climate Action Plan, which identifies measures to increase the diversion of solid waste from landfill disposal.
- City of San Diego Recycling Ordinance: Provides recycling requirements for City-serviced multi-family residences, privately serviced businesses, commercial/institutional facilities, apartments, condominiums and permitted special events.
- City of San Diego C&D Debris Deposit Ordinance: Requires construction, demolition, and remodeling projects needing building, combination (i.e., permits for structural modifications to existing structures), and demolition permits pay a refundable deposit and divert at least 65 percent of their debris by recycling, reusing, or donating usable materials.
- City of San Diego Zero Waste Plan (City of San Diego 2015): Part of the City's approved Climate Action Plan, which sets goals of achieving 75 percent diversion of solid waste by 2020, 90 percent diversion of solid waste by 2035, and zero solid waste by 2040.

The project would not conflict with or cause a local jurisdiction or service provider to conflict with any federal, state, or local solid waste regulations, including AB 939 (California Integrated Waste Management Act), AB 341 (Mandatory Recycling), AB 1594 (Green Material Disposal), or SB 1383 (Short-Lived Climate Pollutants: Organic). The project proposes to modernize the wharf and marina to be capable of supporting modern commercial fishing operations and accommodating a range of commercial fishing vessels. The project would include the demolition of Building E and a small hazardous material storage shed, as well as the demolition and reconstruction of Piers 4 through 8, including their associated structures (i.e., docks, gangways, and headwalks), and the construction of a floating wave attenuator. Waste generated from construction activities would be required to comply with the City Recycling Ordinance and the City's C&D Debris Deposit Ordinance. The demolition of Building E, and subsequently not rebuilding of Building E, would ultimately result in decreasing the generation of solid waste onsite and would thus serve to comply with federal, state, and local management and reduction statutes and regulations related to solid waste. The project, once operational, would resemble the appearance and scale of existing conditions. Therefore, no significant increases in operational generation of solid waste would occur.

In addition, hazardous wastes would be separated, classified, and disposed of at an appropriate landfill that accepts hazardous waste. The disposal of hazardous wastes would be conducted in accordance with applicable regulations and laws, including the Federal Toxic Substances Control Act, RCRA and Hazardous Solid Waste Act Amendments, Environmental Health Standards for the Management of Hazardous Waste (CCR Title 22, Division 4.5, Section 66001 et seq.), California Labor Code (Division 5, Parts 1 and 7), and San Diego County Code (Title 6, Division 8) (see Section 3.9, Hazards and Hazardous Waste, for additional information). No changes in operational generation of hazardous wastes are anticipated.

Based on the discussion above, project construction and operation would comply with all federal, state, and local management regulations related to solid waste. Impacts would be less than significant and further discussion in the EIR is not warranted.

WILDFIRE

ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XX. Wildfire.				
If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☐	☒
c) Require the installation of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☐	☒
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☐	☒

Discussion

a) Substantially impair an adopted emergency response plan or emergency evacuation plan?

No impact. State law requires that all local jurisdictions identify very high fire hazard severity zones (VHFHSZ) within their areas of responsibility (California Government Code Section 51175–51189). Inclusion within these zones is based on vegetation density, slope severity, and other relevant factors that contribute to fire severity. The project site is within a local responsibility area, not a state responsibility area (SRA) and is designated by the California Department of Forestry and Fire Protection (CAL FIRE) as a non-VHFHSZ (CAL FIRE 2024). The nearest lands classified as VHFHSZ are several 3 Shelter Island Commercial Fishing Wharf IS Checklist_102824.docx

miles east of the project site (CAL FIRE 2024). Furthermore, the project site is in a developed urban area on and adjacent to the San Diego Bay. Therefore, the project would not substantially impair an adopted emergency response plan or emergency evacuation plan. Further discussion in the EIR is not warranted.

b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

No impact. As previously discussed, the project site is not located within an SRA or VHFHSZ; therefore, no impact would occur. Further discussion in the EIR is not warranted.

c) Require the installation of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

No impact. The project site is not located within an SRA or VHFHSZ; therefore, no impact would occur. Further discussion in the EIR is not warranted.

d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

No impact. The project site is not located within an SRA or VHFHSZ; therefore, no impact would occur. Further discussion in the EIR is not warranted.

MANDATORY FINDINGS OF SIGNIFICANCE

ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XX. Mandatory Findings of Significance.				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of an endangered, rare, or threatened species, or eliminate important examples of the major periods of California history or prehistory?	☒	☐	☐	☐
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)	☒	☐	☐	☐
c) Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?	☒	☐	☐	☐

Discussion

a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of an endangered, rare, or threatened species, or eliminate important examples of the major periods of California history or prehistory?

Potentially significant impact. As discussed in Section 3.4, Biological Resources, project construction has potential to result in direct and indirect effects on eelgrass habitat and aquatic wildlife if they were to be present in the project site, which would be a potentially significant impact. As such, this issue will be further evaluated in the EIR.

As part of the project, in-water work is proposed to occur in the Bay, which would cause potential impacts on fish and marine mammal species. Although the shoreline and majority of the Project site above ground is underlain by artificial fill, the SCIC records search results revealed archaeological sites within a half mile of the project site. Further, buildings and structures located on the project site are at least 50 years old and therefore may constitute a historical resource. A historical resources evaluation report is currently being conducted. As such, this issue will be further evaluated in the EIR.

b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)

Potentially significant impact. State CEQA Guidelines Section 15130 requires a discussion of the cumulative impacts of a project when the project's incremental effect is "cumulatively considerable," meaning that the project's incremental effects are considerable when viewed in connection with the effects of past, current, and probable future projects.

As determined by this Initial Study, there may be potentially significant effects related to air quality, biological resources, cultural resources, energy, GHG emissions, hazards/hazardous materials, hydrology/water quality, land use and planning, noise, and transportation. Therefore, the project's potential contribution to cumulative impacts related to these resources will be discussed in the EIR.

Although the project would result in a less than significant impact on aesthetics, agriculture and forest resources, geology and soils, mineral resources, population/housing, public services, recreation, tribal cultural resources, utilities and service systems, or wildfire, the proposed project may have the potential to result in cumulative impacts related to these resource areas. Analysis of the project's cumulative effects will be discussed in the EIR.

c) Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?

Potentially significant impact. Based on the analysis above, the proposed project has the potential to result in significant impacts on air quality, biological resources, cultural resources, energy, GHG emissions, hazards/hazardous materials, hydrology/water quality, land use and planning, noise, and transportation. As such, the project has the potential to result in environmental effects that could cause substantial adverse effects on human beings, either directly or indirectly. Therefore, this issue area will be discussed in the EIR.

Assume default of 100% paved roads for worker, construction hauling, vendor trips in San Diego County (CalEEMod default Appendix G21)

Emission Factors

PM10 EF (lbs/VMT)	
Paved Roads	**Paved Roads, Corrected**
6.6E-4	6.3E-4

Emission factor for travel on paved roads is estimated using Eq 3 and 3a on worksheet "Fugitive Dust EF".
For calculating EF from paved road, the average weight of all vehicles traveling the road is assumed to be 2.4 tons

PM2.5 to PM10 Mass Emission Ratio used in Calculation

Fugitive Dust Source	PM2.5/PM10	Reference
Paved road	0.25	EPA. AP-42. Analysis of the Fine Fraction of Particulate Matter in Fugitive Dust, Final
Unpaved road	0.15	EPA. AP-42. Analysis of the Fine Fraction of Particulate Matter in Fugitive Dust, Final

Fugitive Dust Emission Factors

Travel on Paved Roads

E(lbs/VMT)=(k)(sL)^.91 (W)^1.02

Where:	PM10	Unit	Source	
k= Particle Size Multiplier:	0.0022	lb/VMT	AP-42 Chapter 13.2.1, Table 13.2.1-1, PM10 emissions	
sL= road surface silt loading	0.1	g/m^2	Caleemod default	
W= average weight of the vehicles traveling the roa	2.4	tons	Statewide average vehicle weight in CA	
PM10 Emission factor	0.00066	lbs/VMT	Public roads	

Correction for Natural Precipitation[5]

E(ext)=E[(1-P/4N)]

Where:		Unit	Source	
Eext = annual or other long-term average emission factor		dimensionless		
P=#days/yr with >=0.01 inch precipitation during	43	days	Western Regional Climate Center	SAN DIEGO LINDBERGH FLD, CALIFORNIA
N=# days in averaging period	365	days		
Corrected EF PM10	**0.00064**	lbs/VMT	Public roads

Notes
Vibratory hammer is modeled as drilling rig. Horsepower is of Vibratory Hammer APE model 200-6 that uses Caterpillar CAT Engine C18 ACERT Tier III Certified, from a similar project (MGBW)
Impact hammer is modeled as cranes because impact hammers often use a crane-like structure for the hammer mechanism
Jet hose/Jet piling/jet grouting piles involves injecting a high-pressure jet of water, air, or grout into the ground to break up and mix the existing soil, forming a cemented column or pile in place. It has drilling, high-pressure jet injection, soil mixing and grouting, and pile formation process. Thus, it is modeled as a drill rig (typically 100-400 HP) and a concrete pump (50-300 HP), assuming grout injection is involved.

OFFROAD Emission Inventory

Model Output: OFFROAD2021 (v1.1.0) Emissions Inventory
Region Type: Statewide
Region: California
Calendar Year: 2026
Scenario: All Adopted Rules - Exhaust
Vehicle Classification: OFFROAD2021 Equipment Types
Units: tons/day for Emissions, gallons/year for Fuel, hours/year for Activity, Horsepower-hours/year for Horsepower-hours

Notes: Truck trips are from sheet "Truck Trips"

trips per worker per day 3

Trip lengths used CalEEMod default values for San Diego County

11.8 miles/trip for residential home-work trips

20 miles/trip for hauling trip length . Applied to delivery trucks as well.

	gallons/mi Diesel	Gasoline	kWh/mi Electricity
HHDT	0.165224		
LDA	0.024634	0.03396521	386
LDT1	0.04418	0.04177287	386
LDT2	0.032109	0.04204771	386
Worker Fleet		0.03988967	

Particulate Matter Dust emission from vehicle break wear and tire wear only.

GWP used for quantifying CO2e, source: IPCC Fifth Assessment Report (Avg)

CO2	1
CH4	25
N2O	298

Use CalEEMod default for worker fleet composition, and default EMFAX fleet composition.

Fleet	EMFAC vehicle population Diesel	Gasoline	Electricity	EMFAC default mix Diesel	Gasoline	ectricity	Fleet Composition
LDA	4,624	1,154,345	79,089	0.004	0.93	0.06	25%
LDT1	47	120,690	362	0.0004	1.00	0.00	50%
LDT2	2,137	558,134	4,915	0.004	0.99	0.01	25%

The calculation is based on the following emission rates:

Based on EMFAC default data, >90% vehicles use gasoline across LDA, LDT1, and LDT2. Thus, all worker vehicles are assumed t

Note:

Emission type -specific emission rates are calculated using EMFAC 2021 (sheet EMFAC EF).

Construction Phases and Truck Trips

Construction Phase and Truck Trips Compiled

Phase #	Construction Phase	Duration	Workdays	Phase Start	Phase End	# of Trucks	On-way Truck Trips	Description of Activities
1	Landside Demolition	4 months	80	4/1/2026	7/22/2026	39	78	Demolish Building E and the hazardous materials storage shed
2	Waterside Demolition Part 1	4 months	80	8/1/2026	11/21/2026	50	100	Demolition of Piers 5, 7, and 8.
3	Waterside Construction Part 1	4 months	80	12/1/2026	3/23/2027	29	58	Construction of Pier 5
4	Waterside Demolition Part 2	2 months	40	4/1/2027	5/27/2027	14	28	Demolition of Pier 6.
5	Waterside Demolition Part 3	16 months	40	6/1/2027	7/27/2027	16	32	Demolition of Pier 4.
6	Waterside Construction Part 2		280	7/28/2027	8/23/2028	124	248	Construction of Piers 4, 6, 7, and 8, and wave attenuator

Notes: Total Workdays 600 days Construction activity 7a - 7p M-F

Waterside Demolition 160 days

Waterside Construction 360 days

Construction phase and schedule is based on Table 2-8 PD. The original provided schedule has water demolition and construction lumped as one phase. For analysis purpose, they are separated into phase 5 and 6. Phase 5 (Demolition of Pier 4) is assumed to take 40 days, the same duration for Pier 6 demolition.
Haul truck and delivery truck trips are estimated in the following tables.
During Landside Demo (Phase 1), there would be two weekly haul trips (loads, so 4 trips)

Landside Demolition Haul Truck Estimation

Structures	Structure Size to be Demolished (sf)	Volume of Demolition Debris (cy)	# of Trucks	
Building E	20,170	498	36	
Hazardous Materials Storage Shed	200	5	1	
Hazardous Materials Storage Shed	-	25	2	25 cy of soil associated with the demo of the storage shed
Total	**20,370**	**528**	**39**	

Assume 14 cy per truck load
Demolition data Provided, PD Table 2-1

Waterside Demolition Haul Truck Estimation

Phase	Volume of Material Imported	Volume of Material Exported	Unit	Total Trucks During this Phase*	
Waterside Demolition		Wood (will be recycled)	200 Tons	15	
Waterside Demolition		Concrete	900 Tons	45	
Waterside Demolition		Steel	250 Tons	20	
			Total	80	

20

Source: Port of San Diego - Driscoll's Wharf Equipment - 11-20-2024.pdf
*Debris will be removed from the Driscoll site via barge, transported to R. E. Staite’s Waterfront facility at 2145 East Belt Street for off loading / processing and trucking to permitted disposal sites. The boat

Water Construction Delivery Trucks Estimation

Pier	Area (sqft) of Pier to be removed	Demo Proportion	# Demolition Trucks Allocated	Proposed Pier Coverage (sqft)	Construction Proportion	# Construction Delivery Trucks Allocated
4	3,553	0.20	16	3,717	0.11	17
5	4,510	0.25	20	6,603	0.19	29
6	3,149	0.17	14	3,281	0.10	15
7	3,934	0.22	17	6,158	0.18	27
8	2,890	0.16	13	6,028	0.18	27
Main Walk				8,541	0.25	38
Total	18,036	1	80	34,328	1	153

Note: ;QFT per Truck 225

Demo pier SQFT are provided (PD Table 2-2 and 2-3)

Construction pier SQFT are provided (PD Table 2-4 and Table 2-5)

Truck trips are allocated using estimated Pier SQFT

Total # of truck trips during construction is estimated assuming the delivery trucks having similar load capacity as haul trucks.

Small number discrepancy due to rounding error

EMFAC 2021 (On-Road) Emission Rates Output

Region Type: Sub-Area

Assume default of 100% paved roads for worker, construction hauling, vendor trips in San Diego County (CalEEMod default Appendix G21)

Emission Factors

PM10 EF (lbs/VMT)

Paved Roads	Paved Roads, Corrected
6.6E-4	6.3E-4

Emission factor for travel on paved roads is estimated using Eq 3 and 3a on worksheet "Fugitive Dust EF".
For calculating EF from paved road, the average weight of all vehicles traveling the road is assumed to be 2.4 tons

PM2.5 to PM10 Mass Emission Ratio used in Calculation

Fugitive Dust Source	PM2.5/PM10	Reference
Paved road	0.25	EPA. AP-42. Analysis of the Fine Fraction of Particulate Matter in Fugitive Dust, Final
Unpaved road	0.15	EPA. AP-42. Analysis of the Fine Fraction of Particulate Matter in Fugitive Dust, Final

Fugitive Dust Emission Factors

Travel on Paved Roads

E(lbs/VMT)=(k)(sL)^.91 (W)^1.02

Where:	PM10	Unit	Source	
k= Particle Size Multiplier:	0.0022	lb/VMT	AP-42 Chapter 13.2.1, Table 13.2.1-1, PM10 emissions	
sL= road surface silt loading	0.1	g/m^2	Caleemod default	
W= average weight of the vehicles traveling the roa	2.4	tons	Statewide average vehicle weight in CA	
PM10 Emission factor	0.00066	lbs/VMT	Public roads	

Correction for Natural Precipitation[5]

E(ext)=E[(1-P/4N)]

Where:		Unit	Source	
Eext = annual or other long-term average emission factor		dimensionless		
P=#days/yr with >=0.01 inch precipitation during	43	days	Western Regional Climate Center	SAN DIEGO LINDBERGH FLD, CALIFORNIA
N=# days in averaging period	365	days		
Corrected EF PM10	**0.00064**	lbs/VMT	Public roads

HHDT	0.16522		
LDA	0.02463	0.03397	386
LDT1	0.04418	0.04177	386
LDT2	0.03211	0.04205	386
Worker Fleet		0.03989	

Use CalEEMod default for worker fleet composition, and default EMFAX fleet composition.

Fleet	EMFAC vehicle population Diesel	Gasoline	Electricity	EMFAC default mix Diesel	Gasoline	Electricity	Fleet Composit
LDA	4,624	########	79,089	0.00	0.93	0.06	25%
LDT1	47	120,690	362	0.00	1.00	0.00	50%
LDT2	2,137	558,134	4,915	0.00	0.99	0.01	25%

Based on EMFAC default data, >90% vehicles use gasoline across LDA, LDT1, and LDT2. Thus, all worker vehicles are assumed to use gasoline.

The calculation is based on the following emission rates:

On-Road Emission Rates

Fleet Type	Fuel Type	VMT-Based Emission Rate (g/mi) ROG	NOx	PM10_Ex	PM2.5_Ex	PM10_D	PM2.5_D	SOx	CO	CO2	CH4	N2O

Notes:

Assume Worker Fleet = 25/50/25 percent mix of light duty autos, light duty truck class 1, and light duty truck class 2

EMFAC Emission Types Used to Estimate Onroad Emission Rates

Pollutant	VMT-based	Trip-based (g/trip)	Idle/Diurnal-based
TOG, ROG	RUNEX	STREX, HOTSOAK, RUNLOSS	IDLEX, DIURN
Gases	RUNEX	STREX	IDLEX
PM - Exhaust	RUNEX	STREX	IDLEX
PM - Dust	PMTW, PMBW		

Acronyms:

RUNEX	Running exhaust	g/mile
PMBW	PM brake wear	g/mile
PMTW	PM tire wear	g/mile
STREX	Start exhaust	g/trip
HOTSOAK	Hot Soak evaporativ	g/trip
RUNLOSS	Running Loss evapo	g/trip
IDLEX	Idle exhaust	g/vehicle/day
DIURN	Diurnal Loss evapor	g/vehicle/day

EMFAC 2021 (On-Road) Emission Rates Output

Region Type: Sub-Area
Region: San Diego (SD)
Calendar Year: 2026
Season: Annual
Vehicle Classification: EMFAC2007 Categories
Units: miles/day for CVMT and EVMT, trips/day for Trips, kWh/day for Energy Consumption, tons/day for Emissions, 1000 gallons/day for Fuel Consumption

Region	Calendar Year	Vehicle Category	Model Year	Speed	Fuel	Population	Total VMT	CVMT	EVMT	Trips	Energy Consumption	SOx_TOTEX	NH3_RUNEX	Fuel Consumption	Gallons per mile	KWh per mile

Marine Biological Resources Report and Essential Fish Habitat Assessment for the Shelter Island Commercial Fishing Wharf Project

March 23, 2026

1 Introduction

Marine Taxonomic Services, LTD. (MTS) was contracted by Ascent Environmental to provide a marine biological assessment and essential fish habitat assessment for the Shelter Island Commercial Fishing Wharf Project (Project), formerly known as Driscoll's Wharf. MTS completed a survey and analysis of the resources occurring within the designated survey area and prepared the following report on the findings.

1-1 Project Location

The Project is located at 4918 North Harbor Drive in San Diego, California. The project site encompasses 2.9 acres of landside area, and 6.4 acres of water-side area. Proposed demolition and redevelopment activities would occur within the entire 6.4-acre waterside area of the project site, and landside demolition and utility upgrades would occur within approximately 0.4 acres of the 2.9-acre landside portion of the project site. The Shelter Island Commercial Fishing Wharf facilitates commercial fishing operations includes four pier structures and one offloading dock. Figure 1 shows the location of the Project site within the San Diego Bay. The survey area includes all areas of in-water construction proposed by the Project and includes an approximate 17 meter buffer around Project construction activities as shown in Figure 1.

Figure 1. Vicinity map of the Shelter Island Commercial Fishing Wharf Project site and survey area within San Diego Bay, CA.

1-2 Project Description

The purpose of the Project is to modernize the existing facilities, since they are in disrepair, to account for current needs of the Commercial fisherman and increase safety for vessel berthing and tenant use. Proposed Project plans are included as Appendix A. The list below describes specific Project elements proposed to achieve the goals of this Project.

1-2.1 Demolition

- Demolition of the existing fish offloading Pier (Pier 4), removing a total of 3,553 sq ft of overwater coverage. The existing jib-crane would be removed and stored for re-use. The existing pier, pier deck, 83 piles, mooring piles, floating dock, associated hardware, and other supporting infrastructure would be removed.
- Demolition of Piers 5, 6, 7, and 8, removing a total of 14,484 square feet (sq ft) of overwater coverage. Demolition of Piers 5, 7, and 8 would occur prior to demolition of Pier 6. All commercial fishing vessels would be temporarily relocated to Pier 6. Demolition would involve the removal of all existing pier components including electrical power, potable water, gantry cranes, fencing and gates, lighting, ladders, gangways, and float docks, followed by the removal of deck planks, wood and steel stringers and wood and steel pile caps. A total of 390 piles are proposed for removal.
- Demolition of one landside building. Building E, also known as Building 4922.
- Demolition of the underlying concrete pad of a removed storage shed.

1-2.2 Reconstruction

- Reconstruction of up to three floating dock piers (Piers 5, 7, and 8) and associated structures, such as new gangways and headwalks connecting the piers. The reconstruction of Piers 5, 7, and 8 would result in 26,991 sq ft of total overwater cover. A total of 81 concrete piles would be installed to support the proposed structures including the associated main walk.
- Construction of a floating platform to replace the existing Pier 6 for vessel loading and unloading. The new Pier 6 construction would result in 2,846 sq ft of overwater cover and would require 8 piles to secure the structure.
- Reconstruction of Pier 4 for unloading of fish, seafood, and related equipment. Structural upgrades and reconfiguration of Pier 4 include the replacement of the existing timber pier with a concrete fixed deck pier supported by concrete piles and protected by a fender system. The proposed new Pier 4 would result in overwater cover of 3,717 sq ft. A total of 30 concrete piles would be installed to support the proposed Pier 4 structure.
- Installation of a new floating wave attenuation dock east of the marina. A wave attenuation dock is proposed outside of the existing leasehold to protect the Project infrastructure. The wave attenuation dock would result in 3,245 sq ft of overwater cover and require a total of 30 piles for installation.

2 Methods

MTS staff completed a marine biological assessment at the waterside portion of the Project site on September 24, 2024 (refer to Figure 1 for the survey area). A side-scan sonar survey was performed to get a complete view of the seafloor within the survey area. Where the survey area includes all in-water construction activities proposed by the Project and a buffer of approximately 17 meters. A SCUBA diver survey was used to verify the side-scan data and record habitat and species observations within the Project site. Water depths were provided by the Port of San Diego.

2-1 Side-Scan Sonar Survey

The side-scan sonar survey was performed by navigating a small vessel along a series of transects through the Project site. Additional transects were also made outside the Project site boundary such that the survey area included a buffer of approximately 30 meters beyond all proposed Project elements.

The vessel was fitted with a pole-mounted side-scan sonar operating at 450 kHz. The sonar was set to scan 30 meters on both the port and starboard sides of the vessel for a total scanning swath of 60 meters. Multiple side-scan survey transects, within close proximity to one another, were navigated. The survey area extent is provided in Figure 1.

2-2 SCUBA Survey

During the diver survey, the diver swam multiple transects in the survey area and along the shallow water portion of the Project site. As the diver swam within the Project site, they towed a surface buoy mounted with a differential global positioning system (dGPS) with sub-meter accuracy. The start and end points of the diver transects, and nearshore extent of eelgrass were tracked in real time by a dive tender, topside on a small vessel, equipped with a handheld tablet with mapping software that was connected via Bluetooth to a dGPS. As the diver swam through the Project site, they recorded species and habitat observations on a dive slate. When swimming the boundary of eelgrass beds, the diver's track was recorded in real time. All habitat observations and corresponding dGPS positions were used to validate eelgrass beds as described in the side-scan sonar data.

When eelgrass was encountered, the diver would then tow the dGPS along the perimeter of the eelgrass bed or patch while the tender plotted the boundary using mapping software that wirelessly received position data from the dGPS. In areas where side-scan data was collected, the intent of the diver survey was to map the nearshore boundaries of eelgrass and within areas where side-scan data could not be collected due to lack of vessel access or maneuverability; the intent of the diver survey was to map the entire perimeter of eelgrass within that given area. This data was used in combination with side-scan sonar data to delineate all eelgrass resources within the survey area.

Eelgrass density was measured by randomly placing a 1/16 square meter quadrat within eelgrass beds. Density data were collected along transects within the survey area. The survey team sampled 30 quadrats within the Project site.

Additionally, the diver observed dock, pile, and riprap structures and recorded species observations on a dive slate.

2-3 Sensitive Species and Essential Fish Habitat Assessment

A detailed assessment was conducted to determine if any sensitive species holding special or protected status may occur within, or adjacent to, the designated Project site. Species lists provided by the United States Fish and Wildlife Service (USFWS) and the National Marine Fisheries Service (NMFS) (USFWS 2023 and NMFS 2023a) were evaluated for sensitive species near the Project site.

To accurately identify Essential Fish Habitat (EFH) within the survey area, fish species managed by the Pacific Fisheries Management Council (PFMC) that are known to either occur within the survey area, have historically occurred within the survey area, or depend upon those marine habitats that are known to occur within the survey area, were identified. An analysis of the range and habitat preferences of species managed by the PFMC was conducted through EFH geographic information system (GIS) mapping software regularly maintained and updated by National Oceanic and Atmospheric Administration (NOAA) Fisheries (NMFS 2023b). Additional literature reviews were performed to further evaluate habitat requirements of fish species managed by the PFMC.

3 Results

3-1 Marine Habitats Surveyed

Marine habitats observed during the SCUBA survey within the Project site fell within three distinct categories: unvegetated soft-bottom, eelgrass, and hard substrate including docks, dock floats, and piles. Notable fauna observed included 5 species of marine vertebrates, 17 unique species of marine invertebrates, and 12 species of marine macroalgae (Table 1). Water depths within the Project site ranged between +4 and -14 feet mean lower low water (MLLW). Habitats mapped throughout the Project site during this survey are provided in Figure 2.

Table 1. Common marine species observed within the designated Project site during the SCUBA survey.

Common Name	Scientific Name	Conservation Status	Habitat Observed
	Marine Vertebrates		
Shiner surfperch	*Cymatogaster aggregata*	Least Concern	Eelgrass
Kelp bass	*Paralabrax clathratus*	Least Concern	Eelgrass
Opaleye	*Girella nigricans*	Least Concern	Riprap
Topsmelt	*Atherinops affinis*	Least Concern	Riprap
Round ray	*Urobatis halleri*	Least Concern	Soft Bottom
	Marine Invertebrates		
Sponges	*Haliclona*	Least Concern	Piles, Floats and Dock
Bryozoan	*Amathia verticillata*	Invasive	Piles, Floats and Dock
Tunicate	*Ciona robusta*	Least Concern	Piles, Floats and Dock
Tunicate	*Styela plicata*	Least Concern	Piles, Floats and Dock
Pacific oyster	*Crassostrea gigas*	Non-Native	Pile, Riprap
California spiny lobster	*Panulirus interruptus*	Least Concern	Eelgrass
Tunicate	*Styela clava*	Least Concern	Riprap, Piles
Tube-dwelling anemone	*Pachycerianthus fimbriatus*	Least Concern	Soft Bottom
Anemone	*Bunodeopsis* sp.	Least Concern	Eelgrass
Barnacles	*Chthalamus* sp.	Least Concern	Piles, Floats and Dock
Bryozoan	*Watersipora subtorqata*	Least Concern	Piles
Tunicate	*Styela montereyensis*	Least Concern	Piles, Floats and Dock
Limpet	*Lottia* sp.	Least Concern	Piles
Tunicate	*Botryllus schlosseri*	Least Concern	Piles
California mussels	*Mytilus californianus*	Least Concern	Piles
Bay mussels	*Mytilus trossulus*	Least Concern	Floats and Dock
Lined shore crab	*Pachygrapsus crassipes*	Least Concern	Riprap, Piles
	Macroalgae		
Sea lettuce	*Ulva* sp.	Least Concern	Piles, Floats and Dock
Red algae	*Callophyllis* sp.	Least Concern	Piles, Floats and Dock, Riprap
Red algae	*Gelidium coulteri*	Least Concern	Piles, Floats and Dock
Brown algae	*Dictyopteris undulata*	Least Concern	Piles, Floats and Dock
Brown algae	*Ductyota flabellata*	Least Concern	Piles, Floats and Dock
Red algae	*Endocladua muricata*	Least Concern	Piles, Floats and Dock
*Brown algae	*Macrocystis pyrifera* (juv./small)	Least Concern	Piles, Floats and Dock
Turf algae	Un Identified	Least Concern	Riprap
Red algae	*Gracilaria pacifica*	Least Concern	Soft Bottom
Brown algae	*Sargassum muticum*	Invasive	Riprap
Red algae	*Pyropia* sp.	Least Concern	Floats and Dock
Red algae	*Proinitis sternbergii*	Least Concern	Floats and Dock

*Few sparce individuals identified during the survey. Coverage, height, and health of observed individuals did not indicate the presence of kelp canopy or kelp forest HAPC.

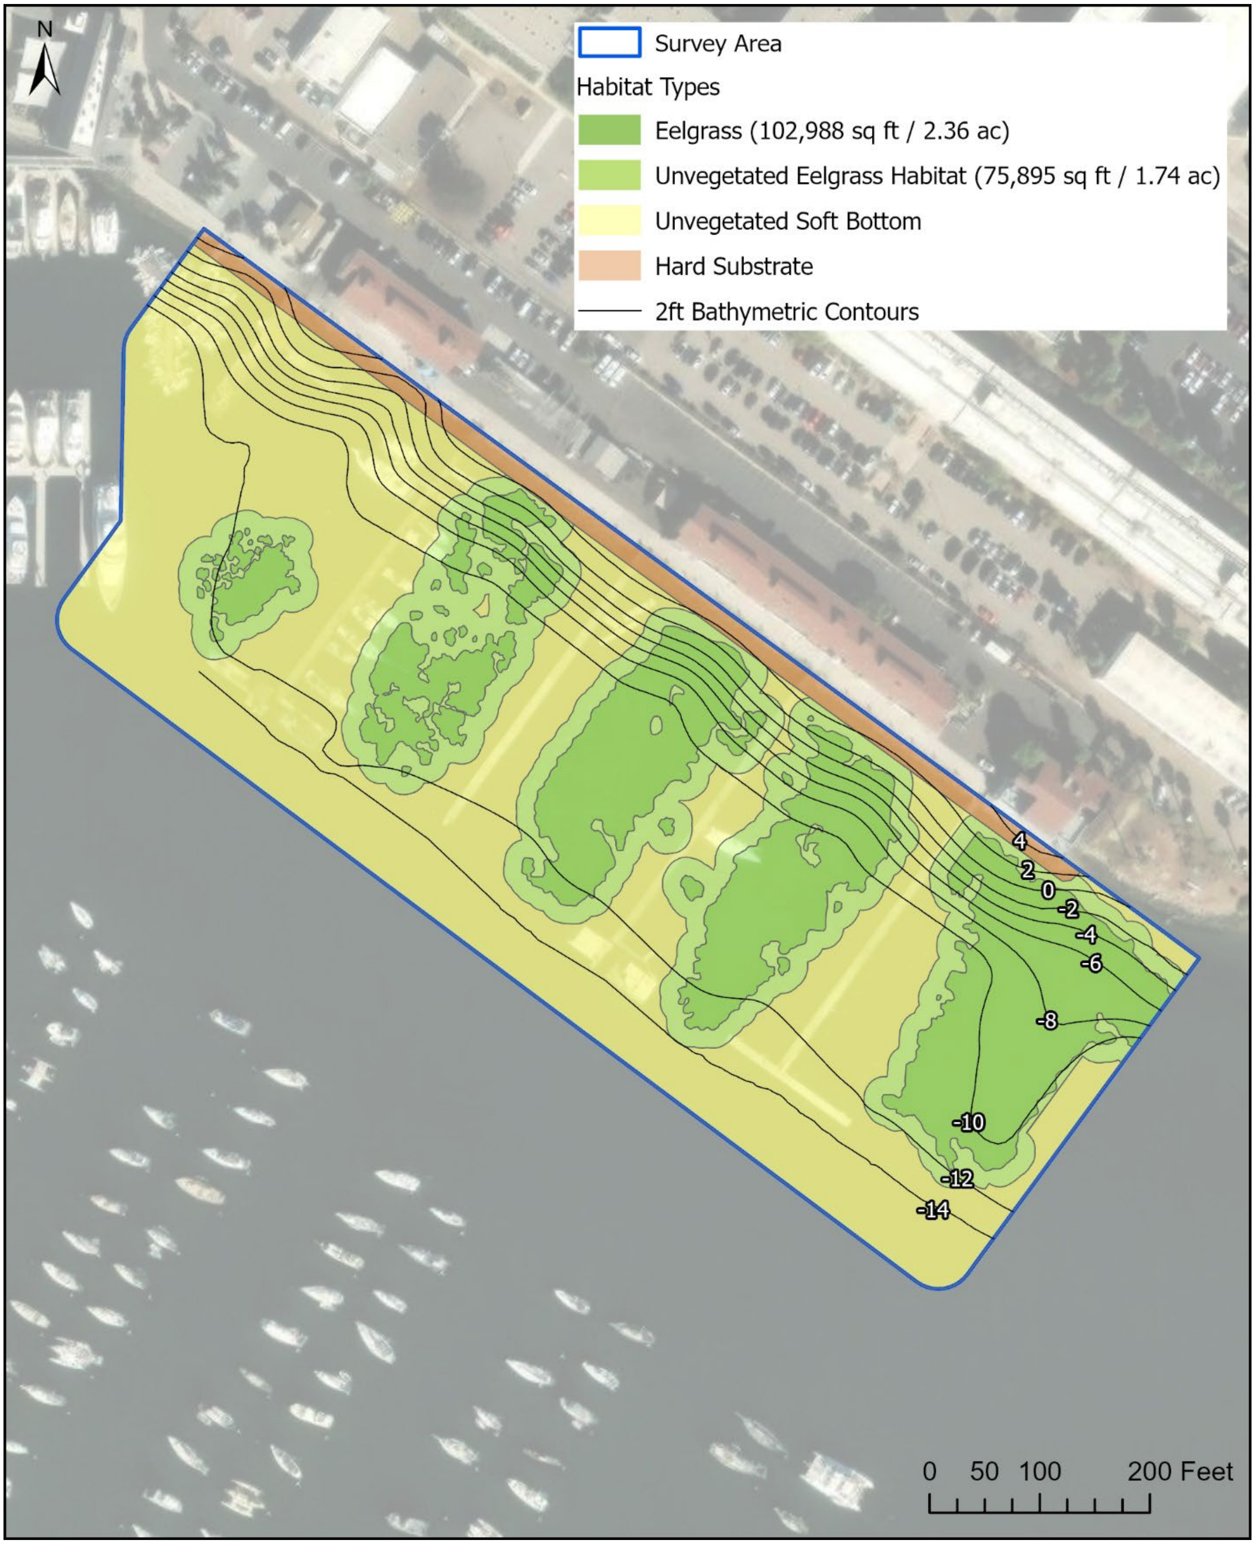

Figure 2. Map showing habitat types observed within the Project site during the side-scan sonar and SCUBA survey. Bathymetry provided by Port of San Diego.

3-2 Unvegetated Soft-Bottom Habitat

A large portion of the seafloor at the Project site was classified as unvegetated soft-bottom (Figure 2). The substrate consisted mostly of very fine sand and mud.

The unvegetated soft-bottom habitat was generally barren with minimal signs of bioturbation. Species observed over soft-bottom habitat included round rays (*Urobatis halleri*), tube dwelling anemones (*Pachycerianthus fimbriatus*), and red algae (*Gracilaria pacifica*).

3-3 Eelgrass Habitat

Approximately 102,989 (sq ft) (2.36 acres) of eelgrass and 75,896 sq ft (1.74 acres) of unvegetated eelgrass habitat occur within the Project site (Figure 2). In general, eelgrass was observed within fairways of the pre-existing docks. Eelgrass was observed in water depths ranging from approximately +1 to -13 feet MLLW. Eelgrass resources mapped are shown in Figure 2.

Vertebrate species observed in eelgrass habitat included shiner surfperch (*Cymatogaster aggregata*) and kelp bass (*Paralabrax clathratus*). The commercially important California spiney lobster (*Panulirus interruptus*) was also observed in eelgrass habitat. *Bunodeopsis* sp. anemones were observed attached to eelgrass blades throughout the Project site.

3-4 Hard Substrate Habitat

Hard substrates including piles, dock floats, and riprap were observed within the Project site (Figure 2). Piles and dock floats were present scattered throughout the Project site. Riprap was observed along the northeastern boundary of the Project site.

3-4.1 Piles

Piles within the Project site were composed of wood or metal (Figure 3). In general, species distribution among shallower portions of piles were more homogeneous, consisting of acorn barnacles (*Balanus glandula*), Pacific oysters (*Crassostrea gigas*), and minor amounts of California mussels (*Mytilus californianus*). These same species were observed in the upper portions of the piles and extended deeper into the water column. Lined shore crab (*Pachygrapsus crassipes*) were observed near the water's surface on piles. The middle and bottom portion of the pile invertebrate community was composed of tunicates (*Styela plicata, Ciona robusta, Styela clava, Styela montereyensis, and Botryllus schlosseri*), sponges (*Haliclona* spp.), invasive bryozoan (*Amathia verticillata*), and bryozoan (*Watersipora subtorqata*). Algae species observed associated with pile communities included sea lettuce (*Ulva* sp.), red alga (*Callophyllis* sp., *Gelidium coulteri*, and *Endocladua muricata*), brown alga (*Dictyopteris undulata* and *Ductyota flabellata*). Small individual giant kelp (*Macrocystis pyrifera*) stipes were observed attached to or near the base of piles within the Project site.

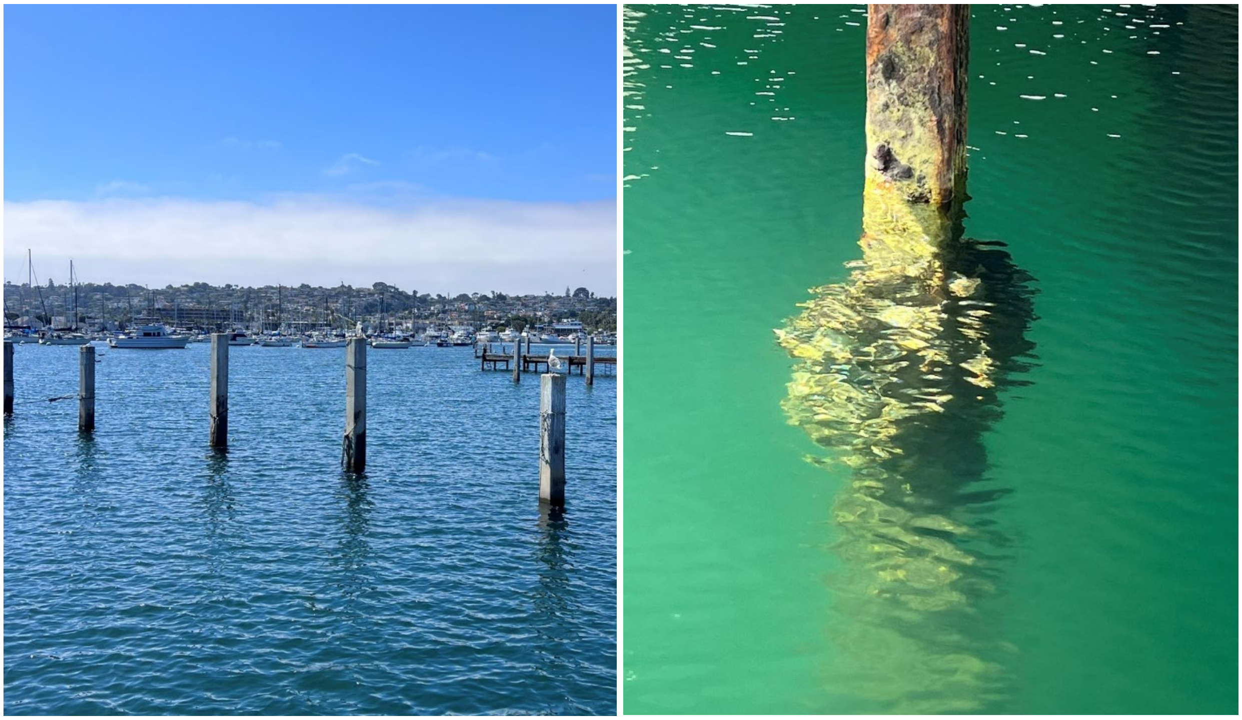

Figure 3. Representative above-water photos of piles (left) and growth at the surface of a pile (right)

3-4.2 Docks and Dock Floats

Dock structures and floats within the Project site were generally composed of similar species observed on upper portions of piles (Figure 4). Invertebrate species observed on this hard substrate included sponges, tunicates, Pacific oyster, barnacles, bryozoans, and occasional bay mussels (*Mytilus trossulus*).

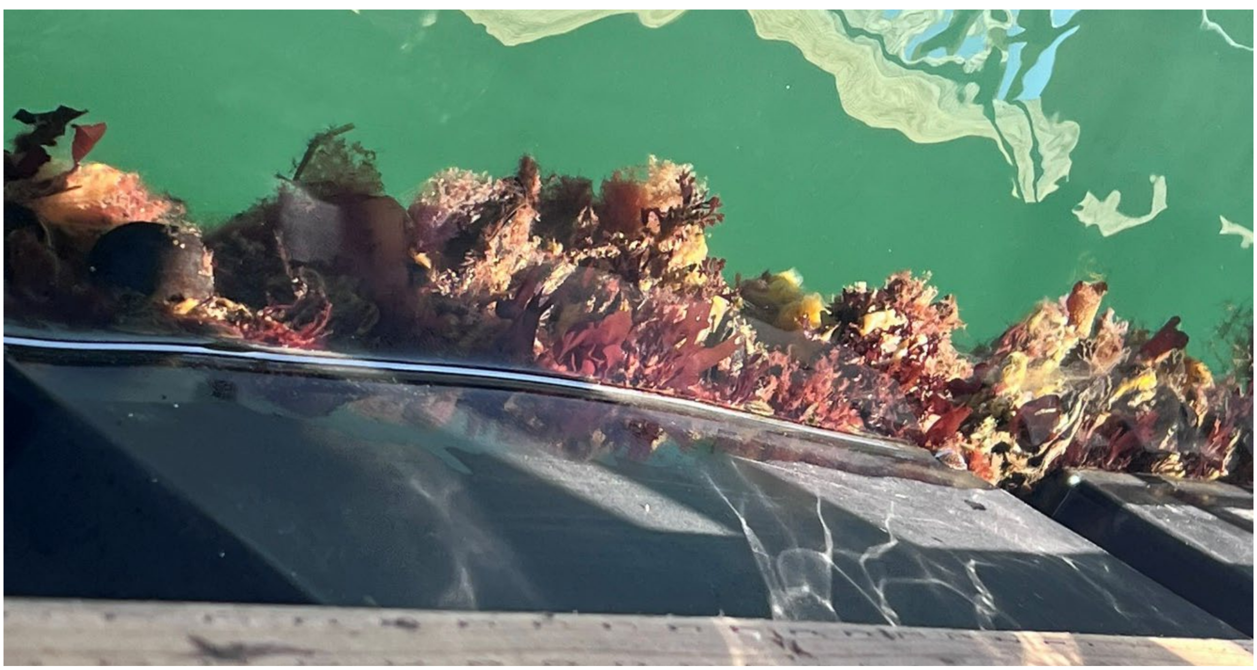

Figure 4. Picture of species growth on dock float structure.

3-4.3 Riprap

Riprap was observed along the northeastern portion of the Project site (Figure 5). Vertebrate species, opaleye (*Girella nigricans*) and topsmelt (*Atherinops affinis*) were observed swimming near riprap structures, seeking refuge within gaps of large rock. Pacific oysters were attached to rock in mid and low-intertidal portions of the riprap. Tunicate (*Styela clava*) was observed on deeper subtidal rock riprap substrate. Lined shore crabs were observed crawling over high inter-tidal riprap. Turf algae and red algae (*Callophyllis* sp.) were encrusting mid and low-intertidal portions of riprap. Additionally, invasive brown algae *(Sargassum muticum*) was growing on mid and deeper water riprap rock.

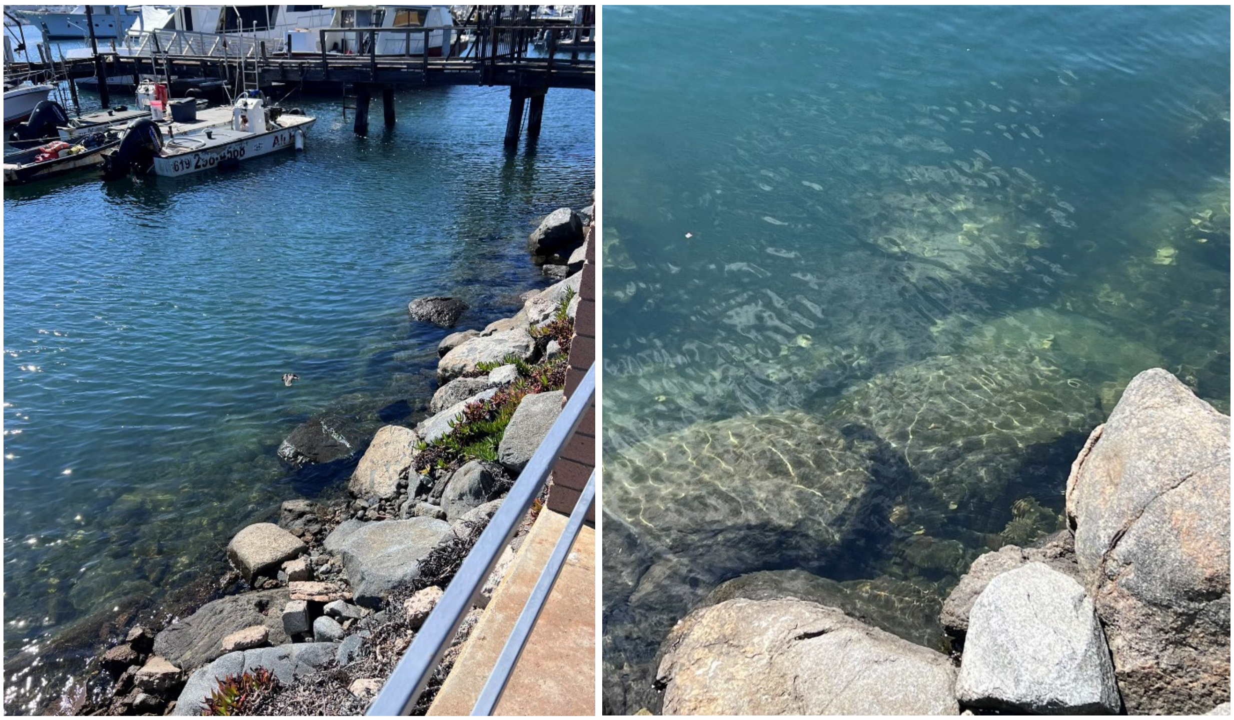

Figure 5. Photos of riprap within the Project site.

3-5 Sensitive Species

In addition to accounting for all marine species identified during the field survey, an assessment was also conducted to determine other sensitive species holding special or protected status that may occur within, or adjacent to, the designated Project site. Based on the species lists provided by USFWS and NMFS (USFWS 2023 and NMFS 2023a), an analysis of the range and habitat preferences of sensitive species that have a potential to occur within or nearby the Project site was completed (Table 2).

Table 2. Special status and protected species with the potential to occur within or near the Project site (USFWS 2023 and NMFS 2023a).

Common Name	Species Name	Conservation Status	Likelihood to Occur
	Marine Mammals		
Baird's Beaked Whale	*Berardius bairdii*	Protected	Not expected to occur
Blainville's Beaked Whale	*Mesoplodon densirostris*	Protected	Not expected to occur
Blue Whale	*Balaenoptera musculus*	Endangered	Not expected to occur
Bryde's Whale	*Balaenoptera edeni*	Protected	Not expected to occur
California Sea Lion	*Zalophus californianus*	Protected	Possible
Common Bottlenose Dolphin	*Tursiops truncatus*	Protected	Possible
Cuvier's Beaked Whale	*Ziphius cavirostris*	Protected	Not expected to occur
Dall's Porpoise	*Phocoenoides dalli*	Protected	Not expected to occur
Dwarf Sperm Whale	*Kogia sima*	Protected	Not expected to occur
False Killer Whale	*Pseudorca crassidens*	Protected	Not expected to occur
Fin Whale	*Balaenoptera physalus*	Endangered	Not expected to occur
Gray Whale	*Eschrichtius robustus*	Protected	Not expected to occur
Guadalupe Fur Seal	*Arctocephalus townsendi*	Threatened	Not expected to occur
Harbor Porpoise	*Phocoena phocoena*	Protected	Not expected to occur
Harbor Seal	*Phoca vitulina*	Protected	Not expected to occur
Humpback Whale	*Megaptera novaeangliae*	Endangered	Not expected to occur
Killer Whale	*Orcinus orca*	Endangered	Not expected to occur
Long-Beaked Common Dolphin	*Delphinus capensis*	Protected	Possible
Melon-Headed Whale	*Peponocephala electra*	Protected	Not expected to occur

Minke Whale	*Balaenoptera acutorostrata*	Protected	Not expected to occur
North Pacific Right Whale	*Eubalaena japonica*	Endangered	Not expected to occur
Northern Elephant Seal	*Mirounga angustirostris*	Protected	Not expected to occur
Northern Fur Seal	*Callorhinus ursinus*	Protected	Not expected to occur
Northern Right Whale Dolphin	*Lissodelphis borealis*	Protected	Not expected to occur
Pacific White-Sided Dolphin	*Lagenorhynchus obliquidens*	Protected	Not expected to occur
Pygmy Sperm Whale	*Kogia breviceps*	Protected	Not expected to occur
Risso's Dolphin	*Grampus griseus*	Protected	Not expected to occur
Rough-Toothed Dolphin	*Steno bredanensis*	Protected	Not expected to occur
Sei Whale	*Balaenoptera borealis*	Endangered	Not expected to occur
Short-Beaked Common Dolphin	*Delphinus delphis*	Protected	Not expected to occur
Short-Finned Pilot Whale	*Globicephala macrorhyncus*	Endangered	Not expected to occur
Sperm Whale	*Physeter macrocephalus*	Endangered	Not expected to occur
Spinner Dolphin	*Stenella longirostris*	Protected	Not expected to occur
Stejneger's Beaked Whale	*Mesoplodon stejnegeri*	Endangered	Not expected to occur
Steller Sea Lion (eastern population)	*Eumetopias jubatus*	Protected	Not expected to occur
Striped Dolphin	*Stenella coeruleoalba*	Protected	Not expected to occur
Sea Turtles			
Green Turtle	*Chelonia mydas*	Threatened	Possible
Leatherback Turtle	*Dermochelys coriacea*	Endangered	Not expected to occur
Loggerhead Turtle	*Caretta caretta*	Endangered	Not expected to occur
Olive Ridley Turtle	*Lepidochelys olivacea*	Endangered	Not expected to occur
Birds			
California Least Tern*	*Sterna antillarum browni*	Endangered	Possible
Coastal California Gnatcatcher	*Polioptila californica californica*	Threatened	Not expected to occur
Least Bell’s Vireo	*Vireo bellii pusillus*	Endangered	Not expected to occur
Western Snowy Plover*	*Charadrius nivosus nivosus*	Threatened	Not expected to occur

*Possible fly over for both species and possible foraging by California least tern.

Protected, rare, threatened, or endangered species that may occur within the region include green sea turtle (*Chelonia mydas*) (Federally Threatened) and California least tern (*Sterna antillarum browni*) (State and Federally Endangered). Mammals protected under the Marine Mammal Protection Act with potential to occur in San Diego Bay (Bay) include common bottlenose dolphin (*Tursiops truncatus*), long-beaked common dolphin (*Delphinus capensis*), and California sea lion (*Zalophus californianus*).

Green sea turtles (GST) are found throughout San Diego Bay which hosts a resident population of benthic-foraging juveniles and adults. The Project site lies within the proposed critical habitat designated by NMFS's latest report that is currently under review (NMFS 2023c). This area has been designated as having high conservation value due to migratory, foraging, and resting behavior of GST documented in the region. GSTs use narrow corridors that connect reproductive, foraging, and resting areas for adults. Obstruction of such corridors would interfere with migration, thus inhibiting recovery of the species. Foraging is less common in the northern portion of the Bay due to lower abundance of eelgrass; however, given the amount of eelgrass documented within the Project site there is potential for GST to utilize this area for foraging. Additionally, GST may use this area as they move towards foraging area in the southern portions of the Bay and nesting sites in Mexico (NMFS 2023c). Therefore, sightings of GST at the Project site are possible, but likely to be rare.

The California least tern is seasonally present in the Bay, from April to September. The two closest nesting areas are the San Diego Airport and the Naval Amphibious Base. The San Diego Airport nest site is approximately 1.5 miles (2.4 kilometers) away from the Project site; the Naval Amphibious Base nest site is approximately 2.5 miles (4.0 kilometers) away from the Project site. Estimates of foraging distance vary by location and have been summarized by Harvey and Associates (2012). Atwood and Minsky (1983) found that 60% of foraging trips were limited to within 2 miles of nesting sites. Steinbeck et al. (2005) found that 91% of surveyed birds within 3.5 miles of the colony and 98% within 4 miles. Due to the proximity of the Project site to local nesting sites in California least tern management area V (refer to USFWS 2006) it is possible that least terns may forage within the Project site. Where management area V refers to California least tern nesting sites located within the Bay at San Diego International Airport, Chula Vista Wildlife Reserve, D Street Fill, North Island Naval Air Station, Delta Beach, and Saltworks. Typical foraging habitat is within two miles of colony sites in relatively shallow nearshore ocean waters in the vicinity of major river mouths so it is possible for California least terns to forage within and near the Project site.

California sea lions do not breed in the Bay, but forage in the bay year-round. This species has potential to be found foraging in and transiting through the Project site. During the marine biological assessment survey, California sea lions were observed transiting through the Project site.

Common dolphin's and bottlenose dolphins have widespread distributions and are commonly observed in southern California nearshore environments. They are also often observed in the Bay, with sightings more concentrated in the northern part of the Bay (NAVFACSW 2016). These animals are often observed either swimming along shore or bow-riding vessels entering and leaving the Bay. Although the location of the Project site is close to the Bay entrance, the potential for the occurrence of these species within the Project site is low because dolphin species are rarely observed within highly modified shoreline environments. It is important to note that while dolphins may have a low potential for occurrence within the Project site, they may be observed within acoustic zones of influence and proper precautions must be taken during pile driving.

All other remaining pinnipeds and cetaceans have a very low potential for observation within the Project site. Many of these species are rarely seen along the San Diego coast and generally prefer habitats associated with less disturbance. Additionally, the relatively shallow water depth associated with the Project site, between +4 and -14 feet MLLW, would limit the ability for large marine mammals to transit easily within the Project site and further reduce the potential for their occurrence.

4 Essential Fish Habitat Assessment

This section provides an essential fish habitat (EFH) assessment for EFH located within the designated Project site. EFH includes coral reefs, kelp forests, bays, wetlands, rivers, and areas of the deep ocean that are necessary for fish reproduction, growth, feeding, and shelter. Essential fish habitat covers federally managed fish and invertebrates, but does not apply to freshwater species. The entirety of San Diego Bay, including the Project site, is designated as EFH (NOAA 2025). This EFH includes an evaluation of proposed actions from the Project that could potentially impact EFH. The following section discusses the legal background and purpose of an EFH for managed species, fisheries, and Habitat Areas of Particular Concern (HAPCs) with potential to occur within the Project site.

4-1 Essential Fish Habitat Background

The following EFH assessment for the proposed Project is provided in accordance with the 1996 amendments to the Magnuson-Stevens Fishery Management and Conservation Act (MSA) (Code of Federal Regulations (CFR) Title 50, Chapter VI, Part 600). The amendments require the delineation of “essential fish habitat” for all managed species. Federal action agencies which fund, permit, or carry out activities that may adversely impact EFH are required to consult with the NMFS regarding the potential effects of their actions on EFH and respond in writing to the NMFS’s recommendations.

The MSA defines EFH as “those waters and substrate necessary to fish for spawning, breeding, feeding, or growth to maturity.” For the purpose of interpreting the definition of essential fish habitat: “waters” includes aquatic areas and their associated physical, chemical, and biological properties that are used by fish and may include aquatic areas historically used by fish where appropriate; “substrate” includes sediment, hard bottom, structures underlying the waters, and associated biological communities; “necessary” means the habitat required to support a sustainable fishery and the managed species' contribution to a healthy ecosystem; and “spawning, breeding, feeding, or growth to maturity” covers a species' full life cycle. A healthy ecosystem is defined under the MSA as, “an ecosystem where ecological productive capacity is maintained, diversity of the flora and fauna is preserved, and the ecosystem retains the ability to regulate itself”.

The purpose of this EFH assessment is to comprehensively identify and analyze EFH occurring within the designated study area so that federal agencies can best determine whether the proposed Project would adversely affect designated EFH and identify possible conservation measures to avoid, minimize, or otherwise offset potential adverse effects to EFH. The MSA requires consultation for all federal agency actions that may adversely affect EFH. EFH consultation with NMFS is required by federal agencies undertaking, permitting, or funding activities that may adversely affect EFH, regardless of its location. Under Section 305(b)(4) of the MSA, NMFS is required to provide EFH conservation and enhancement recommendations to federal and state agencies for actions that adversely affect EFH. As such, the following EFH assessment, which includes an analysis of species managed by the Pacific Fishery Management Council (PFMC) that are known to utilize EFH within the study area, and an analysis of potential HAPCs within the study area, will provide all the information necessary for NMFS to conduct any future EFH consultations for the proposed Project.

4-2 Managed Fisheries with the Potential to Occur Within the Project Site

To adequately address EFH within the Project site, fish species managed by the PFMC that are known to either occur within the study area, have historically occurred within the study area, or depend upon those marine habitats that are known to occur within study area, were identified. This was accomplished through an analysis of the habitat requirements of PFMC managed fish species (McCain et al. 2005 and Love et al. 2002), and by running an analysis using the latest EFH GIS software regularly maintained and updated by NOAA Fisheries (NMFS 2023b). In all, 92 fish species managed by the PFMC were identified, including species managed under the Coastal Pelagic Species Fisheries Management Plan (FMP), which includes the Finfish FMP (Table 3), and species managed under the Pacific Groundfish FMP (Table 4). No species listed in the below tables were observed during the survey effort.

Table 3. Fish species under the Coastal Pelagic Species FMP.

Common Name	Species Name
Pacific sardine	*Sardinops sagax*
Pacific (chub) mackerel	*Scomber japonicus*
Northern anchovy	*Engraulis mordax*
Market squid	*Doryteuthis opalescens*
Jack mackerel	*Trachurus symmetricus*
Krill	*Euphausia pacifica* and *Thysanoessa spinifera*

Table 4. Fish species managed under the Pacific Coast Groundfish FMP.

Common Name	Species Name
Elasmobranchs	
Big skate	*Raja binoculata*
Leopard shark	*Triakis semifasciata*
Longnose skate	*Raja rhina*
Spiny dogfish	*Squalus suckleyi*
Roundfish	
Cabezon	*Scorpaenichthys marmoratus*
Kelp greenling	*Hexagrammos decagrammus*
Lingcod	*Ophiodon elongatus*
Pacific cod	*Gadus macrocephalus*
Pacific whiting (hake)	*Merluccius productus*
Sablefish	*Anoplopoma fimbria*
Rockfish	
Aurora rockfish	*Sebastes aurora*
Bank rockfish	*S. rufus*
Black rockfish	*S. melanops*
Black and yellow rockfish	*S. chrysomelas*
Blackgill rockfish	*S. melanostomus*
Blackspotted rockfish	*S. melanostictus*
Blue rockfish	*S. mystinus*
Bocaccio	*S. paucispinis*
Bronzespotted rockfish	*S. gilli*
Brown rockfish	*S. auriculatus*
Calico rockfish	*S. dallii*

Common Name	Species Name
California scorpionfish	*Scorpaena gutatta*
Canary rockfish	*Sebastes pinniger*
Chameleon rockfish	*S. phillipsi*
Chilipepper rockfish	*S. goodei*
China rockfish	*S. nebulosus*
Copper rockfish	*S. caurinus*
Cowcod	*S. levis*
Darkblotched rockfish	*S. crameri*
Deacon rockfish	*S. diaconus*
Dusky rockfish	*S. ciliatus*
Dwarf-red rockfish	*S. rufinanus*
Flag rockfish	*S. rubrivinctus*
Freckled rockfish	*S lentiginosus*
Gopher rockfish	*S. carnatus*
Grass rockfish	*S. rastrelliger*
Greenblotched rockfish	*S. rosenblatti*
Greenspotted rockfish	*S. chlorostictus*
Greenstriped rockfish	*S. elongatus*
Halfbanded rockfish	*S. semicinctus*
Harlequin rockfish	*S. variegatus*
Honeycomb rockfish	*S. umbrosus*
Kelp rockfish	*S. atrovirens*
Longspine thornyhead	*Sebastolobus altivelis*
Mexican rockfish	*Sebastes macdonaldi*
Olive rockfish	*S. serranoides*
Pink rockfish	*S. eos*
Pinkrose rockfish	*S. simulator*
Pygmy rockfish	*S. wilsoni*
Pacific Ocean perch	*S. alutus*
Quillback rockfish	*S. maliger*
Redbanded rockfish	*S. babcocki*
Redstripe rockfish	*S. proriger*
Rosethorn rockfish	*S. helvomaculatus*
Rosy rockfish	*S. rosaceus*
Rougheye rockfish	*S. aleutianus*
Sharpchin rockfish	*S. zacentrus*
Shortraker rockfish	*S. borealis*
Shortspine thornyhead	*Sebastolobus alascanus*
Silvergray rockfish	*Sebastes brevispinis*
Speckled rockfish	*S. ovalis*
Splitnose rockfish	*S. diploproa*
Squarespot rockfish	*S. hopkinsi*
Sunset rockfish	*S. crocotulus*
Starry rockfish	*S. constellatus*
Stripetail rockfish	*S. saxicola*
Swordspine rockfish	*S. ensifer*
Tiger rockfish	*S. nigrocinctus*
Treefish	*S. serriceps*
Vermilion rockfish	*S. miniatus*

Common Name	Species Name
Widow rockfish	*S. entomelas*
Yelloweye rockfish	*S. ruberrimus*
Yellowmouth rockfish	*S. reedi*
Yellowtail rockfish	*S. flavidus*
Flatfish	
Arrowtooth flounder (turbot)	*Atheresthes stomias*
Butter sole	*Isopsetta isolepis*
Curlfin sole	*Pleuronichthys decurrens*
Dover sole	*Microstomus pacificus*
English sole	*Parophrys vetulus*
Flathead sole	*Hippoglossoides elassodon*
Pacific sanddab	*Citharichthys sordidus*
Petrale sole	*Eopsetta jordani*
Rex sole	*Glyptocephalus zachirus*
Rock sole	*Lepidopsetta bilineata*
Sand sole	*Psettichthys melanostictus*
Starry flounder	*Platichthys stellatus*

4-3 Habitat Areas of Particular Concern (HAPC) Observed Within the Project Site

HAPCs are present within the Project site. HAPCs are a discreet subset of habitats within an EFH that are distinguished by characteristics including their high ecological value and vulnerability to anthropogenic stressors (Figure 6).

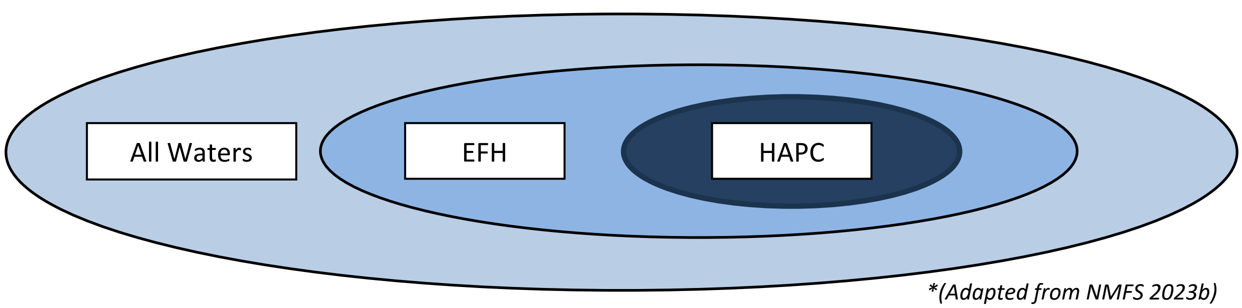

Figure 6. Figure depicting organization chart of essential fish habitat and habitats of particular concern.

Areas within designated EFH can also be designated as an HAPC based on one or more of the following characteristics (NMFS 2023b):

1) The importance of the ecological function provided by the habitat

2) Its sensitivity to human-induced environmental degradation

3) The extent of threats posed by development of the habitat

4) The rarity of the habitat type

HAPCs are considered high priority areas for conservation, management, or research because they are rare, sensitive, stressed by development, or important to ecosystem function (NMFS 2023b). The HAPC designation does not necessitate additional protections or restrictions upon an area, but the help to prioritize and focus conservation efforts (NMFS 2023b). Although these habitats are particularly important for healthy fish populations, other EFH areas that provide suitable habitats are also necessary to support and maintain sustainable fisheries and a healthy ecosystem (NMFS 2023b). Current HAPC types are estuaries, canopy kelp, seagrass, and rocky reefs.

The entirety of the Bay is listed as both an estuarine HAPC and a seagrass HAPC (NMFS 2023b). Estuaries are defined by an inland extent of saltwater intrusion where ocean-derived salts measure less than 0.5 ppt during the period of average annual low flow from a freshwater source. The Bay is considered a low-inflow estuary (Largier et al. 1996) due to low freshwater input. Dams and extensive use of groundwater over the past century in the Sweetwater and Otay Rivers have significantly reduced the input from these rivers to the Bay (WURMP 2003). Most of the freshwater input to the Bay is from surface runoff from urban areas and intermittent flow from rivers and creeks during rain events. The mean rainfall of 26 cm/ year mostly occurring in winter (Largier et al. 1996), results in categorizing the Bay as a low-inflow estuary. Additionally, eelgrass beds were observed throughout fairways within the Project site.

5 Laws and Regulations.

5-1 Federal

5-1.1 Coastal Zone Management Act of 1972

The Coastal Zone Management Act of 1972 is administered by the NOAA Office of Ocean and Coastal Resource Management, provides for management of the nation's coastal resources and balances economic development with environmental conservation.

The Coastal Zone Management Act outlines two national programs. The National Coastal Zone Management Program includes 34 coastal programs. The goal of these programs is to balance competing land and water issues in the coastal zone. The National Estuarine Research Reserve System creates field laboratories that provide a greater understanding of estuaries and how humans affect them. The overall program objectives of the act are to "preserve, protect, develop, and where possible, to restore or enhance the resources of the nation's coastal zone."

The Coastal Zone Management Act ensures that development projects in coastal areas are designed and permitted in a manner that is consistent with coastal zone land uses, maximizes public health and safety, and ensures that biological resources (e.g., wetlands, estuaries, beaches, and fish and wildlife and their habitat) within the coastal zone are protected. In California, the California Coastal Commission enforces the Coastal Zone Management Act by certifying that any proposed project is consistent with the California Coastal Act of 1976 (as amended). The enforceable policies of the Coastal Zone Management Act are found in Chapter 3 of the California Coastal Act.

5-1.2 Rivers and Harbors Act (Section 10)

The United States Army Corps of Engineers (USACE) is authorized to regulate any activity within or over any navigable water of the United States pursuant to Section 10 of the Rivers and Harbors Act. Rivers and Harbors Act Section 10 jurisdiction is defined as "those waters that are subject to the ebb and flow of the tide and/or are presently used, or have been used in the past, or may be susceptible for use, to transport interstate or foreign commerce" (33 Code of Federal Regulations 322). The Bay is considered a traditional navigable water regulated under Section 10 of the Rivers and Harbors Act.

5-1.3 Endangered Species Act of 1973

Species listed as endangered and/or threatened by the USFWS are protected under Section 9 of the federal Endangered Species Act, which forbids any person to "take" an endangered or threatened species. Take is defined in Section 3 of the act as "harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct." The U.S. Supreme Court ruled in 1995 that the term "harm" includes destruction or modification of habitat. Sections 7 and 10 of the Act may authorize "incidental take" for an otherwise lawful activity (a development project, for example) if it is determined that the activity would not jeopardize survival or recovery of the species. Section 7 applies to projects where a federally listed species is present and there is a federal nexus, such as a federal Clean Water Act (CWA) Section 404 permit (e.g., impacts on waters of the U.S.) that is required. Section 10, requiring an incidental take permit, applies when a federally listed species is present, but there is no federal nexus.

5-1.4 Magnuson-Stevens Fishery Management and Conservation Act, as amended 1996 (Public Law 104-267)

Federal agencies must consult with NOAA Fisheries on actions that may adversely affect EFH. EFH is defined as those "waters and substrate necessary to fish for spawning, breeding, feeding, or growth to maturity." NOAA Fisheries encourages streamlining the consultation process using review procedures under the National Environmental Policy Act, Fish and Wildlife Coordination Act, the CWA, and/or the federal Endangered Species Act (ESA) provided that documents meet requirements for EFH assessments under Section 600.920(g). EFH assessments must include (1) a description of the proposed action, (2) an analysis of effects, including cumulative effects, (3) the federal agency's views regarding the effects of the action on EFH, and (4) proposed mitigation, if applicable. The EFH is discussed in Section 5 of this report.

5-1.5 Marine Mammal Protection Act of 1972

The Marine Mammal Protection Act (MMPA) of 1972 prohibits, with certain exceptions, the take of marine mammals in U.S. waters and by U.S. citizens on the high seas, and the importation of marine mammals and marine mammal products into the United States. Congress passed the MMPA based on the following findings and policies: (1) some marine mammal species or stocks may be in danger of extinction or depletion as a result of human activities, (2) these species of stocks must not be permitted to fall below their optimum sustainable population level (depleted), (3) measures should be taken to replenish these species or stocks, (4) there is inadequate knowledge of the ecology and population dynamics, and (5) marine mammals have proven to be resources of great international significance.

The MMPA was amended substantially in 1994 to provide for: (1) certain exceptions to the take prohibitions, such as for Alaska Native subsistence, and for permits and authorizations for scientific research; (2) a program to authorize and control the taking of marine mammals incidental to commercial fishing operations; (3) preparation of stock assessments for all marine mammal stocks in waters under U.S. jurisdiction; and (4) studies of pinniped-fishery interactions. Additionally, under the 1994 amendments to the MMPA, harassment is statutorily defined as any act of pursuit, torment, or annoyance that:

- Has the potential to injure a marine mammal or marine mammal stock in the wild (Level A harassment); or
- Has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavior patterns, including, but not limited to migration, breathing, nursing, breading, feeding, or sheltering but which does not have the potential to injure a marine mammal or marine mammal stock in the wild (Level B harassment).

NOAA Fisheries and USFWS administer the MMPA. The proposed Project must be analyzed to ensure that marine mammals protected under the MMPA would not be harassed or injured as a result of future activities in or adjacent to the Bay. Any future Project activities that may result in Level A or B harassment, injury, or mortality would require consultation with NOAA Fisheries and USFWS under the MMPA.

5-1.6 Migratory Bird Treaty Act

The Migratory Bird Treaty Act (MBTA) was enacted in 1918 to prohibit the killing or transport of native migratory birds, or any part, nest, or egg of any such bird, unless allowed by another regulation adopted in accordance with the MBTA. Under the MBTA, "take" means to kill, directly harm, or destroy individuals, eggs, or nests or to otherwise cause failure of an ongoing nesting effort. Migratory bird species that are protected by the MBTA is maintained by USFWS, which regulates most aspects of the taking, possession, transportation, sale, purchase, barter, exportation, and importation of migratory birds. The USFWS does not issue permits for "incidental take" of migratory birds that results from otherwise lawful activities such as construction of development projects.

5-1.7 Clean Water Act

The major federal legislation governing water quality is the Federal Water Pollution Control Act Amendments of 1972, commonly known as the CWA (33 United States Code [USC] 1251–1376), as amended by the Water Quality Act of 1987. The intention of the CWA is to "restore and maintain the chemical, physical, and biological integrity of the nation's waters." Discharges into waters of the United States (WoUS) are regulated under CWA Section 404 and includes (1) all navigable waters (including all waters subject to the ebb and flow of the tide); (2) all interstate waters and wetlands; (3) all other waters, such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sand flats, wetlands, sloughs, or natural ponds; (4) all impoundments of waters mentioned above; (5) all tributaries to waters mentioned above; (6) the territorial seas; and (7) all wetlands adjacent to waters mentioned above. Important applicable sections of the CWA are discussed below.

- **Section 401** requires any federal permit applicant that proposes an activity that may result in a discharge into WoUS to obtain certification from the state that the discharge will comply with the CWA. A 401 certification is provided by the Regional Water Quality Control Board (RWQCB) assigned to the Project's region. A Section 401 certification from the San Diego RWQCB would be required this Project if a Section 404 permit and Rivers and Harbor Act (Section 10) permit is required.

- **Section 404** certification is required where USACE issues permits for discharge of dredged or fill material into WoUS. These permits typically include conditions to minimize impacts on water quality. Common conditions include: (1) USACE review and approval of sediment quality analysis before dredging; (2) a detailed pre- and post-construction monitoring plan that includes disposal site monitoring; and (3) requiring compensation for loss of WoUS.

5-1.8 California Eelgrass Mitigation Policy

Eelgrass, *Zostera* spp., is protected under the CWA as a habitat forming species and the resource is managed locally under the California Eelgrass Mitigation Policy (CEMP) as developed by NOAA Fisheries (NMFS 2014). Additionally, due to the high ecological value of eelgrass as essential fish habitat, eelgrass is also designated as a habitat area of particular concern (HAPC) by NOAA Fisheries. The CEMP requires that an eelgrass survey be performed prior to construction to evaluate the presence of eelgrass and or potential eelgrass habitat.

NMFS has provided this policy to other state and federal agencies, including the California Department of Fish and Wildlife (CDFW), as guidance for handling project-related impacts on eelgrass habitat.

5-1.9 Caulerpa Control Protocol

In September 2023, NOAA Fisheries was notified of an invasive algae species discovered in the Coronado Cays in south San Diego Bay. The algae, which is native to Florida and other subtropical and tropical locales, is scientifically known as *Caulerpa prolifera*. This is the first positive identification of *C. prolifera* on the U.S. West Coast and is closely related to the previously eradicated *Caulerpa taxifolia*, which was discovered in north San Diego County and determined to be successfully eradicated in 2006.

NOAA Fisheries believes any species of *Caulerpa* that is allowed to establish and spread within coastal areas may adversely impact local fisheries and disrupt eelgrass communities important to protected species. It can grow quickly, choking out native seaweeds and potentially harming marine life through loss of habitat. During the previous *Caulerpa taxifolia* eradication process, the Southern California Caulerpa Action Team (SCCAT) was formed. This team was made up of federal, state, and local governmental agencies, scientists, consultants, and local stakeholders. The SCCAT works quickly to identify the extent of any Caulerpa infestation and recommends immediate action should be taken to eradicate the species, by the development of a Rapid Response Eradication Plan (Eradication Plan). Eradication and survey efforts, consistent with the Eradication Plan.

The SCCAT developed the Caulerpa Control Protocol to detect existing infestations and avoid the spread of these invasive species to other systems. NOAA Fisheries and the RWQCB serve as the lead Federal and State agencies, respectively, for administering the Caulerpa Control Protocol. It outlines the certification, survey, and reporting guidelines required when surveying for all Caulerpa species in California nearshore coastal and enclosed bays, estuaries, and harbors from Morro Bay to the U.S./Mexican border. These guidelines apply to any bottom disturbing activities (e.g., pile driving, dredging, etc.) as those have the potential to fragment and spread Caulerpa. NOAA Fisheries and the RWQCB use the Caulerpa Control Protocol, in partnership with other resource and permitting agencies, as an important tool for conserving sensitive marine ecosystems, including eelgrass beds and other benthic habitats, and the important functions they provide.

5-2 State

5-2.1 California Coastal Act of 1976

California ports, harbors, and coastline beaches are recognized as primary economic and coastal resources and as essential elements of the national maritime industry by the California Coastal Act of 1976. Decisions to undertake specific development projects are to be based on consideration of alternative locations and designs to minimize any adverse environmental impacts. The California Coastal Act is implemented by the California Coastal Commission (CCC).

5-2.2 California Endangered Species Act; Fully Protected Species

The California Endangered Species Act (CESA) establishes the policy of the State to conserve, protect, restore, and enhance threatened or endangered species and their habitats. Projects that would jeopardize the continued existence of threatened or endangered species if reasonable and prudent alternatives are available should not be approved according to the CESA. For projects that affect both a state- and federally listed species, compliance with the federal ESA will satisfy the CESA if the CDFW determines that the federal incidental take authorization is consistent with the CESA under California Fish and Game Code Section 2080.1. Also, California Fish and Game Code Sections 3511, 4700, 5050, and 5515 prohibit the take or possession of fully protected species.

5-2.3 California Fish and Game Code

Other sections of the California Fish and Game Code establish the Fish and Game Commission, as authorized by Article IV, Section 20, of the Constitution of the State of California. Under Sections 200-221 the Fish and Game Commission is responsible for regulating the take of fish and game, not including the taking, processing, or use of fish, mollusks, crustaceans, kelp, or other aquatic plants for commercial purposes. The Fish and Game Commission does regulate aspects of commercial fishing, including fish reduction; shellfish cultivation; take of herring, lobster, sea urchins, and abalone; kelp leases; leases of state water bottoms for oyster allotments; and aquaculture operations. The resource protection is responsible for setting recreational and commercial limits on species collection, collection method, and determines the conditions under which permits, or licenses may be issued or revoked by CDFW. The Fish and Game Commission also oversees the establishment of wildlife areas and ecological reserves and regulates their use and sets policy for CDFW.

CDFW is a state agency that manages native fish, wildlife, plant species, and natural communities for their ecological value and their benefits to people. CDFW oversees the management of marine species through several programs, some in coordination with NMFS and other agencies.

5-2.4 Marine Life Protection Act

The Marine Life Protection Act of 1999 directs the state to redesign California's system of marine protected areas (MPAs) to function as a network in order to: increase coherence and effectiveness in protecting the state's marine life and habitats, marine ecosystems, and marine natural heritage, as well as to improve recreational, educational and study opportunities provided by marine ecosystems subject to minimal human disturbance. For the purposes of MPA planning, a public-private partnership commonly referred to as the Marine Life Protection Act (MLPA) Initiative was established, and the state was split into five distinct regions (four coastal and the San Francisco Bay) each of which had its own MPA planning process. All four coastal regions have completed these individual planning processes. As a result, the coastal portion of California’s MPA network is now in effect statewide. Options for a planning process in the fifth and final region, the San Francisco Bay, have been developed for consideration at a future date.

5-2.5 Marine Life Management Act

The Marine Life Management Act (MLMA), which became law on January 1, 1999, The MLMA applies not only to fish and shellfish taken by commercial and recreational fishermen, but to all marine wildlife. The MLMA shifts the burden of proof toward demonstrating that fisheries and other activities are sustainable. Greater management authority was delegated to the Fish and Game Commission and the CDFW. Instead of focusing on single fisheries management, the MLMA requires an ecosystem perspective including the whole environment. The MLMA strongly emphasizes science-based management developed with the help of all those interested in California's marine resources.

5-2.6 Porter-Cologne Water Quality Control Act

The Porter-Cologne Water Quality Control Act is the California or state equivalent of the federal CWA. It provides for statewide coordination of water quality regulations through the establishment of the State Water Resources Control Board (SWRCB) and nine separate RWQCBs that oversee water quality on a day-to-day basis at the regional/local level. The RWQCB regulates actions involving "discharging waste, or proposing to discharge waste, within any region that could affect the water of the state" (Water Code Section 13260(a)), pursuant to provisions of the Porter-Cologne Act. Waters of the state (WoS) are defined as "any surface water or groundwater, including saline waters, within the boundaries of the state" (Water Code Section 13050 (e)).

The RWQCB regulates WoS under Section 401 of the CWA. This requires states to certify that federally authorized activities comply with state water quality standards. A Water Quality Certification or a waiver must be obtained from the RWQCB if an activity requiring a Section 404 permit would affect WoS. Additionally, the RWQCB issues waste discharge requirements for discharges to WoS for fill of wetlands and other waters that are not regulated by Section 404 of the federal CWA.

5-3 Local

5-3.1 San Diego Unified Port District Port Master Plan

Through implementation of the Port Master Plan (PMP), the San Diego Unified Port District (District) maintains authority over tidelands and submerged lands conveyed in trust to the District by the California legislature. Any amendments to the PMP are first reviewed and adopted by the Board of Port Commissioners and then certified by the CCC, thereby allowing the District to issue coastal development permits for projects within its jurisdiction. The PMP provides for protection of biological resources and states that the District will remain sensitive to the needs of, and will cooperate with, other communities and other agencies in Bay and tideland development. The District is currently in the process of updating the current PMP, an effort often referred to as the Port Master Plan Update or PMPU.

5-3.2 San Diego Bay Integrated Natural Resources Management Plan

The Integrated Natural Resources Management Plan (INRMP) is a long-term strategy sponsored by the U.S. Navy and the District. Its intent is to provide direction for the management of natural resources while also supporting the ability of the Navy and District to meet their missions and continue functioning within the Bay. The main strategies of the plan are to (1) manage and restore habitats, populations, and ecosystem processes; (2) plan and coordinate projects and activities so that they are compatible with natural resources; (3) improve information sharing, coordination, and dissemination; (4) conduct research and long-term monitoring that supports decision-making; and (5) put in place a Stakeholder's Committee and Focus Subcommittees for collaborative, ecosystem-based problem-solving in pursuit of the goal and objectives.

5-3.3 Port of San Diego Environmental Mitigation Property (BPC Policy No. 735)

Board of Port Commissioners (BPC) Policy 735 establishes a policy for the allocation of environmental mitigation property within District Tidelands. Environmental mitigation property refers to land, water area, natural or constructed habitats, credit for the removal of shading over open water, or other assets, held in trust by the District and that could be used to offset the environmental impacts of projects. The District recognizes the demand for mitigation property within Tidelands for capital development projects and major maintenance pursuant to the District's land-use obligation (as defined in Section 4 of the San Diego Unified Port District Act). The District also recognizes that the demand for environmental mitigation property for non-District funded projects is increasing. It is the policy of the District that property suitable for mitigation, which is held in trust by the District, will be retained for District-funded capital development and major maintenance projects. Due to the limited area of mitigation property available to the District, each project requiring mitigation shall be evaluated through an administrative procedure as described in BPC Policy No. 735 to ensure that environmental mitigation property is only used for the most appropriate project. Further, unused mitigation land and new mitigation opportunities on District tidelands that are not encumbered by a project will be under the control of the District and will be added to the District's accounting of available mitigation property.

5-3.4 San Diego Unified Port District Code, Article 10

District Code, Article 10, the District Stormwater Management and Discharge Control Ordinance, prohibits the deposit or discharge of any chemicals or waste to the tidelands or San Diego Bay and makes it unlawful to discharge pollutants directly into non-stormwater or indirectly into the stormwater conveyance system. Article 10 also requires the implementation of best management practices (BMPs), stormwater plans, and other measures, as appropriate to control the discharge of pollution to tideland or receiving waters. Where enforcement is required to maintain compliance, the District will use its enforcement authority established by Article 10. The article enables the District, including District inspectors, to prohibit discharges and require BMPs so that discharges on tidelands do not cause or contribute to water quality problems. Article 10 establishes enforcement procedures to ensure that responsible dischargers are held accountable for their contributions and/or flows.

6 Project Impact Analysis

The following significance criteria are based on Appendix G of the State of California Environmental Quality Act (CEQA) Guidelines and provide the basis for determining the significance of biological resource impacts resulting from the proposed Project. The determination of whether a biological resource impact would be significant is based on the threshold described below and the professional judgment and recommendations of qualified MTS personnel.

Impacts are considered if the proposed Project would result in any of the following.

Threshold 1: Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service.

Threshold 2: Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by CDFW, NMFS, or USFWS.

Threshold 3: Result in substantial interference with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impedance of the use of native wildlife nursery sites.

Threshold 4: Conflict with any applicable local policies or ordinances protecting biological resources, or with the provisions of an applicable adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan.

6-1 Project Impacts and Mitigation Measures

The proposed Shelter Island Commercial Fishing Wharf Project is summarized by the following waterside elements:

- Removal of existing 18,306 sq ft of overwater structures including all support supported piles, mooring piles, abutments, and floating docks.
- Removal of 461 piles of various sizes and materials.
- Installation of 37,039 sq ft of new piers 4, 5, 6, 7, and 8, and floating wave attenuator with concrete dock system including the main walk and all piles.
- Installation of 149 concrete piles of various size.
- Installation of pile supported gangway and ramp platforms.

A breakdown of overwater cover, pile type, and pile count that are existing and proposed is presented in Table 5.

Table 5. Summary table of existing and proposed overwater cover and pile count. Table includes the total change of overwater cover and piles relative to Project components.

Component	Overwater Cover (sq ft)			Pile Type	# of Piles		
	Existing	Proposed	Change		Existing	Proposed	Change
Pier 4	3553	3717	164	12-inch square concrete	83	16	-67
				16-inch square concrete	0	14	14
Pier 5	4510	6502	1992	12-inch square Steel rail	54	0	-54
				Encased timber pile	6	0	-6
				12-inch steel pipe	2	0	-2
				20-inch steel pipe	2	0	-2
				12-inch square concrete	31	3	-28
				16-inch round concrete	0	21	21
Pier 6	3149	3006	-143	Steel rail	66	0	-66
				12-inch square concrete	29	4	-25
				16-inch round concrete	0	4	4
Pier 7	3934	6076	2142	Steel rail	66	0	-66
				12-inch square concrete	33	4	-29
				16-inch round concrete	0	15	15
Pier 8	2890	5952	3062	Steel rail	54	0	-54
				12-inch square concrete	35	4	-31
				16-inch round concrete	0	19	19
Main Walk	0	8541	8541	16-inch round concrete	0	15	15
Floating Wave Attenuator	0	3245	3245	24-inch square concrete	0	30	30
Total	**18036**	**37039**	**19003**		**461**	**149**	**-312**

Total permanent overwater coverage would increase by 19,003 sq ft. The revised dock layout shades 8,036 sq ft (0.18 acre) of eelgrass resources (Figure 7). Additionally, assuming all slips were filled with vessels 100% of the time, additional impacts related to vessel birthing could impact an additional 11,703 sq ft (0.27 acre)of eelgrass resources (Figure 7).

Figure 7. Map showing existing eelgrass resources relative to the proposed dock layout including proposed wave attenuator. The figure includes impacts for shading by the proposed dock structure.

6-1.1 Impacts and Mitigation Summary

A summary of the potential impacts and associated mitigation measures is provided below. Each of the impacts and mitigation measures are discussed in further detail in the sections that follow. Numbering of impacts and mitigation measures in this technical report may not align with numbering with the EIR.

Impact-1: Pile driving-induced noise impacts can disrupt foraging behavior of California least tern and other piscivorous avian species.

Mitigation-1: Perform construction outside of the California least tern nesting season or implement construction monitoring and avoidance measures to eliminate noise impacts to California least tern.

Impact-2: Construction noise impacts on nesting behavior of marine dependent species or other species protected under the MBTA and California Fish and Game Code.

Mitigation-2: Perform construction outside of the nesting season or implement construction monitoring and noise avoidance measures as necessary to reduce noise impacts on sensitive nesting avian species.

Impact-3: Pile driving could generate in-water noise levels that could injure (Level A harassment) or alter the behavior (Level B harassment) of marine mammals, green sea turtles, and fishes.

Mitigation-3: Implement a marine mammal and green sea turtle monitoring program during pile installation activities.

Impact-4: Increased water turbidity from disturbance of submerged sediments during in-water construction such as pile driving would limit the ability of protected piscivorous avian species, green sea turtle, and fish to locate prey and can disrupt eelgrass productivity.

Mitigation-4: Implement construction measures to eliminate water quality impairment impacts on birds, fish, green sea turtles, and eelgrass. Construction measures include contractor education, utilization of depth sounders to avoid shallow waters wherever feasible, appropriate spill kits onsite, and the use of a silt curtain during bottom disturbing activities.

Impact-5: Permanent overwater coverage from new overwater structures would reduce available open water foraging space for protected avian species and depress primary production of surrounding waters. This shading will also impact a portion of the eelgrass present at the site.

Mitigation-5: For the increase in overwater cover, either or in tandem can implement the following measures: reduce overwater cover within another area of San Diego Bay, utilize credits held by the Port of San Diego for past removal of overwater cover, or implement eelgrass or wetland restoration at a 1:1 ratio. For impacts to eelgrass additional establishment and maintenance of a mitigation area according to the CEMP at a 1.2:1 mitigation to impact ratio (NMFS 2014).

Impact-6: The proposed Project construction may result in a conflict with the San Diego Bay INRMP by resulting in adverse effect on special-status species or sensitive habitats.

Mitigation-6: Implementation of Mitigation-1 through Mitigation-5 will reduce to the maximum extent feasible impacts to special-status species or sensitive habitats.

6-1.2 Threshold 1 – Marine Species

In general, construction activities from implementation of the proposed Project could cause construction-induced noise, increases in turbidity, and release of particulates and chemicals of concern into U.S. and State waters.

6-1.2.1 Construction Noise Impact on Marine Resources

The use of large machinery for construction and demolition as well as pile driving could result in construction-induced noise impacts that could alter the behavior of protected species. These impacts could occur from construction activities such as hammering, drilling, operation of heavy construction equipment, or unloading building materials. Construction-induced noise impacts from landside construction activity and overwater construction activities such as pile driving could disrupt the foraging behavior of the California least tern if construction occurs during the California least tern nesting season. Other sensitive piscivorous avian species such as brown pelican can similarly be impacted. This would be considered a significant impact without mitigation (**Impact-1**). Construction noise can also impact species protected under the MBTA and California Fish and Game Code. For instance, marine dependent avian species such as the black-crowned night heron nest in trees or buildings near shore where their nesting activities could be disturbed by construction noise. Disturbance can cause nesting birds to abandon nest sites or alter nesting behavior in ways that lower nesting success. This would be considered a significant impact without mitigation (**Impact-2**). In-water construction associated with proposed construction could generate enough underwater noise to physically injure marine mammals, sea turtles, and fishes, should impact hammer or vibratory pile driving occur during construction. Any noise related impacts would be dependent on the type of activity being performed, the proximity to marine waters, and the biology of the considered species. In-water impact hammer or vibratory pile driving activity could potentially generate enough underwater noise to injure (Level A Harassment) or alter behavior (Level B Harassment) for marine mammals, green sea turtles, and fishes. Additionally, in-air acoustic impacts from construction could occur if pinnipeds are hauled out near noise-generating activities. In-water and in-air acoustic impacts are therefore considered significant without mitigation (**Impact-3**).

6-1.2.1.1 Airborne Noise Impacts

As discussed above, activities such as pile driving have the potential to create adverse noise impacts on marine wildlife. Illingworth & Rodkin, Inc. (I & R 2025) analyzed noise levels associated with noise-generating activities associated with the Project. The full acoustic report is included as Appendix B.

In-air acoustic impacts are only calculated for marine mammals that would haul out of the water (i.e. pinnipeds (seals and sealions). The behavioral disturbance acoustic thresholds and in-air auditory injury criteria for pinnipeds are summarized in I & R 2025. Disturbance and injury thresholds were calculated for 24-inch concrete piles. Since the 24-inch concrete piles represent the greatest potential sound generated by impact pile driving the 12-inch and 16-inch piles were not evaluated (Table 6). The greatest calculated distance for behavioral disturbance is 69 m at 90 decibels (dB) root-mean-square (RMS). The minimum distance for auditory injury over a 24-hour cumulative sound exposure level (SEL) is 11 m.

Table 6. Distance to RMe thresholds for impact pile driving on pinnipeds.

Pile Type	Species/Hearing Group	Distance (m): Auditory Injury Thresholds[1] Peak 162 dB Phocid 177 dB Otariid	Distance (m): Auditory Injury Thresholds[1] $SEL_{cum, 24h}$ 140 dB Phocid 163 dB Otariid	Distance (m): Behavioral Thresholds[1] 100 dB RMS	Distance (m): Behavioral Thresholds[1] 90 dB RMS
24-inch Concrete	Phocid Pinnipeds (including harbor seals)	--[2]	11	22	69
	Otariid Pinnipeds	--[2]	--[2]		

[1] Peak sound pressure (Peak) and RMS has a reference value of 20 µPa (in air) while the weighted cumulative sound exposure level has a reference value of 20 μPa^2s (in air).
[2] Within the near-field of the sound source < 15 m [50 ft]

6-1.2.1.2 Hydroacoustic Noise Impacts

In-water sound pressure levels are summarized by activity in Table 7. Significance criteria related to marine mammals, fish, and GST are summarized in I & R 2025.

The I & R 2025 assessment of underwater sound levels associated with different in-water construction activities were analyzed for impact pile driving of concrete piles with and without jetting. The pulling of piles was not evaluated as those in-water activities were not anticipated to generate sound levels elevated enough to cause injury or harassment.

The isopleths for the different categories of marine mammals within which take can occur are shown in Table 8. Both unattenuated with and without jetting are provided. The greatest distance for Level B harassment is associated with unattenuated impact pile driving of 24-inch round concrete piles, at 293 m. The Level A injury zone for marine mammals is greatest for unattenuated impact pile driving without jetting (“No jetting”) of 12-inch and 24-inch piles, at 28 m and 69 m for low-frequency cetaceans and 44 m and 107 m for very high-frequency cetaceans, respectively.

Construction noise impacts to fishes results in both behavioral modification or injury at different levels depending on pile type (Table 9). Behavioral modifications were calculated using RMS and the impact zones were calculated for unattenuated distances with no jetting as 159 m for impact driving 12-inch concrete piles, 159 m for impact driving 16-inch concrete piles, and 1,359 m for impact driving 24-inch concrete piles. The greatest distances for injury (cumulative SEL at 183 dB) are 29 m for 12-inch piles, 20 m for 16-inch piles, and 70 m 24-inch piles. Unattenuated impact pile driving with jetting resulted in shorter distances for behavioral modifications or auditory injury of fish to occur.

Impacts of noise on GST were also calculated (Table 10). No distance resulted from the calculation of far-field predictions for potential sound exposure from impact pile driving of 12-inch or 16-inch piles. The unattenuated distance for impact pile driving of 24-inch piles is 29 m without jetting and 17 m with or without jetting. Cumulative SEL threshold was calculated for impact pile driving. The greatest distances for injury (cumulative SEL at 184 dB) are 24 m for 12-inch piles, 17 m for 16-inch piles, and 59 m 24-inch piles. Unattenuated impact pile driving with jetting resulted in shorter distances for behavioral modifications or auditory injury of GST to occur.

Table 7. Table summarizing measured levels for activities generating underwater sound impacts (I&R 2025).

Structure	Pile Type (all concrete)	Estimated Blows Per Pile	Piles per Day	Total Number of Piles	Pile Driving Method	Sound Pressure Level in dB at 10m Distance From Pile			TL*	Source Sound Levels
						Peak	RMS	SELss

6-1.2.2 *Construction Noise Mitigation Measures for Marine Resources*

Mitigation measures for reducing noise related impacts on foraging California least tern and other sensitive piscivorous avian predators during nesting season (**Impact-1**) include construction monitoring during the nesting season (**Mitigation-1**). If impact, vibratory, or jetting pile driving activities occur during the nesting season (April 1 – September 15), a qualified biologist would monitor during pile driving activities with potential to result in noise induced harassment. The monitor would have the ability to reduce or temporarily stop noise producing activities if those activities were believed to impact or otherwise alter foraging behavior of sensitive avian species within the Project site during the nesting season. The monitor would observe all areas within a 100 ft buffer of construction. The Project applicant shall take specific actions, as approved by the District, to reduce or temporarily stop noise-producing activities if the qualified biologist identifies that the activities are impacting the foraging behavior of sensitive avian species. These actions shall include (where appropriate), but not be limited to, the installation of sound barriers, reducing intensity of pile driving, and restricting pile driving to periods when sensitive avian species are not present. Implementation of **Mitigation-1** would reduce impacts to foraging California least terns and other sensitive piscivorous avian predators during the nesting season to less than significant by minimizing the effects of noise producing activities that could alter foraging behavior.

While disturbance of nesting marine dependent avian species (**Impact-2**) is not anticipated due to the lack of nesting habitat within the Project site. Disturbance can be minimized by ensuring that nesting bird behavior is not modified during construction activities that generate loud noises. Project proponents would be required to retain a qualified biologist to perform a nesting bird survey within 500 feet of the noise generating activity one week prior to the start of construction utilizing heavy equipment, and if nests are found, survey once per week during construction until use of heavy equipment ceases (**Mitigation-2**). Regulatory agencies could consider a reduced frequency of avian surveys due to the urban nature of the site and low likelihood of sensitive species nesting there. If noise levels are anticipated to be 10dBA or greater above ambient background noise levels within the vicinity of an active nest, the qualified biologist shall establish a no - disturbance buffer around each nest until the nesting individuals have fledged. The disturbance buffer will be determined by the qualified biologist dependent upon the species nesting and the noise acceptability exhibited by the bird. If noise effects cannot be minimized, construction shall be altered, to the extent necessary and as approved by the District to ensure that impacts to the nesting species are negligible. Implementation of **Mitigation-2** would reduce impacts on nesting marine dependent avian species to less than significant by implementing the measures to minimize noise impacts on active nests.

Potential impacts on fish, marine mammals, and GST (**Impact-3**) can be minimized by implementing the various measures required under mitigation measure **Mitigation-3**. This mitigation measure describes monitoring of hauled out marine mammals whenever noise generating activities are in excess of 90 dB root mean square (RMS) for harbor seals and 100 dB RMS for non-harbor seals (sea lions) at the haul out locations. The monitoring distances from the noise source are dependent upon the size of pile installed and if jetting is allowed and implemented. For 12-inch and 16-inch concrete piles, a 150 ft survey buffer of the noise source is recommended. For 24-inch concrete piles, a 970 ft monitoring buffer from the noise source is recommended. The recommended monitoring buffers are based on calculated Level B harassment zones per pile size. These criteria are established by NOAA NMFS as noise levels for a Level B harassment (behavior alteration) of marine mammals when those mammals are hauled out. Protecting marine mammals against Level B harassment when hauled out also ensures protection against Level A harassment (injury).

If marine mammals are hauled out within the zone where sound thresholds are exceeded, then the biological monitor will notify the contractor to halt or alter the noise generating activity such that construction noise is at or below 90 dB RMS or 100 dB RMS for harbor seals and non-harbor seals, respectively. For portions of the proposed Project that generate in water noise such as impact and vibratory pile driving, the biological monitor will monitor for marine mammals in the water within isopleth distances calculated to be within the range of sound thresholds established by NOAA NMFS for Level A and Level B harassment of marine mammals (NMFS 2018). Like monitoring for hauled out animals, the biological monitor will have the authority to halt or modify work based on animal observations relative to monitoring isopleths. GST will be monitored using the maximum calculated isopleth for Level B harassment of GST (Table 10, Illingworth & Rodkin 2025).

In addition, Project activities where impact hammer and vibratory pile driving occurs shall utilize a soft start for pile driving. This generally means three pile strikes at reduced (approximately 50%) force, then waiting 30 seconds. This is repeated three times before starting pile driving at full force. This measure provides time for marine mammals, GST, and fishes to disperse from the sound source area in the event that the sound is a source of stress for the animal. Implementation of **Mitigation-3** would reduce impacts to less than significant.

6-1.2.3 Construction Water Quality Impacts on Marine Resources

Construction activities associated with pile driving activities and pier construction could increase levels of turbidity in waters within the Bay in the absence of regulations. This could occur either during activities such as pile driving, incidentally during vessel contact with bottom substrate, and by propeller wash in shallower water. Increases in water turbidity may occur as a result of displaced sediment from construction activities.

In general, increased turbidity could limit the ability of California least terns, other sensitive piscivorous avian species, fish, and GST to locate prey. Decreased visual acuity caused by turbidity can lower the foraging success for avian species and fish. While GST vision would also be affected by increases in turbidity, GST foraging efficiency could be further reduced by the impact turbidity can have on primary producers. Where the disruption to the photic zone can occur due to increased turbidity. Prolonged increases in turbidity can reduce primary productivity because turbid water prevents sunlight from reaching primary producers. These impacts would be considered a significant impact without mitigation (**Impact-4**). Marine mammals with potential to occur in the Project site including the California sealion and dolphin species utilize alternative methods for hunting and are unlikely to have foraging impacts due to increases in turbidity. California sea lions have highly sensitive whiskers that detect hydrodynamic trains left by fish and can track fish with good accuracy even without vision (Gläser et al. 2010). Additionally, dolphins use echolocation to support prey searches allowing effective foraging in dark or turbid water their vision fails (Wisniewska et al. 2014). Dolphins have been found to target areas of higher turbidity or show preference for night-time foraging (Miller and Baltz 2009; Simonis et al. 2017).

Construction activities could potentially result in impacts on protected species by the inadvertent introduction of pollutants such as fuel, oil, and/or other industrial and mechanical fluids into waters of the U.S, either from construction equipment, landside construction vehicles, construction vessels, and from partially completed overwater structures. These impacts would be considered a significant impact without mitigation (**Impact-4**).

6-1.2.4 Construction Water Quality Mitigation Measures on Marine Resources

Turbidity generated by in-water construction activities (**Impact-4**) can be reduced by implementing various measures required under **Mitigation-4**. These measures include contactor education. Vessel operators shall be instructed regarding the impacts of propeller wash with regards to erosion of sediments and suspension of fine particulates; this will allow vessel operators to adjust operations, when possible, in ways that lessen impact. All vessels would be required to use depth sounders which are routinely checked to ensure vessels are positioned to avoid shallow water areas to the extent practical. Construction crews will have appropriate spill kits on site and shall not fuel or clean equipment on site unless a spill containment structure is in place. Finally, when construction involves necessary bottom disturbance such as pile driving methods including impact, vibratory, or jetting methods where sediment displacement is likely, silt curtains would be in place around the activity to limit the spread of any turbidity generated during bottom disturbing activity. As such, **Mitigation-4** would reduce impacts to less than significant.

6-1.2.5 Operational Overwater Cover and Shading Impacts on Marine Resources

The operational impacts associated with overwater cover are introduced by the piers, mainwalks, wave attenuator, and gangways. The installation and use of overwater structures would result in permanent reduction of potential open water foraging habitat for California least tern and other sensitive piscivorous species. Overwater coverage also leads to lower primary productivity in the water column and at the seafloor due to shading. Similarly, the revised slip mix will cast additional shadows that increase shading of water area. This will further lower primary productivity. The lost primary productivity impacts all higher trophic levels due to the lost production of organic carbon. The impact on primary productivity is considered to be significant due to the presence of eelgrass resources at the Project site. Additionally, the impacts to California least tern associated with overwater coverage are considered a significant impact (**Impact-5**).

6-1.2.6 Operational Overwater Cover Mitigation Measures for Marine Resources

Overwater cover from permanent structures can be mitigated in-kind if feasible, or out-of-kind if in-kind options are not available. Mitigation measure **Mitigation-5** includes options for mitigating impacts associated with **Impact-5**. These options can be implemented either individually or on combination, as may be required through consultation with applicable resource agencies during permitting processes, including but not limited to, NMFS, USFWS, RWQCB, and/or USACE, to offset impacts from permanent overwater coverage. The in-kind option includes removal of existing overwater coverage at a 1:1 mitigation ratio at other locations within the Project site. Out-of-kind mitigation measures include creation or restoration of wetlands or eelgrass habitat at a 1:1 mitigation ratio to improve fisheries and associated wildlife beneficial uses in consultation with regulatory agencies identified above, contribution to an approved mitigation bank, and/or purchasing credits from the District's shading credit program. Implementation of **Mitigation-5** would reduce **Impact-5** to less than significant. The potential impacts and mitigation measures related to eelgrass, which is considered a sensitive natural community, are discussed below.

Mitigation measure **Mitigation-5** requires that a plan be developed to mitigate for impacts associated with **Impact-5**. The plan should include mitigation for the increase in coverage of open Bay waters that do not support eelgrass or potential eelgrass habitat by establishing an out-of-kind mitigation. All impacts to eelgrass resources should comply with the CEMP (NMFS 2014) by performing two years of post-construction eelgrass monitoring to determine the realized extent of impacts to eelgrass resources. Additionally, the establishment of new eelgrass resources at 1.2 times the amount of eelgrass impacts should be considered for implementation. Should an appropriate area for eelgrass mitigation not be feasible, an alternative mitigation should be considered to establish marine resources or support marine species.

6-1.3 Level of Significance After Mitigation

Implementation of **Mitigation-1** would reduce potential noise related impacts on foraging California least tern and other sensitive piscivorous avian predators during the nesting season (**Impact-1**) to less than significant by requiring construction monitoring during the nesting season by a qualified biological monitor. The monitor would have the ability to reduce or temporarily stop noise producing construction activities if those activities were believed to impact or otherwise alter the foraging behavior of sensitive avian species during the nesting season.

Impacts associated with disturbance of nesting marine dependent avian species (**Impact-2**) would be reduced to less than significant by **Mitigation-2**, which requires pre-construction surveys and if nests are detected, noise monitoring to ensure that noise levels do not exceed 10 dBA above ambient levels. In the event noise exceedances occur or disruption of nesting behavior is observed, **Mitigation-2** provides for actions that can be taken to protect nesting marine dependent avian species from the noise generating activity that the nest.

Implementation of **Mitigation-3** would reduce impacts on marine mammals, GST, and fishes (**Impact-3**) to less-than-significant levels by identifying when species are approaching or within the designated isopleth for Level B harassment and halting in-water pile driving activities until the species has left the construction area.

Implementation of **Mitigation-4** would reduce impacts associated with **Impact-4** to less than significant levels by requiring contractor education relative to construction actions that can increase turbidity. Turbidity will be reduced through the implementation of training and construction measures, such as silt curtains, which will protect the foraging behavior of sensitive avian species and minimize sedimentation of eelgrass resources from turbidity impacts.

Implementation of **Mitigation-5** would reduce **Impact-5** to less than significant by requiring in-kind mitigation if feasible, or out-of-kind mitigation if in-kind options are not available. Mitigation measure **Mitigation-5** includes various mitigation options that can be implemented either individually or in combination, as may be required through consultation with applicable resource agencies during permitting process, to offset impacts from permanent overwater coverage.

6-2 Threshold 2 - Sensitive Natural Community

Eelgrass habitat, which comprises approximately 102,989 sq ft (2.36 acres) of marine habitat in the Project site. Eelgrass is considered a sensitive habitat and is managed by NMFS as EFH. The eelgrass habitat on the Project site is also classified as a HAPC as defined by the MSA.

Proposed construction activities have the potential to have a substantial adverse effect on eelgrass. These activities include placement of floating dock structures and pile replacement activities. Construction related impacts associated with these proposed activities could result from increased turbidity from support vessels, equipment, and installation of structures and piles. The operation of vessels over shallow water during construction can decrease light to the seafloor by increasing turbidity from propeller wash or direct contact with the seafloor. Suspended particles reduce water clarity and can reduce the light reaching plant and algae cells. When suspended particles settle on primary producers such as periphyton, macroalgae, and eelgrass, they can further continue to prevent light from reaching the plant cells and reduce primary productivity. Additionally, any contact with the seafloor where eelgrass occurs could directly dislodge and remove eelgrass and other vegetation. Although **Mitigation-4** provides for measures to reduce and restrict turbidity, in some cases eelgrass may occur within the footprint where construction vessels and turbidity curtains are placed during construction. In such cases, the contained turbidity may still impact eelgrass that is within the limits of the silt curtains and construction activity. These construction-related impacts on eelgrass would be significant (**Impact-5**).

The mitigation measures to reduce construction turbidity impacts on eelgrass beds are the same as those proposed under **Mitigation-4**. Impacts associated with reduced growth and cover of eelgrass or direct removal of eelgrass during construction would be mitigated by the measures identified under **Mitigation-5**. This mitigation measure would follow guidelines set by the CEMP (NMFS 2014). Pre- and post-construction eelgrass surveys would be required at the construction site and a suitable reference area. The final calculation of mitigation requirements should occur after the post-construction monitoring. Should losses to eelgrass occur, mitigation should be carried out in accordance with the CEMP at or before the time of impact in a manner that conservatively mitigates all potential impacts to eelgrass. Mitigation by replanting or restoring eelgrass should follow the CEMP's eelgrass restoration ratio. Any implemented eelgrass mitigation site shall be monitored for 5 years to ensure successful eelgrass establishment in accordance with the CEMP. Implementation of mitigation measures **Mitigation-4** and **Mitigation-5** would reduce **Impact -5** to a less-than-significant level.

6-2.1 Level of Significance after Mitigation

Implementation of **Mitigation-4** and **Mitigation-5** would reduce **Impact-5** to less than significant by requiring the implementation of various measures to reduce turbidity from in-water construction, pre- and post-construction eelgrass surveys in accordance with the CEMP, and in the event, eelgrass is impacted, requiring mitigation for eelgrass impacts at a ratio of no less than 1.2:1, as required by the CEMP. If impacts on eelgrass are detected during the 2-year post-construction period, **Mitigation-5** also requires the project proponent to provide additional mitigation for eelgrass impacts.

In addition, the RWCQB is currently gathering and interpreting sediment data at the project site. It is possible, but not certain at this time, that some form of remediation of existing sediments may be required as part of the CWA Section 401 water certification. If remediation is required, additional impacts to eelgrass resources may occur.

The District calculated a reasonable area that sediment remediation, if required, may occur within. Specifically, a 111,451 sq ft (2.56 acre) boundary for potential sediment remediation was evaluated for eelgrass impacts. Within this boundary, 102,989 sq ft (2.36 acre) of eelgrass resources were identified and 29,967 sq ft (0.68 acre) would be impacted by dredge/fill operations. A map showing the potential sediment remediation boundary relative to existing eelgrass resources is included as Appendix C. Please note that the potential sediment remediation shown on the map does not represent the actual boundary of remediation to be completed, which, if needed, would be determined at a later time once RWQCB has completed its analysis of the existing sediment data. Therefore, the map should only be considered for CEQA impact purposes as a reasonable potential remediation area depicted to present all reasonably foreseeable consequences of undertaking the project, including potential requirements imposed by other regulatory agencies such as the RWQCB. Based on the potential sediment remediation area evaluated, impacts to eelgrass resources would be significant without mitigation. Implementation of an eelgrass mitigation plan would result in less than significant impacts to eelgrass resources.

6-3 Threshold 3 - Movements of Fish or Wildlife

Aquatic wildlife, including fish, birds, marine mammals, and turtles, likely transit periodically through the marine environment in the Project site to access foraging and resting habitat elsewhere in the Bay or at sea. The project site also contains eelgrass, which is a nursery area for many commercially and recreationally important finfish and shellfish. (Orth and Heck 2023). While the proposed Project has the potential to affect eelgrass, open water habitat, and special-status wildlife species, the Project site contains uses typical for Bay inner harbors, and the habitat types and species are all common throughout the Bay. As discussed in Threshold 1 and 2, impacts on special-status species (**Impact-1, Impact-2, Impact-3,** and **Impact-4**) would all be mitigated to less than significant by incorporating **Mitigation-1, Mitigation-2, Mitigation-3,** and **Mitigation-4.** Impacts on open water habitat and adjacent eelgrass habitat outside of the Project Site (**Impact-5**) would be mitigated to less than significant with implementation of **Mitiagtion-4** and **Mitigation-5**. Implementation of the proposed Project would not substantially interfere with the movement of fish or other wildlife species or substantially impede the use of native wildlife nursery habitat.

6-3.1 Level of Significance after Mitigation

Implementation of the proposed Project would not substantially interfere with the movements of fish or other wildlife species or substantially impede the use of native wildlife nursery habitat. Impacts would be less than significant.

6-4 Threshold 4 - Conflict with Policies Protecting Biological Resources

The applicable local land use plans, policies, ordinances, or regulations of the District, adopted for the purpose of protecting biological resources, are the Port Master Plan, San Diego Unified Port District Code, and the District's INRMP. A conflict with the San Diego Bay INRMP that results in an adverse effect on special-status species or sensitive habitat would also be considered a significant biological resource impact (**Impact-6**).

6-4.1 Level of Significance after Mitigation

To ensure consistency with the San Diego Bay INRMP, **Mitigation-1** through **Mitigation-5** would be implemented to avoid impacts to biological resources, including on special status species and sensitive marine habitat. After mitigation is incorporated, **Impact-6** would be reduced to less than significant.

7 Discussion

The biological communities present within the designated Project site are typical of the bays and shorelines in the region, and are not notably diverse, unique, or sensitive. Fish and invertebrate species that were observed during the SCUBA surveys throughout the Project site are generally considered common throughout the bays and shorelines of the region and would generally not be put at risk by activities such as those proposed by this Project.

The marine habitats within the Project site are generally composed of subtidal eelgrass and unvegetated soft-bottom. Flora and fauna observed within the Project site were typical of species likely to occur within San Diego Bay. Neither sensitive nor unique species were observed during the survey. However, commercially, and recreationally important California lobster was observed on occasion within the Project site. Invasive species seen include *Amathia verticillate*, *Sargassum muticum,* and Pacific oyster (*Crassostrea gigas*)**.**

The proposed Project would consist of construction and operational activities in marine environments. Construction related impacts on marine resources that could occur from this Project include construction-induced noise impacts, increases in turbidity, and release of particulates and chemicals of concern into WoUS. Permanent operational impacts include loss of water due to increases in overwater coverage that impede use of surface water by fish-foraging birds and cause lowered primary productivity by plankton and benthic algae.

Construction-induced noise impacts from overwater and in-water construction activities such as pile driving could disrupt the foraging behavior of California least tern and other sensitive piscivorous avian species (**Impact-1**). Construction noise can also impact marine dependent species projected under the MBTA and California Fish and Game Code by causing nesting birds to abandon nest sites or alter nesting behavior in ways that lower nesting success (**Impact-2**). Furthermore, in-water construction activities could generate enough underwater noise to physically injure marine mammals, sea turtles, and fish should impact hammer or vibratory pile driving occur during construction (**Impact-3**). However, the implementation of **Mitigation-1** through **Mitigation-3** would reduce these Project level impacts to less than significant.

In-water construction activities that involve bottom sediment disturbance would also potentially result in temporary increases in turbidity, which could limit the ability of California least terns, other sensitive piscivorous avian species, fish, and GST to locate prey (**Impact-4**). However, this Project level impact would be reduced to less than significant with implementation of **Mitigation-4**, which requires implementation of various construction measures to reduce turbidity and its effects on foraging.

Additionally, the increase of overwater structures would result in increased overwater coverage, which can impact foraging opportunities for sensitive piscivorous species and lowered primary productivity due to shading (**Impact-5**). However, overwater cover from permanent structures will be mitigated by the establishment and maintenance of a mitigation area as described by **Mitigation-5**. Implementation of **Mitigation-5** would reduce the Project level impact to less than significant.

Through the implementation of **Mitigation-1** through **Mitigation-5** conflicts with existing plans, policies, ordinances, or regulations will be complied with (**Impact-6**).

It is not anticipated that the GST or other sensitive species noted above would be significantly impacted by the proposed improvement or construction activities. The change in overwater structures has the potential to alter existing migration corridors for GST, but this is unlikely due to the proximity of the Project site to similar existing piers along the shoreline. GSTs are not likely to be seen at the Project site due to the location of the Project site in the northern portion of the Bay, however given the amount of eelgrass growing within the Project site there is potential for GSTs utilizing areas within the Project site for foraging. The pile driving associated with structural pile replacement may produce noise levels that can cause behavioral disruption of marine mammals and GSTs.

Many of the pacific coast groundfish and coastal pelagic fish species have potential to occur at the Project site due to the structural complexity of the existing dock lay out and associated piles. Additionally, the presence of eelgrass resources within the Project site may support potential prey species and provide additional shelter that may increase the potential for pacific coastal groundfish and coastal pelagic fish species presence.

The purpose of this assessment was to determine whether proposed Project activities would have any effect on the surrounding marine environment, or to the marine flora and fauna reliant on the resources provided by this marine environment. Based on the analysis previously described in this assessment, it has been determined that any potential impacts caused by the Project to the marine environment, sensitive species, and marine mammals can be reduced to less than significant and impacts would be reduced if mitigation measures are followed.

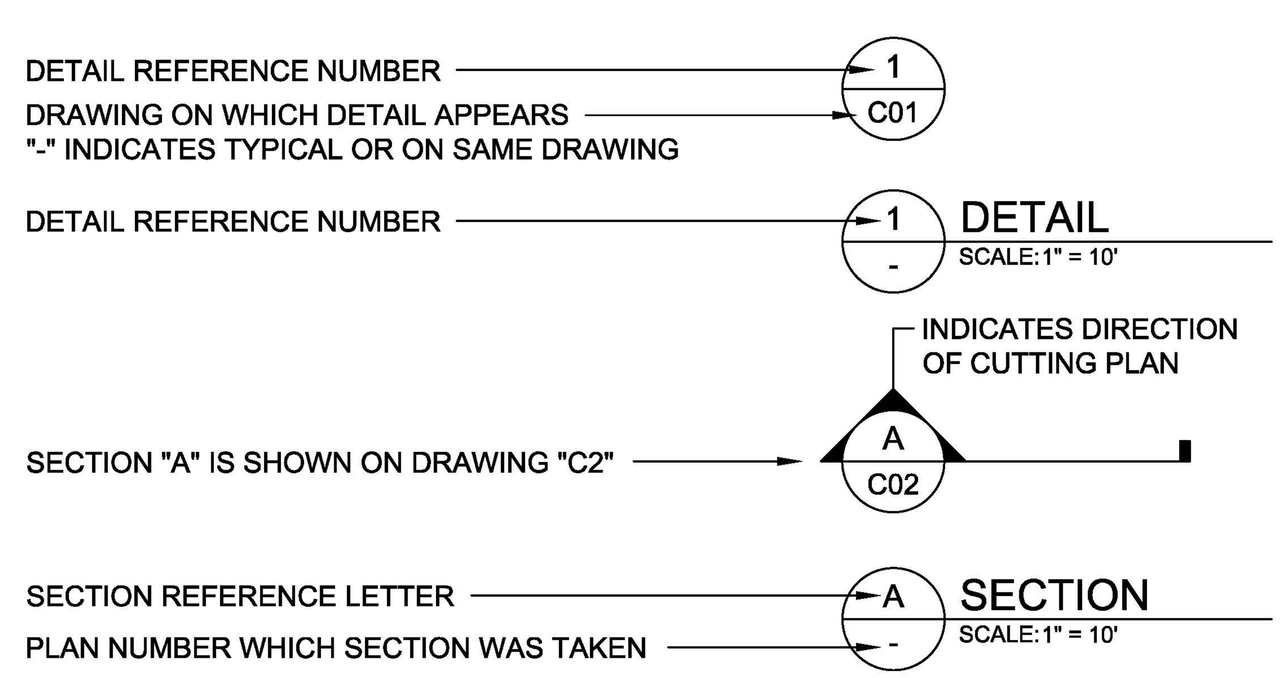
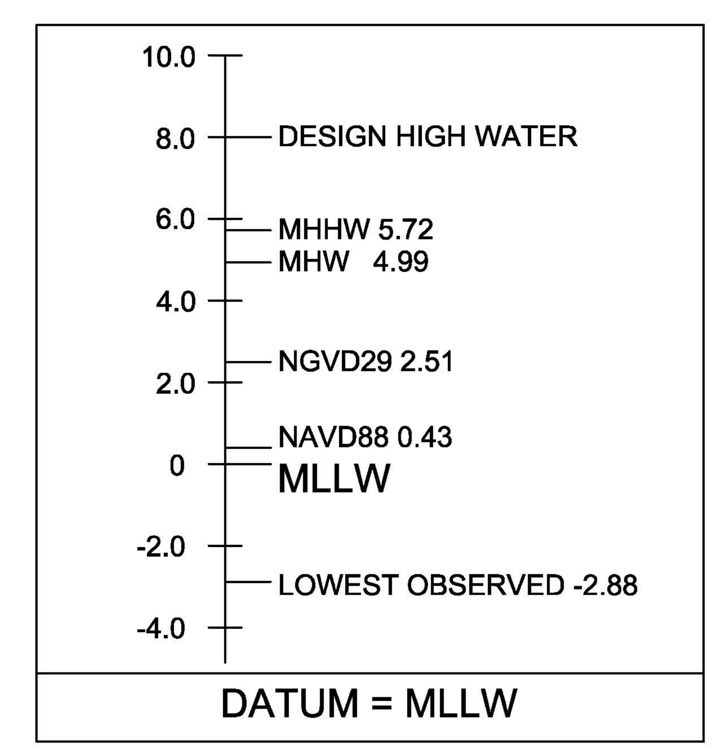
DETAIL AND SECTION REFERENCING





WORK TO BE DONE

THE WORK TO BE DONE SHALL BE ACCORDING TO THESE DRAWINGS AND SPECIFICATION OF THE SAN DIEGO UNIFIED PORT DISTRICT, AND IN ACCORDANCE WITH THE CALIFORNIA DEPARTMENT OF BOATING AND WATERWAYS, BOATING FACILITIES DIVISION LAYOUT AND DESIGN GUIDELINES FOR MARINA BERTHING FACILITIES, DATED JULY 2005.

IN ACCORDANCE WITH THE CONSTRUCTION DOCUMENTS, THE CONTRACTOR SHALL PROVIDE ALL EQUIPMENT, LABOR, MATERIALS, AND SYSTEMS NECESSARY TO CONSTRUCT A FUNCTIONAL MARINA FOR SPORT FISHERMAN, INCLUDING:

1. DEMOLISH AND REMOVE EXISTING PIERS, MOORING PILES, ABUTMENTS, FLOATING DOCKS, AND APPURTENANCES.
2. INSTALL NEW FLOATING PIERS 5, 6, 7 AND 8, AND FLOATING WAVE ATTENUATOR WITH CONCRETE DOCK SYSTEM INCLUDING ALL PILES, UTILITIES, FIRE WATER PIPING, ELECTRICAL, AND APPURTENANCES.
3. CONSTRUCT PILE SUPPORTED GANGWAY AND RAMP PLATFORMS WITH RAILINGS AND GATES.
4. INSTALL NEW ALUMINUM GANGWAYS AND STEEL RAMP.
5. CONSTRUCT NEW PIER 4 WHARF WITH REINFORCED CONCRETE PIER STRUCTURE INCLUDING ALL PILES, JIB CRANE, UTILITIES, FENDER SYSTEM, FIRE WATER PIPING, ELECTRICAL, AND APPURTENANCES.

T:\PROJECTS\23-2852 Driscolls Wharf Waterside Improvements\50 Drawing Layout\01.dwg / Mar 04, 2024 - 10:46am / CAD Machine

GENERAL NOTES

1. DOCK AND GANGWAY RAMP MANUFACTURERS SHALL PROVIDE ALL NECESSARY STRUCTURAL CALCULATIONS, SCALED SHOP DRAWINGS, AND ALL OTHER SUPPORTING DOCUMENTATION REQUIRED BY THE SPECIFICATION FOR PERMIT. ALL SHOP DRAWINGS AND CALCULATIONS SHALL BE SIGNED AND STAMPED BY A STATE OF CALIFORNIA LICENSED PROFESSIONAL ENGINEER. SHOP DRAWINGS SHALL SHOW ALL DETAILS AND OVERALL CONFIGURATIONS NECESSARY TO CLEARLY DESCRIBE THE WORK AND MATERIALS OF CONSTRUCTION.

2. GENERAL CONTRACTORS SHALL COORDINATE ALL WORK OF ALL SUBCONTRACTORS AND OTHER SUBCONTRACTORS CONTRACTED DIRECTLY WITH THE PORT, AS APPLICABLE, FOR SCHEDULE AND WORK COORDINATION REQUIREMENTS. THE CITY SHALL BEAR NO RESPONSIBILITY FOR FAILURE ON THE PART OF THE CONTRACTOR TO COORDINATE ACTIVITIES OF CONTRACTOR'S EMPLOYEES OR SUBCONTRACTORS.

3. THE CONSTRUCTION DOCUMENTS INCLUDE WRITTEN SPECIFICATIONS UNDER SEPARATE COVER. THESE PLANS SHALL BE CONSIDERED INCOMPLETE WITHOUT THE SPECIFICATIONS. CONTRACTORS SHALL REPORT APPARENT DISCREPANCIES BETWEEN THE PLANS AND THE SPECIFICATIONS TO THE PORT OR THE ENGINEER BEFORE PROCEEDING WITH THE WORK.

4. THE CONTRACTOR SHALL VERIFY ALL DIMENSIONS AND SITE CONDITIONS BEFORE STARTING WORK. THE PORT OR ENGINEER SHALL BE NOTIFIED OF DISCREPANCIES PRIOR TO THE START OF THE WORK. THE PORT SHALL BEAR NO RESPONSIBILITY FOR EXPENSES INCURRED AS A RESULT OF FAILURE ON THE PART OF THE CONTRACTOR TO VERIFY DIMENSIONS AND/OR VERIFIABLE SITE CONDITIONS PRIOR TO BEGINNING WORK.

5. DIMENSIONS TAKE PRECEDENCE OVER SCALE.

6. CONTRACTORS SHALL MAINTAIN FIRE LANES AND ACCESS TO EXISTING FACILITIES AND EQUIPMENT IN ACCORDANCE WITH THE CITY OF SAN DIEGO FIRE DEPARTMENT.

7. ALL WORK AND MATERIALS SHALL CONFORM TO THE CURRENT EDITIONS OF THE CALIFORNIA BUILDING CODE, CALIFORNIA FIRE CODE, CALIFORNIA MECHANICAL CODE, NATIONAL ELECTRICAL CODE, CALIFORNIA PLUMBING CODE, AND AMERICANS WITH DISABILITIES ACT (ADA), ALUMINUM ASSOCIATION'S "SPECIFICATIONS FOR ALUMINUM STRUCTURES", "LAYOUT DESIGN GUIDELINES FOR SMALL CRAFT BERTHING FACILITIES" PREPARED BY THE CALIFORNIA STATE PARKS DIVISION OF BOATING AND WATERWAYS, LATEST EDITION, AND SAN DIEGO REGIONAL STANDARD DRAWINGS.

8. CONTRACTORS SHALL STRICTLY ENFORCE ALL APPLICABLE SAFETY LAWS (I.E. OSHA, CAL-OSHA) AND MAINTAIN SITE SAFETY.

9. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO PROVIDE SUPERVISION OF THE WORK TO ENSURE THAT IT IS CONSTRUCTED IN CONFORMANCE WITH THE APPROVED PLANS AND SPECIFICATIONS.

10. THE CONTRACTOR SHALL MAKE AND KEEP CURRENT A SET OF RECORD DRAWINGS SHOWING EXACT DIMENSIONED LOCATIONS OF CONSTRUCTION CHANGES. TWO SETS SHALL BE SUBMITTED TO THE PORT WITHIN 30 DAYS OF PROJECT COMPLETION FOR ALL WORK AND SHALL INCLUDE ALL MAINTENANCE AND OPERATIONS MANUALS AND CERTIFICATIONS OF PERFORMANCE TO THESE PLANS AND SPECIFICATIONS.

11. NO PENETRATIONS OR WORK SHALL BE PERFORMED ON THE EXISTING ABUTMENTS, EXCEPT AS SHOWN ON THESE PLANS.

12. "REMOVE" SHALL MEAN TO DEMOLISH, TRANSPORT, AND DISPOSE OF AT CONTRACTOR'S EXPENSE.

13. "REMOVE AND REINSTALL" SHALL MEAN TO REMOVE, PROTECT, STORE, CLEAN AND REINSTALL IN GOOD CONDITION.

14. "SALVAGE" SHALL MEAN TO DISASSEMBLE, SORT INTO LIKE COMPONENTS, PACKAGE OR PALLETIZE INTO TRANSPORTABLE UNITS AND TRANSPORT TO A SITE DESIGNATED BY THE CITY.

15. ALL UNISTRUT ATTACHED TO GANGWAYS FOR SUPPORT OF UTILITIES SHALL BE OF STAINLESS STEEL TYPE 316 WITH STAINLESS STEEL TYPE 316 CONNECTORS AND BOLTS.

16. SPECIAL INSPECTIONS BY THE CONTRACTOR: CONTINUOUS INSPECTIONS SHALL BE MADE BY A REGISTERED DEPUTY INSPECTOR (PER CBC SECTION 1701). THE CONTRACTOR SHALL PROVIDE WRITTEN REPORTS TO THE ENGINEER FOR THE FOLLOWING:

    A. PILE DRIVING (SEE ALSO NOTE 19 BELOW).

17. CONCRETE ANCHORS SHALL BE INSTALLED IN STRICT CONFORMANCE WITH MANUFACTURER'S RECOMMENDATIONS, IN SOUND MATERIAL, WITH NO LESS THAN THE MINIMUM EMBEDMENT SPECIFIED BY THE MANUFACTURER. HILTI KWIK-BOLT, ICBO REPORT NO. ER-4627.

18. CONCRETE: SEE PRESTRESSED CONCRETE PILES DRAWING.

    CONCRETE FOR ABUTMENT:
    1) f'c = 4000 psi @ 28 DAYS, CONFORMS TO ASTM C94
    2) WATER-CEMENT RATIO = 0.45 MIN.
    3) PRIOR TO PLACEMENT OF CONCRETE, ENGINEERS SHALL INSPECT EXCAVATION AND PLACEMENT OF REBAR.

    REINFORCING BARS:
    1) ASTM A615, GRADE 60
    2) ALL BARS TO BE EPOXY COATED PER ASTM A934

1. ALL PILE DRIVING, INSTALLATION AND INSPECTIONS SHALL BE PROVIDED AND PAID FOR BY THE CONTRACTOR AND SHALL BE PERFORMED UNDER PERIODIC INSPECTION OF PORT DISTRICT INSPECTOR AND AND APPROVAL OF THE ENGINEER OF RECORD. A LOG OF PILE DRIVING SHALL BE KEPT BY THE CONTRACTOR AND A COPY SUBMITTED TO THE PORT DISTRICT ALONG WITH WRITTEN CERTIFICATION THAT THE WORK SUPERVISED MEETS THE REPORT.

2. WELDING:
    A. WELD LENGTHS SHOWN ARE EFFECTIVE LENGTH PER CODE. WHERE LENGTHS ARE NOT SHOWN, THE WELD SHALL BE FULL LENGTH OF JOINT. IN ADDITION TO INDICATED STRUCTURAL WELDS, ALL CONNECTED PARTS SHALL BE SEAL-WELDED, ALL-AROUND, A MINIMUM OF 18" FILLET WELDS.

    B. ALL WELDING SHALL BE AS PER LATEST EDITION OF AWS D1.1.

    C. ALL WELDERS SHALL BE CERTIFIED TO THE SATISFACTION OF THE GOVERNING JURISDICTION(S).

    D. WELD DAMS ARE NOT PERMITTED IN LIEU OF WELD TABS.

    E. ALL WELDING REQUIREMENTS SHOWN OR INDICATED ON THE DRAWINGS MAY BE FIELD OR SHOP WELDED AS REQUIRED FOR EFFICIENT ERECTION BY CERTIFIED WELDERS, SUBJECT TO THE APPROVAL OF THE ENGINEER.

21. STEEL:
    A. STRUCTURAL STEEL SHALL CONFORM TO STANDARD SPECIFICATIONS FOR STRUCTURAL STEEL FOR BRIDGES AND BUILDINGS, ASTM A36, UNLESS NOTED OTHERWISE.

    B. WELDED AND SEAMLESS STEEL PIPES SHALL CONFORM TO ASTM A53 GRADE B.

    C. COLD-FORMED WELDED AND SEAMLESS CARBON STEEL STRUCTURAL TUBING SHALL CONFORM TO ASTM A500, UNLESS NOTED OTHERWISE.

    D. HOT-FORMED WELDED AND SEAMLESS CARBON STEEL STRUCTURAL TUBING SHALL CONFORM TO ASTM A501, UNLESS NOTED OTHERWISE.

    E. FABRICATION AND ERECTION SHALL COMPLY WITH THE LATEST AISC SPECIFICATIONS.

    F. ALL DIMENSIONS SHALL BE FIELD VERIFIED PRIOR TO FABRICATION OR ERECTION OF STRUCTURAL STEEL OR METAL FABRICATIONS.

    G. ALL STRUCTURAL AND MISCELLANEOUS STEEL SHALL HAVE HOT-DIPPED GALVANIZED FINISH, UNLESS NOTED OTHERWISE.

    H. ALL EXPANSION ANCHORS USED FOR THIS PROJECT SHALL BE STAINLESS STEEL TYPE 316.

22. ALUMINUM

    A. ALUMINUM SHAPES SHALL BE EXTRUDED FROM 6061-T6 OR 6063-T6 UNLESS OTHERWISE NOTED.

    B. ALL FASTENERS SHALL BE STAINLESS STEEL. SEE SPECIFICATIONS FOR ADDITIONAL INFORMATION.

23. CONTACT USA ALERT:

    A. CONTACT UNDERGROUND SERVICE ALERT (1-800-422-4133) 10 CALENDAR DAYS

    B. PRIOR TO EXCAVATION: EXISTING UNDERGROUND UTILITIES AND FACILITIES DATA SHOWN OR REFERRED TO ARE PER RECORDS ONLY.VERIFY ALL LOCATIONS OF AFFECTED UTILITIES AND FACILITIES IN THE FIELD PRIOR TO COMMENCING CONSTRUCTION. CONTRACTOR SHALL USE EXTREME CARE WHEN EXCAVATING.

DRISCOLL'S WHARF WATERSIDE IMPROVEMENTS

DATE 02/29/24
A/E NO.
SHEET 2 OF 24
DRAWING NO. EM-XXXX-XX
REV. A

T:\PROJECTS\23-2852 Driscolls Wharf Waterside Improvements\50 Drawing Layout\02.dwg / Mar 04, 2024 - 10:04am / CAD Machine

BEST MANAGEMENT PRACTICES (BMP) AND WATER QUALITY MONITORING

GENERAL

A. THE CONTRACTOR SHALL DEVELOP AND IMPLEMENT A STORMWATER POLLUTION PREVENTION PLAN (SWPPP) INCLUDING APPROPRIATE BEST MANAGEMENT PRACTICES (BMP) IN ACCORDANCE WITH THE MITIGATION, MONITORING, AND REPORTING PROGRAM (MMRP) TO REDUCE IMPACTS TO COASTAL WATERS BY THE WORK. BMPS WHICH SHALL BE IMPLEMENTED INCLUDE THOSE SHOWN ON THE PLANS AND ADDITIONAL BMPS DETERMINED TO BE REQUIRED FOR THE TYPE OF WORK PERFORMED AS LISTED IN THE CONTRACTOR'S APPROVED SWPPP. THE MMRP IS PROVIDED IN THE APPENDICES OF THE CONTRACT SPECIFICATIONS.

B. THE MAINTENANCE OF BMPS IS THE CONTRACTOR'S RESPONSIBILITY. THE CONTRACTOR SHALL INSPECT BMPS WEEKLY AND SHALL REPAIR OR REPLACE FAILING BMPS. THE CONTRACTOR'S FAILURE TO INSTALL OR MAINTAIN BMPS MAY RESULT IN ENFORCEMENT ACTION. IF INSTALLED BMPS FAIL, THE CONTRACTOR SHALL IMMEDIATELY NOTIFY THE PORT DISTRICT AND THE ENGINEER AND REPAIR OR REPLACE ALL FAILED BMPS WITHIN 72 HOURS, OR SOONER IF SAFE TO DO SO. THE CONTRACTOR SHALL BE LIABLE FOR ANY AND ALL DAMAGES AND FINES DUE TO NON-COMPLIANCE WITH THE SWPPP, BMPS, AND MMRP.

C. THE CONTRACTOR SHALL IMPLEMENT THE SWPPP AND BMPS TO EFFECTIVELY PREVENT OR MINIMIZE THE POTENTIALLY NEGATIVE IMPACTS OF THE WORK ON WATER QUALITY. IF CONTROL MEASURES BEING IMPLEMENTED AT THE PROJECT SITE ARE DETERMINED TO BE INADEQUATE, THE ENGINEER OR THE PORT DISTRICT MAY REQUIRE THE CONTRACTOR TO SELECT AND IMPLEMENT NEW AND/OR ADDITIONAL BMPS AT THE PROJECT SITE, AT NO ADDITIONAL COST TO THE CITY.

D. THESE MEASURES SHALL BE IMPLEMENTED PRIOR TO COMMENCEMENT OF THE WORK AND SHALL REMAIN IN EFFECT FOR THE DURATION OF THE WORK UNTIL SUBSTANTIAL COMPLETION IS ISSUED. ALL SUBCONTRACTORS SHALL BE TRAINED ON THESE PRACTICES PRIOR TO THE COMMENCEMENT OF THE WORK AND SHALL BE HELD TO THESE STANDARDS FOR THE DURATION OF THEIR WORK AT THE PROJECT SITE. CONTRACTOR SHALL PROVIDE THE PORT DISTRICT DOCUMENTATION OF SUBCONTRACTOR EDUCATION OF THESE BMPS. CONTRACTOR SHALL PROVIDE PROOF TO THE ENGINEER OF ON-SITE TRAINING (E.G., TAILGATE, KICK-OFF MEETING) OF SUPERINTENDENT, WORKERS, AND SUBCONTRACTORS IN WRITING WITHIN 5 DAYS OF COMMENCEMENT OF WORK LISTING NAMES AND COMPANY IN A TRAINING ATTENDANCE ROSTER.

E. IMPLEMENT TEMPORARY EROSION CONTROL MEASURES SHOULD WORK AT THE PROJECT SITE CEASE FOR A PERIOD EXCEEDING 10 DAYS. THE CONTRACTOR SHALL MONITOR AND MAINTAIN TEMPORARY EROSION CONTROL MEASURES UNTIL WORK RESUMES AT THE PROJECT SITE.

F. NO DEMOLITION OR CONSTRUCTION MATERIALS, EQUIPMENT, DEBRIS, OR WASTE SHALL BE PLACED OR STORED WHERE IT MAY BE SUBJECT TO INUNDATION, EROSION, OR DISPERSION IN COASTAL WATERS BY WAVE, WIND, OR RAIN OR WHERE IT MAY ENTER A STORM DRAIN.

G. ACTIVE DEWATERING, WHICH IS DEFINED AS REMOVAL OF WATER FROM ANY EXCAVATION OR TRENCH, IS NOT PERMITTED.

H. ERECT 8-FOOT-TALL, CHAIN-LINK FENCING WITH GREEN SCREENING AROUND THE PERIMETER OF THE PROJECT SITE AND STAGING AREAS FOR THE DURATION OF THE WORK. THE CONTRACTOR SHALL NOT WORK OUTSIDE OF WORK LIMIT UNLESS OTHERWISE NOTED ON THE PLANS.

I. UPON COMPLETION OF THE WORK, THE CONTRACTOR SHALL COORDINATE WITH THE PORT DISTRICT TO COMPLETE A VISUAL SITE INSPECTION TO ENSURE NO DEBRIS, TRASH, OR CONSTRUCTION MATERIALS HAVE BEEN LEFT ON SHORE, IN THE WATER, OR ON THE BAY BOTTOM. IF ANY DEBRIS, TRASH, OR CONSTRUCTION MATERIALS ARE FOUND, THE CONTRACTOR SHALL IMMEDIATELY REMOVE AND PROPERLY DISPOSE OF SUCH MATERIAL.

J. UPON COMPLETION OF THE WORK, THE CONTRACTOR SHALL COORDINATE WITH THE PORT DISTRICTTO CERTIFY THAT THE PROJECT HAS NOT CREATED A HAZARD TO NAVIGATION.

STOCKPILES AND STORAGE AREAS

A. NO PORTION OF EXISTING PUBLIC PARKING LOTS OR PUBLIC ON-STREET PARKING AREAS SHALL BE USED FOR THE INTERIM OR OVERNIGHT STORAGE OF CONSTRUCTION EQUIPMENT OR MATERIALS, WITH THE EXCEPTION THAT THE A PORTION OF THE DRISCOLL WHARF PARKING LOT MAY BE USED ON A TEMPORARY BASIS.

B. THE CONSTRUCTION OR WORK AREA, INCLUDING ANY STAGING AREAS, STOCKPILES, AND MATERIAL STORAGE SHALL BE LIMITED TO THE AREAS DESIGNATED ON THE PLANS. ANY ALTERATION TO THE WORK AREAS SHALL BE APPROVED BY THE AND UPDATED ON THE PLANS PRIOR TO IMPLEMENTATION.

C. ALL DEMOLITION CONSTRUCTION EQUIPMENT AND MATERIALS SHALL BE STORED IN PREDESIGNATED STAGING AREAS. STAGING AND STORAGE BEYOND THE PREDESIGNATED AREA LIMITS IS PROHIBITED.

D. STOCKPILES AND OTHER CONSTRUCTION-RELATED MATERIALS SHALL BE PROTECTED FROM BEING TRANSPORTED FROM THE SITE VIA WIND OR WATER.

E. ALL STOCKPILES AND CONSTRUCTION MATERIALS STORED AT THE PROJECT SITE SHALL BE KEPT OFF THE GROUND, COVERED ON ALL SIDES BY A TARP OR IN AN ENCLOSED STORAGE UNIT, AND SHALL BE LOCATED AS FAR AS POSSIBLE FROM DRAIN INLETS AND ALL WATERWAYS. FLOATING DOCK MODULES, GANGWAYS, AND CURED CONCRETE PANELS ARE EXEMPT FROM THE REQUIREMENT TO BE COVERED.

F. ALL TARPS SHALL BE TIED DOWN OR WEIGHTED DOWN WITH SAND OR GRAVEL BAGS TO KEEP THEM SECURE IN WIND AND RAIN. PERIMETER OF ALL STOCKPILES SHALL INCLUDE STRAW WATTLE OR GRAVEL BAGS.

G. DURING CONSTRUCTION OF FACILITIES OVER THE WATER, MATERIALS SHALL BE STORED OFF THE FLOAT DECKS AND COVERED WITH A TARP IF NOT IN USE. ALL EXCESS OR WASTE MATERIALS SHALL BE REMOVED AT THE END OF EACH DAY AND DISPOSED OF IN COVERED RECYCLING AND TRASH CONTAINERS.

RAIN EVENTS

A. DURING CONSTRUCTION OF FACILITIES OVER THE WATER, ALL MATERIALS KEPT ON FLOAT DECKS FOR PERFORMANCE OF THE DAY'S WORK SHALL BE REMOVED FROM THE FLOATS IF RAIN IS IMMINENT OR FORECASTED WITH A 50 OR GREATER CHANCE OF OCCURRENCE.

B. NO WORK SHALL BE PERFORMED DURING A RAIN EVENT IF THE PORT DISTRICT DETERMINES THAT DEMOLITION OR CONSTRUCTION ACTIVITIES WILL CONTAMINATE STORMWATER RUNOFF ENTERING STORM DRAINS OR THE WATERS OF SAN DIEGO BAY.

C. IMMEDIATELY COVER ALL POTENTIAL SOURCES OF POLLUTION WITH A TARP AT THE START OF A RAIN EVENT IF RAIN IS IMMINENT, OR IF RAIN IS FORECASTED WITH A 50 OR GREATER CHANCE OF OCCURRENCE. ALL TARPS SHALL BE TIED DOWN OR WEIGHTED DOWN WITH SAND OR GRAVEL BAGS.

D. A "STANDBY EMERGENCY CREW" SHALL BE ALERTED BY THE CONTRACTOR TO PERFORM EMERGENCY WORK DURING RAIN EVENTS. NECESSARY MATERIALS SHALL BE AVAILABLE ON SITE AND STOCKPILED AT CONVENIENT LOCATIONS TO FACILITATE RAPID CONSTRUCTION OF TEMPORARY DEVICES WHEN RAIN IS IMMINENT.

DEBRIS, WASTE, AND DISCHARGES

A. REMOVE ALL DEMOLITION DEBRIS AND BAY BOTTOM DEBRIS FOUND AFTER DEMOLITION PRIOR TO COMMENCING CONSTRUCTION.

B. ALL DEMOLITION AND CONSTRUCTION WASTE MATERIALS SHALL BE DISPOSED OF IN COVERED TRASH AND RECYCLING CONTAINERS PROVIDED BY THE CONTRACTOR AT THE END OF EACH DAY.

C. DEMOLITION AND CONSTRUCTION WASTES SHALL BE TRANSFERRED TO AN APPROVED DISPOSAL SITE OUTSIDE OF THE COASTAL ZONE. THE CONTRACTOR SHALL COORDINATE WITH EDCO, OR APPROVED COMPARABLE WASTE HAULER, FOR RECYCLING AND WASTE DISPOSAL. A LIST OF OTHER APPROVED CONSTRUCTION RECYCLING CENTERS IS AVAILABLE FROM THE COUNTY OF SAN DIEGO. PROVIDE ALL REQUIRED RECYCLING AND WASTE HANDLING DOCUMENTATION PRIOR TO COMMENCING THE WORK.

D. ANY AND ALL DEBRIS RESULTING FROM DEMOLITION AND CONSTRUCTION ACTIVITIES SHALL BE REMOVED FROM THE PROJECT SITE WITHIN 24 HOURS OF COMPLETION OF CONSTRUCTION.

E. THE CONTRACTOR SHALL ENSURE NO DEBRIS, SOIL, SILT, SAND, SAWDUST, RUBBISH, CEMENT OR CONCRETE WASHINGS, AND OIL OR PETROLEUM PRODUCTS FROM DEMOLITION OR CONSTRUCTION ACTIVITIES SHALL BE ALLOWED TO ENTER INTO OR PLACED WHERE IT MAY BE WASHED BY RAINFALL OR RUNOFF INTO COASTAL WATERS.

F. ANY AND ALL DEMOLITION OR CONSTRUCTION DEBRIS DISCHARGED INTO COASTAL WATERS SHALL BE RETRIEVED IMMEDIATELY AND DISPOSED OF IN A COVERED RECYCLING OR TRASH CONTAINER. THE CONTRACTOR SHALL HAVE AVAILABLE ADEQUATE PERSONNEL AND EQUIPMENT FOR ANY SUCH RETRIEVAL.

G. REASONABLE AND PRUDENT MEASURES SHALL BE TAKEN BY THE CONTRACTOR TO PREVENT ANY DISCHARGE OF FUEL OR OILY WASTE FROM HEAVY MACHINERY, CONSTRUCTION EQUIPMENT, OR POWER TOOLS INTO COASTAL WATERS. THE CONTRACTOR SHALL HAVE ADEQUATE EQUIPMENT AVAILABLE TO CONTAIN ANY SUCH DISCHARGE IMMEDIATELY.

H. NO CONCRETE OR ASPHALT RUBBLE SHALL BE PLACED WITHIN THE EELGRASS RESTORATION SITE, THE WATERS OF SAN DIEGO BAY, OR ANY OTHER WATER BODY. ALL RUBBLE SHALL BE EXPORTED OFFSITE TO AN APPROVED RECYCLING FACILITY.

LANDSIDE BMPS

A. INSTALL GRAVEL BAG BERM, OR SIMILAR BMP IN ACCORDANCE WITH THE SWPPP, AT LIMIT OF WORK PERIMETER UNLESS OTHERWISE NOTED ON THE PLANS. MAINTAIN THE GRAVEL BAG BERMS SO THAT IT REMAINS FUNCTIONAL FOR THE DURATION OF THE WORK.

B. INSTALL OIL-ABSORBENT ROLLS AT THE TOP OF THE LAUNCH RAMP, SEAWALL OPENING, AND ALONG ANY SURFACES SLOPED TOWARD COASTAL WATERS. MAINTAIN THE OIL-ABSORBENT ROLLS FOR THE DURATION OF THE WORK.

C. ERODED SEDIMENTS AND POLLUTANTS SHALL BE RETAINED ON SITE AND SHALL NOT BE TRANSPORTED FROM THE SITE VIA SHEET FLOW, SWALES, AREA DRAINS, NATURAL DRAINAGE COURSE, OR WIND.

D. SEDIMENTS AND OTHER MATERIALS SHALL NOT BE TRACKED FROM THE PROJECT SITE BY VEHICLE TRAFFIC. ACCIDENTAL SEDIMENT DEPOSITIONS SHALL BE SWEPT UP IMMEDIATELY AND SHALL NOT BE WASHED DOWN BY RAIN OR BY ANY OTHER MEANS.

IN-WATER BMPS

A. PRESERVATIVE FOR TIMBER TREATMENTS SHALL BE ALKALINE COPPER QUATERNARY (ACQ) OR AMMONIACAL COPPER ZINC ARSENATE (ACZA), LISTED IN ORDER OF PREFERENCE.

B. MACHINERY OR DEMOLITION CONSTRUCTION MATERIALS NOT ESSENTIAL FOR BRIDGE FOR PERSONAL VEHICLES, PROJECT IMPROVEMENTS SHALL NOT BE ALLOWED AT ANY TIME IN THE SUBTIDAL OR INTERTIDAL ZONE.

C. THE CONTRACTOR SHALL MAINTAIN NO-WAKE SPEEDS FOR ALL VESSELS UTILIZED DURING DEMOLITION AND CONSTRUCTION AND SHALL NOT OPERATE VESSELS IN AREAS SUPPORTING EELGRASS UNLESS REQUIRED TO PERFORM THE WORK SHOWN ON THE PLANS. MAINTAIN THE MINIMUM DISTANCE NECESSARY TO AVOID PROP WASH AND POSSIBLE VESSEL GROUNDING THAT WOULD IMPACT EELGRASS BEDS.

D. WHEN DEMOLITION ACTIVITIES INVOLVE SIGNIFICANT REMOVAL OF STRUCTURES FROM THE WATER, FLOATING BOOMS WITH SILT CURTAINS SHALL BE USED TO CONTAIN DEBRIS AROUND THE STRUCTURE(S). ALL NON-BUOYANT DEBRIS DISCHARGED INTO COASTAL WATERS SHALL BE RECOVERED BY DIVERS AS SOON AS POSSIBLE AFTER LOSS, BUT NO LATER THAN AT THE END OF EACH DAY. CONTRACTORS SHALL HAVE AVAILABLE STAFF AND EQUIPMENT TO COLLECT DEBRIS IN A TIMELY MANNER.

E. FLOATING BOOMS SHALL BE DEPLOYED TO CONTAIN DEBRIS DURING DOCK DEMOLITION, DOCK PLACEMENT, PLATFORM CONSTRUCTION, AND BOAT LAUNCH RAMP CONSTRUCTION ACTIVITIES.

F. FLOATING BOOMS WITH SILT CURTAINS SHALL BE USED TO CONTROL TURBIDITY DURING ROCKWORK ACTIVITIES, DREDGING ACTIVITIES, AND DREDGED MATERIAL PLACEMENT AT THE EELGRASS RESTORATION SITE. THE SILT CURTAIN SHALL BE ANCHORED SECURELY TO TEMPORARILY DRIVEN PIPE STOP TO PREVENT DRIFT THAT COULD IMPACT ADJACENT EELGRASS BEDS. SILT CURTAIN DEPLOYMENT, DREDGING ACTIVITIES, AND DREDGED MATERIAL PLACEMENT AT THE EELGRASS RESTORATION SITES SHALL BE MONITORED BY A QUALIFIED BIOLOGICAL MONITOR APPROVED BY THE PORT DISTRICT TO AVOID ADVERSE EFFECTS TO ADJACENT EELGRASS HABITAT.

G. TURBIDITY PLUMES GENERATED BY DEMOLITION OR CONSTRUCTION ACTIVITIES SHALL BE MONITORED CONTINUOUSLY BY THE CONTRACTOR. ALL TURBIDITY GENERATED BY THE DEMOLITION OR CONSTRUCTION ACTIVITIES SHALL BE CONTAINED WITHIN THE CONFINES OF THE SILT CURTAIN. IF VISIBLE TURBIDITY PLUMES ARE OBSERVED OUTSIDE OF THE PERIMETER OF THE SILT CURTAIN, THE CONTRACTOR SHALL IMMEDIATELY SUSPEND OPERATIONS IN THE AFFECTED AREA UNTIL COMPLIANCE WITH THIS CONDITION IS RESUMED. FOR THE PURPOSE OF MONITORING, TURBIDITY SHALL BE DEFINED AS ANY CHANGE IN THE AMBIENT CONDITION OF CLARITY OF THE WATER COLUMN BY USE OF A SECCHI DISK.

PILE REMOVAL AND DRIVING ACTIVITIES

A. PILE REMOVAL AND DRIVING ACTIVITIES SHALL BE CONDUCTED IN A MANNER THAT MINIMIZES DISTURBANCE TO BENTHIC SUBSTRATES AND TO MARINE LIFE.

B. WHEN REMOVING PILES, THE CONTRACTOR SHALL FIRST HIT OR VIBRATE PILES TO BREAK THE BOND WITH THE SEDIMENT. REMOVE PILES SLOWLY TO MINIMIZE TURBIDITY. ACTIVITIES SHALL BE PERFORMED BETWEEN APRIL 1 AND SEPTEMBER 15 OF A GIVEN YEAR.

D. JETTING OF PILES SHALL BE TO THE DEPTHS SHOWN ON THE PLANS AND LISTED IN THE CONTRACT SPECIFICATIONS. CONTRACTOR SHALL IMPACT DRIVE FINAL 5 FEET TO TIP ELEVATION. JETTING OF PILES SHALL BE IN ACCORDANCE WITH CONTRACT DOCUMENTS AND REQUIREMENTS OF MMRP AND REGULATORY PERMITS.

E. PRIOR TO BEGINNING IMPACT PILE DRIVING ACTIVITIES, THE CONTRACTOR SHALL STRIKE THE PILE WITH 4 SHORT BLOWS FOLLOWED BY A 5-MINUTE DEAD PERIOD TO ENCOURAGE SEA TURTLES TO LEAVE THE PROJECT SITE. PILE DRIVING ACTIVITIES SHALL CEASE IF A SEA TURTLE IS OBSERVED WITHIN A 100-FOOT RADIUS OR IF A MARINE MAMMAL IS OBSERVED WITHIN A 500-FOOT RADIUS OF THE PILE DRIVING PERIMETER. WORK MAY RESUME ONCE THE ANIMALS HAVE LEFT THEIR RESPECTIVE RADII.

CONCRETE PLACEMENT

A. EMPLOY METHODS TO PREVENT PLACEMENT OR DISCHARGE OF CEMENT OR CONCRETE PRODUCTS, CEMENT OR CONCRETE WASHINGS, AND OR CONCRETE DEBRIS INTO STORM DRAINS OR COASTAL WATERS. PREVENTION METHODS INCLUDE LIMITING OVER-WATER CONCRETE WORK AND PROPER DESIGN OF FORMWORK TO PREVENT OVERFLOW OF PLACED CONCRETE. EXEMPT FROM THIS REQUIREMENT ARE CONCRETE AND GROUT FORMULATED FOR IN-WATER PLACEMENT AND CURING OF IN-WATER AND OVER-WATER WORK NOTED ON THE PLANS.

B. EXCESS OR WASTE CONCRETES SHALL NOT BE WASHED INTO ANY STORM DRAINS, PUBLIC WAY, OR THE WATERS OF SAN DIEGO BAY. CONCRETE WASHOUT AREAS SHALL BE PROVIDED AS SHOWN ON THE PLANS AND LOCATED A MINIMUM OF 50 FEET FROM STORM DRAINS AND COASTAL WATERS.

C. NO CONCRETE SHALL BE PLACED IF RAIN IS IMMINENT OR FORECASTED WITH A 50 OR GREATER CHANCE OF OCCURRENCE.

DEMOLITION NOTES:

1. REMOVE EXISTING PIER, PILES, FENDER PILES, AND ASSOCIATED HARDWARE.
2. REMOVE EXISTING DOCK, GANGWAY, GUIDE PILES, AND ASSOCIATED HARDWARE.
3. REMOVE EXISTING ABUTMENT.
4. DISCONNECT AND REMOVE EXISTING ELECTRICAL AND COMMUNICATION PANELS AND BOXES.
5. DISCONNECT AND SHUT-OFF OR CAP EXISTING DOMESTIC WATER LINES.
6. REMOVE EXISTING EXISTING PAVEMENT FOR FIRE WATER LINE WORK AND ELECTRICAL CONDUIT.
7. REMOVE AND STORE EXISTING JIB CRANE FOR RE-USE.

I&R Job No.: 24-111

INTRODUCTION

This hydroacoustic assessment evaluates the effects of underwater sound levels on marine resources caused by construction to redevelop the Shelter Island Commercial Fishing Wharf located at 4918 North Harbor Drive in San Diego, California. Underwater sounds would be generated by pile driving activities, and demolition activities. These sounds could affect fish, sea turtles and marine mammals that may be present in the area.

PROJECT DESCRIPTION

The project site is currently used as a wharf for commercial fishing boat mooring. Driscoll's Wharf is one of two commercial fishing harbors in San Diego Bay. The project site includes both landside and waterside facilities. The landside portions of the project site include surface parking, office buildings, outdoor storage areas, and other facilities that are involved with the fishing industry. The waterside portion of the project site includes piers and docks used to moor, load and off-load commercial fishing vessels. The project is needed to address deficiencies related to the age and condition of structures, and to allow commercial fishing operations to continue within the marina. The existing structures have reached the end of their useful life. To achieve the need and purpose of the proposed project, the following project objectives have been identified:

- Modernize the wharf and marina through improved waterside facilities capable of supporting modern commercial fishing operations.
- Demolish structurally deficient piers and replace with floating docks, gangways, and headwalks that meet current safety standards and are Americans with Disabilities Act (ADA) compliant.
- Allow for the continued operation of commercial fishing, identified as a high-priority use under the California Coastal Act.
- Provide a mix of vessel slip sizes to accommodate a range of commercial fishing vessels.
- Demolish underutilized and deteriorated buildings that are no longer needed.
- Reduce the impact of waves on the shoreline and marina, maintain safe operation of the marina, and prevent future damage from wave action.

STUDY PURPOSE

This study is an assessment of potential underwater sound levels generated by planned construction activities involved with the Shelter Island Commercial Fishing Wharf Redevelopment Project. The study supports regulatory biologists in assessing underwater sound impacts on fish, marine mammals and sea turtles that may be present in the area when construction occurs. This assessment is based on information provided by project designers consisting of a location map, draft layout sheets, estimated pile-driving data, a review of potential construction activities to be conducted at the site, a review of related studies, the modeling, and a quantitative analysis of underwater noise levels. This study focuses on the sound impacts associated with potential pile-driving activities that could affect aquatic species. This study does not address environmental airborne noise impacts that affect people associated with the project.

Consultation will likely be required with agencies, including the National Marine Fisheries Service (NMFS), United States (US) Fish and Wildlife Service, and the California Coastal Commission. Figure 1 shows the regional location of the project and Figure 2 shows the project site.

UNDERWATER SOUNDS FROM PILE-DRIVING ACTIVITIES

Fundamentals of Underwater Noise

Underwater sounds can be expressed in several different physical quantities, such as acoustic energy (joules), power (watts), intensity (watts per unit area) and pressure (pascals or micro pascals). The most common method in which underwater sounds are expressed is in terms of a relative unit of decibels (dB). This is a logarithmic ratio of a physical quantity to a reference quantity. Typically, a sound pressure level is mentioned in terms of dB re 1 micro-Pascal (µPa) underwater or 20 µPa in air. The term 're' is shorthand for the term 'in reference to'.

Several sound level metrics are used to evaluate the effects of underwater sounds on marine life, such as peak sound pressure (Peak), root-mean-square (RMS) sound pressure levels, and sound exposure level (SEL). The various acoustical terms are used in this report, which are defined in Table 1.

The primary sounds of concern produced by the Project are from pile driving. Impact pile driving produces impulsive sounds. Vibratory pile installation and removal produces continuous underwater sounds that are considered non-impulsive. Any demolition that includes chipping are assumed to produce impulsive sounds.

Impact pile driving produces the most extensive sound impacts from this type of project. When a pile-driving hammer strikes a pile, a pulse is created that propagates through the pile and radiates sound into the water, the ground, and the air. Sound pressure pulse as a function of time is referred to as the waveform. In terms of acoustics, these sounds are described by the peak pressure, the root-mean-square (RMS) pressure, and the sound exposure level (SEL). The peak pressure is the highest absolute value of the measured waveform and can be a negative or positive pressure peak. For pile-driving pulses, RMS level is determined by analyzing the waveform and computing the average of the squared pressures over the time that comprises that portion of the waveform containing the sound energy (Richardson et al. 1995; ISO 18406:2017(E).). The pulse RMS has been approximated in the field for pile-driving sounds by measuring the signal with a precision sound level meter set to the "impulse" RMS setting and is typically used to assess impacts to marine mammals. Another measure of the pressure waveform that is used to describe the pulse is the sound energy itself. The total sound energy in the pulse is referred to in many ways, most commonly as the "total energy flux" (Finerran 2002). The "total energy flux" is equivalent to the un-weighted SEL for a plane wave propagating in a free field, a common unit of sound energy used in airborne acoustics to describe short-duration events. The unit used is decibels (dB) re 1 micro pascal $(\mu Pa)^2$-second (sec). In this report, peak pressure levels are expressed as the absolute maximum pressure of a pulse in dB re 1 µPa; however, in other literature, peak pressure levels can take varying forms, such as pascals or pounds per square inch. The total sound energy in an acoustical impulse accumulates over the duration of that pulse and the duration of a pile driving event. Figure 3 illustrates the acoustical characteristics of an underwater pile-driving pulse. Table 1 includes definitions of terms commonly used to describe underwater sounds.

TABLE 1 Definition of Underwater Acoustical Terms

Term	Definition

Peak Sound Pressure (Peak), unweighted (dB), dB re 1 μPa	Peak sound pressure level based on the largest absolute value of the instantaneous sound pressure. This pressure is expressed in this report as a dB (referenced to a pressure of 1 μPa) but can also be expressed in units of pressure, such as μPa or pounds per square inch.
RMS Sound Pressure Level (RMScont) , dB re 1 μPa	For this application, the squared root of the average of the squared pressures over one second. This measure is typically used to assess acoustical impacts on marine mammals from non-impulsive sounds.
RMS Sound Pressure Level, (NMFS Criterion), dB re 1 μPa	The squared root of the average of the squared pressures over the time that comprises that portion of the waveform containing 90 percent of the sound energy for one pile-driving impulse.[1] This measure is typically used to assess acoustical impacts on marine mammals from impulsive sounds.
Pulse SEL (SELpulse), dB re 1 μPa^2-sec	Proportionally equivalent to the time integral of the squared pressure and is described in this report in terms of dB re 1 μPa^2-sec over the duration of the impulse. Similar to the unweighted SEL standardized in airborne acoustics to study noise from single events. Terms commonly used are SELpulse = SEL per pulse or impulse, SELss = SEL per single pile strike.
Cumulative SEL (cSEL)	A measure of the total energy received through a pile-driving event that has many pile strikes (here defined as pile driving that occurs within a day).
Ambient Sound Level	The background sound pressure level at a given location, normally specified as a reference level to study a new intrusive sound source.
Transmission Loss (TL)	Transmission Loss (TL) is the decrease in a sound metric as an acoustic pressure wave propagates away from a source.
Waveforms, μPa over time	A graphical plot illustrating the time history of positive and negative sound pressures of individual pile strikes shown as a plot of μPa over time (i.e., seconds).
Frequency Spectra, dB over frequency range	A graphical plot illustrating the distribution of sound pressure vs. frequency for a waveform; dimension in RMS pressure and defined frequency bandwidth.
Weighted Sound Level, dBx	The sound pressure level, or SPL, in decibels as measured using a filter network that applies adjustments to specific frequencies. For example, the A-weighting filter de-emphasizes the very low and very high frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise. A-weighted sound levels are expressed in decibels as dBA.
Impulsive and non-impulsive sounds	NMFS groups sounds into two categories: Impulsive or Non-Impulsive. NMFS considers sounds such as impact pile driving, blasting, and seismic surveys as impulsive. Other sounds such as drilling and vibratory driving are considered non-impulsive*.

*NMFS = National Marine Fisheries Services

[1] The underwater sound measurement results have indicated that most pile-driving impulses occurred over a 50- to 100-msec period. Most of the energy was contained in the first 30 to 50 msec. Analysis of that underwater acoustic data for various pile strikes at various distances demonstrated that the acoustic signal measured using the standard “impulse exponential-time-weighting” (35-msec rise time) correlated to the RMS (impulse) level.
Notes: msec = millisecond(s)

The variation of instantaneous pressure over the duration of an impulsive sound event is referred to as the waveform. The waveform can provide an indication of rise time or the rapidity with which pressure fluctuates with time; however, rise time differences are not clearly apparent for pile-driving sounds because of the numerous rapid fluctuations that are characteristic of this impulse type. A plot showing the accumulation of sound energy over the duration of the pulse (or at least the portion of time during which much of the energy accumulates) illustrates the differences in source strength and rise time. An example of the underwater acoustical characteristics of a typical pile-driving pulse is shown on Figure 3.

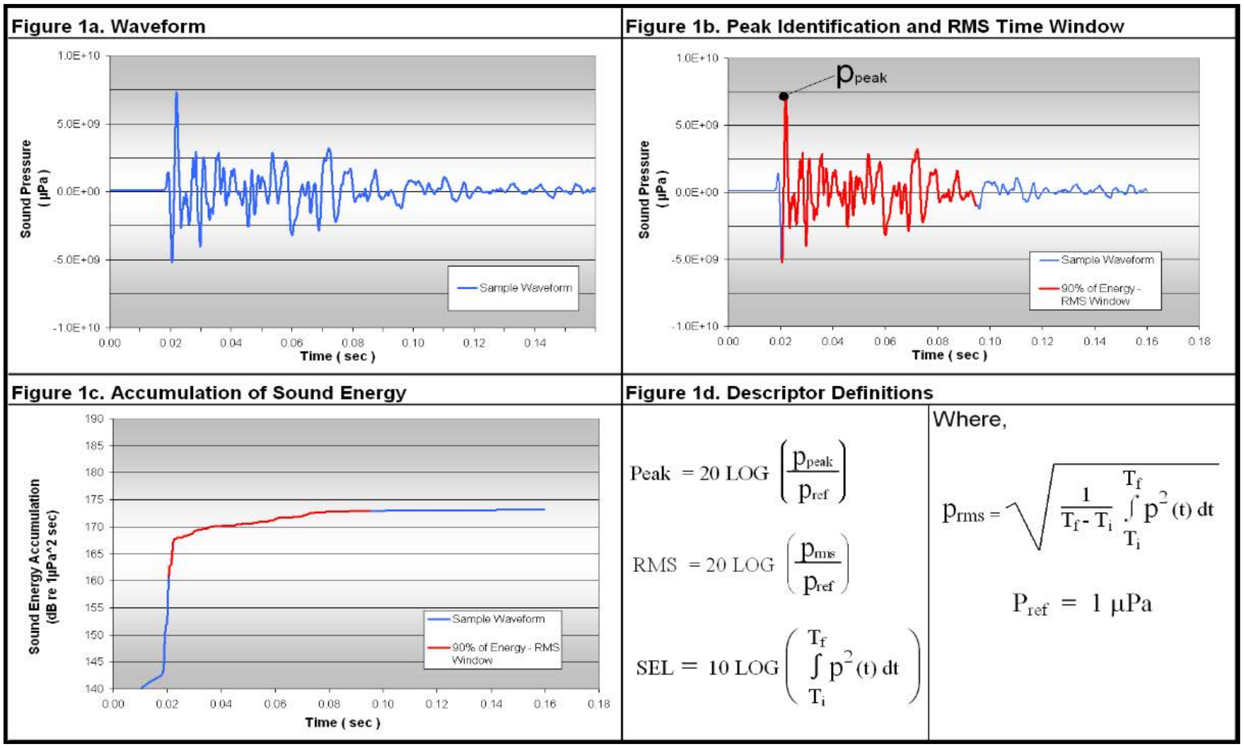
SEL is the acoustic metric that provides an indication of the amount of acoustical energy contained in a sound event. For pile driving, the typical event can be one pile-driving pulse or many pulses, such as pile driving for one pile or for one day of pile driving. Typically, SEL is measured for a single strike and a cumulative condition. The cumulative SEL associated with the driving of a pile can be estimated using the single-strike SEL value and the number of pile strikes through the following equation:

$$SEL_{cumulative} = SEL_{single-strike} + 10log(\#of\ pile\ strikes)$$

For example, if a single-strike SEL for a pile is 165 dB, and it takes 1,000 strikes to drive the pile, the cumulative SEL is 195 dB (165 dB + 30 dB = 195 dB), where 10 * Log_{10}(1000) = 30.

Transmission Loss (TL) is the decrease in a sound metric as an acoustic pressure wave propagates away from a source. The reduction in sound levels as they propagate out from a source may result from a combination of geometric spreading, energy loss to the medium through which the sound propagates, and complex interaction with non-uniformities in the medium transmitting or reflecting the propagating sound. The simplest form of calculating TL for pile driving sources is based on a 15 dB decrease per each 10-fold increase in distance from the source. Point sources are typically on the order of a 20 dB decrease per each 10-fold increase in distance from the source. However, some forms of TL computations include frequency dependent effects. The transmission of sound in shallow waters with complex sound source radiation is intricate.

FIGURE 3 Underwater Acoustical Characteristics of a Pile-Driving Pulse



Underwater Sound Thresholds

<u>Marine Mammals</u>

Under the Marine Mammal Protection Act (16 U.S.C. 1361-1407), NMFS has defined levels of harassment for marine mammals. Level A harassment is defined as "Any act of pursuit, torment, or annoyance which has the potential to injure a marine mammal or marine mammal stock in the wild." Level B harassment is defined as "Any act of pursuit, torment, or annoyance which has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including but not limited to migration, breathing, nursing, breeding, feeding or sheltering."

Sounds in water and air can cause both Level A and B harassment. Impact pile driving produces impulsive sounds that correspond to those that are typically transient, brief (typically less than 1 second), broadband and consist of high peak sound pressure with rapid rise time and decay. Vibratory pile installation or removal is considered non-impulsive or continuous sounds as those that could be broadband, narrowband or tonal, brief or prolonged, continuous or intermittent and usually do not have a high peak sound pressure with rapid rise and decay times (NMFS 2018). NMFS uses behavior thresholds rather than TTS thresholds for assessing Level B harassment for pile driving (NMFS 2023).

Table 2 outlines the latest adopted Level A and Level B (behavioral harassment) criteria. NMFS has provided marine mammal acoustic technical guidance for predicting the onset of permanent threshold shift (PTS) and temporary threshold shifts in marine mammal hearing from sound sources (NMFS 2018). NMFS recently updated the 2018 technical guidance (NMFS 2024). PTS is now referred to as Auditory Injury (AUD INJ) in the new 2024 guidance. Table 2 defines the different marine mammal hearing groups based on their hearing range, adopted by NMFS.

The onset of PTS or AUD INJ is considered by NMFS to be Level A harassment. For impact pile driving, the majority of the acoustic energy is confined to frequencies below 2 kilohertz (kHz), and there is very little energy above 20 kHz. Similarly, much of the acoustic energy for vibratory driving is in the frequency range below 2.5 kHz. The underwater acoustic criteria for cetaceans and phocid and otariid pinnipeds are provided in Table 2. Table 3 lists the functional hearing groups and their hearing ranges as defined by the most recent NMFS guidance (NMFS 2024).

For continuous sounds, NMFS Northwest Region has provided guidance for reporting RMS sound pressure levels (NMFS 2012). RMS levels for non-impulsive sounds are based on continuous RMS measurements with a time-constant of 1 or 10 seconds that are averaged across the entire event. For impulsive sounds, such as impact pile driving, the pulse RMS level is characterized by integrating sound for each acoustic pulse across 90 percent of the acoustic energy in each pulse and taking the median RMS value of all pulses.

The application of the 120-dB RMS threshold for Level B harassment is used to address vibratory pile driving (or pile removal). This level can sometimes be problematic because this threshold level can be either at or below the ambient noise level of certain locations. The project is adjacent to a busy portion of San Diego Bay where most vessels transiting the bay pass by. These include naval, commercial and private watercraft. The U.S. Navy has conducted ambient underwater sound measurements in the area (North San Diego Bay) that characterize the ambient sound environment at 129.2 dB[2] (NAVFAC, 2020). This ambient level is used as a threshold for behavioral impacts (i.e., Level B harassment).

TABLE 2 Underwater Acoustic Criteria for Marine Mammals

Species	Underwater Noise Thresholds (dB re: 1µPa)				
	Non-Impulsive Disturbance Threshold (*Level B Harassment*)	Impulsive Disturbance Threshold (*Level B Harassment*)	Marine Mammal Hearing Group (see Table 4)	AUD INJ SEL_{cum} Threshold Peak – dB re: 1µPa SEL_{cum} – dB re: 1µPa²-sec	
				Impulsive (*Impact Pile Driving*)	Non-Impulsive (*Vibratory Pile Driving*)
Cetaceans	129.2 dB RMS*	160 dB RMS	Low Frequency	222 dB Peak 183 dB SEL_{cum}	197 dB SEL_{cum}
			High Frequency	230 dB Peak 193 dB SEL_{cum}	201 dB SEL_{cum}
			Very High Frequency	202 dB Peak 159 dB SEL_{cum}	181 dB SEL_{cum}
Pinnipeds	129.2 dB RMS*	160 dB RMS	Phocid	223 dB Peak 183 dB SEL_{cum}	195 dB SEL_{cum}

[2] Data from measurement periods in December 2014, December 2015, and April 5, 2016 (Table 49 of the report), which excluded locally influenced sound measurements at active areas, the average median (or L50) SPL over both years was 129.2 dB RMS.

Species	Underwater Noise Thresholds (dB re: 1µPa)				
	Non-Impulsive Disturbance Threshold (*Level B Harassment*)	Impulsive Disturbance Threshold (*Level B Harassment*)	Marine Mammal Hearing Group (see Table 4)	AUD INJ SEL_{cum} Threshold Peak – dB re: 1µPa SEL_{cum} – dB re: $1µPa^2$-sec Impulsive (*Impact Pile Driving*)	Non-Impulsive (*Vibratory Pile Driving*)
			Otariid	230 dB Peak 185 dB SEL_{cum}	199 dB SEL_{cum}

*Threshold is 120 dB or ambient level, whichever is highest. Ambient levels were measured by the U.S. Navy at 129.2 dB in the Project area.

TABLE 3 Definition of Marine Mammal Hearing Groups

Functional Hearing Group	Generalized Hearing Range*
Low-frequency (LF) Cetaceans –baleen whales	7 Hz to 36 kHz
High-frequency (HF) Cetaceans – dolphins, toothed whales, beaked whales, bottlenose whales	150 Hz to 160 kHz
Very high-frequency (VHF) Cetaceans – true porpoises, *kogia*, river dolphins, *Cephalorhynchus*, *Lagenorhynchus cruciger* & *L. australis*	200 Hz to 160 kHz
Phocid Pinnipeds (PW) – true seals, including harbor seals	40 Hz to 90 kHz
Otariid Pinnipeds (OW) – sea lions and fur seals	60 Hz to 68 kHz

***** Represents the generalized hearing range for the entire group as a composite (i.e., all species within the group), where individual species' hearing ranges may not be as broad. Generalized hearing range chosen based on ~65 dB threshold from composite audiogram, previous analysis in NMFS 2018, and/or data from Southall et al. 2007; Southall et al. 2019. Additionally, animals are able to detect very loud sounds above and below that "generalized" hearing range. [*Source: NMFS 2024];* Note: Hz = hertz

<u>Fish</u>

In 2008, NOAA's NMFS; U.S. Fish and Wildlife Service; California, Oregon, and Washington Departments of Transportation; California Department of Fish and Game; and the U.S. Federal Highway Administration agreed in principle to interim criteria to protect fish from pile-driving activities. The agreed-upon criteria are presented in Table 4. These criteria have applied to fish protected under the Endangered Species Act (ESA 16 U.S.C. 1531-1544) or other fish protected under State laws.

TABLE 4 Adopted Fish Criteria (2008)

Interim Criteria for Injury	Sound Levels Agreed-upon in Principle
Peak	206 dB re 1 µPa (for all sizes of fish)
Cumulative SEL	187 dB re 1 $µPa^2$-sec – for fish size of 2 grams or greater[a] 183 dB re 1 $µPa^2$-sec – for fish size of less than 2 grams[a]

[a] Applies to pile strikes of 150 dB SEL (single strike) or greater.

The adopted criteria listed in Table 4 are for pulse-type sounds (e.g., impact pile driving) and do not address sound from vibratory driving. The SEL criteria are not applied to vibratory driving sounds for assessing impacts to fish. The in-water areas with project sound levels above 150 dB RMS are considered by NMFS to be acoustically affected, given possible behavioral changes in fish; however, these levels are not anticipated to trigger any mitigation requirements (Caltrans

2020). There are no thresholds for non-impulsive sounds (e.g., vibratory pile driving) that apply to fishes.

Substantial research has occurred since the establishment of the “2008 interim injury criteria.” This research was synthesized in the 2024 guidance published by Caltrans (2024). This guidance document reports that the 2008 Interim Criteria are excessively conservative and do not reflect current knowledge of the sound levels at which there may be an onset of effects from impact pile driving. The guidance also identifies ANSI-accredited thresholds developed by Popper et al. (2014 and 2019), as the primary injury criteria that should be used for assessing impact pile driving impacts to fish. Furthermore, this recent Caltrans guidance also acknowledges the “2008 interim injury criteria.”

The 2024 Caltrans guidance indicates that the onset of recoverable injury occurs at a peak sound level of 207 dB and a cumulative SEL of 203 dB. Note that Popper et.al., found that temporary threshold shift (TTS) from elevated underwater sound level occur at or above 186 dB cumulative SEL. This is defined as a recoverable effect. The 2024 Caltrans guidance recommends that the 2008 Interim Criteria for injurious sound levels be replaced with these criteria on an interim basis for all impact pile driving projects in California until such time that additional research indicates that further revisions are necessary.

This assessment incorporates results from the 2008 Interim Injury Criteria along with the 2024 Caltrans guidance, ensuring a comprehensive analysis for impacts to fish.

Green Sea Turtles

Green sea turtles are listed as threatened and protected under the Endangered Species Act (16 U.S.C. 1531-1544). NMFS and the U.S. Fish and Wildlife Service oversee the protection of these turtles. Onset of PTS and TTS thresholds are recommended for sea turtles. Table 5 shows the NMFS acoustic thresholds for Sea Turtles (NMFS, 2023).

Table 5 Underwater Acoustic Thresholds for Sea Turtles

Hearing Group	PTS Onset Thresholds[1] for Impulsive Sources	PTS Onset Thresholds[1] for Non-Impulsive Sources	TTS Onset Thresholds[1] for Impulsive Sources	TTS Onset Thresholds[1] for Non-Impulsive Sources	Onset of Behavioral Disturbance[1] for all sources
Sea Turtles	232 dB Peak 204 dB SEL_{cum}	220 dB SEL_{cum}	226 dB Peak 189 dB SEL_{cum}	200 dB SEL_{cum}	175 dB RMS

[1] Peak, RMS – dB re 1 µPa, SEL_{cum} – dB re 1 µPa^2-sec

PROJECT UNDERWATER SOUND-GENERATING ACTIVITIES

The primary type of activity that has the potential to elevate underwater sound levels is the installation of piles using an impact pile driver. This activity could both harass and possibly cause injury to marine mammals, fish and sea turtles. Vibratory pile installation or removal could harass marine mammals if they are present, but to a lesser extent than impact pile driving. Other sounds include those from demolition. For this project, piles are expected to be installed using impact installation. Construction activities that could generate underwater sound are summarized below.

- Pier 4. The proposed improvements entail the replacement of the existing timber pier with a concrete fixed deck pier supported by concrete piles and protected by a fender system. The proposed concrete fixed pier would provide similar functions to the existing structure, which include continuous operations and with nighttime lighting, a jib crane for lifting the ship's catch, gear, equipment, nets, and traps from the berthed ship to the pier deck, and allowance for truck and forklift access over the fixed pier. The proposed pier would be an L-shaped structure with an area of approximately 3,670 square feet (sf). For concrete support piles requiring deeper penetration (i.e., concrete support piles at Pier 4), an impact hammer would be used. Similar to the guide piles (see Piers 5 through 8, below), the number of concrete support piles to be installed per day/week would vary based on the difficulty of the installation process in a given area and the designated number of concrete support piles to be replaced. The number of concrete support piles installed would be 4 piles per day, and 15 to 20 piles per week (assuming 5-day work weeks). For the concrete support piles (12- and 16-inch square piles), the number of pile strikes is estimated to be 120 blows per pile. In the event that jetting is not possible, these may take 240 blows per pile.

- Piers 5 through 8. The project includes the replacement of Piers 5, 6, 7, and 8 with a set of new floating docks, totaling approximately 28,000 sf. The proposed piers would consist of three finger docks, a floating work platform, associated head walks, three pedestrian gangways, one loading ramp, four concrete abutment platform and security gate structures at the shoreline. New concrete piles would be installed to support the new dock configuration. The guide piles (for Piers 5, 6, 7, and 8) would be jetted to 5 feet from tip elevation and then driven by impact hammer to the final depth. The number of guide piles to be installed per day/week would vary based on the difficulty of the installation process in a given area and the designated number of piles to be replaced. Generally, the number of guide piles to be installed per day would be approximately 6 guide piles per day, and 30 per week (assuming 5-day work weeks). For the guide piles, the number of pile strikes is estimated to be 65 blows per pile. In the event that jetting is not possible, these may take 95 blows per pile.

- Floating Wave Attenuator. The 270-foot in length wave attenuator would consist of a concrete deck supported by 24-inch octagonal vertical precast concrete piles. The wave attenuator is proposed to address existing damage and prevent future damage from wave action and to maintain safe operation of the marina. Floating Wave Attenuator piles are guide piles and would be jetted to 5 ft from tip and then impact driven. These are larger and longer piles so may take more blows and fewer per day than Pier 5 to 8 guide piles. This analysis assumes approximately 4 piles per day with 85 blows per pile. In the event that jetting is not possible, these may take 145 blows per pile.

Figure 4 shows the proposed pile layout for the project. Table 6 summarizes the activities that would cause elevated underwater sound levels. Pile driving in the water causes sound energy to radiate directly into the water by vibrating the pile between the surface of the water and the substrate, and indirectly as a result of ground-borne vibration in the substrate. Airborne sound does not make a substantial contribution to underwater sound levels because of the attenuation of sound at the air/water interface.

TABLE 6 Sound Generating Activities for the Proposed Project Using An Impact Hammer Only and No Jetting

Structure	Component Structure	Pile Type	Pile Location	Maximum Strikes per Pile*	Piles per Day	Total Number of Piles
Pier 4	Concrete pier (e.g., concrete pier deck, support piles, floating camels, and fender system)	16-inch square concrete	In Water	240	4	14
		12-inch square concrete	In Water	240	4	16
Pier 5	Guide piles (Concrete)	16-inch round	In Water	95	6	21
	Concrete Platform Piles	12-inch square	In Water	240	4	3
Pier 6	Guide piles (Concrete)	16-inch round	In Water	95	6	4
	Concrete Platform Piles	12-inch square	In Water	240	4	4
Pier 7	Guide piles (Concrete)	16-inch round	In Water	95	6	15
	Concrete Platform Piles	12-inch square	In Water	240	4	4
Pier 8	Guide piles (Concrete)	16-inch round	In Water	95	6	19
	Concrete Platform Piles	12-inch square	In Water	240	4	4
Main Walk	Guide piles (Concrete)	16-inch round	In Water	95	6	15
Floating Wave Attenuator		24-inch square concrete	In Water	145	4	30

*The estimate for the maximum strikes per pile assume that piles would not be jetted in order to present a worst-case scenario in the event jetting is not permitted.

Predicted Underwater Sound Levels from Construction

This assessment predicts underwater sound levels associated with the different in-water construction activities that are anticipated. Construction activities include the impact pile driving of concrete piles. The pulling of concrete or other piles and jetting is not anticipated to generate substantial underwater sound that would be harmful (i.e., sound that would cause injury or some form of harassment).

The prediction of sound levels from pile-driving and other construction activities proposed for this project relies on sound-source data, transmission loss (i.e., reduction of sound with increased distance from source), the type of activity, and the amount of activity. Sound data is based on measured sound levels for similar activities. Table 7 below shows the studies used to aid in predicting underwater sound levels.

The distance to each threshold was computed using the transmission loss coefficient of 15 times the Log_{10} of the distance, as recommended by NMFS when there is no site-specific information for the area.

Underwater Sound Levels from Project Construction Activities

The values in Table 7 are for sound levels measured at 10 meters (m) or 33 feet (ft) from the piles or other construction activities for conditions similar to those that would occur at this project. Detailed information on the measurements that make up these levels below are provided in the references and described below.

TABLE 7 Measured Levels for Activities Generating Underwater Sound Impacts

Driving Method	Pile Type	Size	Sound Pressure Level in dB at 10 m			TL[1]	Notes
			Peak	RMS	SELss		
Impact	Concrete pile in water	12-inch	193	168	160	15	16-in concrete piles driven at Westside Boat Launch Bodega Bay, CA (Caltrans, 2020) [2]
Impact	Concrete pile in water	16-inch					
Impact	Concrete pile in water	24-inch	195	182	168	15	Average of measurements that were conducted for 6 piles on 3 separate days at USCG Homeport LA/LB base in Long Beach

[1] Coefficient of the transmission loss, expressed as a Log_{10} function of the increasing distance from the source.
[2] Insufficient data for 12-inch piles. The data for 16-inch piles is used conservatively as a source level for both 12- and 16-inch piles.

Three types of concrete piles will be driven. These include 12-inch and 24-inch square concrete piles, along with 16-inch round concrete piles. These would be installed by impact hammer. The 12-inch piles would be impact driven. The 16-inch guide piles that would secure the floating docks are planned to be jetted to 5 feet from tip elevation and then impact driven. Piles for the 'Floating Wave Attenuator' will be 24-inch concrete piles that are also planned to be jetted to 5 feet from tip elevation and then impact driven.

The pile driving methods above are described as impact and jetting. Impact driving would generate levels much louder than jetting. Therefore, source levels are based on measurements of impact pile driving sounds made at 10 meters (m) from a similar sized pile.

Caltrans (2020) have published results of sound levels measured for various projects. These levels are also summarized in the NMFS Multi-Species Pile Driving Calculator. Due to a lack of data collected for 12-inch concrete piles, levels measured for the 16-inch concrete piles are used to conservatively assess impacts from both the 12-inch and 16-inch concrete piles. The Westside Boat Launch project at Bodega Bay, California was used as a representative project from the Compendium for source sound levels from impact driving of 16-inch concrete piles.

Underwater sound measurements were recently measured for the impact driving of 24-inch diameter octagonal concrete piles at the United States Coast Guard (USCG) Homeport LA/LB base in Long Beach during wharf construction (Illingworth & Rodkin Inc., 2023). These levels were louder than those reported by Caltrans and the US Navy and are representative of the area. Although source levels were louder than other similar size concrete piles measured and reported by Caltrans (2020), the TL measured for this project was equivalent to a 22 dB decrease in sound per 10-fold increase in distance from the source. This indicates a much greater decrease in sound level than modeling using a Practical Spreading Loss Model recommended by NMFS (2023). Caltrans (2020) data indicates that levels are about 10 to 15 dB lower. The louder sound levels measured for the USCG project were used in this assessment and are likely an overestimate given the range of other sound levels that are considerably lower. Measured levels are peak pressures of 195 dB, RMS pulsed levels of 182 dB and SEL per strike of 168 dB at 10 m.

Weighting Frequency Adjustments

NMFS guidance (2018, 2024) defines frequency dependent marine mammal auditory weighting factor adjustments (WFAs) that reflect hearing or susceptibility to underwater sound-induced hearing loss. The default WFA for impact pile driving is based on a single 1/3rd-octave band frequency adjustment at 2 kHz. For vibratory driving and dredging, the adjustment is at 2.5 kHz. This adjustment is the default setting in the NMFS Users Spreadsheet Tool that is applied to all impact pile driving sounds, regardless of pile type or attenuations effects.

Table 8 provides the WFAs used for modeling sound impacts to marine mammals for each underwater sound producing activity.

TABLE 8 WFAs for Project Construction Activities

Activity	Cetaceans[1]			Pinnipeds[1]	
	LF	HF	VHF	Phocid	Otariid
Impact Piles - Concrete (2kHz) [2]	-0.03	-3.45	-21.19	-0.80	-5.23

[1] See Table 3 for definitions for hearing groups.
[2] Based on NMFS suggested default value for broadband sources.

Acoustic Modeling Inputs

Sound impacts were predicted using the 2024 Multi-Species Pile Driving Calculator (Version 2.0 [2024]) for the different aquatic species. Sound levels reported above for the various activities are used as an input for this model, along with the parameters that describe each activity in terms of duration and frequency content (i.e., WFAs). Duration is described in terms of time for non-impulsive sounds and by the number of pules (e.g., pile strikes) for impulsive sounds. Inputs are based on activity descriptions presented in Tables 6 through 8.

Predicted Underwater Impact Zones

Predicted Impacts on Fishes

Table 9 shows the anticipated distances (in m and in feet[ft]) to the various adopted 2008 interim fish thresholds (NMFS, 2022). Distances are also shown for the 203 dB cumulative SEL threshold recommended by the Caltrans 2024 guidance. Distances are shown for both unattenuated and attenuated piles (5-dB attenuation). The cumulative SEL was computed by adding 10 times the Log_{10} of the number of impact pile strikes to the 10-meter (33-foot) SEL source level provided in Table 7. Impact strikes used in these computations are the sum of the anticipated strikes per pile times the number of piles per day. NMFS applies an “effective quiet” level to the assessment of SEL_{cum} for fish. Piles strikes with SEL less than 150 dB do not accumulate to cause injury. This concept does not apply to computations of impacts to marine mammals nor turtles.

TABLE 9 Distance to Adopted Fish Thresholds for Construction Activities

Method	Pile Type	Size	Piles per Day	Max. No. of Strikes per Pile[a]	Condition	Distance to Adopted Fish Thresholds (m [ft])				
						Peak 206 dB	RMS 150 dB	Cumulative SEL 203 dB	Cumulative SEL 187 dB	Cumulative SEL 183 dB
Impact	Concrete pile in water	12-inch	4	240	Unattenuated No Jetting	--[b]	159 m *[520 ft]*	--[b]	15 m [*51 ft*]	29 m [*94 ft*]
					Unattenuated with Jetting	--[b]	80m [*260 ft*]	--[b]	8 m [*26 ft*]	15 m [*47 ft*]
		16-inch	6	95	Unattenuated No Jetting	--[b]	159 m *[520 ft]*	--[b]	11 m *[36 ft]*	20 m *[66 ft]*
					Unattenuated with Jetting	--[b]	111m [*364 ft*]	--[b]	8 m [*26 ft*]	14 m [*46 ft*]
		24-inch	4	145	Unattenuated No Jetting	--[b]	1,359 m *[4,460 ft]*	--[b]	38 m *[124 ft]*	70 m *[228 ft]*
					Unattenuated with Jetting	--[b]	815 m [*2,675 ft*]	--[b]	23 m [*75 ft*]	42 m [*138 ft*]

[a]Assumes a worst-case scenario where only an impact hammer is used and no jetting is permitted. If jetting is performed, substantially fewer piles strikes would be needed. This would reduce the impact zones for fish that are based on Cumulative SEL values.
[b] Within the near-field of the sound source - < 10 m [33 ft]
Note : Refer to Attachment A for illustration of fish impact distances
Refer to Attachment B for screenshots of NMFS calculator tool used for the impact distances

Predicted Impacts on Marine Mammals

The following threshold distances were computed to assess impacts on marine mammals:

- Distance to onset AUD INJ for each hearing group (considered Level A impacts)

- Distance for unweighted continuous (vibratory) and impulsive (impact driving) behavior isopleth (considered Level B impacts)

The 2024 Multi-Species Pile Driving Calculator (Version 2.0 [2024])[3] was used to predict zones where the onset of AUD INJ to marine mammal hearing could occur. A spreading loss calculation is included in the spreadsheet to predict the distance to the onset AUD INJ from accumulated SEL and peak sound pressure. The spreadsheet incorporates a frequency weighting function that accounts for sensitivity for different hearing groups when computing the accumulated SEL. These are referred to as weighting frequency adjustments. The default weighting frequency adjustments are 2 kHz for impact pile driving and 2.5 kHz for vibratory driving. Because the onset of AUD INJ based on cumulative SEL is computed as further from the pile than it would be using peak sound pressure computations, the onset of AUD INJ is based on SEL computations; therefore, the onset of AUD INJ based on peak sound levels is not provided in this assessment.

The extent of the Level B Zone was calculated using the 10-meter (33-foot) sound levels and applying a transmission loss coefficient of 15 times the Log_{10} of the distance, as recommended by NMFS when there is no site-specific information for the area.

Table 10 presents the anticipated distances to the adopted marine mammal thresholds (Level A and Level B Zones). The peak AUD INJ thresholds that apply to marine mammals will not be reached. Distances are shown for both unattenuated and attenuated pile-driving activities expected from the project, for the estimated number of strikes and piles per day proposed.

[3] Distances to Marine Mammal thresholds also calculated using Optional Multi-Species Pile Driving Calculator 2.0 (2024) - https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-acoustic-technical-guidance . Screenshots of calculated results shown in Attachment B

TABLE 10 Distance to the Adopted Marine Mammal Thresholds for Different Construction Activities – Level A & B zones

Method	Pile Type	Size	Piles per day	Max. No. of strikes or duration per pile[a]	Condition	Level A injury zone (m [ft]) (using SEL_{cum} Threshold)					Level B harassment zone (using RMS)
						Cetaceans			Pinnipeds		
						LF	HF	VHF	PW	OW	
Impact	Concrete pile in water	12-inch	4	240	Unattenuated No Jetting	28 m *[93 ft]*	--[b]	44 m *[144 ft]*	25 m *[83 ft]*	10 m *[33 ft]*	34 m *[112 ft]*
					Unattenuated with Jetting	14 m *[47 ft]*	--[b]	22 m *[72 ft]*	13 m *[42 ft]*	--[b]	
		16-inch	6	95	Unattenuated No Jetting	20 m *[66 ft]*	--[b]	31 m *[102 ft]*	18 m *[58 ft]*	--[b]	34 m *[112 ft]*
					Unattenuated with Jetting	14 m *[47 ft]*	--[b]	22 m *[72 ft]*	13 m *[43 ft]*	--[b]	
		24-inch	4	145	Unattenuated No Jetting	69 m *[227 ft]*	--[b]	107 m *[351 ft]*	62 m *[202 ft]*	23 m *[75 ft]*	293 m *[961 ft]*
					Unattenuated with Jetting	14 m *[47 ft]*	--[b]	64 m *[210 ft]*	37 m *[121 ft]*	16 m *[53 ft]*	

[a]Assumes a worst-case scenario where only an impact hammer is used and no jetting is permitted. If jetting is performed, substantially fewer piles strikes would be needed. This would reduce the impact zones for marine mammals that are based on Cumulative SEL values. .
[b] Within the near-field of the sound source - < 10 m [33 ft]
Note : Refer to Attachment A for illustration of marine mammal impact distances
Refer to Attachment B for screenshots of NMFS calculator tool used for the impact distances

Predicted Impacts to Sea Turtles

Table 11 shows the predicted distances to the sea turtle thresholds as mentioned in Table 5. These distances have been calculated for impact driving and their respective levels expected from the project using the transmission loss coefficients as discussed in Table 7.

TABLE 11 Distance to the Adopted Green Sea Turtle thresholds

Method	Pile Type	Size	Piles per Day	No. of Strikes per Pile[a]	Condition	Distance to Sea Turtle threshold: Peak 232 dB	RMS 175 dB	Cumulative SEL 204 dB[b]	Cumulative SEL 220 dB[c]
Impact	Concrete pile in water	12-inch	4	240	Unattenuated No Jetting	0 m *[0 ft]*	--[d]	--[d]	NA[c]
					Unattenuated with Jetting	0 m *[0 ft]*	--[d]	--[d]	NA[c]
		16-inch	6	95	Unattenuated No Jetting	0 m *[0 ft]*	--[d]	--[d]	NA[c]

		24-inch	4	145	Unattenuated No Jetting	0 m *[0 ft]*	29 m *[96 ft]*	--[d]	NA[c]
					Unattenuated with Jetting	0 m *[0 ft]*	17 m *[58 ft]*	--[d]	NA[c]

[a] Assumes a worst-case scenario where only an impact hammer is used and no jetting is permitted. If jetting is performed, substantially fewer piles strikes would be needed.
[b]For impulsive sound sources
[c] Not applicable since this threshold is for continuous sound sources
[d] Within the near-field of the sound source - < 10 m [33 ft]
Note : Refer to Attachment B Figures for screenshots of NMFS calculator tool used for the impact distances

It is important to note that no values are reported for distances within 10 m (33 ft) of the source for fish, marine mammals and sea turtles because this near-field zone is characterized by complex and highly variable acoustic behavior. Sound levels in this region are not reliably measurable due to interference and other complex effects close to the source. As a result, standard modeling practices and regulatory guidance exclude near-field data (less than 10 m), focusing instead on far-field predictions that more accurately represent potential exposure for fish, marine mammals, and sea turtles.

Effect of Jetting

Piles are planned to be installed by the combination of jetting and impact driving. The predictions of sound levels and associated impact zones are based on a worst-case scenario where jetting is not performed. If jetting is performed, then there would be substantially fewer piles strikes. This would reduce the impact zones for fish and marine mammals that are based on Cumulative SEL values[4]. The reduction in these zones, in terms of radius, would be 50 percent for the Pier 4 support piles, 30 percent for the Piers 5 through 8 guide piles, and 40 percent for the wave attenuator support piles. See Tables 9, 10, and 11 above.

[4] There are no injurious impacts predicted for sea turtles based on a scenario with no jetting.

Attenuation Methods

Impact driving of concrete piles typically includes the use of cushion blocks that reduce sound pressure levels. The unattenuated levels presented in this report include the effect of wood cushion blocks, since they are used to protect the pile. If additional sound reduction is necessary, air bubble curtains, either confined or un-confined, have been shown to reduce sound pressure levels for impact pile driving in water by up to about 5 to 20 dB within 300 m of the pile (Caltrans 2020). The Caltrans guidance recommends a 5-dB reduction be used for calculating the distances to the fish and marine mammal thresholds. The attenuated levels provided in this report are based on the use of an air bubble curtain.

The design of the specific bubble ring configuration depends on several factors, such as the depth of water and the water current. Air bubble curtain systems are commonly used during production pile driving to reduce underwater sound pressures. Typically, a system consists of stacked rings to generate air bubbles throughout the entire water column surrounding the piles, even with currents. It is critical to ensure bubble flux throughout the entire water depth, especially near the bottom. A bubble curtain system is generally composed of air compressors, supply lines to deliver the air, distribution manifolds or headers, perforated aeration pipes, and a frame. The frame is used to facilitate transportation and placement of the system, keep the aeration pipes stable, and provide ballast to counteract the buoyancy of the aeration pipes during pile-driving operations. Bubble curtain designs consist of single or multiple concentric layers of perforated aeration pipes (stacked vertically). Pipes in any layer are arranged in a geometric pattern that allows the pile-driving operation to be completely enclosed by bubbles for the full depth of the water column. The lowest layer of perforated aeration pipe is designed to ensure contact with the mud line without sinking into the bottom substrates. A proper combination of bubble density and closeness of bubbles to the pile is most effective. Numerous smaller bubbles are more effective because they displace more water between the bubbles. Again, this pattern has to be maintained throughout the water column.

While not considered an attenuation method, jetting a pile reduces the number of pile strikes necessary to drive a pile and reduces the area of injurious impacts to marine species. Please see the “Effect of Jetting” discussion provided above.

Illustration of Impacts

Attachment A includes maps displaying the extent of fish injury zones and marine mammal Level A and B Zones, and the maximum extent of the sea turtle behavioral disturbance zone around the proposed project site for the construction activities proposed. Attachment B includes screenshots from the *NMFS Multi-Species Calculator* (October 2024) tool for the construction activities proposed that was used to calculate distances to fish, marine mammal and sea turtle thresholds.

Dredging Impacts

This section discusses the extent of potential hydroacoustic impacts associated with 111,451 square feet of dredging operations that could occur as part of the mitigation strategies implemented for the project. According to Discovery of Sound in the Sea (DOSITS, 2021), dredging is an excavation activity that involves removing materials from the seafloor, lake bottoms, riverbeds, harbors, and other water bodies. The depth of navigation channels and harbors needs to be maintained over time or in some cases increased if vessels use the area. Other purposes for dredging include flood and storm protection, extraction of mineral resources, fishing for benthic animals, and removal of contaminated sediments.

A variety of techniques are used for dredging. Mechanical dredging involves the use of a crane-operated grab or bucket to remove seabed materials. Hydraulic (suction) dredging works by sucking a mixture of dredged material and water from the seabed through a suction pipe that may or may not have a tool at its end ("drag head") to disturb and/or break up bottom materials. Underwater measurements of noise generated by dredging vessels are limited. The main processes that contribute to noise associated with dredging are collection noise, pump noise, transport noise (material being lifted from the seafloor to the dredger), deposition noise (placing material within a barge or hopper), and ship/machinery noise from the dredging vessel itself. In general, dredging produces continuous, broadband sound concentrated at or below 1 kHz. Sound pressure levels can vary widely depending on dredger type, operational stage, or environmental conditions. Noise levels also depend on the materials being extracted, with harder sediment extraction generating higher noise levels than loose or soft sediment extraction (DOSITS, 2021).

For this project, a "mechanical" dredging operation is assumed, that typically involves using a grab dredge (commonly referred to as a clamshell or bucket dredge). This activity is a stationary operation, where grab dredges are held in place with spuds or anchors. Often several scows are used to store and transport the dredged material for placement with intermittent use of vessels (e.g., tugs) to move scows for disposal. Typical sound generating activities involve the bucket striking the bottom and opening/closing, winching, and dumping material on to the scow. Occasional movement of scows generate sounds from vessel activity, while other dredging operations temporarily cease. The USACE (Suedel et al., 2019) and Mc Queen et al. (2018) report sound levels of 107 to 124 dB at 150 m. Propagating the sound back to the source yields a maximum level of 157 dB at 1 m.

Dredging sounds are treated as non-impulsive sounds**.** As a result, the extent of dredging sound impacts was assessed with the criteria presented for non-impulsive sounds. Auditory injury impacts to fish, marine mammals (Level A) and sea turtles are not expected beyond 10 m (33 ft). Behavioral effects for marine mammals would be limited to 71 m (233 ft).

AIRBORNE NOISE LEVELS FROM PROJECT PILE DRIVING

Fundamentals of Airborne Noise

Airborne sound is treated slightly differently than underwater sound. For example, the decibel scale used to express airborne sounds reference an acoustic pressure of 20 µPa rather than 1µPa, as 20µPa is the threshold of healthy human hearing. Sound transmission in air from a single source (i.e., a "point" source) radiates uniformly outward in a more spherical pattern as it travels away from the source since the propagating field is less bounded. The sound level attenuates (or drops off) at a rate of 6 dBA for each doubling of distance. This is expressed as a logarithmic function, where sound decreases 20 dB for each 10-fold increase in distance. Usually, the noise path between the source and the observer is very close to the ground. Noise attenuation from ground absorption and reflective wave canceling adds to the rate of attenuation. Traditionally, the excess attenuation has also been expressed in terms of attenuation per doubling of distance. This approximation is done for simplification only; for distances of less than 300 feet, prediction results based on this scheme are sufficiently accurate. For acoustically "hard" sites (i.e., sites with a reflective surface, such as a smooth body of water, between the source and the receiver), no excess ground attenuation is assumed. Sounds generated from construction activities are considered point sources, rather than a line source such as a freeway or roadway. The marine environment around the project site is mostly water and would be considered a "hard" site.

Airborne Noise Thresholds

In-air acoustic impacts are only considered for marine mammals that would haul out of the water. Therefore, pinnipeds (seals and sea lions) are considered but cetaceans (whales, dolphins, and porpoises) are not. NMFS (2023) states the following (Table 12) in-air behavioral thresholds for marine mammals.

Table 12 In-Air Onset of Behavioral Disturbance Acoustic Thresholds

Species/Group	Threshold (RMS, unweighted)[1]
Harbor Seal	90 dB re 20 µPa
All other pinnipeds	100 dB re 20 µPa

[1] Note: Sound levels underwater (re: 1 µPa) have a different reference pressure compared to in-air sounds (re: 20 µPa)

According to the latest 2024 NMFS guidance, there have been changes in the criteria used to evaluate impacts to Phocid and Otariid Pinnipeds. Table 13 shows the auditory injury criteria for the respective Pinnipeds.

Table 13 In-Air Onset of Auditory Injury (2024 NMFS Guidance)

Species/Group	Threshold[1]	
	Impulsive	Non-impulsive
Phocid Pinnipeds	162 dB Peak 140 dB Cumulative SEL[2]	154 dB Cumulative SEL[2]
Otariid Pinnipeds	177 dB Peak 163 dB Cumulative SEL[2]	177 dB Cumulative SEL[2]

[1] Note: Peak sound pressure has a reference value of 20 µPa (in air) and weighted cumulative sound exposure level has a reference value of 20 µPa²s (in air).
[2] The recommended accumulation period is 24 hours

Airborne Noise Source Levels

Impact pile driving sound levels for 24-inch concrete piles are based on measurements that were conducted at the USCG Homeport LA/LB base in Long Beach, California. These measurements recorded sound levels of 95 dBA at 100 feet (97 dB unweighted). This report utilizes these sound levels to characterize the airborne sounds generated by impact driving of all concrete piles associated with the proposed construction.

Airborne Impacts from Impact Pile Driving and Rock Chipping Concrete Demolition

The airborne source sound levels were used to calculate a 24-hour cumulative SEL for the concrete piles. The 24-hour cumulative SEL for concrete piles would be 137 dB at 15 m (50 ft). Table 14 shows the distances to the Auditory Injury and Behavioral thresholds.

TABLE 14 Distance to Airborne Thresholds for Impact Driving

Pile type	Species/Hearing Group	Distance (meters)			
		Auditory Injury Thresholds[1]		Behavioral Thresholds[1]	
		Peak 162 dB Phocid 177 dB Otariid	$SEL_{cum, 24h}$ 140 dB Phocid 163 dB Otariid	100 dB RMS	90 dB RMS
24-in Concrete Pile	Phocid Pinnipeds (including harbor seals)	--[2]	11	22	69
	Otariid Pinnipeds	--[2]	--[2]		

[1] Peak sound pressure and RMS has a reference value of 20 µPa (in air) while the weighted cumulative sound exposure level has a reference value of 20 µPa²s (in air).
[2] Within the near-field of the sound source - < 15 m [50 ft]

INTRODUCTION

This hydroacoustic assessment evaluates the effects of underwater sound levels on marine resources caused by construction to redevelop the Shelter Island Commercial Fishing Wharf located at 4918 North Harbor Drive in San Diego, California. Underwater sounds would be generated by pile driving activities, and demolition activities. These sounds could affect fish, sea turtles and marine mammals that may be present in the area.

PROJECT DESCRIPTION

The project site is currently used as a wharf for commercial fishing boat mooring. Driscoll's Wharf is one of two commercial fishing harbors in San Diego Bay. The project site includes both landside and waterside facilities. The landside portions of the project site include surface parking, office buildings, outdoor storage areas, and other facilities that are involved with the fishing industry. The waterside portion of the project site includes piers and docks used to moor, load and off-load commercial fishing vessels. The project is needed to address deficiencies related to the age and condition of structures, and to allow commercial fishing operations to continue within the marina. The existing structures are reaching the end of their useful life. To achieve the need and purpose of the proposed project, the following project objectives have been identified:

- Modernize the wharf and marina through improved waterside facilities capable of supporting modern commercial fishing operations.
- Demolish structurally deficient piers and replace with floating docks, gangways, and headwalks that meet current safety standards and are Americans with Disabilities Act (ADA) compliant.
- Allow for the continued operation of commercial fishing, identified as a high-priority use under the California Coastal Act.
- Provide a mix of vessel slip sizes to accommodate a range of commercial fishing vessels.
- Demolish underutilized and deteriorated buildings that are no longer needed.
- Reduce the impact of waves on the shoreline and marina, maintain safe operation of the marina, and prevent future damage from wave action.

STUDY PURPOSE

This study is an assessment of potential underwater sound levels generated by planned construction activities involved with the Shelter Island Commercial Fishing Wharf Redevelopment Project. The study supports regulatory biologists in assessing underwater sound impacts on fish, marine mammals and sea turtles that may be present in the area when construction occurs. This assessment is based on information provided by project designers consisting of a location map, draft layout sheets, estimated pile-driving data, a review of potential construction activities to be conducted at the site, a review of related studies, the modeling, and a quantitative analysis of underwater noise levels. This study focuses on the sound impacts associated with potential pile-driving activities that could affect aquatic species. This study does not address environmental airborne noise impacts that affect people associated with the project.

Consultation will likely be required with agencies, including the National Marine Fisheries Service (NMFS), United States (US) Fish and Wildlife Service, and the California Coastal Commission. Figure 1 shows the regional location of the project and Figure 2 shows the project site.

UNDERWATER SOUNDS FROM PILE-DRIVING ACTIVITIES

Fundamentals of Underwater Noise

Underwater sounds can be expressed in several different physical quantities, such as acoustic energy (joules), power (watts), intensity (watts per unit area) and pressure (pascals or micro pascals). The most common method in which underwater sounds are expressed is in terms of a relative unit of decibels (dB). This is a logarithmic ratio of a physical quantity to a reference quantity. Typically, a sound pressure level is mentioned in terms of dB re 1 micro-Pascal (µPa) underwater or 20 µPa in air. The term 're' is shorthand for the term 'in reference to'.

Several sound level metrics are used to evaluate the effects of underwater sounds on marine life, such as peak sound pressure (Peak), root-mean-square (RMS) sound pressure levels, and sound exposure level (SEL). The various acoustical terms are used in this report, which are defined in Table 1.

The primary sounds of concern produced by the Project are from pile driving. Impact pile driving produces impulsive sounds. Vibratory pile installation and removal produces continuous underwater sounds that are considered non-impulsive. Any demolition that includes chipping are assumed to produce impulsive sounds.

Impact pile driving produces the most extensive sound impacts from this type of project. When a pile-driving hammer strikes a pile, a pulse is created that propagates through the pile and radiates sound into the water, the ground, and the air. Sound pressure pulse as a function of time is referred to as the waveform. In terms of acoustics, these sounds are described by the peak pressure, the root-mean-square (RMS) pressure, and the sound exposure level (SEL). The peak pressure is the highest absolute value of the measured waveform and can be a negative or positive pressure peak. For pile-driving pulses, RMS level is determined by analyzing the waveform and computing the average of the squared pressures over the time that comprises that portion of the waveform containing the sound energy (Richardson et al. 1995; ISO 18406:2017(E).). The pulse RMS has been approximated in the field for pile-driving sounds by measuring the signal with a precision sound level meter set to the "impulse" RMS setting and is typically used to assess impacts to marine mammals. Another measure of the pressure waveform that is used to describe the pulse is the sound energy itself. The total sound energy in the pulse is referred to in many ways, most commonly as the "total energy flux" (Finerran 2002). The "total energy flux" is equivalent to the un-weighted SEL for a plane wave propagating in a free field, a common unit of sound energy used in airborne acoustics to describe short-duration events. The unit used is decibels (dB) re 1 micro pascal $(\mu Pa)^2$-second (sec). In this report, peak pressure levels are expressed as the absolute maximum pressure of a pulse in dB re 1 µPa; however, in other literature, peak pressure levels can take varying forms, such as pascals or pounds per square inch. The total sound energy in an acoustical impulse accumulates over the duration of that pulse and the duration of a pile driving event. Figure 3 illustrates the acoustical characteristics of an underwater pile-driving pulse. Table 1 includes definitions of terms commonly used to describe underwater sounds.

TABLE 1 Definition of Underwater Acoustical Terms

Term	Definition
Peak Sound Pressure (Peak), unweighted (dB), dB re 1 μPa	Peak sound pressure level based on the largest absolute value of the instantaneous sound pressure. This pressure is expressed in this report as a dB (referenced to a pressure of 1 μPa) but can also be expressed in units of pressure, such as μPa or pounds per square inch.
RMS Sound Pressure Level (RMScont) , dB re 1 μPa	For this application, the squared root of the average of the squared pressures over one second. This measure is typically used to assess acoustical impacts on marine mammals from non-impulsive sounds.
RMS Sound Pressure Level, (NMFS Criterion), dB re 1 μPa	The squared root of the average of the squared pressures over the time that comprises that portion of the waveform containing 90 percent of the sound energy for one pile-driving impulse.[1] This measure is typically used to assess acoustical impacts on marine mammals from impulsive sounds.
Pulse SEL (SELpulse), dB re 1 μPa^2-sec	Proportionally equivalent to the time integral of the squared pressure and is described in this report in terms of dB re 1 μPa^2-sec over the duration of the impulse. Similar to the unweighted SEL standardized in airborne acoustics to study noise from single events. Terms commonly used are SELpulse = SEL per pulse or impulse, SELss = SEL per single pile strike.
Cumulative SEL (cSEL)	A measure of the total energy received through a pile-driving event that has many pile strikes (here defined as pile driving that occurs within a day).
Ambient Sound Level	The background sound pressure level at a given location, normally specified as a reference level to study a new intrusive sound source.
Transmission Loss (TL)	Transmission Loss (TL) is the decrease in a sound metric as an acoustic pressure wave propagates away from a source.
Waveforms, μPa over time	A graphical plot illustrating the time history of positive and negative sound pressures of individual pile strikes shown as a plot of μPa over time (i.e., seconds).
Frequency Spectra, dB over frequency range	A graphical plot illustrating the distribution of sound pressure vs. frequency for a waveform; dimension in RMS pressure and defined frequency bandwidth.
Weighted Sound Level, dBx	The sound pressure level, or SPL, in decibels as measured using a filter network that applies adjustments to specific frequencies. For example, the A-weighting filter de-emphasizes the very low and very high frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise. A-weighted sound levels are expressed in decibels as dBA.
Impulsive and non-impulsive sounds	NMFS groups sounds into two categories: Impulsive or Non-Impulsive. NMFS considers sounds such as impact pile driving, blasting, and seismic surveys as impulsive. Other sounds such as drilling and vibratory driving are considered non-impulsive*.

*NMFS = National Marine Fisheries Services

[1] The underwater sound measurement results have indicated that most pile-driving impulses occurred over a 50- to 100-msec period. Most of the energy was contained in the first 30 to 50 msec. Analysis of that underwater acoustic data for various pile strikes at various distances demonstrated that the acoustic signal measured using the standard “impulse exponential-time-weighting” (35-msec rise time) correlated to the RMS (impulse) level.
Notes: msec = millisecond(s)

The variation of instantaneous pressure over the duration of an impulsive sound event is referred to as the waveform. The waveform can provide an indication of rise time or the rapidity with which pressure fluctuates with time; however, rise time differences are not clearly apparent for pile-driving sounds because of the numerous rapid fluctuations that are characteristic of this impulse type. A plot showing the accumulation of sound energy over the duration of the pulse (or at least the portion of time during which much of the energy accumulates) illustrates the differences in source strength and rise time. An example of the underwater acoustical characteristics of a typical pile-driving pulse is shown on Figure 3.

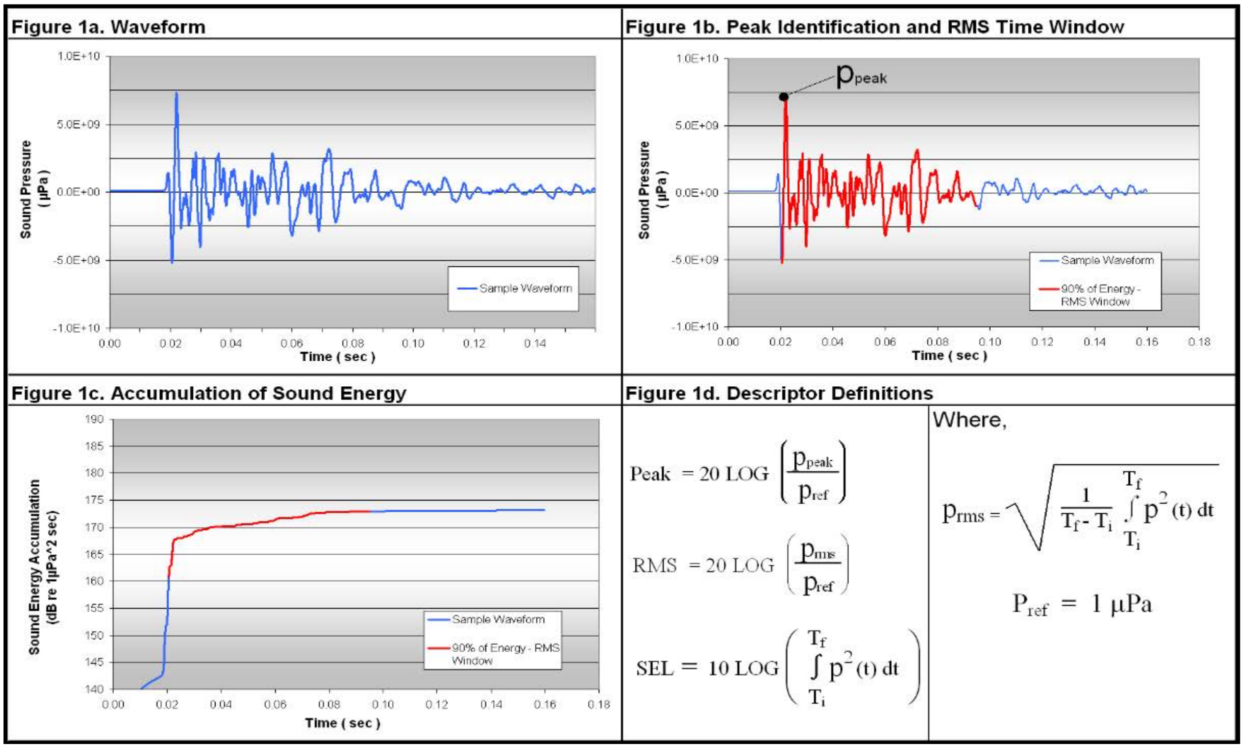
SEL is the acoustic metric that provides an indication of the amount of acoustical energy contained in a sound event. For pile driving, the typical event can be one pile-driving pulse or many pulses, such as pile driving for one pile or for one day of pile driving. Typically, SEL is measured for a single strike and a cumulative condition. The cumulative SEL associated with the driving of a pile can be estimated using the single-strike SEL value and the number of pile strikes through the following equation:

$$SEL_{cumulative} = SEL_{single-strike} + 10log(\#of\ pile\ strikes)$$

For example, if a single-strike SEL for a pile is 165 dB, and it takes 1,000 strikes to drive the pile, the cumulative SEL is 195 dB (165 dB + 30 dB = 195 dB), where 10 * Log_{10}(1000) = 30.

Transmission Loss (TL) is the decrease in a sound metric as an acoustic pressure wave propagates away from a source. The reduction in sound levels as they propagate out from a source may result from a combination of geometric spreading, energy loss to the medium through which the sound propagates, and complex interaction with non-uniformities in the medium transmitting or reflecting the propagating sound. The simplest form of calculating TL for pile driving sources is based on a 15 dB decrease per each 10-fold increase in distance from the source. Point sources are typically on the order of a 20 dB decrease per each 10-fold increase in distance from the source. However, some forms of TL computations include frequency dependent effects. The transmission of sound in shallow waters with complex sound source radiation is intricate.

FIGURE 3 Underwater Acoustical Characteristics of a Pile-Driving Pulse



Underwater Sound Thresholds

<u>Marine Mammals</u>

Under the Marine Mammal Protection Act (16 U.S.C. 1361-1407), NMFS has defined levels of harassment for marine mammals. Level A harassment is defined as "Any act of pursuit, torment, or annoyance which has the potential to injure a marine mammal or marine mammal stock in the wild." Level B harassment is defined as "Any act of pursuit, torment, or annoyance which has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including but not limited to migration, breathing, nursing, breeding, feeding or sheltering."

Sounds in water and air can cause both Level A and B harassment. Impact pile driving produces impulsive sounds that correspond to those that are typically transient, brief (typically less than 1 second), broadband and consist of high peak sound pressure with rapid rise time and decay. Vibratory pile installation or removal is considered non-impulsive or continuous sounds as those that could be broadband, narrowband or tonal, brief or prolonged, continuous or intermittent and usually do not have a high peak sound pressure with rapid rise and decay times (NMFS 2018). NMFS uses behavior thresholds rather than TTS thresholds for assessing Level B harassment for pile driving (NMFS 2023).

Table 2 outlines the latest adopted Level A and Level B (behavioral harassment) criteria. NMFS has provided marine mammal acoustic technical guidance for predicting the onset of permanent threshold shift (PTS) and temporary threshold shifts in marine mammal hearing from sound sources (NMFS 2018). NMFS recently updated the 2018 technical guidance (NMFS 2024). PTS is now referred to as Auditory Injury (AUD INJ) in the new 2024 guidance. Table 2 defines the different marine mammal hearing groups based on their hearing range, adopted by NMFS.

The onset of PTS or AUD INJ is considered by NMFS to be Level A harassment. For impact pile driving, the majority of the acoustic energy is confined to frequencies below 2 kilohertz (kHz), and there is very little energy above 20 kHz. Similarly, much of the acoustic energy for vibratory driving is in the frequency range below 2.5 kHz. The underwater acoustic criteria for cetaceans and phocid and otariid pinnipeds are provided in Table 2. Table 3 lists the functional hearing groups and their hearing ranges as defined by the most recent NMFS guidance (NMFS 2024).

For continuous sounds, NMFS Northwest Region has provided guidance for reporting RMS sound pressure levels (NMFS 2012). RMS levels for non-impulsive sounds are based on continuous RMS measurements with a time-constant of 1 or 10 seconds that are averaged across the entire event. For impulsive sounds, such as impact pile driving, the pulse RMS level is characterized by integrating sound for each acoustic pulse across 90 percent of the acoustic energy in each pulse and taking the median RMS value of all pulses.

The application of the 120-dB RMS threshold for Level B harassment is used to address vibratory pile driving (or pile removal). This level can sometimes be problematic because this threshold level can be either at or below the ambient noise level of certain locations. The project is adjacent to a busy portion of San Diego Bay where most vessels transiting the bay pass by. These include naval, commercial and private watercraft. The U.S. Navy has conducted ambient underwater sound measurements in the area (North San Diego Bay) that characterize the ambient sound environment at 129.2 dB[2] (NAVFAC, 2020). This ambient level is used as a threshold for behavioral impacts (i.e., Level B harassment).

TABLE 2 Underwater Acoustic Criteria for Marine Mammals

	Underwater Noise Thresholds (dB re: 1µPa)				
Species	**Non-Impulsive Disturbance Threshold (*Level B Harassment*)**	**Impulsive Disturbance Threshold (*Level B Harassment*)**	**Marine Mammal Hearing Group (see Table 4)**	**AUD INJ SEL_{cum} Threshold Peak – dB re: 1µPa SEL_{cum} – dB re: 1µPa^2-sec**	
				Impulsive (*Impact Pile Driving*)	**Non-Impulsive (*Vibratory Pile Driving*)**
Cetaceans	129.2 dB RMS*	160 dB RMS	Low Frequency	222 dB Peak 183 dB SEL_{cum}	197 dB SEL_{cum}
			High Frequency	230 dB Peak 193 dB SEL_{cum}	201 dB SEL_{cum}

[2] Data from measurement periods in December 2014, December 2015, and April 5, 2016 (Table 49 of the report), which excluded locally influenced sound measurements at active areas, the average median (or L50) SPL over both years was 129.2 dB RMS.

Species	Underwater Noise Thresholds (dB re: 1µPa)				
	Non-Impulsive Disturbance Threshold (***Level B Harassment***)	**Impulsive Disturbance Threshold** (***Level B Harassment***)	**Marine Mammal Hearing Group** (**see Table 4**)	**AUD INJ SEL_{cum} Threshold** **Peak – dB re: 1µPa** **SEL_{cum} – dB re: 1µPa^2-sec**	
				Impulsive (***Impact Pile Driving***)	**Non-Impulsive** (***Vibratory Pile Driving***)
			Very High Frequency	202 dB Peak 159 dB SEL_{cum}	181 dB SEL_{cum}
Pinnipeds	129.2 dB RMS*	160 dB RMS	Phocid	223 dB Peak 183 dB SEL_{cum}	195 dB SEL_{cum}
			Otariid	230 dB Peak 185 dB SEL_{cum}	199 dB SEL_{cum}

*Threshold is 120 dB or ambient level, whichever is highest. Ambient levels were measured by the U.S. Navy at 129.2 dB in the Project area.

TABLE 3 Definition of Marine Mammal Hearing Groups

Functional Hearing Group	Generalized Hearing Range*
Low-frequency (LF) Cetaceans –baleen whales	7 Hz to 36 kHz
High-frequency (HF) Cetaceans – dolphins, toothed whales, beaked whales, bottlenose whales	150 Hz to 160 kHz
Very high-frequency (VHF) Cetaceans – true porpoises, *kogia*, river dolphins, *Cephalorhynchus*, *Lagenorhynchus cruciger* & *L. australis*	200 Hz to 165 kHz
Phocid Pinnipeds (PW) – true seals, including harbor seals	40 Hz to 90 kHz
Otariid Pinnipeds (OW) – sea lions and fur seals	60 Hz to 68 kHz

***** Represents the generalized hearing range for the entire group as a composite (i.e., all species within the group), where individual species' hearing ranges may not be as broad. Generalized hearing range chosen based on ~65 dB threshold from composite audiogram, previous analysis in NMFS 2018, and/or data from Southall et al. 2007; Southall et al. 2019. Additionally, animals are able to detect very loud sounds above and below that "generalized" hearing range. [*Source: NMFS 2024];* Note: Hz = hertz

Fish

In 2008, NOAA's NMFS; U.S. Fish and Wildlife Service; California, Oregon, and Washington Departments of Transportation; California Department of Fish and Game; and the U.S. Federal Highway Administration agreed in principle to interim criteria to protect fish from pile-driving activities. The agreed-upon criteria are presented in Table 4. These criteria have applied to fish protected under the Endangered Species Act (ESA 16 U.S.C. 1531-1544) or other fish protected under State laws.

TABLE 4 Adopted Fish Criteria (2008)

Interim Criteria for Injury	Sound Levels Agreed-upon in Principle
Peak	206 dB re 1 µPa (for all sizes of fish)
Cumulative SEL	187 dB re 1 µPa^2-sec – for fish size of 2 grams or greater[a] 183 dB re 1 µPa^2-sec – for fish size of less than 2 grams[a]

[a] Applies to pile strikes of 150 dB SEL (single strike) or greater.

The adopted criteria listed in Table 4 are for pulse-type sounds (e.g., impact pile driving) and do not address sound from vibratory driving. The SEL criteria are not applied to vibratory driving sounds for assessing impacts to fish. The in-water areas with project sound levels above 150 dB RMS are considered by NMFS to be acoustically affected, given possible behavioral changes in fish; however, these levels are not anticipated to trigger any mitigation requirements (Caltrans 2020). There are no thresholds for non-impulsive sounds (e.g., vibratory pile driving) that apply to fishes.

Substantial research has occurred since the establishment of the “2008 interim injury criteria.” This research was synthesized in the 2024 guidance published by Caltrans (2024). This guidance document reports that the 2008 Interim Criteria are excessively conservative and do not reflect current knowledge of the sound levels at which there may be an onset of effects from impact pile driving. The guidance also identifies ANSI-accredited thresholds developed by Popper et al. (2014 and 2019), as the primary injury criteria that should be used for assessing impact pile driving impacts to fish. Furthermore, this recent Caltrans guidance also acknowledges the “2008 interim injury criteria.”

The 2024 Caltrans guidance indicates that the onset of recoverable injury occurs at a peak sound level of 207 dB and a cumulative SEL of 203 dB. Note that Popper et.al., found that temporary threshold shift (TTS) from elevated underwater sound level occur at or above 186 dB cumulative SEL. This is defined as a recoverable effect. The 2024 Caltrans guidance recommends that the 2008 Interim Criteria for injurious sound levels be replaced with these criteria on an interim basis for all impact pile driving projects in California until such time that additional research indicates that further revisions are necessary.

This assessment incorporates results from the 2008 Interim Injury Criteria along with the 2024 Caltrans guidance, ensuring a comprehensive analysis for impacts to fish.

<u>Green Sea Turtles</u>

Green sea turtles are listed as threatened and protected under the Endangered Species Act (16 U.S.C. 1531-1544). NMFS and the U.S. Fish and Wildlife Service oversee the protection of these turtles. Onset of AUD INJ, TTS thresholds and Behavioral Disturbance are recommended for sea turtles. Table 5 shows the NMFS acoustic thresholds for Sea Turtles (NMFS, 2025a).

Table 5 Underwater Acoustic Thresholds for Sea Turtles

Hearing Group	PTS Onset Thresholds[1] for Impulsive Sources	PTS Onset Thresholds[1] for Non-Impulsive Sources	TTS Onset Thresholds[1] for Impulsive Sources	TTS Onset Thresholds[1] for Non-Impulsive Sources	Onset of Behavioral Disturbance[1] for all sources
Sea Turtles	230 dB Peak 184 dB SEL_{cum}	198 dB SEL_{cum}	224 dB Peak 169 dB SEL_{cum}	178 dB SEL_{cum}	175 dB RMS

1 Peak, RMS – dB re 1 µPa, SEL_{cum} – dB re 1 μPa^2-sec

PROJECT UNDERWATER SOUND-GENERATING ACTIVITIES

The primary type of activity that has the potential to elevate underwater sound levels is the installation of piles using an impact pile driver. This activity could both harass and possibly cause injury to marine mammals, fish and sea turtles. Vibratory pile installation or removal could harass marine mammals if they are present, but to a lesser extent than impact pile driving. Other sounds include those from demolition. For this project, piles are expected to be installed using impact installation. Construction activities that could generate underwater sound are summarized below.

- Pier 4. The proposed improvements entail the replacement of the existing timber pier with a concrete fixed deck pier supported by concrete piles and protected by a fender system. The proposed concrete fixed pier would provide similar functions to the existing structure, which include continuous operations and with nighttime lighting, a jib crane for lifting the ship's catch, gear, equipment, nets, and traps from the berthed ship to the pier deck, and allowance for truck and forklift access over the fixed pier. The proposed pier would be an L-shaped structure with an area of approximately 3,670 square feet (sf). For concrete support piles requiring deeper penetration (i.e., concrete support piles at Pier 4), an impact hammer would be used. Similar to the guide piles (see Piers 5 through 8, below), the number of concrete support piles to be installed per day/week would vary based on the difficulty of the installation process in a given area and the designated number of concrete support piles to be replaced. The number of concrete support piles installed would be 4 piles per day, and 15 to 20 piles per week (assuming 5-day work weeks). For the concrete support piles (12- and 16-inch square piles), the number of pile strikes is estimated to be 120 blows per pile. In the event that jetting is not possible, these may take 240 blows per pile.

- Piers 5 through 8. The project includes the replacement of Piers 5, 6, 7, and 8 with a set of new floating docks, totaling approximately 28,000 sf. The proposed piers would consist of three finger docks, a floating work platform, associated head walks, three pedestrian gangways, one loading ramp, four concrete abutment platform and security gate structures at the shoreline. New concrete piles would be installed to support the new dock configuration. The guide piles (for Piers 5, 6, 7, and 8) would be jetted to 5 feet from tip elevation and then driven by impact hammer to the final depth. The number of guide piles to be installed per day/week would vary based on the difficulty of the installation process in a given area and the designated number of piles to be replaced. Generally, the number of guide piles to be installed per day would be approximately 6 guide piles per day, and 30 per week (assuming 5-day work weeks). For the guide piles, the number of pile strikes is estimated to be 65 blows per pile. In the event that jetting is not possible, these may take 95 blows per pile.

- Floating Wave Attenuator. The 270-foot in length wave attenuator would consist of a concrete deck supported by 24-inch octagonal vertical precast concrete piles. The wave attenuator is proposed to address existing damage and prevent future damage from wave action and to maintain safe operation of the marina. Floating Wave Attenuator piles are guide piles and would be jetted to 5 ft from tip and then impact driven. These are larger and longer piles so may take more blows and fewer per day than Pier 5 to 8 guide piles. This analysis assumes approximately 4 piles per day with

85 blows per pile. In the event that jetting is not possible, these may take 145 blows per pile.

Figure 4 shows the proposed pile layout for the project. Table 6 summarizes the activities that would cause elevated underwater sound levels. Pile driving in the water causes sound energy to radiate directly into the water by vibrating the pile between the surface of the water and the substrate, and indirectly as a result of ground-borne vibration in the substrate. Airborne sound does not make a substantial contribution to underwater sound levels because of the attenuation of sound at the air/water interface.

TABLE 6 Sound Generating Activities for the Proposed Project Using An Impact Hammer Only and No Jetting

Structure	Component Structure	Pile Type	Pile Location	Maximum Strikes per Pile*	Piles per Day	Total Number of Piles
Pier 4	Concrete pier (e.g., concrete pier deck, support piles, floating camels, and fender system)	16-inch square concrete	In Water	240	4	14
		12-inch square concrete	In Water	240	4	16
Pier 5	Guide piles (Concrete)	16-inch round	In Water	95	6	21
	Concrete Platform Piles	12-inch square	In Water	240	4	3
Pier 6	Guide piles (Concrete)	16-inch round	In Water	95	6	4
	Concrete Platform Piles	12-inch square	In Water	240	4	4
Pier 7	Guide piles (Concrete)	16-inch round	In Water	95	6	15
	Concrete Platform Piles	12-inch square	In Water	240	4	4
Pier 8	Guide piles (Concrete)	16-inch round	In Water	95	6	19
	Concrete Platform Piles	12-inch square	In Water	240	4	4
Main Walk	Guide piles (Concrete)	16-inch round	In Water	95	6	15
Floating Wave Attenuator		24-inch square concrete	In Water	145	4	30

*The estimate for the maximum strikes per pile assume that piles would not be jetted in order to present a worst-case scenario in the event jetting is not permitted.

Predicted Underwater Sound Levels from Construction

This assessment predicts underwater sound levels associated with the different in-water construction activities that are anticipated. Construction activities include the impact pile driving of concrete piles. The pulling of concrete or other piles and jetting is not anticipated to generate substantial underwater sound that would be harmful (i.e., sound that would cause injury or some form of harassment).

The prediction of sound levels from pile-driving and other construction activities proposed for this project relies on sound-source data, transmission loss (i.e., reduction of sound with increased distance from source), the type of activity, and the amount of activity. Sound data is based on measured sound levels for similar activities. Table 7 below shows the studies used to aid in predicting underwater sound levels.

The distance to each threshold was computed using the transmission loss coefficient of 15 times the Log_{10} of the distance, as recommended by NMFS when there is no site-specific information for the area.

<u>Underwater Sound Levels from Project Construction Activities</u>

The values in Table 7 are for sound levels measured at 10 meters (m) or 33 feet (ft) from the piles or other construction activities for conditions similar to those that would occur at this project. Detailed information on the measurements that make up these levels below are provided in the references and described below.

TABLE 7 Measured Levels for Activities Generating Underwater Sound Impacts

Driving Method	Pile Type	Size	Sound Pressure Level in dB at 10 m			TL[1]	Notes
			Peak	RMS	SELss		
Impact	Concrete pile in water	12-inch	193	168	160	15	16-in concrete piles driven at Westside Boat Launch Bodega Bay, CA (Caltrans, 2020) [2]
Impact	Concrete pile in water	16-inch					
Impact	Concrete pile in water	24-inch	195	182	168	15	Average of measurements that were conducted for 6 piles on 3 separate days at USCG Homeport LA/LB base in Long Beach

[1] Coefficient of the transmission loss, expressed as a Log_{10} function of the increasing distance from the source.
[2] Insufficient data for 12-inch piles. The data for 16-inch piles is used conservatively as a source level for both 12- and 16-inch piles.

Three types of concrete piles will be driven. These include 12-inch and 24-inch square concrete piles, along with 16-inch round concrete piles. These would be installed by impact hammer. The 12-inch piles would be impact driven. The 16-inch guide piles that would secure the floating docks are planned to be jetted to 5 feet from tip elevation and then impact driven. Piles for the ‘Floating Wave Attenuator’ will be 24-inch concrete piles that are also planned to be jetted to 5 feet from tip elevation and then impact driven.

The pile driving methods above are described as impact and jetting. Impact driving would generate levels much louder than jetting. Therefore, source levels are based on measurements of impact pile driving sounds made at 10 meters (m) from a similar sized pile.

Caltrans (2020) have published results of sound levels measured for various projects. These levels are also summarized in the NMFS Multi-Species Pile Driving Calculator. Due to a lack of data collected for 12-inch concrete piles, levels measured for the 16-inch concrete piles are used to conservatively assess impacts from both the 12-inch and 16-inch concrete piles. The Westside Boat Launch project at Bodega Bay, California was used as a representative project from the Compendium for source sound levels from impact driving of 16-inch concrete piles.

Underwater sound measurements were recently measured for the impact driving of 24-inch diameter octagonal concrete piles at the United States Coast Guard (USCG) Homeport LA/LB base in Long Beach during wharf construction (Illingworth & Rodkin Inc., 2023). These levels were louder than those reported by Caltrans and the US Navy and are representative of the area. Although source levels were louder than other similar size concrete piles measured and reported by Caltrans (2020), the TL measured for this project was equivalent to a 22 dB decrease in sound per 10-fold increase in distance from the source. This indicates a much greater decrease in sound level than modeling using a Practical Spreading Loss Model recommended by NMFS (2023). Caltrans (2020) data indicates that levels are about 10 to 15 dB lower. The louder sound levels measured for the USCG project were used in this assessment and are likely an overestimate given the range of other sound levels that are considerably lower. Measured levels are peak pressures of 195 dB, RMS pulsed levels of 182 dB and SEL per strike of 168 dB at 10 m.

Weighting Frequency Adjustments

NMFS guidance (2018, 2024) defines frequency dependent marine mammal auditory weighting factor adjustments (WFAs) that reflect hearing or susceptibility to underwater sound-induced hearing loss. The default WFA for impact pile driving is based on a single 1/3rd-octave band frequency adjustment at 2 kHz. For vibratory driving and dredging, the adjustment is at 2.5 kHz. This adjustment is the default setting in the NMFS Users Spreadsheet Tool that is applied to all impact pile driving sounds, regardless of pile type or attenuations effects.

Table 8 provides the WFAs used for modeling sound impacts to marine mammals for each underwater sound producing activity.

TABLE 8 WFAs for Project Construction Activities

Activity	Cetaceans[1]			Pinnipeds[1]	
	LF	HF	VHF	Phocid	Otariid
Impact Piles - Concrete (2kHz) [2]	-0.03	-3.45	-21.19	-0.80	-5.23

[1] See Table 3 for definitions for hearing groups.
[2] Based on NMFS suggested default value for broadband sources.

Acoustic Modeling Inputs

Sound impacts were predicted using the 2025 Multi-Species Pile Driving Calculator (Version 2.1 [2025b]) for the different aquatic species. Sound levels reported above for the various activities are used as an input for this model, along with the parameters that describe each activity in terms of duration and frequency content (i.e., WFAs). Duration is described in terms of time for non-impulsive sounds and by the number of pules (e.g., pile strikes) for impulsive sounds. Inputs are based on activity descriptions presented in Tables 6 through 8.

Predicted Underwater Impact Zones

Predicted Impacts on Fishes

Table 9 shows the anticipated distances (in m and in feet[ft]) to the various adopted 2008 interim fish thresholds (NMFS, 2022). Distances are also shown for the 203 dB cumulative SEL threshold recommended by the Caltrans 2024 guidance. Distances are shown for both unattenuated and attenuated piles (5-dB attenuation). The cumulative SEL was computed by adding 10 times the Log_{10} of the number of impact pile strikes to the 10-meter (33-foot) SEL source level provided in Table 7. Impact strikes used in these computations are the sum of the anticipated strikes per pile times the number of piles per day. NMFS applies an “effective quiet” level to the assessment of SEL_{cum} for fish. Piles strikes with SEL less than 150 dB do not accumulate to cause injury. This concept does not apply to computations of impacts to marine mammals nor turtles.

TABLE 9 Distance to Adopted Fish Thresholds for Construction Activities

Method	Pile Type	Size	Piles per Day	Max. No. of Strikes per Pile[a]	Condition	Distance to Adopted Fish Thresholds (m [ft])				
						Peak 206 dB	RMS 150 dB	Cumulative SEL		
								203 dB	187 dB	183 dB
Impact	Concrete pile in water	12-inch	4	240	Unattenuated No Jetting[a]	--[b]	159 m *[520 ft]*	--[b]	15 m [*51 ft*]	29 m [*94 ft*]
					Unattenuated with Jetting	--[b]	159 m *[520 ft]*	--[b]	10 m [*32 ft*]	18 m [*59 ft*]
		16-inch	6	95	Unattenuated No Jetting[a]	--[b]	159 m *[520 ft]*	--[b]	11 m *[36 ft]*	20 m *[66 ft]*
					Unattenuated with Jetting	--[b]	159 m *[520 ft]*	--[b]	9 m [*28 ft*]	16 m [*51 ft*]
		24-inch	4	145	Unattenuated No Jetting[a]	--[b]	1,359 m *[4,460 ft]*	--[b]	38 m *[124 ft]*	70 m *[228 ft]*
					Unattenuated with Jetting	--[b]	1,359 m *[4,460 ft]*	--[b]	26 m [*87 ft*]	49 m [*160 ft*]

[a]Assumes a worst-case scenario where only an impact hammer is used and no jetting is permitted. If jetting is performed, substantially fewer piles strikes would be needed. This would reduce the impact zones for fish that are based on Cumulative SEL values.
[b] Within the near-field of the sound source - < 10 m [33 ft]
Note : Refer to Attachment A for illustration of fish impact distances
Refer to Attachment B for screenshots of NMFS calculator tool used for the impact distances

Predicted Impacts on Marine Mammals

The following threshold distances were computed to assess impacts on marine mammals:

- Distance to onset AUD INJ for each hearing group (considered Level A impacts)
- Distance for unweighted continuous (vibratory) and impulsive (impact driving) behavior isopleth (considered Level B impacts)

The 2025 Multi-Species Pile Driving Calculator (Version 2.1 [2025b])[3] was used to predict zones where the onset of AUD INJ to marine mammal hearing could occur. A spreading loss calculation is included in the spreadsheet to predict the distance to the onset AUD INJ from accumulated SEL and peak sound pressure. The spreadsheet incorporates a frequency weighting function that accounts for sensitivity for different hearing groups when computing the accumulated SEL. These are referred to as weighting frequency adjustments. The default weighting frequency adjustments are 2 kHz for impact pile driving and 2.5 kHz for vibratory driving. Because the onset of AUD INJ based on cumulative SEL is computed as further from the pile than it would be using peak sound pressure computations, the onset of AUD INJ is based on SEL computations; therefore, the onset of AUD INJ based on peak sound levels is not provided in this assessment.

The extent of the Level B Zone was calculated using the 10-meter (33-foot) sound levels and applying a transmission loss coefficient of 15 times the Log_{10} of the distance, as recommended by NMFS when there is no site-specific information for the area.

Table 10 presents the anticipated distances to the adopted marine mammal thresholds (Level A and Level B Zones). The peak AUD INJ thresholds that apply to marine mammals will not be reached. Distances are shown for both unattenuated and attenuated pile-driving activities expected from the project, for the estimated number of strikes and piles per day proposed.

[3] Distances to Marine Mammal thresholds also calculated using Optional Multi-Species Pile Driving Calculator 2.0 (2024) - https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-acoustic-technical-guidance . Screenshots of calculated results shown in Attachment B

TABLE 10 Distance to the Adopted Marine Mammal Thresholds for Different Construction Activities – Level A & B zones

						Level A injury zone (m [ft]) (using SEL_{cum} Threshold)					Level B harassment zone (using RMS)
						Cetaceans			Pinnipeds		
Method	**Pile Type**	**Size**	**Piles per day**	**Max. No. of strikes or duration per pile[a]**	**Condition**	**LF**	**HF**	**VHF**	**PW**	**OW**	
Impact	Concrete pile in water	12-inch	4	240	Unattenuated No Jetting[a]	28 m *[93 ft]*	--[b]	44 m *[144 ft]*	25 m *[83 ft]*	10 m *[33 ft]*	34 m *[112 ft]*
					Unattenuated with Jetting	18 m *[59 ft]*	--[b]	28 m *[91 ft]*	16 m *[52 ft]*	--[b]	
		16-inch	6	95	Unattenuated No Jetting[a]	20 m *[66 ft]*	--[b]	31 m *[102 ft]*	18 m *[58 ft]*	--[b]	34 m *[112 ft]*
					Unattenuated with Jetting	16 m *[51 ft]*	--[b]	24 m *[79 ft]*	14 m *[45 ft]*	--[b]	
		24-inch	4	145	Unattenuated No Jetting[a]	69 m *[227 ft]*	--[b]	107 m *[351 ft]*	62 m *[202 ft]*	23 m *[75 ft]*	293 m *[961 ft]*
					Unattenuated with Jetting	49 m *[159 ft]*	--[b]	75 m *[246 ft]*	43 m *[141 ft]*	16 m *[53 ft]*	

[a]Assumes a worst-case scenario where only an impact hammer is used and no jetting is permitted. If jetting is performed, substantially fewer piles strikes would be needed. This would reduce the impact zones for marine mammals that are based on Cumulative SEL values.
[b] Within the near-field of the sound source - < 10 m [33 ft]

Predicted Impacts to Sea Turtles

Table 11 shows the predicted distances to the sea turtle thresholds as mentioned in Table 5. These distances have been calculated for impact driving and their respective levels expected from the project using the transmission loss coefficients as discussed in Table 7.

TABLE 11 Distance to the Adopted Green Sea Turtle thresholds

Method	Pile Type	Size	Piles per Day	No. of Strikes per Pile[a]	Condition	Distance to Sea Turtle threshold			
						Peak 230 dB	RMS 175 dB	Cumulative SEL	
								184 dB[b]	198 dB[c]
Impact	Concrete pile in water	12-inch	4	240	Unattenuated No Jetting[a]	0 m *[0 ft]*	--[d]	24 m *[80 ft]*	NA[c]
					Unattenuated with Jetting	0 m *[0 ft]*	--[d]	15 m *[50 ft]*	NA[c]
		16-inch	6	95	Unattenuated No Jetting[a]	0 m *[0 ft]*	--[d]	17 m *[56 ft]*	NA[c]
					Unattenuated with Jetting	0 m *[0 ft]*	--[d]	13 m *[43 ft]*	NA[c]
		24-inch	4	145	Unattenuated No Jetting[a]	0 m *[0 ft]*	29 m *[96 ft]*	59 m *[195 ft]*	NA[c]
					Unattenuated with Jetting	0 m *[0 ft]*	29 m *[96 ft]*	42 m *[137 ft]*	NA[c]

[a] Assumes a worst-case scenario where only an impact hammer is used and no jetting is permitted. If jetting is performed, substantially fewer piles strikes would be needed.
[b] For impulsive sound sources
[c] Not applicable since this threshold is for continuous sound sources
[d] Within the near-field of the sound source - < 10 m [33 ft]
Note : Refer to Attachment B Figures for screenshots of NMFS calculator tool used for the impact distances

It is important to note that no values are reported for distances within 10 m (33 ft) of the source for fish, marine mammals and sea turtles because this near-field zone is characterized by complex and highly variable acoustic behavior. Sound levels in this region are not reliably measurable due to interference and other complex effects close to the source. As a result, standard modeling practices and regulatory guidance exclude near-field data (less than 10 m), focusing instead on far-field predictions that more accurately represent potential exposure for fish, marine mammals, and sea turtles.

Effect of Jetting

Piles are planned to be installed by the combination of jetting and impact driving. The predictions of sound levels and associated impact zones are based on a worst-case scenario where jetting is not performed. If jetting is performed, then there would be substantially fewer piles strikes. This would reduce the impact zones for fish and marine mammals that are based on Cumulative SEL values[4]. The reduction in these zones, in terms of radius, would be 50 percent for the Pier 4 support piles, 30 percent for the Piers 5 through 8 guide piles, and 40 percent for the wave attenuator support piles. See Tables 9, 10, and 11 above.

[4] There are no injurious impacts predicted for sea turtles based on a scenario with no jetting.

Attenuation Methods

Impact driving of concrete piles typically includes the use of cushion blocks that reduce sound pressure levels. The unattenuated levels presented in this report include the effect of wood cushion blocks, since they are used to protect the pile. If additional sound reduction is necessary, air bubble curtains, either confined or un-confined, have been shown to reduce sound pressure levels for impact pile driving in water by up to about 5 to 20 dB within 300 m of the pile (Caltrans 2020). The Caltrans guidance recommends a 5-dB reduction be used for calculating the distances to the fish and marine mammal thresholds. The attenuated levels provided in this report are based on the use of an air bubble curtain.

The design of the specific bubble ring configuration depends on several factors, such as the depth of water and the water current. Air bubble curtain systems are commonly used during production pile driving to reduce underwater sound pressures. Typically, a system consists of stacked rings to generate air bubbles throughout the entire water column surrounding the piles, even with currents. It is critical to ensure bubble flux throughout the entire water depth, especially near the bottom. A bubble curtain system is generally composed of air compressors, supply lines to deliver the air, distribution manifolds or headers, perforated aeration pipes, and a frame. The frame is used to facilitate transportation and placement of the system, keep the aeration pipes stable, and provide ballast to counteract the buoyancy of the aeration pipes during pile-driving operations. Bubble curtain designs consist of single or multiple concentric layers of perforated aeration pipes (stacked vertically). Pipes in any layer are arranged in a geometric pattern that allows the pile-driving operation to be completely enclosed by bubbles for the full depth of the water column. The lowest layer of perforated aeration pipe is designed to ensure contact with the mud line without sinking into the bottom substrates. A proper combination of bubble density and closeness of bubbles to the pile is most effective. Numerous smaller bubbles are more effective because they displace more water between the bubbles. Again, this pattern has to be maintained throughout the water column.

While not considered an attenuation method, jetting a pile reduces the number of pile strikes necessary to drive a pile and reduces the area of injurious impacts to marine species. Please see the “Effect of Jetting” discussion provided above.

Illustration of Impacts

Attachment A includes maps displaying the extent of fish injury zones and marine mammal Level A and B Zones, and the maximum extent of the sea turtle behavioral disturbance zone around the proposed project site for the construction activities proposed. Attachment B includes screenshots from the *NMFS Multi-Species Calculator* (NMFS, 2025b) tool for the construction activities proposed that was used to calculate distances to fish, marine mammal and sea turtle thresholds.

AIRBORNE NOISE LEVELS FROM PROJECT PILE DRIVING

Fundamentals of Airborne Noise

Airborne sound is treated slightly differently than underwater sound. For example, the decibel scale used to express airborne sounds reference an acoustic pressure of 20 µPa rather than 1µPa, as 20µPa is the threshold of healthy human hearing. Sound transmission in air from a single source (i.e., a “point” source) radiates uniformly outward in a more spherical pattern as it travels away from the source since the propagating field is less bounded. The sound level attenuates (or drops off) at a rate of 6 dBA for each doubling of distance. This is expressed as a logarithmic function, where sound decreases 20 dB for each 10-fold increase in distance. Usually, the noise path between the source and the observer is very close to the ground. Noise attenuation from ground absorption and reflective wave canceling adds to the rate of attenuation. Traditionally, the excess attenuation has also been expressed in terms of attenuation per doubling of distance. This approximation is done for simplification only; for distances of less than 300 feet, prediction results based on this scheme are sufficiently accurate. For acoustically “hard” sites (i.e., sites with a reflective surface, such as a smooth body of water, between the source and the receiver), no excess ground attenuation is assumed. Sounds generated from construction activities are considered point sources, rather than a line source such as a freeway or roadway. The marine environment around the project site is mostly water and would be considered a “hard” site.

Airborne Noise Thresholds

In-air acoustic impacts are only considered for marine mammals that would haul out of the water. Therefore, pinnipeds (seals and sea lions) are considered but cetaceans (whales, dolphins, and porpoises) are not. NMFS (2023) states the following (Table 12) in-air behavioral thresholds for marine mammals.

Table 12 In-Air Onset of Behavioral Disturbance Acoustic Thresholds

Species/Group	Threshold (RMS, unweighted)[1]
Harbor Seal	90 dB re 20 µPa
All other pinnipeds	100 dB re 20 µPa

[1] Note: Sound levels underwater (re: 1 µPa) have a different reference pressure compared to in-air sounds (re: 20 µPa)

According to the latest 2024 NMFS guidance for marine mammals, there have been changes in the criteria used to evaluate impacts to Phocid and Otariid Pinnipeds. Table 13 shows the auditory injury criteria for the respective Pinnipeds.

Table 13 In-Air Onset of Auditory Injury (2024 NMFS Guidance)

Species/Group	Threshold[1]	
	Impulsive	Non-impulsive
Phocid Pinnipeds	162 dB Peak 140 dB Cumulative SEL[2]	154 dB Cumulative SEL[2]
Otariid Pinnipeds	177 dB Peak 163 dB Cumulative SEL[2]	177 dB Cumulative SEL[2]

[1] Note: Peak sound pressure has a reference value of 20 µPa (in air) and weighted cumulative sound exposure level has a reference value of 20 $\mu Pa^2 s$ (in air).
[2] The recommended accumulation period is 24 hours

Airborne Noise Source Levels

Impact pile driving sound levels for 24-inch concrete piles are based on measurements that were conducted at the USCG Homeport LA/LB base in Long Beach, California. These measurements recorded sound levels of 95 dBA at 100 feet (97 dB unweighted). This report utilizes these sound levels to characterize the airborne sounds generated by impact driving of all concrete piles associated with the proposed construction.

Airborne Impacts from Impact Pile Driving and Rock Chipping Concrete Demolition

The airborne source sound levels were used to calculate a 24-hour cumulative SEL for the concrete piles. The 24-hour cumulative SEL for concrete piles would be 137 dB at 15 m (50 ft). Table 14 shows the distances to the Auditory Injury and Behavioral thresholds.

TABLE 14 Distance to Airborne Thresholds for Impact Driving

Pile type	Species/Hearing Group	Distance (meters)			
		Auditory Injury Thresholds[1]		Behavioral Thresholds[1]	
		Peak 162 dB Phocid 177 dB Otariid	$SEL_{cum, 24h}$ 140 dB Phocid 163 dB Otariid	100 dB RMS	90 dB RMS
24-in Concrete Pile	Phocid Pinnipeds (including harbor seals)	--[2]	11	22	69
	Otariid Pinnipeds	--[2]	--[2]		

[1] Peak sound pressure and RMS has a reference value of 20 µPa (in air) while the weighted cumulative sound exposure level has a reference value of 20 $\mu Pa^2 s$ (in air).
[2] Within the near-field of the sound source - < 15 m [50 ft]

Special Status Species List

Special-Status Plants and Their Potential for Occurrence on the Project Site

The following species were returned in the California Natural Diversity Database (CNDDB) 5-quadrangle search that surrounds the project site in San Diego, California. The project site exhibits virtually no natural vegetation that could support these species. Therefore, all of the special-status plant species listed below are *not expected to occur* within the project site.

- red sand-verbena (*Abronia marítima*) (CRPR 4.2)
- San Diego thorn-mint (*Acanthomintha ilicifolia*) (FT, SE, CRPR 1B.1)
- Nuttall's acmispon (*Acmispon prostratus*) (CRPR 1B.1)
- California adolphia (*Adolphia californica*) (CRPR 2B.1)
- Shaw's agave (*Agave shawii* var. *shawii*) (CRPR 2B.1)
- San Diego bur-sage (*Ambrosia chenopodiifolia*) (CRPR 2B.1)
- singlewhorl burrobrush (*Ambrosia monogyra*) (CRPR 2B.2)
- San Diego ambrosia (*Ambrosia pumila*) (FE, CRPR 1B.1)
- aphanisma (*Aphanisma blitoides*) (CRPR 1B.2)
- short-lobed broomrape (*Aphyllon parishii* ssp. *brachylobum*) (CRPR 4.2)
- Del Mar manzanita (*Arctostaphylos glandulosa* ssp. *crassifolia*) (FE, CRPR 1B.1)
- San Diego sagewort (*Artemisia palmeri*) (CRPR 4.2)
- western spleenwort (*Asplenium vespertinum*) (CRPR 4.2)
- Dean's milk-vetch (*Astragalus deanei*) (CRPR 1B.1)
- coastal dunes milk-vetch (*Astragalus tener* var. *titi*) (FE, SE, CRPR 1B.1)
- Coulter's saltbush (*Atriplex coulteri*) (CRPR 1B.1)
- south coast saltscale (*Atriplex pacifica*) (CRPR 1B.2)
- San Diego County viguiera (*Bahiopsis laciniata*) (CRPR 4.3)
- golden-spined cereus (*Bergerocactus emoryi*) (CRPR 2B.2)
- San Diego goldenstar (*Bloomeria clevelandii*) (CRPR 1B.1)
- Orcutt's brodiaea (*Brodiaea orcuttii*) (CRPR 1B.1)
- Lewis' evening primrose (*Camissoniopsis lewisii*) (CRPR 3)
- Otay Mountain ceanothus (*Ceanothus otayensis*) (CRPR 1B.2)
- wart-stemmed ceanothus (*Ceanothus verrucosus*) (CRPR 2B.2)
- Orcutt's pincushion (*Chaenactis glabriuscula* var. *orcuttiana*) (CRPR 1B.1)
- southern mountain misery (*Chamaebatia australis*) (CRPR 4.2)
- salt marsh bird's-beak (*Chloropyron maritimum* ssp. *maritimum*) (FE, SE, CRPR 1B.2)
- Orcutt's spineflower (*Chorizanthe orcuttiana*) (FE, SE, CRPR 1B.1)
- long-spined spineflower (*Chorizanthe polygonoides* var. *longispina*) (CRPR 1B.2)
- seaside cistanthe (*Cistanthe maritima*) (CRPR 4.2)
- delicate clarkia (*Clarkia delicata*) (CRPR 1B.2)

- summer holly (*Comarostaphylis diversifolia* ssp. *diversifolia*) (CRPR 1B.2)
- small-flowered morning-glory (*Convolvulus simulans*) (CRPR 4.2)
- San Diego sand aster (*Corethrogyne filaginifolia* var. *incana*) (CRPR 1B.1)
- snake cholla (*Cylindropuntia californica* var. *californica*) (CRPR 1B.1)
- Otay tarplant (*Deinandra conjugens*) (FT, SE, CRPR 1B.1)
- paniculate tarplant *(Deinandra paniculata*) (CRPR 4.2)
- western dichondra (*Dichondra occidentalis*) (CRPR 4.2)
- Orcutt's bird's-beak (*Dicranostegia orcuttiana*) (CRPR 2B.1)
- low bush monkeyflower (*Diplacus aridus*) (CRPR 4.3)
- Orcutt's dudleya (*Dudleya attenuata* ssp. *attenuata*) (CRPR 2B.1)
- Blochman's dudleya (*Dudleya blochmaniae* ssp. *blochmaniae*) (CRPR 1B.1)
- short-leaved dudleya (*Dudleya brevifolia*) (SE, CRPR 1B.1)
- variegated dudleya (*Dudleya variegata*) (CRPR 1B.2)
- sticky dudleya (*Dudleya viscida*) (CRPR 1B.2)
- Palmer's goldenbush (*Ericameria palmeri* var. *palmeri*) (CRPR 1B.1)
- San Diego button-celery (*Eryngium aristulatum* var. *parishii*) (FE, SE, CRPR 1B.1)
- sand-loving wallflower (*Erysimum ammophilum*) (CRPR 1B.2)
- Palomar monkeyflower (*Erythranthe diffusa*) (CRPR 4.3)
- cliff surge (*Euphorbia misera*) (CRPR 2B.2)
- San Diego barrel cactus (*Ferocactus viridescens*) (CRPR 2B.1)
- Palmer's frankenia (*Frankenia palmeri*) (CRPR 2B.1)
- Campbell’s liverwort (*Geothallus tuberosus*) (CRPR 1B.1)
- Mission Canyon bluecup (*Githopsis diffusa* ssp. *filicaulis*) (CRPR 3.1)
- San Diego gumplant (*Grindelia hallii*) (CRPR 1B.2)
- Palmer's grapplinghook (*Harpagonella palmeri*) (CRPR 4.2)
- Hogwallow starfish (*Hesperevax caulescens*) (CRPR 4.2)
- beach goldenaster (*Heterotheca sessiliflora* ssp. *sessiliflora*) (CRPR 1B.1)
- graceful tarplant (*Holocarpha virgata* ssp. *elongata)* (CRPR 4.2)
- vernal barley (*Hordeum intercedens*) (CRPR 3.2)
- decumbent goldenbush (*Isocoma menziesii* var. *decumbens*) (CRPR 1B.2)
- San Diego marsh-elder (*Iva hayesiana*) (CRPR 2B.2)
- southwestern spiny rush (*Juncus acutus* ssp. *leopoldii*) (CRPR 4.2)
- Coulter's goldfields (*Lasthenia glabrata* ssp. *coulteri*) (CRPR 1B.1)
- pride-of-California (*Lathyrus splendens*) (CRPR 4.3)
- heart-leaved pitcher sage (*Lepechinia cardiophylla*) (CRPR 1B.2)

- Robinson's pepper-grass (*Lepidium virginicum* var. *robinsonii*) (CRPR 4.3)
- sea dahlia (*Leptosyne marítima*) (CRPR 2B.2)
- California box-thorn (*Lycium californicum*) (CRPR 4.2)
- small-flowered microseris (*Microseris douglasii* ssp. *platycarpha*) (CRPR 4.2)
- light gray lichen (*Mobergia calculiformis*) (CRPR 3)
- willowy monardella (*Monardella viminea*) (FE, SE, CRPR 1B.1)
- California spineflower (*Mucronea califórnica*) (CRPR 4.2)
- little mousetail (*Myosurus minimus* ssp. *apus*) (CRPR 3.1)
- mud nama (*Nama stenocarpa*) (CRPR 2B.2)
- spreading navarretia (*Navarretia fossalis*) (FT, CRPR 1B.1)
- prostrate vernal pool navarretia (*Navarretia prostrata*) (CRPR 1B.2)
- coast woolly-heads (*Nemacaulis denudata* var. *denudata*) (CRPR 1B.2)
- slender cottonheads (*Nemacaulis denudata* var. *gracilis*) (CRPR 2B.2)
- California adder's-tongue (*Ophioglossum californicum*) (CRPR 4.2)
- California Orcutt grass (*Orcuttia californica*) (FE, SE, CRPR 1B.1)
- Baja California birdbush (*Ornithostaphylos oppositifolia*) (SE, CRPR 2B.1)
- golden-rayed pentachaeta (*Pentachaeta aurea* ssp. *aurea*) (CRPR 4.2)
- Brand's star phacelia (*Phacelia stellaris*) (CRPR 1B.1)
- chaparral rein orchid (*Piperia cooperi*) (CRPR 4.2)
- San Diego mesa mint (*Pogogyne abramsii*) (FE, SE, CRPR 1B.1)
- Otay Mesa mint (*Pogogyne nudiuscula*) (FE, SE, CRPR 1B.1)
- Nuttall's scrub oak (*Quercus dumosa*) (CRPR 1B.1)
- Santa Catalina Island currant (*Ribes viburnifolium*) (CRPR 1B.2)
- small-leaved rose (*Rosa minutifolia*) (SE, CRPR 2B.1)
- Munz's sage (*Salvia munzii*) (CRPR 2B.2)
- ashy spike-moss (*Selaginella cinerascens*) (CRPR 4.1)
- chaparral ragwort (*Senecio aphanactis*) (CRPR 1B.2)
- salt spring checkerbloom (*Sidalcea neomexicana*) (CRPR 2B.2)
- bottle liverwort (*Sphaerocarpos drewiae*) (CRPR 1B.1)
- purple stemodia (*Stemodia durantifolia*) (CRPR 2B.1)
- San Diego County needle grass (*Stipa diegoensis*) (CRPR 4.2)
- Laguna Mountains jewelflower (*Streptanthus bernardinus*) (CRPR 4.3)
- oil neststraw (*Stylocline citroleum*) (CRPR 1B.1)
- estuary seablite (*Suaeda esteroa*) (CRPR 1B.2)
- wooly seablite (*Suaeda taxifolia*) (CRPR 4.2)

- Parry's tetracoccus (*Tetracoccus dioicus*) (CRPR 1B.2)
- woven-spored lichen (*Texosporium sancti-jacobi*) (CRPR 3)
- California screw moss (*Tortula californica*) (CRPR 1B.2)

Notes: CRPR = California Rare Plant Rank; subsp. = subspecies; var. = variety.

[1] Legal Status Definitions

Federal:
FE Endangered (legally protected)
FT Threatened (legally protected)

State:
SE Endangered (legally protected)
ST Threatened (legally protected)
SR State-listed as rare (legally protected by NPPA)

California Rare Plant Ranks:
1B Plant species considered rare or endangered in California and elsewhere (protected under CEQA, but not legally protected under ESA or CESA)
2B Plant species considered rare or endangered in California but more common elsewhere (protected under CEQA, but not legally protected under ESA or CESA)
3 Plant species lacking the necessary information to assign them to one of the other ranks or to reject them. Many meet the definitions of the California Endangered Species Act and are eligible for state listing.
4 Plant species of limited distribution or that occur infrequently throughout a broader area in California.

Threat Ranks:
0.1 Seriously threatened in California (more than 80% of occurrences threatened; high degree and immediacy of threat)
0.2 Moderately threatened in California (20–80% occurrences threatened; moderate degree and immediacy of threat)
0.3 Not very threatened in California (less than 20% of occurrences threatened/low degree and immediacy of threat or no current threats known)

Special-Status Wildlife and Their Potential for Occurrence on the Project Site

Species	Federal Status[1]	State Status[1]	Other Status	Habitat	Potential for Occurrence
Amphibians and Reptiles					
Southern California legless lizard *Anniella stebbinsi*	—	—	CDFW SSC	Broadleaved upland forest, chaparral, coastal dunes, coastal scrub. Generally south of the Transverse Range, extending to northwestern Baja California. Occurs in sandy or loose loamy soils under sparse vegetation. Disjunct populations in the Tehachapi and Piute Mountains in Kern County. Variety of habitats; generally in moist, loose soil. They prefer soils with a high moisture content.	*Not expected to occur.* Suitable habitat is not present within the project site.
California glossy snake *Arizona elegans occidentalis*	—	—	CDFW SSC	Patchily distributed from the eastern portion of San Francisco Bay, southern San Joaquin Valley, and the Coast, Transverse, and Peninsular ranges, south to Baja California. Generalist reported from a range of scrub and grassland habitats, often with loose or sandy soils.	*Not expected to occur.* Suitable habitat is not present within the project site.
coastal whiptail *Aspidoscelis tigris stejnegeri*	—	—	CDFW SSC	Found in deserts and semi-arid areas with sparse vegetation and open areas. Also found in woodland and riparian areas. Ground may be firm soil, sandy, or rocky.	*Not expected to occur.* Suitable habitat is not present within the project site.
loggerhead turtle *Caretta caretta*	FE	—	—	Juveniles and adults live in U.S. coastal waters. Found worldwide primarily in subtropical and temperate regions. In coastal waters, feeds on bottom-dwelling invertebrates.	*Not expected to occur.* Suitable habitat is not present within the project site.
green sea turtle *Chelonia mydas*	FT	—	—	Marine bay. Completely herbivorous; needs adequate supply of seagrasses and algae.	*May occur.* Suitable foraging habitat (i.e., eelgrass) present. The species is known to inhabit San Diego Bay with the nearest known occurrence of located 7.5 miles southeast of the project site.
red diamond rattlesnake *Crotalus ruber*	—	—	CDFW SSC	Chaparral, woodland, grassland, and desert areas from coastal San Diego County to the eastern slopes of the mountains. Occurs in rocky areas and dense vegetation. Needs rodent burrows, cracks in rocks or surface cover objects.	*Not expected to occur.* Suitable habitat is not present within the project site.
leatherback turtle *Dermochelys coriacea*				Nesting beaches are primarily located in tropical latitudes around the world. Western Pacific leatherbacks feed off the Pacific coast of North America, and migrate across the Pacific to nest in Indonesia, Papua New Guinea, and the Solomon Islands.	*Not expected to occur.* Suitable habitat is not present within the project site.
Olive Ridley turtle *Lepidochelys olivacea*				Primarily found in tropical regions of the Pacific, Indian, and Atlantic oceans. Mainly a pelagic (open ocean) sea turtle, but are also known to inhabit coastal areas.	*Not expected to occur.* Suitable habitat is not present within the project site.

Species	Federal Status[1]	State Status[1]	Other Status	Habitat	Potential for Occurrence
Baja California coachwhip *Masticophis fuliginosus*	—	—	CDFW SSC	In California restricted to southern San Diego County, where it is known from grassland and coastal sage scrub. Open areas in grassland and coastal sage scrub.	*Not expected to occur.* Suitable habitat is not present within the project site.
coast horned lizard *Phrynosoma blainvillii*	—	—	CDFW SSC	Chaparral, cismontane woodland, coastal bluff scrub, coastal scrub, desert wash, pinon and juniper woodlands, riparian scrub, riparian woodland, valley and foothill grassland. Frequents a wide variety of habitats, most common in lowlands along sandy washes with scattered low bushes. Open areas for sunning, bushes for cover, patches of loose soil for burial, and abundant supply of ants and other insects.	*Not expected to occur.* Suitable habitat is not present within the project site.
coast patch-nosed snake *Salvadora hexalepis virgultea*	—	—	CDFW SSC	Coastal scrub. Brushy or shrubby vegetation in coastal Southern California. Require small mammal burrows for refuge and overwintering sites.	*Not expected to occur.* Suitable habitat is not present within the project site.
western spadefoot *Spea hammondii*	PT	—	CDFW SSC	Cismontane woodland, coastal scrub, valley and foothill grassland, vernal pool, wetland. Occurs primarily in grassland habitats, but can be found in valley-foothill hardwood woodlands.	*Not expected to occur.* Suitable habitat is not present within the project site.
two-striped gartersnake *Thamnophis hammondii*	—	—	CDFW SSC	Marsh and swamp, riparian scrub, riparian woodland, wetland. Coastal California from vicinity of Salinas to northwest Baja California. From sea to about 7,000 ft elevation. Highly aquatic, found in or near permanent fresh water. Often along streams with rocky beds and riparian growth.	*Not expected to occur.* Suitable habitat is not present within the project site.
Birds					
tricolored blackbird *Agelaius tricolor*	—	ST	CDFW SSC, USFWS BCC, MSCP Covered Species	Freshwater marsh, marsh and swamp, swamp, wetland. Highly colonial species, most numerous in Central Valley and vicinity. Largely endemic to California. Requires open water, protected nesting substrate, and foraging area with insect prey within a few km of the colony.	*Not expected to occur.* Suitable habitat is not present within the project site.
burrowing owl *Athene cunicularia*	—	SCE	CDFW SSC, USFCW BCC, MSCP Covered Species	Coastal prairie, coastal scrub, Great Basin grassland, Great Basin scrub, Mojavean desert scrub, Sonoran desert scrub, valley and foothill grassland. Open, dry annual or perennial grasslands, deserts, and scrublands characterized by low-growing vegetation. Subterranean nester, dependent upon burrowing mammals, most notably, the California ground squirrel.	*Not expected to occur.* Suitable habitat is not present within the project site.
Swainson's hawk *Buteo swainsoni*	—	ST	MSCP Covered Species	Great Basin grassland, riparian forest, riparian woodland, valley and foothill grassland. Breeds in grasslands with scattered trees, juniper-sage flats, riparian areas, savannahs, and agricultural or ranch lands with groves or lines of trees. Requires adjacent suitable foraging areas such	*Not expected to occur.* Suitable habitat is not present within the project site.

Species	Federal Status[1]	State Status[1]	Other Status	Habitat	Potential for Occurrence
				as grasslands, or alfalfa or grain fields supporting rodent populations.	
coastal cactus wren *Campylorhynchus brunneicapillus sandiegensis*	—	—	CDFW SSC, USFWS BCC, MSCP Covered Species	Coastal scrub. Southern California coastal sage scrub. Wrens require tall opuntia cactus for nesting and roosting.	*Not expected to occur.* Suitable habitat is not present within the project site.
western snowy plover *Charadrius nivosus nivosus*	FT	—	CDFW SSC, MSCP Covered Species	Great Basin standing waters, sand shore, wetland. Sandy beaches, salt pond levees and shores of large alkali lakes. Needs sandy, gravelly or friable soils for nesting.	*Not expected to occur.* Suitable nesting and foraging habitat is not present within the project site (all developed or deep water habitats with no sandy beach or natural shoreline land covers).
northern harrier *Circus hudsonius*	—	—	CDFW SSC, USFWS BCC, MSCP Covered Species	Coastal scrub, Great Basin grassland, marsh and swamp, riparian scrub, valley and foothill grassland, wetland. Coastal salt and freshwater marsh. Nest and forage in grasslands, from salt grass in desert sink to mountain cienagas. Nests on ground in shrubby vegetation, usually at marsh edge; nest built of a large mound of sticks in wet areas.	*Not expected to occur.* Suitable habitat is not present within the project site.
western yellow-billed cuckoo *Coccyzus americanus occidentalis*	FT	SE	—	Riparian forest. Riparian forest nester, along the broad, lower flood-bottoms of larger river systems. Nests in riparian jungles of willow, often mixed with cottonwoods, with lower story of blackberry, nettles, or wild grape.	*Not expected to occur.* Suitable habitat is not present within the project site.
yellow rail *Coturnicops noveboracensis*	—	—	CDFW SSC, USFWS BCC	Freshwater marsh, meadow and seep. Summer resident in eastern Sierra Nevada in Mono County. Freshwater marshlands.	*Not expected to occur.* Suitable habitat is not present within the project site.
American peregrine falcon *Falco peregrinus anatum*	Delisted	Delisted	MSCP Covered Species	Near wetlands, lakes, rivers, or other water; on cliffs, banks, dunes, mounds; also, human-made structures. Nest consists of a scrape or a depression or ledge in an open site.	*Not expected to occur.* Suitable habitat is not present within the project site.
least bittern *Ixobrychus exilis*	—	—	CDFW SSC	Marsh and swamp, wetland. Colonial nester in marshlands and borders of ponds and reservoirs which provide ample cover. Nests usually placed low in tules, over water.	*Not expected to occur.* Suitable habitat is not present within the project site.
California black rail *Laterallus jamaicensis coturniculus*	—	ST	CDFW FP	Brackish marsh, freshwater marsh, marsh and swamp, salt marsh, wetland. Inhabits freshwater marshes, wet meadows and shallow margins of saltwater marshes bordering larger bays. Needs water depths of about 1 inch that do not fluctuate during the year and dense vegetation for nesting habitat.	*Not expected to occur.* Suitable habitat is not present within the project site.
Belding's savannah sparrow *Passerculus sandwichensis beldingi*	—	SE	USFWS BCC, MSCP Covered Species	Marsh and swamp, wetland. Inhabits coastal salt marshes, from Santa Barbara south through San Diego County. Nests in Salicornia on and about margins of tidal flats.	*Not expected to occur.* Suitable habitat is not present within the project site.

Species	Federal Status[1]	State Status[1]	Other Status	Habitat	Potential for Occurrence
coastal California gnatcatcher *Polioptila californica californica*	FT	—	CDFW SSC, MSCP Covered Species	Coastal bluff scrub, coastal scrub. Obligate, permanent resident of coastal sage scrub below 2500 ft in Southern California. Low, coastal sage scrub in arid washes, on mesas and slopes. Not all areas classified as coastal sage scrub are occupied.	*Not expected to occur.* Suitable habitat is not present within the project site.
light-footed Ridgway's rail *Rallus obsoletus levipes*	FE	SE	CDFW FP	Marsh and swamp, salt marsh, wetland. Found in salt marshes traversed by tidal sloughs, where cordgrass and pickleweed are the dominant vegetation. Requires dense growth of either pickleweed or cordgrass for nesting or escape cover; feeds on molluscs and crustaceans.	*Not expected to occur.* Suitable habitat is not present within the project site.
yellow warbler *Setophaga petechia*	—	—	CDFW SSC	Riparian forest, riparian scrub, riparian woodland. Riparian plant associations in close proximity to water. Also nests in montane shrubbery in open conifer forests in Cascades and Sierra Nevada. Frequently found nesting and foraging in willow shrubs and thickets, and in other riparian plants including cottonwoods, sycamores, ash, and alders.	*Not expected to occur.* Suitable habitat is not present within the project site.
California least tern *Sternula antillarum browni*	FE	SE	CDFW FP, MSCP Covered Species	Alkali playa, wetland. Nests along the coast from San Francisco Bay south to northern Baja California. Colonial breeder on bare or sparsely vegetated, flat substrates: sand beaches, alkali flats, land fills, or paved areas.	*May occur.* Suitable foraging habitat is present for this species within the project site.
least Bell's vireo *Vireo bellii pusillus*	FE	SE	MSCP Covered Species	Riparian forest, riparian scrub, riparian woodland. Summer resident of Southern California in low riparian in vicinity of water or in dry river bottoms; below 2000 ft. Nests placed along margins of bushes or on twigs projecting into pathways, usually willow, Baccharis, mesquite.	*Not expected to occur.* Suitable habitat is not present within the project site.
Fish					
steelhead - southern California DPS *Oncorhynchus mykiss irideus* pop. 10	FE	SCE	—	Aquatic, south coast flowing waters. Federal listing refers to populations from Santa Maria River south to southern extent of range (San Mateo Creek in San Diego County). Southern steelhead likely have greater physiological tolerances to warmer water and more variable conditions.	*Not expected to occur.* Suitable habitat is not present within the project site. Nearest known occurrence of this species is located approximately 13 miles south of the project site.
Invertebrates					
Crotch's bumble bee *Bombus crotchii*	—	SCE	—	Coastal California east to the Sierra-Cascade crest and south into Mexico. Food plant genera include Antirrhinum, Phacelia, Clarkia, Dendromecon, Eschscholzia, and Eriogonum.	*Not expected to occur.* Suitable habitat is not present within the project site.
San Diego fairy shrimp *Branchinecta sandiegonensis*	FE	—	MSCP Covered Species	Chaparral, coastal scrub, vernal pool, wetland. Endemic to San Diego and Orange County mesas.	*Not expected to occur.* Suitable habitat is not present within the project site.

Species	Federal Status[1]	State Status[1]	Other Status	Habitat	Potential for Occurrence
monarch - California overwintering population *Danaus plexippus plexippus* pop. 1	FPT	—	—	Closed-cone coniferous forest. Winter roost sites extend along the coast from northern Mendocino to Baja California, Mexico. Roosts located in wind-protected tree groves (eucalyptus, Monterey pine, cypress), with nectar and water sources nearby.	*Not expected to occur.* Suitable habitat is not present within the project site.
Quino checkerspot butterfly *Euphydryas editha quino*	FE	—	—	Chaparral, coastal scrub. Sunny openings within chaparral and coastal sage shrublands in parts of Riverside and San Diego counties. Hills and mesas near the coast. Need high densities of food plants Plantago erecta, P. insularis, and Orthocarpus purpurescens.	*Not expected to occur.* Suitable habitat is not present within the project site.
Hermes copper butterfly *Lycaena hermes*	FT	—	—	Chaparral, coastal scrub. Found in southern mixed chaparral and coastal sage scrub at western edge of Laguna Mountains. Host plant is Rhamnus crocea. Although R. crocea is widespread throughout the coast range, Lycaena hermes is not.	*Not expected to occur.* Suitable habitat is not present within the project site.
wandering (=saltmarsh) skipper *Panoquina errans*	—	—	MSCP Covered Species	Marsh and swamp, wetland. Southern California coastal salt marshes. Requires moist saltgrass for larval development.	*Not expected to occur.* Suitable habitat is not present within the project site.
Riverside fairy shrimp *Streptocephalus woottoni*	FE	—	MSCP Covered Species	Coastal scrub, valley and foothill grassland, vernal pool, wetland. Endemic to Western Riverside, Orange, and San Diego counties in areas of tectonic swales/earth slump basins in grassland and coastal sage scrub. Inhabit seasonally astatic pools filled by winter/spring rains. Hatch in warm water later in the season.	*Not expected to occur.* Suitable habitat is not present within the project site.
Mammals					
pallid bat *Antrozous pallidus*	—	—	CDFW SSC	Chaparral, coastal scrub, desert wash, Great Basin grassland, Great Basin scrub, Mojavean desert scrub, riparian woodland, Sonoran desert scrub, upper montane coniferous forest, valley and foothill grassland. Deserts, grasslands, shrublands, woodlands and forests. Most common in open, dry habitats with rocky areas for roosting. Roosts must protect bats from high temperatures. Very sensitive to disturbance of roosting sites.	*Not expected to occur.* Suitable habitat is not present within the project site.
Guadalupe fur seal *Arctocephalus townsendi*	FT	ST	MMPA Protected, MMPA Depleted	Live in the waters off southern California and the Pacific coast of Mexico. During the breeding season, they are found in coastal rocky habitats and caves. Not common along the West Coast of the United States.	*Not expected to occur.* Suitable habitat is not present within the project site.
minke whale *Balaenoptera acutorostrata*	—	—	MMPA Protected	Prefer temperate to boreal waters but are also found in tropical and subtropical areas. They feed most often in cooler waters at higher latitudes and can be found in both coastal/inshore and oceanic/offshore areas.	*Not expected to occur.* Suitable habitat is not present within the project site.

Species	Federal Status[1]	State Status[1]	Other Status	Habitat	Potential for Occurrence
sei whale *Balaenoptera borealis*	FE	—	MMPA Protected, MMPA Depleted	Wide distribution and live in subtropical, temperate, and subpolar waters around the world. They prefer temperate waters in the mid-latitudes, and can be found in the Atlantic, Indian, and Pacific Oceans.	*Not expected to occur.* Suitable habitat is not present within the project site.
Bryde's whale *Balaenoptera edeni*	—	—	MMPA Protected	Wide distribution and occur in tropical, subtropical, and warm temperate waters (61° to 72°F) around the world. They live in all oceans from 40° south to 40° north.	*Not expected to occur.* Suitable habitat is not present within the project site.
blue whale *Balaenoptera musculus*	FE	—	MMPA Protected, MMPA Depleted	Found in all oceans except the Arctic. Along the West Coast of the United States, eastern North Pacific blue whales are believed to spend winters off of Mexico and Central America. They likely feed during summer off the U.S. West Coast and, to a lesser extent, in the Gulf of Alaska and central North Pacific waters.	*Not expected to occur.* Suitable habitat is not present within the project site.
fin whale *Balaenoptera physalus*	FE	—	MMPA Protected, MMPA Depleted	Fin whales are typically found in deep, offshore waters of all major oceans, primarily in temperate to polar latitudes. They are less common in the tropics.	*Not expected to occur.* The project site does not contain deep, offshore waters that support this species.
Baird's beaked whale *Berardius bairdii*	—	—	MMPA Protected	Prefer cold, deep, oceanic waters deeper than 3,300 feet but may occasionally be found near shore along narrow continental shelves. This species is often associated with steep underwater geologic structures, such as submarine canyons, seamounts, and continental slopes.	*Not expected to occur.* The project site does not contain cold, deep waters to support this species.
northern fur seal *Callorhinus ursinus*	—	—	MMPA Protected, MMPA depleted	Found in open ocean and rocky or sandy beaches on islands for resting, reproduction, and molting.	*Not expected to occur.* The project site does not contain open ocean or rocky/sandy beaches to support this species.
Mexican long-tongued bat *Choeronycteris mexicana*	—	—	CDFW SSC	Pinon and juniper woodlands, riparian scrub, Sonoran thorn woodland. Occasionally found in San Diego County, which is on the periphery of their range. Feeds on nectar and pollen of night-blooming succulents. Roosts in relatively well-lit caves, and in and around buildings.	*Not expected to occur.* Suitable habitat is not present within the project site.
long-beaked common dolphin *Delphinus capensis*	—	—	MMPA Protected	Prefer shallow, tropical, subtropical, and warmer temperate waters within 50 to 100 nautical miles of the coast and on the continental shelf, often in inshore waters. In U.S. waters, this species is only found along the west coast, and their distribution extends from Baja California, Mexico, northward to central California.	*May occur.* Suitable habitat is present within the project site.
short-beaked common dolphin *Delphinus delphis*	—	—	MMPA Protected	Prefer sub-tropical to temperate waters that are primarily offshore. They can be found along the continental slope in waters between approximately 300 to 6,500 feet deep. Often associated with underwater geologic features	*Not expected to occur.* Suitable habitat is not present within the project site. Preferred water depths

Species	Federal Status[1]	State Status[1]	Other Status	Habitat	Potential for Occurrence
				such as underwater ridges and seamounts where upwelling occurs, increasing nutrient concentrations and supporting higher productivity.	and geologic features not present.
gray whale *Eschrichtius robustus*	—	—	MMPA Protected	Found mainly in shallow coastal waters in the North Pacific Ocean. Most of the eastern North Pacific stock gray whales spend the summer feeding in the northern Bering and Chukchi seas, but some feed along the Pacific coast during the summer, in waters off of Southeast Alaska, British Columbia, Washington, Oregon, and northern California.	*Not expected to occur.* Suitable habitat is not present within the project site.
north pacific right whale *Eubalaena japonica*	FE	—	MMPA Protected, MMPA Depleted	Contemporary sightings of right whales have mostly occurred in the central North Pacific and Bering Sea. Sightings have been reported as far south as central Baja California in the eastern North Pacific.	*Not expected to occur.* Suitable habitat is not present within the project site.
spotted bat *Euderma maculatum*	—	—	CDFW SSC	Occupies a wide variety of habitats from arid deserts and grasslands through mixed conifer forests. Feeds over water and along washes. Feeds almost entirely on moths. Needs rock crevices in cliffs or caves for roosting.	*Not expected to occur.* Suitable habitat is not present within the project site.
Steller sea lion *Eumetopias jubatus*	Delisted	—	MMPA Protected, MMPA Depleted	Inhabit the colder temperate to subarctic waters of the North Pacific Ocean. They need both terrestrial and aquatic habitats. Distributed mainly around the coasts along the North Pacific Ocean rim from northern Hokkaido, Japan through the Kuril Islands and Sea of Okhotsk, the Aleutian Islands and Bering Sea, the southern coast of Alaska, and south to central California.	*Not expected to occur.* Suitable habitat is not present within the project site.
western mastiff bat *Eumops perotis californicus*	—	—	CDFW SSC	Chaparral, cismontane woodland, coastal scrub, valley and foothill grassland. Many open, semi-arid to arid habitats, including conifer and deciduous woodlands, coastal scrub, grasslands, chaparral, etc. Roosts in crevices in cliff faces, high buildings, trees and tunnels.	*Not expected to occur. r.* Suitable habitat is not present within the project site.
short-finned pilot whale *Globicephala macrorhyncus*	—	—	MMPA Protected	Prefer warmer tropical and temperate waters. They can be found at varying distances from shore but typically prefer deeper waters. Areas with a high density of squid are their main foraging habitats.	*Not expected to occur.* Suitable habitat is not present within the project site.
Risso's dolphin *Grampus griseus*	—	—	MMPA Protected	Found worldwide in temperate, subtropical, and tropical oceans and seas from latitudes 64° North to 46° South. Their preferred habitats appear to be mid-temperate waters of the continental shelf and slope between 30° and 45° latitude. They prefer areas of deeper waters (3,300 feet) with steep bottom topography, but they are known to inhabit shallow coastal areas as well.	*Not expected to occur.* Suitable habitat is not present within the project site.

Species	Federal Status[1]	State Status[1]	Other Status	Habitat	Potential for Occurrence
pygmy sperm whale *Kogia breviceps*	—	—	MMPA Protected	Live in tropical, subtropical, and temperate waters in oceans and seas around the world. They are most common off coasts and along continental shelves (the edges of continents lying under the ocean). In the United States, pygmy sperm whales live off the coasts of Hawai'i, the Pacific Northwest, the North Atlantic, and the northern Gulf of America (formerly Gulf of Mexico). They may be most common off the southeastern coasts.	*Not expected to occur.* Suitable habitat is not present within the project site.
dwarf sperm whale *Kogia sima*	—	—	MMPA Protected	Dwarf sperm whales live in temperate and tropical seas around the world. In the United States, dwarf sperm whales live in the waters of Hawai'i, the Pacific Northwest and California, the western North Atlantic, and the northern Gulf of America (formerly Gulf of Mexico).	*Not expected to occur.* Suitable habitat is not present within the project site.
pacific white-sided dolphin *Lagenorhynchus obliquidens*	—	—	MMPA Protected	Live in the open ocean and nearshore waters, but are unlikely to be found close to shore. They live in the temperate waters of the North Pacific Ocean. In the United States, they are found off the coast of California, Oregon, Washington, and Alaska.	*Not expected to occur.* This species is not likely to be found close to shore.
western red bat *Lasiurus frantzii*	—	—	CDFW SSC	Cismontane woodland, lower montane coniferous forest, riparian forest, riparian woodland. Roosts primarily in trees, 2-40 ft above ground, from sea level up through mixed conifer forests. Prefers habitat edges and mosaics with trees that are protected from above and open below with open areas for foraging.	*Not expected to occur.* Suitable habitat is not present within the project site.
western yellow bat *Lasiurus xanthinus*	—	—	CDFW SSC	Desert wash. Found in valley foothill riparian, desert riparian, desert wash, and palm oasis habitats. Roosts in trees, particularly palms. Forages over water and among trees.	*Not expected to occur.* Suitable habitat is not present within the project site.
northern right whale dolphin *Lissodelphis borealis*	—	—	MMPA Protected	Deep, cold and warm temperate waters from the outer continental shelf to oceanic regions throughout the North Pacific Ocean, between 30° north and 50° North. Their range includes the waters of western North America (northern Baja California to the Gulf of Alaska), Russia (Kamchatka), and Japan. May occur in deep water close to the coast where there are submarine canyons and other features.	*Not expected to occur.* Suitable habitat is not present within the project site.
humpback whale *Megaptera novaeangliae*	FE (Central America DPS, Western North Pacific DPS); FT	—	MMPA Protected, MMPA Depleted (Western North Pacific stock, Central America/Southern Mexico-California-	Live throughout the world's major oceans. While calving, they prefer shallow, warm waters commonly near offshore reef systems or shores. Humpback whale feeding grounds are generally in cold, productive waters.	*Not expected to occur.* Suitable habitat is not present within the project site.

Species	Federal Status[1]	State Status[1]	Other Status	Habitat	Potential for Occurrence
	(Mexico DPS)		Oregon-Washington stock, Mainland Mexico-California-Oregon-Washington stock)		
Blainville's beaked whale *Mesoplodon densirostris*	—	—	MMPA Protected	Lives in tropical to temperate waters worldwide. It is typically found in deep, offshore waters (656 to 3,281 feet) off the continental shelf and often associated with steep underwater geological structures, such as banks, submarine canyons, seamounts, and continental slopes.	*Not expected to occur.* Suitable habitat is not present within the project site.
Stejneger's beaked whale *Mesoplodon stejnegeri*	—	—	MMPA Protected	Prefer the cold, temperate, and subarctic waters of the North Pacific Ocean. They are generally found in deep, offshore waters between 2,500 and 5,000 feet on or beyond the continental slope. Distribution throughout the North Pacific that includes California, the Aleutian Islands, the southwest Bering Sea, Kamchatka, the Okhotsk Sea, and the Sea of Japan.	*Not expected to occur.* Suitable habitat is not present within the project site.
northern elephant seal *Mirounga angustirostris*	—	—	MMPA Protected	Found in the eastern and central North Pacific Ocean. Typically breed and give birth in the Channel Islands off California or Baja California in Mexico, primarily on offshore islands from December to March.	*Not expected to occur.* Suitable habitat is not present within the project site.
San Diego desert woodrat *Neotoma lepida intermedia*	—	—	CDFW SSC	Coastal scrub. Coastal scrub of Southern California from San Diego County to San Luis Obispo County. Moderate to dense canopies preferred. They are particularly abundant in rock outcrops, rocky cliffs, and slopes.	*Not expected to occur.* Suitable habitat is not present within the project site.
pocketed free-tailed bat *Nyctinomops femorosaccus*	—	—	CDFW SSC	Joshua tree woodland, pinon and juniper woodland, riparian scrub, Sonoran desert scrub. Variety of arid areas in Southern California; pine-juniper woodlands, desert scrub, palm oasis, desert wash, desert riparian, etc. Rocky areas with high cliffs.	*Not expected to occur.* Suitable habitat is not present within the project site.
big free-tailed bat *Nyctinomops macrotis*	—	—	CDFW SSC	Low-lying arid areas in Southern California. Need high cliffs or rocky outcrops for roosting sites. Feeds principally on large moths.	*Not expected to occur.* Suitable habitat is not present within the project site. The nearest known occurrence of this species is located approximately 3.4 miles east of the project site.
killer whale *Orcinus orca*	—	—	MMPA Protected	Killer whales are found in all oceans. While they are most abundant in colder waters like Antarctica, Norway, and Alaska, they are also found in tropical and subtropical waters. Resident killer whales have been seen from California to Russia. Offshore killer whales have	*Not expected to occur.* Suitable habitat is not present within the project site.

Species	Federal Status[1]	State Status[1]	Other Status	Habitat	Potential for Occurrence
				the largest range of any community, and often occur more than 9 miles offshore. They are not, however, exclusively "offshore", as they are sometimes seen in coastal nearshore waters.	
melon-headed whale *Peponocephala electra*	—	—	MMPA Protected	Found primarily in deep waters throughout tropical areas of the world. In the United States, there are four distinct populations.	*Not expected to occur.* Suitable habitat is not present within the project site.
Pacific pocket mouse *Perognathus longimembris pacificus*	FE	—	CDFW SSC	Coastal scrub. Inhabits the narrow coastal plains from the Mexican border north to El Segundo, Los Angeles County. May prefer soils of fine alluvial sands near the ocean.	*Not expected to occur.* Suitable habitat is not present within the project site.
harbor seal *Phoca vitulina*	—	—	MMPA Protected	Live in temperate coastal habitats along the northern coasts of North America, Europe, and Asia, occurring as far north as 78° N. They occur in the U.S. East and West coasts.	*Not expected to occur.* This species is highly sensitive to disturbance and is not likely to occur within San Diego Bay.
harbor porpoise *Phocoena phocoena*	—	—	MMPA Protected	Live in northern temperate and subarctic, and Arctic coastal and offshore waters. They are commonly found in bays, estuaries, harbors, and fjords less than 650 feet deep. In the North Pacific, they are found from Japan north to the Chukchi Sea and from Point Conception off central California north to the Beaufort Sea.	*Not expected to occur.* Suitable habitat is not present within the project site.
Dall's porpoise *Phocoenoides dalli*	—	—	MMPA Protected	Common in the North Pacific Ocean and found off the US West Coast from California to the Bering Sea in Alaska. Prefers temperate to boreal waters that are more than 600 feet deep and with temperatures between 36° Fahrenheit and 63° Fahrenheit.	*Not expected to occur.* Suitable habitat is not present within the project site.
sperm whale *Physeter macrocephalus*	FE	—	MMPA Protected, MMPA Depleted	Found in all deep oceans from the equator to the edge of the icepack in the Arctic and Antarctic.	*Not expected to occur.* Suitable deep-water habitat is not present within the project site.
false killer whale *Pseudorca crassidens*	—	—	MMPA Protected, MMPA Depleted	Found globally in tropical, subtropical, and temperate waters that are deeper than 3,300 feet.	*Not expected to occur.* Suitable deep-water habitat is not present within the project site.
striped dolphin *Stenella coeruleoalba*	—	—	MMPA Protected	Prefer deep tropical to warm temperate oceanic, deep waters, and are attracted to upwelling areas, where deep, cold, nutrient-rich water rises towards the surface, and in convergence zones, where ocean currents meet.	*Not expected to occur.* Suitable deep oceanic waters are not present within the project site.
spinner dolphin *Stenella longirostris*	—	—	MMPA Protected, MMPA Depleted	Found in the Pacific, Atlantic, and Indian Oceans, as well as the Persian Gulf and Red Sea. Mostly found in deep offshore waters, although they can be observed around oceanic islands or other coastlines where there is deeper water near the coast (IUCN, 2018).	*Not expected to occur.* The project site is not within the known range of this species.

Species	Federal Status[1]	State Status[1]	Other Status	Habitat	Potential for Occurrence
rough-toothed dolphin *Steno bredanensis*	—	—	MMPA Protected	Found in deep oceanic waters throughout tropical and warmer temperate areas of the world.	*Not expected to occur.* Suitable deep water habitat is not present within the project site.
American badger *Taxidea taxus*	—	—	MSCP Covered Species	Most abundant in drier open stages of most shrub, forest, and herbaceous habitats, with friable soils. Needs sufficient food, friable soils and open, uncultivated ground. Preys on burrowing rodents. Digs burrows.	*Not expected to occur.* Suitable habitat is not present within the project site.
common bottlenose dolphin *Tursiops truncatus*	—	—	MMPA Protected	Found in temperate and tropical waters around the world. Inhabit a wide variety of habitats including harbors, bays, gulfs, and estuaries, as well as nearshore coastal waters, deeper waters over the continental shelf, and far offshore in the open ocean. Feeds on fish, squid, and crustaceans.	*May occur.* Suitable habitat for this species is present within the project site.
California sea lion *Zalophus californianus*	—	—	MMPA Protected	Found in shallow waters of the eastern North Pacific Ocean. Prefers sandy beaches or rocky coves for breeding and haul-out sites. May also haul out on marina docks as well as jetties and buoys. Feed mainly offshore in coastal areas and eat a variety of prey including squid, anchovies, mackerel, rockfish, and sardines. May also take fish from commercial fishing gear, sport fishing lines, and fish passage facilities at dams and rivers.	*May occur.* Suitable habitat is present for this species within the project site.
Cuvier's beaked whale *Ziphius cavirostris*	—	—	MMPA Protected	Found in temperate, subtropical, and tropical waters. Prefer deep pelagic waters (usually greater than 3,300 feet) of the continental slope and edge, as well as around steep underwater geological features like banks, seamounts, and submarine canyons. Favor oceanographic features such as currents, current boundaries, and core ring features.	*Not expected to occur.* Suitable deepwater habitat for this species is not present within the project site.

Notes: CEQA = California Environmental Quality Act; CNDDB = California Natural Diversity Database; DPS = distinct population segment; ESU = evolutionarily significant unit; ssp. = subspecies.

[1] Legal Status Definitions

Federal:
FE Endangered (legally protected)
FT Threatened (legally protected)
FP Federally proposed for listing (no formal protection other than CEQA consideration)
FC Federal candidate for listing (no formal protection other than CEQA consideration)
FD Federally delisted

State:
SE Endangered (legally protected)
ST Threatened (legally protected)
SC State candidate for listing (legally protected)
SD State delisted

Other:

CDFW FP Fully protected (legally protected)
CDFW SSC Species of special concern (no formal protection other than CEQA consideration)

2 Potential to Occur Definitions

Present	Species has been observed within the project site during surveys and it could be impacted by project activities.
May Occur	Species has not been observed within the project site. Suitable habitat for the species is present and it may occur within the project site; therefore, the species could be impacted by project activities.
Not Expected to Occur	Species has not been observed within the project site. Suitable habitat for the species is not present within the project site and the species is not expected to occur; therefore, the species would not be impacted by project activities. Sources:

EXECUTIVE SUMMARY

PURPOSE AND SCOPE

The San Diego Unified Port District (District) retained Ascent Environmental (Ascent) to complete a Historical Resources Assessment Report for the Shelter Island Commercial Fishing Wharf Project, in San Diego. The District is the lead agency under the California Environmental Quality Act (CEQA). The services provided included a historical resources literature search, intensive pedestrian survey of the project site, an evaluation of potential historical resources, and a potential impact assessment. This study was completed in compliance with CEQA guidelines, California Code of Regulations, Title 14, Section 15064.5.

FINDINGS OF THE INVESTIGATION

The California Historical Resources Information System records search at the South Coastal Information Center (SCIC) indicated that three prior cultural resource studies have been completed within a portion of the project site, and 31 additional studies have been completed outside the project site but within the 0.5-mile record search radius. The record search also indicated that no cultural resources have been previously recorded within the project site, but that nine have been recorded within the 0.5-mile search radius.

A pedestrian survey of the project site was conducted on February 18, 2025, by Alta Cunningham, M.A. The entire project site was surveyed with three buildings and five piers recorded. Examination of historical aerial imagery and mapping revealed that the three buildings were not historic-age; however, the five piers were constructed c.1953. Therefore, the Driscoll's Wharf site was recorded and evaluated as a potential historical resource for the purposes CEQA. An archaeological investigation was not part of this effort.

ASSESSMENT CONCLUSION AND RECOMMENDATIONS

No historical resources were identified within the project site as a result of the background research and pedestrian survey. No further investigation is recommended.

DISPOSITION OF DATA

This report will be filed with the District, the SCIC at California State University, San Diego, and the Ascent office in Sacramento. All field notes and other documentation related to the study are on file at the Sacramento office of Ascent.

PERSONNEL QUALIFICATIONS

Alta Cunningham has over 20 years of experience in the environmental consulting field. Her experience as an architectural historian includes archival research, historic building and structure surveys and evaluations, evaluating project for consistency with the Secretary of the Interior's Standards, and cultural resources documentation for NEPA and CEQA projects ranging from single building evaluations to district-wide surveys for CEQA, PRC 5024, and Section 106 compliance documents. Alta has completed evaluations for higher education facilities, California's correctional facilities, pre- and post-World War II residential and commercial buildings, agricultural properties, and water conveyance systems. Alta received her Bachelor of Science in History from the University of California, Davis, and a Master of Arts in Historic Preservation from the Savannah College of Art and Design. She meets the Secretary of the Interior's Professional Qualification Standards for architectural history and history.

Amber Engle Grady has over 25 years of environmental compliance and cultural resource management experience in California, Oregon, Washington, and Nevada. Her experience as an architectural historian includes archival research, historic building and structure surveys and evaluations, evaluating project for consistency with the Secretary of the Interior's Standards, and cultural resources documentation for National Environmental Protection Act and CEQA projects ranging from single building evaluations to district-wide surveys for CEQA, NEPA, PRC 5024, and Section 106 compliance documents. Amber has completed evaluations for residential and industrial buildings; linear features such water conveyance, electrical conveyance, and railroad systems; and landscapes such as public parks. Amber received her Master of Arts in Historic Preservation from the Savannah College of Art and Design. She meets the Secretary of the Interior's Professional Qualification Standards for architectural history and history.

1 INTRODUCTION

The District retained Ascent to complete a Historical Resources Assessment Report for the Shelter Island Commercial Fishing Wharf Project, in San Diego. The District is the lead agency under CEQA.

Ascent completed this report in compliance with the CEQA Section 21083.2 of the statute and Section 15064.5 of the CEQA Guidelines. This report details the methods and results of the study, which consisted of an archival document review, intensive pedestrian field survey, and a potential impact assessment.

1.1 PROJECT LOCATION AND DESCRIPTION

The project site is within the existing Driscoll's Wharf leasehold, located on District property, at 4918 North Harbor Drive in San Diego, California (Figure 1-1) (Assessor's Parcel Number 760-004-42-00). The leasehold encompasses 2.9 acres of landside area, and 5.7 acres of water-side area. The project site also includes an additional approximately 0.7-acre area where the floating wave attenuator is proposed. The proposed demolition activities would occur within the waterside area of the leasehold, as well as approximately 0.4-acre of the landside of the leasehold (Figure 1-2).

The proposed project is the modernization of the existing commercial fishing marina at the existing Driscoll's Wharf (Driscoll's) leasehold area. Proposed actions would include a tenant (Driscoll Marina Ltd.) sponsored demolition component, which is a condition of the lease, and a District sponsored waterside development component. The demolition component would remove Piers 4, 5, 6, 7, and 8; demolish Building E and a small hazardous material storage shed; and remove all soil, groundwater, and sediment contaminants from the leased premises. The District proposes to reconstruct and operate Piers 4, 5, 6, 7, and 8, which would also include new gangways, headwalks connecting piers, and a floating wave attenuator to the east of the existing leasehold. Coastal Development Permits are required to implement the proposed project.

Figure 1-2 Project Location and Limits

1.2 REGULATORY CONTEXT

1.2.1 Federal

NATIONAL REGISTER OF HISTORIC PLACES

The National Register of Historic Places (NRHP) is the nation's master inventory of known historic properties. It is administered by the National Park Service and includes listings of buildings, structures, sites, objects, and districts that possess historic, architectural, engineering, archaeological, or cultural significance at the national, state, or local level.

The formal criteria (36 CFR 60.4) for determining NRHP eligibility are as follows:

1. The property is at least 50 years old (however, properties under 50 years of age that are of exceptional importance or are contributors to a district can also be included in the NRHP);
2. It retains integrity of location, design, setting, materials, workmanship, feeling, and associations; and
3. It possesses at least one of the following characteristics:

   Criterion A Is associated with events that have made a significant contribution to the broad patterns of history (events).

   Criterion B Is associated with the lives of persons significant in the past (persons).

   Criterion C Embodies the distinctive characteristics of a type, period, or method of construction, or represents the work of a master, or possesses high artistic values, or represents a significant, distinguishable entity whose components may lack individual distinction (architecture).

   Criterion D Has yielded, or may be likely to yield, information important in prehistory or history (information potential).

For a property to retain and convey historic integrity, it must possess most of the seven aspects of integrity: location, design, setting, materials, workmanship, feeling, and association. Location is the place where the historic property was constructed or the place where a historic event occurred. Integrity of location refers to whether the property has been moved since its construction. Design is the combination of elements that create the form, plan, space, structure, and style of a property. Setting is the physical environment of a historic property that illustrates the character of the place. Materials are the physical elements that were combined or deposited during a particular period and in a particular pattern or configuration to form a historic property. Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. Feeling is a property's expression of the aesthetic or historic sense of a particular period. This intangible quality is evoked by physical features that reflect a sense of a past time and place. Association is the direct link between the important historic event or person and a historic property. Continuation of historic use and occupation help maintain integrity of association.

Listing in the NRHP does not entail specific protection or assistance for a property, but it does guarantee consideration in planning for federal or federally assisted projects, eligibility for federal tax benefits, and qualification for federal historic preservation assistance. In addition, project effects on properties listed in the NRHP must be evaluated under CEQA.

1.2.2 California Register of Historical Resources

All properties in California that are listed in or formally determined eligible for listing in the NRHP are eligible for listing in the California Register of Historical Resources (CRHR). The CRHR is a listing of State of California resources that are significant in the context of California's history. It is a Statewide program with a scope and with criteria for inclusion similar to those used for the National Register of Historic Places. In addition, properties designated under municipal, or county ordinances are also eligible for listing in the CRHR. A historical resource must be significant at the local, state, or national level under one or more of the criteria defined in the California Code of Regulations Title 15, Chapter 11.5, Section 4850 to be included in the CRHR. The CRHR criteria are tied to CEQA because any resource that meets the criteria below is considered a significant historical resource under CEQA.

The CRHR uses four evaluation criteria for significance:

Criterion 1. Is associated with events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States.

Criterion 2. Is associated with the lives of persons important to local, California, or national history.

Criterion 3. Embodies the distinctive characteristics of a type, period, region, or method of construction; represents the work of a master; or possesses high artistic values.

Criterion 4. Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

CALIFORNIA ENVIRONMENTAL QUALITY ACT

CEQA requires public agencies to consider the effects of their actions on “historical resources”. Pursuant to PRC Section 21084.1, a “project that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment.”

Historical Resources

“Historical resource” is a term with a defined statutory meaning (PRC Section 21084.1; State CEQA Guidelines Sections 15064.5[a] and [b]). Under State CEQA Guidelines Section 15064.5(a), historical resources include the following:

1) A resource listed in, or determined to be eligible by the State Historical Resources Commission for listing in, the CRHR is considered a historical resource (PRC Section 5024.1).

2) A resource included in a local register of historical resources, as defined in PRC Section 5020.1(k) or identified as significant in a historical resource survey meeting the requirements of PRC Section 5024.1(g), will be presumed to be historically or culturally significant. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant.

3) Any object, building, structure, site, area, place, record, or manuscript that a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be a historical resource, provided the lead agency’s determination is supported by substantial evidence in light of the whole record. Generally, a resource will be considered by the lead agency to be historically significant if the resource meets the criteria for listing in the CRHR (PRC Section 5024.1).

4) The fact that a resource is not listed in or determined to be eligible for listing in the CRHR, not included in a local register of historical resources (pursuant to PRC Section 5020.1[k]), or not identified in a historical resources survey (meeting the criteria in PRC Section 5024.1[g]) does not preclude a lead agency from determining that the resource may be a historical resource as defined in PRC Sections 5020.1(j) or 5024.1.

1.2.3 City of San Diego

MUNICIPAL CODE

City of San Diego Municipal Code Chapters 11, 12 and 14 of the Municipal Code establish the Historical Resources Board authority, appointment and terms, meeting conduct, and powers and duties; the designation process including the nomination process, noticing and report requirements, appeals, recordation, amendments or recission, and nomination of historical resources to state and national registers; and development regulations for historical resources.

SAN DIEGO REGISTER OF HISTORICAL RESOURCES

Any improvement, building, structure, sign, interior element and fixture, feature, site, place, district, area, or object may be designated a historical resource by the City's Historical Resources Board if it meets one or more of the following designation criteria:

A. Exemplifies or reflects special elements of the City's, a community's, or a neighborhood's, historical, archaeological, cultural, social, economic, political, aesthetic, engineering, landscaping, or architectural development.

B. Is identified with persons or events significant in local, state or national history.

C. Embodies distinctive characteristics of a style, type, period, or method of construction or is a valuable example of the use of indigenous materials or craftsmanship.

D. Is representative of the notable work of a master builder, designer, architect, engineer, landscape architect, interior designer, artist, or craftsman.

E. Is listed or has been determined eligible by the National Park Service for listing on the National Register of Historic Places or is listed or has been determined eligible by the State Historical Preservation Office for listing on the State Register of Historical Resources.

F. Is a finite group of resources related to one another in a clearly distinguishable way; or is a geographically definable area or neighborhood containing improvements which have a special character, historical interest or aesthetic value; or which represent one or more architectural periods or styles in the history and development of the City.

CERTIFIED LOCAL GOVERNMENT

The City became a Certified Local Government in 1986 the requirements of which include:

- Enforce appropriate state and local laws and regulations for the designation and protection of historic properties, including adoption of a historic preservation plan or inclusion of a historic preservation element in the General Plan;
- Establish a historic preservation review commission by local ordinance;
- Maintain a system for the survey and inventory of historic properties;
- Provide for public participation in the local preservation program; and
- Satisfactorily perform responsibilities delegated to it by the state.

GENERAL PLAN

Historic Preservation Element

The purpose of the Historic Preservation Element is to "guide the preservation, protection, restoration, and rehabilitation of historical and cultural resources and maintain a sense of the City" (City of San Diego 2024). None of the goals or policies of the Historic Preservation Element are applicable because no historical resources were identified on the project site.

2 RECORDS SEARCHES AND CONSULTATION

2.1 RECORDS SEARCH

On October 7, 2025, a search of records of the project site and a 0.5-mile radius around the project site was conducted at the SCIC, at California State University, San Diego (File No. 3748). The SCIC results are included as Appendix A.

The following information was reviewed:

- site records of previously recorded cultural resources,
- previous cultural studies,
- NRHP and CRHR listings,
- the California Historic Resources Inventory,
- Built Environment Resource Directory for San Diego County,
- Historical United States Geological Survey (USGS) topographic maps (1911, 1950, 1954, 1967), and
- General Land Office Plat maps (1865, 1866).

The records search identified no previously recorded resources within the project site, but nine resources have been previously recorded within a 0.5-mile radius. These nine resources include three built-environment features. Table 2-1 describes the previously recorded resources located within 0.5 miles of the project site. The search also found that three previous investigations included a portion of the project site, and 31 investigations have occurred within 0.5-mile. Table 2-2 lists the previously conducted studies within the project site and Table 2-3 lists the studies within the 0.5-mile radius.

Table 2-1 Previously Recorded Resources within 0.5-mile of Project Site

2.2 OTHER SOURCES

Additional research included revies of historic USGS Topographic maps and aerials available on-line from Nationwide Environmental Title Research, LLC were also reviewed. Both historic USGS topographic maps from 1904 to 2021 and aerial images from 1953 to 2022 were reviewed (NETR 2025). Other documents examined included the San Diego Modernism Historic Context Statement (City of San Diego 2007).

2.3 FIELD METHODS

Field work for the project was conducted on February 18, 2025, by Ascent architectural historian Alta Cunningham M.A. All built environment features were photographed with a digital camera. The results of the surveys are detailed in Section 4.

3 HISTORIC SETTING

The subject property is in the southeastern portion of San Diego in the America's Cup Harbor adjacent to the Roseville-Fleet Ridge and La Playa areas.

3.1 SPANISH PERIOD (1769-1822)

Although Juan Cabrillo landed on Point Lona in 1542, the Spanish permanent settlement of Alta California began in 1769 with the founding of Mission San Diego de Alcala. The Spanish government sent an expedition of soldier, settlers, and missionaries to secure and occupy the northwestern border of what was then known as New Spain. They first camped on the shore near the area now known as Spanish Landing in downtown San Diego, just east of the project site; however, they later moved closer to the San Diego River in what is now known as Old Town. Shortly after 1800, soldiers and their families began moving away from the presidio down the hill near the San Diego River (City of San Diego 2007).

3.2 MEXICAN PERIOD (1822-1846)

In 1822, Mexico won its independence from Spain and San Diego became part of the Mexican Republic and California was opened up to foreign trade. Private land grants began being issued as early as the 1820s, which created the rancho system of large agricultural estates and in 1833 the Spanish missions were secularized. In 1835, Mexico granted San Diego official pueblo status; at this time the population was nearly 500 residents. The town and ship landing area became the centers of activity during this period (City of San Diego 2007).

3.3 EARLY AMERICAN PERIOD (1846-1914)

In July 1846, United States military forces occupied San Diego and America assumed formal control in January 1847 with the signing of the Treaty of Guadalupe-Hildalgo (City of San Diego 2007). San Diego County, one of the original 27 counties, was formally organized by the California State Legislature on February 18, 1850 (Gudde 1998). The city of San Diego has always been the county seat (Hoover 2002). County office elections were first held April 1, 1850. The town struggled to grow with the population dropping from 650 in 1850 to 539 in 1860. The urbanization of San Diego began in 1867 with land speculator Alonzo Horton's development of the 800 acres of what is now downtown; this shifted the focus away from what is now called Old Town. Horton gave away lots to anyone who would build a house worth $500 on it. The development centered on Fifth Avenue and Market Street and within the next five years 15 new subdivisions were laid out around Horton's Addition. In 1880, the construction of the Santa Fe Railroad began with the system operational in 1882. In the late 1800s and early 1900s, the Golden Hill, Uptown, Banker's Hill, and Sherman Heights area were developed, which resulted in many improvements including street cars, paving, electrical street lights, railways, and sewage systems. The continued improvement of public transportation allowed for growth to continue further and further away from the city center. In 1908, a comprehensive city plan, develop by John Nolen, was completed; however, it was blocked by the City Council (City of San Diego 2007).

3.4 20TH-CENTURY

The 1915 Panama-California Exposition took place in San Diego's Balboa Park and marked the beginning of the significant military presence in San Diego. The arrival of the Navy boosted the population and the economy. In the 1920s the population doubled from 74,683 to 147,897. The aerospace industry began in 1910 when Glenn Curtiss opened an aviation school on Coronado Island. T. Claude Ryan opened a flying service in 1922 that led to the opening of a manufacturing plant. This plant was responsible for designing several innovative aircrafts including the *Spirit of St. Louis* which was flown by Charles Lindbergh from New York to Paris in 1927. Perhaps the greatest boost to the aerospace industry was the establishment of Consolidated Aircraft, which was previously based in Buffalo, New York (City of San Diego 2007).

The financial blow of the Great Depression in the 1930s was softened due to the presence of the military industry and recovery was assisted by New Deal programs through the Works Progress Administration (WPA). Between 1935 and 1943 approximately 1/5th of the national labor force was working on WPA projects and the city of San Diego secured several projects. The projects were federally funded, but administered by local jurisdictions (City of San Diego 2007).

As early as 1941, freeway planning in San Diego began with the goal of providing access between downtown and the harbor, including Highway 395 (later renumbered to Highway 163) and the Coast Highway 101. The automobile grew in popularity and new roads were constructed throughout the United States which was funded by the Gasoline Tax. Legislation such as the Federal Aid Highway Act and the Interstate Highway Act supported the expansion and construction of the freeways and expressways in the 1950s (City of San Diego 2007).

3.4.1 Waterfront Development

The San Diego shoreline is occupied by a variety of uses including recreational and commercial sailing, commercial fishing, and military. Much of the coastline in the San Diego Bay was shaped by infill while the use of the bay was expanded by the dredging of the channel to allow larger ships access. In the early 1900s elected officials were working to convince the federal government that San Diego was a good location for military installations and by 1920 both the Naval Training Center and Marine Corps Recruiting Depot were built. The US Navy was the major driver in the development of the harbor in the 1902s as well (San Diego 2007).

Shelter Island was constructed in 1950 by the city of San Diego Port Authority using dredging materials. The tenants of Shelter Island consist mostly of private yachts, small boat slips, and fishing vessels. In 1961, the US Navy dredged a new channel to accommodate aircraft carriers in the harbor (Cardno, Inc. 2016). Shelter Island is on the opposite side of America’s Cup Bay from Driscoll’s Wharf, which is also constructed of fill.

COMMERCIAL FISHING INDUSTRY

The presence of a land locked harbor and the Mediterranean climate made San Diego ideal for commercial fishing. In the 1870s and 80s Italian immigrants, primarily from the Italian coastal region of Porticello and Riva Trigoso, began arriving in San Diego. Italian fisherman arrived between 1902 and 1906. The fisherman strung a net between two boats to capture fish. The fish were sold at the San Diego fish markets which were also often owned and operated by Italian families. The technique was so efficient that this spurred the development of the canning industry (Cardno, Inc. 2016).

Since 1889, a small Japanese fishing community has existing in San Diego (Estes 1982). By 1918 it was estimated by the Department of Commerce that 50 percent of the crews in San Diego were Japanese with 85 percent of the total annual catch (Estes 1978, Estes 1982). The success of M.K. Fishing Company which was headed by Kondo Masaharu and managed by Abe Tokunosuke is believed to be one reason why Japanese fisherman were drawn to San Diego. The Japanese are credited with introducing the bamboo pole to tuna fishing, the incorporation of lang range refrigerated boats, the use of live bait, or “chumming,” and barbless feathers hooks known as squids. After the bombing of Pearl Harbor, all persons of Japanese ancestry in San Diego County were arrested and shipped to Missoula, Montana were there were detained during World War II (Estes 1978).

In 1909, the first sardine cannery was opened. They fished for sardines and tuna (Cardno, Inc. 2016). “[A]t one time San Diego was known as “The Tuna Capital of the World” with two of the countries three biggest tuna canneries being based along its Bay.” Tuna Boat Basin is located adjacent to the G Street Mole, which is on the other side of the Bay to the east of the project site (Port of San Diego 2025).

“In 1920, 125 fishing boats operated out of San Diego Bay and California led the United States in fishing with 97,000 tons of fish caught” (Cardno, Inc. 2016). The mid-1920s brought new regulations with regards to fishing nets. In addition, to the new regulations, over-fishing and contaminated water slowed the fishing industry and the number of fisherman declined (Cardno, Inc. 2016).

In the 1960s almost 40,000 people caught, sold, or processed fish along the Bay making it the third largest industry in the city (Port of San Diego 2025). "Every major cannery, including Bumble Bee, was based here" (Johnson 2019). Tuna Boat pier was constructed in 1977 in Tuna Boat Basin and Fish Harbor Pier was constructed in 1980, approximately 2-1/2 and 3 miles southeast of the project site respectively (Port of San Diego 2025).

Tuna Harbor and Driscoll's Wharf are the two remaining commercial fishing spots along San Diego Bay. Commercial fishing spots have been replaced by cruise ships, yachts, recreational fishing boats and floating museums (Johnson 2019).

3.5 PROJECT SITE

Prior to 1942, the project site was underwater with the shoreline located approximately 2,000 feet to the northwest near present-day Rosencrans Street. By 1941, fill was moving the shoreline to the southeast, but the project site was still underwater. By 1953, the bay was filled to form the land in the project site which included the five piers in the water portion and a parking lot on the land portion. Between 1953 and 1964 additional fill was added to straighten out the shoreline (Kleinfelder 2022).

The project site currently consists of five fixed structure piers with a total of 120 slips and three commercial buildings. The piers (numbers 4 through 8) were constructed c1953; however, the three buildings that are currently present are not historic age. The three buildings are addresses as 4904, 4918, and 4922 North Harbor Drive while the whole project site has been previously addressed as 4900 North Harbor Drive. The buildings currently addressed as 4904 and 4918 North Harbor Drive were constructed c1985 and the building currently addressed as 4922 North Harbor Drive was constructed c1990 (Kleinfelder 2022).

Piers 5-8 were built at the same time and are of identical construction. These piers are used for small-craft commercial fishing vessels. Maintenance has been done over the years, including the repair/replacement of the decking, but no new piles have been constructed (Driscoll, pers. comm., 2025). Pier 4, although constructed at the same time, is shorter than Piers 5-8. In 1970, the dock was removed and extended and in 2010 it was resurfaced, a floating pier to the south was added, and the crane installed (Driscoll, pers. comm., 2025).

3.5.1 Occupants of Driscoll's Wharf

Driscoll's Wharf has been operated by the Driscoll family since 1992 (Driscoll's Wharf 2025). It is a "commercial fishing marina off San Diego Bay that provides berthing spaces, storage, and other serviced for commercial boats, crews, and their catches" (Driscoll's Inc 2025). Known occupants between 1955 and 1980 include (Kleinfelder 2022):

1955–1966 – San Diego Commercial Fishing Boat Owners Inc.,

1961–1970 – Ernest Lapacek,

1970 – Boat Landing Association,

1970 – San Diego Commercial Marina,

1970 – Western Fish Boat Owners,

1975 – San Diego Commercial Marina Boat Landing,

1980 – L&W Communication Co Supplies,

1980 – San Diego Commercial Marina Storage sales service and repair, and

1980 – Steve Skelley.

3.5.2 Operators of Driscoll's Wharf

WESTERN FISHBOAT OWNERS' ASSOCIATION

The Western Fishboat Owners Association (WFOA) is a non-profit group that represents albacore troll vessel owners and associated businesses in California, Oregon, Washington, Alaska, and Hawaii that advocates safe and sustainable fishing. Its members fish wild Pacific albacore along the U.S. West Coast from June through October and in the South Pacific from January through April. WFOA assists in the development of management strategies and serves on the Western and Central Pacific Fisheries Commission and the InterAmerican Tropica Tuna Commission. (WFOA 2025). The WFOA was a recognized fishery association in 1969-1970 with J.V. Shaw listed as the President and an address of 4904 N. Harbor Drive (NOAA 1971). WFOA owned and operated what is now known as Driscoll's Wharf for approximately 20 years (Driscoll, pers. comm., 2025).

DRISCOLL BOAT WORKS

Driscoll Boat Works was founded in 1947 with its first location, a boatyard, on Shelter Island, by brothers Harlan and Gerry Driscoll. John Gerald Driscoll III (a.k.a. Gerry) participated in six America's Cup races with his final one in 1974 as captain of the Intrepid. Gerry is also known for introducing the concept of year-round training for the event as opposed to the previous accepted norm of four to five months prior to the event. Driscoll Boat Works now includes four facilities: Mission Bay, Boatworks, Intrepid, and Driscoll's Wharf (Driscoll's Wharf 2025).

4 RESULTS

4.1 BACKGROUND RESEARCH RESULTS

The results of the SCIC record search found that no cultural resources have been previously identified within the project site and that nearly 100 percent of the land portion of the project site was previously surveyed.

Review of the United States Geologic Survey topographic maps from 1904 to 2021 and historic aerials from 1953 to 2022 revealed that the 3 buildings that are currently present are not historic age; however, the 5 piers appear to have been constructed c1953.

4.2 PEDESTRIAN SURVEY RESULTS

The entire project site was subjected to an intensive level built-environment survey on February 18, 2025. Figures 4-1 and 4-5 present overviews of the project site.

4.3 HISTORIC RESOURCE EVALUATION

To be considered eligible for listing in the NRHP/CRHR under Criterion A/1, a property must be associated with events that have made a significant contribution to the broad patterns of our nation's, California's, or local history. Driscoll's Wharf is associated with commercial fishing in San Diego, however, commercial fishing began in the area around 1900 and Driscoll's Wharf did not exist until c1953. There is no information in the archival record that indicates that the subject property is associated with events that have made a significant contribution to the history of commercial fishing; therefore, it does not appear to be eligible for the NRHP/CRHR under Criterion A/1.

To be considered eligible for listing in the NRHP/CRHR under Criterion B/2, a property must be associated with the lives of persons significant in our past. The Driscoll brothers, known locally for their contributions to the commercial fishing industry and America's Cup, are associated with the property, but not until 1992. Various companies and individuals have been associated with Driscoll Wharf, but historical research did not reveal specific, significant individuals that have direct important association with the subject property. Therefore, it does not appear to be eligible for the NRHP/CRHR under Criterion B/2.

Under NRHP/CRHR Criterion C/3, a property must embody distinctive characteristics of a type, period, or method of installation, or represent the work of a master, or possess high artistic values. The architect and/or builder of the property are unknown. The three buildings are not historic age and the five piers are of common construction with no distinct or innovative construction methods or architectural style. Therefore, the subject property does not appear to possess sufficient design or construction value to be eligible for the NRHP/CRHR under Criterion C/3.

Criterion D/4 generally applies to archaeological resources or other resources that through study of construction details can provide information that cannot be obtained in other ways. The buildings and piers on the subject property appear to be of common construction. The subject property does not appear to be significant under this criterion because it is not likely to yield any additional important information about our history.

4.3.1 Integrity Consideration

For a property to retain and convey historic integrity it must possess most of the seven aspects of integrity: location, design, setting, materials, workmanship, feeling, and association. The property appears to retain its integrity of location and association as the piers have not been moved since construction and their purpose remains the same. The setting of the immediate area has not significantly changed except for the addition of modern buildings in what was the parking lot. The piers appear to retain a moderate to high degree of integrity of design, materials, workmanship, and feeling based on the site visit observations and information gathered regarding the minor maintenance level modifications that have been done. However, modern buildings have replaced the parking lot modestly, reducing the integrity of the property overall. Eligibility for listing on the NRHP and the CRHR rests on twin factors of significance and integrity. A resource must have both significance and integrity to be considered eligible. Loss of integrity, if sufficiently great, will become more important than the historical significance a resource may possess and render it ineligible. Likewise, a resource can have complete integrity, but if it lacks significance, it must also be considered ineligible. In this case the subject property retains sufficient integrity; however, it is not significant under any of the four criteria and therefore does not appear eligible for listing in either the CRHR or NRHP.

5 CONCLUSIONS AND RECOMMENDATIONS

In accordance with CEQA (PRC 15064.5 and PRC 15126.4), the effects of the proposed project have been assessed as related to the built environment. Both the background research, which includes the SCIC record search and the pedestrian survey, failed to identify the presence of historical resources within the project site. As such, a finding of no impact to historical resources is recommended under CEQA. No further investigation is recommended.

This property does not appear to meet the criteria for the California Register of Historical Resources (CRHR) or the National Register of Historic Places (NRHP).

Historic Context

San Diego

The project site is in the southeastern portion of San Diego in the America's Cup Harbor adjacent to the Roseville-Fleet Ridge and La Playa areas.

20th Century

The 1915 Panama-California Exposition took place in San Diego's Balboa Park and marked the beginning of the significant military presence in San Diego. The arrival of the Navy boosted the population and the economy. In the 1920s the population doubled from 74,683 to 147,897. The aerospace industry began in 1910 when Glenn Curtiss opened an aviation school on Coronado Island. T. Claude Ryan opened a flying service in 1922 that led to the opening of a manufacturing plant. This plant was responsible for designing several innovative aircrafts including the Spirit of St. Louis which was flown by Charles Lindbergh from New York to Paris in 1927. Perhaps the greatest boost to the aerospace industry was the establishment of Consolidated Aircraft, which was previously based in Buffalo, New York (City of San Diego 2007).

B10. Significance (continued)

The financial blow of the Great Depression in the 1930s was softened due to the presence of the military industry and recovery was assisted by New Deal programs through the Works Progress Administration (WPA). Between 1935 and 1943 approximately 1/5th of the national labor force was working on WPA projects and the city of San Diego secured several projects. The projects were federally funded, but administered by local jurisdictions (City of San Diego 2007).

As early as 1941, freeway planning in San Diego began with the goal of providing access between downtown and the harbor, including Highway 395 (later renumbered to Highway 163) and the Coast Highway 101. The automobile grew in popularity and new roads were constructed throughout the United States which was funded by the Gasoline Tax. Legislation such as the Federal Aid Highway Act and the Interstate Highway Act supported the expansion and construction of the freeways and expressways in the 1950s (City of San Diego 2007).

Waterfront Development

The San Diego shoreline is occupied by a variety of uses including recreational and commercial sailing, commercial fishing, and military. Much of the coastline in the San Diego Bay was shaped by infill while the use of the bay was expanded by the dredging of the channel to allow larger ships access. In the early 1900s elected officials were working to convince the federal government that San Diego was a good location for military installations and by 1920 both the Naval Training Center and Marine Corps Recruiting Depot were built. The US Navy was the major driver in the development of the harbor in the 1902s as well (San Diego 2007).

Shelter Island was constructed in 1950 by the city of San Diego Port Authority using dredging materials. The tenants of Shelter Island consist mostly of private yachts, small boat slips, and fishing vessels. In 1961, the US Navy dredged a new channel to accommodate aircraft carriers in the harbor (Cardno, Inc. 2016). Shelter Island is on the opposite side of America's Cup Bay from Driscoll's Wharf, which is also constructed of fill.

Commercial Fishing Industry

The presence of a land locked harbor and the Mediterranean climate made San Diego ideal for commercial fishing. In the 1870s and 80s Italian immigrants, primarily from the Italian coastal region of Porticello and Riva Trigoso, began arriving in San Diego. Italian fisherman arrived between 1902 and 1906. The fisherman strung a net between two boats to capture fish. The fish were sold at the San Diego fish markets which were also often owned and operated by Italian families. The technique was so efficient that this spurred the development of the canning industry (Cardno, Inc. 2016).

Since 1889, a small Japanese fishing community has existing in San Diego (Estes 1982). By 1918 it was estimated by the Department of Commerce that 50 percent of the crews in San Diego were Japanese with 85 percent of the total annual catch (Estes 1978, Estes 1982). The success of M.K. Fishing Company which was headed by Kondo Masaharu and managed by Abe Tokunosuke is believed to be one reason why Japanese fisherman were drawn to San Diego. The Japanese are credited with introducing the bamboo pole to tuna fishing, the incorporation of lang range refrigerated boats, the use of live bait, or "chumming," and barbless feathers hooks known as squids. After the bombing of Pearl Harbor, all persons of Japanese ancestry in San Diego County were arrested and shipped to Missoula, Montana were there were detained during World War II (Estes 1978).

B10. Significance (continued)

In 1909, the first sardine cannery was opened. They fished for sardines and tuna (Cardno, Inc. 2016). "[A]t one time San Diego was known as "The Tuna Capital of the World" with two of the countries three biggest tuna canneries being based along its Bay." Tuna Boat Basin is located adjacent to the G Street Mole, which is on the other side of the Bay to the east of the project site (Port of San Diego 2025).
"In 1920, 125 fishing boats operated out of San Diego Bay and California led the United States in fishing with 97,000 tons of fish caught" (Cardno, Inc. 2016). The mid-1920s brought new regulations with regards to fishing nets. In addition, to the new regulations, over-fishing and contaminated water slowed the fishing industry and the number of fisherman declined (Cardno, Inc. 2016).

In the 1960s almost 40,000 people caught, sold, or processed fish along the Bay making it the third largest industry in the city (Port of San Diego 2025). "Every major cannery, including Bumble Bee, was based here" (Johnson 2019). Tuna Boat pier was constructed in 1977 in Tuna Boat Basin and Fish Harbor Pier was constructed in 1980, approximately 2-1/2 and 3 miles southeast of the project site respectively (Port of San Diego 2025).

Tuna Harbor and Driscoll's Wharf are the two remaining commercial fishing spots along San Diego Bay. Commercial fishing spots have been replaced by cruise ships, yachts, recreational fishing boats and floating museums (Johnson 2019).

B10. Significance (continued)

Subject Property

Prior to 1942, the project site was underwater with the shoreline located approximately 2,000 feet to the northwest near present-day Rosencrans Street. By 1941, fill was moving the shoreline to the southeast, but the project site was still underwater. By 1953, the bay was filled to form the land in the project site which included the five piers in the water portion and a parking lot on the land portion. Between 1953 and 1964 additional fill was added to straighten out the shoreline (Kleinfelder 2022).

The project site currently consists of five fixed structure piers with a total of 120 slips and three commercial buildings. The piers (numbers 4 through 8) were constructed c1953; however, the three buildings that are currently present are not historic age. The three buildings are addresses as 4904, 4918, and 4922 North Harbor Drive while the whole project site has been previously addressed as 4900 North Harbor Drive. The buildings currently addressed as 4904 and 4918 North Harbor Drive were constructed c1985 and the building currently addressed as 4922 North Harbor Drive was constructed c1990 (Kleinfelder 2022).

Piers 5-8 were built at the same time and are of identical construction. These piers are used for small-craft commercial fishing vessels. Maintenance has been done over the years, including the repair/replacement of the decking, but no new piles have been constructed (Driscoll, pers. comm., 2025). Pier 4, although constructed at the same time, is shorter than Piers 5-8. In 1970, the dock was removed and extended and in 2010 it was resurfaced, a floating pier to the south was added, and the crane installed (Driscoll, pers. comm., 2025).

<u>Occupants of Driscoll's Wharf</u>

Driscoll's Wharf has been operated by the Driscoll family since 1992 (Driscoll's Wharf 2025). It is a "commercial fishing marina off San Diego Bay that provides berthing spaces, storage, and other serviced for commercial boats, crews, and their catches" (Driscoll's Inc 2025). Known occupants between 1955 and 1980 include (Kleinfelder 2022):

1955–1966 – San Diego Commercial Fishing Boat Owners Inc.
1961–1970 – Ernest Lapacek
1970 – Boat Landing Association
1970 – San Diego Commercial Marina
1970 – Western Fish Boat Owners
1975 – San Diego Commercial Marina Boat Landing
1980 – L&W Communication Co Supplies
1980 – San Diego Commercial Marina Storage sales service and repair
1980 – Steve Skelley

B10. Significance (continued)

Operators of Driscoll's Wharf

Western Fishboat Owners' Association

The Western Fishboat Owners Association (WFOA) is a non-profit group that represents albacore troll vessel owners and associated businesses in California, Oregon, Washington, Alaska, and Hawaii that advocates safe and sustainable fishing. Its members fish wild Pacific albacore along the U.S. West Coast from June through October and in the South Pacific from January through April. WFOA assists in the development of management strategies and serves on the Western and Central Pacific Fisheries Commission and the InterAmerican Tropica Tuna Commission. (WFOA 2025). The WFOA was a recognized fishery association in 1969-1970 with J.V. Shaw listed as the President and an address of 4904 N. Harbor Drive (NOAA 1971). WFOA owned and operated what is now known as Driscoll's Wharf for approximately 20 years (Driscoll, pers. comm., 2025).

Driscoll Boat Works

Driscoll Boat Works was founded in 1947 with its first location, a boatyard, on Shelter Island, by brothers Harlan and Gerry Driscoll. John Gerald Driscoll III (a.k.a. Gerry) participated in six America's Cup races with his final one in 1974 as captain of the Intrepid. Gerry is also known for introducing the concept of year-round training for the event as opposed to the previous accepted norm of four to five months prior to the event. Driscoll Boat Works now includes four facilities: Mission Bay, Boatworks, Intrepid, and Driscoll's Wharf (Driscoll's Wharf 2025).

Figure 1. 1953 Aerial Map
Note: Arrow shows location of the subject property.

B10. Significance (continued)

To be considered eligible for listing in the NRHP/CRHR under Criterion A/1, a property must be associated with events that have made a significant contribution to the broad patterns of our nation's, California's, or local history. Driscoll's Wharf is associated with commercial fishing in San Diego, however, commercial fishing began in the area around 1900 and Driscoll's Wharf did not exist until c1953. There is no information in the archival record that indicates that the subject property is associated with events that have made a significant contribution to the history of commercial fishing; therefore, it does not appear to be eligible for the NRHP/CRHR under Criterion A/1.

To be considered eligible for listing in the NRHP/CRHR under Criterion B/2, a property must be associated with the lives of persons significant in our past. The Driscoll brothers, known locally for their contributions to the commercial fishing industry and America's Cup, are associated with the property, but not until 1992. Various companies and individuals have been associated with Driscoll Wharf, but historical research did not reveal specific, significant individuals that have direct important association with the subject property. Therefore, it does not appear to be eligible for the NRHP/CRHR under Criterion B/2.

Under NRHP/CRHR Criterion C/3, a property must embody distinctive characteristics of a type, period, or method of installation, or represent the work of a master, or possess high artistic values. The architect and/or builder of the property are unknown. The three buildings are not historic age and the five piers are of common construction with no distinct or innovative construction methods or architectural style. Therefore, the subject property does not appear to possess sufficient design or construction value to be eligible for the NRHP/CRHR under Criterion C/3.

Criterion D/4 generally applies to archaeological resources or other resources that through study of construction details can provide information that cannot be obtained in other ways. The buildings and piers on the subject property appear to be of common construction. The subject property does not appear to be significant under this criterion because it is not likely to yield any additional important information about our history.

Integrity Consideration

For a property to retain and convey historic integrity it must possess most of the seven aspects of integrity: location, design, setting, materials, workmanship, feeling, and association. The property appears to retain its integrity of location and association as the piers have not been moved since construction and their purpose remains the same. The setting of the immediate area has not significantly changed except for the addition of modern buildings in what was the parking lot. The piers appear to retain a moderate to high degree of integrity of design, materials, workmanship, and feeling based on the site visit observations and information gathered regarding the minor maintenance level modifications that have been done. However, modern buildings have replaced the parking lot modestly, reducing the integrity of the property overall. Eligibility for listing on the NRHP and the CRHR rests on twin factors of significance and integrity. A resource must have both significance and integrity to be considered eligible. Loss of integrity, if sufficiently great, will become more important than the historical significance a resource may possess and render it ineligible. Likewise, a resource can have complete integrity, but if it lacks significance, it must also be considered ineligible. In this case the subject property retains sufficient integrity; however, it is not significant under any of the four criteria and therefore does not appear eligible for listing in either the CRHR or NRHP.

1 EXECUTIVE SUMMARY

A Phase I Environmental Site Assessment (ESA) was performed by Kleinfelder, Inc. (Kleinfelder) for the San Diego Unified Port District (Client) of a property located at 4900–4930 North Harbor Drive, San Diego, California (Subject Property) (see Figures 1 and 2). The Subject Property is owned by the Client and is identified as San Diego County Assessor's Parcel Number (APN) 760-004-42-00. Kleinfelder understands the Client is requesting a Phase I ESA to evaluate the existing conditions at the Subject Property.

Information gathered and activities performed for this Phase I ESA were consistent with the guidelines in ASTM International (ASTM) Designation E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (the "ASTM Standard"), the All Appropriate Inquiry (AAI) section of the Small Business Liability Relief and Revitalization Act (the Federal Brownfields Law), and also incorporated the procedures set forth in ASTM E1527-21.

A summary of findings is provided below:

- The Subject Property is located between 4900 and 4930 North Harbor Drive, San Diego. The three buildings on the Subject Property currently have addresses of 4904, 4918, and 4922 North Harbor Drive. The Subject Property consists of approximately 100,000-square feet of land area, 300,000-square feet of water area, 35,000-square feet of commercial office space, five fixed structure piers, a 750-foot-long concrete walkway, and a paved access road and parking lot.
- 4904 North Harbor Drive is currently occupied by Chula Seafood and Tunaville Market on the first floor. These businesses process and package fresh seafood. Large refrigeration units were noted inside these businesses. The second floor of the building appeared vacant and under renovation.
- 4918 North Harbor Drive is currently occupied on the first floor by Miramar Canvas (an upholstery/fabric shop that was not accessible during the site reconnaissance), City of San Diego (not accessible during site reconnaissance), a small maintenance and storage room used by Driscoll's Wharf, and spaces that were used as miscellaneous storage or were vacant and appeared undergoing renovation. Second floor subtenants of 4918 North Harbor Drive included VSSL offices (a marketing and advertising company), Michelle Paul (a family law office), Driscoll's Wharf administrative office, and vacant office space.
- The interior of the 4922 North Harbor Drive building was not accessible during the site reconnaissance. 4922 North Harbor Drive is occupied by Semantic AI (a computer software company).

- The Subject Property is currently and was historically used as a wharf for fishing boat mooring and recreational vessels. These activities have occurred on the Subject Property since at least 1953, when boats were first identified on the historic aerial photographs. Driscoll Marina Ltd. has leased the Subject Property from the San Diego Unified Port District since 1992.

- Other current and historical uses of the Subject Property have included the City of San Diego Marine Biology Laboratory, restaurants, and commercial offices.

- The use, storage, and generation of hazardous wastes, including petroleum hydrocarbons, paints, and solvents, have been documented on the Subject Property in association with boat maintenance and laboratory-related activities. These wastes are currently and have historically been stored in aboveground storage tanks (ASTs), drums, and an underground storage tank (UST) on the Subject Property. The UST was identified by Kleinfelder on a 1984 site plan. It is unknown if the UST was removed or is still present on the Subject Property.

- A hazardous materials storage shed was observed on the Subject Property. The shed contained paints, household cleaners, oils, and lubricants on shelving units, propane cylinders used for forklift operation were stored in a polyethylene box in the corner of the shed, and four 55-gallon drums containing waste oil, oily water, oily rags, and absorbents were located on secondary containment. Heavily stained concrete in the hazardous waste storage shed was observed during Kleinfelder's site reconnaissance.

- The area where the current hazardous materials storage shed is located, was previously used for outdoor hazardous materials storage. Photographs of this area in 2008 show a concrete slab containment structure for a waste oil AST. Oily debris was observed on the base of the secondary containment. Additional photographs show three 55-gallon drums of used oil rags, filters, and litter as well as the secondary containment structure for the waste oil AST being raised to clean the base of the containment area.

- Two environmental investigations were conducted in 1992 on the Subject Property. These investigations identified petroleum hydrocarbon contamination in soil and groundwater as well as copper, lead, zinc, mercury, tributyltin (TBT), dibutyltin (DBT), and monobutyltin (MBT) contamination in bay sediment within the Subject Property boundaries. The copper, lead, and zinc concentrations exceeded their respective Effects Range-Low (ERL) value and mercury exceeded the ERL and Effects Range-Medium (ERM) value (Long et al, 1995). The ERL and ERM values are typically used by regulatory agencies to evaluate metals concentrations in bay sediment.

- A leaking underground storage tank (LUST) case reportedly impacted soil and groundwater at the adjacent property to the northwest of the Subject Property (4960 North Harbor Drive). The property at 4960 North Harbor Drive was historically a boat building and repairing facility. Eight USTs, ranging from 8,000 to 10,000 gallons and containing gasoline or diesel fuels, were removed from the site in 1994. During tank removal, gasoline and diesel contamination was detected in soil and groundwater and free product was observed to be seeping into the harbor. The soil and groundwater contamination were remediated by soil excavation and free product recovery. The LUST case was closed in 2000 by the San Diego County Department of Environmental Health. It was reported that residual soil and groundwater contamination remained after LUST case closure.

- Two closed LUST cases reportedly impacted soil and groundwater at the adjacent property to the east of the Subject Property (Naval Base Point Loma). The closed LUST cases were located on Naval Base Point Loma, in close proximity to the Subject Property, in association with a former 1,400-gallon diesel fuel UST and a former 1,400-gallon heating oil/fuel oil UST.
- A drum storage area was observed on adjacent tidelands property to the north. The storage area is located between the Subject Property and a public restrooms/sewer pump station building. The storage area is enclosed with a chain-link fence with "Private Property" signage. The San Diego Unified Port District has indicated that this storage area is under control by the San Diego Moorings Company and that the San Diego Moorings Company uses the drums to store chains.
- Elevated levels of copper, mercury, and TBT have been identified in bay sediment within America's Cup Harbor at nearby, historic boat repair, maintenance and other industrial facilities.

This assessment has revealed no evidence of recognized environmental conditions (RECs), controlled RECs (CRECs), or historical RECs (HRECs) in connection with the Site, except for the following (see Figure 4 for REC locations):

<u>RECs Identified on Landside Portion of Subject Property</u>

1. The presence of petroleum hydrocarbons identified in soil and groundwater on the Subject Property during the 1992 environmental assessment conducted by Engineering Science Applications is considered a REC.
2. The waste oil UST, depicted on the 1984 site plan, on the Subject Property represents a REC, due to the potential for the UST to have leaked and impacted the surrounding soil and groundwater.
3. The lead battery reclamation that was conducted on the Subject Property, as identified by the San Diego Unified Port District (via Client interview) represents a REC. This activity may have impacted soil on the Subject Property.

4. The use of tar for lobster cages on the Subject Property represents a REC, due to the potential for soil to be impacted from this activity.

5. The fill material originally used to construct the tideland area at the Subject Property is considered a REC. The fill material has the potential to be contaminated from historic industrial and/or dumping activities in the area(s) where the fill material originated from.

RECs Associated with Hazardous Materials Storage Area/Shed

6. The heavy staining on the concrete floor of the hazardous materials storage shed, as identified during the site reconnaissance, represents a REC. Petroleum hydrocarbon waste is stored in this shed; therefore, based on the degree of staining, soil and groundwater below this area may be impacted.

7. The County of San Diego Department of Environmental Health reported waste oil-soaked carpet around a waste oil tank in 2005 in the former hazardous waste storage area on the Subject Property. The oil-soaked carpet around a waste oil tank is considered a REC, due to the potential for soil to have been impacted. The former hazardous waste storage area was located where the current hazardous materials storage shed is located. The County's inspection report indicates that the business name associated with the oil-soaked carpet was "Driscoll's Wharf" and the address was 4904 North Harbor Drive. The Subject Property's Office Manager, Cynthia Price, signed the inspection report.

8. The County of San Diego Department of Environmental Health reported oily debris below a waste oil AST in 2008 in the former hazardous waste storage are on the Subject Property. The oily debris below a waste oil AST is considered a REC, due to the potential for soil to have been impacted. The County's inspection report indicates that the business name associated with the oily debris was "Driscoll's Wharf" and the address was 4918 North Harbor Drive, #203. The Subject Property's Office Manager, Cynthia Price, signed the inspection report.

RECs Associated with Bay Sediment

9a. The trench drain located at Chula Seafood on the Subject Property represents a REC. It is unknown where the trench drain discharges. There is a potential that contaminants, originating near the trench drain, could have been discharged to the harbor through the storm drain system and could have impacted bay sediments within the waterside portion of the Subject Property.

9b. The storm drain outfall on the Subject Property represents a REC. According to a storm drain map provided by the San Diego Unified Port District, the storm drain outfall is connected to the catch basins that were observed along the northeastern boundary of the Subject Property. There is a potential that contaminants, originating near the catch basins, could have been discharged to the harbor through the storm drain system and could have impacted bay sediments within the waterside portion of the Subject Property.

10. Copper, lead, zinc, mercury, TBT, DBT, and MBT have been detected in sediment on the Subject Property. The copper, lead, and zinc concentrations exceeded their respective ERL value and mercury exceeded the ERL and ERM value (Long et al, 1995). Leaching of metals from hull paints, overwater hull maintenance and other overwater boat maintenance activities within the wharf may have contributed to these sediment impacts. Consequently, the use of the Subject Property as a wharf is considered a REC for sediment impacts.

11. Bay sediment within America's Cup Harbor has been reported to be impacted by copper, mercury, and TBT due to boat repair, maintenance, and other industrial activities around America's Cup Harbor. Therefore, the potential for migration of contaminated sediment from America's Cup Harbor into the Subject Property is considered a REC.

RECs Associated with Off-Site Sources

12. The adjacent closed LUST case at the former Bay City Marine facility (northwest of the Subject Property at 4960 North Harbor Drive) represents a REC. The reported groundwater contamination at the former Bay City Marine facility has the potential to migrate below the Subject Property.

13. The adjacent closed LUST cases at Naval Base Point Loma (east of the Subject Property), represents a REC. The reported groundwater contamination at Naval Base Point Loma has the potential to migrate below the Subject Property.

In addition to these conditions, deviations from the Phase I ESA Standard (if any) are discussed in Section 8.1 of this report. This report is subject to the limitations in Section 2.5.

2 INTRODUCTION

This purpose of this Phase I ESA is to identify potential or known hazardous materials, hazardous waste, and contamination, which may be present in the Subject Project vicinity. Information gathered and activities performed for this Phase I ESA were consistent with applicable guidelines set forth in ASTM Standard Designation E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*, and also incorporated the procedures set forth in ASTM E1527-21. Pursuant to the ASTM Standard and limitations discussed in this report, RECs, and other environmental issues related to the Subject Property will be evaluated:

2.1 PURPOSE

The purpose of this Phase I ESA is to identify RECs, to the extent feasible pursuant to the scope of services defined in Task Authorization No. 04, dated May 19, 2022, and limitations discussed in this report.

As defined in the ASTM Standard, a REC is:

> *The presence of hazardous substances or petroleum products due to a release to the environment; (2) likely presence of hazardous substances or petroleum products due to a release or likely release to the environment; or (3) presence of hazardous materials or petroleum products under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.*
>
> *Note: "Likely" is that which is neither certain nor proved but can be expected or believed by a reasonable observer based on the logic and/or experience of the environmental professional, and/or available evidence, as stated in the report to support the opinion given therein.*

As defined in the ASTM Standard, a *de minimis* condition is:

> *A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.*

As defined in the ASTM Standard a CREC is:

> *… a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use limitations, activity and use limitations, institutional controls, or engineering controls).*

Additionally, the ASTM Standard defines HRECs, as:

> *…a past release of any hazardous substances or petroleum products that has affected the Subject Property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to environmental controls.*

The final decision regarding whether a past release is an HREC rests with the environmental professional (EP) and will be influenced by the current impact (if any) of the past release to the Subject Property.

Finally, the ASTM Standard defines a business environmental risk (BER) as:

> *…a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations...*

This report describes Kleinfelder's assessment methodology and documents our findings, subject to the limitations presented in Section 2.5 of this report.

Kleinfelder professionals conducting this site assessment included Mr. Jake Lippman, who was the primary author of this report, Mr. Stefan Birardi who performed the site reconnaissance, and Mr. William Golightly and Ms. Lizanne Simmons who provided project oversight. Resumes of Environmental Professionals are available from Kleinfelder upon request.

2.2 DETAILED SCOPE-OF-SERVICES

To achieve the stated purpose, the following scope of services was undertaken by Kleinfelder for this project:

- Section 2, **Introduction**, includes a discussion of the purpose/reason for performing the Phase I ESA, additional services requested by the Client (e.g., an evaluation of business environmental risk factors associated with the Subject Property), significant assumptions (e.g., property boundaries if not marked in the field), limitations, exceptions, special terms and conditions (e.g., contractual), and user reliance parameters.
- Section 3, **Subject Property Description**, is a compilation of information concerning the Subject Property location, legal description, current and proposed use of the Subject Property, a description of structures and improvements on the Subject Property at the time of Kleinfelder's assessment, and adjoining property use.
- Section 4, **Records Review**, is a compilation of Kleinfelder's review of several databases available from Federal, State, and local regulatory agencies regarding hazardous substance use, storage, or disposal at the Subject Property and off-site facilities within the search distances specified in the ASTM Standard. Records provided by the Client are summarized and copies of relevant documents are included in the appendices of this report. Physical setting sources (including topography and soil and groundwater conditions) and typical Client-provided information (e.g., title records, environmental liens, specialized knowledge, valuation reduction for environmental issues, and owner, property manager, and occupant information) are also summarized in this section. Other interviews with people knowledgeable about the Subject Property (including the Client) are included in Section 7.
- Section 5, **Historical Use Information**, summarizes the history of the Subject Property and adjoining properties. This Subject Property history is based on various sources, which may include a review of historical aerial photographs, Sanborn Fire Insurance Maps, city or suburban directories, historical topographic maps, building department records, and results of previous site assessments (if any and reasonably ascertainable).
- Section 6, **Site Reconnaissance**, describes observations by Kleinfelder during the site reconnaissance of the Subject Property and surrounding areas. The methodology used and limiting conditions are described in this section.
- Section 7, **Interviews**, is a summary of telephone and in-person interviews performed with "Key Subject Property Managers" that may include the Subject Property owner/manager,

occupants/tenants, local government officials, and the Client. Additional interview sources may be contacted if Key Subject Property Managers were not available prior to production of this report and may include adjoining landowners and people with historical knowledge of the area.

- Section 8, **Evaluation**, is a presentation of our findings and opinions regarding the information in Sections 3 through 7, and presents our conclusions regarding the presence of RECs, HRECs, CRECs, and *de minimis* conditions connected with the Subject Property.
- Section 9, **References**, is a summary of the resources used to compile this Phase I ESA report.

A statement of qualifications of the signatories of this report is provided in Appendix A, and pertinent documentation regarding the Subject Property is included in Appendices B through D.

2.3 ADDITIONAL SERVICES

An evaluation of BER associated with the Subject Property was not included in Kleinfelder's scope of services. The scope of this Phase I ESA does not incorporate ASTM Standard non-scope considerations such as asbestos-containing materials (ACMs), radon, lead-based paint (LBP), lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, and high-voltage power lines.

2.4 SIGNIFICANT ASSUMPTIONS

Kleinfelder does not guarantee the accuracy of the information supplied by its sources but reserves the right to rely on this information in formulating a professional opinion on the potential for contamination at the Subject Property. Kleinfelder also assumes the Client provided all applicable and available environmental records and specialized knowledge regarding the Subject Property. Kleinfelder assumes that any potential historical agrichemical/pesticide application which may be associated with the identified historical agricultural land use was performed in a customary manner in strict accordance with the agrichemical/pesticide manufacturer labels; and this assumption does not apply to any potentially identified areas associated with agrichemical storage, mixing, transportation, spills, and/or disposal. If specific information was not available, Kleinfelder also made assumptions for this Phase I ESA regarding the surficial groundwater flow direction at the Subject Property based on observed conditions and a review of United States Geological Survey (USGS) Topographic Maps and online USGS StreamStats drainage basin delineation tool. Kleinfelder assumed that historical aerial photographs, topographic maps, and other information was representative of conditions during periods between coverage.

Kleinfelder has not made other significant assumptions during the performance of this Phase I ESA.

2.5 LIMITATIONS AND EXCEPTIONS

Environmental assessments are non-comprehensive by nature and are unlikely to identify all environmental problems or eliminate all risk. This report is a qualitative assessment. Kleinfelder offers a range of investigative and engineering services to suit the needs of our clients, including more quantitative investigations. Although risk can never be eliminated, more detailed and extensive investigations yield more information, which may help the Client understand and better manage risks. Since such detailed services involve greater expense, we ask our clients to participate in identifying the level of service, which will provide them with an acceptable level of risk. Please contact the signatories of this report if you would like to discuss this issue of risk further.

Kleinfelder performed this Phase I ESA in general accordance with the guidelines set forth in the ASTM Standard, and the proposed scope subsequently approved by the Client. No warranty, either express or implied, is made. Environmental issues not specifically addressed in this report were beyond the scope of our services and not included in our evaluation.

Land use, Subject Property conditions (both on-site and off-site), and other factors will change over time (e.g., EDR Lightbox [EDR], The EDR Radius Map™ Report). Since Subject Property activities and regulations beyond our control could change at any time after the completion of this report, our observations, findings, and opinions can be considered valid only as of the date of *The EDR Radius Map™ Report with GeoCheck®* (April 8, 2022), which was used in the preparation of this report. Additionally, Subject Property conditions observed were limited to readily apparent environmental conditions observed at the Subject Property.

This report may be used only by the Client and the registered design professional in responsible charge, only for the purposes stated within a reasonable time from its issuance, but in no event later than 1 year from the date of *The EDR Radius Map™ Report with GeoCheck®* (expires April 8, 2023). Land or facility use, on and off-site conditions, regulations, or other factors may change over time, and additional work may be required with the passage of time. Any party other than the Client who wishes to use this report shall notify Kleinfelder of such intended use. Based on the intended use of the report, Kleinfelder may require that additional work be performed and that an updated report be issued. Non-compliance with any of these requirements by the Client or anyone else will release Kleinfelder from any liability resulting from the use of this report by any unauthorized party, and the Client agrees to defend, indemnify, and hold Kleinfelder harmless from any claim or liability associated with such unauthorized use or non-compliance.

During the course of the performance of Kleinfelder's services, hazardous materials may have been discovered. Kleinfelder assumes no responsibility or liability whatsoever for any claim, loss of property value, damage, or injury that results from pre-existing hazardous materials being encountered or present on the Subject Project, or from the discovery of such hazardous materials. Nothing contained in this report should be construed or interpreted as requiring Kleinfelder to assume the status of an owner, operator, or generator, or person who arranges for disposal, transport, storage, or treatment of hazardous materials within the meaning of any governmental statute, regulation, or order. Client is solely responsible for directing notification of all governmental agencies, and the public at large, of the existence, release, treatment, or disposal of any hazardous materials observed at the Subject Property, either before or during performance of Kleinfelder's services. Client is responsible for directing all arrangements to lawfully store, treat, recycle, dispose of, or otherwise handle hazardous materials, including cuttings and samples resulting from Kleinfelder's services.

2.6 SPECIAL TERMS AND CONDITIONS

No special terms and conditions were agreed to by the Client and Kleinfelder.

3 SUBJECT PROPERTY DESCRIPTION

The description of the Subject Property is presented in this section and addresses the condition of the Subject Property at the time of the Phase I ESA. A Subject Property Location Map is provided as Figure 1. Tables 3-1 through 3-4 summarize the physical characteristics of the Subject Property and adjoining properties.

3.1 LOCATION AND LEGAL DESCRIPTION

The information presented in Table 3-1 includes the physical location and legal description of the Subject Property. This information was obtained from review of various maps (such as topographic maps and tax assessor maps), aerial photographs, public records at City and/or County offices, interviews, and/or information provided by the Client.

Table 3-1: Location and Legal Description

PARAMETER	INFORMATION/COMMENTS
LOCATION	The Subject Property is located along the shore of America's Cup Harbor, within the City of San Diego, San Diego County, California (see Figure 1, Subject Property Location Map).
APNs/ADDRESS	The Subject Property is assigned as APN 760-004-42-00 and has addresses between 4900 and 4930 North Harbor Drive. Specifically, the three buildings on the Subject Property have current addresses of 4904, 4918, and 4922 North Harbor Drive. The address numbers on the Subject Property increase towards the southeast (e.g., 4904 is assigned to the northwestern-most building and 4922 is assigned to the southeastern-most building). This is in contrast to the properties to the northwest of the Subject Property, where the address numbers increase towards the west along North Harbor Drive. In addition, the historic address of 4900 North Harbor Drive was identified in the EDR Radius Map Report and City Directory listings and the historic address of 4910 North Harbor Drive was identified in a previous environmental investigation at the subject property (Section 5.6). Based on our research, the address of 4900 North Harbor Drive has been associated with the entire Subject Property and has not been associated with a specific building on the Subject Property. The address of 4910 North Harbor Drive was associated with the building currently located at 4904 North Harbor Drive.
LEGAL DESCRIPTION	The legal description of the Subject Property parcel is included in the *EDR Environmental Lien and AUL Search* report (EDR, 2022b) located in Appendix C).

Table 3-1: Location and Legal Description (continued)

PARAMETER	INFORMATION/COMMENTS
SECTION, TOWNSHIP, AND RANGE	The Subject Property situated within Section 6 of Township 10 South and Range 3 West of the San Bernardino Principal Baseline and Meridian.
ZONING	Based on the City of San Diego Official Zoning Map (https://www.sandiego.gov/development-services/zoning-maps), the Subject property has not been assigned a zoning type.

3.2 CURRENT / PROPOSED USE OF THE PROPERTY

At the time of Kleinfelder's assessment, land use at the Subject Property and in the immediate Subject Property vicinity appeared to be predominantly used for commercial and military (Naval Base Point Loma) purposes. Current and proposed uses are described in Table 3-2.

Table 3-2: Current / Proposed Uses

PARAMETER	GENERAL OBSERVATIONS
CURRENT USE	The Subject Property consists of three commercial buildings and a commercial fishing wharf.
PROPOSED USE	No change to the current use is proposed.

3.3 DESCRIPTION OF STRUCTURES / IMPROVEMENTS

Structures and/or improvements observed on the Subject Property at the time of Kleinfelder's site reconnaissance are described in Table 3-3.

Table 3-3: Structures / Improvements

PARAMETER	GENERAL OBSERVATIONS
STRUCTURES	The Subject Property is developed with three multi-tenant commercial buildings, a hazardous materials storage shed, fish chiller container, five piers, a covered fishing materials storage area, and a net mending area.
IMPROVEMENTS	The Subject Property has been improved with an asphalt-paved driveway and associated parking stalls, a concrete walkway along the southern portion of the property, three pad-mounted transformers, a trench drain and two catch basins along the northeastern boundary, and utility infrastructure. The trench drain was located directly outside one of the side doors to Chula Seafood. The trench drain was located in an area where Chula Seafood received frozen fish delivery. The trench drain appeared to drain to a storm drain catch basin.

3.4 CURRENT USES OF ADJOINING PROPERTIES

Kleinfelder performed a brief drive-by survey of the properties adjoining to the Subject Property on June 9, 2022. A summary of the surrounding properties is presented in Table 3-4 and shown on Figure 5.

Table 3-4: Adjoining Properties

LAND USE DESCRIPTION	GENERAL DIRECTIONS FROM SUBJECT PROPERTY
Public Restrooms, Sewer Pump Station	NORTH
Multi-Tenant Commercial (4960 North Harbor Drive), Boat Docks	NORTHWEST
Naval Base Point Loma military facility	NORTH, NORTHEAST, EAST, and SOUTHEAST
America's Cup Harbor	NORTHWEST, WEST, SOUTHWEST, SOUTH, and SOUTHEAST

Hazardous materials and petroleum products were not directly observed to be stored on the properties adjoining to the Subject Property at the time of the site reconnaissance. See Section 6 for a summary of the site reconnaissance.

4 RECORDS REVIEW

4.1 STANDARD ENVIRONMENTAL RECORD SOURCES

The purpose of the records review was to obtain and review records that would help to evaluate RECs of potential concern in connection with the Subject Property and bordering properties.

Federal, State, and local regulatory agencies publish databases or "lists" of businesses and properties that handle hazardous materials or hazardous waste or are the known location of a release of hazardous substances to soil and/or groundwater. These databases are available for review and/or purchase at the regulatory agencies, or the information may be obtained through a commercial database service. Kleinfelder contracted a commercial database service, EDR of Shelton, Connecticut to perform the government database search for listings within the appropriate ASTM Standard minimum search distance of the Subject Property. Kleinfelder provided EDR with a Subject Property map to incorporate the search distances from the Subject Property boundary. Included in The EDR Radius Map™ Report with GeoCheck® (EDR, 2022a) is a listing of specific databases outlined by the ASTM Standard. A listing of the search distances, databases evaluated, dates the databases were last updated, and types of information contained in each database are included in the regulatory database search provided as Appendix B to this report.

EDR utilizes a geographical information system to plot the locations of reported spills, leaks, incidents, etc. Kleinfelder reviews this information to help establish if the Subject Property, or nearby properties, have been included in the noted databases and lists. Each of the listings was reviewed to assess whether the corresponding property details included in the EDR report revealed a potential environmental impact to the Subject Property. A number of listings in the EDR database were found not to have the potential to impact the Subject Property based on the following, or a combination thereof:

- The listed property was located at a distance where the facility would be unlikely to impact the Subject Property based on Kleinfelder's evaluation of the relevant data in the EDR report and knowledge of the Subject Property vicinity.
- The listed property was located in a down-gradient or cross-gradient direction from the Subject Property, based on the anticipated direction of groundwater flow at the property being evaluated, and is located at a distance that would be unlikely to impact the Subject Property. Note that groundwater flow direction may be variable in the vicinity of the Subject Property and

determinations as to down- or cross-gradient direction were made only when groundwater flow direction was available for a specific property.

- The listed property was identified in the Underground Storage Tank (UST) or Small Quantity Generator (SQG) databases and was not on or immediately adjoining the Subject Property. The property was not listed in other databases that reported a release of a hazardous substance or petroleum product and/or was not listed as having environmental violations. The listing of a facility on these databases alone is not indicative of an unauthorized release.
- The listing for the facility suggested a short-term release had occurred (i.e., from incidental traffic accidents, or chemicals from illegal drug labs found at residences) with associated response actions completed.
- The quantity of the hazardous substances or petroleum product released from an off-site facility was not considered to have resulted in contamination above the most stringent criteria that would require regulatory action. Therefore, no impact to the Subject Property is anticipated.
- The listed property record indicates that the property was characterized, the reported release affected soil only, the listed property was not on or adjacent to the Subject Property, and the release was not recognized as indicative of area-wide conditions or was characterized as a soil removal action only.
- The listed property record indicates that contamination on the property is limited to relatively non-mobile contaminants, including polyaromatic hydrocarbons (PAHs) and metals, in soil only, on a non-adjacent property.
- The listed property record indicates that the case has been closed to the satisfaction of the designated lead regulatory agency and residual contamination, if present, is not considered likely to affect the Subject Property based on one or more of the criteria mentioned in the bulleted items above (referred in the ASTM Standard as an HREC).

Based on these criteria indicating no material threat of a release that affected the Subject Property and/or no release that could require future regulatory agency oversight, these listings were not evaluated further and are not discussed in the following sections.

4.2 RESULTS OF DATABASE SEARCH

The remaining property listings were reviewed to assess whether these properties had environmental releases, which may have resulted in RECs in relation to the Subject Property. The listed properties for which a reported release may have resulted in a REC were further assessed by performing a review of agency files available through the State Water Resources Control Board's (SWRCB) GeoTracker™ website (http://geotracker.waterboards.ca.gov/) and other relevant regulatory agency websites, to evaluate whether the listed release represents a potential impact to the Subject Property.

4.2.1 Subject Property Listings

The following summarizes the EDR listings that are associated with the Subject Property.

4900 North Harbor Drive, Driscoll

The Subject Property is listed in the California Hazardous Material Incident Report System (CHMIRS) database due to a diesel fuel release to America's Cup Harbor on August 12, 2019. A sheen on the water's surface was observed at the time of the incident. No information was reported in relation to the source of the release (e.g. from a marine vessel or from landside activities) or the precise location of the release.

Naut-A-Care, 4900–4930 North Harbor Drive

The Subject Property is listed in the HAZNET and the Hazardous Waste Tracking System (HWTS) databases due to historic hazardous waste manifests that were associated with the Subject Property. According to these databases, Naut-A-Care generated hazardous wastes on the Subject Property from 1998 to 2007, including waste and mixed oil, organic solids and residues, oil/water separation sludge, and oil-containing waste. This listing did not provide information on the specific processes that generated the wastes. However, based on our review of San Diego County Department of Environmental Health (DEH) records, summarized in Section 4.3.3, these wastes may have been generated from the storage and handling of bilge waste by Naut-A-Care. The DEH records indicate that Naut-A-Care generated bilge waste by servicing vessels at the Subject Property. No evidence of an underground oil-water separator, in association with the handling of bilge waste on the Subject Property, was identified.

Naut-A-Care, 4904 North Harbor Drive, Suite 105

The Subject Property is listed under the EDR Historical Auto Stations database. The listing indicates that a gasoline service station was present on the Subject Property in 1999. However, based on our review of the historical aerial photographs and our interview with the Client, it does not appear that a gasoline service station was present on the Subject Property. This listing may be associated with the bilge waste generation that was also reported for Naut-A-Care in 1999 by the County DEH (see Section 4.3.3).

SDCTY-Marine Biology Lab, 4918 North Harbor Drive

The Subject Property is listed in the San Diego County Hazardous Materials Management Division (HMMD), and California Environmental Reporting System (CERS) databases. This listing indicates that the City of San Diego Metro Wastewater Department held a San Diego County HMMD permit at Suite #201 (second floor of building), on the Subject Property, to generate hazardous waste. The San Diego County DEH completed compliance evaluation inspections for this permit from 2016 through 2021. Violations were reported by the San Diego County DEH for the Subject Property in 2016 and 2018 for failure to complete a site map, to annually certify the hazardous material business plan, to properly label hazardous waste containers, and for not making a hazardous waste manifest available for inspection. The EDR listing did not indicate the type or quantity of waste associated with the Marine Biology Lab. Because this listing was associated with a second floor suite and no chemical releases were reported, the Marine Biology Lab does not represent a REC. See Section 4.3.3 for inspection reports associated with the Marine Biology Lab.

Driscoll Marina LTD, 4918 North Harbor Drive

The Subject Property is listed in the RCRA Non-Generators/No Longer Regulated (NonGen/NLR) database. This listing indicates that universal waste was reported in association with the Subject Property. No violations were reported in association with this listing.

4.2.2 Off-site Listings

San Diego Fleet Antisubmarine Warfare Training Center/Naval Base Point Loma

This military facility adjoins the Subject Property to the east (see Figure 5). This facility is listed under various databases including UST, AST, CERS, RESPONSE, and ENVIROSTOR databases. Several listings were reported in close proximity to the Subject Property (one 1,400-gallon diesel fuel UST that caused soil contamination at Building 50 and one 1,400-gallon heating oil/fuel oil UST that caused groundwater contamination at Building 7) (see Page 1 of Appendix C for the facility's building location map). According to GeoTracker, individual UST cases were opened for each building and, as of 2004, the cases have been closed by the San Diego Regional Water Quality Control Board. No other specific information was available regarding the cases for Buildings 7 or 50 to evaluate the impact to the Subject Property. The UST cases associated with Naval Base Point Loma for Buildings 7 and 50 are considered a REC.

Former Bay City Marine/Harbor Fuel Dock, 4960 North Harbor Drive

This facility is located approximately 200 feet northwest of the Subject Property and is listed under the LUST database, San Diego County SAM/HMMD, SWEEPS UST, HIST UST, Cortese, ENF, CIWQS, and CERS databases. This site was historically a boat building and repairing facility. Eight USTs, ranging from 8,000 to 10,000 gallons and containing gasoline or diesel fuels, were removed from the site in 1994. During tank removal, gasoline and diesel contamination was detected in soil and groundwater and free product was observed to be seeping into the harbor. The soil and groundwater contamination were remediated by soil excavation and free product recovery. The LUST case was closed in 2000 by the San Diego County DEH. It was reported that residual soil and groundwater contamination remained after LUST case closure. The direction of groundwater flow was reportedly south toward the harbor. Due to the close proximity of this site to the Subject Property and potential for residual contamination to migrate toward the Subject Property, this site is considered a REC.

4.2.3 Orphan List

Sites not plotted by EDR due to poor or inadequate address information are referred to as orphan sites. Sixteen orphan off-site facilities are listed in the EDR Radius Map™ Report with GeoCheck®. The listed orphan sites fall under one or more of the criteria listed in Section 4.1 and do not represent a hazardous waste impact to the Subject Property.

4.3 OTHER RECORDS REVIEWED / AGENCIES CONTACTED

The following additional sources of environmental records were reviewed during this Phase I ESA for the purposes of meeting the ASTM Standard. Local regulatory agencies were contacted for reasonably ascertainable and practically reviewable documentation regarding RECs present at the Subject Property and adjoining facilities. Summaries of interviews with local regulatory agency representatives are included in Section 7 of this report (with interview documentation included in Appendix C). The following agencies (if marked with an "X") were contacted for documentation:

- ☒ State of California, Geologic Energy Management Division (CalGEM)
- ☒ San Diego County Air Pollution Control District (APCD)
- ☒ San Diego County Department of Environmental Health and Quality (DEH)
- ☒ State Water Resources Control Board, GeoTracker™ / San Diego Regional Water Quality Control Board (RWCQB)
- ☒ State Department of Toxic Substances Control (DTSC)
- ☒ Pipeline and Hazardous Materials Safety Administration (PHMSA), National Pipeline Mapping System (NPMS)
- ☒ City of San Diego, Development Services Department, Building Permits

☒ United States Environmental Protection Agency Resource Conservation and Recovery Act Information (RCRAInfo)

☒ State Water Resources Control Board Stormwater Multiple Application and Report Tracking System (SMARTS)

Information from these agencies is presented below.

4.3.1 State of California, Geologic Energy Management Division

Information concerning oil and gas fields was obtained by Kleinfelder from the State of California's CalGEM Well Finder database (https://maps.conservation.ca.gov/doggr/wellfinder/#openModal). Based on our review of the database, the Subject Property is not depicted within the boundaries of a known oil or gas field. In addition, no oil or gas wells are depicted on the Subject Property, or in the immediate vicinity of the Subject Property. A copy of the CalGEM Well Finder search results is included in Appendix C.

4.3.2 San Diego County Air Pollution Control District

The APCD maintains permits, violations, and or complaints pertaining to air emissions. A request for information for the Subject Property was submitted to the APCD on June 6, 2022. Based on a June 6, 2022 email response from the APCD, records were not available for the Subject Property. A copy of the APCD response is included in Appendix C.

4.3.3 San Diego County Department of Environmental Health

A written request for information was submitted on June 7, 2022, to the San Diego DEH for information pertaining to the Subject Property. The San Diego DEH provided records associated with the Subject Property on June 7, 2022. The following information is a summary of the records provided by the San Diego DEH. Copies of these records are included in Appendix C.

On October 6, 1992, Engineering Science Applications submitted a *Boring Logs and Laboratory Data* report to the San Diego County DEH, in association with a soil and groundwater investigation at the Subject Property. The Subject Property address was listed as 4904–4922 North Harbor Drive and the name of the Subject Property at the time of the investigation was "Fisherman's Village." The purpose of the investigation was to assess petroleum hydrocarbon contamination; however, the source of contamination was not identified. The investigation included drilling six soil borings, throughout the Subject Property, to depths ranging from 6 to 8 feet below ground surface (bgs). A slight diesel odor was reported between approximately 0 and 3 feet bgs at the boring located southeast of 4904 North Harbor Drive. The laboratory analytical results indicate that total recoverable petroleum hydrocarbons (TRPH) were detected at 24 and 51 milligrams per kilogram (mg/kg) in soil samples composited from multiple locations and depths. Additionally, in the boring located southeast of 4904 North Harbor Drive, TRPH was detected at 90 mg/kg at 2 feet bgs and at 1.7 milligrams per liter in groundwater. Engineering Science Applications did not include recommendations as part of their report, based on the results of their investigation.

On November 5, 1993, the City of San Diego's Marine Biology Laboratory signed an Onsite Hazardous Waste Treatment Notification Form in association with 4918 North Harbor Drive, Suite #101 on the Subject Property. The notification form indicates that the facility was assigned a United States Environmental Protection Agency ID Number (CAL000098749) to treat five gallons per month of acidic wastewater by pH adjustment or neutralization methods. The wastewater would be generated from glassware cleaning procedures. After treatment, the wastewater would be discharged as non-hazardous aqueous waste to the public sewer system. The notification form was submitted to the California Department of Toxic Substances Control (DTSC). On March 3, 1994, the DTSC acknowledged receipt of the notification form.

Between 1995 and 2021, the San Diego DEH conducted routine compliance inspections at the Subject Property as part of on-site management of hazardous materials and waste. The street addresses listed below may represent more than one building or area on the Subject Property and are not necessarily associated with the three current building addresses on the Subject Property. Our summary of the compliance inspections is included below.

1995 – Driscoll's Wharf, 4904 N. Harbor Dr – Four 55-gallon drums and one 30-gallon plastic container were observed in the waste oil storage area. The San Diego County DEH reported that the drums and containers were not adequately labeled and that nobody onsite was trained to manage the oil storage area properly.

1996 – City of San Diego Marine Biology Laboratory, 4918 N. Harbor Dr., Suite 101 – Three one-gallon cans of thinner waste and four small cans of epoxy/paint were observed and were not properly labeled as hazardous waste. Transfer of waste oil from servicing boats and acid neutralization activities were also observed on the Subject Property. Although the inspection was conducted at the City of San Diego Marine Biology Laboratory, the inspection does not indicate whether the transfer of waste oil from servicing boats was associated with laboratory activities or with other activities at Driscoll's Wharf. The inspection also does not indicate the quantity of waste oil or how the transfer of waste oil was being conducted.

1997 – City Marine Biology Laboratory, 4918 N. Harbor Dr., Suite 101 – Acetone, formaldehyde, and ethanol were observed on the Subject Property.

1998 – Driscoll's Wharf, 4904 N. Harbor Dr. – One used oil tank was observed and was not labeled properly. No information regarding the size or type of tank or the specific location of the tank was identified in the inspection report.

1999 – City of San Diego Marine Biology Laboratory, 4918 N. Harbor Dr. – The laboratory indicates that they have expanded into Suite #106A on the Subject Property. The San Diego County DEH indicates that the facility may qualify for exemption from tiered permitting regulations.

1999 – A San Diego County DEH Complaint Form was filed for Naut-a-Care Marine Services at 4904 North Harbor Drive. The complaint alleges that Naut-A-Care at Suite 206 (second floor of building) has two 300-gallon tanks used to store bilge waste/water and that the tanks were emptied by a company called "Evergreen" that uses hoses from their tanker trucks to empty out the tanks. The complainant was concerned due to the system used to store the bilge wastes. Naut-A-Care reportedly generated waste oil from servicing vessels at the Subject Property.

2000 – The City of San Diego requests the San Diego County DEH to remove the laboratory from permitting regulations. Additionally, Naut-a-Care Marine Services notified the San Diego County DEH that they went out of business as of February 1, 2000.

2001 – Driscoll's Wharf, 4904 N. Harbor Dr. – No hazardous materials of reportable quantity were observed by San Diego County DEH.

2002 – City of San Diego Marine Biology Laboratory, 4918 N. Harbor Dr., Suite 101 – The treatment of hazardous waste was observed (formaldehyde used to treat sediment samples) on the Subject Property. The rinsate generated from the treatment process was discharged to the sewer. The San Diego County DEH reported that hazardous material containers in flammable storage locker Room #107 were damaged.

2003 – City of San Diego Marine Biology Laboratory, 4918 N. Harbor Dr., Suite 101 – No violations were reported by the San Diego County DEH.

2004 – City of San Diego Marine Biology Laboratory, 4918 N. Harbor Dr., Suite 101 – The facility was closed by the City of San Diego, all wastes were removed, and a permit was no longer required.

2005 – Driscoll's Wharf, 4904 N. Harbor Dr. – Two plastic containers were observed in the hazardous waste storage area. One container was used to store old paint thinner, and one container was unlabeled. Carpet around an aboveground waste oil tank, in the hazardous waste storage area, was observed to be contaminated with waste oil. Details of the size or type of waste oil tank were not identified in the inspection report. The Subject Property's Office Manager, Cynthia Price, signed the inspection report.

2006 – Driscoll's Wharf, 4904 N. Harbor Dr. – One used oil AST and two 55-gallon drums were missing labels. The San Diego County DEH reported that an AST and one 55-gallon plastic container were left open. Details of the size or type of AST or the specific location on the Subject Property were not identified in the inspection report.

2008 – Driscoll's Wharf, 4918 N. Harbor Dr. – Two 8-gallon cylinders of propane and a waste oil AST were observed. Details of the size or type of waste oil tank or the specific location on the Subject Property were not identified in the inspection report. Disposal records for used/oil absorbents and pads were reportedly not available for the last three years for San Diego County DEH's review. One 100-gallon AST was used to dip lobster cages into tar. The specific location on the Subject Property of the 100-gallon AST was not identified in the inspection report. Photographs of the hazardous waste storage area shows a concrete slab containment structure for the waste oil AST. Oily debris was observed on the base of the secondary containment. This area appears to be where the current hazardous materials storage shed is located. Additional photographs were provided showing three 55-gallon drums of used oil rags, filters, and litter as well as showing the secondary containment structure being raised to clean the base of the containment area. The Subject Property's Office Manager, Cynthia Price, signed the inspection report.

2011 – Driscoll's Wharf, 4918 N. Harbor Dr. – Two propane tanks, one 375-gallon used oil AST, two 55-gallon drums for used oily rags, and one 55-gallon drum for used filters were observed. A violation for keeping used oily rag drums onsite for more than 180 days was reported. The specific location of the waste storage on the Subject Property was not identified in the inspection report. The 375-gallon used oil AST was not observed during Kleinfelder's site reconnaissance.

2013 – Driscoll's Wharf, 4918 N. Harbor Dr. – The same quantities of hazardous material, as observed during the 2011 inspection, were reported, with the addition of one 30-gallon waste gasoline drum. The specific location of the waste storage on the Subject Property was not identified in the inspection report.

2016 – Driscoll's Wharf, 4918 N. Harbor Dr. – Two 55-gallon used oil drums, two 55-gallon soiled rags/absorbent drums, and one 55-gallon with an unknown red liquid drum were observed. This drum was labeled later by Driscoll's Wharf as "red-dye diesel." The activity associated with the use or generation of "red-dye diesel" was not reported and the specific location of the waste storage on the Subject Property was not identified in the inspection report.

2018 – Driscoll's Wharf, 4918 N. Harbor Dr. – Propane tanks, two 55-gallon used oil drums (empty), one 55-gallon metal filters drum (empty), one 55-gallon oily absorbent drum (empty), and one trailer-mounted diesel generator (capacity unknown) located on the offloading pier (Pier 4) were observed. A diesel generator on Pier 4 was not observed during Kleinfelder's site reconnaissance.

2021 – Driscoll's Wharf, 4918 N. Harbor Dr. – The inspection indicated that waste containers were closed and in good condition; however, the San Diego County DEH did not report the specific types or quantities of hazardous waste that were on-site.

4.3.4 State Water Resources Control Board, GeoTracker / San Diego Regional Water Quality Control Board

Kleinfelder reviewed the SWRCB GeoTracker™ website (https://geotracker.waterboards.ca.gov/) on June 8, 2022 for information pertaining to the Subject Property and adjoining properties of concern. No information was available pertaining to the Subject Property. The following information is a summary of adjoining properties. Copies of the GeoTracker™ search results are included in Appendix C.

Commercial Basin (America's Cup Harbor) Harbor Drive (adjoins northwest)

This GeoTracker case is for the Commercial Basin (America's Cup Harbor), which the Subject Property is a part of. However, upon review of the documents associated with the case, the Subject Property does not appear to be included as part of this case as described below.

In an e-mail dated October 24, 2018, the San Diego RWQCB requested information from the San Diego Unified Port District regarding a parcel of land and storm drain collection areas to the northwest of the Subject Property (no address was provided by the San Diego RWQCB).

At the request of the San Diego Unified Port District, Kleinfelder prepared a Historical Assessment for Commercial Basin (America's Cup Harbor) (Kleinfelder, 2019). The Historical Assessment was included in the documents for this GeoTracker case. According to the Historical Assessment, the San Diego RWQCB issued Cleanup and Abatement Orders in 1988 and 1989 to seven boatyards adjacent to the Commercial Basin (America's Cup Harbor) for the discharge of waste that caused elevated levels of copper, mercury, and TBT in bay sediment. The Subject Property was not identified by the San Diego RWQCB as a source of copper, mercury, or TBT contamination to the harbor and the Subject Property was not included in the

Cleanup and Abatement Orders. At the facility closest to the Subject Property (Bay City Marine), which adjoins the Subject Property to the northwest, impacted sediment extended to approximately four feet below the top of the bay sediment. Cleanup and Abatement Order No. 88-79 was issued for Bay City Marine, due to boat repair and maintenance activities that allegedly resulted in the discharge of waste to the bay. Remediation of sediment, by dredging, was implemented at the facility and remediation was completed by 1997. The boundaries of the extent of remediation were not included in the Historical Assessment.

Due to the proximity of contaminated sediments to the Subject Property, there is a potential that contaminated sediments have migrated and are present on the Subject Property. Therefore, the historic presence of contaminated sediments within the Commercial Basin (America's Cup Harbor) is considered a REC.

Bay City Marine Boatyard (adjoins northwest)

This listing provides additional information related to contaminated sediments at the adjacent Bay City Marine facility. A Woodward-Clyde Consulants map from 1990 depicts interpreted copper concentrations, up to approximately 500 mg/kg, and interpreted mercury concentrations, up to approximately 5 mg/kg, extending onto the northern portion of the Subject Property. The interpreted concentrations are based on sediment samples collected adjacent to the north of the Subject Property. No sediment samples are depicted on the Subject Property. A JNE & Associates, Inc. letter from 1993, entitled *Sampling Plan for Determining Suitability of Commercial Basin Sediments for Upland Disposal,* indicates that the Cleanup and Abatement Orders for the Commercial Basin boatyards require clean-up of copper concentrations to 530 mg/kg and mercury concentrations to 4.8 mg/kg. The letter includes a map showing the property dredging area for Bay City Marine. The dredging area is depicted approximately 150 feet northwest of the Subject Property.

San Diego Fleet AntiSubmarine Warfare Training Center Pacific (Naval Base Point Loma Harbor Drive) (adjoins east) – *See Section 4.2.2 for a summary of listings for this facility.*

Harbor Fuel Dock, 4960 North Harbor Drive (adjoins northwest) – *See Section 4.2.2 for a summary of listings for this facility.*

4.3.5 State Department of Toxic Substances Control

A request for information for the Subject Property was submitted to the DTSC on June 7, 2022. Based on a June 9, 2022 email response from the DTSC, records were not available for the Subject Property. A copy of the DTSC response is included in Appendix C.

Kleinfelder also reviewed the DTSC EnviroStor online database (https://www.envirostor.dtsc.ca.gov/public/) on June 8, 2022 for information pertaining to the Subject Property and adjoining properties. Records were not available for the Subject Property. The following information is a summary of adjoining properties. Copies of the DTSC EnviroStor search results are presented in Appendix C.

Fleet Anti-Sub Warfare Training Center, North Harbor Drive and McDonough Road (adjoins east) – See Section 4.2.2. for a summary of listings for this facility.

4.3.6 Pipeline and Hazardous Materials Safety Administration, National Pipeline Mapping System

Pipeline information is available at the PHMSA's online NPMS (https://pvnpms.phmsa.dot.gov/PublicViewer/). Kleinfelder researched pipeline information on the NPMS for the Subject Property and vicinity on June 7, 2022. Based on Kleinfelder's review of the NPMS website, no mapped natural gas transmission pipelines or hazardous liquid pipelines are located on Subject Property, or on properties that adjoin the Subject Property. A copy of the NPMS map is included in Appendix C.

4.3.7 City of San Diego, Development Services Department, Building Permits

Kleinfelder accessed the City of San Diego, Development Services Department online database, on June 8, 2022, for building permits associated with the Subject Property after 2002. Based on our search of the database, no building permits were available for the Subject Property.

4.3.8 United States Environmental Protection Agency RCRAInfo Search

Kleinfelder accessed the United States Environmental Protection Agency's RCRAInfo Search online database for hazardous waste information pertaining to the Subject Property. Based on our search of the database, no information was available for the Subject Property.

4.3.9 State Water Resources Control Board Stormwater Multiple Application and Report Tracking System (SMARTS)

Kleinfelder accessed the State Water Resources Control Board's SMARTS online database for stormwater reports associated with the Subject Property. Based on our search of the database, no reports were available for the Subject Property.

4.4 PHYSICAL SETTING SOURCE(S)

Table 4-1 presents information concerning the physical setting of the Subject Property. This information was obtained from published maps.

Table 4-1: Physical Setting

DATA	GENERAL INFORMATION
USGS TOPOGRAPHIC QUADRANGLE	Based on a review of the United States Geological Survey (USGS) Point Loma, California 7.5-Minute Series (Topographic) Quadrangle Maps dated 2021, the Subject Property is located at approximately 0 to 20 feet above mean sea level (msl). The topographic relief is generally flat in the Subject Property vicinity, sloping toward the San Diego Bay.
SOIL TYPE	Based on information in the EDR Radius Map™ Report with GeoCheck®, the vicinity of the Subject Property is designated as urban land with variable soil textures (EDR, 2022a; Appendix B).
OIL AND GAS WELLS	Kleinfelder reviewed the State of California CalGEM Well Finder database (https://maps.conservation.ca.gov/doggr/wellfinder/#openModal) for oil and gas wells that may be located on the Subject Property and in the Subject Property vicinity. The Subject Property is not depicted within the boundaries of a known oil or gas field. In addition, no oil or gas wells are depicted on the Subject Property, or in the immediate vicinity of the Subject Property. Results of the well search is provided in Appendix C.

Information about the regional geology is presented in Table 4-2. This information was obtained by Kleinfelder from published data and maps, interviews with public agencies, and/or previous investigations performed by Kleinfelder in the Subject Property vicinity.

Table 4-2: Regional Geology and Hydrogeology

PHYSICAL PARAMETER	INFORMATION/COMMENTS
REGIONAL PHYSIOGRAPHY AND GEOLOGY	The Subject Property is located within the Peninsular Ranges Geomorphic Province. The Peninsular Ranges consist of a series of ranges separated by northwest trending valleys, subparallel to faults branching from the San Andreas Fault. The Peninsular Ranges extend into lower California and are bound on the east by the Colorado Desert. The geology is similar to the Sierra Nevada Geomorphic Province, with granitic rock intruding the older metamorphic rocks (California Geological Survey [CGS], 2002).
REGIONAL HYDROGEOLOGY	The Subject Property is not located within a named groundwater basin. Areas to the west of Interstate 5 do not have designated beneficial uses for groundwater are excepted from the sources of drinking water policy (RWQCB, 1994).
DEPTH TO GROUNDWATER AND DIRECTION OF ANTICIPATED FLOW [1]	Groundwater was encountered at 7 feet bgs on the Subject Property during an environmental investigation in 1992 (Engineering Science Applications, 1992). The anticipated direction of groundwater flow in the vicinity of the Subject Property is to the southwest and southeast, toward America's Cup Harbor and San Diego Bay.
REGIONAL GROUNDWATER QUALITY PROBLEMS	Regional groundwater quality problems were not specifically identified in the vicinity of the Subject Property.
WATER SUPPLY	Water is supplied to the Subject Property by the City of San Diego.
FLOOD ZONE DESIGNATION	According to *The EDR Radius Map™ Report with GeoCheck®,* the Subject Property is not located within a flood zone (EDR, 2022a).

[1] Groundwater flow direction is based on regional information sources. Site-specific conditions may vary due to a variety of factors including geologic anomalies, utilities, nearby pumping wells (if present), and other factors.

4.5 USER PROVIDED INFORMATION

Kleinfelder understands that the Client has requested a Phase I ESA to establish existing conditions on the Subject Property. Information regarding the current owners/occupants of the Subject Property is summarized in Table 4-3.

Table 4-3: Owner / Occupant Information

ENTITY	NAME
OWNER	San Diego Unified Port District owns the Subject Property. Driscoll's Wharf is a current leaseholder.
OCCUPANT(S)	The Subject Property is occupied by numerous subtenants listed below, by building: 4904 North Harbor Drive Chula Seafood Tunaville Market and Grocery 4918 North Harbor Drive Miramar Canvas & Upholstery City of San Diego VSSL Driscoll's Wharf offices Law Office of Michelle Paul Barclay Management 4922 North Harbor Drive Semantic AI

Summaries of interviews of key individuals with knowledge of the Subject Property ("Key Subject Property Managers") are provided in Section 7. The following sections present information provided to Kleinfelder by the Client.

4.5.1 Title Records

Chain-of-title (COT) information was not provided by the Client for this Phase I ESA.

4.5.2 Environmental Liens and Usage Limitations

According to information provided in EDR's regulatory agency database search report (EDR, 2022a), there are no liens pertaining to the Subject Property listed in the Federal Superfund Liens List maintained by US EPA, and no known recorded land-use environmental deed restrictions pertaining to the Subject Property listed in the State Liens Database. Kleinfelder's review of the *EDR Environmental Lien and AUL Search* report (EDR, 2022b) indicates there are no environmental liens or activity and use limitations (AULs) associated with the Subject Property. The *EDR Environmental Lien and AUL Search* report includes a Corporation Grant Deed, dated December 30, 1992, between CCB Bancorp, Inc. and Driscoll Marina, LTD. A copy of the report is provided in Appendix D.

4.5.3 Value Reduction

As part of the ASTM Standard Designation E1527-13 process, information is to be gathered regarding the prospective purchase price of the Subject Property relative to its fair market value. If there appears to be a value reduction, that reduction must be identified with respect to whether the difference could be attributed to environmental degradation of the property. However, the Client (San Diego Unified Port District) owns the Subject Property and this Phase I ESA is not being conducted as part of a property transaction.

4.5.4 Other Information/Documents Provided

Kleinfelder reviewed the San Diego Unified Port District's environmental database for documents related to the Subject Property (see Section 5.6).

5 HISTORICAL USE INFORMATION

The history of the Subject Property was researched to identify obvious uses. Historical land use was researched to the first developed use, or back to 1940, whichever was earlier or readily available. Table 5-1 summarizes the availability of information reviewed during this assessment.

Table 5-1: Historical Information Sources

SOURCE	YEARS REVIEWED	SOURCE / AVAILABILITY
SANBORN FIRE INSURANCE MAPS	Not available	EDR, 2022c
AERIAL PHOTOGRAPHS	1928, 1949, 1953, 1964, 1966, 1970, 1979, 1985, 1990, 1994, 1997, 2002, 2005, 2009, 2012, 2016	EDR, 2022d

BUILDING DEPARTMENT	Not applicable	Not applicable
PREVIOUS ASSESSMENT(S)	Not applicable	Not applicable

5.1 SANBORN FIRE INSURANCE MAPS

Sanborn Fire Insurance Maps provide historical land use information for some metropolitan areas and small, established towns. Kleinfelder requested EDR to search its library of Sanborn Fire Insurance Maps for maps of the Subject Property. EDR indicated that no Sanborn maps were found for the Subject Property. A copy of the Certified Sanborn® Map Report (EDR, 2022c) provided by EDR is included in Appendix D.

5.2 AERIAL PHOTOGRAPHS

A review of historical aerial photography may indicate past activities at a property that may not be documented by other means or observed during a reconnaissance visit. The effectiveness of this technique depends on the scale and quality of the photographs and the available coverage. Aerial photographs were obtained from several historical photograph collections through EDR (2022d) and span a period of 88 years. A tabulation of the aerial photographs reviewed by Kleinfelder is presented in Table 5-2. Copies of the aerial photographs provided by EDR are included in Appendix D.

Table 5-2: Historical Aerial Photographs Reviewed

YEAR	APPROXIMATE SCALE	SUMMARY
1928	1" = 500'	**Subject Property:** The Subject Property is located within the waters of San Diego Bay (the land has not been filled in). **Surrounding Area:** The immediate vicinity is located within the waters of San Diego Bay (the land has not been filled in).
1949	1" = 500'	**Subject Property:** The land at the Subject Property has been filled in. There appears to be a road through the Subject Property extending from the northwestern boundary to the southeastern boundary. Three boat piers have been constructed; however, no boats appear to be docked at the piers. Additionally, there do not appear to be any buildings on the Subject Property. **Surrounding Area:** The areas generally to the northeast and east of the Subject Property appear to be developed, similar to the current Naval Base Point Loma military facility. Three large, rectangular buildings associated with Naval Base Point Loma are located adjacent to the Subject Property, to the northeast and east. The building located furthest to the south appears similar to the currently existing building on Naval Base Point Loma. Other various buildings on Naval Base Point Loma are depicted adjacent to the Subject Property, to the north. The land to the northwest of the Subject Property (near existing 4960-4980 North Harbor Drive) appears to be developed for commercial and fishing-related purposes including several buildings and structures, a boat docked on dry land (which may indicate boat repair activities), and multiple boating piers. There appears to be a dock adjacent to the southeast of the Subject Property. North Harbor Drive is depicted north of the Naval Base Point Loma facility.
1953	1" = 500'	**Subject Property:** Additional piers have been constructed and small boats appear to be docked at the piers. There are a total of five piers on the Subject Property, similar to the layout existing piers. **Surrounding Area:** The surrounding area generally appears similar to the previous aerial photograph.
1964, 1966, 1970	1" = 500'	**Subject Property:** The Subject Property generally appears similar to the previous aerial photograph. **Surrounding Area:** The surrounding area generally appears similar to the previous aerial photograph.
1979	1" = 500'	**Subject Property:** A building appears in the central portion of the Subject Property. **Surrounding Area:** The surrounding area generally appears similar to the previous aerial photograph.
1985	1" = 500'	**Subject Property:** The building depicted in the 1979 photograph appears to have been demolished. Two new buildings are depicted on the Subject Property. These buildings appear similar to the existing buildings located at 4904 and 4918 North Harbor Drive. **Surrounding Area:** The surrounding area generally appears similar to the previous aerial photograph.

Table 5-2: Historical Aerial Photographs Reviewed (continued)

YEAR	APPROXIMATE SCALE	SUMMARY
1990	1" = 500'	**Subject Property:** A third building is depicted on the Subject Property. This building appears similar to the existing building located at 4922 North Harbor Drive. The area along the eastern boundary of the Subject Property appears to be developed as a paved parking lot, similar to the existing parking lot. There appears to be fewer boats docked at the piers than in previous aerial photographs. **Surrounding Area:** Two of the large, rectangular buildings east of the Subject Property on Naval Base Point Loma are no longer depicted. The pier directly southeast of the Subject Property is no longer depicted.
1994, 1997	1" = 500'	**Subject Property:** The area between the buildings located at 4904 and 4918 North Harbor Drive appears to be used for material storage, similar to the existing use. **Surrounding Area:** The surrounding area generally appears similar to the previous aerial photograph.
2002, 2005	1" = 500'	**Subject Property:** The Subject Property generally appears similar to the previous aerial photograph. **Surrounding Area:** The commercial buildings to the northwest of the Subject Property (near existing 4960 North Harbor Drive) are no longer depicted.
2009, 2012	1" = 500'	**Subject Property:** The Subject Property generally appears similar to the previous aerial photograph. **Surrounding Area:** The commercial building to the northwest of the Subject Property (existing 4980 North Harbor Drive) has been constructed.
2016	1" = 500'	**Subject Property:** The Subject Property generally appears similar to the previous aerial photograph. **Surrounding Area:** The commercial building to the northwest of the Subject Property (existing 4960 North Harbor Drive) has been constructed. Several of the buildings located on Naval Base Point Loma, to the northeast of the Subject Property are no longer depicted.

Note: Aerial photographs only provide information concerning indications of land use, and no conclusions regarding the release of hazardous substances or petroleum products can be drawn from the review of photographs alone.

5.3 CITY DIRECTORIES

City directories provide information regarding property occupants by address. EDR provided a city directory image report (EDR, 2022e), included in Appendix D. Listings for the Subject Property and adjacent properties are summarized in Tables 5-3 and 5-4, respectively.

Table 5-3: City Directory Listings – Subject Property

ADDRESS(ES)	SUMMARY OF OCCUPANT(S)
Northwest	
4960 North Harbor Drive	Harbor Boat & Yacht Co boat builders, fuel dock (1955, 1960, 1961, 1966, 1970, 1985, 1980) Antone F Jelusich/David Carsten Harbor Boat & Yacht Co (1955, 1960) Mike Makipaa (1960) Bay City Marine (1984) America Cubed Foundation (1992, 1994) Point Loma Constructors (1994) Scott B Jones Yacht & Ship Brokers (1999) Abejon Rotary Power Corporation (1999) Driscoll Marina (1994, 1999, 2000) Driscoll Wharf (2006)

Based on the city directories reviewed, the adjoining address to the northwest (4960 North Harbor Drive) appears to be associated with commercial and fishing-related activities. Additionally, a company named Global Chemical was listed on the Subject Property in 2014. This Phase I ESA has not identified any evidence of specific chemical use, storage, or release on the Subject Property that is associated with this listing.

5.4 HISTORICAL TOPOGRAPHIC MAP REVIEW

Kleinfelder obtained information regarding historical topographic maps of the Subject Property vicinity from EDR (2022f). The topographic maps reviewed for this assessment are listed in Table 5-3 and copies of the maps are included in Appendix D.

Table 5-5: Historical Topographic Maps Reviewed

YEAR	SCALE	SUMMARY
1904 1930 1942	15-minute 15-minute 7.5-minute	**Subject Property:** The Subject Property is located within the waters of San Diego Bay (the land has not been filled in). **Surrounding Area:** The surrounding area is located within the waters of San Diego Bay (the land has not been filled in).

Table 5-5: Historical Topographic Maps Reviewed (continued)

YEAR	SCALE	SUMMARY
1953	7.5-minute	**Subject Property:** The Subject Property is depicted as developed land, including four piers. A road is depicted in the northeastern portion of the Subject Property. No individual buildings or structures are shown. **Surrounding Area:** The surrounding area is depicted as developed land. No individual buildings or structures are shown. Developed roads are located northwest, north, and northeast of the Subject Property. Piers are located northwest and southeast of the Subject Property. The area to the east of the Subject Property is labeled as a "Naval Reservation." Harbor Drive is located north of the Subject Property.
1967 1975	7.5-minute 7.5-minute	**Subject Property:** The Subject Property appears similar to the previous map. **Surrounding Area:** The surrounding area appears similar to the previous map. The area to the east of the Subject Property is labeled as "US Naval Res." And the harbor to the southwest of the Subject property is labeled as "Commercial Basin." Additional piers have been constructed northwest of the Subject Property.
1991	15-minute	**Subject Property:** The Subject Property appears similar to the previous map. **Surrounding Area:** The surrounding area appears similar to the previous map, with the addition of individual buildings shown on the US Naval Training Center to the east of the Subject Property.
1994	7.5-minute	**Subject Property:** The Subject Property appears similar to the previous map. **Surrounding Area:** The surrounding area appears similar to the previous map. No individual buildings or structures are depicted.
1996 2012 2015 2018	7.5-minute	**Subject Property:** The Subject Property appears similar to the previous map. **Surrounding Area:** The surrounding area appears similar to the previous map. The harbor to the southwest of the Subject Property is labeled as "America's Cup Harbor."
2012 2015	7.5-minute 7.5-minute	**Subject Property:** The Subject Property appears similar to the previous map. **Surrounding Area:** The surrounding area appears similar to the previous map.
2018	7.5-minute	**Subject Property:** The Subject Property appears similar to the previous map. **Surrounding Area:** The surrounding area appears similar to the previous map. The land to the east of the Subject Property is labeled as "NAVMINEASWCOM."

5.5 BUILDING DEPARTMENT

See Section 4.3.7.

5.6 PREVIOUS ASSESSMENTS

See Section 4.3.3 for a description of the October 1992 Engineering Science Applications environmental assessment conducted on the Subject Property.

Kleinfelder reviewed the San Diego Unified Port District's environmental database for documents related to the Subject Property. One document was identified in relation to the Subject Property and is summarized below.

Converse Environmental West, Report of Soil and Bay Sediment Characterization – Fisherman's Village 4904 North Harbor Drive

An environmental investigation was performed on the Subject Property and adjacent property to the north in June 1992 on behalf of Driscoll Incorporated. The report identifies the three commercial buildings on the Subject Property, from northeast to southeast, with the addresses of 4910, 4918, and 4922 North Harbor Drive. The purpose of the investigation was to assess potential contamination on the Subject Property. Three bay sediment samples were collected, and four soil borings were drilled on the Subject Property. Three additional soil borings were drilled to the north of the Subject Property. Soil samples were collected from 2.5 feet bgs and from approximately 5 to 6 feet bgs from each soil boring. The soil samples collected on the Subject Property were only analyzed for total petroleum hydrocarbons (TPH) by USEPA Method 8015. The soil samples collected north of the Subject Property were analyzed for TPH as well as volatile organic compounds (VOCs). Based on the laboratory analytical results, TPH was not detected in the soil samples collected on the Subject Property. TPH, benzene, toluene, and xylenes were detected in soil samples collected approximately 150 to 300 feet north of the Subject property. The borings to the north of the Subject Property were located near the former Bay City Marine LUST case described in Section 4.2.2.

The bay sediment samples were analyzed for metals, TBT, dibutyltin (DBT), and monobutyltin (MBT). Copper was detected up to 262 mg/kg, lead was detected up to 62.6 mg/kg, mercury was detected up to 2.9 mg/kg, and zinc was detected up to 253 mg/kg. Additionally, TBT was detected up to 17 micrograms per kilogram (µg/kg), DBT was detected up to 50 µg/kg, and MBT was detected up to 3 µg/kg. Based on the results of the investigation, Converse Environmental West did not recommend further investigation of soil or sediment on the Subject Property.

The copper, lead, and zinc concentrations detected in sediment on the Subject Property exceeded their respective Effects Range-Low (ERL) value and mercury exceeded the ERL and Effects Range-Medium (ERM) value (Long et al, 1995). The ERL and ERM values are typically used by regulatory agencies to evaluate metals concentrations in bay sediment. MBT does not have published regulatory limits in soil or sediment. Regulated concentrations of TBT and DBT typically apply to those detected in water, which was not sampled as part of the 1992 investigation. The detections of TBT, DBT, MBT, copper, lead, zinc, and mercury in bay sediments on the Subject Property represent a REC.

6 SITE RECONNAISSANCE

Kleinfelder's Phase I ESA activities included a site reconnaissance. This section summarizes the findings from the site reconnaissance.

6.1 METHODOLOGY AND LIMITING CONDITIONS

Mr. Stefan Birardi of Kleinfelder performed a site reconnaissance on June 9, 2022. The site reconnaissance included a visual inspection of the Subject Property to assist in identifying the presence or likely presence of hazardous substances or petroleum hydrocarbons under conditions that indicate an existing release, a past release, or threat of release into structures, soil, groundwater, or surface water at the Subject Property (i.e., RECs). Observations of readily apparent environmental conditions are summarized in Table 6-1, and color photographs of the Subject Property are presented on Figures 6a through 6i. The approximate Subject Property boundaries are shown on Figure 2.

6.2 GENERAL PROPERTY SETTING

The Subject Property consists of approximately 100,000-square feet of land area, 300,000-square feet of water area, 35,000-square feet of commercial office space, five fixed structure piers, a 750-foot-long concrete walkway, and a paved access road and parking lot. The Subject Property is owned by the San Diego Unified Port District and is generally surrounded by commercial and military properties.

6.3 PROPERTY OBSERVATIONS

Kleinfelder's Subject Property observations are summarized in Table 6-1.

Table 6-1: Subject Property Observations

GENERAL OBSERVATIONS	REMARKS	OBSERVED	NOT OBSERVED
Current use	The Subject Property consists of three commercial buildings and a commercial fishing wharf.	X	
Current use likely to indicate RECs	Hazardous material storage shed with heavy floor staining.	X	

Table 6-1: Subject Property Observations (continued)

GENERAL OBSERVATIONS	REMARKS	OBSERVED	NOT OBSERVED
Past use			X
Past use likely to indicate RECs			X
Structures	A total of five piers and three commercial buildings are present at the Subject Property. The shoreline is improved with riprap and a concrete walkway. 4922 North Harbor Drive is the southernmost building. 4918 North Harbor Drive is the central building. 4904 North Harbor is the northernmost building. One hazardous materials storage shed, one "fish chiller" trailer, one covered fishing materials storage area, and one fishing net mending structure were observed.	X	
Roads	One asphalt-paved access road with associated parking.	X	
Topography of Site and surrounding area	Generally flat, sloping slightly south.	X	
Interior and exterior observations or environmental conditions that may involve the use, storage, disposal or generation of hazardous substances or petroleum products.		**Observed**	**Not Observed**
Aboveground storage tanks (ASTs)	One empty, polyethylene AST was observed in the southeastern corner of the Subject Property.	X	
Below grade vaults	Utility-related vaults were observed.	X	
Burned or buried debris			X

Table 6-1: Subject Property Observations (continued)

GENERAL OBSERVATIONS	REMARKS	OBSERVED	NOT OBSERVED
Chemical storage	5-gallon containers of paint, various quantities (less than 5 gallons) of cleaners, oils, lubricants and containers of gasoline that appeared to be stored for future use, , propane cylinders used for forklift operation, and 55-gallon waste drums of used oil, oily water, rags and absorbent were located in the hazardous materials storage shed.	X	
Interior and exterior observations or environmental conditions that may involve the use, storage, disposal or generation of hazardous substances or petroleum products.		**Observed**	**Not Observed**
Chemical mixing areas			X
Discolored soil or water			X
Ditches, streams	A trench drain is located along the northern property boundary.	X	
Drains and piping	Two storm drain catch basins were observed along the northeastern boundary and one was observed at the trench drain. Floor drains were observed in the maintenance and storage room.	X	
Asbestos and Lead			X
Drums	Four 55-gallon drums of waste oily water, rags, and absorbent materials were located on secondary containment inside the hazardous materials storage shed.	X	
Electrical or hydraulic equipment (PCBs)	Three pad-mounted transformers were located at the Subject Property. Transformers appeared in good condition with no leaks observed.	X	
Fill dirt from an unknown source			X
Fill dirt from a known source			X
Hazardous chemical and petroleum products in connection with known use	Various quantities of gasoline, oils, and lubricants associated with boating operations.	X	

Table 6-1: Subject Property Observations (continued)

GENERAL OBSERVATIONS	REMARKS	OBSERVED	NOT OBSERVED
Hazardous chemical and petroleum products in connection with unknown use			X
Non-hazardous containers with contents	See Chemical Storage area above.	X	
Hazardous waste storage	Hazardous waste is stored in the hazardous materials storage shed in the central portion of the Subject Property.	X	
Heating and cooling system and fuel source	Heating and cooling are not provided to the buildings unless subtenants choose to install window-mounted air conditioning units.	X	
Interior and exterior observations or environmental conditions that may involve the use, storage, disposal or generation of hazardous substances or petroleum products.		**Observed**	**Not Observed**
Industrial waste treatment equipment			X
Loading and unloading areas	Commercial fishing vessels unload at Pier 4, which is the designated offloading pier.	X	
Odors			X
Pits, ponds, or lagoons			X
Pools of liquid			X
Process wastewater			X
Sanitary sewer system	Utility provided.	X	
Septic system (e.g., tank and leach fields)			X
Soil piles			X
Solid waste/evidence of unauthorized dumping			X
Stained pavement, soil or concrete	Heavy staining on the concrete inside the hazardous materials storage shed was observed in the vicinity of the drum storage area.	X	

Table 6-1: Subject Property Observations (continued)

GENERAL OBSERVATIONS	REMARKS	OBSERVED	NOT OBSERVED
Stains or corrosion (interior, non-water)	Heavy staining on the concrete inside the hazardous materials storage shed was observed in the vicinity of the drum storage area.	X	
Storm drains/catch basins	Two catch basins located along the northeastern boundary of the Subject Property.	X	
Stressed vegetation			X
Sumps and clarifiers			X
Surface water	America's Cup Harbor in the western portion of the Subject Property.	X	
UST(s) (including heating oil tanks)	Not observed. However, a site plan dated 1984 depicts a waste oil UST located north of Pier 5.		X
Unidentified substance containers			X
Wastewater discharge			X
Interior and exterior observations or environmental conditions that may involve the use, storage, disposal or generation of hazardous substances or petroleum products.		**Observed**	**Not Observed**
Water supplies (potable and process)	Water is provided from the City of San Diego.	X	
Wells (irrigation, monitoring, or domestic)			X
Wells (dry)			X
Wells (oil and gas)			X

6.4 RESULTS OF SITE RECONNAISSANCE

Mr. Birardi was accompanied by Mr. Patrick Barnett, the Dock Master for Driscoll's Wharf during the site reconnaissance. Mr. Barnett indicated he has been associated with the property for less than one year and has limited knowledge of prior activities.

The Subject Property consists of five piers used for commercial fishing vessel mooring (known as Driscoll's Wharf) and three buildings assigned the street addresses 4904, 4918, and 4922 North Harbor Drive. A summary of observations is provided below.

Kleinfelder accessed the Subject Property from the north by a private dead-end access road via North Harbor Drive. Kleinfelder was able to walk the interior and exterior portions of the Subject Property, with the exception of the building located at 4922 North Harbor Drive and several subtenant-occupied suites located at 4904 and 4918 North Harbor Drive. Mr. Barnett indicated that 4922 North Harbor Drive was occupied by a computer software company named Semantic AI. Semantic AI is a sublease of Driscoll's Wharf. The Subject Property was generally flat, sloping gently to the south and was improved with an asphalt paved parking lot and concrete walkway along the shoreline. Three multi-tenant commercial use structures are located on the Subject Property. The buildings located at 4904 and 4918 North Harbor Drive are two stories and are located in the northern and central portions of the property, respectively.

The site reconnaissance began at Pier 4, which is designated as the offloading pier. A crane was observed toward the end of the pier which is used to hoist fish and equipment during offloading. A fish-processing machine was located near the beginning of the pier. A "fish chiller" trailer that is used to store fish after vessels offload their inventory was located at the north property boundary. The trailer was equipped with refrigeration units that appeared to be in good condition. Kleinfelder did not witness any boat hull cleaning or painting activities at the time of the site reconnaissance.

Chula Seafood and Tunaville Market are subtenants on the first floor of 4904 North Harbor Drive. The second floor of 4904 North Harbor Drive appeared vacant and under renovation. Kleinfelder was only able to access the Tunaville Market. Both businesses process and package fresh seafood. Large refrigeration units were noted inside these businesses and a trench drain was located directly outside one of the side entrances to Chula Seafood, on the northwest side of the building (Figure 3). The trench drain was located in an area where Chula Seafood receives frozen fish delivery. Kleinfelder did not observe where this catch basin discharged. Additionally, no storm water Best Management Practices (BMPs) were observed at the trench drain. The San Diego Unified Port District provided a storm drain map of the Subject Property (Appendix C). The storm drain map does not depict the trench drain.

Multiple subtenants, including Miramar Canvas and the City of San Diego, occupied suites on the first floor of 4918 North Harbor Drive. Kleinfelder was only able to view Miramar Canvas from the doorway. Miramar Canvas appeared to actively use the suite as an upholstery/fabric shop. Based on our observation, it is unknown if Miramar Canvas was using or storing chemicals in their suite. Kleinfelder was not able to access the City of San Diego suite. Mr. Barnett was unaware of the activities performed in the suite occupied by the City of San Diego. Other suites on the first floor of 4918 North Harbor Drive were used as miscellaneous storage or were vacant spaces and appeared under renovation. Second floor subtenants included VSSL offices, a marketing and advertising company, Michelle Paul, a family law office, Driscoll's Wharf administrative office, subtenant restrooms, and vacant office space. The VSSL offices and the Michelle Paul family law office were not able to be accessed. Additionally, a small maintenance and storage room, operated by Mr. Barnett, was located on the first floor, in the northern portion of 4918 North Harbor Drive. The maintenance and storage room contained work benches, hand tools, fire extinguisher, empty buckets, and miscellaneous equipment (see Figure 6c – Photograph 6). No chemicals or petroleum products were observed other than one 1-gallon container of Spectracide weed control. Floor drains were observed within the maintenance and storage room. No evidence of spills or leaks were observed in the maintenance room and limited chemical storage was observed, therefore, the maintenance room is not considered a REC.

Kleinfelder accessed an enclosed hazardous materials storage shed, located in the central portion of the Subject Property. The shed is secured with a padlock to ensure unauthorized access is not granted. Mr. Barnett indicated that only himself and the owner of Chula Seafood had access to the shed. Mr. Barnett was unaware of how long the shed has existed on the Subject Property. Mr. Barnett indicated that the hazardous materials are generated by various subtenants and commercial boaters of Driscoll's Wharf. Mr. Barnett indicated that the subtenants would drop off waste in front of the shed, then Mr. Barnett would move the waste inside the shed. Mr. Barnett was unaware of which specific subtenants dropped off the waste. Mr. Barnett did not indicate who was responsible or what the process was for removing or disposing of the hazardous waste at the Subject Property. Furthermore, Kleinfelder did not witness any waste actively being generated by subtenants at the time of the site reconnaissance.

Within the hazardous materials storage shed, Kleinfelder observed various quantities (less than 5 gallons) of paints, household cleaners, oils, lubricants, and gasoline that were stored on shelving units and appeared to be stored for future use. Propane cylinders used for forklift operation were stored in a polyethylene box in the corner of the shed. Four 55-gallon waste drums containing waste oil, oily water, oily rags, and absorbents were located on secondary containment. Significant staining surrounding the drums was observed on the concrete flooring. A fishing net mending area, covered storage area, and fishing material storage areas were located between the buildings located at 4904 and 4918 North Harbor Drive. Mr. Barnett said that fishing vessel subtenants are allowed to store netting and equipment in these areas.

Three pad-mounted transformers were located on the Subject Property. The transformers appeared in good condition and staining was not observed on the surrounding concrete. Two catch basins (one clogged with debris) were observed along the northeastern boundary of the Subject Property (Figure 3). No storm water BMPs were observed at the catch basins. The storm drain map provided by the San Diego Unified Port District depicts three storm drain catch basins in the northeastern portion of the Subject Property. Of the three catch basins depicted on the storm drain map, only two catch basins were observed during the site reconnaissance. According to the storm drain map, the catch basins connect to an outfall on the shoreline of the Subject Property.

A material/debris storage area was located within a fenced-in area east of the building located at 4922 North Harbor Drive. The storage area contained a wooden trailer, a large empty, polyethylene AST, tarps, fishing equipment, and other miscellaneous debris. Directly outside the fenced area was wooden, concrete, and Styrofoam debris.

The Subject Property is adjoined by Naval Base Point Loma Harbor Drive facility to the east, America's Cup Harbor to the west, public restrooms and a sewer pump station to the northwest. Farther to the northwest includes multi-tenant commercial and retail properties. A drum storage area was observed on adjacent tidelands property to the north. The storage area is located between the Subject Property and the public restrooms/sewer pump station building. The storage area is enclosed with a chain-link fence with "Private Property" signage. The San Diego Unified Port District has indicated that this storage area is under control by the San Diego Moorings Company and that the San Diego Moorings Company uses the drums to store chains.

A site plan dated 1984 was made available to Kleinfelder during the site reconnaissance. The site plan depicts a waste oil UST located north of Pier 5 (see Figure 4). It is unknown if this UST was removed or is still present on the Subject Property. Additionally, Mr. Barnett did not have any knowledge of this UST. The waste oil UST represents a REC for the Subject Property.

7 INTERVIEWS

Key Subject Property Managers are contacted to obtain current and historical environmental information concerning the Subject Property. The following sections highlight information revealed during the interviews.

7.1 INTERVIEW WITH CLIENT

Mr. Paul Brown, Program Manager for the San Diego Unified Port District, was interviewed by Kleinfelder via telephone on June 17, 2022. Mr. Brown indicated that he was not aware of environmental liens filed or recorded against the Subject Property. Mr. Brown indicated that he was not aware of activity and use limitations in relation to environmental concerns on the Subject Property. Mr. Brown indicated that he was not aware of any environmental cleanups that have taken place at the Subject Property. Mr. Brown indicated that he was aware of poor housekeeping at the Subject Property in relation to equipment and vehicle maintenance and chemical storage (gasoline, diesel, lubricants, and paint). Reported incidents of poor housekeeping were investigated and corrected with the leasehold operator. Mr. Brown indicated that fisherman previously reclaimed lead cells from batteries on the Subject Property. Mr. Brown was unaware of where precisely this activity had occurred on the Subject Property. Mr. Brown indicated that the past use of the Subject Property was similar to the current fishing-related operations. The building located at 4922 North Harbor Drive was previously occupied by the Blue Crab restaurant.

The Port District provided a list of entities that previously leased the Subject Property from the Port District. The following summarizes the entities and their approximate lease dates:

- March 29, 1977 to November 28, 1979: San Diego Commercial Marina.
- November 28, 1979 to April 30, 1983: North Harbor Landing.
- May 17, 1983 to October 30, 1986: San Diego's Fisherman's Marina (f/k/a North Harbor Landing).
- October 30, 1986 to December 2, 1987: Mark A. Battaglia.
- December 2, 1987 to December 11, 1992: Commercial Center Bank.
- December 11, 1992 to December 16, 1992: CCB Bancorp., Inc.
- December 16, 1992 to present: Driscoll Marina, Ltd.

7.2 INTERVIEW WITH OWNER/OCCUPANTS

The Client (San Diego Unified Port District) owns the Subject Property. A summary of the Client interview is described previously in Section 7.1. An occupant of the Subject Property, Mr. Patrick Barnett, the Dock Master for Driscoll's Wharf, accompanied Kleinfelder during the site reconnaissance. However, Mr. Barnett had limited knowledge of the history of the Subject Property.

7.3 INTERVIEWS WITH LOCAL GOVERNMENT OFFICIALS

Information obtained from regulatory agencies, if applicable, contacted by Kleinfelder is discussed in Section 4.3.

8 EVALUATION

Kleinfelder performed this Phase I ESA of the Subject Property consistent with the scope and limitations of ASTM Designation E1527-13. The following sections describe Kleinfelder's findings and provide general background information about the Subject Property. Findings address RECs, HRECs, CRECs, and notation of *de minimis* quantities, as applicable to the Subject Property. In summary, Kleinfelder's assessment revealed the following information concerning the Subject Property:

- The Subject Property is located between 4900 and 4930 North Harbor Drive, San Diego. The three buildings on the Subject Property currently have addresses of 4904, 4918, and 4922 North Harbor Drive. The Subject Property consists of approximately 100,000-square feet of land area, 300,000-square feet of water area, 35,000-square feet of commercial office space, five fixed structure piers, a 750-foot-long concrete walkway, and a paved access road and parking lot.
- 4904 North Harbor Drive is currently occupied by Chula Seafood and Tunaville Market on the first floor. These businesses process and package fresh seafood. Large refrigeration units were noted inside these businesses. The second floor of the building appeared vacant and under renovation.
- 4918 North Harbor Drive is currently occupied on the first floor by Miramar Canvas (an upholstery/fabric shop that was not accessible during the site reconnaissance), City of San Diego (not accessible during site reconnaissance), a small maintenance and storage room used by Driscoll's Wharf, and spaces that were used as miscellaneous storage or were vacant and appeared undergoing renovation. Second floor subtenants of 4918 North Harbor Drive included VSSL offices (a marketing and advertising company), Michelle Paul (a family law office), Driscoll's Wharf administrative office, and vacant office space.
- The interior of the 4922 North Harbor Drive building was not accessible during the site reconnaissance. 4922 North Harbor Drive is occupied by Semantic AI (a computer software company).
- The Subject Property is currently and was historically used as a wharf for fishing boat mooring and recreational vessels. These activities have occurred on the Subject Property since at least 1953, when boats were first identified on the historic aerial photographs. Driscoll Marina Ltd. has leased the Subject Property from the San Diego Unified Port District since 1992.
- Other current and historical uses of the Subject Property have included the City of San Diego Marine Biology Laboratory, restaurants, and commercial offices.

- The use, storage, and generation of hazardous wastes, including petroleum hydrocarbons, paints, and solvents, have been documented on the Subject Property in association with boat maintenance and laboratory-related activities. These wastes are currently and have historically been stored in ASTs, drums, and a UST on the Subject Property. The UST was identified by Kleinfelder on a 1984 site plan. It is unknown if the UST was removed or is still present on the Subject Property.

- A hazardous materials storage shed was observed on the Subject Property. The shed contained paints, household cleaners, oils, and lubricants on shelving units, propane cylinders used for forklift operation were stored in a polyethylene box in the corner of the shed, and four 55-gallon drums containing waste oil, oily water, oily rags, and absorbents were located on secondary containment. Heavily stained concrete in the hazardous waste storage shed was observed during Kleinfelder's site reconnaissance.

- The area where the current hazardous materials storage shed is located, was previously used for outdoor hazardous materials storage. Photographs of this area in 2008 show a concrete slab containment structure for a waste oil AST. Oily debris was observed on the base of the secondary containment. Additional photographs show three 55-gallon drums of used oil rags, filters, and litter as well as the secondary containment structure for the waste oil AST being raised to clean the base of the containment area.

- Two environmental investigations were conducted in 1992 on the Subject Property. These investigations identified petroleum hydrocarbon contamination in soil and groundwater as well as copper, lead, zinc, mercury, TBT, DBT, and MBT contamination in bay sediment within the Subject Property boundaries. The copper, lead, and zinc concentrations exceeded their respective ERL value and mercury exceeded the ERL and ERM value (Long et al, 1995). The ERL and ERM values are typically used by regulatory agencies to evaluate metals concentrations in bay sediment.

- A LUST case reportedly impacted soil and groundwater at the adjacent property to the northwest of the Subject Property (4960 North Harbor Drive). The property at 4960 North Harbor Drive was historically a boat building and repairing facility. Eight USTs, ranging from 8,000 to 10,000 gallons and containing gasoline or diesel fuels, were removed from the site in 1994. During tank removal, gasoline and diesel contamination was detected in soil and groundwater and free product was observed to be seeping into the harbor. The soil and groundwater contamination were remediated by soil excavation and free product recovery. The LUST case was closed in 2000 by the San Diego County Department of Environmental Health. It was reported that residual soil and groundwater contamination remained after LUST case closure.

- Two closed LUST cases reportedly impacted soil and groundwater at the adjacent property to the east of the Subject Property (Naval Base Point Loma). The closed LUST cases were located on Naval Base Point Loma, in close proximity to the Subject Property, in association with a former 1,400-gallon diesel fuel UST and a former 1,400-gallon heating oil/fuel oil UST.
- A drum storage area was observed on adjacent tidelands property to the north. The storage area is located between the Subject Property and a public restrooms/sewer pump station building. The storage area is enclosed with a chain-link fence with "Private Property" signage. The San Diego Unified Port District has indicated that this storage area is under control by the San Diego Moorings Company and that the San Diego Moorings Company uses the drums to store chains.
- Elevated levels of copper, mercury, and TBT have been identified in bay sediment within America's Cup Harbor at nearby, historic boat repair, maintenance and other industrial facilities.

8.1 DEVIATIONS AND ADDITIONAL SERVICES

The scope of this Phase I ESA does not incorporate ASTM Standard non-scope considerations, such as ACMs, radon, LBP, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality/vapor intrusion, and high-voltage power lines.

8.2 CONCLUSIONS

Kleinfelder has performed this Phase I ESA, consistent with the scope of ASTM Standard Designation E1527-13 and incorporating procedures set forth in ASTM Standard Designation E1527-21, our Task Authorization No. 04, dated May 19, 2022, and limitations discussed in this report. Exceptions to and deviations from this practice are described in Section 8.1 of this report.

This assessment has revealed no evidence of RECs, CRECs or HRECs in connection with the Site, except for the following (see Figure 4 for REC locations):

RECs Identified on Landside Portion of Subject Property

1. The presence of petroleum hydrocarbons identified in soil and groundwater on the Subject Property during the 1992 environmental assessment conducted by Engineering Science Applications is considered a REC.

2. The waste oil UST, depicted on the 1984 site plan, on the Subject Property represents a REC, due to the potential for the UST to have leaked and impacted the surrounding soil and groundwater.
3. The lead battery reclamation that was conducted on the Subject Property, as identified by the San Diego Unified Port District (via Client interview) represents a REC. This activity may have impacted soil on the Subject Property.
4. The use of tar for lobster cages on the Subject Property represents a REC, due to the potential for soil to be impacted from this activity.
5. The fill material originally used to construct the tideland area at the Subject Property is considered a REC. The fill material has the potential to be contaminated from historic industrial and/or dumping activities in the area(s) where the fill material originated from.

RECs Associated with Hazardous Materials Storage Area/Shed

6. The heavy staining on the concrete floor of the hazardous materials storage shed, as identified during the site reconnaissance, represents a REC. Petroleum hydrocarbon waste is stored in this shed; therefore, based on the degree of staining, soil and groundwater below this area may be impacted.
7. The County of San Diego Department of Environmental Health reported waste oil-soaked carpet around a waste oil tank in 2005 in the former hazardous waste storage area on the Subject Property. The oil-soaked carpet around a waste oil tank is considered a REC, due to the potential for soil to have been impacted. The former hazardous waste storage area was located where the current hazardous materials storage shed is located. The County's inspection report indicates that the business name associated with the oil-soaked carpet was "Driscoll's Wharf" and the address was 4904 North Harbor Drive. The Subject Property's Office Manager, Cynthia Price, signed the inspection report.
8. The County of San Diego Department of Environmental Health reported oily debris below a waste oil AST in 2008 in the former hazardous waste storage are on the Subject Property. The oily debris below a waste oil AST is considered a REC, due to the potential for soil to have been impacted. The County's inspection report indicates that the business name associated with the oily debris was "Driscoll's Wharf" and the address was 4918 North Harbor Drive, #203. The Subject Property's Office Manager, Cynthia Price, signed the inspection report.

RECs Associated with Bay Sediment

9a. The trench drain located at Chula Seafood on the Subject Property represents a REC. It is unknown where the trench drain discharges. There is a potential that contaminants, originating near the trench drain, could have been discharged to the harbor through the storm drain system and could have impacted bay sediments within the waterside portion of the Subject Property.

9b. The storm drain outfall on the Subject Property represents a REC. According to a storm drain map provided by the San Diego Unified Port District, the storm drain outfall is connected to the catch basins that were observed along the northeastern boundary of the Subject Property. There is a potential that contaminants, originating near the catch basins, could have been discharged to the harbor through the storm drain system and could have impacted bay sediments within the waterside portion of the Subject Property.

10. Copper, lead, zinc, mercury, TBT, DBT, and MBT have been detected in sediment on the Subject Property. The copper, lead, and zinc concentrations exceeded their respective ERL value and mercury exceeded the ERL and ERM value (Long et al, 1995). Leaching of metals from hull paints, overwater hull maintenance and other overwater boat maintenance activities within the wharf may have contributed to these sediment impacts. Consequently, the use of the Subject Property as a wharf is considered a REC for sediment impacts.

11. Bay sediment within America's Cup Harbor has been reported to be impacted by copper, mercury, and TBT due to boat repair, maintenance, and other industrial activities around America's Cup Harbor. Therefore, the potential for migration of contaminated sediment from America's Cup Harbor into the Subject Property is considered a REC.

RECs Associated with Off-Site Sources

12. The adjacent closed LUST case at the former Bay City Marine facility (northwest of the Subject Property at 4960 North Harbor Drive) represents a REC. The reported groundwater contamination at the former Bay City Marine facility has the potential to migrate below the Subject Property.

13. The adjacent closed LUST cases at Naval Base Point Loma (east of the Subject Property), represents a REC. The reported groundwater contamination at Naval Base Point Loma has the potential to migrate below the Subject Property.

8.3 DATA GAPS

Kleinfelder attempted to obtain reasonably ascertainable information regarding the Subject Property consistent with ASTM Standard E1527-13 and -21. Despite good faith efforts by the environmental professional(s) to gather the necessary information, data gaps, a lack of information, or inability to obtain information as required by the ASTM Standard, were encountered during the completion of this Phase I ESA:

- The interior of the building located at 4922 North Harbor Drive and several subtenant-occupied suites within the buildings located at 4904 and 4918 North Harbor Drive were not accessible.

The inability to access interior areas of the Subject Property buildings is a significant data gap, which may have affected the identification of hazardous substances or petroleum products for the evaluation of RECs at the Subject Property.

APPENDIX A
STATEMENT OF QUALIFICATIONS

STATEMENT OF QUALIFICATIONS

We declare that to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in Section 312.10 of 40 Code of Federal Regulations (CFR) 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all-appropriate inquiries in conformance with the standards and practices set forth in CFR Part 312.

____
Jake Lippman
California Professional Geologist No. 9127

____
Lizanne Simmons
California Professional Geologist No. 7431

The resumes of above-listed environmental professionals performing this Phase I ESA are on file at the Kleinfelder office and are available on request.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 04/27/2022 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/28/2022 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal (Superfund) equivalent sites

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, has revealed that there is 1 RESPONSE site within approximately 1 mile of the target property.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/24/2022 has revealed that there are 7 ENVIROSTOR sites within approximately 1 mile of the target property.

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 26 LUST sites within approximately 0.5 miles of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 17 CPS-SLIC sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board’s Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 15 UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/28/2022 has revealed that there are 5 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSITES]. This listing is no longer updated by the state agency.

A review of the HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there are 15 HIST CORTESE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Notify 65: Listings of all Proposition 65 incidents reported to counties by the State Water Resources Control Board and the Regional Water Quality Control Board. This database is no longer updated by the reporting agency.

A review of the Notify 65 list, as provided by EDR, and dated 12/13/2021 has revealed that there are 11 Notify 65 sites within approximately 1 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

CA Waste Code: 221 - Waste oil and mixed oil
Disposal Method: H01 - Transfer Station
Tons: 0.38

Year: 1999
Gepaid: CAL000188807
TSD EPA ID: CAT080013352
CA Waste Code: 222 - Oil/water separation sludge
Disposal Method: R01 - Recycler
Tons: 11.4257

Year: 1999
Gepaid: CAL000188807
TSD EPA ID: CAT080012602
CA Waste Code: 223 - Unspecified oil-containing waste
Disposal Method: -
Tons: 1.251

Year: 1998
Gepaid: CAL000188807
TSD EPA ID: CAT080013352
CA Waste Code: 133 - Aqueous solution with total organic residues 10 percent or more
Disposal Method: R01 - Recycler
Tons: 0.3294

Year: 1998
Gepaid: CAL000188807
TSD EPA ID: CAL000161743
CA Waste Code: 221 - Waste oil and mixed oil
Disposal Method: -
Tons: 6.726

Potential Contaminants of Concern:	Heating Oil / Fuel Oil
Potential Media Affected:	Other Groundwater (uses other than drinking water)
Site History:	During the closure by removal of a UST at Building 7, contaminated soil was discovered that was associated with the UST. A remedial action ensued. Following remediation, it was determined that the remaining contamination does not pose a threat to human health, human safety, or the environment. 1,400 gallon fuel oil tank.
Begin Date:	1991-01-25 00:00:00

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

RB Case Number:	9UT3095
Loc Case Number:	H80021-013
File Location:	Not reported
Potential Contaminants of Concern:	Diesel
Potential Media Affected:	Other Groundwater (uses other than drinking water)
Site History:	The site was originally designated as POI 89 due to the suspected presence of contamination resulting from the operation of USTs. Two USTs were identified in this area, and removed in May of 1996. In January 2000, the Regional Water Quality Control Board (RWQCB) confirmed the completion of a site investigation and remedial action for the USTs formerly located at this location.

Last Update:	2022-01-12T01:53:57.000
Inspection Date:	2019-01-02T16:07:53.000
Violation Code:	2030036 (TCR 9b) Failure to comply with one or more of the following overfill prevention equipment requirements: 1. Alert the transfer operator when the tank is 90% full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30m before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95% of capacity and activate an audible alarm at least 5m before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95% of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. 5. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. 6. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. 7. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. 8. Inspected within 30 days after a repair to the overfill prevention equipment. 9. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. 10. Inspected by a certified UST service technician. 11.

THRIFTY #116 (Continued) **S103296825**

Violation Date:	01-02-2019
Citation:	23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes:	Returned to compliance on 01/02/2019. Inspection Sequence ID:6055091;Tank ID:23674,23675,23676;Violation Description:(TCR 9b) Failure to comply with one or more of the following overfill prevention equipment requirements: 1. Alert the transfer operator when the tank is 90% full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30m before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95% of capacity and activate an audible alarm at least 5m before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95% of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. 5. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prev

Name:	COMMERCIAL BASIN (AMERICA'S CUP HARBOR) - MAURICIO & SONS, INC. - BOATYARD SEDIMENT CLEANUP
Address:	2420 SHELTER ISLAND DR
City,State,Zip:	SAN DIEGO, CA 92106
Region:	STATE
Facility Status:	**Completed - Case Closed**
Status Date:	12/01/1999
Global Id:	SL189014174
Lead Agency:	SAN DIEGO RWQCB (REGION 9)
Lead Agency Case Number:	Not reported
Latitude:	32.7200288166916
Longitude:	-117.22511579895
Case Type:	Cleanup Program Site
Case Worker:	DTB
Local Agency:	Not reported
RB Case Number:	18901
File Location:	Regional Board
Potential Media Affected:	Sediments
Potential Contaminants of Concern:	Not reported
Site History:	This case is part of the Commercial Basin Boatyard Sediment Cleanup Site. The boatyards contributed tributyltin (TBT) and metals to sediments in the Commercial Basin. Sediments were dredged and clean up levels were met at that time and the case closed.

Status Date:	10/08/2021
Case Worker:	LT
RB Case Number:	9UT97
Local Agency:	Not reported
File Location:	Regional Board
Local Case Number:	Not reported
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Diesel
Site History:	The site was a former marine fueling terminal until 1991 which had nine 10,000 gallon diesel and gasoline underground storage tanks (UST) and one 500 gallon waste oil tank. During a UST replacement in 1984, approximately 2,100 gallons of liquid phase hydrocarbons were recovered from the excavation using a vacuum truck. Monitoring wells were installed at that time and free product was detected. In July 1989 there was an unauthorized release of diesel fuel from a pipe union at the east end of the tank area (quantity unknown). See Environmental data tab for additional information.

DRISCOLL CUSTOM BOATS (Continued) **S100179006**

Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste: PROCES
Waste Type2: D
Waste2: Process Waste (Waste produced as part of the industrial/manufacturing process)
Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste: Washwater Waste (Product washwater wastes: E.G., photo reuse wastewater, vegetable washwater)
Secondary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Design Flow: 0
Baseline Flow: 0
Reclamation: No reclamation requirements associated with this facility.
POTW: The facility is not a POTW.
Treat To Water: Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

DRISCOLL CUSTOM BOATS (SAN DIEGO BAY) (Continued) **S103963955**

File Location:	Local Agency
Local Case Number:	H09719-002
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	This case was opened because soil contamination was found during the removal of a waste oil tank in January 1991. The tank was located in an area near or in the midst of a free product plume from another UST release at the same location (Chevron High Seas Terminal H03413-001). The waste oil tank was double-walled fiberglass and noted in good condition without holes when removed. Chevron agreed to investigate the waste oil tank release and drilled two borings in adjacent to the former excavation in March 2009. Soil samples were analyzed for volatile organic compounds (VOCs) full scan using EPA Method 8260 (to determine if chlorinated compounds or solvents were present); for total petroleum hydrocarbons using EPA Method 8015B, and for Title 22 Metals. Groundwater samples were collected from four existing wells in the vicinity of the former waste oil tank and analyzed for VOCs using EPA Method 8260, for a fuel scan using EPA Method 8015B, and for Title 22 Metals. With the exception of acetone in soil, chlorinated and/or halogenated compounds were not detected in the soil or the groundwater. Total petroleum hydrocarbons as gasoline and VOCs detected were consistent with the prior release (H03413-001). Metals were not detected above levels of concern in soil. The groundwater samples were not filtered and therefore the metals concentrations may be elevated based on the presence of soil particulates. The consultant concluded that the presence of TPH as gasoline and fuel constitutents in groundwater indicated that the hydrocarbon plume from the previous release had impacted the area formerly occupied by the waste oil tank and any impacts that may have resulted from the waste oil tank will be addressed by remedial efforts to clean up this release (H03413-001). DEH concurs with this conclusion. See ESI for additional information.

WDS:

Name:	KOEHLER KRAFT CO
Address:	2302 SHELTER ISLAND DR
City:	SAN DIEGO
Facility ID:	San Diego 000000474
Facility Type:	Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status:	Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number:	CA0109096 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion:	9
Facility Telephone:	6192229051
Facility Contact:	SUZANNE BLANCO/C. F. KOEHLER
Agency Name:	KOEHLER KRAFT CO
Agency Address:	2302 SHELTER ISLAND DR
Agency City,St,Zip:	SAN DIEGO 92106
Agency Contact:	URSULA KOEHLER
Agency Telephone:	6192229051
Agency Type:	Private
SIC Code:	3732
SIC Code 2:	Not reported
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste:	PROCES

KOEHLER KRAFT (Continued) **S100725461**

Waste Type2:	D
Waste2:	Process Waste (Waste produced as part of the industrial/manufacturing process)
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Washwater Waste (Product washwater wastes: E.G., photo reuse wastewater, vegetable washwater)
Secondary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Potential Contaminants of Concern:	Polychlorinated biphenyls (PCBs), Arsenic, Chromium, Copper, Lead, Mercury (elemental), Nickel, Silver, Zinc, Diesel, Gasoline
Site History:	The site property consists of 1.65 acres situated approximately 100

KETTENBURG MARINE (Continued) **1000400373**

feet west of San Diego Bay and bounded by residences to the south across Carleton Street, and commercial properties to the west and north across Scott Street and Dickens Street, respectively. The site was purchased by Colrich California, LLC for development as mixed use commercial and residential space with a partial subgrade parking garage located up to 7 feet below surrounding grade. The site had historically been used for a number of commercial and industrial uses, primarily associated with the storage, maintenance, and repair of boats. In March 1988, the Regional Water Quality Control Board issued a Cleanup and Abatement Order (88-78) for the site (later identified as Department of Environmental Health-DEH case H09675-002) due to copper impact to bay sediments. In 1998, following sampling activities, impacted sediments were excavated from the site and the case was subsequently closed in 1999. In May 1990, a 1,000 gallon gasoline underground storage tank (UST) was removed from the site under the direction of DEH. DEH subsequently opened unauthorized release case H09675-001 based on soil samples collected at the time of UST removal. Monitoring wells and borings installed at the site suggested that gasoline impacts were primarily localized to the UST area. While some limited excavation (reportedly 175 cubic yards) of hydrocarbon-impacted soil was conducted at the site in the vicinity of the UST, a significant volume of hydrocarbon-impacted soil remained in place following case closure. DEH closed case H09675-001 on December 3, 1998. In February 2004, a Voluntary Assistance Program (VAP) application was submitted to DEH requesting oversight for the redevelopment of the property. Limited assessment and excavation activities were conducted including the excavation and disposal of approximately 273 cubic yards of hydrocarbon-impacted soil in the vicinity of the former UST excavation before the City of San Diego halted excavation activities due to lack of a grading permit. Further assessment and remediation activities did not commence until 2012 following a change in ownership to the current property owner. In 2012 and 2013, additional site assessment was conducted by the new property owner which included soil sampling activities at numerous locations with borings, trenches, and the installation of three groundwater monitoring wells to evaluate groundwater conditions at the site. Soil sampling and analysis conducted at the site identified several constituents of concern (COCs), including petroleum hydrocarbons, metals, VOCs, SVOCs, and PCBs. Petroleum hydrocarbon-impacted soil was primarily limited to the former UST cavity and vicinity, and contained total petroleum hydrocarbons as gasoline (TPHg), benzene, and ethylbenzene at maximum concentrations of 2,800, 43, and 130 milligrams per kilogram (mg/kg), respectively. The other constituents of concern (metals, SVOCs, and PCBs) were spread over the majority of the site and were primarily located between the surface and four feet below grade with a few pockets extending down to a maximum depth of approximately 13 feet below grade. The majority of near-surface impacts were related to three primary metals (arsenic, lead, and mercury), detected as high as 79.8, 4,280, and 15.3 mg/kg, respectively. Three groundwater monitoring wells were installed in the vicinity of the former UST cavity at the site in 2013 to evaluate the extent and magnitude of dissolved-phase hydrocarbon-impacted groundwater. The monitoring wells were installed and sampled prior to the excavation of hydrocarbon-impacted soil. Following the excavation of hydrocarbon-impacted soil, groundwater samples were collected again to evaluate residual hydrocarbon impacts to groundwater for use in

KETTENBURG MARINE (Continued) **1000400373**

subsequent vapor risk analysis. Depth to groundwater in the aforementioned monitoring wells ranged from approximately 5 to 7 feet below grade (fbg).Historically, dissolved-phase TPHg, benzene, and ethylbenzene were detected at maximum concentrations of 60,000, 5,400, and 2,400 micrograms per liter, respectively. The consultant established cleanup goals based on risk for VOCs which could potentially pose a vapor intrusion risk to occupants of the proposed onsite structure. Cleanup goals for the other COCs were based on a combination of published background levels, United States Environmental Protection Agency, Regional Screening Levels (RSLs), or a portion of the RSL as deemed appropriate. The excavation of hydrocarbon-impacted soil occurred in the southwestern portion of the property adjacent to Carleton Street in the vicinity of the former UST. Excavation activities extended down to a maximum depth of approximately 14.5 fbg and removed 4,597 tons (approximately 3,065 cubic yards) of hydrocarbon-impacted soil, which was disposed at Azusa Land Reclamation. Confirmation samples for hydrocarbon-impacted soil were collected on a ten-foot grid for the bottom of the excavation and every ten horizontal feet and 5 vertical feet for sidewalls. Confirmation samples indicated that all hydrocarbon-impacted soil above the cleanup goals was excavated from the site. The highest remaining concentrations of TPHg, benzene, and ethylbenzene in soil were 1,900, 2.4, and 27 mg/kg, respectively. Following excavation activities, the highest remaining concentration of dissolved-phase TPHg, benzene, and ethylbenzene were 280, 26, and 9.6 micrograms per liter, respectively. The consultant estimated that approximately 96.3 cubic yards of hydrocarbon-impacted soil remains at the site beneath Carleton Street and the sidewalk adjacent to the site. Excavation of other COCs (metals, SVOCs, and PCBs) were conducted across the majority of the site. A total of 6,059 tons (approximately 4,039 cubic yards) of impacted soil was excavated and ultimately disposed at Azusa Land Reclamation. Of that amount, 3,668 tons (approximately 2,445 cubic yards) of impacted soil was treated by stabilization onsite with a mobile treatment system before being transported to Azusa Land Reclamation for disposal due to its leaching potential. Confirmation samples for the other COCs (metals, SVOCs, and PCBs) were generally collected on a forty foot grid across the site. Excavation primarily occurred at depths less than 4 fbg and focused on metals, SVOCs, and PCBs, with five exceptions where discoloration, odors, or debris pits were observed, the deepest which extended down to 13 fbg. Additional sampling and analysis for hydrocarbons, SVOCs, and metals was conducted for these areas beyond the proposed forty foot grid confirmation samples, including sidewall samples, as appropriate to verify the removal of observed impacts. None of the confirmation samples exhibited concentrations which exceeded the established cleanup goals for the site with the exception of one soil sample which exhibited a lead concentration of 40.5 mg/kg, slightly over the established cleanup of goal of 40 mg/kg. The consultant deemed this exceedance insignificant and concluded that additional excavation in this grid was not warranted. Following excavation activities, the consultant conducted a cumulative soil vapor risk evaluation utilizing soil and groundwater analytical data for petroleum hydrocarbons remaining onsite. Based on the highest remaining concentrations of benzene and ethylbenzene in soil and groundwater, the only detected carcinogenic compounds remaining at the site, the resulting vapor risk evaluation indicated a cumulative human health risk of 2.8x10-8, less than the DEH

KETTENBURG MARINE (Continued) **1000400373**

threshold of one in a million (1.0x10-6). Based on this evaluation, the consultant concluded that the potential for human health risk associated with VOCs at the site is low. Based on the results of the vapor risk evaluation for the site, and the other aforementioned considerations, the consultant concluded that in the sites current condition, the proposed mixed use commercial and residential space with a partial subgrade parking garage is protective of human health and the environment. It is the consultants opinion that no further action is necessary at the site. Based on the provided data, DEH agrees with this conclusion.

Local Agency:	SAN DIEGO COUNTY LOP
File Location:	Local Agency
Local Case Number:	H13227-001
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	In June 1982, Chevron had a gasoline release from their underground storage tank (UST) system. This release was reported to San Diego Fire Department at the time. In January 1985, three gasoline USTs and one waste oil tank were removed under inspection by DEH and the San Diego Fire Department. One additional UST was discovered at the time of site redevelopment and was removed in March 2002. DEH became involved with this case in January 1985 due to proposed development on the adjacent property. At that time, DEH became the lead

CHEVRON SERVICE STATION (Continued) **S102427543**

regulatory agency over the case. In 1982, when they discovered the release, Chevron proceeded to install a total of 18 monitoring wells and four recovery wells. Records regarding Chevrons activities are limited and incomplete from 1982 through 1986. In general, in 1982, there was as much as 3 feet of product reported in a number of monitoring wells on the site. Prior to completing the investigation on the soil and groundwater impacts, Chevron proceeded to implement free product recovery in January 1985. By January 1986, the product thickness had been reduced to 0.2 feet in six of the wells on the property. In March 1987, Chevron installed a groundwater recovery system that operated through October 1990. The system was modified in September 1988 to include soil vapor extraction which also operated through October 1990. Between the free product recovery activities, the groundwater recovery system and the vapor extraction system, an estimated 1,482 gallons of gasoline was recovered and treated. Site investigation under the oversight of DEH took place from 1985 through 1999 with groundwater monitoring at this site conducted between 1985 and 2004. The site investigation included the installation of 22-monitoring wells, 4-groundwater recovery wells, 7-vapor extraction wells, 4-multilevel vapor probes and 46-soil borings on and off-site. Free product was identified primarily on-site and extending off-site to the southwest. Groundwater flow has varied from southwest to south. On the southwestern side of Nimitz Boulevard, monitoring wells near the intersection of Rosecrans Street and Nimitz Boulevard had product sheen from 1998 through the beginning of 2002. Evidence of free product on-site and off-site was last observed in early 2002. The dissolved groundwater impacts were identified to extend to the south and southwest approximately 150 to 200 feet into the intersection of Rosecrans Street and Nimitz Boulevard. There remains an estimated 2,947 cubic yards of impacted soil associated with this release. The residual soil impacts are located beneath the former UST excavation, beneath the former dispenser islands and a three foot thick zone at the capillary fringe. The residual soil impacts do not pose a health risk for the occupants of the property that is being used as retail market and gasoline station with slab-on-grade construction. In April 2005, Chevron was directed to proceed with the destruction of the various remaining monitoring wells prior to site closure. All the remaining wells were destroyed in June of 2005 with the exception of wells B-1 and B-2. The surface expressions of the wells were removed and the wells were lost during site redevelopment activities in 2002. Due to access issues the status of these two wells was not addressed to the satisfaction of DEH until February 2011. Based on the site investigation and the remedial activities completed the dissolved plume is stable in aerial extent and the concentrations are deceasing over time due to natural attenuation. DEH concurs with the request for no further action being required at this site related to the 1982 release.

Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	A bank is currently located at the site; however, the property was formerly occupied by an auto repair facility. During property improvement activities for construction of the bank in June 1989, five 550-gallon capacity abandoned underground storage tanks (USTs) were discovered near the northeast corner of the site within the Rosecrans Street right-of-way. Soil samples were collected from trenches around the UST area, and laboratory analyses showed the presence of elevated concentrations of total petroleum hydrocarbons (TPH), benzene, toluene, ethylbenzene, and xylenes (BTEX). The USTs were removed on August 28, 1989. A maximum TPH concentration of 5,240 milligrams per kilogram (mg/kg) was reported in a soil sample collected from the bottom of the tank excavation. A limited soil assessment of the UST excavation area was conducted in September 1989. TPH was not detected in soil samples collected around the perimeter of the tank area, and the consultant concluded that the release area was localized. During the assessment, an estimated 200 cubic yards of petroleum-impacted soil was excavated from the tank area, and reportedly moved offsite for later disposal. DEH opened an unauthorized release case for the site on September 14, 1989. In August 2000, three direct-push borings were advanced near the UST excavation in the sidewalk adjoining Rosecrans Street. Based on analytical results for the soil samples collected from the borings, the consultant estimated that approximately 100 cubic yards of TPH-impacted soil remained in vicinity of the former USTs. Groundwater samples were also collected from the three boreholes. Dissolved petroleum hydrocarbons concentrations were highest in the groundwater sample collected from the boring located near the

CALTRANS - DISTRICT 11 (Continued) **S100179283**

northeast corner of the site (B3), with a maximum benzene concentration of 1,300 micrograms per liter (ug/l). In May 2013, three soil borings/groundwater monitoring wells were installed to delineate the extent of soil and groundwater contamination. TPH in the gasoline range (TPH-g) concentrations of 121 mg/kg and 144 mg/kg were detected in soil samples collected from two of the borings at a depth of 15 feet (near the groundwater table). TPH-g was not detected in soil samples collected from the downgradient boring. The three monitoring wells were sampled in May 2013 and January 2014. Only trace amounts of TPH were detected in the groundwater samples, and BTEX and methyl tertiary butyl ether (MTBE) were not detected at concentrations above the method detection limits. The consultant concludes that contaminants present during the site assessment conducted in 2000 have degraded over time through natural attenuation. Based on the low TPH concentrations and absence of BTEX and fuel oxygenates in recent groundwater and soil samples, and on the location of the site in a groundwater basin with no designated beneficial uses, the consultant recommends case closure under the State Water Resources Control Boards Low-Threat UST Case Closure Policy (LTCP). DEH concurs with the consultants recommendation for case closure under the LTCP. A 60-day public comment period for DEHs Intent to Close Case notification was completed. Comments were only received from the City of San Diego Public Utilities Department (PUD). In a response letter to PUD dated August 27, 2014, DEH stated that residual petroleum hydrocarbon contaminants are not expected to impact any plans by the City to develop groundwater resources in the vicinity of the site. According to the Basin Plan, groundwater beneath the site has no designated beneficial uses, and is exempted from municipal and domestic supply. Note that the attached SCM incorrectly identifies the Metropolitan Water District of Southern California as the public water system for the site. The San Diego County Water Authority is the water purveyor for the City of San Diego. The three site monitoring wells were destroyed under DEH permit #DEH2014-LMWP-001262 on September 30, 2014.

Potential Media Affect: Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern: Gasoline
Site History: A permit to install underground storage tanks (USTs) was issued by the City of San Diego Fire Department on July 29, 1955, for a new service station at the corner of Rosecrans and Dickens Streets in the Point Loma area of San Diego. Four USTs were permitted, including one 4,000-gallon gasoline tank, two 3,000-gallon gasoline tanks, and one 550-gallon waste oil tank. Fire department records indicate that the removal of two 3,000-gallon USTs and the installation of one 10,000-gallon gasoline UST were permitted on September 30, 1969, for Shell Oil Company. The records include a permit issued May 22, 1970,

NORTHERN TRUST OF CA, N.A. (Continued) **S104809649**

for installation of a new 6,000-gallon gasoline UST. A sketch map that accompanied the permit depicted the USTs as located in the northern portion of the parcel. The service station remained in operation until 1981 and was subsequently demolished. A one-hour photo shop operated on the site from 1983 to 1989, when a paved parking lot and a banking (ATM) machine occupied the property. A Phase II environmental site assessment was performed at the site in September 2000 in association with a potential real estate transaction. A geophysical survey was performed over the entire parcel in an attempt to locate the USTs; however, no anomalies suggestive of USTs were found. Four borings were advanced to a depth of 15 feet below ground surface (bgs) and soil samples were collected. Analytical results for the samples indicated maximum detected concentrations of gasoline and diesel as 4,200 and 320 milligrams per kilogram (mg/kg), respectively. Benzene, toluene, ethylbenzene, and xylenes (BTEX) were also detected in the soil samples, as well as other volatile organic compounds that are typically associated with gasoline products. Two of the samples collected at a depth of 15 feet bgs were saturated with petroleum hydrocarbons. DEH was notified of the findings, and an unauthorized release case was opened on October 6, 2000. Site assessment activities were also performed in March 2003 when nine borings were advanced at the site to depths of 14 to 23 feet bgs. One of the borings was converted to a groundwater monitoring well. The depth to water was measured as 11.5 feet and a hydrocarbon sheen was observed. Gasoline and benzene were detected in the groundwater sample at concentrations of 29 and 13 milligrams per liter (mg/l), respectively. Work plans were submitted to DEH in May 2004 and in March 2008 for additional soil and groundwater investigation at the site, as well as a soil vapor survey and a human health risk assessment. These work plans were approved on June 15, 2004, and March 27, 2008, respectively. However, no further work has been performed at the site.
