Los Angeles, Riverside and San Bernardino Counties. The AQMD historically has not required permits for equipment associated with fireworks displays at theme park activities or annual celebrations. AQMD Rule 219-Exemptions From Written Permit Requirements, specifically exempts pyrotechnic equipment from written permit requirements. AQMD prohibitory Rule 444 - Open Burning, also provides exemption from rule provisions for various fire works and pyrotechnics activities. However, AQMD Rules 401 - Visible Emissions, and 402 – Nuisance, do not provide exemption for emissions from fireworks displays or pyrotechnics used in the creation of special effects at theme parks.

6. U.S. Department of Transportation (DOT).

Prior to transportation into and within the U.S., all explosives, including fireworks, must be classed and approved by DOT. Federal hazardous materials (hazmat) transportation law (Federal hazmat law; 49 U.S.C., 5101 et seq.) authorizes DOT to issue classification documents—EX Approvals—in accordance with the Hazardous Materials Regulations (HMR; 49 CFR, Parts 100 -185). All fireworks must be in compliance with, and meet the terms and conditions of, the American Pyrotechnic Association (APA) Standard 87-11 (, which is incorporated by reference as part of the HMR, or be submitted to a DOT-approved laboratory for examination and classification (See 49 CFR 173.56(b)). If approved, fireworks are assigned an explosives classification number by the Associate Administrator of Hazardous Materials Safety. Approval holders also must comply with the rules set forth by the U.S. Coast Guard; U.S. Customs and Border Protection; Bureau of Alcohol, Tobacco, and Firearms; as well as the Consumer Product Safety Commission.

II. PERMIT INFORMATION

The following table summarizes administrative information related to the discharge.

Table 2. Facility Information

Discharger	Any person discharging pollutant wastes associated with the public display of fireworks to surface waters in the San Diego Region
Type of Facility	Amusement and Recreation Services (SIC Code: 7999)
Major or Minor Facility	Minor
Threat to Water Quality	3
Complexity	C
Pretreatment Program	No
Watershed	various
Receiving Water	All receiving surface waters within the San Diego Region
Receiving Water Type	Ocean waters, enclosed bay, estuary, and inland surface water

A. Discharger Eligibility Criteria

Any person who proposes to discharge pollutant waste from the public display of fireworks to surface waters in the San Diego Region may submit a Notice of Intent (NOI) for coverage under this Order. The NOI may address multiple fireworks events at different locations throughout the San Diego Region. When a fireworks event is hosted by one person but is operated or conducted by another person, it is the person's hosting the event duty to submit an NOI and obtain coverage under this Order. The San Diego Water Board may require the joint submission of an NOI from both the host person and the person operating the fireworks event on a case-by-case basis.

B. General Permit Application

To obtain coverage under this Order Dischargers must submit a complete application containing the following items to the San Diego Water Board:

1. A completed Notice of Intent (NOI) form shown as Attachment B signed in accordance with the signatory requirements of the Standard Provisions in Attachment D, Section V.B.1. Signatory and Certification Requirements, no later than 60 days prior to a fireworks event. During the period of May 11, 2011 through June 10, 2011, Dischargers may submit the complete application no later than 24 days prior to a fireworks event. The NOI may address multiple fireworks events at different locations throughout the San Diego Region;
2. Payment of the annual application fee, equal to the first annual fee, made payable to State Water Resources Control Board or "SWRCB;" and

3. A Fireworks Best Management Practices Plan.

The NOI, including, the application fee, and other attachments must be submitted to the following address:

CRWQCB – San Diego Region
9174 Sky Park Court, Suite 100
San Diego, CA 92123

Attn: Fireworks General NPDES Order
NOTICE OF INTENT

C. Notice of Enrollment

The San Diego Water Board will review the application package for completeness and applicability to this Order. Notice of Enrollment (NOE) under this Order will be provided to the Discharger by the San Diego Water Board upon receipt of a complete NOI and application fee. The effective enrollment date will be specified in the NOE and the Discharger is authorized to discharge fireworks pollutant waste starting on the date specified in the NOE. General Permit coverage will be effective when all of the following have occurred:

1. The Discharger has submitted a complete permit application;
2. The Fireworks Best Management Practices Plan has been accepted by the San Diego Water Board; and

The San Diego Water Board has issued a Notice of Enrollment (NOE).

D. Notice of Exclusion (NOEX)

The San Diego Water Board may issue a Notice of Exclusion (NOEX), which either terminates the permit coverage or requires submittal of an application for an individual permit. An NOEX is a one-page notice that indicates that the Discharger or proposed Discharger is not eligible for coverage under this General Permit and states the reason why. This justification can include, but is not limited to, necessity to comply with a total maximum daily load or to protect sensitive water bodies).

E. Fees

Under this General Permit, fireworks discharges require no treatment systems to meet the terms and conditions of this Order and pose no significant threat to water quality. As such, they are eligible for Category 3 in section 2200(b)(8) of Title 23, California Code of Regulations (CCR). This category is appropriate because firework discharges incorporate best management practices (BMPs) to

control potential impacts to beneficial uses, and this General Permit prohibits firework residual pollutant waste from causing excursions of water quality objectives. The annual fee associated with this rating can be found in section 2200(b)(8) of Title 23, CCR, which is available at <http://www.waterboards.ca.gov/resources/fees/>.

F. Terminating Coverage

To terminate permit coverage, a Discharger must submit a complete and accurate Notice of Termination (NOT). The Discharger's coverage under this General Permit terminates on the day of the coverage termination letter issued by the San Diego Water Board. Prior to the termination effective date, the Discharger is subject to the terms and conditions of this General Permit and is responsible for submitting the annual fee and all reports associated with this General Permit. Discharger must submit an NOT when one of the following conditions occurs:

1. A new host has taken over responsibility of the Discharger's fireworks display activities covered under an existing NOI;
2. The Discharger has ceased all discharges from the application of pesticides for which it obtained General Permit coverage and does not expect to discharge during the remainder of this General Permit term; or
3. The Discharger has obtained coverage under an individual permit for all discharges required to be covered by an NPDES permit.

III. APPLICABLE PLANS, POLICIES, AND REGULATIONS

The requirements contained in the proposed Order are based on the requirements and authorities described in this section.

A. Legal Authorities

This Order is issued pursuant to section 402 of the federal Clean Water Act (CWA) and implementing regulations adopted by the U.S. Environmental Protection Agency (USEPA) and chapter 5.5, division 7 of the California Water Code (commencing with section 13370). It shall serve as a NPDES permit for point source discharges from this facility to surface waters. This Order also serves as Waste Discharge Requirements (WDRs) pursuant to article 4, chapter 4, division 7 of the Water Code (commencing with section 13260). Section 122.28(a)(1) of Title 40 of the Code of Federal Regulations [40 C.F.R. §122.28(a)(1)] allows NPDES permits to be written to cover a category of discharges within the State political boundaries as a general NPDES permit. USEPA Region 9 has granted the San Diego Water Board the authority to issue general NPDES permits.

B. California Environmental Quality Act (CEQA)

Under Water Code section 13389, this action to adopt an NPDES permit is exempt from the provisions of CEQA, Public Resources Code sections 21100 through 21177.

C. State and Federal Regulations, Policies, and Plans

Water Quality Control Plans. The Regional Water Quality Control Board, San Diego Region (San Diego Water Board) adopted a Water Quality Control Plan for the San Diego Basin (hereinafter Basin Plan) on September 8, 1994 that designates beneficial uses, establishes water quality objectives, and contains implementation programs and policies to achieve those objectives in all receiving waters addressed through the plan. In addition, the Basin Plan implements State Water Resources Control Board (State Water Board) Resolution No. 88-63, which established state policy that all waters, with certain exceptions, should be considered suitable or potentially suitable for municipal or domestic supply.

Beneficial uses applicable to receiving waters within the San Diego Region are as follows:

Table 3. Basin Plan Beneficial Uses

Discharge Point(S)	Receiving Water Name	Beneficial Use(s)
Various	Coastal Waters (Pacific Ocean, Enclosed Bays and Estuaries, Harbors, and Lagoons)	Industrial service supply (IND), navigation (NAV), contact water recreation (REC1), non-contact water recreation (REC2), commercial and sport fishing (COMM), biological habitats of special significance (BIOL), estuarine habitats (EST)wildlife habitat (WILD), preservation of rare, threatened or endangered species (RARE), marine habitat (MAR), Aquaculture (AQUA), migration of aquatic organisms (MIGR), spawning (SPWN), and shellfish harvesting (SHELL).
Various	Inland Surface Waters	Municipal and domestic supply (MUN), agricultural supply (AGR), industrial service supply (IND), industrial process supply (PROC), ground water recharge (GWR), hydropower generation (POW), contact water recreation (REC1), non-contact water recreation (REC2), biological habitats of special significance (BIOL), warm freshwater habitat (WARM), cold freshwater habitat (COLD), wildlife habitat (WILD), preservation of rare, threatened or endangered species (RARE), spawning (SPWN).

Requirements of this Order implement the Basin Plan.

California Ocean Plan. The State Water Board adopted the Water Quality Control Plan for Ocean Waters of California, California Ocean Plan (Ocean Plan) in 1972 and amended it in 1978, 1983, 1988, 1990, 1997, 2000, and 2005. The State Water Board adopted the latest amendment on April 21, 2005 and it became effective on February 14, 2006. The Ocean Plan is applicable, in its

entirety, to point source discharges to the ocean. The Ocean Plan identifies beneficial uses of ocean waters of the State to be protected as summarized below:

Table 4. Ocean Plan Beneficial Uses

Discharge Point	Receiving Water	Beneficial Uses
Outfall 001	Pacific Ocean	Industrial water supply; water contact and non-contact recreation, including aesthetic enjoyment; navigation; commercial and sport fishing; mariculture; preservation and enhancement of designated Areas of Special Biological Significance (ASBS); rare and endangered species; marine habitat; fish spawning and shellfish harvesting

Section III.E of the Ocean Plan specifies that waste shall not be discharged to areas designated as being of special biological significance (ASBS). Section III.E.2 provides that the Regional Water Boards may, however, approve waste discharge requirements or recommend certification for limited-term (i.e. weeks or months) activities in ASBS. Limited term activities may result in temporary and short-term changes in existing water quality. Water quality degradation shall be limited to the shortest possible time. The activities must not permanently degrade water quality or result in water quality lower than that necessary to protect existing uses, and all practical means of minimizing such degradation shall be implemented. This Order establishes requirements for discharges of residual pollutants waste into the La Jolla ASBS and the Heisler Park ASBS.

In order to protect the beneficial uses, the Ocean Plan establishes water quality objectives and a program of implementation. Requirements of this Order implement the Ocean Plan.

Alaska Rule. On March 30, 2000, USEPA revised its regulation that specifies when new and revised state and tribal water quality standards (WQS) become effective for CWA purposes (40 C.F.R. § 131.21, 65 Fed. Reg. 24641 (April 27, 2000)). Under the revised regulation (also known as the Alaska rule), new and revised standards submitted to USEPA after May 30, 2000, must be approved by USEPA before being used for CWA purposes. The final rule also provides that standards already in effect and submitted to USEPA by May 30, 2000, may be used for CWA purposes, whether or not approved by USEPA.

Antidegradation Policy. Section 131.12 requires that the state water quality standards include an antidegradation policy consistent with the federal policy. The State Water Board established California’s antidegradation policy in State Water Board Resolution No. 68-16. Resolution No. 68-16 incorporates the federal antidegradation policy where the federal policy applies under federal law. Resolution No. 68-16 requires that existing water quality be maintained unless degradation is justified based on specific findings. The San Diego Water Board’s Basin Plan implements, and incorporates by reference, both the State and

federal antidegradation policies. The permitted discharge must be consistent with the antidegradation provision of section 131.12 and State Water Board Resolution No. 68-16.

Anti-Backsliding Requirements. Sections 402(o)(2) and 303(d)(4) of the CWA and federal regulations at title 40, Code of Federal Regulations²² section 122.44(l) prohibit backsliding in NPDES permits. These anti-backsliding provisions require that effluent limitations in a reissued permit must be as stringent as those in the previous permit, with some exceptions in which limitations may be relaxed.

D. Impaired Water Bodies on CWA 303(d) List

The federal Clean Water Act requires States to identify and make a list of surface water bodies that are polluted. These water bodies, referred to in law as "water quality limited segments," do not meet water quality standards even after discharges of wastes from point sources have been treated by the minimum required levels of pollution control technology. Wastewater treatment plants, a city's storm drain system, or a boat yard, are a few examples of point sources that discharge wastes to surface waters. States are required to compile the water bodies into a list, referred to as the "Clean Water Act Section 303(d) List of Water Quality Limited Segments" (303(d) List). States must also prioritize the water bodies on the list and develop action plans, called total maximum daily loads (TMDLs) to improve the water quality.

The State Board updated the 2004-2006 303(d) List for California on October 25, 2006, and EPA approved it on November 30, 2006.

There are approximately 100 impaired water bodies on the 303(d) List in the San Diego Region. Most TMDLs for water bodies within the San Diego Region are under development or have not been started. However, four TMDLs for the San Diego Region need only State Board approval to be complete, and three are already complete. Of the three completed TMDLs, two impact the water quality of San Diego Bay and the third impacts the water quality of Rainbow Creek.

E. Other Plans, Policies and Regulations – Not Applicable

IV. RATIONALE FOR EFFLUENT LIMITATIONS AND DISCHARGE SPECIFICATIONS

The CWA requires point source dischargers to control the amount of conventional, non-conventional, and toxic pollutants that are discharged into the waters of the United States. The control of pollutants discharged is established through effluent limitations and other requirements in NPDES permits. There are two principal bases

²² All further statutory references are to title 40 of the Code of Federal Regulations unless otherwise indicated.

for effluent limitations in the Code of Federal Regulations: section 122.44(a) requires that permits include applicable technology-based limitations and standards; and section 122.44(d) requires that permits include water quality-based effluent limitations to attain and maintain applicable numeric and narrative water quality criteria to protect the beneficial uses of the receiving water.

A. Discharge Prohibitions

Discharges under this Order are required to be nontoxic. Toxicity is the adverse response of organisms to chemicals or physical agents. This prohibition is based on the Basin Plan, which requires that all waters be maintained free of toxic substances in concentrations that are lethal or produce other detrimental responses in aquatic organisms. Detrimental responses include, but are not limited to, decreased growth rate and decreased reproductive success of resident or indicator species. The Basin Plan also requires waters to be free of toxic substances in concentrations that produce detrimental physiological responses in human, plant, or animal life. This objective applies regardless of whether the toxicity is caused by a single substance or the interactive effect of multiple substances.

B. Technology-Based Effluent Limitations

1. Scope and Authority

Section 301 (b) of the CWA and implementing USEPA permit regulations (40 CFR 122.44) require that permits include conditions meeting the applicable technology-based requirements at a minimum, and any more stringent effluent limitations necessary to meet applicable water quality standards.

The CWA requires that technology-based effluent limitations be established based on several levels of controls:

Best practicable treatment control technology (BPT) represents the average of the best performance by plants within an industrial category or subcategory. BPT standards apply to toxic, conventional, and non-conventional pollutants.

Best available technology economically achievable (BAT) represents the best existing performance of treatment technologies that are economically achievable within an industrial point source category. BAT standards apply to toxic and non-conventional pollutants.

Best conventional pollutant control technology (BCT) represents the control from existing industrial point sources of conventional pollutants including BOD, TSS, fecal coliform, pH, and oil and grease. The BCT standard is established after considering the "cost reasonableness" of the relationship between the cost of attaining a reduction in effluent discharge and the

benefits that would result, and also the cost effectiveness of additional industrial treatment beyond BPT.

New source performance standards (NSPS) represent the best available demonstrated control technology standards. The intent of NSPS guidelines is to set limitations that represent state-of-the-art treatment technology for new sources.

The CWA requires USEPA to develop effluent limitations, guidelines and standards (ELGs) representing application of BPT, BAT, BCT, and NSPS. Section 402(a)(1) of the CWA and section 125.3 of the Code of Federal Regulations authorize the use of best professional judgment (BPJ) to derive technology-based effluent limitations on a case-by-case basis where ELGs are not available for certain industrial categories and/or pollutants of concern. Where BPJ is used, the permit writer must consider specific factors outlined in section 125.3. This General Permit requires the use of BMPs to control and abate the discharge of pollutants from public fireworks event to surface waters within the San Diego Region.

2. Applicable Technology-Based Effluent Limitations

This General Permit will authorize the discharge of residual firework pollutant waste that may pose a threat to water quality and beneficial uses of the receiving waters. The primary mechanism for regulating such discharges will be through the development and implementation of BMPs as required by section VI.C.3. of this Order.

NPDES regulations [40 CFR 122.44(k)] allows for the use of BMPs to control or abate the discharge of pollutants under certain circumstances, including when numeric effluent limitations are infeasible. Proper implementation of BMPs will assure the protection of water quality within the receiving waters. Dischargers enrolled under this General Permit are expected to comply with all water quality objectives through the implementation of BMPs.

C. Water Quality-Based Effluent Limitations (WQBELs)

1. Scope and Authority

Section 301(b) of the CWA and section 122.44(d) require that permits include limitations more stringent than applicable federal technology-based requirements where necessary to achieve applicable water quality standards.

Section 122.44(d)(1)(i) mandates that permits include effluent limitations for all pollutants that are or may be discharged at levels that have the reasonable potential to cause or contribute to an exceedance of a water quality standard, including numeric and narrative objectives within a standard. Where reasonable potential has been established for a pollutant, but there is no

numeric criterion or objective for the pollutant, water quality-based effluent limitations (WQBELs) must be established using: (1) USEPA criteria guidance under CWA section 304(a), supplemented where necessary by other relevant information; (2) an indicator parameter for the pollutant of concern; or (3) a calculated numeric water quality criterion, such as a proposed state criterion or policy interpreting the state's narrative criterion, supplemented with other relevant information, as provided in section 122.44(d)(1)(vi).

The process for determining reasonable potential and calculating WQBELs when necessary is intended to protect the designated uses of the receiving water as specified in the Basin Plan, and achieve applicable water quality objectives and criteria that are contained in other state plans and policies, or any applicable water quality criteria contained in the Ocean Plan and CTR.

2. Applicable Beneficial Uses and Water Quality Criteria and Objectives

The designated beneficial uses of surface waters throughout the State may include municipal, domestic, industrial, and agricultural supply; water contact and non-contact recreation; navigation; groundwater recharge and freshwater replenishment; hydropower generation; wildlife habitat; cold freshwater and warm freshwater habitat; fish migration and fish spawning; marine habitat; estuarine habitat; shellfish harvesting; ocean commercial and sport fishing; areas of special biological significance; and preservation of rare and endangered species. To the extent that the Basin Plan designates additional or different beneficial uses, the Basin Plan shall control.

3. Determining the Need for WQBELs

This Order does not contain WQBELs. The San Diego Water Board finds that numeric effluent limitations are infeasible because it is impracticable to determine actual concentrations of pollutants in the fireworks waste prior to entering the receiving water. This Order requires the use of BMPs to control and abate the discharge of pollutants from public fireworks events to surface waters in the San Diego Region.

CWA section 301 (b)(1) and section 122.44(d) require NPDES permits to include effluent limitations that achieve technology-based standards and any more stringent limitations necessary to meet water quality standards. Where numeric effluent limitations for a pollutant or pollutant parameter have not been established in the applicable state water quality control plan, 40 CFR section 122.44(d)(1)(vi) specifies that water quality-based effluent limitations (WQBELs) may be set based on USEPA criteria, and may be supplemented where necessary by other relevant information to attain and maintain narrative water quality criteria, and to fully protect designated beneficial uses.

NPDES regulations [section 122.44(k)] acknowledge that BMPs shall be included as permit conditions (when applicable) where they are authorized under section 304(e) of the CWA when (1) numeric effluent limitations are infeasible or (2) necessary to achieve limitations or carry out the purpose and intent of the CWA.

1. This General Permit regulates discharges of residual pollutant wastes which are firework constituents or breakdown products that are present after the use of the fireworks for public display. Therefore, the exact residual pollutant waste levels in the discharge are immeasurable and undefined; and
 2. It would be impractical to provide effective treatment, given the numerous short duration intermittent residual firework pollutant releases to surface waters at many different locations.
- 4. WQBEL Calculations – Not Applicable**
- 5. Whole Effluent Toxicity (WET) – Not Applicable**

D. Final Effluent Limitations

1. **Satisfaction of Anti-Backsliding Requirements – Not Applicable**
2. **Satisfaction of Antidegradation Policy**

The San Diego Water Board has determined that discharges authorized under the General Permit will be consistent with applicable antidegradation requirements of State Water Board Resolution No. 68-16, as well as USEPA policy established at 40 CFR 131.12. These provisions require that, at a minimum, existing instream water uses and the level of water quality necessary to protect those existing uses must be maintained. Where the existing water quality is better than the water quality objectives set to protect existing and potential beneficial uses, that quality must be maintained, unless specific findings are made.

3. Stringency of Requirements for Individual Pollutants

This Order requires the Discharger to develop and implement BMPs to regulate and control the discharge of waste associated with public fireworks events.

The requirements established by this Order are no more stringent than necessary to implement the mandates of the CWA.

E. Fireworks Best Management Practices Plan (FBMPP)

The Discharger shall prepare and implement a Fireworks Best Management Practices Plan (FBMPP) to prevent or reduce the discharge of pollutants associated with the public display of fireworks. The FBMPP shall address, at a minimum, the following elements:

1. Whenever practicable and economically feasible, the Discharger shall consider the use of alternative fireworks produced with new pyrotechnic formulas that replace perchlorate with other oxidizers and propellants that burn cleaner, produce less smoke and reduce pollutant waste loading to surface waters.
2. Whenever practicable and feasible, the Discharger shall design the firing range, or consider alternative firing ranges, to eliminate or reduce residual firework pollutant waste discharges to waters of the United States.
3. As soon as practicable, and no later than 24 hours following a public display of fireworks, the Discharger, in addition to complying with title 19 of the California Code of Regulations, section 1003, shall, to the extent practical, collect, remove, and manage particulate matter and debris from ignited and un-ignited pyrotechnic material including aerial shells, stars (small pellets of composition that produce color pyrotechnic effects), paper, cardboard, wires and fuses found during inspection of the entire firing range, , and adjacent affected surface water(s).
4. If the fireworks are launched or ignited on barges or floating platforms, the fireworks and fireworks equipment shall be set- up, discharged and taken down in accordance with the laws and regulations applying to that display by a public display operator licensed by the State of California. All required permits, licenses and approvals shall be obtained from the authorities having jurisdiction over the fireworks display, and the parties responsible under applicable law and regulation shall comply with the requirements and conditions of those permits. All equipment used to hold and launch the fireworks shall be secured properly in accordance with applicable laws and regulations and is such a way as to minimize the risk that they would fall into the water. Barges and floating platforms shall be inspected for leaks and other potential safety issues. Other than system firing cables and common or grounding wires intended to be recovered after the display, electric igniter wires used to trigger the fireworks shall be secured to minimize the risk that the wires would fall into the water during or after discharge. As soon as practicable, and no later than 24 hours following a public display of fireworks, the decks of each barge or floating platform that contained fireworks shall be raked or swept to gather fireworks debris and prevent it from being deposited into the water. The barges shall be returned to the loading or setup area to be further cleaned and to have the mortars

removed.

5. Immediately following a public display of fireworks, all hazardous fireworks waste, including duds, resulting from the set-up, firing, and strike of the public display, including live pyrotechnics waste, shall be handled and managed in accordance with applicable fireworks and hazardous waste laws and regulations.
6. All non-hazardous solid waste resulting from the set-up, firing, and strike of the public display, including wires, boxes, and packaging, shall be collected to the extent practicable and properly disposed of.
7. Fireworks shall be packaged, transported, stored, set-up, and handled in accordance with California Code of Regulations, Title 19, Division 1, Chapter 6, Fireworks and Title 22, Chapter 33, Best Management Practices for Perchlorate Materials in order to prevent or minimize firework pollutant wastes from entering surface waters.
8. Residual firework pollutant waste discharges shall be located a sufficient distance from areas designated ASBS to assure maintenance of natural water quality conditions in these areas, except as provided in Section VII.C.2, *Special Provisions for Discharges into La Jolla and Heisler Park ASBS* of this Order.

F. Public Fireworks Display Log

The Discharger shall maintain a written log for each public fireworks display event. The log shall be completed within 5 days following each public fireworks event and shall be made available to the San Diego Water Board upon request. The log shall contain the following information:

1. The name of the organization hosting the fireworks event, together with the names and license numbers of the pyrotechnic operators actually in charge of the display;
2. The date, time, and duration of the public fireworks event;
3. The location of the public fireworks event;
4. The affected receiving waters;
5. Certification that the FBMPP was fully implemented; and
6. The amounts of fireworks debris collected, the dates, times and visual monitoring observations noted from after event firing range inspections and any other pertinent information

G. Interim Effluent Limitations – Not Applicable

H. Land Discharge Specifications- Not Applicable

I. Reclamation Specifications – Not Applicable

V. RATIONALE FOR RECEIVING WATER LIMITATIONS

A. Surface Water

The discharge shall at all times be in conformance with applicable water quality standards and shall not cause an excursion above any applicable narrative or numeric water quality objective, including but not limited to all applicable provisions contained in:

1. The San Diego Water Board's *Water Quality Control Plan for the San Diego Basin* (Basin Plan), including beneficial uses, water quality objectives, and implementation plans;
2. State Water Board plans for water quality control including the:
 - a) Water Quality Control Plan for Control of Temperature in the Coastal and Interstate Waters and Enclosed Bays and Estuaries (Thermal Plan), and
 - b) The *California Ocean Plan* (Ocean Plan), including beneficial uses, water quality objectives, and implementation plans;
3. State Water Board policies for water quality control including the
 - a) Water Quality Control Policy for the Enclosed Bays and Estuaries of California,
 - b) Policy for Implementation of Toxics Standards for Inland Surface Waters, and Enclosed Bays, and Estuaries of California;
 - c) State Water Resources Control Board's Water Quality Control Plan for Enclosed Bays and Estuaries – Part 1 Sediment Quality which includes the following narrative objectives
 - (1) Pollutants in sediments shall not be present in quantities that, alone or in combination, are toxic to benthic communities; and
 - (2) Pollutants shall not be present in sediments at levels that will bioaccumulate in aquatic life to levels that are harmful to human health.
 - d) Resources Control Board's Water Quality Control Plan for Enclosed Bays and Estuaries – Part 1 Sediment Quality; and

- e) The Statement of Policy with Respect to Maintaining High Quality of Waters in California (State Water Board Resolution No. 68-16)
- 4. Priority pollutant criteria promulgated by the U.S. Environmental Protection Agency (U.S. EPA) through the:
 - a) National Toxics Rule (NTR)²³ (promulgated on December 22, 1992 and amended on May 4, 1995) and
 - b) California Toxics Rule (CTR)^{24, 25}

B. Groundwater – Not Applicable

VI. RATIONALE FOR MONITORING AND REPORTING REQUIREMENTS

Section 122.48 requires that all NPDES permits specify requirements for recording and reporting monitoring results. Water Code sections 13267 and 13383 authorizes the San Diego Water Board to require technical and monitoring reports. The Monitoring and Reporting Program (MRP), Attachment E of this Order, establishes monitoring and reporting requirements to implement federal and state requirements. The following provides the rationale for the monitoring and reporting requirements contained in the MRP for this facility.

A. Influent Monitoring – Not Applicable

B. Effluent Monitoring – Not Applicable

C. Whole Effluent Toxicity Testing Requirements – Not Applicable

D. Receiving Water Monitoring

1. Surface Water

a. General Water Quality Effects on Surface Waters

The effects of fireworks pollutant waste on the environment are relatively unknown at this time. The infrequency of fireworks displays at most locations, coupled with the wide dispersion of constituents make detection of residual firework pollutant waste difficult. In addition, pollution from other sources makes it difficult to measure the amount of pollution and subsequent effects that specifically comes from fireworks. The possible toxicity of any fallout may also be affected by the amount of black powder used, type of oxidizer, colors produced and launch method.

²³ 40 CFR 131.36

²⁴ 65 Federal Register 31682-31719 (May 18, 2000), adding Section 131.38 to 40 CFR

²⁵ If a water quality objective and a CTR criterion are in effect for the same priority pollutant, the more stringent of the two applies

A study²⁶ was conducted on a small lake located at EPCOT Center, a theme park at the Walt Disney World Resort in Lake Buena Vista, Florida, between 1982 and 1992, to evaluate the impact of repeat fireworks displays (2,000 shows over a decade). Sampling of both water-column and sediments was conducted intermittently over the ten year period. The testing revealed higher than normal concentrations of antimony, barium, and strontium, three common ingredients of fireworks, demonstrating that residual firework pollutant waste does accumulate over time.

A team led by the U. S. Environmental Protection Agency's Richard Wilkin, have conducted research on the use of pyrotechnic devices over bodies of water noting concerns over the effects of environmental perchlorate on human health and wildlife. Sources of perchlorate range from lightning and certain fertilizers to the perchlorate compounds in rocket fuel and explosives. It had been long suspected that community fireworks displays were another source, but few studies had been done on the topic. Wilkin's group has now established fireworks displays as a source of perchlorate contamination by analyzing water in an Oklahoma lake before and after annual Fourth of July fireworks displays in 2004, 2005 and 2006.²⁷ Within 14 hours after the fireworks, perchlorate levels rose 24 to 1,028 times above background levels. Levels peaked about 24 hours after the display, and then decreased to the pre-fireworks background within 20 to 80 days.

The San Diego Water Board has reviewed monitoring conducted to date by SeaWorld San Diego. As described in greater detail in Section I.D above, SeaWorld has conducted annual fireworks related monitoring for sediment and water quality parameters since 2001. Water chemistry sampling documented elevated levels of pollutants within the fireworks discharge zone, with some pollutants exceeding water quality criteria. Sediment monitoring showed enrichment of metals within the fireworks fallback area, though short-term sediment toxicity testing was inconclusive and toxicity testing for sublethal effects, a requirement under the SWRCB Sediment Quality Control Plan, was not conducted or required. For benthic communities, differing benthic communities were documented, though the reference sites and fallback area had differing habitat types.

b. Net Explosive Weight

SeaWorld conducts nightly fireworks displays during the summer months between April and September and averages between 110 and 120 shows per year. The data in Table 5 indicates that the firework displays vary in length from approximately 6 minutes to 20 minutes depending on the

²⁶ Thomas A. Debusk, Jeffrey J. Keaffaber, Benedict R. Schwegler, Jr., John Repoff, Environmental Effects of Fireworks on Bodies of Water,

²⁷ Wilkin, R.T., D.D. Fine, and N.G. Burnett. (2007). "Perchlorate Behavior in a Municipal Lake Following Fireworks Displays." *Environmental Science and Technology*, 41: 3966–3971.

number of firework aerial shells ignited during the displays. The maximum residual firework pollutant loading on the receiving water occurs on the Fourth of July event when up to 1750 aerial shells are ignited with an estimated net explosive weight of 961 pounds.

Table 5. SeaWorld Fireworks Events

Fireworks Display Type	Approximate Show Length	Aerial Shells Fired (Average)	Estimated Net Explosive Weight (in pounds)
Typical	6 minutes	Up to 250	216
Special	12 minutes	Up to 1000	Not Reported
Major	20 minutes	Up to 1750	961

c. Receiving Waters With Required Monitoring Under this Order

Between June 2010 and December 2010 there were approximately 66 Marine Event Permits for fireworks events issued by the U.S. Coast Guard for Mission Bay and San Diego Bay. Approximately 11 of the Marine Event Permits issued were for fireworks shows over Mission Bay and approximately 55 were for fireworks shows over San Diego Bay.

The San Diego Water Board currently does not have any information regarding additional fireworks events discharging to other surface water bodies within the region, with the exception of the Pacific Ocean. While the San Diego Water Board has received some documentation regarding the occurrence of fireworks events over the Pacific Ocean, no monitoring data has been provided to the San Diego Water Board for these discharges. This Order does not require receiving water monitoring for fireworks displays over the Pacific Ocean.

The Southern California Coastal Water Research Project (SCCWRP) routinely conducts a comprehensive assessment of the ecological condition of the Pacific Ocean at hundreds of sampling locations along the Southern California Bight.²⁸ The Bight Monitoring Program has several components including coastal ecology and offshore water quality to assess conditions of marine resources in the Bight and evaluate effects of their exposure to pollutants. The monitoring and assessment is conducted by SCCWRP at regular intervals. The current monitoring survey called Bight 2008 is the fourth in a series of regional surveys in the Southern California Bight that began in 1994. Receiving water monitoring for public fireworks events over

²⁸ The Southern California bight is the 400 miles of recessed coastline between Point Conception, in Santa Barbara County, and Cabo Colnett, south of Ensenada in Mexico.

the Pacific Ocean in the San Diego Region may be conducted as part of the regular SCCWRP Bight Monitoring Surveys. These surveys are funded in part by the Surface Water Ambient Monitoring Surcharge paid by the Dischargers as part of the annual fee for coverage under this Order. Utilizing a regional approach is expected to provide baseline information to assess water quality conditions in Pacific Ocean areas located at or near firework events and evaluate the effects of firework residual pollutant waste discharges. In 2004 the SWRCB adopted Resolution No. 2004-0052 which, in part, established an ASBS Natural Water Quality Committee (NWQC). The NWQC's purpose and role is to provide guidance on determining "natural water quality" and provide scientific advice regarding assessing impacts in ASBS. The NWQC produced a Summation of Findings (SCCWRP Technical Report 625) in September 2010. Additionally, the voters of California approved bond measures for Proposition 84 that provides funding to responsible parties to assist responsible parties to comply with the discharge prohibition into ASBS. An estimated \$1,000,000 of funds will be set aside to conduct monitoring, including a regional water quality assessment in accordance with BMP monitoring. This effort is expected to better characterize the receiving water condition of ASBS across the state, including those which may receive discharges from fireworks.

d. Discharger Categories

SeaWorld San Diego is a Category 1 Discharger. All other dischargers are Category 2 Dischargers.

e. Category 1 Discharger Monitoring

Category 1 Dischargers are required to monitor in accordance with Section IX.A. of the Monitoring and Reporting Program. SeaWorld San Diego is considered a Category 1 Discharger. This monitoring is needed to ensure compliance with receiving water limitations.

Mission Bay and the mouth of the San Diego River form a 4,000 acre aquatic park. Water quality within Mission Bay generally is lower than that of the coastal ocean water due to the poor flushing characteristics of the bay and the input of nutrient material from storm runoff.

San Diego Bay is approximately 13 miles long and varies from ½ to 1 ½ miles in width. It is surrounded by metropolitan San Diego and most of the shoreline has been heavily developed for recreational, residential, military, and industrial use.

f. Water Chemistry

Water chemistry monitoring requirements were developed based on the results obtained from the SeaWorld San Diego monitoring, which are discussed in section I.D of the fact sheet. The required list of pollutants to be monitored is considered a minimum list, and Discharger(s) may elect to monitor for additional constituents of concern. Additionally, the ultimate fate and transport of pollutants from the discharge is required to be addressed by a conceptual model, which is a component of the SWRCB Sediment Quality Control Plan. It is expected that the development of a conceptual model will enable the discharger(s) to determine, and subsequently propose, a sampling frequency and timing that is representative of the discharge.

g. Sediment Monitoring

The Order requires sampling of sediment chemistry, toxicity and the benthic community. The basis for sediment monitoring under the Order is based on the requirements in the SWRCB Sediment Quality Control Plan. Sediment chemistry sampling has been expanded to include metals the San Diego Water Board determined to be at elevated levels in reviewing the SeaWorld San Diego monitoring data. It is important to note that the required sediment chemistry list includes constituents that are not included in fireworks discharges. This data collected will enable proper stressor identification to be conducted if sediments fail to meet the Sediment Quality Objective. Sediment toxicity must be conducted pursuant to the SWRCB Sediment Quality Control Plan, which requires a short-term and sublethal toxicity test.

The benthic community assessment has been modified to require monitoring that reflects the benthic habitat subject to the discharge. For unvegetated subtidal habitats the monitoring must be done in accordance with the line of evidence approach described in Section V.G of the SWRCB Sediment Quality Control Plan. Where the subtidal habitat is vegetated (*Zostera marina*, eelgrass), the line of evidence tool under Section V.G does not accurately portray impacts to benthic communities, as the tool was developed specifically for unvegetated subtidal habitat. However, the SWRCB Sediment Quality Control Plan does provide guidance under Section V.J for situations when a particular line of evidence may not be suitable. This alternative approach, which calls for utilization of a reference site for statistical comparison, is required under the Order. The Order requires the same chemistry and toxicity testing be utilized as in found Section V of the SWRCB Sediment Quality Control Plan, but requires a line of evidence for the benthic community which utilizes invertebrates and pertinent regulatory guidance to protect receiving waters, which for vegetated subtidal includes the Southern California Eelgrass Mitigation

Policy from the National Marine Fisheries Service²⁹. It is expected that the benthic community assessment can utilize invertebrates and eelgrass in the line of evidence approach to estimate levels of impacts, consist with the SWRCB Sediment Quality Control Plan requirements under Section V.J.

Monitoring Frequency and Discussion: The monitoring requirements under the Order do not specify a required frequency of monitoring for water chemistry, and require a minimum number of one sediment monitoring event (using all lines of evidence) every 3 years. The frequency of sediment monitoring is based upon the guidelines from the SWRCB Sediment Quality Control Plan, which specifies a minimum frequency for minor discharges and regional monitoring groups (see Section VII.D of the SWRCB Sediment Quality Control Plan). The proposed frequency of water chemistry monitoring is expected to be based upon results from the conceptual model required under the Water and Sediment Monitoring Plan required under this Order.

h. Category 2 Discharge Monitoring

Category 2 Dischargers will not be required to conduct monitoring at this time, unless the San Diego Water Board determines monitoring is needed based on the following considerations described in Section IX.B. of this Order:

- i. Receiving water body characteristics including circulation, depth, assimilative capacity; CWA 303(d) listed impairments, and beneficial uses;
- ii. Receiving water body characteristics including circulation, depth, assimilative capacity; CWA 303(d) listed impairments, and beneficial uses;
- iii. The frequency of firework events in the receiving water including those at or near the same firework fallout area;
- iv. The estimated firework pollutant loading from an individual or repeated firework event(s) affecting the same water body or segment thereof;
- v. Accumulative effects from repeat firework events in the same location or other firework events affecting the same water body or segment thereof;
- vi. Proximity of the firework event to existing or proposed State Water Quality Protection Areas, inclusive of Areas of Special Biological Significance (ASBS) or other environmental sensitive receiving waters;

²⁹ http://swr.nmfs.noaa.gov/hcd/HCD_webContent/aboutus/policies.htm

or

vii. Any other relevant water quality factors

2. Groundwater

Discharges of wastes from public fireworks events to land are subject to regulation under the San Diego Water Board's Conditional Waiver No. 11 and are not subject to regulation under this Order. Additional information on the San Diego Water Board Conditional Waivers can be found at the San Diego Water Board website: <http://www.waterboards.ca.gov/sandiego/>

E. Other Monitoring Requirements – Not Applicable

VII. RATIONALE FOR PROVISIONS

A. Standard Provisions

Standard Provisions, which apply to all NPDES permits in accordance with section 122.41, and additional conditions applicable to specified categories of permits in accordance with section 122.42, are provided in Attachment D to the order.

Section 122.41(a)(1) and (b) through (n) establish conditions that apply to all State-issued NPDES permits. These conditions must be incorporated into the permits either expressly or by reference. If incorporated by reference, a specific citation to the regulations must be included in the Order. Section 123.25(a)(12) allows the state to omit or modify conditions to impose more stringent requirements. In accordance with section 123.25, this Order omits federal conditions that address enforcement authority specified in sections 122.41(j)(5) and (k)(2) because the enforcement authority under the Water Code is more stringent. In lieu of these conditions, this Order incorporates by reference Water Code section 13387(e).

B. Special Provisions

1. Reopener Provisions

This Order may be re-opened and modified, revoked, and reissued or terminated in accordance with the provisions of 40 CFR Parts 122, 123, 124, and 125. The San Diego Water Board may reopen the permit to modify permit conditions and requirements. Causes for modifications include the promulgation of new regulations or adoption of new regulations by the State Water Board or San Diego Water Board, including revisions to the Basin Plan.

2. Special Provisions for Discharges into La Jolla and Heisler Park ASBS

Public displays of fireworks are conducted every Fourth of July by the La Jolla Community Fireworks Foundation at the Scripps Park near the La Jolla ASBS in San Diego County and by the City of Laguna Beach over the Heisler Park ASBS in Orange County. These events result in the discharge of residual firework pollutant waste to these ASBS areas.

Public firework display events have been occurring near the La Jolla ASBS since 1984. The annual Fourth of July event conducted at Scripps Park by the La Jolla Community Fireworks Foundation is located approximately one-quarter mile from the La Jolla ASBS. The fireworks fallout area may extend into portions of the ASBS. The event typically runs 20-25 minutes. The number and size of shells launched are unknown at this time. It is estimated that, in 2010, less than 500 pounds net weight of pyrotechnics material is discharged into the air over or adjacent to the La Jolla ASBS during this single event.

Public firework display events have been occurring over the Heisler Park ASBS in Orange County since approximately 2001. The annual Fourth of July event conducted by the City of Laguna Beach typically runs approximately 15 minutes and during that time approximately 667 aerial shells are ignited and launched. The aerial shells range in size from 2.5 inches to 5 inches. It is estimated that 600 pounds of pyrotechnic material is discharged into the air over or adjacent to the Heisler Park ASBS during this single event. The City of Laguna Beach estimates that between 20 to 46 percent of the firing range is over land. Beach clean-up is mandatory after the event and additional clean-up is conducted the morning after each event.

The Ocean Plan explicitly prohibits discharges into an ASBS unless an exception has been granted by the State Water Resources Control Board. The Ocean Plan does, however, allow the Regional Water Board's may approve waste discharge requirements for limited term activities in ASBS as described in Section III.E. subject to the following restrictions:

- Limited term activities may result in temporary and short term changes in existing water quality;
- Water quality degradation shall be limited to the shortest possible time; and
- The activities may not permanently degrade water quality or result in water quality lower than that necessary to protect existing uses, and all practicable means of minimizing such degradations shall be implemented.

A once per year fireworks event of less than 1000 pounds net explosive

weight that complies will all the provisions specified in this Order and meets the specifications below is not likely to permanently degrade water quality or result in water quality lower than that necessary to protect existing beneficial uses of the La Jolla ASBS or Heisler Park ASBS. Proper implementation of the minimum specified BMPs required under this Order will also minimize residual firework pollutant waste discharges into the ASBS and water quality degradation of the ASBS.

The San Diego Water Board has determined that the annual Fourth of July public firework displays near the La Jolla ASBS and in the Heisler Park ASBS are limited-term short duration activities and are eligible for approval of waste discharge requirements under Ocean Plan Section III.E. The San Diego Water Board has established the following special conditions in section VII.C. of this Order to assure maintenance of natural ocean water quality conditions and protection of beneficial uses in the ASBS while allowing continued discharges of residual firework pollutant waste discharges to the ASBS at the annual Fourth of July public firework display events. Discharges of residual fireworks pollutant waste by the La Jolla Community Fireworks Foundation near the La Jolla ASBS and by the City of Laguna Beach into the Heisler Park ASBS may continue subject to the following conditions:

- a. The residual firework pollutant waste discharges shall be limited to those resulting from one Fourth of July celebration public fireworks display event per calendar year.
- b. The net explosive weight of fireworks used in the public fireworks display event shall not exceed 1,000 pounds of pyrotechnic material.
- c. The areal extent of the firing range in the ASBS shall be limited to the maximum extent practicable to prevent or reduce residual firework pollutant waste discharges into the ASBS.
- d. The residual firework pollutant waste discharges shall not permanently alter natural water quality conditions³⁰ in the ASBS receiving waters. Temporary excursions from natural ocean water quality conditions resulting from residual firework pollutant waste discharges within any portion of the firing range located in the ASBS are permissible if beneficial uses are protected.
- e. The residual firework pollutant waste discharges shall comply with all other applicable provisions, including water quality standards, of the Ocean Plan.

³⁰ Natural ocean water quality will be determined by the Southern California Water Research Project (SCCWRP) ASBS Monitoring Program which is designed to define natural water quality in ASBS areas at selected reference sites.

3. Special Provisions for SeaWorld San Diego Discharges

On December 17, 2007, the San Diego Water Board made revisions to the NPDES permit for SeaWorld San Diego (Order No. R9-2005-0091, NPDES No. CA0107336) to incorporate requirements for the discharge of pollutant waste associated with the public display of fireworks to Mission Bay. Sea World Inc. has submitted a Report of Waste Discharge dated October 15, 2009 and applied for a NPDES permit renewal of Order No. R9-2005-0091 for 1) the discharge of up to 9.36 million gallons per day of treated wastewater from SeaWorld, San Diego and 2) the discharge of waste from public fireworks displays to Mission Bay. The October 15, 2009 Report of Waste Discharge submitted by Sea World Inc. is deemed complete for the purpose of enrollment under this Order. The enrollment date will be effective upon the effective date of this Order and SeaWorld San Diego is authorized to discharge residual firework pollutant waste starting on this date pursuant to the requirements of this Order. The requirements of this Order will supersede the requirements of Order No. R9-2005-0091 for residual firework pollutant waste discharges upon the effective date of this Order.

4. Special Studies and Additional Monitoring Requirements – Not Applicable

5. Construction, Operation, and Maintenance Specifications – Not Applicable

6. Special Provisions for Municipal Facilities (POTWs Only) – Not Applicable

7. Other Special Provisions – Not Applicable

8. Compliance Schedules – Not Applicable

VIII. PUBLIC PARTICIPATION

The San Diego Water Board is considering the issuance of waste discharge requirements (WDRs) that will serve as a General National Pollutant Discharge Elimination System (NPDES) permit for discharges of waste associated with public display of fireworks. As a step in the WDR adoption process, the San Diego Water Board staff has developed tentative WDRs. The San Diego Water Board encourages public participation in the WDR adoption process.

A. Notification of Interested Parties

The San Diego Water Board has notified interested agencies and persons of its intent to prescribe waste discharge requirements for the discharge and has provided them with an opportunity to submit their written comments and recommendations. The draft tentative Order was electronically e-mailed to all known interested persons on March 21, 2011, posted on the San Diego Water

Board's webpage shortly thereafter. Notification was published in the San Diego Union Tribune, the Orange County Register and the (Riverside) Press-Enterprise on March 21, 2011.

B. Written Comments

Interested persons were invited to submit written comments concerning this Order prior to its adoption by the San Diego Water Board. Comments were required to be submitted either in person or by mail to the Executive Office at the San Diego Water Board at the address above on the cover page of this Order.

C. Public Hearing

The San Diego Water Board held a public hearing on this Order during its regular Board meeting on the following date and time and at the following location:

Date: **May 11, 2011**
Time: **9:00 AM**
Location: **Regional Water Quality Control Board
Regional Board Meeting Room
9174 Sky Park Court, Suite 100
San Diego, CA 92123**

Interested persons were invited to attend. At the public hearing, the San Diego Water Board heard testimony, if any, pertinent to the discharge and this Order.

D. Waste Discharge Requirements Petitions

Any person affected by adoption of this Order of the San Diego Water Board may petition the State Water Board to review the action in accordance with California Water Code section 13320 and California Code of Regulations Title 23 section 2050. The petition must be received by the State Water Board (Office of Chief Counsel, P.O. Box 100, Sacramento, California 95812) within 30 days of the date of adoption of this Order. Copies of the laws and regulations applicable to filing petitions will be provided upon request.

E. Information and Copying

Documents related to this Order, comments received, and other information are on file and may be inspected at the address above at any time between 8:30 a.m. and 4:45 p.m., Monday through Friday. Copying of documents may be arranged through the San Diego Water Board by calling (858) 467-2952.

F. Register of Interested Persons

Any person interested in being placed on the mailing list for information regarding this Order should contact the San Diego Water Board, reference this facility, and provide a name, address, and phone number.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
SAN DIEGO REGION

NOTICE OF INTENT

ORDER NO. R9-2011- 0022
NPDES NO. CAG999002

**GENERAL NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM
(NPDES)
PERMIT FOR RESIDUAL FIREWORKS POLLUTANT WASTE DISCHARGES
TO WATERS OF THE UNITED STATES IN THE SAN DIEGO REGION FROM
THE PUBLIC DISPLAY OF FIREWORKS**

I. NOTICE OF INTENT STATUS

Mark only one Item:: <input type="checkbox"/> New Application <input type="checkbox"/> Change of Information: WDID# _____
<input type="checkbox"/> Change of Discharger or Responsibility WDID# _____

II. STIPULATION OF APPLICABILITY

<input type="checkbox"/>	has reviewed the eligibility criteria of the subject Order as stated below and hereby certifies that the criteria is met.
Eligibility Criteria Any person who proposes to discharge pollutant waste from the public display of fireworks to surface waters in the San Diego Region may submit a Notice of Intent (NOI) for coverage under this Order. When a fireworks event is hosted by one person but is operated or conducted by another person, it is the host's duty to submit an NOI and obtain coverage under the Order. The San Diego Water Board may require the joint submission of an NOI from both the host and the person operating the fireworks event on a case-by-case basis.	
<input type="checkbox"/>	has reviewed the Order and hereby certifies that:
1.	understands the requirements of the Order; and
2.	will comply with all terms, conditions, and requirements of the Order.

III. DISCHARGER INFORMATION

Discharger Name:			
Mailing Address			
City	County	State	ZIP
Contact Person Name and Title			
Contact Person e-mail		Contact Person Phone	

IV. BILLING INFORMATION

<input type="checkbox"/> Same as Discharger Information (Enter information <u>only</u> if different from Section III above)			
Discharger Name:			
Mailing Address

Contact Person e-mail		Contact Person Phone	

V. FIREWORKS BEST MANAGEMENT PRACTICES PLAN

Has a Fireworks Best Management Practices Plan been prepared pursuant to the requirements of this Order? <input type="checkbox"/> Yes <input type="checkbox"/> No
<input type="checkbox"/> If yes, check the box and attach a copy of the Fireworks Best Management Practices Plan to this form.

VI. APPLICATION FEE

Have you included payment of the filing fee (for first-time enrollees only) with this submittal? <input type="checkbox"/> Yes <input type="checkbox"/> No
The initial fee and annual fee are based upon the type of pollutants to be discharged or potentially discharged.
Make checks payable to " State Water Resources Control Board " and include "Fireworks General NPDES Order" in the check memo field.
Category 3 Lowest Threat to Water Quality Discharges that require minimal or no treatment systems to meet limits and pose no significant threat to the environment in accordance with California Code Of Regulations Title 23, Division 3, Chapter 9, Waste Discharge Reports And Requirements Article 1. Fees. (Fees amounts are subject to change. The fee for enrollment under this Order as of September 23, 2010 is \$1,200 plus \$252 surcharge = \$1,452)

VII. CERTIFICATION

I certify under penalty of law that the information provided in this application and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those directly responsible for gathering the information, the information submitted is true, accurate, and complete to the best of my knowledge and belief. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment. In addition, I certify that the provisions of the permit, including the criteria for eligibility will be complied with.

 Analysis method: EPA Method 331.0 (M)
 RL = reporting limit; MDL = minimum detection level; ND = Not detected at reporting limit
 PRE = Pre-show stations; T+0 = during-show stations; T+30min = thirty minutes post-show stations; T+60min = sixty minutes post-show stations
 ft = feet; µg/L = micrograms per liter; J = Value is below the RL but above the MDL, reported value is estimated.
 Water Quality Standards: NTR = National Toxics Rule, Continuous Concentration Criteria for saltwater (2013); CTR = California Toxics Rule, Continuous Concentration Criteria for saltwater (2000);
 OP IMAX = California Ocean Plan, Objectives for Protection of Marine Life, Instantaneous Maximum (2009); Basin Plan = San Diego Basin Plan, Bays and Estuaries (2011)

**Big Bay Boom - 2013 Chemistry Data
Phosphorus Results vs. Regulatory Criterion**

Phosphorus, Total Station (Distance, ft)	RL	MDL	PRE (µg/L)	T+0 (µg/L)	T+30min (µg/L)	T+60min (µg/L)	NTR (µg/L)	CTR (µg/L)	OP IMAX (µg/L)	Basin Plan

J = Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated; B = Analyte was present in the associated method blank

RL = reporting limit; MDL = minimum detection level; ND = not detected above indicated concentration

PRE = Pre-show stations; POST = Post-show stations

µg/L = micrograms per liter

CTR = California Toxics Rule, Continuous Concentration Criteria for saltwater (2000); CTR for metals applies to dissolved fraction, except for mercury

Notes:
SVOC - semivolatile organic compounds
B - Analyte was present in the associated method blank.
J - Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
* - the reporting limit for Bis(2-Ethylhexyl) Phthalate in these samples was 4.9 µg/L instead of 4.8 µg/L.
NA - not analyzed
MDL - minimum detection limit
µg/L - micrograms per liter
mg/L - milligrams per liter
CTR - California Toxics Rule, Continuous Concentration Criteria for saltwater (2000); CTR for metals applies to dissolved fraction, with the exception of mercury
red - surpasses CTR threshold

Note: Model assumes hard site ground conditions and an excess attenuation of 2.8 dB per kilometer due to air absorption (source: Handbook of Acoustical Measurements & Noise Control, 3rd Edition, Harris, Page 3.3; based on effect at 500 Hz for temperature of 68°F and relative humidity of 70%.)

Appendix I
Public Services Questionnaires

San Diego Bay and Imperial Beach Oceanfront Fireworks Display Events Questions Related to Public Services (July 7, 2016)

City of Chula Vista Fire Department Henry Muns, Deputy Fire Chief (619) 409-5836 Response provided August 11, 2016

1. Primary response unit for areas surrounding fireworks barges? Equipment per response unit?
 - E51 (Type 1 Engine)
 - T51 (Type 1 Truck)
 - B51 (Incident Commander)
 - E55 (Type 1 Engine)
 - E52 (Type 1 Engine)

Equipment: <http://www.firescope.org/ics-guides-and-terms/ICS%20020-1.pdf>

2. Current response times from primary station to areas surrounding fireworks barges? Estimated response times from other stations to areas surrounding fireworks barges? What is used to calculate these times?
 - FS 1 (5 min)
 - FS2 (7 min)
 - FS5 (8 min)
 - Historical incident response times
3. What standard is used to determine adequate response times? What is the “best practice” initial response time? Actual number of staff deployed and response time?
 - City of Chula Vista response time metric is 7 min 80% of all calls for the first unit.
 - Best practice is NFPA 1710
 - First unit(EMS)= 6 min 90%
 - First unit(Fire)= 6 min 90%
 - First 14 firefighters (Effective Firefighting Force)= 10 min 90%
4. How does the Department provide services during 4th of July fireworks shows? What measures are enforced in order to ensure effective response times? Does the Department have a plan in place to respond to emergencies during special events (for example, guidelines for navigating heavy traffic)?
 - Events in Chula Vista such as the 4th of July have not overwhelmed our current service delivery network and therefore we have no policy to increase our capability.

1

City of Chula Vista Police Department

1. Current staff numbers? **221 sworn and 84 civilian.** Work shifts? **Hybrid 3 10-hour shifts Mon-Thur and 3 12.5 hour shifts Fri-Sun.** Number of officers deployed per shift? **10 to 19.** What standard is used to determine this? **Calls for police services**
2. What is the City-wide officer to resident ratio goal? **There is no record responsive to this request** How many sworn officers are there currently? **227 budgeted.**
3. How does the Department provide services during 4th of July fireworks shows? **If needed, additional City services may be allocated through the City's Special Events planning and permitting processes.** What measures are enforced in order to ensure effective response times? Does the Department have a plan in place to respond to emergencies during special events (for example, guidelines for navigating heavy traffic)? **There are no records responsive to these requests.**
4. Please list standard and actual response times in minutes per call types E, and 1 through 4. **We only have a threshold standard for Priority 1 and Priority 2 calls for service.**
 - **Priority 1 Threshold is 6 minutes. The average response time for our latest GMOC reporting (7/1/2014-6/30/15) is 6 minutes 49 seconds.**
 - **Priority 2 Threshold is 12 minutes. The average response time for our latest GMOC reporting (7/1/2014-6/30/15) is 13 minutes and 50 seconds.**

Thank you,
City of Chula Vista

San Diego Bay and Imperial Beach Oceanfront Fireworks Display Events

Questions Related to Public Services (July 7, 2016)

Tom Santos, Fire Safety Inspector II

Imperial Beach Fire-Rescue Department

865 Imperial Beach Blvd.

Imperial Beach, CA 91932

Phone: (619) 628-1392 - Fax: (619) 628-1489

tsantos@imperialbeachca.gov

RESPONSE RECEIVED AUGUST 10th

City of Imperial Beach Fire Department

1. Primary response unit for areas surrounding fireworks barges? Equipment per response unit?

There are no fireworks barges associated with the Imperial Beach display. The display is fired from the Imperial Beach fishing pier where (1) type 1 fire engine (E239) is assigned for the event. The engine is staffed with (1) Fire Captain, (1) Fire Engineer, and (2) Firefighters. The fire engine is connected to the pier standpipe which has fire department connections along its 1,500 foot length. Additionally (1) ALS ambulance is assigned to the event as well.

2. Current response times from primary station to areas surrounding fireworks barges? Estimated response times from other stations to areas surrounding fireworks barges? What is used to calculate these times?

Response times do not apply; the engine is on scene and assigned to the display.

3. What standard is used to determine adequate response times? What is the "best practice" initial response time? Actual number of staff deployed and response time?

Response times do not apply; the engine is staged and dedicated to the display. Staff assigned is (1) Fire Captain (1) Fire Engineer, and (2) Firefighters.

4. How does the Department provide services during 4th of July fireworks shows? What measures are enforced in order to ensure effective response times? Does the Department have a plan in place to respond to emergencies during special events (for example, guidelines for navigating heavy traffic)?

Incidents associated with the fireworks display will be responded to by the E-239 pier group and incidents in the remainder of the city are responded to by E-39 from the fire station.

Primary arterial intersections are staffed by San Diego County Sheriff deputies and associated staff which conduct manual traffic control beginning at 8pm and continuing approximately 1 hour after the display end. This traffic control staff meters traffic in manner maintaining effective response.

Yes staff has a response plan for this and other high congestion special events. Additionally all Imperial Beach Fire Engineers are trained and accredited through the State of California to respond in a variety of conditions including heavy traffic.

San Diego Bay and Imperial Beach Oceanfront Fireworks Display Events Questions Related to Public Services (July 7, 2016)

Phone call w Robert Hernandez. Battalion Chief Fire Marshall and Fire Investigator of National City on 7/12/2016

City of National City Fire Department

1. Primary response unit for areas surrounding fireworks barges? Equipment per response unit?

IF fireworks were to happen.

Primary response = truck 34 and engine 34, housed at station 34. 343 east 16th street (waterfront section). Battalion 57 is also housed at Station 34.

If something happens, immediately goes to 1st alarm, truck 34, engine 54, engine 34, paramedic, 343 16th and additional **engine 31** from east side of time. add additional fire engine and battalion chief. use mutual aid contract to provide services

Most departments are broken into 1 fire engine, 1 fire truck. smaller departments reach out to others for hazards (San Diego), paramedics

fire engine = smaller engines, 99% of those on street, respond to most situations in city (fire fighting, rescue for vehicles, medical equipment). most of these have available water aboard engine and pump that can attach to hoses (always)

fire truck = bigger longer trucks with ladders on top. main responsibility is rescue and roof company operations. this is heavier equipment for multiple car extractions, etc. Roof = technical utilities, forced entries for larger buildings

quint – this fire truck has water and hose onboard all the time. used often in national city bc large majority of calls, sandwiched between SD and chula vista, so going into those areas daily. east = paradise hills, also goes into those territories. more than 80% of runs are medically related, so that means that engines are out

2. Current response times from primary station to areas surrounding fireworks barges? Estimated response times from other stations to areas surrounding fireworks barges? What is used to calculate these times?

National avg, national fire protection association nfpa = goal of ~5 mins (DON'T QUOTE)

response times 6 mins from time of 911 to time on scene, 90% of time. 1 min for dispatch. another minute for firefighters to go from rest to out the door, putting on gear. 4 minutes given to response times from firehouse to emergencies.

headquarters would respond to barges. another on 24th and Euclid/ Division, covers east side of town, responsible for Marina located emergencies. those that require all units, same response goal of 6 mins

National City has been installing middle crossing pedestrian safe havens. 2 choices if stuck, 1) turn off lights, cant meet goal or 2) can't turnaround

3. What standard is used to determine adequate response times? What is the "best practice" initial response time? Actual number of staff deployed and response time?

looks at national avg, everyone strives to do that. best practice = always looking at numbers, see if there are impacts or improvements to respond to. SD County fire chiefs meet monthly. Every month, "in service training" covers everything, throughout firefighters career.

Actual number of staff = engine has 4 seats. most departments only bring 3 firefighters. only apparatus with mandatory staffing are the trucks with

typical medical emergency = 3 firefighters.

large event = radio dispatch for additional resources, another engine with 3 firefighters to assist. if trucks are out, will use truck, which has mandatory staffing of 4

station 34, headquarters, has 4 firefighters on truck, 3 firefighters on engine, and 1 battalion chief

station 31 = 3 firefighters on engine

total of 11 firefighters on staff

4. How does the Department provide services during 4th of July fireworks shows? What measures are enforced in order to ensure effective response times? Does the Department have a plan in place to respond to emergencies during special events (for example, guidelines for navigating heavy traffic)?

Yes on all of above.

1) any other special events. City has temporary use permit (TUP). org is required to fill out package that gets sent out to all departments in city. ex:// cooking under a canopy or pop up tent, will have criteria to meet. all need to be reviewed by rob Hernandez (pers. contact), inspection before and after the event. details noted include roadways that are closed. department plans through these TUPs.

if delayed by traffic, turn off lights, let dispatch know that delayed, wait for traffic to open up, turn on lights and resume when possible.

trainings are planned ahead 1 month always, looks at alternative routes. main objective is to get there quickly. if you cant get there in a straight line, figure out other ways. plan accordingly.

Robert Hernandez. Battallion Chief Fire Marshall and Fire Investigator of National City.

Wind direction goes south east, nothing goes over water. 1.5 from waterfront fire barges.

Kimball Park 1200 block of D ave, center city, nowhere near water Fireworks

Used to receive fireworks on barges and offloaded in National City and out of city to surrounding cities. This hasn't happened in 8-10 years. Has permit but has not used in large number of year. Fireworks come in on roadways PyrosSpectacular is vendor who transports them

San Diego Bay and Imperial Beach Oceanfront Fireworks Display Events

Questions Related to Public Services (July 7, 2016)

Karl Becker, Fire Captain of SD Fire Rescue
619-533-4300 and KBecker@sandiego.gov
Phone conversation on August 5, 2016

City of San Diego Fire-Rescue Department

1. Primary response unit for areas surrounding fireworks barges? Staffing and equipment per response unit?
Depends on the type of incident. Fire Station 7 would respond to incidents near the most southern barge for the Big Bay Boom events. Fire Station 1 would respond to incidents near the middle BBB barges near Harbor Island. Fire Station 22 would respond to incidents near the BBB barge closest to Shelter Island.
2. Current response times from primary response unit to areas surrounding fireworks barges? Estimated response times from other stations to areas surrounding fireworks barges? What is used to calculate these times?

[KARL TO PROVIDE]:

From 8/17 email:

I just talked to the our communications people and they said 3-10 minutes would be the best estimate without having to generate computer simulations. I can probably get slightly more accurate numbers but the issue is that the barges are in the middle of the bay and the response would have to come from Harbor Police on a fire boat.

Let me know if you need more info

3. What standard is used to determine adequate response times? What is the “best practice” initial response time? Actual number of staff deployed and response time?
[KARL TO PROVIDE]
4. How does the Department provide services during 4th of July fireworks shows? What measures are enforced in order to ensure effective response times? Does the Department have a plan in place to respond to emergencies during special events (for example, guidelines for navigating heavy traffic)?

In addition to having oversight by the State Fire Marshall, the Department stations 1 squad in the Embarcadero area and an emergency response unit at Shelter Island and Harbor Island. The Department has an Emergency Response Plan, which gets updated using information from past events.

San Diego Bay and Imperial Beach Oceanfront Fireworks Display Events

Questions Related to Public Services (July 7, 2016)

Lt. Tom Underwood

SDPD Operational Support/CIMU

Tunderwood@pd.sandiego.gov

(619) 531-2172

Email response received 8/12/2016

City of San Diego Police Department

1. Current staff numbers? Work shifts? Number of officers deployed per shift? What standard is used to determine this?

The San Diego Sheriff Department is responsible for Imperial Beach and the San Diego Harbor Patrol is responsible for the San Diego Bay.

2. What is the City-wide officer to resident ratio goal? How many sworn officers are there currently?

The San Diego Police Department has 1.36 officers per 1000 residents. The goal of the San Diego Police Department is to have 1.48 police officers per 1000 residents.

As of August 8, 2016, the San Diego Police Department has 1783 sworn officers.

3. How does the Department provide services during 4th of July fireworks shows? What measures are enforced in order to ensure effective response times? Does the Department have a plan in place to respond to emergencies during special events (for example, guidelines for navigating heavy traffic)?

The San Diego Sheriff Department is responsible for Imperial Beach and the San Diego Harbor Patrol is responsible for the San Diego Bay.

For the City of San Diego, the San Diego Police Department develops operational plans to effectively staff the July 4th weekend and events for any affected commands. Assigned officers are strategically deployed in the affected areas to navigate heavy traffic. A supervisor will be assigned to oversee utilization of police personnel and resources.

4. Please complete the table below:

San Diego Police Department Response Time Standards and Actual Response Times

Call Type	Description	Standard (minutes)	Actual (minutes)
Priority Emergency (E)	Imminent threat to life	7	6.9
Priority 1	Serious crimes in progress	14	13.2
Priority 2	Less serious, non-life-threatening crimes	27	30.6
Priority 3	Minor crimes/non-urgent requests	70	76.8
Priority 4	Minor requests for police service	70	83.3

Actual (minutes) for fiscal year 2015

Target (minutes) per:

<https://www.sandiego.gov/sites/default/files/legacy/fm/.../v2police.pdf>

To: Chen, Liane
Cc: King, Blair; Johanna Canlas
Subject: RE: Public Service Qs for SD Bay and Imperial Beach Oceanfront Fireworks Display Events Project

EIR – Barge based fireworks display response in Coronado.

The project manager for this Fireworks EIR is Mayra Medel at the Port of San Diego. Her email is mmedel@portofsandiego.org.

Predicted Response Units and Times:

All units coming from quarters to Glorietta Boat launch ramp which is located just south of 1845 Strandway.

E-36	3:47	3 personnel
T-37	7:31	4 personnel
B-53	3:17	1 personnel
SND E-7	6:59	4 personnel
SND E-4	9:51	4 personnel
SND E-11	9:05	4 personnel
SND T-11	9:25	4 personnel
SND B1	9:56	1 personnel
HPD Fire Boat	<10	3 personnel

- Total of 28 personnel on scene under 10 minutes with the first engine company on scene under 4 minutes.
- Standard – provide EMS with a maximum response time of eight minutes, 90% of the time. This performance standard

would be met and comply with San Diego County Department of Emergency Medical Services.

- Standard – Best Practices guideline is NFPA 1710. The first engine company is predicted to be on scene in 4 minutes or less (the standard would be met), however, the entire first alarm would not be on scene in 8 minutes or less and in this case the NFPA 1710 guideline would not be met. We utilize a robust Automatic Aid System and the bulk of this response would be coming from surrounding agencies. Additional resources may be requested on an as needed basis by the Incident Commander.
- These response times do not account for potential delays in traffic that may be a factor on the 4th of July.

4th of July

The Fire Department overstaffs 1 additional ALS ambulance, 1 boat with two BLS lifeguards in Glorietta Bay, and 1 additional Battalion Chief in the Emergency Operations Center. These are additional units that exceed our daily staffing of 1 engine, 1 truck, 1 Battalion Chief, and 1 ambulance.

San Diego Bay and Imperial Beach Oceanfront Fireworks Display Events Questions Related to Public Services (July 7, 2016)

Mary Ann Castellano
Support Services Supervisor
Coronado Police Department
700 Orange Avenue
Coronado, Ca. 92118
619-522-7363
619-568-1816 fax

Email response received 8/15/2016

City of Coronado Police Department

1. Current staff numbers? Work shifts? Number of officers deployed per shift? What standard is used to determine this?
 - a) There are currently a total of 58 sworn and non-sworn personnel.
 - b) Sworn personnel in Field Services work two shifts – 6:00 a.m. to 6:15 p.m. and 6:00 p.m. to 6:15 a.m.
 - c) The number of Patrol Officers deployed per shift is required to be a minimum of 4 with a maximum of 6 when fully staffed. The day shift will also have additional Traffic Officers on duty ranging from 2 to 5 officers per shift.
 - d) We staff police officers, reserve officers, outside agencies, volunteers, explorers, and contracted security. The work is then divided to cover the 24 hour shift.

2. What is the City-wide officer to resident ratio goal? How many sworn officers are there currently?
 - a) We do not have a standard for that at this time.
 - b) We have 40 sworn officers at this time.

3. How does the Department provide services during 4th of July fireworks shows? What measures are enforced in order to ensure effective response times? Does the Department have a plan in place to respond to emergencies during special events (for example, guidelines for navigating heavy traffic)?
 - a) The EOC (Emergency Operations Center) is in operation, Patrol and Dispatch staffing levels are increased to handle calls for service and outside local law enforcement personnel provide additional support to help monitor higher traffic and pedestrian volumes.

- b) The Police Department strategically places personnel throughout the City to be able to respond timely to all calls for service.
- c) Yes, the Department does have a plan in place to respond to emergencies during special events.

4. Please complete the table below:

Coronado Police Department Response Time Standards and Actual Response Times

Call Type	Description	Standard (minutes)	Actual (minutes)
Priority Emergency (E)	Imminent threat to life	5 min	2 ½ min
Priority 1	Serious crimes in progress	5 min	2 ½ min
Priority 2	Less serious, non-life-threatening crimes	ASAP	5 min
Priority 3	Minor crimes/non-urgent requests	ASAP	7 1/2 min
Priority 4	Minor requests for police service	ASAP	7 min

San Diego Bay and Imperial Beach Oceanfront Fireworks Display Events

Questions Related to Public Services (July 7, 2016)

Donald Brick | Harbor Police Sergeant

PORT OF SAN DIEGO

3380 N. Harbor Drive • San Diego, CA 92101

O: 619.686.6376 F: 619.758.1617

Email response received 8/11/2016

Harbor Police Department

1. Can you describe the role of marine firefighters?

The role of the marine firefighters during the 4th of July event is to provide fire safety for the 4 fireworks barges in SD bay. They are generally on scene 15 minutes prior to and 20-30 minutes after the event. Duties would include firefighting, first aid, and security perimeter for the event.

2. Please describe shifts, officers deployed, and equipment used for: *Shifts for the big bay boom are all 12.5 hour days. Dayshift is from 0500-1730. Eves is 1200-0030, Nights is from 1700-0530. The majority of our staffing is made up of evening shift and supplemented by the night shift. Dayshift is basically normal staffing.*
 - a. Vehicle Patrol: *8 vehicles with 2 officers each, 2 vehicles with one officer*
 - b. Vessel Patrol: *4 fire boats, 2 fast boats*
 - c. Bicycle Team: *4 bike units*
 - d. Dive Team: *11 units spread throughout the event*
 - e. Investigations Unit: *The full investigative teams (5) were working the event.*
 - f. Reserve Senior Volunteer Patrol Program (RSVP) *0*
 - g. Any other units: *FBI USCG and SDSO were also on scene at the HPD command post.*

3. How does the Department provide services during 4th of July fireworks shows? What measures are enforced in order to ensure effective response times? Does the Department have a plan in place to respond to emergencies during special events (for example, guidelines for navigating heavy traffic)?

The department increases staffing to 43 personnel in patrol on Eves vs normal staffing of 8 in patrol.

Effective response times are achieved by the use of more units on tidelands including bicycle units and vessel units. We also have units assigned to the 3 major patrol areas.

HPD has traffic plans for before the event, during the event, and after the event. HPD also has an Emergency Operations Guide for responses during the event.

San Diego Bay and Imperial Beach Oceanfront Fireworks Display Events

Questions Related to Public Services (July 7, 2016)

City of National City Police Department

1. Current staff numbers? Work shifts? Number of officers deployed per shift? What standard is used to determine this?
 - There are a total of 135 employees at the Police Department
 - 6 shifts
 - Staffing is dependent on the beat, time of day and crime trends in the City.

2. What is the City-wide officer to resident ratio goal? How many sworn officers are there currently?
 - There is no city-wide ratio goal.
 - There are currently 86 sworn officers.

3. How does the Department provide services during 4th of July fireworks shows? What measures are enforced in order to ensure effective response times? Does the Department have a plan in place to respond to emergencies during special events (for example, guidelines for navigating heavy traffic)?
 - The 4th of July fireworks funding is by services organizations and the City's General Fund.
 - Deployment for the 4th of July events (fireworks) does not impact the Patrol Division due to overtime funding by the service organizations and the City's General Fund providing staffing for the event(s).
 - The police department has an "Operational Plan" and a "Traffic Plan" for the event (due to the public's and officer safety reasons, these plans are not for public dissemination)

4. Please complete the table below: National City Police Department Response Time Standards and Actual Response Times

Call Type	Description	Standard (minutes)	Actual (minutes)
Priority Emergency (E)	Imminent threat to life		00:03:36
Priority 1	Serious crimes in progress		00:09:53
Priority 2	Less serious, non-life-threatening crimes		00:20:52
Priority 3	Minor crimes/non-urgent requests		00:05:39
Priority 4	Minor requests for police service	<i>Self-Initiated</i>	00:00:07

San Diego Bay and Imperial Beach Oceanfront Fireworks Display Events Questions Related to Public Services (July 7, 2016)

Email response received 8/11/2016

Lt. Herbert Taft
Imperial Beach Substation
845 Imperial Beach Blvd
Imperial Beach, CA 91932

San Diego County Sheriff's Department, Imperial Beach Division

1. Current staff numbers? Work shifts? Number of officers deployed per shift? What standard is used to determine this? **We have two shifts per 24 hour period, day and night shift. On any day/night we have 2-5 deputies working depending on training, scheduled days off, sickness, court etc. Standards used is based on needs of the individual contract city. Those needs can vary depending on whether special events are occurring.**

2. What is the City-wide officer to resident ratio goal? How many sworn officers are there currently? **Approximately 40 sworn are assigned to the Imperial Beach command. Imperial Beach has a population of approximately 26,000 residents and cover about a 4 sq mile area.**

3. How does the Department provide services during 4th of July fireworks shows? What measures are enforced in order to ensure effective response times? Does the Division have a plan in place to respond to emergencies during special events (for example, guidelines for navigating heavy traffic)?
 - A. **Needs of city, current budget, expected visitors, traffic expectations, prior 4th events**
 - B. **Deputies are assigned to locations in the city which ensures effective response times**
 - C. **Yes through tactical placement of resources which minimize travel time**

4. Please complete the table below:

San Diego County Sheriff's Department, Imperial Beach Division Response Time Standards and Actual Response Times

Call Type	Description	Standard (minutes)	Actual (minutes)
Priority Emergency (E)	Imminent threat to life		
Priority 1	Serious crimes in progress		
Priority 2	Less serious, non-life-threatening crimes		
Priority 3	Minor crimes/non-urgent requests		
Priority 4	Minor requests for police service		

The city is small so response times in general for non-emergency can be 5 minutes or less. Emergent calls with code 3 response under 2 minutes. During special events deputies are placed throughout the city so there is little to no impact from traffic conditions.

Questions Related to Public Services (July 7, 2016)

LT Robert Cole
Waterways Management Division Chief
Sector San Diego
U.S. Coast Guard
robert.d.cole@uscg.mil
619.278.7261

Email response sent on 8/11/2016

United States Coast Guard Sector San Diego

1. What is your role and coordination with other agencies that provide emergency services and public protection during special events (such as the Big Bay Boom)?
Coast Guard Sector San Diego facilitates the events that occur on the federal waterways by receiving, analyzing, and reviewing the Applications for Marine Event for each event. For events such as the Big Bay Boom, we enforce regulatory Safety Zone's around each barge (to ensure the public remains safe and clear of the area) as well as enforce (as appropriate) the Navigation Rules (vessel transits, vessel lighting, vessel anchoring, etc.). For the Big Bay Boom, we closely coordinated with the SD Harbor Police on the posture and location of personnel and assets. Please note that this is in addition to our normal requirements and duties for operations related to safety and security within our area of responsibility.
2. Please describe your unit's trained capabilities.
This is wide ranging, and depends on job assignments and specific ratings (career field) for certain personnel. Trained capabilities for this specific event could include (in laymen's terms): Vessel operator, vessel crew, search and rescue, law enforcement, waterways management, patrol command, communications, and marine safety.
3. Number of staff? Equipment used? Typical assigned shifts?
Cannot provide specifics due to operational security. Broadly, on the evening of the Big Bay Boom, the Coast Guard provided a "normal duty watch" that consists of a command center, search and rescue and law enforcement vessels, and search and rescue aircraft. Additionally, an added patrol force for this event provided specific event command and control, and multiple active duty and Auxiliary vessel assets.
4. Standards for response times? Actual response times?
Cannot provide specifics due to operational security. However, as stated in #3, the Coast Guard provided a "normal duty watch" that consists of a command center, search and rescue and law enforcement vessels, and search and rescue aircraft. Additionally, an added patrol force for this event provided specific event command and control, and multiple active duty and Auxiliary vessel assets.

1.0 Introduction

The purpose of this study is to identify changes in travel and parking patterns associated with a series of new firework display events that will take place in and around the San Diego Bay (Proposed Project).

1.1 Project Background

The District Code section that would be established by the proposed ordinance would govern existing and proposed new fireworks display events requiring a discretionary action by the District or operated by the District’s tenants. A number of existing fireworks display events occur year-round in and around San Diego Bay and the Pacific Ocean near Imperial Beach. These existing fireworks display events would be subject to the District Code section established by the proposed ordinance.

In addition to the existing fireworks display events, the District Code section would govern four new fireworks display events that are anticipated to require a future discretionary action by the District, including three displays along the Chula Vista Bayfront, allowed under the Chula Vista Bayfront Master Plan Settlement Agreement and Natural Resources Management Plan, and one Fourth of July display along the National City Bayfront. The three proposed fireworks display events along the Chula Vista Bayfront include one Fourth of July display and two non-Fourth of July displays. It is anticipated that the District would consider annually whether or not to provide event sponsorship and/or issue a Special Event Permit, Right-of-Entry Permit, Tideland Use and Occupancy Permit, Coastal Development Permit, Coastal Act Categorical Determination of Exclusion, or other similar approval for these fireworks display events. These fireworks display events are anticipated to last approximately 3 to 20 minutes, and the fireworks are anticipated to be launched from piers or barges. These proposed new fireworks display events would also be subject to the District Code section established by the proposed ordinance. The proposed new fireworks display events associated with the proposed project are identified in **Table 1-1**, below.

Table 1-1. Proposed New Fireworks Display Events Requiring a Future Discretionary Action by the District

Time of Year	Approximate Number of Fireworks Display Events	Location(s) of Fireworks Display Event	Approximate Duration of Each Fireworks Display Event	Approximate Shell Size
January–March	1	Chula Vista ¹	3–10 minutes	2–8 inches
April–June	—	—	—	—
July–September	2	Chula Vista ² National City ²	15–20 minutes	3–8 inches
October–December	1	Chula Vista ¹	3–10 minutes	2–8 inches
TOTAL	4⁽³⁾			

Source: ICF, January 2017

Notes:

¹Non-Fourth of July display (smaller display)

²Fourth of July display

³Total includes three fireworks display events along the Chula Vista Bayfront, as allowed under the Chula Vista Bayfront Master Plan Settlement Agreement and Natural Resources Management Plan.

Fourth of July Fireworks Display Events

The following Fourth of July fireworks display events currently require a discretionary action or are anticipated to require future consideration of a discretionary action by the District.

Big Bay Boom

The Big Bay Boom is a large, multi-berth outdoor fireworks display event that takes place in North San Diego Bay on the Fourth of July. The District provides event sponsorship and financial assistance for this free event, which was first established in 2001. Given the natural amphitheater provided by the various neighborhoods, parks, and commercial centers surrounding San Diego Bay, including Point Loma, Shelter Island, Harbor Island, Liberty Station, Little Italy, North Embarcadero, Seaport Village, South Embarcadero, and the Coronado Ferry Landing, the Big Bay Boom is viewed by approximately 300,000 to 500,000 people annually. In addition, other private viewing locations are available at the USS Midway Museum, Hornblower Yachts, Flagship Cruises and Events, and San Diego Maritime Museum.

This event requires the strategic placement of four barges (moved by tug boats) around San Diego Bay near Seaport Village, the Embarcadero, Harbor Island, and Shelter Island and does not require construction of any on-land support facilities. During the event, the Coast Guard, City Fire Department, Harbor Police, and special patrol vessels provide safety on the water, while the Harbor Police and San Diego Police Department provide traffic coordination and public safety on land. The fireworks display lasts approximately 18 minutes, after which the barges are removed and, once the Fire Marshal has determined it is safe to do so, cleanup is conducted.

Fourth of July Imperial Beach Fireworks Show

The Fourth of July Imperial Beach Fireworks show is a small, single-location outdoor fireworks display event that takes place within the District's Coastal Development Permit jurisdiction in Imperial Beach on the Fourth of July. The District provides event sponsorship and financial assistance for this free event. Primary viewing locations for this event are from Portwood Pier Plaza, Dunes Park, and along the beach from Palm Avenue to Imperial Beach Boulevard.

For this event, fireworks are launched over the Pacific Ocean in Imperial Beach from the Imperial Beach Pier (Pier). During the event, the City of Imperial Beach and San Diego County Sheriff's Department provide traffic coordination and public safety on land. In addition, U.S. Fish and Wildlife Service Safety Officers voluntarily provide patrol and enforcement of a few sensitive habitat areas to prevent trespass. Finally, spectator management in the form of street-end barricades and signage is conducted along 3rd and 5th Streets at the intersection of Imperial Beach Boulevard. Signage prohibiting public access into the southern entry point of the Navy's Silver Strand Training Complex South is also posted by Imperial Beach Lifeguard staff. The fireworks display lasts approximately 18 minutes. After completion of the display event, and once the Fire Marshal has determined it is safe to do so, cleanup is conducted.

Fireworks Show Over Glorietta Bay

The Fireworks Show Over Glorietta Bay is a waterborne fireworks display event that takes place in the Glorietta Bay inlet of San Diego Bay on July 4 of each year. The show is organized and produced by Coronado 4th of July, a non-profit corporation established in 1993.

An estimated 50,000 people directly view the Fireworks Show Over Glorietta Bay from the expansive walkway that extends along the western edge of the bay from Glorietta Bay Marina to Glorietta Bay Park; from Glorietta Bay Park at the southwestern corner of Glorietta Bay; from the Naval Amphibious Base to the south of Glorietta Bay; from Coronado Municipal Golf Course on the northern side of Glorietta Bay; from the high-rise condominiums at the Coronado Shores complex immediately to the west of Glorietta Bay; and from well over 200 vessels that are either moored at Glorietta Bay Marina or visit and anchor there for the fireworks show. The show can also be seen from a distance on San Diego Bay and the considerable viewing area that it offers, but because the show is concurrent to the Big Bay Boom on San Diego Bay, people along the bay—including residents and visitors along the San Diego Bayfront on the Coronado side of the bay—have a much better view of the Big Bay Boom, and the crowds to watch the Big Bay Boom from the Coronado side of San Diego Bay are considerable.

Fireworks Over Glorietta Bay entails the placement of a single barge at the southeastern corner of Glorietta Bay. The barge is moved into its location by a tugboat. The preparation and placement of the barge do not require construction of any on-land support facilities. During the event, the Coast Guard, Harbor Police, and special patrol vessels provide safety on the water, while the Coronado Police Department provides traffic coordination and public safety on land. The fireworks display lasts approximately 19 minutes, after which the barge is removed cleanup is conducted.

Other *Fireworks* Display Events (Other Bay and Oceanfront Fireworks Displays)

A number of other fireworks display events that require a discretionary action by the District occur in and around San Diego Bay throughout the year, including select Summer Pops concerts and private events sponsored by other organizations, such as the Our Lady of Rosary Church annual procession. The Summer Pops is a concert series sponsored by the San Diego Symphony. These concerts are held on most weekends from late June through August; however, not every concert is accompanied by a fireworks show. When the concerts do include a fireworks show, the pyrotechnics are launched from a barge located off Embarcadero Marina Park in an area known as Embarcadero South. Each of these fireworks displays lasts approximately 5 minutes, with one show lasting approximately 10 minutes. The Our Lady of Rosary Church annual procession is a private event sponsored by Our Lady of Rosary Church that involves the launching of fireworks from the Grape Street Pier while a procession marches down Harbor Drive. Finally, other fireworks display events anticipated to require future consideration of a discretionary action by the District include the three fireworks display events along the Chula Vista Bayfront allowed under the Chula Vista Bayfront Master Plan Settlement Agreement and potentially any shows that would occur along the National City Bayfront. These fireworks display events are anticipate to last approximately 3 to 20 minutes, and the pyrotechnics would be launched from piers, barges, and/or landside locations.

1.2 Report Organization

Following this Introduction chapter, this report is organized into the following chapters:

- 2.0 Analysis Methodology – This chapter documents the methodologies used to assess and quantify the anticipated changes in travel patterns and parking demands associated with the proposed new firework events.
- 3.0 Fourth of July Event (Big Bay Boom) – To establish a sampling of the impacts that may be associated with the new Proposed Project events occurring on the Fourth of July, this chapter documents changes in travel patterns and parking demands associated with the current Fourth of July fireworks event at the San Diego Bay. To determine these changes, transportation-related data including daily roadway counts, peak hour intersection counts (auto, bike and pedestrian movements), parking occupancy data, freeway volumes and transit ridership data were collected during the Fourth of July Event (Big Bay Boom) and compared to the exact same transportation data collected during a typical Saturday (non-event).
- 4.0 Imperial Beach - 4th of July Fireworks Display – To establish a sampling of the impacts that may be associated with the new Proposed Project events occurring on the Fourth of July, this chapter documents changes in travel patterns and parking demands associated with the current Imperial Beach - 4th of July Fireworks Display. To determine these changes, transportation-related data including daily roadway counts, peak hour intersection counts (auto, bike and pedestrian movements), parking occupancy data, freeway volumes and transit ridership data were collected during the Fourth of July Fireworks display and compared to the exact same transportation data collected during a typical Saturday (non-event).
- 5.0 Other Event (End of World War II 70th Anniversary) – To establish a sampling of the impacts that may be associated with the new Proposed Project events not occurring on the Fourth of July, this chapter documents changes in travel patterns and parking demands associated with a small scale, single location fireworks event at the San Diego Bay. Similar to the Fourth of July event, transportation-related data including daily roadway counts, peak hour intersection counts (auto, bike and pedestrian movements), parking occupancy data, freeway volumes and transit ridership data were collected during the event and compared to the exact same transportation data collected during a typical Saturday (non-event).
- 6.0 Findings and Conclusions – This chapter provides a summary of the observed travel and parking demand changes associated with the sample display events (Fourth of July and Other fireworks display events). The observed changes in travel and parking patterns were then correlated with the proposed locations for the new events to qualitatively identify potential project related impacts, and corresponding mitigation measures are recommended.

2.0 Methodology

The following chapter outlines the methodologies used to assess and evaluate the changes in the travel patterns and parking demand associated with fireworks display events within and around the San Diego Bay and the Imperial Beach Oceanfront. These changes were then correlated to the potential locations of the new events, to qualitatively identify potential transportation and parking related impacts.

2.1 Example Events

To understand and identify the potential travel and parking related changes associated with new fireworks display events in and around the San Diego Bay, a sampling of data collection efforts were performed during both a Fourth of July Event (the Big Bay Boom, July 4, 2015) and Other Event (The End of WWII 70th Anniversary, August 15, 2015). The travel related data from these events were then compared to a typical Saturday (Non-event, August 22, 2015) to determine changes in travel patterns and parking demands associated with both event types. The magnitude of travel and parking related changes observed during these two sample events was used to understand the changes that may also be expected with the new fireworks display events included in the Proposed Project.

Fourth of July Event – The Big Bay Boom event is an annual Independence Day fireworks display held at San Diego Bay. During the event, fireworks displays are synchronized across four barges in San Diego Bay. The event typically starts at 9:00 PM and lasts for approximately 20 minutes. Thousands of community members gather at several viewing locations around the Bay to view the event each year. For more information on the event, visit <http://www.bigbayboom.com>.

Imperial Beach 4th of July Fireworks Display - Imperial Beach 4th of July Fireworks display, which is not officially part of the Big Bay Boom, was also included in this sample event since it takes place on the same day, and at the same approximate time as, the Big Bay Boom. The Imperial Beach 4th of July Fireworks display takes place along the Imperial Beach Oceanfront, off the end of the Imperial Beach Pier.

Other Event (The End of WWII 70th Anniversary) – The End of World War II 70th Anniversary event was a free event occurring at the Midway Museum on August 15, 2015. The event started at 6:00 PM and concluded at 8:00 PM with a fireworks display from the deck of the Midway Museum. The fireworks display lasted approximately 10 minutes.

Non-event – Travel and parking data were collected during the same times and locations as the Fourth of July and Other firework events, on a day in which no firework event was scheduled, in order to develop a non-event condition for comparison with the two event conditions. Since both study events occurred during the summer and on a Saturday, data for the non-event event was also collected on a Saturday during the summer months, specifically on August 22, 2015.

2.2 Data Collection Effort

The following data were collected near the viewing areas during the two sample events, as well as on August 22nd, to measure the non-event condition.

Daily Roadway Segment Traffic Counts – Daily roadway segment counts were collected on the main roadways accessing the various event viewing areas. The counts reflect daily vehicular traffic patterns and provide a measure of the level of traffic demand under event conditions.

Peak hour Intersection Counts – Pedestrian, bicycle and auto movement counts were conducted two hours before and two hours after the event at key intersection locations providing access to the viewing areas. These counts provide a measure of change in pedestrian and bicycle activities near the viewing areas before and after the event. They also provide another metric for assessing change in vehicular demand under event conditions.

Parking Occupancy Counts – Parking occupancy counts were conducted at parking facilities serving viewing sites before, during, and after the events.

Freeway Counts – Freeway counts were obtained during event and non-event conditions from Caltrans Performance Measurement System (PeMS) database.

Trolley Ticket Sales – MTS does not monitor daily transit ridership by station location. Therefore, to understand changes in transit ridership associated with the event, total system-wide ticket sales were obtained from MTS for previous July 4th holidays, as well as typical weekday and weekend ridership.

2.3 Impacts of the Events

Since it is difficult to assess what transportation related impacts are associated with the actual fireworks display event and what impacts are associated with the Fourth of July holiday, specific travel related impacts cannot be assessed through a conventional traffic impact analysis approach, which would include intersection and roadway level of service analyses. Instead, impacts are qualitatively identified by correlating the magnitude of change in travel and parking demand observed during current events with the locations of the new events. Therefore, the change in transportation related operations associated similar display events from around the bay were measured and used as an analog for the newly proposed events. Recommendations on how to limit travel and parking related impacts of the new event locations are also provided.

3.0 Fourth of July Event (Big Bay Boom)

As noted in the project description, two of the new firework display events included in the Proposed Project will occur on the Fourth of July (Chula Vista Bay Front and National City). To understand the magnitude of change in travel and parking patterns that may occur at these events, samplings of data were collected during a current Big Bay Boom event at known popular viewing locations. It is assumed that the changes observed at the current Big Bay Boom event could then be qualitatively applied to the two Proposed Project events occurring on the Fourth of July to determine potential impacts. This section documents the observed changes in the travel and parking demand and patterns during a sample Big Bay Boom event.

3.1 Event Background

The Big Bay Boom event is an annual Independence Day fireworks display held at the San Diego Bay on the 4th of July. During the event, fireworks displays are synchronized across four barges within the San Diego Bay. The event typically starts at 9:00 PM and lasts for approximately 20 minutes. Thousands of community members gather at several viewing locations near the Bay to view the event each year. The most popular viewing areas along the Bay for the show are typically Shelter Island, Harbor Island, North Embarcadero, Marina District, Seaport Village/South Embarcadero, and the Coronado Ferry Landing. Other areas located near the Bay, such as the Spanish Landing Park, Liberty Station, America's Cup Harbor, and Point Loma, are also areas where people congregate to see the fireworks show. **Figure 3-1** displays the location of the viewing areas near the San Diego Bay.

Broadway Pier. Source: Chen Ryan Associates, July 2015

3.2 Data Collection Effort

Vehicular count data was collected along a total of 24 key roadway segments across the twelve (12) viewing sites. Key study roadway segments were selected based on the level of access they provide to the event. Vehicular roadway counts were conducted during the entire day, midnight to midnight, and provide an hour by hour count of vehicular traffic entering and exiting the viewing sites.

Vehicular, pedestrian and bicycle counts were collected at a total of 20 key study intersections across the twelve (12) viewing sites. The intersections that provide key connections between the viewing sites that were studied and the adjacent communities, as they were anticipated to have the highest vehicular, pedestrian, and bicyclist activity. Intersection counts were conducted between 7 PM and 11 PM to document the vehicular, pedestrian and bicycle activity around the viewing areas before, during and after the event.

In addition to roadway segment and intersection counts, parking occupancy counts were conducted at 17 parking facilities. Parking facilities that either directly serve the viewing areas or are adjacent to (within a quarter of a mile) were counted during the afternoon and evening (at 1 PM, 3 PM, 5 PM and 7 PM) to determine whether and when they reached capacity. Parking occupancy data was also obtained from the parking management companies who operate the paid public parking facilities within the study area to provide a more significant sample size for the data collection effort.

Freeway segment counts were obtained from the Caltrans PeMS data base for the segments of Interstate 8 and Interstate 5, each of which provides regional access to the viewing areas.

Table 3.1 displays the roadway segments, intersections, and parking lots that were anticipated to be the most impacted due to proximity to the viewing locations.

As previously noted in Table 1.2, this project will allow both the Chula Vista Bayfront and Glorietta Bay to be included in the Big Bay Boom Show. Since these locations have not been included in previous shows, no data could be collected to assess the potential transportation related impacts associated with their inclusion. However, since these locations will be associated and advertised with the Big Bay Boom Show, it can be assumed that the transportation related impacts associated with these locations would be similar to the other locations. Therefore, the transportation related impacts identified at the existing viewing sites, and proposed mitigation measures, will be generally applied to these locations as well.

3.3 North Embarcadero

The area along Harbor Drive from Grape Street to Broadway, including the B Street Pier and Broadway Pier, was available for viewing the Big Bay Boom event. Large crowds were observed wandering the North Embarcadero area starting early in the afternoon, around 1:00 PM. Heavy vehicular traffic was observed along Harbor Drive, Hawthorne Street and Pacific Highway, while considerable pedestrian and bicyclist traffic was observed in areas closer to the waterfront, such as at the intersection of Harbor Drive and Broadway. The figure and tables below summarize observed vehicular, pedestrian and bicycle traffic along the roadway facilities adjacent to the North Embarcadero during the event, as well as the observed parking occupancy for the facilities serving this area.

Broadway & Harbor Drive Intersection. Source: Chen Ryan Associates, July 2015

Roadway Segments

Figure 3-2 displays roadway segment daily traffic volumes, observed during the Big Bay Boom event day, along the main roadways that provide vehicular access to the area.

Figure 3-2 Roadway Segment ADT on Big Bay Boom Event Day – North Embarcadero

Source: PTD, July 2015. Chen Ryan Associates, July 2015.

As shown, the highest traffic volumes for the majority of the roadway segments were observed between 7:00 PM and 8:00 PM, just prior to the start of the Big Bay Boom event. Traffic volumes remained high for approximately three hours after the event, from 9:00 PM to midnight.

Broadway – between Harbor Drive and Pacific Highway. Source: Chen Ryan Associates, July 2015.

Table 3.2 provides a comparison of the roadway segment average daily traffic volumes (ADT) providing access to the North Embarcadero area during both the Big Bay Boom event day and a typical summer Saturday (non-event).

Table 3.2: Roadway Segments ADT Comparisons – North Embarcadero

Roadway	Segment	ADT		
		Event Day	Non-event (Aug. 22)	Change in Volume %
Harbor Drive	Between Grape Street and Ash Street	18,902	21,020	-10%
Hawthorn Street	Between Pacific Highway and Kettner Boulevard	22,663	26,259	-14%
Grape Street	Between Pacific Highway and Kettner Boulevard	18,070	20,804	-13%
Pacific Highway	Between Cedar Street and Ash Street	16,159	15,696	3%
Ash Street	Between Pacific Highway and Kettner Boulevard	12,860	10,340	24%
Broadway	Between Pacific Highway and Kettner Boulevard	12,569	8,698	45%
Total Change for the Area ¹			-2%	

Source: PTD, July-August 2015. Chen Ryan Associates, July-August 2015.

Note:

¹Total change for the area is based on the total of the Event condition volumes compared to the total of the Non-event condition volumes.

As shown, the North Embarcadero area experienced an average decrease of 2% in average daily vehicular traffic during the 4th of July. It should be noted that the observed decrease in vehicular traffic may be associated with fewer community members accessing restaurant and commercial establishments in Downtown San Diego due to the July 4th holiday, and may not be directly related to the actual event.

Figure 3-3 compares average hourly traffic volumes, combined across all observed roadways, between the Big Bay Boom event day and non-event conditions, within the North Embarcadero area.

Figure 3-3 Roadway Segment ADT During Big Bay Boom Event Day and Non-event Conditions – North Embarcadero Area

Source: PTD, July-August 2015. Chen Ryan Associates, September 2015.

As shown in Figure 3-3, traffic volumes on the Big Bay Boom event day were consistently lower than non-event conditions between 10:00 AM and 5:00 PM. However, traffic volumes during the Big Bay Boom event day spiked above non-event conditions, between 7:00 PM and 8:00 PM, just prior to the start of the Big Bay Boom event.

Intersections

Table 3.3 displays vehicular, pedestrian, and bicyclist volumes at key intersections in the North Embarcadero area during both the Big Bay Boom event and non-event (August 22, 2015) conditions.

Table 3.3: Intersection Volumes (7:00 PM to 11:00 PM) – North Embarcadero

Intersection	Event (Big Bay Boom)			Non-event (Aug. 22)			Change in Volume %		
	Auto	Peds	Bikes	Auto	Peds	Bikes	Auto	Peds	Bikes
Harbor Drive and Hawthorn Street	8,703	2,250	48	10,257	75	17	-15%	2,900%	182%
Harbor Drive and Grape Street	6,999	3,752	0	8,230	241	19	-15%	1,457%	-100%
Harbor Drive and Ash Street	5,418	7,525	443	4,372	1,477	10	24%	410%	4,330%
Harbor Drive and Broadway	4,704	9,950	631	4,337	2,257	300	9%	341%	110%
Total Change for the Area¹							-5%	480%	224%

Source: PTD, July-August 2015. Chen Ryan Associates, September 2015.

Note:

¹Total change for the area is based on the total of the Event condition volumes compared to the total of the Non-event condition volumes.

As shown, similar to daily roadway segment volumes, the North Embarcadero area experienced a 5% average decrease in peak hour intersection vehicular traffic. There was an average increase of 480% in pedestrian activity, and an average increase of 224% in cyclist activity in the hours before and after the Big Bay Boom event.

Parking

Parking at the North Embarcadero area is available at various public parking lots and along streets such as Harbor Drive and Pacific Highway. **Table 3.4** displays the parking occupancy observed at different times throughout the afternoon during both the Big Bay Boom event day and non-event conditions.

Table 3.4: Parking Occupancy – North Embarcadero

Parking Lots	1 PM to 2 PM		3 PM to 4 PM		5 PM to 6 PM		7PM to 8PM	
	Event	Non-event	Event	Non-event	Event	Non-event	Event	Non-event
Harbor Drive Surface Parking (in front of Solar Turbines)	100%	100%	100%	80%	100%	100%	100%	95%
Harbor Drive Surface Parking (in front of County Admin. Center)	100%	100%	100%	100%	100%	100%	100%	90%
G Street Pier Parking Lot	100%	100%	100%	100%	100%	100%	100%	80%
Navy Pier Parking Lot	100%	100%	100%	100%	100%	100%	100%	100%

Source: PTD, July-August 2015. Chen Ryan Associates, July-August 2015.

As shown in Table 3.4, all of the parking lots observed remained at full capacity (100%) during the four (4) observation periods during the 4th of July, and ranged between 80% and 100% occupied during non-event conditions.

Tuna Harbor Park Parking Lot. Source: Chen Ryan Associates, July 2015.

3.4 South Embarcadero & Seaport Village

The South Embarcadero & Seaport Village area is located between North Embarcadero and the San Diego Convention Center, southwest of Downtown San Diego. The area from Broadway to the Old Police Headquarters complex in Seaport Village provided attendees with excellent viewing possibilities. Large crowds were observed wandering the South Embarcadero & Seaport Village area starting early in the afternoon, around 1:00 PM. The majority of people attending the event were observed in the Seaport Village area. During the early afternoon (2 PM), heavy traffic was observed at the intersection of Pacific Highway and Harbor Drive. The figure and tables below outline observed vehicular, pedestrian and bicycle traffic along the roadway facilities adjacent to the South Embarcadero & Seaport Village area during the event, as well as observed parking occupancy in the facilities serving this area.

People walking on the path between Tuna Park and Seaport Village. Source: PTD, July 2015. Chen Ryan Associates, July 2015.

Roadway Segments

Figure 3-4 displays roadway segment daily traffic volumes, observed during the Big Bay Boom event day, along the main roadways that provide vehicular access to the South Embarcadero & Seaport Village viewing areas.

Figure 3-4 Roadway Segments ADT on Big Bay Boom Event Day – South Embarcadero & Seaport Village

Source: PTD, July 2015. Chen Ryan Associates, July 2015.

As shown, the highest traffic volumes for the majority of the roadway segments were observed between 8:00 PM and 9:00 PM, just prior to the start of the Big Bay Boom event.

Table 3.5 provides a comparison of the roadway segment ADTs in the South Embarcadero & Seaport Village area during both the Big Bay Boom event day and non-event conditions.

Table 3.5: Roadway Segments ADT Comparisons – South Embarcadero & Seaport Village

Roadway	Segment	ADT		
		Event Day	Non-event (Aug. 22)	Change in Volume %
Harbor Drive	Between G Street and Pacific Highway	18,021	13,912	30%
	Between Market Street and Fifth Avenue	18,835	17,711	6%
	Between Fifth Avenue and Park Boulevard	19,568	22,650	-14%
Pacific Highway	Between Harbor Drive and Seaport Village Parking Lot	13,666	13,363	2%
Kettner Boulevard	Between Harbor Drive and Seaport Village Parking Lot	8,729	8,056	8%
Total Change for the Area ¹				4%

Source: PTD, July-August 2015. Chen Ryan Associates, July-August 2015

Note:

¹Total change for the area is based on the total of the Event condition volumes compared to the total of the Non-event condition volumes.

As shown in Table 3.5, the South Embarcadero & Seaport Village area experienced an average increase of 4% in average daily vehicular traffic during the Big Bay Boom event day.

Figure 3-5 compares the hourly traffic volumes, combined across all observed roadways, between the Big Bay Boom event day and non-event conditions, in the South Embarcadero & Seaport Village area.

Figure 3-5 Roadway Segment ADT during Big Bay Boom Event Day and Non-event Conditions – South Embarcadero & Seaport Village Area

Source: PTD, July-August 2015. Chen Ryan Associates, September 2015.

As shown, the traffic volumes in the South Embarcadero & Seaport Village area were similar during both the Big Bay Boom event day and non-event conditions. However, a spike in traffic volume was observed during the Big Bay Boom event day between 6:00 PM and 7:00 PM, just a few hours prior to the start of the Big Bay Boom event. Additionally, high traffic volumes were observed between 9:00 PM and 11:00 PM during the Big Bay Boom event day event, as compared to non-event conditions. These higher volumes could be attributed to community members exiting the area after the Big Bay Boom event, which ended around 9:30 PM.

Intersections

Table 3.6 displays vehicular, pedestrian, and bicyclist volumes at key intersections in the South Embarcadero & Seaport Village area, during both the Big Bay Boom event and non-event conditions.

Table 3.6: Intersection Volumes (7:00 PM to 11:00 PM) – South Embarcadero & Seaport Village

Intersection	Event (Big Bay Boom)			Non-event (Aug. 22)			Change in Volume %		
	Auto	Peds	Bikes	Auto	Peds	Bikes	Auto	Peds	Bikes
Pacific Highway and Harbor Drive	6,810	14,269	938	5,987	1,571	59	14%	808%	1,490%
Kettner Boulevard and Harbor Drive	6,729	18,223	860	6,138	3,409	68	10%	435%	1,165%
Market and Harbor Drive	6,126	8,257	372	5,881	1,804	120	4%	358%	210%

Harbor Drive Pedestrian Bridge	-	5,699	469	-	1,029	22	-	454%	2,032%
Total Change for the Area¹							12%	390%	926%

Source: PTD, July-August 2015. Chen Ryan Associates, July-August 2015

Note:

¹Total change for the area is based on the total of the Event condition volumes compared to the total of the Non-event condition volumes.

As shown in Table 3.6, the South Embarcadero & Seaport Village area experienced an average increase of 12% in intersection vehicular traffic, an average increase of 390% in pedestrian activity, and an average increase of 926% in cyclist activity during the Big Bay Boom event.

Parking

Parking was available in the Seaport Village and the South Embarcadero parking lots. **Table 3.7** displays parking occupancy at different times during the afternoon during both the Big Bay Boom event day and under non-event conditions.

Table 3.7: Parking Occupancy – South Embarcadero & Seaport Village

Parking Lots	1 PM to 2 PM		3 PM to 4 PM		5 PM to 6 PM		7 PM to 8 PM	
	Event Day	Non-event	Event Day	Non-event	Event Day	Non-event	Event Day	Non-event

Source: PTD, July-August 2015. Chen Ryan Associates, July-August 2015.

As shown, with the exception of the Port Hotel Parking Facility, all of the parking lots were at full capacity (100%) during the four observation periods during the Big Bay Boom event day, and ranged between 90% and 100% occupied under non-event conditions.

Embarcadero Marina Park South Parking Lot. Source: Chen Ryan Associates, July 2015

3.5 Coronado

Large crowds and heavy traffic were observed throughout the day in Coronado, especially, in the area around the Coronado Ferry Landing and Coronado Tidelands Park. The Coronado Ferry Landing is located on the northeast side of the Coronado Island, west of Downtown San Diego. Its shopping area provided attendees with an excellent view of the Bay. Coronado Tidelands Park is located on the northeast side of the island directly north of the western terminus of the Coronado Bridge.

Roadway Segments

Figure 3-6 displays roadway segment daily traffic volumes, observed during the Big Bay Boom event day, along the main roadways that provide vehicular access to this area.

Figure 3-6 Roadway Segments ADT on Big Bay Boom Event Day– Coronado Ferry Landing

Source: PTD, July 2015. Chen Ryan Associates, July 2015.

As shown in Figure 3-6, Pomona Avenue between Glorietta Boulevard and Third Street maintained high traffic volumes (around 2,000 trips per hour) for the majority of the day, while First Street had a lower volume, at about 500 trips per hour during the same time period.

Table 3.8 provides a comparison of the roadway segment ADTs in Coronado during both the Big Bay Boom event day, as well as during non-event conditions.

Table 3.8: Roadway Segments ADT Comparisons – Coronado Ferry Landing

Roadway	Segment	ADT		
		Event Day	Non-event (Aug. 22)	Change in Volume %
Pomona Avenue	Between Glorietta Boulevard and Third Street	33,995	37,421	-9%
First Street	Between B Avenue and C Avenue	8,567	8,940	-4%
Total Change for the Area ¹				-8%

Source: PTD, July-August 2015. Chen Ryan Associates, July-August 2015.

Note:

¹Total change for the area is based on the total of the Event condition volumes compared to the total of the Non-event condition volumes.

As shown in the table above, the Coronado viewing areas experienced an average decrease of 8% in average daily vehicular traffic.

Figure 3-7 compares hourly traffic volumes, combined across all observed roadways, between the Big Bay Boom event day and non-event conditions, in the Coronado Ferry Landing area.

Figure 3-7 Roadway Segment ADT during Big Bay Boom Event Day and Non-event Conditions – Coronado Ferry Landing

Source: PTD, July-August 2015. Chen Ryan Associates, September 2015.

As shown in Figure 3-7, average daily traffic during the Big Bay Boom event day was consistently lower compared to non-event conditions between 10:00 AM and 6:00 PM. The highest traffic volumes during the Big Bay Boom event day were experienced between 7:00 PM and 8:00 PM, just prior to the start of the Big Bay Boom event.

Intersections

Table 3.9 displays vehicular, pedestrian, and bicyclist volumes at the key intersections during both the Big Bay Boom event and non-event conditions.

Table 3.9: Intersection Volumes (7:00 PM to 11:00 PM) - Coronado Ferry Landing

Intersection	Event (Big Bay Boom)			Non-event (Aug. 22)			Change in Volume %		
	Auto	Peds	Bikes	Auto	Peds	Bikes	Auto	Peds	Bikes
First Street and B Avenue	2,192	6,653	403	1,388	1,010	20	58%	559%	1,915%

Source: PTD, July-August 2015. Chen Ryan Associates, July-August 2015.

As shown, the Coronado viewing areas experienced an increase of 58% in intersection vehicular traffic, an increase of 559% in pedestrian activity, and an increase of 1,915% in cyclist activity during the Big Bay Boom event.

Parking

Parking was not only available at the Ferry Landing and at Coronado Tidelands Park but also on the public streets in the general vicinity. **Table 3.10** displays parking occupancy observed at different times during the afternoon during both the Big Bay Boom event day and during non-event conditions.

Table 3.10: Parking Occupancy – Coronado Ferry Landing

Parking Lots	1 PM to 2 PM		3 PM to 4 PM		5 PM to 6 PM		7 PM to 8 PM	
	Event Day	Non-event	Event Day	Non-event	Event Day	Non-event	Event Day	Non-event
Coronado Ferry Landing Parking Lot	100%	94%	100%	95%	100%	100%	100%	100%
Coronado Tidelands Park	100%	97%	100%	95%	100%	80%	100%	50%

Source: PTD, July-August 2015. Chen Ryan Associates, July-August 2015.

As shown in the table above, the parking lots remained at full capacity (100%) during the four observation periods during the Big Bay Boom event day, and ranged between 50% and 100% of capacity under non-event conditions.

3.6 Harbor Island

Harbor Island is located between Shelter Island and Downtown San Diego, making it a prime location to watch the fireworks show. Large crowds and high volumes of traffic were observed at this location. Parking was extremely limited on Harbor Island and it was full by early afternoon. Goldfield Stage, a transportation partner during the Big Bay Boom, provided free shuttle service to Harbor Island. Passengers were picked up from the corner of McCain Road and North Harbor Drive west of Airport Terminal 2 and

dropped off and picked up after the show at the San Diego Harbor Police Headquarters. The final shuttle run was at 11:00 PM.

Harbor Island viewing area on the 4th of July, Source: Chen Ryan Associates, July 2015

Roadway Segments

The only roadway studied for the Harbor Island location was Harbor Island Drive, since it is the only access point to/from the island. **Figure 3-8** displays roadway segment daily traffic volumes, observed during the Big Bay Boom event day, along the only roadway that provides vehicular access to the area.

Figure 3-8 Roadway Segment ADT on Big Bay Boom Event Day– Harbor Island

Source: PTD, July 2015. Chen Ryan Associates, July 2015.

As shown in Figure 3-8, Harbor Island Drive south of Harbor Drive, reached its peak demand period between 5:00 PM and 6:00 PM, as well as between 8:00 PM and 9:00 PM, which could be associated with viewers arriving at the event. An additional spike in traffic also occurred between 11:00 PM and midnight, which could be associated with viewers leaving the event.

Table 3.11 provides a comparison of the roadway segment ADT on Harbor Island Drive both during the Big Bay Boom event day, as well as under non-event conditions.

Table 3.11: Roadway Segments ADT Comparisons – Harbor Island

Roadway	Segment	ADT		
		Event Day	Non-event (Aug. 22)	Change in Volume %
Harbor Island Drive	South of Harbor Drive	20,069	22,117	-9%

Source: PTD, July-August 2015. Chen Ryan Associates, September 2015.

As shown, Harbor Island experienced a decrease of 9% in average daily vehicular traffic during the Big Bay Boom event day. This decrease in traffic may be associated with the lack of available public parking on the island, which may have deterred some community members from driving to the island.

Figure 3-9 compares the hourly traffic volumes, combined across all observed roadways, between the Big Bay Boom event day and non-event conditions, in Harbor Island.

Figure 3-9 Roadway Segment ADT during Big Bay Boom Event Day and Non-event Conditions - Harbor Island

Source: PTD, July-August 2015. Chen Ryan Associates, September 2015.

As shown in Figure 3-9, traffic volumes during the Big Bay Boom event day were consistently lower compared to non-event conditions between 5:00 AM and 9:00 PM. However, traffic volumes during the Big Bay Boom event day spiked between 9:00 PM and 11:00 PM, which could be attributed to community members exiting the island after the Big Bay Boom event, which ended around 9:30 PM.

Intersections

Table 3.12 displays vehicular, pedestrian, and bicyclist volumes at key intersections during both the Big Bay Boom event day and non-event conditions.

Table 3.12: Intersection Volumes (7:00 PM to 11:00 PM) - Harbor Island

Intersection	Event (Big Bay Boom)			Non-event (Aug. 22)			Change in Volume %		
	Auto	Peds	Bikes	Auto	Peds	Bikes	Auto	Peds	Bikes
Harbor Island Drive and Harbor Drive	9,304	856	152	11,511	74	67	-19%	1,057%	127%

Source: PTD, July-August 2015. Chen Ryan Associates, July-August 2015.

As shown in the table above, Harbor Island experienced a decrease of 19% in intersection vehicular traffic, an increase of 1,057% in pedestrian activity, and an increase of 127% in bicyclist activity during the Big Bay Boom event. The high increase in pedestrian activity may further confirm that most community members decided to park off site and walk to the island due to the high demand for available public parking on the island itself.

Parking

Parking at Harbor Island is extremely limited since there is only one public off-street parking lot on the island with a capacity of approximately 88 vehicles, as well as a few time-limited on-street parking spaces.

Table 3.13 displays parking occupancy observed at different times during the afternoon.

Table 3.13: Parking Occupancy – Harbor Island

Parking Lots	1 PM to 2 PM		3 PM to 4 PM		5 PM to 6 PM		7 PM to 8 PM	
	Event Day	Non-event	Event Day	Non-event	Event Day	Non-event	Event Day	Non-event
Harbor Island Parking Lot	100%	85%	100%	95%	100%	80%	100%	60%

Source: PTD, July-August 2015. Chen Ryan Associates, July-August 2015.

As shown, all of the off-street public parking spaces at Harbor Island were at full capacity (100%) during the four observation periods during the Big Bay Boom event, and between 60% and 95% in capacity under non-event conditions.

3.7 Spanish Landing

Spanish Landing Park is located across from the San Diego International Airport and extends between Harbor Island Drive and Spanish Landing Way. This park features a pedestrian path, bike route, picnic tables, and benches. The vast majority of the attendees at this location were families who showed up

early in the morning (as early as 5 AM) in order to claim a spot from which to enjoy the fireworks show at night.

Spanish Landing viewing area on the 4th of July, Source: Chen Ryan Associates, July 2015

Roadway Segments

The only roadway studied in the Spanish Landing Park location was Harbor Drive since it is the only roadway adjacent to the park. **Figure 3-10** displays roadway segment daily traffic volumes, observed during the Big Bay Boom event day, along the main roadway providing vehicular access to the area.

Figure 3-10 Roadway Segment ADT on Big Bay Boom Event Day– Spanish Landing Park

Source: PTD, July 2015. Chen Ryan Associates, July 2015.

As shown in Figure 3-10, Harbor Drive between Spanish Landing Parking Lot Driveway and Harbor Island Drive reached its peak in the period of time between 7:00 PM and 8:00 PM, just prior to the beginning of the Big Bay Boom event. There was also an additional spike in vehicular traffic between 10:00 PM and 11:00 PM that could be associated with viewers exiting the site after the event.

Table 3.14 provides a comparison of the roadway segment adjacent to the Spanish Landing area both during the Big Bay Boom event day, as well as during non-event conditions.

Table 3.14: Roadway Segments ADT Comparisons – Spanish Landing

Roadway Segment	Segment	ADT		
		Event Day	Non-event (Aug. 22)	Change in Volume %
Harbor Drive	Between Spanish Landing Parking Lot Driveway and Harbor Island Drive	26,143	25,492	3%

Source: PTD, July-August 2015. Chen Ryan Associates, July-August 2015.

As shown, Harbor Drive between the Spanish Landing parking lot driveway and Harbor Island Drive experienced an increase of 3% in average daily vehicular traffic during the 4th of July event.

Figure 3-11 compares the hourly traffic volumes, combined across all observed roadways, between the Big Bay Boom event day and non-event conditions, in the Spanish Landing Park area.

Figure 3-11 Roadway Segment ADT During Big Bay Boom Event Day and Non-event Conditions – Spanish Landing Park

Source: PTD, July-August 2015. Chen Ryan Associates, September 2015.

As shown, the traffic volumes during the Big Bay Boom event were consistently lower than non-event conditions between 4:00 AM and 12:00 PM. However, traffic volumes on Big Bay Boom event day increased significantly both before and after the Big Bay Boom event (at 8:00 PM and 10:00 PM) as community members entered and exited the viewing areas.

Intersections

There are currently no pedestrian or bicycle crossing locations across Harbor Drive that provide access to Spanish Landing. Therefore, no intersections were analyzed at this location.

Parking

Spanish Landing Park features three parking lots with a combined capacity of approximately 180 vehicles. **Table 3.15** displays parking occupancy observed at different times throughout the afternoon during both the Big Bay Boom event day and non-event conditions.

Table 3.15: Parking Occupancy – Spanish Landing

Parking Lots	1 PM to 2 PM		3 PM to 4 PM		5 PM to 6 PM		7 PM to 8 PM	
	Event Day	Non-event	Event Day	Non-event	Event Day	Non-event	Event Day	Non-event
Spanish Landing Parking Lots	100%	95%	100%	85%	98%	50%	100%	50%

Source: PTD, July-August 2015. Chen Ryan Associates, July-August 2015.

As shown in the table above, the parking lots were observed at full capacity (100%) during the first two observation rounds at 1:00 PM and 3:00 PM, but at approximately 98% capacity at 5:00 PM, when a few parking spots were available, and finally filled to capacity again just prior to the event. Under non-event conditions, the parking lots ranged between 50% and 95% of capacity.

3.8 Liberty Station

Liberty Station is a mixed-use development with a park/open space area along the boat channel, located a few miles north of Downtown San Diego. The large open areas in this area make it an attractive setting to watch the fireworks show.

Liberty Station viewing area on the 4th of July, Source: Chen Ryan Associates, July 2015

Roadway Segments

Figure 3-12 displays roadway segment daily traffic volumes, observed during the Big Bay Boom event day, along the main roadways that provide vehicular access to the area.

Figure 3-12 Roadway Segments ADT on Big Bay Boom Event Day – Liberty Station

Source: PTD, July 2015. Chen Ryan Associates, July 2015.

As shown, the access roads into Liberty Station (Womble Road and Roosevelt Road) experienced the highest volumes between 12 PM and 1 PM during the Big Bay Boom event day. Additionally, there was another spike in traffic between 9:00 PM and 10:00 PM from community members exiting Liberty Station after the fireworks show.

Table 3.16 provides a comparison of the roadway segment ADTs for the access roads into Liberty Station both during the Big Bay Boom event day, as well as during non-event conditions.

Table 3.16: Roadway Segments ADT Comparisons – Liberty Station

Roadway Segment	Segment	ADT		
		Event Day	Non-event (Aug. 22)	Change in Volume %
Womble Road	Between Rosecrans Street and Truxtun Road	5,231	7,544	-31%
Roosevelt Road	Between Rosecrans Street and Truxtun Road	5,069	4,598	10%
Total Change for the Area				-15% ¹

Source: PTD, July-August 2015. Chen Ryan Associates, July-August 2015.

Note:

¹Total change for the area is based on the total of the Event condition volumes compared to the total of the Non-event condition volumes.

As shown, Liberty Station experienced an average decrease of 15% in average daily vehicular traffic during the Big Bay Boom event day.

Figure 3-13 compares hourly traffic volumes, combined across all observed roadways, between the Big Bay Boom event day and non-event conditions, in the Liberty Station area.

Figure 3-13 Roadway Segment ADT During Big Bay Boom Event Day and Non-event Conditions—Liberty Station

Source: PTD, July-August 2015. Chen Ryan Associates, September 2015.

As shown in the figure above, average daily traffic during the Big Bay Boom event day was consistently lower compared to non-event conditions between 6:00 AM and 8:00 PM. The highest traffic volumes during the Big Bay Boom event day were experienced between 12:00 PM and 1:00 PM during the fireworks display, and between 11:00 AM and 12:00 PM under non-event conditions.

Intersections

Table 3.17 displays vehicular, pedestrian, and bicyclist volumes at key intersections at the Liberty Station area during both the Big Bay Boom event and non-event conditions.

Table 3.17: Intersection Volumes (7:00 PM to 11:00 PM) - Liberty Station

Intersection	Event (Big Bay Boom)			Non-event (Aug. 22)			Change in Volume %		
	Auto	Peds	Bikes	Auto	Peds	Bikes	Auto	Peds	Bikes
Rosecrans Street and Womble Road	7,239	66	16	7,306	10	1	-1%	560%	1,500%
Rosecrans Street and Roosevelt Road	7,574	149	30	7,312	24	4	4%	521%	650%
Total Change for the Area ¹							1%	532%	820%

Source: PTD, July-August 2015. Chen Ryan Associates, July-August 2015.

Note:

¹Total change for the area is based on the total of the Event condition volumes compared to the total of the Non-event condition volumes.

As shown in the table above, Liberty Station experienced an average increase of 1% in intersection vehicular traffic, an average increase of 532% in pedestrians, and an average increase of 820% in bicyclists during the Big Bay Boom event. It should be noted that the observed decrease in vehicular traffic may be associated with fewer community members accessing restaurant and commercial establishments in Liberty Station due to the July 4th holiday, and may not be directly related to the actual firework event.

Parking

Table 3.18 displays parking occupancy observed at different times throughout the afternoon during both the Big Bay Boom event day and non-event conditions.

Table 3.18: Parking Occupancy – Liberty Station

Parking Lots	1 PM to 2 PM		3 PM to 4 PM		5 PM to 6 PM		7 PM to 8 PM	
	Event Day	Non-event	Event Day	Non-event	Event Day	Non-event	Event Day	Non-event
Liberty Station Parking Lots Adjacent to the Viewing Area	100%	70%	100%	60%	100%	30%	100%	30%
Other Liberty Station Parking Lots	20%	20%	30%	20%	50%	20%	65%	20%

Source: PTD, July-August 2015. Chen Ryan Associates, July-August 2015.

As shown, all of the parking lots adjacent to the viewing area remained at full capacity (100%) during the four (4) observation rounds during the Big Bay Boom event day. However, the parking lots in other areas of Liberty Station were observed between 20% and 65% of capacity throughout the afternoon. During non-event conditions, parking lots ranged between 20% and 70% capacity.

Parking on Cushing Road on the 4th of July, Source: Chen Ryan Associates, July 2015

3.9 America’s Cup Harbor

America’s Cup Harbor is located between Harbor Island and Shelter Island, west of Downtown San Diego. Many people attended the restaurants located in this area in order to watch the fireworks display. Heavy traffic coming both from Point Loma and east of the Harbor was observed along Scott Street, Rosecrans Street, and Harbor Drive.

Roadway Segments

The only roadway studied in the America’s Cup Harbor location was Scott Street because it is adjacent to the Harbor. **Figure 3-14** displays roadway segment daily traffic volumes, observed during the Big Bay Boom event day, along the main roadways that provide vehicular access to the area.

Figure 3-14 Roadway Segment ADT on Big Bay Boom Event Day – America’s Cup Harbor

Source: PTD, July 2015. Chen Ryan Associates, July 2015.

As shown, Scott Street between Garrison Street and Fenelon Street reached its peak between 10 PM and 11 PM, which was just after the completion of the Big Bay Boom event.

Table 3.19 provides a comparison of the roadway segment ADTs within America’s Cup Harbor both during the Big Bay Boom event day, as well as during non-event conditions.

Table 3.19: Roadway Segments ADT Comparisons – America’s Cup Harbor

Roadway Segment	Segment	ADT		
		Event Day	Non-event (Aug. 22)	Change in Volume %
Scott Street	Between Garrison Street and Fenelon Street	9,867	11,109	-11%

Source: PTD, July-August 2015. Chen Ryan Associates, July-August 2015.

As shown in the table above, America’s Cup Harbor experienced a decrease of 11% in average vehicular traffic during the Big Bay Boom event day.

Intersections

Table 3.20 displays vehicular, pedestrian, and bicyclist volumes at the key intersection in the America’s Cup Harbor area.

Table 3.20: Intersection Volumes (7:00 PM to 11:00 PM) - America’s Cup Harbor

Intersection	Event (Big Bay Boom)			Non-event (Aug. 22)			Change in Volume %		
	Auto	Peds	Bikes	Auto	Peds	Bikes	Auto	Peds	Bikes
Scott Street and Harbor Drive	3,540	1,060	73	3,576	120	12	-1%	783%	508%

Source: PTD, July-August 2015. Chen Ryan Associates, July-August 2015.

As shown, America’s Cup Harbor experienced a decrease of 1% in average daily vehicular traffic, an increase of 783% in pedestrian activity, and an increase of 508% in bicyclist activity during the Big Bay Boom event.

Parking

America’s Cup Harbor has four parking areas. **Table 3.21** displays the parking occupancy observed at different times during the afternoon during both the Big Bay Boom event day and non-event conditions.

Table 3.21: Parking Occupancy – America’s Cup Harbor

Parking Lots	1 PM to 2 PM		3 PM to 4 PM		5 PM to 6 PM		7 PM to 8 PM	
	Event Day	Non-event	Event Day	Non-event	Event Day	Non-event	Event Day	Non-event
America’s Cup Harbor Retail Parking Lot on south side of Harbor Drive	100%	100%	100%	100%	95%	100%	100%	95%
America’s Cup Harbor Industrial/Harbor Parking Lot	100%	100%	100%	100%	90%	100%	90%	95%
Westy’s Lot	50%	50%	65%	65%	65%	65%	75%	75%
Scott Street Lots	100%	100%	100%	100%	100%	100%	100%	100%

Source: PTD, July-August 2015. Chen Ryan Associates, July-August 2015.

As shown in the table above, the Retail Parking Lot on south side of Harbor Drive and the Industrial/Harbor Parking Lot were observed at full capacity (100%) on the event day during the first two observation periods. During the third observation period from 5 PM to 6 PM on the event day, both lots were observed at 95% and 90% occupancy, respectively, while during the final observation period both lots were observed at 100% and 90% occupancy, respectively. The Westy’s lot only reached 75% capacity during the Big Bay Boom event. The Scott Street Lots were observed to be parking at 100% occupancy during all observation periods. During non-event conditions, the parking lots ranged between 50% and 100% capacity.

3.10 Shelter Island

Shelter Island is located to the west of Harbor Island in Point Loma. Shelter Island, like Harbor Island, provides a clear view of the San Diego Bay. Old Town Trolley Shuttle provided Shelter Island free shuttle pick up service from the corner of Carleton Street and Rosecrans Street in Point Loma, adjacent to West

Marine. The shuttle dropped and picked up riders in front of the Gazebo on Shelter Island. The final shuttle ran at 11 PM.

Roadway Segments

The only roadway studied in the Shelter Island location was Shelter Island Drive since it is the only access point to/from the island. **Figure 3-15** displays roadway segment daily traffic volumes, observed during the Big Bay Boom event day, along the main roadways that provide vehicular access to the area.

Figure 3-15 Roadway Segment ADT on Big Bay Boom Event Day – Shelter Island

Source: PTD, July 2015. Chen Ryan Associates, July 2015.

As shown, Shelter Island Drive reached its peak in the period of time between 10:00 AM and 11:00 AM when viewers were coming to the island, and spiked again between 10:00 PM and 11:00 PM just after the completion of the Big Bay Boom event. It should also be noted that traffic on the island dropped significantly between 2:00 PM and 9:00 PM, when the island was closed to traffic.

Table 3.22 provides a comparison of the roadway segment ADTs accessing Shelter Island both during the Big Bay Boom event day, as well as during non-event conditions.

Table 3.22: Roadway Segments ADT Comparisons – Shelter Island

Roadway Segment	Segment	ADT		
		Event Day	Non-event (Aug. 22)	Change in Volume %
Shelter Island Drive	Between Anchorage Lane and Roundabout	11,515	13,292	-13%

Source: PTD, July-August 2015. Chen Ryan Associates, July-August 2015.

As shown in Table 3.22, Shelter Island Drive experienced a decrease of 13% in average daily vehicular traffic during the Big Bay Boom event day. This could be potentially due to the fact that Shelter Island restricted access to vehicles starting in the early afternoon and into the night (approximately 2:00 PM to 9:00 PM).

Figure 3-16 compares the hourly traffic volumes, combined across all observed roadways, between the Big Bay Boom event day and non-event conditions, in Shelter Island.

Figure 3-16 Roadway Segment ADT During Big Bay Boom Event Day and Non-event Conditions – Shelter Island

Source: PTD, July-August 2015. Chen Ryan Associates, September 2015.

As shown, average daily traffic during the Big Bay Boom event day was consistently lower compared to non-event conditions between 2:00 PM and 9:00 PM, this is due to the Island being closed to vehicular traffic during this time on the Big Bay Boom event day.

Intersections

Table 3.23 displays pedestrian and bicycle volumes at a key intersection in Shelter Island during both the Big Bay Boom event and non-event conditions.

Table 3.23: Intersection Volumes (7:00 PM to 11:00 PM) – Shelter Island

Intersection	Event (Big Bay Boom)			Non-event (Aug. 22)			Change in Volume %		
	Auto	Peds	Bikes	Auto	Peds	Bikes	Auto	Peds	Bikes
Shelter Island Drive and 767 feet south of Anchorage Lane	-	7,456	427	-	536	29	-	1,291%	1,372%

Source: PTD, July-August 2015. Chen Ryan Associates, July-August 2015

As shown in Table 3.23, the crosswalk located in front of Pearson Deli experienced an increase of 1,291% in pedestrian activity and an increase of 1,372% in cyclist activity during the Big Bay Boom event. It should be noted that since these counts were taken at a crosswalk rather than a typical intersection, vehicular counts were not provided.

Parking

The available parking on Shelter Island filled up quickly on the Event Day and there was limited to no parking available on the island during the event. **Table 3.24** displays parking occupancy observed at different times throughout the afternoon during both the Big Bay Boom event day and non-event conditions.

Table 3.24: Parking Occupancy – Shelter Island

Parking Lots	1 PM to 2 PM		3 PM to 4 PM		5 PM to 6 PM	
	Event Day	Non-event	Event Day	Non-event	Event Day	Non-event
Shelter Island Parking Lots	Closed	40%	Closed	90%	Closed	90%

Source: PTD, July-August 2015. Chen Ryan Associates, July-August 2015.

During the first observation period, Shelter Island was closed by the Harbor Police, and interchangeable signs that read “SHELTER ISLAND CLOSED” were posted at the edge of Shelter Island, therefore parking occupancy counts could not be conducted. During non-event conditions, the parking lots ranged between 40% and 90% in capacity.

Shelter Island Closed. Source: Chen Ryan Associates, July 2015

3.11 Point Loma & Cabrillo Point

Point Loma is a peninsula bordered on the west and south by the Pacific Ocean, the east by the San Diego Bay, and the north by the San Diego River. The hilly nature of Point Loma provides a clear view of the Bay. Cabrillo Point is a popular spot where large crowds congregate.

Roadway Segments

Figure 3-17 displays roadway segment daily traffic volumes, observed during the Big Bay Boom event, along the main roadways that provide vehicular access to the area.

Figure 3-17 Roadway Segment ADT on Big Bay Boom Event Day – Point Loma & Cabrillo Point

Source: PTD, July 2015. Chen Ryan Associates, July 2015.

As shown, Rosecrans Street between Talbot Street and McCall Street, as well as Cabrillo Memorial Drive between Ashburn Road and Cabrillo Road, experienced their peak demand between 1:00 PM and 2:00 PM. Cabrillo Memorial Drive also experienced an additional spike in traffic between 9:00 PM and 10:00 PM, just after the completion of the Big Bay Boom event.

Table 3.25 provides a comparison of the roadway segment ADTs within the Point Loma & Cabrillo Point area both during the Big Bay Boom event, as well as during non-event conditions.

Table 3.25: Roadway Segments ADT Comparisons – Point Loma & Cabrillo Point

Roadway Segment	Segment	ADT		
		Event Day	Non-event (Aug. 22)	Change in Volume %
Rosecrans Street	Between Talbot Street and McCall Street	8,592	11,289	-24%

Roadway Segment	Segment	ADT		
		Event Day	Non-event (Aug. 22)	Change in Volume %
Cabrillo Memorial Drive	Between Ashburn Road and Cabrillo Road	4,014	2,272	77%
Total Change for the Area ¹				-7%

Source: PTD, July-August 2015. Chen Ryan Associates, July-August 2015

Note:

¹Total change for the area is based on the total of the Event condition volumes compared to the total of the Non-event condition volumes.

As shown in Table 3.25, the Point Loma & Cabrillo Point area experienced a decrease of 7% in average daily vehicular traffic during the Big Bay Boom event day.

Figure 3-18 compares the hourly traffic volumes, combined across all observed roadways, between the Big Bay Boom event day and non-event conditions, in the Point Loma & Cabrillo Point area.

Figure 3-18 Roadway Segment ADT During Big Bay Boom Event Day and Non-event Conditions – Point Loma & Cabrillo Point

Source: PTD, July-August 2015. Chen Ryan Associates, September 2015.

As shown, average daily traffic during the Big Bay Boom event day was consistently lower compared to non-event conditions between 5:00 AM and 4:00 PM. However, average daily traffic was higher compared to non-event conditions beginning at about 4:00 PM, and there was a spike in traffic on Big Bay Boom event day between 8:00 PM and 9:00 PM, just prior to the Big Bay Boom event.

Intersections

Due to Cabrillo Point’s remote location, there is limited bicycle and pedestrian traffic that access the area from other communities. Therefore; no intersections were analyzed at this location.

Parking

No public parking lots were observed at this location because none exist within the study area, however on-street parking was available within the Point Loma & Cabrillo Point neighborhoods (about 70% occupied) just prior to the start of the Big Bay Boom event, around 8:30 PM.

3.13 Freeway Facilities

Freeway segment counts were obtained from the Caltrans PeMS database for segments of Interstate 8 and Interstate 5, each of which provide regional access to the Big Bay Boom viewing areas. **Table 3.26** displays freeway volumes for different freeway segments along Interstate 8 and Interstate 5.

Table 3.26: Freeway Facilities Volumes

Freeway	Freeway Segment	Direction	Event Day ADT	Event Day 9PM-12AM	Non-event ADT	Non-event 9PM-12AM	Change in Traffic Volume %	Change in Traffic Volume % 9PM-12AM
I-8	Between Sports Arena Boulevard and I-5 Junction	EB	49,502	11,718	59,283	7,350	-16%	59%
		WB	56,055	3,798	61,920	4,064	-9%	-7%
	Between I-5 Junction and Hotel Circle	EB	80,186	16,541	101,849	11,366	-21%	46%
		WB	88,552	5,050	104,700	5,529	-15%	-9%
I-5	Between Washington Street and Sassafras Street	NB	71,616	8,860	78,878	7,009	-9%	26%
		SB	65,701	11,607	73,370	7,432	-10%	56%
	Between Sassafras Street and Front Street	NB	88,339	8,281	99,118	6,609	-11%	25%
		SB	69,298	16,633	78,335	10,343	-12%	61%
Total Change for the Area¹							-13%	38%

Source: Caltrans PeMS September 2015. Chen Ryan Associates, September 2015.

Note:

¹Total change for the area is based on the total of the Event condition volumes compared to the total of the Non-event condition volumes.

As shown in the table above, freeway volumes experienced an average decrease of 13% in average vehicular traffic during the Big Bay Boom event day potentially due to fewer community members accessing restaurant and commercial establishments in Downtown San Diego due to the July 4th holiday, and may not be directly related to the actual event. However, after the event, freeway volumes experienced an average increase of 38% in average vehicular traffic.

3.14 Public Transit – San Diego Trolley

The Port of San Diego, in collaboration with the local public transit service provider Metropolitan Transit Systems (MTS), encouraged people to abstain from driving to the Big Bay Boom event and instead utilize public transit (Trolley) to access the viewing locations. Transit ridership data at each of the Trolley stations was collected to understand changes in transit ridership associated with the event. Since MTS does not monitor daily trolley ridership by station location, total system-wide ticket sales were obtained from MTS in lieu of ticket sales by specific station for previous July 4th holidays, as well as typical weekend ridership.

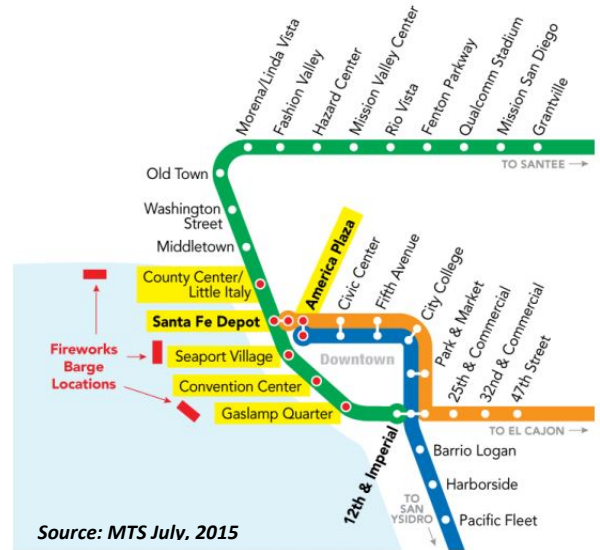

Table 3.27 displays system-wide trolley ticket sales during a previous 4th of July holiday, as well as during a typical weekday and a typical weekend day. It is important to note that data for July 4, 2014 was provided by MTS, however, that information was considered an inaccurate representation of typical trolley ridership during 4th of July due to a baseball game taking place on that day.

Table 3.27: System-Wide Trolley Ticket Sales During Previous 4th of July Holiday, Typical Weekday and Typical Weekend

Type of Ticket	Thursday, July 4, 2013	Typical Weekday	Typical Weekend	Change in Ticket Sales Weekday	Change in Ticket Sales Weekend
Senior/Disabled One-Way	2,094	2,501	2,167	-16%	-3%
Adult One-Way	9,963	7,624	6,949	31%	43%
Day Pass	9,145	7,560	6,051	21%	51%
Total¹	21,202	17,685	15,167	20%	40%

Source: MTS June, 2015. Chen Ryan Associates, September 2015

Note:

¹Total change for the area is based on the total of the Event condition volumes compared to the total of the Non-event condition volumes.

As shown in the table above, ticket sales during Thursday, July 4, 2013 experienced an increase of 20% in ticket sales when compared to typical weekday ticket sales and an increase of 40% in ticket sales when compared to a typical weekend day. It is important to note that on major holidays, MTS offers the “Friends Ride Free” promotion, which allows two passengers to ride on one valid fare of any type. This aforementioned promotion could contribute to an increase in ticket sales during the 4th of July.

4.0 Imperial Beach - 4th of July Fireworks Display

The City of Imperial Beach is the southernmost beach city on the West Coast of the United States. It is located in the South Bay area of San Diego County. The Imperial Beach 4th of July fireworks display was viewed by thousands of people from the beach. The Imperial Beach 4th of July Fireworks display is not officially part of the Big Bay Boom. However, since the event takes place on the same day and approximately the same time as the Big Bay Boom, it is more similar to a Fourth of July Event than a non-Fourth of July, or Other, Event.

Imperial Beach on the 4th of July. Source: Chen Ryan Associates, July 2015

4.1 Data Collection

Vehicular count data was collected at a total of three (3) key roadway segments accessing or adjacent to the event location. Key study roadway segments were selected based on a review of the roadway network surrounding proximity to the event and the level of access to the event site provided by the roadway. Vehicular roadway counts were conducted during the entire day, midnight to midnight, and provide an hour by hour summary of vehicular traffic entering and exiting the event location.

Pedestrian and bicycle counts were collected at a total of three (3) key study intersections providing access to the event.

In addition to roadway segment and pedestrian and bicycle counts, parking occupancy counts were conducted at four (4) parking facilities, that either directly serve the viewing areas or are adjacent to (within a quarter of a mile). Parking counts were counted during the afternoon and evening (at 1 PM, 3 PM, 5 PM and 7 PM) to determine whether and when they reached capacity.

Table 4.1 displays roadway segments, intersections, and parking lots anticipated to be most impacted due to proximity to the event location.

Table 4.1: Imperial Beach - Fourth of July Fireworks Display - Transportation Data Collection

View Location	Roadway Segment Counts	Bike and Pedestrian Counts	Parking Lots
Imperial Beach – 4 th of July Fireworks Display	<ul style="list-style-type: none"> • Palm Avenue – between 7th Avenue and Rainbow Drive • Imperial Beach Boulevard – between Connecticut Street and 4th Street • Seacoast Drive – between Elkwood Avenue and Daisy Avenue 	<ul style="list-style-type: none"> • Palm Avenue and Seacoast Drive • Evergreen Avenue and Seacoast Drive • Imperial Beach Boulevard and Seacoast Drive 	<ul style="list-style-type: none"> • Daisy Avenue Parking Lot • Elm Avenue Parking Lot • Seacoast Drive Parking Lot • Imperial Beach Boulevard Parking Lot

4.2 Imperial Beach Analysis

Roadway Segments

Figure 4-1 displays roadway segment daily traffic volumes, observed during the event day, along the main roadways that provide vehicular access to the area.

Figure 4-1 Roadway Segment ADT on the Event Day – Imperial Beach

Source: PTD, July 2015. Chen Ryan Associates, July 2015.

As shown in Figure 4-1, the highest traffic volumes on the majority of roadways were experienced between 8:00 PM and 9:00 PM just prior to the start of the event. High traffic volumes along the majority of roadways persisted for two hours after the event between 9:00 PM and 11:00 PM, as community members vacated the viewing areas.

Seacoast Drive. Source: Chen Ryan Associates, July 2015.

Table 4.2 provides a comparison of the roadway segment ADTs within the Imperial Beach area both during the event day, as well as during non-event conditions.

Table 4.2: Roadway Segments ADT Comparisons – Imperial Beach

Roadway Segment	Segment	ADT		
		Event Day	Non-event (Aug. 22)	Change in Volume %
Palm Avenue	Between 7 th Street and Rainbow Drive	16,800	14,693	14%
Imperial Beach Boulevard	Between Connecticut Street and 4 th Street	14,184	10,762	32%
Seacoast Drive	Between Elkwood Avenue and Daisy Avenue	13,638	7,121	92%
Total Change for the Area ¹				37%

Source: PTD, July-August 2015. Chen Ryan Associates, July-August 2015

Note:

¹Total change for the area is based on the total of the Event condition volumes compared to the total of the Non-event condition volumes.

As shown in the table above, the Imperial Beach area experienced an average increase of 37% in average daily vehicular traffic during the event day.

Figure 4-2 compares hourly traffic volumes, combined across all observed roadways, between the event day and non-event conditions, in the Imperial Beach area.

Figure 4-2 Roadway Segment ADT during Event Day and Non-event Conditions – Imperial Beach

Source: PTD, July-August 2015. Chen Ryan Associates, September 2015.

As shown, the traffic volumes during the event day were consistently higher throughout the day compared to non-event conditions.

Intersections

Table 4.3 displays vehicular, pedestrian, and bicyclist volumes at key intersections in the Imperial Beach area during both event and non-event conditions.

Table 4.3: Intersection Volumes (7:00 PM to 11:00 PM) - Imperial Beach

Intersection	Event (IB 4th of July Fireworks)			Non-event (Aug. 22)			Change in Volume %		
	Auto	Peds	Bikes	Auto	Peds	Bikes	Auto	Peds	Bikes
Palm Avenue and Seacoast Drive	1,822	6,171	181	1,487	317	37	23%	1,847%	389%
Evergreen Avenue and Seacoast Drive	1,860	8,463	357	1,258	510	43	48%	1,559%	730%
Imperial Beach Boulevard and Seacoast Drive	2,228	6,610	215	1,314	188	31	70%	3,416%	594%
Total Change for the Area¹							46%	1,993%	578%

Source: PTD, July-August 2015. Chen Ryan Associates, July-August 2015.

Note:

¹Total change for the area is based on the total of the Event condition volumes compared to the total of the Non-event condition volumes.

As shown in Table 4.3, the Imperial Beach area experienced an average increase of 46% in vehicular traffic, an average increase of 1,993% in pedestrian activity, and an average increase of 578% in bicyclist activity during the event.

Parking

Imperial Beach features four parking lots with low capacity and reached their full capacity quickly. People tended to park on adjacent residential streets, reaching out as far east as 5th Street, approximately half a mile away from the Pier Plaza. **Table 4.4** displays parking occupancy observed at different times during the afternoon.

Table 4.4: Parking Occupancy – Imperial Beach

Parking Lots	1 PM to 2 PM		3 PM to 4 PM		5 PM to 6 PM		7 PM to 8 PM	
	Event Day	Non-event	Event Day	Non-event	Event Day	Non-event	Event Day	Non-event
Daisy Avenue Parking Lot	100%	95%	100%	100%	100%	100%	100%	100%
Elm Avenue Parking Lot	Closed	99%	Closed	100%	Closed	95%	Closed	95%
Seacoast Drive Parking Lot	100%	80%	100%	90%	100%	95%	100%	100%
Imperial Beach Boulevard Parking Lot	100%	100%	100%	100%	100%	70%	100%	100%

Source: PTD, July 2015. Chen Ryan Associates, July 2015.

As shown, all of the available parking lots observed were at full capacity (100%) during the four observation periods during the event day and between 70% and 100% in capacity during non-event conditions.

5.0 End of World War II 70th Anniversary Event (Other Event)

The End of WWII 70th Anniversary was held on the flight deck of the USS Midway Museum, located in the North Embarcadero area in Downtown San Diego, with the purpose of honoring WWII veterans. The event took place on Saturday, August 15, 2015, and consisted of a live musical show, a fireworks display, and a dance with the event commencement and closure between 6:00 PM and 10:00 PM, respectively. Data was collected during this event in order to compare potential traffic impacts associated with a Fourth of July event (such as the Big Bay Boom and Imperial Beach fireworks displays) and a non-Fourth of July, or Other, event (End of WWII 70th Anniversary fireworks display). It should be noted that even though this did not require dictionary action by District, it was selected for evaluation since it was a publicly advertised fireworks show that was open to the public. Because this show was advertised and fully open to the public it was assumed that this would be a worst-case scenario as opposed to studying a fireworks show associated with a private event (ie. Our Lady of Rosary Church Annual Procession, a Symphony Summer Pops Concert Event, ect.).

5.1 Data Collection

Vehicular count data was collected at a total of five (5) key roadway segments across the two (2) areas adjacent to the event location. Key study roadway segments were selected based on a review of the roadway network surrounding proximity to the event and the level of access to the event site provided by the roadway. Vehicular roadway counts were conducted during the entire day, midnight to midnight, and provide an hour by hour summary of vehicular traffic entering and exiting the event location.

Pedestrian and bicycle counts were collected at a total of two (2) key study intersections providing access to the event.

In addition to roadway segment and pedestrian and bicycle counts, parking occupancy counts were conducted at five (5) parking facilities adjacent to (within a quarter of a mile) the event location during the afternoon and evening (between 1PM and 8PM) to determine whether and when they reached

capacity. Parking occupancy data was also obtained from the parking management companies who operate the paid public parking facilities in the study area.

Table 5.1 displays roadway segments, intersections, and parking lots anticipated to be most impacted due to proximity to the event location.

Table 5.1: End of WWII 70th Anniversary – Transportation Data Collection

Event	Roadway Segment Counts	Bike and Ped Counts	Parking Lots
70 th Anniversary End of WWII	<ul style="list-style-type: none"> Harbor Drive – between Ash Street and Broadway Harbor Drive – between Broadway and G Street Broadway – between Harbor Drive and Pacific Highway Harbor Drive – between G Street and Pacific Highway Harbor Drive – between Kettner Blvd and Market Street 	<ul style="list-style-type: none"> Broadway Embarcadero Entrance to Tuna Park Parking Lot 	<ul style="list-style-type: none"> Cruise Ship Parking Lot (NE corner of Broadway and Harbor) Navy Pier Parking Lot G Street Pier Parking Lot Seaport Village Embarcadero Parking Lot South Embarcadero – Surface Parking Lots

5.2 North Embarcadero

Roadway Segments

Figure 5-1 displays roadway segment daily traffic volumes observed on August 15 along the main roadways providing vehicular access to the event.

Figure 5-1 Roadway Segment ADT on Other Event Day – North Embarcadero

Source: PTD, August 2015. Chen Ryan Associates, September 2015.

As shown, the highest traffic volumes for the majority of roads was observed between 5:00 PM and 6:00 PM just prior to the start of the End of WWII 70th Anniversary event. Substantial traffic volumes were also maintained for approximately three hours after the event, from 9:00 PM to midnight.

Table 5.2 provides a comparison of the roadway segment ADTs in the North Embarcadero area during both the End of WWII 70th Anniversary event (Other event) held at the USS Midway and non-event conditions.

Table 5.2: Roadway Segments ADT Comparisons – North Embarcadero

Roadway Segment	Segment	ADT		
		Other Event Day	Non-event (Aug. 22)	Change in Volume %
Harbor Drive	Between Ash Street and Broadway	21,886	18,526	18%
	Between Broadway and G Street	21,846	17,115	28%
Broadway	Between Harbor Drive and Pacific Highway	10,055	8,639	16%
Total Change for the Area¹				21%

Source: PTD, August 2015. Chen Ryan Associates, September 2015.

Note:

¹Total change for the area is based on the total of the Event condition volumes compared to the total of the Non-event condition volumes.

As shown in the table above, the North Embarcadero area experienced an average increase of 21% in average daily vehicular traffic during the day of the event (August 15, 2015).

Figure 5-2 displays roadway segment daily traffic volumes observed during the event day (August 15, 2015), as well as under non-event conditions, in the North Embarcadero area.

Figure 5-2 Roadway Segment ADT During Other Event Day and Non-event Conditions – North Embarcadero Area

Source: PTD, August 2015. Chen Ryan Associates, September 2015.

As shown, the traffic volumes during the Other event day (August 15, 2015) was consistently higher compared to a typical summer Saturday between 9:00 AM and midnight.

Intersections

Table 5.3 displays vehicular, pedestrian, and bicyclist volumes at key intersections in the North Embarcadero area during both the End of WWII 70th Anniversary event and non-event conditions. Both study locations are located on bike/pedestrian facilities, therefore only bicycle and pedestrian counts were conducted.

Table 5.3: Intersection Volumes (5:00 PM to 7:00 PM and 9:00 PM to 11:00 PM) - North Embarcadero

Intersection	Other Event (EWWIIA)			Non-event (Aug. 22)			Change in Volume %		
	Auto	Peds	Bikes	Auto	Peds	Bikes	Auto	Peds	Bikes
Harbor Drive and Broadway (Embarcadero)	-	3,198	354	-	2,257	300	-	42%	18%
Harbor Drive and Tuna Lane	-	3,371	335	-	2,631	310	-	28%	8%
Total Change for the Area ¹							-	34%	13%

Source: PTD, July 2015. Chen Ryan Associates, August 2015.

Note:

¹Total change for the area is based on the total of the Event condition volumes compared to the total of the Non-event condition volumes.

As shown in Table 5.3, the North Embarcadero area experienced an average increase of 34% in pedestrian activity and an average increase of 13% in bicyclist activity during the End of WWII 70th Anniversary event.

Parking

Parking at the North Embarcadero area is available in various public parking lots and along streets such as Harbor Drive to Pacific Highway. **Table 5.4** displays parking occupancy observed at different times during the afternoon during both the event day (August 15, 2015) and a typical summer Saturday.

Table 5.4: Parking Occupancy – North Embarcadero

Parking Lots	1 PM to 2 PM		3 PM to 4 PM		5 PM to 6 PM		7PM to 8PM	
	Other Event Day	Non-event	Other Event Day	Non-event	Other Event Day	Non-event	Other Event Day	Non-event
Harbor Drive Surface Parking (in front of Solar Turbines)	100%	100%	100%	80%	100%	100%	100%	95%
Harbor Drive Surface Parking (in front of County Admin. Center)	100%	100%	100%	100%	100%	100%	100%	90%
G Street Pier Parking Lot	100%	100%	100%	100%	100%	100%	100%	80%
Navy Pier Parking Lot	100%	100%	100%	100%	100%	100%	100%	100%

Source: PTD, July-August 2015. Chen Ryan Associates, July-August 2015.

As shown in the table above, all of the parking lots observed remained at full capacity (100%) during the four observation periods during the Other event, and ranged between 80% and 100% of capacity during non-event conditions.

5.3 South Embarcadero & Seaport Village

Roadway Segments

Figure 5-3 displays roadway segment daily traffic volumes observed during the event day (August 15, 2015) along the main roadways that provide vehicular access to the area.

Figure 5-3 Roadway Segments ADT on Other Event Day – South Embarcadero & Seaport Village

Source: PTD, August 2015. Chen Ryan Associates, September 2015.

As shown, the highest traffic volumes during the Other event day (August 15, 2015) were observed between 4:00 PM and 5:00 PM just prior to the start of the End of WWII 70th Anniversary event.

Table 5.5 provides a comparison of roadway segment ADTs within the South Embarcadero & Seaport Village both during the End of WWII 70th Anniversary event, as well as during non-event conditions.

Table 5.5: Roadway Segments ADT Comparisons – South Embarcadero & Seaport Village

Roadway	Segment	ADT		
		Other Event Day	Non-event (Aug. 22)	Change in Volume %
Harbor Drive	Between G Street and Pacific Highway	15,793	13,912	14%
	Between Kettner Boulevard and Market Street	22,789	21,985	4%
Total Change for the Area ¹				7%

Note:

¹Total change for the area is based on the total of the Event condition volumes compared to the total of the Non-event condition volumes.

As shown in Table 5.5, Harbor Drive in the South Embarcadero & Seaport Village area experienced an average increase of 7% in vehicular traffic during the Other event day.

Figure 5-4 displays roadway segment daily traffic volumes observed during the Other event day (August 15, 2015), as well as during non-event conditions, in the South Embarcadero & Seaport Village area.

Figure 5-4 Roadway Segment ADT Other Event Day and Non-event Conditions – South Embarcadero & Seaport Village Area

Source: PTD, August 2015. Chen Ryan Associates, September 2015.

As shown, average daily traffic on August 15 was consistently slightly higher compared to non-event conditions between 6:00 AM and 12:00 PM. This increase most likely represents patrons accessing the additional WWII celebratory activities around the site during the day. Additionally, there is an increase in vehicular traffic between 6:00 PM and 9:00 PM, which is most likely associated with patrons accessing the End of WWII 70th Anniversary (study event), which occurred between 6:00 PM and 10:00 PM.

Intersections

It was assumed that patrons coming in from this location would park in either Seaport Village or on the G Street Mole and would use the Embarcadero to access the site. Therefore; no intersections were analyzed at this location.

Parking

Parking was available at Seaport Village and on the South Embarcadero Parking Lots. **Table 5.6** displays parking occupancy observed at different times during the afternoon during both the event day (August 15, 2015) and non-event conditions.

Table 5.6: Parking Occupancy – South Embarcadero & Seaport Village

Parking Lots	1 PM to 2 PM		3 PM to 4 PM		5 PM to 6 PM		7 PM to 8 PM	
	Other Event Day	Non-event	Other Event Day	Non-event	Other Event Day	Non-event	Other Event Day	Non-event
Seaport Village Parking Lot	100%	100%	100%	100%	100%	100%	100%	100%
Convention Center Parking Lot	85%	100%	85%	100%	85%	100%	85%	100%

Source: PTD, July 2015. Chen Ryan Associates, July 2015.

As shown in Table 5.6, the Seaport Village parking lot was observed at full capacity (100%) during the four observation periods, both during the event and under non-event conditions, while the Convention Center Parking Lot was observed at 85% in capacity during the Other event day and at full capacity (100%) under non-event conditions.

5.4 Freeway Facilities

Freeway segment counts were obtained from the Caltrans PeMS database for the segments of Interstate 5, which provides regional access to the viewing areas. Table 5.7 displays freeway volumes for freeway segments along Interstate 5.

Table 5.7: Freeway Facilities Volumes

Freeway	Freeway Segment	Direction	Other Event Day ADT	Non-event ADT	Change in Traffic Volume %
I-5	Between Washington Street and Sassafras Street	NB	79,197	78,878	0.4%
		SB	73,029	73,370	-0.5%
	Between Sassafras Street and Front Street	NB	100,156	99,118	1.0%
		SB	78,325	78,335	0.0%
Total Change in the Area ¹					0.3%

Source: Chen Ryan Associates, July 2015.

Note:

¹Total change for the area is based on the total of the Event condition volumes compared to the total of the Non-event condition volumes.

As shown in the table above, freeway volumes increased by about 0.3% during the Other event. This increase in traffic may not be directly related to the actual event.

6.0 Findings and Conclusions

This chapter provides a summary of the observed transportation and parking demand changes associated with both the sample firework display events (Fourth of July, and Other fireworks display events). The observed changes were then correlated with the locations of the new display events included in the Proposed Project. Based on the magnitude of these changes, potential transportation related impacts associated with proposed project events were qualitatively identified, and corresponding mitigation measures are recommended.

6.1 Changes Associated with the Fourth of July Event

Table 6.1 summarizes the total change in vehicular, pedestrian, and bicycle volumes observed during the Fourth of July Event (Big Bay Boom), at each viewing location.

Table 6.1: Summary of Change in Vehicular, Pedestrian, and Bicycle Volumes – Fourth of July Event

Location	Change in Vehicular Volume (%)	Change in Pedestrian Volume (%)	Change in Bicycle Volume (%)
North Embarcadero	-2%	480%	224%
South Embarcadero & Seaport Village	4%	390%	926%
Coronado Ferry Landing	-8%	559%	1,915%
Harbor Island	-9%	1,057%	127%
Spanish Landing Park	3%	-	-
Liberty Station	-15%	532%	820%
America's Cup Harbor	11%	783%	508%
Shelter Island	-13%	1,291%	1,372%
Point Loma & Cabrillo Point	-7%	-	-

Source: *PTD, July-August 2015. Chen Ryan Associates, September 2015*

As shown, the changes in vehicular traffic on the event day is negligible in most locations (ranging between -15% to 311% total change). However, the changes in bicycle and pedestrian activity are very significant (ranging between 127% to 1,915% total change).

Table 6.2 summarizes the total change in vehicular, pedestrian, and bicycle volumes observed during the Imperial Beach 4th of July Event.

Table 6.2: Summary of Change in Vehicular, Pedestrian, and Bicycle Volumes – Imperial Beach 4th of July Event

Location	Change in Vehicular Volume (%)	Change in Pedestrian Volume (%)	Change in Bicycle Volume (%)
Imperial Beach	37%	1,993%	578%

Source: *PTD, July-August 2015. Chen Ryan Associates, September 2015*

As shown, the changes in vehicular traffic on the event day increases 37%. However, the changes in bicycle and pedestrian activity are very significant (ranging between 578% to 1,993% total change).

6.2 Changes Associated with Other Events

Table 6.3 summarizes the total change in vehicular, pedestrian, and bicycle volumes observed during the Other Event (End of WWII 70th Anniversary), at each viewing location.

Table 6.3: Summary of Change in Vehicular, Pedestrian, and Bicycle Volumes – Other Event

Location	Change in Vehicular Volume (%)	Change in Pedestrian Volume (%)	Change in Bicycle Volume (%)
North Embarcadero	21%	34%	13%
South Embarcadero & Seaport Village	7%	-	-

Source: PTD, July-August 2015. Chen Ryan Associates, September 2015

As shown, there was a slight increase in vehicular traffic associated with the Other Event (between 7% to 21% total change). There was also a slight increase in pedestrian and bicycle activity associated with the event (34% and 13%, respectively).

6.3 Transportation and Parking Related Impacts

This section summarizes the potential parking and transportation related impacts associated the firework display events included in the proposed project and proposes mitigation, as needed.

New Events Occurring on the Fourth of July

Vehicular Traffic – As noted above, the change in vehicular traffic at most sample locations was negligible on the event day. However, higher traffic volumes were typically observed before and after the sample event. Therefore, it is also likely that additional traffic congestion and delays would also occur along roadways and at intersections that provide access to the new Proposed Project event locations. This additional congestion, both before and after the event could potentially result in temporary traffic related impacts.

Higher traffic volumes were also observed on the freeway facilities that serve the sample event viewing areas between 9:00 PM and Midnight. Traffic congestion was observed on the freeway facilities serving the Big Bay Boom viewing areas up to three hours after the conclusion of the event. Therefore, Proposed Project event occurring on the Fourth of July will also likely generate additional traffic congestion on freeway facilities serving the new event locations, resulting in temporary traffic related impacts.

Pedestrian Activity – Increases in pedestrian activity were observed both before and after the sample Fourth of July events. Some locations observed up to a 1,993% increase in pedestrian traffic, crossing intersections adjacent to or accessing the event viewing site. Since these pedestrian volumes are not typical, the intersections and pedestrian facilities adjacent to or accessing the new Proposed Project locations may not be designed to accommodate this level of pedestrian traffic. Therefore, the new Proposed Project events occurring on the Fourth of July may potentially create temporary pedestrian-related impacts to pedestrian facilities providing access the event site.

Bicycle Activity – Similar to pedestrian activity, increases in bicycle activity were observed both before and after the sample Fourth of July events. Some locations observed up to a 1,915% increase in bicycle traffic, crossing intersections adjacent to or accessing the event viewing site. Since these bicycle volumes are not typical, the intersections and bicycle facilities adjacent to or accessing the new Proposed Project locations may not have been designed to accommodate this level of bicycle traffic. Therefore, the Proposed Project Events occurring on the Fourth of July may potentially create temporary bicycle related impacts to the facilities providing access to the event site.

Transit Ridership (Trolley) – As noted in Chapter 3.0, an increase in trolley ticket sales, which is likely related to an increase in ridership, was observed during the sample Fourth of July Event. The increase is most likely due to the 4th of July Holiday and not the fireworks event itself. Even though an increase in trolley ridership was observed, it is anticipated that the new Proposed Project events occurring on the Fourth of July will not result in any impacts transit facilities.

Parking – As noted in Chapters 3.0 and 4.0, most of the parking facilities serving the viewing areas reached capacity on both event and non-event days, therefore, the sample event’s impact on parking could not be determined. However, since there was an observed increase in vehicular traffic at some locations on the day of the Fourth of July Event, it can be assumed that the parking demand would increase as well. Therefore, the new Proposed Project events occurring on the Fourth of July would likely result in temporary impacts to parking facilities serving the viewing areas.

6.4 Recommended Mitigation

Fourth of July Event

All transportation-related impacts associated with the Proposed Project events occurring on the Fourth of July Event will be temporary in nature and would only occur on the day of the event. Therefore, no permanent mitigation measures are recommended. Since each new Fourth of July Event will be unique in both size and nature, a transportation management plan should be developed and implemented for each new event occurring on the Fourth of July. Since such a increase in both pedestrian and bicycle activity was observed during the sample Fourth of July Event (over 1,000% increase in some places), it is recommended that a transportation management plan be developed to safely accommodate the additional pedestrian and bicycle demand accessing the event viewing area. Management strategies included in the plan will need to give special considerations to all transportation modes in order to ensure safe and convenient access to the viewing areas, while limiting conflicts between transportation modes, as well as impacts to surrounding transportation facilities.

Other Event

All transportation-related impacts associated with a non-Fourth of July, or Other, Event will be temporary in nature and would only occur on the day of the event. Therefore, no permanent mitigation measures are recommended. Since only a low to moderate increase in transportation activity was observed during the sample Other Event (21% in auto traffic, 34% in pedestrian traffic, and 13% in bicycle traffic), it is anticipated that a minor transportation management plan be required.

Appendix K
Cumulative Development Projects

Cumulative Development Projects

Project #	Name	Location	Description	Status
1	Shipyards Sediment Remediation Project	San Diego Bay between Sampson Street extension to the north and Schley Street to the south from the shoreline to the U.S. Pierhead Line to the west and a portion of British Aerospace Systems facility, San Diego, CA 92113	This project consists of dredging sediment adjacent to shipyards in the San Diego Bay; the dewatering, and possible solidification of the dredged material on-shore; potential treatment of decanted water; and the transport of the removed material to an appropriate landfill for disposal.	Completed
2	Mitsubishi Cement Corporation	850 B. Water Street, San Diego, CA 92101, within District's Tenth Avenue Marine Terminal	Project involves improvements to Warehouse C at the TAMT to import up to 500,000 metric tons of cement per year with an annual number of customer truck trips estimated to be 20,000 or an average of less than 55 trucks per day of operation with a maximum number of trucks visiting the site at 192 per day.	Proposed, not entitled
3	Pier 1 North Drydock	Sampson and Dewey streets, San Diego, CA 92113	This project proposes the construction and operation of a new drydock facility on the north side of Pier 1 at the British Aerospace Systems facility at 2205 and 400 East Belt Street. The project also analyzes the removal of subsurface cooling tunnels and associated real estate agreements.	BPC certified the Final EIR on November 17, 2015. Delivery and installation of the new dry dock scheduled for late 2016.
4	Metro Center Project	West side of National Avenue between Commercial and 16th streets, San Diego, CA 92113	This project consists of 160,600 square feet of regional shopping center uses, 163,300 square feet of retail space, and a 152,000-square-foot lumber store.	Proposed, not entitled
5	San Diego Continuing Education – Cesar Chavez Campus	Intersection of National Avenue and Cesar E. Chavez Parkway, San Diego, CA 92113	The new Cesar E. Chavez Campus will be a 67,924-square-foot school facility with 22 classrooms to serve 720 students. The facility will include a multi-purpose room and administrative offices.	Completed

Project #	Name	Location	Description	Status
6	Jack in the Box	Northwest corner of 29th Street and National Avenue, San Diego, CA 92113	The project proposes to construct a 2,588-square-foot fast food restaurant with drive-thru on the existing vacant pad.	Completed
7	Ballpark Village Parcel C	On the block bounded by Park Boulevard to the west and north, the trolley tracks/12th Avenue alignment to the east, and Imperial Avenue to the south, San Diego, CA 92101	The project proposes to remove the existing surface parking lot and develop 646 residential units at the project site. The residential units would include 280 condominiums and 366 apartments. There would also be 41,505 square feet of gross retail space.	In construction from 2015 to 2018
8	Ballpark Village Parcel D	Southwest corner of the 11th Avenue/Imperial Avenue intersection, San Diego, CA 92101	The project would include 1,800 hotel rooms with meeting space.	In construction from 2015 to 2018
9	Park and G	South side of G Street between Park Boulevard and 13th Street, San Diego, CA 92101	The project proposes to construct 5,500 square feet of retail space and 208 mid-rise and ground level apartments. In addition, the building will include common areas for residents at the ground floor and a rooftop deck.	Completed
10	Pinnacle Towers	15th Street and Island Street, San Diego, CA 92101	This project will be located on the block bounded by 14th Street, 15th Street, Island Avenue, and J Street in downtown San Diego. The project includes 442 apartments, 451 condos, and 17,100 square feet of commercial space.	First tower is complete; second is under construction; anticipated completion –2019
11*	San Diego Convention Center Phase III Expansion and Hotel Expansion as shown in the Port Master Plan	111 West Harbor Drive, San Diego, CA 92101	Expansion of the existing Convention Center that would add approximately 220,150 square feet of exhibit hall space, approximately 101,500 square feet of meeting rooms, and approximately 78,470 square feet of ballroom space to the existing facility. Public amenities include a 5-acre rooftop park/plaza. It would be accessible to the public with lighted paths, seating areas, an open lawn/performance area, and several observation vistas. Spaces on the rooftop park/plaza would range from grand areas where events can take place to more intimate, contemplative areas. Does not involve any in-water work. The ballroom and meeting facility expansion would	EIR certified and PMPA approved by the District Board in September 2012. PMPA approved by CCC October 2013. Project is currently unfunded and the San Diego Convention Center Corporation does not have real property rights to the site, but the City of San Diego has expressed

Project #	Name	Location	Description	Status
			contain approximately 55,000 net square feet of total meeting space including a grand ballroom and break-out meeting space. The grand ballroom would be located atop the existing seven-story hotel parking facility adjacent to the hotel. At its highest point, the new grand ballroom would rise approximately 60 feet above the top floor of the existing parking deck. The Expansion Hotel would consist of a maximum of 500 guestrooms in a new guestroom tower and an adjacent ballroom/meeting facility. The new tower would consist of 24 guestroom levels atop 6 levels of lobby, amenity, meeting, and support spaces, including a 10,000-square-foot fitness/spa facility and up to 2,500 square feet of retail space. The height of the expansion tower would not exceed the height of the existing Hilton Hotel tower.	interest in pursuing the project.
12	Sprint Cell Tower	224 Marina Park Way, San Diego, CA 92101	The project proposes to construct, operate, and maintain an unmanned wireless telecommunications facility and equipment room located at Embarcadero Marina Park South.	Completed
13	Dole Fresh Fruit Refrigerated Rack Improvements Project	850 B. Water Street, San Diego, CA 92101, within District's TAMT	Installation of 5 new refrigerated racks with an additional 94 electrical outlets, which would increase outlets from 669 to 763. Improvements would increase storage capacity within existing footprint that would accommodate up to three new larger ocean-going vessels.	Construction completed end of 2016
14	National City Marine Terminal Tank Farm Paving and Street Closures Project	Generally Quay Avenue, between Bay Marina Drive and 28th Street, National City, CA 91950	This project would grade and pave the former tank farm parcel at the National City Marine Terminal (NCMT) and proposes closure of Quay Avenue between Bay Marina Drive and 28th Street, 28th Street between Quay Avenue and the National City Marine Terminal, and 32nd Street west of Tidelands Avenue in order to provide additional space for marine terminal operations, which primarily include import, export, handling, and storage of motor vehicles.	Partially entitled (EIR certified in 2016); paving of former tank farm anticipated in 2017

Project #	Name	Location	Description	Status
15	San Diego Marriott Marquis & Marina Facilities Improvement Project	333 West Harbor Drive, San Diego, CA 92101	This project would demolish the existing 131,500-square-foot Marriott Hall at 333 W. Harbor Drive to accommodate a new facility containing 71,800 square feet of ballroom and meeting space. The proposed new Marriott Hall would increase the gross building area from 131,500 square feet to 169,400 square feet, and the total building footprint would increase from 60,900 square feet to 80,400 square feet.	Completed
16	COMM22	Southeast corner of Commercial and 22nd Streets, San Diego, CA 92113	A master-planned development located on a 4-acre parcel at the southeast corner of Commercial and 22nd Streets. 130 affordable family apartments and 70 senior affordable apartments have been developed. Additional development includes community-serving commercial and retail space, office space, market rate live/work lofts, and for-sale townhomes. The lofts will be housed in a rehabilitated warehouse building, with the remainder of the development consisting of new construction.	Affordable housing complete; remaining phases depend on market conditions
17	Pier 12 Replacement and Dredging at Naval Base San Diego	Pier 12 at Naval Base San Diego, San Diego, CA 92136	Demolition of an inadequate existing pier (Pier 12), dredging in berthing and approach areas for a new pier, dredged material disposal at an approved ocean disposal site and permitted upland landfill, construction of a new pier and associated pier utilities, including upgrades to the electrical infrastructure at the adjacent Pier 13, and reuse of demolition concrete to create fish enhancement structures (artificial reefs). The purpose of the proposed action is to address the current and impending shortfall at Naval Base San Diego of pier infrastructure necessary to support modern Navy ship classes with deep draft-power intensive or power intensive requirements.	The project construction started in 2011 and is expected to be completed in 2016

Project #	Name	Location	Description	Status
18	Pier 8 Replacement Naval Base San Diego	Pier 8 at Naval Base San Diego, San Diego, CA 92136	Demolition of the inadequate existing Pier 8; construction of a replacement Pier 8; provision of associated pier utilities. The purpose of the proposed action is to address the current and impending shortfall at Naval Base San Diego of pier infrastructure necessary to support modern Navy ship classes with deep-draft and power-intensive requirements.	The construction period is estimated to be approximately 10 months and would take place between 2018 and 2019
19	National City Aquatic Center	Southeastern corner of Pepper Park, 3299 Tidelands Avenue, National City, CA 91950	This project consists of a 4,600-square-foot aquatic center in the southeastern corner of Pepper Park, north of the Sweetwater Channel, east of the Pepper Park boat launch ramp, and west of the Pier 32 National City Marina. The aquatic center, which was constructed by the City of National City on District property, includes a multi-purpose classroom, offices, a police storefront, lockers, showers, restrooms, boat and equipment storage, public art, landscape improvements, and promenades and walkways. Construction commenced in 2013 and was complete in 2016. Additional information on the environmental effects of this project is available at the District's Office of the District Clerk.	Completed
20	Interim Segment 5 of the Bayshore Bikeway	Tidelands Avenue between Civic Center Drive on the north and West 32nd Street on the south, and on West 32nd Street between Tidelands Avenue on the west and Marina Way on the east, National City, CA 91950	SANDAG is proposing to construct the interim Segment 5 of the Bayshore Bikeway on Tidelands Avenue between Civic Center Drive on the north and West 32nd Street on the south, and on West 32nd Street between Tidelands Avenue on the west and Marina Way on the east. This project includes a combination of Class I, Class II, and Class III bicycle facilities. Additional information on the environmental effects of this project is available at the District's Office of the District Clerk. This interim alignment is to remain until a permanent alignment is constructed elsewhere or another interim alignment is identified and constructed. The permanent alignment is discussed below under Cumulative Project #28.	Construction in mid-2017; estimated 6 month construction period

Project #	Name	Location	Description	Status
21	Pavement Repair at 32nd Street	32nd Street west of Tidelands Avenue, National City, CA 91950	Port District repairs to 32nd Street west of Tidelands Avenue. This project includes the grinding and overlaying of 2 inches of asphalt for a total of approximately 51,000 square feet, as well as replacing a concrete driveway and installing striping and pavement markings. Additional information on the environmental effects of this project is available at the District's Office of the District Clerk.	Completed
22	Wayfinding Signage Program	On and off of District tidelands, National City, CA 91950	This project includes a Memorandum of Understanding (MOU) between the District and City of National City to fund the City's wayfinding signage program with funds from the District's Maritime Terminal Impact Fund. The MOU specifies the terms and conditions of payment to the City for the City's installation of various wayfinding signage to direct National City visitors and residents to key attractions, amenities, and features located on, or adjacent to, District tidelands. The signage would also help to enhance urban design; reinforce community identity; reduce confusion for drivers, pedestrians, and bicyclists; improve access for District tenants; improve land use compatibility with roadway network; and improve traffic flow and enhance safety. By creating wayfinding signage that is informative to traffic and pedestrians, National City intends to improve on-tidelands operations by providing a more efficient access to the NCMT, while directing trucks and industrial parking from the local streets and neighborhoods located off-tidelands. The placement and information provided on the wayfinding signage will attempt to identify routes for commercial, recreational, residential, visitor, and pedestrian uses promoting routes that are more agreeable to each user group, thus increasing efficiencies. The signs would be located on and off of District tidelands and are anticipated to be installed by the end of 2015. Additional information on the environmental effects of this project is available at the District's Office of the District Clerk.	Anticipated to be completed by the end of 2017

Project #	Name	Location	Description	Status
23	National City Marine Terminal Guard Shack Roof Repair	Western end of Bay Marina Drive, National City, CA 91950	This project consists of repairs to the roof of an existing guardshack at NCMT located at the western end of Bay Marina Drive. Construction commenced in December 2014 and was completed in February 2015. Additional information on the environmental effects of this project is available at the District's Office of the District Clerk.	Completed
24	ADA Accessibility Improvements	Pepper Park, 3299 Tidelands Avenue, National City, CA 91950	This project consists of three wheelchair curb ramp modifications—one in Pepper Park and two near the entrance to Pepper Park. Construction began in early 2015 and was completed within 1 month. Additional information on the environmental effects of this project is available at the District's Office of the District Clerk.	Completed
25	NCMT Fire Alarm System Replacement	National City Marine Terminal, 1400 West Bay Marina Drive, National City, CA 91950	This project is replacing the existing fire alarm system at the NCMT. The project will include upgrading alarms, sensors, alarm pull handles, and wiring. The project was completed in December 2014. Additional information on the environmental effects of this project is available at the District's Office of the District Clerk.	Completed
26	Westside Infill Transit Oriented Development (WI-TOD)	South of 19th Street, west of Hoover Avenue, north of 22nd Street, and east of Harding Avenue, National City, CA 91950	This project, also known as the Paradise Creek Affordable Housing Project, is a proposed 201-unit affordable housing and park development on the east side of Paradise Creek, and the expansion of Paradise Creek Educational Park on the west side of the creek. This project is incorporated into the Westside Specific Plan, which is a 100-acre plan to improve the health of the Westside community by promoting sustainable development and amortizing non-compatible land uses. The plan was adopted by the City of National City in 2010. The project site is approximately 13 acres of the 100-acre area and is generally located south of 19th Street, west of Hoover Avenue, north of 22nd Street, and east of Harding Avenue. The site consists of four parcels owned by the City and includes the National City Public Works Yard, the former Sun Diego Bus Charters maintenance facility, Paradise Creek, and Paradise Creek	In construction: Phase I (109 apartments and resident center) anticipated to be complete in December 2016; Phase II (92 apartments) construction began in summer 2016

Project #	Name	Location	Description	Status
			<p>Educational Park. The site also includes portions of adjacent public rights-of-way that are generally undeveloped. This project was evaluated in the EIR for the Westside Specific Plan as 360 residential units, 450,000 square feet of office space, and 65,000 square feet of retail space. The EIR identified significant environmental impacts associated with air quality, GHG emissions, noise, cultural resources, biological resources, and hazards and hazardous materials. Mitigation measures were required, and impacts on biological resources, cultural resources, and hazards and hazardous materials were reduced to less-than-significant levels with mitigation incorporated. However, even after mitigation, the plan’s impacts on air quality and noise were determined to be significant and unavoidable, while the plan’s cumulative contribution to significant cumulative impacts related to air quality, climate change (i.e., GHG emissions), noise, and traffic would be cumulatively considerable (City of National City 2010).</p>	
27	<p>NCMT Berth 24-10 Structural & Mooring Repair</p>	<p>National City Marine Terminal, 1400 West Bay Marina Drive, National City, CA 91950</p>	<p>This project is a Port District project that would maintain and repair Berth 24-10 at the NCMT. Construction is not budgeted or approved yet, but it is currently planned to be an option proposed for approval for Fiscal Year 2015/2016. If approved, construction is planned to span two fiscal years and be complete by the end of Fiscal Year 2016/2017.</p>	<p>In construction from 2016 through early summer 2017</p>
28	<p>Balanced Land Use Plan EIR</p>	<p>Generally north of the Sweetwater Channel, south of Bay Marina Drive, east of NCMT, and west of Paradise Marsh, National City, CA 91950</p>	<p>Includes Balanced Land Use Plan (changing commercial recreation, marine related industrial, marine terminal, park/plaza, and street land uses in the Marina District; a tenant project to close Tidelands Avenue between Bay Marina Drive and 32nd Street for marine terminal activities; a permanent alignment of the Bayshore Bikeway; a tenant project to construct a connector rail track; a tenant project to construct an RV park and up to four hotels; and a hotel project on property owned by the</p>	<p>EIR analysis anticipated to commence early 2017</p>

Project #	Name	Location	Description	Status
			City of National City, north of the existing Best Western Marina Gateway Hotel. This project requires an amendment to the Port Master Plan, and amendments to the City of National City's General Plan, Local Coastal Program, and Bicycle Master Plan.	
30	B Street Mooring Dolphin	B Street Pier, 1140 North Harbor Drive, San Diego, CA 92101	Installation of moorings off the end of B Street Pier to allow for larger cruise ship docking.	Draft EIR circulated February 2013. The Final EIR has not yet been released.
31	B Street Cruise Ship Terminal Maintenance Projects	B Street Pier, 1140 North Harbor Drive, San Diego, CA 92101	Projects on B Street Pier are required to address routine maintenance requirements to improve safety, security, integrity, aesthetics, and comfort of this facility. Roof replacement, canopy improvements, roll-up and rolling rate doors installation, fire system upgrades, clean and paint ceilings and hangers, mobile gangway and platform painting, and photovoltaic system.	Approved by the District in early 2012 and incorporated into District's Asset Management Program (AMP). Currently in design phase for 2017, followed with construction in 2018.
32	Lane Field North and South	North side of Broadway between North Harbor Drive and Pacific Highway, San Diego, CA 91910	Two hotels (totaling 800 rooms), parking facilities, and retail uses on a 5.8-acre parcel formerly used as a parking lot. Construct park/plaza on western 150-feet of property.	Construction of Lane Field North was completed in April 2016. Lane Field South began in June 2016. Construction is anticipated to be completed in Fall 2018.
33	Tenth Avenue Marine Terminal	686 Switzer Street, San Diego, CA 92101	This project's EIR includes a program- and project-level analysis. The program component looks at Maximum Practical Capacity of three distinct cargo nodes (e.g., Refrigerated Container, Neo-bulk/Break Bulk, Dry Bulk) to the horizon year of 2035. Long-term infrastructure investments may include up to five gantry cranes, additional and consolidated dry bulk storage capacity, enhancements to the existing conveyor system, demolition	EIR was certified on December 13, 2016. Construction of Phase 1 to begin in 2017.

Project #	Name	Location	Description	Status
			<p>of molasses tanks and Warehouse C, additional open storage space, and on-dock intermodal rail facilities. The project level improvements would be completed by June 30, 2020, and involve demolition of the two transit sheds, installation of a small gear-shack with restrooms and outdoor storage space, and on-terminal rail upgrades. Project improvement do not involve any in-water work; all program and project level improvements would be landside.</p>	
34	Public Viewing Platform	1050 North Harbor Drive, San Diego, CA 92101	<p>Demolition of a vacant approximately 2,400-square-foot building, supported by piles over the San Diego Bay. The building was most recently used by the Bay Café as a restaurant, which ceased operations in January 2014. The proposed project will result in the demolition of only the building, leaving the concrete pad and supporting piles and creating a public access area with surface improvements (i.e., railing, enhanced paving or bricks, benches, or tables and chairs) that match the North Embarcadero Visionary Plan (NEVP) Phase 1 project adjacent to the project site. The public access area will be open to the public at all times. The project also includes structural repairs to some of the concrete pile extension jackets in order to preserve the platform structure and extend its useful life.</p>	Construction completed Spring 2016
35*	Wyndham Hotel Renovations	1355 North Harbor Drive, San Diego, CA 92101	<p>Project proposes the demolition of 28,685 square feet of existing facilities, to relocate the hotel entrance to Pacific Highway and A street, construction of approximately 70,303 square feet to include a new lobby, pool deck, retail and pavilions, 2.8 acres of public space, and the addition of 141 parking spaces on a new parking deck on the existing parking structure.</p>	Proposed, not entitled.

Project #	Name	Location	Description	Status
36*	Wyndham Hotel with a 205-foot setback park and potential realignment of North Harbor Drive pursuant to NEVP Phase 1 CDP Conditions and MOU, which require an analysis of the 205-foot setback park on equal footing with the North Embarcadero Port Master Plan Amendment	1355 North Harbor Drive, San Diego, CA 92101	Project site redevelopment with an alternative 205-foot waterfront setback park as specified in the NEVP Phase 1 CDP dated April 18, 2011 (SDUPD Clerk Document No. 58230) and MOU entered into on November 9, 2010 (SDUPD Clerk Document No. 57019). Realignment of North Harbor Drive may also occur. The alternate 205-foot setback park is part of the 15 “planning elements” to be analyzed on equal footing with the proposed North Embarcadero Port Master Plan Amendment project.	Pre-Design Concept Underway for North Embarcadero/Harbor Drive realignment; Environmental Review anticipated to begin Late-2017.
37	North Embarcadero Visionary Plan – Phase 1	North Harbor Drive from F Street to Ash Street, and West Broadway from North Harbor Drive to Pacific Highway, San Diego, CA 92101	Public access improvements to North Embarcadero, including: realign North Harbor Drive from B Street Pier to south of the Broadway Pier eastward; construct 105-foot-wide esplanade, public plaza at the foot of West Broadway, gardens, shade pavilions, ticket kiosks, information building, walk-up café, restroom, median improvements on West Broadway between North Harbor Drive and Pacific Highway; restripe North Harbor Drive to provide an additional turn lane to the Grape Street/North Harbor Drive intersection.	Construction completed May 2016.

Project #	Name	Location	Description	Status
38	Environmental Impact Report Review for North Embarcadero and Port Master Plan Amendment	North Harbor Drive between Laurel Street and G Street, San Diego, CA 92101	Environmental review associated with the realignment of North Harbor Drive between Laurel Street and G Street in order to define the future character of North Embarcadero consistent with conditions specified in the California Coastal Commission-issued Coastal Development Permit dated April 18, 2011 (SDUPD Clerk Document No. 58230) and an Memorandum of Understanding (MOU) entered into on November 9, 2010 (SDUPD Clerk Document No. 57019). The Project will analyze plans for key public infrastructure improvements related to parks and open space, parking, traffic, and multi-modal circulation, including an analysis of 15 “planning elements” described in the CDP and MOU.	Pre-Design Concept Underway; Environmental Review anticipated to begin Late-2017.
39	B Street Shore Power	B Street Pier and Broadway Pier, 1140 and 1000 North Harbor Drive, San Diego, CA 92101	Project consists of infrastructure components to provide shore power to existing terminal operations at the B Street and Broadway Piers (three berths) with the result of reducing air pollutant emissions and greenhouse gas emissions while cruise ships are berthed. Initially, shore power will be available to one ship at a time; in subsequent years, two ships will be able to use shore power at the same time.	Initial phase completed in December 2010. The second phase is scheduled to be completed in 2017.
40	Bayside Fire Station	Southeast corner of Pacific Highway and Cedar, San Diego, CA 92101	Three-bay City of San Diego Fire Station.	Construction began May 2016 and is anticipated to be completed mid-2017.
41	Pacific Gate	Southeast corner of Pacific Highway and Broadway, San Diego, CA 92101	A 41-story residential tower comprising 217 residential units and 16,027 square feet of retail commercial space, and 419 parking spaces.	Design approved in 2016. Construction estimated to be completed in 2017.
42	Pacific and Broadway Parcel #9	Pacific Highway/Broadway/E Street/Rail Corridor, San Diego, CA 92101	232 condos, 16,000 square feet of retail	Began construction December 2015, anticipated to be completed in 2017.

Project #	Name	Location	Description	Status
43	Pacific and Broadway Parcel #1	Pacific Highway and Broadway, San Diego, CA 92101	306 condos, 15,000 square feet of retail	Pending approval
44	1919 Pacific Highway	East side of Pacific Highway between Grape and Cedar, San Diego, CA 92101	110 apartments	Pending approval
45	Navy Broadway Complex	Broadway/Harbor Drive/Pacific Highway, San Diego, CA 92101	Redevelopment of a 13.7-acre parcel with 2.9 million square feet of office space, including a 351,000-square-foot museum; 213,000-square feet of retail and restaurant space; more than 3,100 parking spaces; and a 1.9 acre public park at the corner of Broadway and Harbor Drive.	Development Agreement, Master Plan, Phase I Buildings Consistency Determination approved in 2009. Construction is anticipated to begin in 2017.
46	Naval Base Point Loma Fuel Pier (18) Replacement and Dredging	Naval Station Point Loma and Alternative Bait Barge locations within State lands, San Diego, CA	Construct temporary Space and Naval Warfare Systems Center (SSC) marine mammal facilities at Naval Main and Anti-Submarine Warfare Command (NMAWC) and then relocate the program to NMAWC; demolish existing NBPL Fuel Pier in phases so as to leave pier operational throughout project; construct 71,180-square-foot double-deck replacement pier and perform associated dredging; return SSC marine mammal program to original location.	In construction; anticipated to be completed in 2017.
47	Harbor View Hotel	Block bounded by Pacific Highway, Ivy, California, and Hawthorne Streets, San Diego, CA 92101	Construction of a six-story (60-foot-tall) building containing two hotels with a total of 364 hotel rooms and 182 parking spaces.	In construction, anticipated to be completed mid-2016.
48	San Diego International Airport Mater Plan – Northside Improvements	3225 North Harbor Drive, San Diego, CA 92101	Includes the following: construction of a 6,500-space consolidated rental car (CONRAC) facility, a 2,170-space public surface parking lot, and 225,000 square feet of air cargo facilities on the north side of San Diego International Airport.	In construction, anticipated to be completed in 2017.
49	San Diego International	3225 North Harbor Drive, San Diego, CA 92101	The San Diego Regional Airport Authority (SDCRAA) proposes to design and construct a parking plaza adjacent	In construction; anticipated to take 20

Project #	Name	Location	Description	Status
	Airport Mater Plan – Parking Plaza		to Terminal 2 on the San Diego International Airport. The parking plaza would be a three-story, 1,035 million square-foot approximately 34-48 foot-high parking structure with 1,753 new parking spaces over an existing surface parking lot with 1,323 parking spaces for a total of 3,076 parking spaces, removal of 46 palm trees, landscaping, and 34,400 cubic yards (CY) of grading (31,800 CY cut, 2,600 CY fill).	months to complete
50	Integrated Planning Process- PMP Update	Throughout District tidelands	Comprehensive Update of the Port Master Plan anticipated including new topical sections, or elements, to provide baywide guidance related to Land and Water Use, Coastal Access and Recreation, Mobility, Natural Resources, Safety and Resiliency, and Economic Development.	Planning Phase – PEIR under preparation
51*	Fifth Avenue Landing Redevelopment	Southerly paper end of Fifth Avenue, between the back of the Convention Center and South Embarcadero Park, San Diego, CA 92101	Development includes: two hotel structures, one 44-story, approximately 498-foot tall 850-room hotel tower, and one 5-story, approximately 82-foot tall 565-bed lower-cost visitor-serving hotel; a 205-space parking structure ; retail; meeting space; ancillary guest amenities; a bridge connecting the hotel to the Convention Center; approximately 92,142 square feet of public access areas approximately 8,322 square feet at ground level and 83,820 square feet on a podium level; and expansion of the marina by an additional 52,175 square feet of dock space. The project would maintain the existing 35-foot-wide bayfront promenade.	The Board of Port Commissioners authorized staff to commence environmental review in March 2016. EIR under preparation. Existing lease with Fifth Avenue Landing reserves discretion with the Board of Port Commissioners to approve or disapprove the project.
52	Verizon Embarcadero Marina Park South Telecommunications Project	224 Marina Park Way, San Diego, CA 92101	Verizon Wireless proposes to modifications to an existing Sprint Wireless telecommunications facility in Embarcadero Marina Park South. The project would allow for Verizon Wireless to collocate on the existing cellular tower. A Tideland Use and Occupancy Permit would be needed to install the facility.	Proposed, not entitled

Project #	Name	Location	Description	Status
53	Laurel Hawthorn Embayment: Excavation/Enhanced Monitored Natural Recovery Remedial Action for the 30-inch Storm Water Conveyance System Outfall Project	2701 North Harbor Drive, San Diego, CA 92101	The project will combine a cleanup action involving the direct removal of higher PCB concentrated sediment from an approximately 0.06 acre area in the immediate vicinity of the 30-inch storm water conveyance system and placement of an enhanced monitored natural recovery sand layer with activated carbon over an approximately 1-acre area adjacent to the storm water conveyance system outfall. In addition, a 24-foot long section of shoreline riprap stabilization will be covered with a non-woven geotextile fabric, anchored by articulated concrete panels to mitigate the potential for re-mobilization of impacted sediment over an approximately 0.02 acre area immediately adjacent to the storm water conveyance system outfall.	Proposed, partially entitled
54	Poseidon Resources Mitigation Site (Pond 15)	Pond 15 located in northeast corner of the San Diego Bay Unit of the San Diego Bay National Wildlife Refuge, Chula Vista, CA 91911	Restoration activities would substantially restore wetland habitat at Pond 15.	Proposed, not entitled
55	Coronado Yacht Club Redevelopment	1631 Strand Way, Coronado, CA 92118	The project proposes demolishing the existing clubhouse and Junior Sailing clubhouse and constructing a replacement clubhouse and Junior Sailing clubhouse on the site. Specifically, the existing approximately 10,555 square-foot clubhouse and Junior Sailing clubhouse would be replaced with a one-story approximately 10,554 square-foot clubhouse. The finished floor elevation is proposed to be raised by approximately 18 inches to accommodate sea level rise; as a result, the finished roof height will increase by approximately five inches. To accommodate the building replacement, exterior improvements to the walkway and the wood deck are also proposed, as well as landscape enhancements between the existing revetment and sidewalk.	Proposed, not entitled

Project #	Name	Location	Description	Status
56	Glorietta Bay Marina Dock C and Boat Launch Facility Improvements	1715 Strand Way and 1917 Strand Way, Coronado, CA 92118	The Dock C improvements consist of the redevelopment, reconfiguration, and extension of the existing dock system. The reconstructed dock would provide the same number of boat slips (34 total) with the same slip mix (16 slips for vessels 30 feet and under, and 18 slips for vessels over 30 feet). The gangway ramp would be extended in order to move the dock away from the shoreline fringe. Landside improvements would include upgrades to electrical, internet, and telephone systems and extending firewater service to the dock system. The boat launch facility improvements would consist of replacing the concrete apron of the boat launch ramp, maintaining the adjacent revetment, replacing and expanding the uses of the adjoining boarding dock with a free public dock, installing a non-motorized craft launch area on a new sandy beach, resurfacing the parking lot, installing a new boat wash-down area, and repairing a small area of riprap and existing storm drain in the northern beach area of Glorietta Bay Park.	Construction anticipated to commence in fall 2016 and be completed in approximately 6 months
57	Portside Pier Restaurant Redevelopment Project	1360 North Harbor Drive, San Diego, CA 92101	Redevelopment of an existing waterfront restaurant with a new facility, including new pilings, piers, decking, and structure. Development involves demolition of an existing restaurant and supporting structure (including 66 piles) and redevelopment with a new, two-story restaurant and supporting structure (on 53 piles). The new facility would be approximately 33,577 square feet and include three distinct dining establishments, a coffee and gelato shop, an expanded dock and dine for short-term boat berthing, and a public viewing deck. The Project would involve an approximately 8,722-square-foot increase in building floor area and a 4,480-square-foot net increase in water coverage. Restaurant seating would be increased by 464 seats. A new public viewing deck with approximately 108 seats is proposed and the replacement dock and dine boat dock would increase slips from 2 to 12 boat slips.	The Board of Port Commissioners adopted the Mitigated Negative Declaration December 13, 2016. Construction is anticipated to commence in 2017.

Project #	Name	Location	Description	Status
58	Shelter Island Boat Launch Facility Improvements Project	2210 Shelter Island Drive, San Diego, CA 92106	The project involves repair, maintenance, and replacement of the boat launch ramp, jetties (including public walkways), gangways, and floating docks, as well as minor improvements to the kayak launching area, restrooms, and parking.	Construction anticipated to commence in early 2017 and be completed in approximately 8-10 months
59	Kona Kai Resort Hotel Expansion Project	1551 Shelter Island Drive, San Diego, CA 92106	The project involves expansion and renovation of the existing Kona Kai Resort, as follows: 1) construction of 41 new guest rooms in two new buildings; 2) construction of a new two-story marina facility retail building; 3) construction of a new pool and pool deck; 4) expansion of the existing pool deck and construction of a new pool bar; and 5) renovation of the existing restaurant, spa and fitness center, conference and meeting facilities, guest rooms, lobby marina facility building, dock master building, beach, parking lot, and landscaping.	In construction; anticipated to be completed in 2018
60	Intrepid Landing Buildings A and B	2702 Shelter Island Drive, San Diego, CA 92106	The project involves construction of approximately 6,240 square feet of marine sales and service buildings with approximately 281 square feet of food service made up of Building A and B with parking, pedestrian walkway of 10-foot width, hardscape, and landscaping.	In construction; anticipated to be completed by December 2016
61	Intrepid Landing Building C	2702 Shelter Island Drive, San Diego, CA 92106	The project involves Construction of a 5,000-square-foot marine sales and service building (Building C), up to 52 boat slips, shoreline pedestrian walkway of 10-foot width, public plazas and gathering areas, and required parking.	Completed
62	Humphrey's Half Moon Inn and Suites Marina Redevelopment	2303 Shelter Island Drive, San Diego, CA 92106	The project involves replacement of the existing wood docking system comprising the Humphrey's Half Moon Inn and Suites marina with a recycled aluminum docking system, as well as minor reconfiguration of the marina to support a new Americans with Disabilities Act compliant gangway. The project will not require the installation of any new piles.	In construction; anticipated to be completed in early 2017

Project #	Name	Location	Description	Status
63	Navy Miramar Pipeline Repair and Relocation	Between Naval Base Point Loma (NBPL) Defense Fuel Support Point (DFSP) in the NBPL Complex (south end of the pipeline) and the first 5 miles of pipeline extending out into the City of San Diego	The project would involve the repair and relocation of the existing Navy owned 8-inch Miramar Fuel Pipeline along various locations in the City of San Diego within the first five miles of the pipeline. The project is needed to maintain the safe, consistent, and continuous use of the pipeline between Defense Fuel Support Point Loma and Marine Corps Air Station Miramar. This project would repair various pipeline anomalies and mitigate potential geohazards to provide for the continued fueling needs of existing and future Navy ships.	In construction; anticipated to be completed in summer 2017
64	Tonga Landing Redevelopment	2385 Shelter Island Drive, San Diego, CA 92106 and 2353 Shelter Island Drive, San Diego, CA 92106	The project would modernize the existing two-story Tonga Landing building, demolish and replace the one-story Gold Coast building, update the Gold Coast dock, enhance the entire site layout, and operate as one entity as Tonga Partners, Inc.	Proposed, not entitled
65	South Bay Substation Relocation	Chula Vista, CA 91910	The Project includes six components: (1) Construction of a 230/69/12-kilovolt (kV) substation (Bay Boulevard Substation) in the City of Chula Vista; (2) Construction of a 230 kV transmission line loop-in, including an approximately 1,000-foot-long underground interconnection and an approximately 300-foot-long overhead interconnection of the existing 230 kV tie-line, located east of the proposed Bay Boulevard Substation; (3) Relocation of six 69 kV transmission lines and associated communication cables to the proposed Bay Boulevard Substation, requiring the relocation of approximately 7,500 feet of overhead line and the construction of approximately 4,100 feet of underground line; (4) Installation of a 138 kV transmission line extension, including an approximately 3,800-foot underground and approximately 200-foot overhead span from one new steel cable pole to an existing steel lattice structure, as well as undergrounding of the remaining overhead segment of 138 kV line on Bay Boulevard, including two lattice towers and approximately 1,000 feet of overhead line; (5)	In construction; anticipated to be completed by 2017

Project #	Name	Location	Description	Status
			Demolition of the existing 138/69 kV South Bay Substation; and (6) Completion of wetland mitigation at the D Street Fill site.	
66	Pond 20 Mitigation Banking	Pond 20, San Diego, CA 92154	Pond 20 is a 95.13 acre undeveloped parcel of land located at the south end of San Diego Bay. An approximately 80-acre parcel in the center of Pond 20 is proposed as a mitigation bank, while 11 acres are proposed as potential commercial and/or passive uses.	Proposed, not entitled
67	South Campus Demolition Project	Bounded by H Street to the north, J Street to the south, Marina Parkway to the west, and western boundary of the San Diego Gas & Electric utility corridor to the east, Chula Vista, CA 91910	The project involves demolition and removal of existing concrete slab foundations and asphalt paved areas located entirely on a 66.17-acre site.	Phase 4A demolition completed in 2014; Phase 4B demolition anticipated to commence in early 2017
68	Palm Street Observation Area	Palm Street/Pacific Highway/Admiral Boland Way, San Diego, CA 92101	Construction of an observation area for pedestrians to view the surrounding airport and approaching aircraft. Previously used as the main vehicle entrance to a former GA facility which was demolished and reconstructed to the north, the observation area is proposed on a remnant parcel of approximately 0.7 acre. The observation area would create a small park setting and provide an area from which pedestrians may observe aircraft approaching and departing the airport. In addition, light rail transit passengers from the Middletown trolley station will be guided to walk through the observation area to access the free bus shuttle to the airport terminals. The area will combine art, seating, landscaping, lighting, and pedestrian walkways. No vehicle parking will be provided	In construction
69	H Street Extension	H Street, Chula Vista, CA 91910	The project extended H Street westerly from Bay Boulevard, where the public roadway currently ends, to Marina Parkway. Additionally, Marina Parkway was extended southerly from H Street to Sandpiper Way. The four-lane roadway includes a 12-foot-wide Class 1	Completed

Project #	Name	Location	Description	Status
70	Chula Vista Resort Hotel and Conference Center	H-3 parcel, Chula Vista, CA 91910	bikeway adjacent to the sidewalk. Other improvements include landscaping, a drainage system, water transmission lines, landscaping and street lights. The roadway extension totals 1,800 feet in length. The proposed resort and conference center is anticipated to include up to 1,600 rooms and have up to 100,000 square feet of restaurant, up to 20,000 square feet of retail, up to 415,000 square feet of meeting space, and other associated ancillary uses. The bayward portion of the site would be developed with a 150-foot-wide public open space esplanade inland of E Street, and a specialty retail shopping village consisting of buildings no more than 35 feet in height with commercial retail on the ground floor and hotel/conference uses above. The maximum heights for the resort conference center would be 240 feet for the hotel and 120 feet for the convention center.	Proposed, partially entitled
71	Western Chula Vista Residential Development	Western Chula Vista, Chula Vista, CA 91910	Several entitled projects in western Chula Vista remain undeveloped. However, 522 multi-family units are projected by the end of 2017, including: <ul style="list-style-type: none"> • 230 Church Avenue – 28 units • 387 Roosevelt Street – 2 units • Bahia Vista Townhomes – 16 units: Ada Street • Creekside Point – 119 units: 944 Third Avenue • D Street Townhomes – 85 units • Monterey Place – 24 units: 267 Oxford Street • Stone Creek Casitas – 97 units: 3875 Main Street • Vista del Mar – 71 units: Third & K • Vista del Oro – 80 units: Broadway & Moss • Bayfront – Pacifica – 161 units • The Colony – 162 units: 435 Third Avenue • El Dorado Ridge – 104 units: Brandywine Avenue • Industrial Townhomes – 42 units • Urbana – 266 units: H Street between Third and Fourth Avenues 	Entitled; construction anticipated to commence in 2017 and 2018

Project #	Name	Location	Description	Status
72	City of Coronado Third, Fourth, and I Avenue Storm Drain Rehabilitation Project	Third, Fourth, and I Avenue, Coronado, CA 92118	The project proposes to mitigate flooding near the intersection of Fourth Street and Alameda Boulevard in the City of Coronado that occurs during storm events. The project involves installation of new inlets, construction of a new storm drain system, upsizing of an existing storm drain outfall, installation of a rock energy dissipater, and other related improvements.	Construction anticipated to commence in early 2017
73	New Restaurant at Ferry Landing	1201 First Street, Coronado, CA 92118	<p>The proposed Project includes the construction of approximately 7,200 square feet (sf) of indoor space and approximately 4,854 sf of outdoor space for restaurant use. The total number of restaurant seats for both spaces is anticipated to be approximately 300. The height of the restaurant is anticipated to be approximately 24 feet above ground level. The Project is designed to allow for accessibility between the existing parking areas and the shoreline public walkway. The Project will provide pedestrian/bicyclist amenities to the existing observation deck adjoining the shoreline public walkway adjacent to the Project site. The Project will incorporate current Americans with Disabilities standards, energy efficient systems and lighting, additional recycling facilities, and water saving plumbing and irrigation systems.</p> <p>It is anticipated that construction of the Project will be completed in approximately nine months.</p>	Proposed, not entitled
74	Site Preparation at Chula Vista Bayfront	Chula Vista, CA 91910	The proposed project involves site preparation and fill placement of approximately 681,000 cubic yards of soil at various sites within the Chula Vista Bayfront. The project involves removal of existing foundations, pavement, and utilities, as well as grading and compaction of various sites.	Proposed, partially entitled

Project #	Name	Location	Description	Status
75	Harbor Island West Marina Redevelopment	2040 Harbor Island Drive, San Diego, CA 92101	The project involves demolition of 23,000 square-feet of existing building and construction of 15,800 square feet of new office, deli, and retail, as well as reconfiguration of an existing marina. The project would expand the promenade from 8 feet to 12 and reduce boat slips from 620 to 603.	Proposed, not entitled
76	San Diego-Coronado Bay Bridge Lighting	San Diego, CA 92113 and Coronado, CA 92118	The Project proposes to illuminate the bridge columns with up-lighting and down-lighting.	Proposed, not entitled
77	Lockheed Martin Company Marine Terminal Demolition Project	1160 Harbor Island Drive, San Diego, CA 92101	The project involves demolition of 5,500 square feet of building and removal of a pier and trolley rail.	Proposed, not entitled
78	San Diego Symphony Bayside Performance Park Enhancement Project	Portion of Embarcadero Marina Park South, 224 Marina Park Way, San Diego, CA 92101	The project proposes construction of a permanent outdoor forum to facilitate concerts and events, including San Diego Symphony performances and rehearsals, guest seating, restrooms, ancillary structures, and public park improvements and amenities.	Proposed, not entitled
79	Navy Coastal Campus		Navy project for training expansion in City of Coronado, north of Imperial Beach	Under construction
80	Various street end projects		Street end improvements (sidewalk, landscaping, decorative improvements, lighting, etc.)	Conceptual Project; Future, unfunded, conceptual plan only
81	South Seacoast Restroom and Shower Facility project (MF 1209)		New comfort station/restroom and shower facility on a street end yet to be determined	Port has prepared a draft feasibility study and concept designs; still under review

Project #	Name	Location	Description	Status
82	IB Resort (MF 1166)	1060 Seacoast Drive, Imperial Beach, CA	New hotel with 100 rooms, restaurant, view bar, patio dining, pool, meeting rooms, rooftop garden, new seawall, and landscaping at 1060 Seacoast Drive	Processing discretionary permits
83	Pier South (Seacoast Inn) (MF 661)	800 Seacoast Drive, Imperial Beach, CA	Hotel with 78 hotel rooms, restaurant, commercial space, seawall, Date Ave improvements at 800 Seacoast Drive	Project completed 2014
84	110 Evergreen Avenue (MF 1169)	110 Evergreen Avenue, Imperial Beach, CA	Mixed-use project with 11 residential units above 3,326 square feet of commercial space at 110 Evergreen Avenue	Discretionary permits approved March 4, 2015; under construction
85	119 Elm Avenue (MF 1170)	117 and 119 Elm Avenue, Imperial Beach, CA	3 new residential units at 117 #01, 117 #02, 119 Elm Avenue	Discretionary permits approved March 4, 2015; under construction
86	951 Seacoast Drive (MF 1149)	951 Seacoast Drive, Imperial Beach, CA	Mixed-use project with 3 residential units above approximately 2,100 square feet of commercial space at 951 Seacoast Drive	Discretionary permits approved July 15, 2015; processing building permits
87	684-686 Ocean Lane (MF 1188)	684-686 Ocean Lane, Imperial Beach, CA	Private project for 2 attached dwelling units; vertical seawall at 684-686 Ocean Lane	Processing discretionary permits
88	812 Ocean Lane (MF 1197)	812 Ocean Lane, Imperial Beach, CA	Private project for 2 attached dwelling units; use existing vertical seawall at 812 Ocean Lane	Discretionary permits approved July 20, 2016; processing building permits
89	Bernardo Shores (MF 1100)	500 Highway 75, Imperial Beach, CA	Replace RV Park with 187 residential units and bike path at 500 Highway 75	Discretionary permits approved by City Council (December 3, 2014) and Coastal Commission (August 13, 2015); processing building permits; grading ongoing
90	Breakwater commercial center (MF 1062)	9 th and Palm Ave, Imperial Beach, CA	45,000 square foot commercial redevelopment project at 9 th and Palm Ave	Under construction

Project #	Name	Location	Description	Status
91	Imperial Beach Library (MF 1067)	810 Imperial Beach Blvd, Imperial Beach, CA	Construct a new, approximately 14,000-square-foot library, including a 2,000 square foot community room, and parking in the 8 th Street right-of-way at 810 Imperial Beach Blvd.	Under construction
92	Improvements on Imperial Beach Blvd. (Seacoast Drive to Connecticut St.)	Imperial Beach Blvd. between Seacoast Drive and Connecticut Street, Imperial Beach, CA	Street improvements on Imperial Beach Blvd. between Seacoast Drive and Connecticut Street	Prop 1 and Active Transportation Program grant applications submitted; no design and unfunded at this time
93	Seacoast lighting project	Seacoast Drive, Imperial Beach, CA	Lighting and aesthetic improvements on Seacoast Drive	No design at this time; not fully scoped
94	Seacoast Drive sewer main improvements	Seacoast Drive, Imperial Beach, CA	Modify sewer mains on Seacoast Drive and potential new lift station	No design at this time; not fully scoped
95	Homeporting Six Zumwalt Class Destroyers at East and West Coast Installations (including Hawaii)	Naval Base San Diego	The project would allow the USS Zumwalt guided-missile destroyer to be homeported at Naval Base San Diego.	First ship expected in San Diego Bay in late 2016.
96	Littoral Combat Ship Homeporting Project	Naval Base San Diego	The Navy proposed to homeport its first twelve Littoral Combat Ships (LCS) at NBSD. The Navy considered the west coast and Hawaii surface combatant homeports for homeporting the LCS. Alternative homeporting locations considered include: Naval Base Kitsap Bremerton/Bangor, Washington; Naval Station Everett, Washington; Naval Base San Diego, California, and Joint Base Pearl Harbor-Hickam, Hawaii. Based on the analysis of these potential locations, only NBSD met the mission, logistic and operational criteria critical to the success of the LCS	Several LCS have arrived in at NBSD since May 2012.

Project #	Name	Location	Description	Status
97	Naval Base Point Loma Fuel Pier Replacement and Dredging	Naval Base Point Loma	<p>program. Furthermore, maintaining a single homeport for the initial twelve ships supports the spiral development concept for the LCS Fleet, provides logistic and operational synergies, facilitates standardization of support procedures and enhances training effectiveness. An EA addressing homeporting the ships and supporting mission modules, permanent assignment of crew, and related facility improvements required to support the homeporting was prepared and a FONSI was signed in 2012.</p> <p>The Proposed Action would involve the demolition and replacement of the existing fuel pier (Pier 180) in San Diego Bay at Naval Base Point Loma. This project would replace the aging, seismically deficient, and increasingly dysfunctional and obsolete fuel Pier 180 with a new fuel pier that would meet current state and Navy seismic construction standards, meet projected ship fueling requirements and enable the Navy and Department of Homeland Security to meet their and national defense mission and security missions. The Proposed Action would also involve sediment dredging with beneficial reuse of the dredge sediments in the nearshore zone at the Navy's Silver Strand Training Complex. The proposed dredging would allow the replacement fuel pier to serve deeper draft ships. An EA was completed for this project and a FONSI was signed in August 2013.</p>	<p>Construction is anticipated to begin in September 2013 and end in January 2017; however there will be no in-water work for this project during the least-tern nesting season each year (1 April through 15 September).</p>
98	Pier 12 Replacement and Dredging	Naval Base San Diego	<p>This project involved demolition of an inadequate existing pier (Pier 12) at NBSD, dredging in berthing and approach areas for the new single-deck pier, dredged material disposal at an approved ocean disposal site and permitted landfill, construction of a new general purpose berthing pier and associated pier utilities, including upgrades to the electrical utilities at adjacent Pier 13, and construction of fish enhancement structures (artificial habitat for fish) using concrete debris from pier demolition. An</p>	<p>Demolition and dredging for this project began in 15 March 2012. Construction was completed October 2013. Dredging was estimated to be completed June 2016.</p>

Project #	Name	Location	Description	Status
			Environmental Assessment (EA) was completed for this project and a FONSI was signed.	
99	Naval Amphibious Base Coronado Maintenance Dredging	Naval Amphibious Base Coronado	This project conducts maintenance dredging around the north side of NAB from the fuel pier to Pier 14 at Pier 21 and on the south side around Piers 16 and 19. Total volume of dredging was 34,493 cubic yards. Of that amount 7,325 cy would be beneficial reused, 3,186 would be disposed of at an approved landfill and the remaining 23,982 cy will be disposed of at an approved location in the ocean. Army Corps of Engineers permit SPL-2015-00315-RRS.	Dredging was expected to begin in September 2015 and end in June 2016.
100	Hawaii-Southern California Training and Testing	San Diego Bay	The Navy evaluated potential environmental effects associated with ongoing military readiness activities, which include training and research, development, testing, and evaluation activities within the Hawaii-Southern California Training and Testing Study Area (which includes San Diego Bay). An EIS (known as Phase II) was completed in December 2013. A Notice of Intent to prepare another EIS (also known as Phase III) was issued on Nov 12, 2015 and public comment period concluded Jan 12, 2016. A draft EIS is being prepared.	
101	Maintenance Dredging at Naval Base San Diego	Naval Base San Diego	This project conducts maintenance dredging at Piers 2, 6, 7, 13 and former Pier 14 and Chollas Creek at NBSD. The total volume to be dredged is approximately 250, 780 cubic yards (cy) with 85,340 cy being disposed of via ocean disposal and the remaining 165,439 cy transported to an approved upland landfill. Army Corps of Engineers Permit (SPL-2013-00405-RRS) approved June 2016.	

*Represents sites that have been identified as having two proposed projects on the same project site. As a result, the project that represents the worst-case scenario has been included in the cumulative analysis for the Proposed Project (i.e., Wyndham Hotel with alternative 205-foot setback park; and San Diego Convention Center Phase III Expansion and Expansion Hotel Project)

Project Title: San Diego Bay and Imperial Beach Oceanfront Fireworks Display Events Project

Project Applicant: Jim Hutzelman, San Diego Unified Port District, 3165 Pacific Highway, San Diego, CA 92101, (619) 686-6564

Project Location (include county): San Diego Bay and Imperial Beach Oceanfront, San Diego County

Project Description:

The proposed project consists of (1) an ordinance to govern existing and proposed new fireworks display events that occur within San Diego Bay and the Imperial Beach Oceanfront requiring a discretionary action by the District or that are operated by the District's tenants, and (2) four proposed new fireworks displays, which would be located adjacent to the National City and Chula Vista Bayfronts and are anticipated to require a future discretionary action by the District. Discretionary actions for fireworks displays that may require District approval include, but are not limited to, the following: Sponsorship agreement, Special event permit, Lease and lease amendment, Tideland Use and Occupancy Permit, Right of Entry Permit, Coastal Act Categorical Determination of Exclusion, and Coastal Development Permit.

This is to advise that the San Diego Unified Port District has approved the above (input checked) Lead Agency or (input unchecked) Responsible Agency)

described project on May 25, 2017 and has made the following determinations regarding the above (date) described project.

- 1. The project (input checked) will (input unchecked) will not] have a significant effect on the environment.
- 2. (input checked) An Environmental Impact Report was prepared for this project pursuant to the provisions of CEQA. (input unchecked) A Negative Declaration was prepared for this project pursuant to the provisions of CEQA.
- 3. Mitigation measures (input checked) were (input unchecked) were not] made a condition of the approval of the project.
- 4. A mitigation reporting or monitoring plan (input checked) was (input unchecked) was not] adopted for this project.
- 5. A statement of Overriding Considerations (input checked) was (input unchecked) was not] adopted for this project.
- 6. Findings (input checked) were (input unchecked) were not] made pursuant to the provisions of CEQA.

This is to certify that the final EIR with comments and responses and record of project approval, or the negative Declaration, is available to the General Public at:

RESOLUTION 2017-075

RESOLUTION TO CERTIFY FINAL ENVIRONMENTAL IMPACT REPORT, ADOPT FINDINGS OF FACT AND STATEMENT OF OVERRIDING CONSIDERATIONS, ADOPT MITIGATION MONITORING AND REPORTING PROGRAM, AND DIRECT FILING OF NOTICE OF DETERMINATION

WHEREAS, the San Diego Unified Port District (District) is a public corporation created by the Legislature in 1962 pursuant to Harbors and Navigation Code Appendix I (Port Act); and

WHEREAS, Section 21 of the Port Act states that the Board of Port Commissioners (Board) may pass all necessary ordinances and resolutions for the regulation of the District; and

WHEREAS, Section 35 of the Port Act states that the Board may do all other acts necessary and convenient for the exercise of its powers; and

WHEREAS, fireworks display events have been occurring for many years at several locations within San Diego Bay and the Imperial Beach Oceanfront, including off Shelter Island, Harbor Island, Centre City Embarcadero (which includes North Embarcadero, Central Embarcadero, and South Embarcadero), and the National Steel and Shipbuilding Company (NASSCO) facility, as well as along the Coronado Bayfront within Glorietta Bay (an inlet of San Diego Bay adjacent to Coronado Island) and off the Imperial Beach Pier; and

WHEREAS, in the interest of protecting the environment and the public health, safety and welfare, the District has proposed the adoption of an ordinance that establishes policies, performance standards and other requirements that would apply to all fireworks display events that occur in and around San Diego Bay and the Pacific Ocean near Imperial Beach and require a discretionary action by the District or are operated by the District's tenants (Proposed Ordinance); and

WHEREAS, the District has proposed four additional new fireworks display events, including three along the Chula Vista Bayfront and one along the National City Bayfront, which also would be subject to the Proposed Ordinance; and

WHEREAS, the Proposed Ordinance and the proposed four additional new fireworks display events along the Bayfront in Chula Vista and National City are collectively referred to as the "Proposed Project"; and

WHEREAS, pursuant to the California Environmental Quality Act

("CEQA"), Public Resources Code Section 21000, et seq., and its implementing regulations, 14 California Code of Regulations Section 15000, et seq. ("CEQA Guidelines"), the District prepared a Draft Environmental Impact Report for the San Diego Bay and Imperial Beach Oceanfront Fireworks Display Events Project (UPD #EIR-2015-115; SCH #2015081013) for the Proposed Project ("Draft EIR"), which was made available for public review and comment as required by law in March 2017; and

WHEREAS, the District received comments letters concerning the Draft EIR from several public agencies and organizations and, pursuant to CEQA Guidelines section 15088, the District has prepared written responses to all comments received on the Draft EIR during the public comment period which raised environmental issues; and

WHEREAS, the District has determined that the comments received on the Draft EIR do not contain any significant new information within the meaning of CEQA Guidelines section 15088.5 and therefore recirculation of the Draft EIR is not required; and

WHEREAS, the District has prepared a Final Environmental Impact Report ("Final EIR") which contains the information required by CEQA Guidelines section 15132, including the Draft EIR and the revisions and additions thereto, technical appendices, public comments and the District's responses to public comments on the Draft EIR, and which has been filed with the District Clerk; and

WHEREAS, pursuant to CEQA Guidelines sections 15091, 15093 and 15097, the District has prepared Findings of Fact and a Statement of Overriding Considerations and a Mitigation Monitoring and Reporting Program, which have been filed with the District Clerk; and

WHEREAS, the District Clerk has caused notice to be duly given of a public hearing in this matter in accordance with law, as evidenced by the affidavit of publication and affidavit of mailing on file with the District Clerk; and

WHEREAS, all materials with regard to the Proposed Project were made available to the Board for its review and consideration of the Proposed Project including, but not limited to, the following:

1. The Draft EIR and appendices, dated March 2017;
2. The Final EIR and its appendices, dated May 2017;
3. The Staff Report and Agenda Sheet, dated May 25, 2017;
4. The proposed Findings of Fact and Statement of Overriding Considerations, dated May 2017;

5. The proposed Mitigation Monitoring and Reporting Program, dated May 2017; and

6. All documents and records filed in this proceeding by the District and other interested parties;

WHEREAS, a duly noticed public hearing was held on May 25, 2017, before the Board, at which the Board received public testimony, reviewed and considered all testimony and materials made available to the Board regarding the Proposed Project; and

WHEREAS, having reviewed and considered all testimony and materials made available to the Board, including but not limited to the Final EIR, the staff reports and all the testimony and evidence in the record of the proceedings with respect to the Proposed Project, the Board took the actions hereinafter set forth.

NOW, THEREFORE, BE IT RESOLVED by the Board of Port Commissioners of the San Diego Unified Port District, as follows:

1. The Board finds the facts recited above are true and further finds that this Board has jurisdiction to consider, approve and adopt the subject of this Resolution.

2. The Board finds and determines that the applicable provisions of CEQA, its implementing State Guidelines, and District Guidelines have been duly observed in conjunction with said hearing and the considerations of this matter and all of the previous proceedings related thereto.

3. The Board finds and determines that (a) the Final EIR is complete and adequate in scope and has been completed in compliance with CEQA and the State and District Guidelines for implementation thereof, (b) the Final EIR was presented to the Board, and the Board has fully reviewed and considered the information in Final EIR prior to approving the Proposed Project, (c) the Final EIR reflects the District's independent judgment and analysis, and, therefore, the Final EIR is hereby declared to be certified in relation to the subject of this Resolution.

4. The Board finds and determines that the Proposed Project is approved despite the existence of certain significant environmental effects identified in the Final EIR and, pursuant to Public Resources Code Section 21081 and CEQA Guidelines Section 15091, the Board hereby makes and adopts the findings with respect to each significant environmental effect as set forth in the Findings of Fact, appended hereto as Exhibit "A" and made a part hereof by this reference, and declares that it considered the evidence described in connection with each such finding.

5. The Board further finds and determines that the Proposed Project is approved despite the existence of certain unavoidable significant environmental effects identified in the Final EIR, and, pursuant to Public Resources Code section 21081(b) and CEQA Guidelines section 15093, the Board hereby makes and adopts the Statement of Overriding Considerations appended hereto as Chapter 7.0 of Exhibit A and made part hereof by this reference, and finds that such effects are considered acceptable because the benefits of the Proposed Project outweigh the unavoidable environmental effects.

6. Pursuant to Public Resources Code Section 21081.6 and CEQA Guidelines Section 15091(d), the Board hereby adopts and approves the Mitigation Monitoring and Reporting Program, which is appended hereto as Exhibit "B" and is made a part hereof by this reference, with respect to the significant environmental effects identified in the Final EIR, and hereby makes and adopts the provisions of the Mitigation Monitoring and Reporting Program as conditions of approval for the Proposed Project.

7. Pursuant to Public Resources Code Section 21152 and CEQA Guidelines Section 15094, the Clerk of the Board shall cause a Notice of Determination to be filed with the Clerk of the County of San Diego and the State Office of Planning and Research. Unless the Proposed Project is declared exempt herein and a Certificate of Filing Fee Exemption is on file, the Proposed Project is not operative, vested or final until the filing fees required pursuant to Fish and Game Code Section 711.4 are paid to the Clerk of the County of San Diego.

8. Pursuant to Public Resources Code Section 21081.6(a)(2) and CEQA Guidelines Section 15091(e), the location and custodian of the documents and other materials which constitute the record of proceedings on which this Resolution is based is the Clerk, San Diego Unified Port District, 3165 Pacific Highway, San Diego, California 92101.

FINAL ENVIRONMENTAL IMPACT REPORT
(UPD #EIR-2015-115; SCH #2015081013)**

INTRODUCTION

The Board of Port Commissioners of the San Diego Unified Port District ("District") hereby makes the following Findings and Statement of Overriding Considerations concerning the Final Environmental Impact Report (UPD #EIR-2015-115; SCH #2015081013) for the San Diego Bay and Imperial Beach Oceanfront Fireworks Display Events Project ("proposed project"), pursuant to the California Environmental Quality Act, Public Resources Code §21000, *et seq.* ("CEQA"), and its implementing regulations, California Code of Regulations, title 14, §15000, *et seq.* ("CEQA Guidelines").

The Final Environmental Impact Report ("Final EIR") prepared for the proposed project consists of the following:

- Volume I contains the Final EIR, which is composed of the following:
 - Chapter 1 is an introduction to the Final EIR;
 - Chapter 2 contains the final Executive Summary and Summary of Impacts and Mitigation Measures for the proposed project, and a list of public agencies, organizations, and persons commenting on the Draft EIR;
 - Chapter 3 contains the errata and revisions to the Draft EIR and Ordinance;
 - Chapter 4 contains comments received on the Draft EIR and the District's responses to those comments; and
 - Chapter MMRP contains the Mitigation Monitoring and Reporting Program.
- Volume II contains the Draft EIR.
- Volume III contains the appendices to the Draft EIR.

1.0 PROJECT DESCRIPTION

1.1 Project Overview

The proposed San Diego Bay and Imperial Beach Oceanfront Fireworks Display Events Project (herein referred to as the proposed project) consists of (1) an ordinance establishing a San Diego Unified Port District (District) Code section (proposed ordinance) to govern existing and proposed new fireworks display events that occur throughout the year in and around San Diego Bay and the Imperial Beach Oceanfront that require a discretionary action by the District or that are operated by the District's tenants, and (2) four proposed new fireworks display events, which would be located adjacent to the National City and Chula Vista Bayfronts and are anticipated to require a future discretionary action by the District. Discretionary actions for fireworks display events that may require District approval include, but are not limited to, the following:

- Sponsorship agreement
- Special event permit
- Lease and lease amendment
- Tideland Use and Occupancy Permit
- Right-of-Entry Permit
- Coastal Act Categorical Determination of Exclusion
- Coastal Development Permit

Fireworks display events that require a discretionary action by the District or are operated by the District's tenants have been occurring on the Fourth of July and at other times throughout the year for more than a decade. The most prominent existing fireworks display events are the annual Fourth of July Big Bay Boom in San Diego Bay and the Fourth of July Imperial Beach Fireworks Show. Furthermore, the Fireworks Show Over Glorietta Bay is an existing display whose fireworks organizers may seek to obtain funding from the District in the future, which would require a discretionary action by the District. Existing fireworks display events that occur at other times throughout the year include those associated with the San Diego Symphony's Summer Pops concert series (multiple small displays) and the Our Lady of Rosary Church annual procession, along with the U.S.S. Midway Aircraft Carrier Museum (U.S.S. Midway Museum) (multiple small displays) and General Dynamics National Steel and Shipbuilding Company (NASSCO) displays. A description of the operational characteristics of each of these existing displays is provided in Volume II (Draft EIR), Tables 2-1 and 2-2, respectively, of Chapter 2, *Environmental Setting*. These fireworks display events would be subject to the proposed ordinance.

1.2 Fireworks Display Event Locations

Existing Fireworks Display Events

Existing fireworks display events currently occur at several locations within San Diego Bay, a natural harbor and deep-water port in southern San Diego County, and the Imperial Beach Oceanfront. San Diego Bay is an active maritime environment that provides passage and berthing for numerous types of boats and vessels, including small recreational boats that moor at dock marinas and open anchorage marinas within the Bay, mid-sized vessels such as private yachts and harbor cruise boats, and large vessels that consist of naval ships, cruise ships, cargo ships, and shipping barges. Fireworks display events within San Diego Bay take place off Shelter Island, Harbor Island, Centre City Embarcadero (which includes North Embarcadero, Central Embarcadero, and South Embarcadero), and the NASSCO ship repair facility. In addition, fireworks display events take place along the Coronado Bayfront within Glorietta Bay (an inlet of San Diego Bay adjacent to Coronado Island) and the Imperial Beach Oceanfront.

Proposed New Fireworks Display Events

There are currently no fireworks display events along the National City or Chula Vista Bayfronts. Along the National City Bayfront, it is anticipated that future fireworks display events would take place from a barge within view of Pepper Park because Pepper Park is the closest publicly accessible gathering space near the National City Bayfront that would have a partial view of the fireworks. Pepper Park is located along Tidelands Avenue in National City. The site is adjacent to the Sweetwater Channel, north of the Sweetwater Marsh Unit of the San Diego Bay National Wildlife Refuge, which includes Paradise Creek to the east and D Street Fill to the south, south of the National City Marine Terminal, east of San Diego Bay, and west of Pier 32 Marina. Interstate 5 (I-5) runs northeasterly approximately 0.4 mile from the park site boundary. Pepper Park site access is provided via Tidelands Avenue, which turns into Goesno Place as it approaches the park. One fireworks display event, likely a Fourth of July event, may occur along the National City Bayfront and is anticipated to involve the placement of a single, temporary barge in the Bay and within view of Pepper Park.

Along the Chula Vista Bayfront, it is anticipated that fireworks display events would take place from a barge within view of both the Chula Vista Bayside Park and the Chula Vista Bayfront Park. Bayside Park is a waterfront park accessed by Bayside Parkway. It is bounded to the north by a boatworks facility, to the south by a man-made inlet that contains marinas, to the east by a recreational vehicle (RV) park, and to the west by San Diego Bay. Bayfront Park is on the south side of the man-made inlet and is bounded to the south and west by San Diego Bay and to the east by the marinas of the man-made inlet as well as vacant land. The park is accessed by Marina Way. I-5 is approximately 0.5 mile

to the east of the Chula Vista Bayfront. A total of three fireworks display events (including one on the Fourth of July) along the Chula Vista Bayfront area are allowed under the Chula Vista Bayfront Master Plan Settlement Agreement and Natural Resources Management Plan and are anticipated to involve the placement of a single, temporary barge in the Bay in the vicinity of the two parks.

1.3 Project Components

Proposed Ordinance

As stated above, the proposed project consists of an ordinance to govern existing and proposed new fireworks display events that occur within San Diego Bay and the Imperial Beach Oceanfront that require a discretionary action by the District or that are operated by the District's tenants.

The proposed ordinance addresses the following:

- Permit procedures and requirements for the conduct of fireworks displays
- Compliance with applicable federal, state, and local laws and regulations governing fireworks, including, but not limited to:
 - Code of Federal Regulations
 - Clean Water Act
 - California Health and Safety Code
 - California Code of Regulations
 - CEQA
 - California Coastal Act
- Compliance with applicable federal, state, and local plans and permits governing fireworks, including, but not limited to:
 - San Diego Regional Water Quality Control Board's (SDRWQCB's) General Permit for Public Display of Fireworks (Order No. R9-2011-0022)
 - District's Climate Action Plan
 - District's Stormwater Management and Discharge Control Code
 - Integrated Natural Resources Management Plan
 - Chula Vista Bayfront Master Plan Natural Resources Management Plan
- Consistency with the features and characteristics of each individual fireworks display event analyzed, including, but not limited to:
 - Allowable launch site locations for individual displays
 - Total pounds of fireworks for individual displays
 - Allowable shell size(s) for individual displays
 - Frequency of individual displays
 - Duration of individual displays

- Compliance with the applicable mitigation measures identified in the Mitigation Monitoring and Reporting Program (MMRP) for the proposed project

Project Operations

A number of fireworks display events occur year-round in and around San Diego Bay and the Pacific Ocean near Imperial Beach. A list of these fireworks display events is provided within Volume II (Draft EIR), Table 2-1 of Chapter 2, *Environmental Setting*. These fireworks display events would be subject to the proposed ordinance.

In addition to the existing fireworks display events, the proposed ordinance would govern four proposed new fireworks display events, including three displays along the Chula Vista Bayfront as allowed under the Chula Vista Bayfront Master Plan Settlement Agreement and Natural Resources Management Plan, and one Fourth of July display along the National City Bayfront. The three proposed fireworks display events along the Chula Vista Bayfront include one Fourth of July display and two non-Fourth of July displays. It is anticipated that the District would consider annually whether or not to provide event sponsorship and/or issue a Special Event Permit, Right-of-Entry Permit, Tideland Use and Occupancy Permit, Coastal Development Permit, Coastal Act Categorical Determination of Exclusion, or other similar approval for these proposed new fireworks display events. These proposed new fireworks display events are anticipated to last approximately 3 to 10 minutes for non-Fourth of July displays and 15 to 20 minutes for Fourth of July displays, and the fireworks are anticipated to be launched from barges within San Diego Bay.

The proposed new fireworks display events are identified in Chapter 2, *Executive Summary*, of the Final EIR (see Table 2-1). The total pounds of fireworks estimated for each proposed new fireworks display event are also identified in Chapter 2, *Executive Summary*, of the Final EIR (see Table 2-2).

Because the proposed ordinance would require consistency with the features and characteristics of each individual fireworks display event analyzed in the Final EIR, including, but not limited to, the total net explosive weight (NEW) in pounds of fireworks and durations for individual displays, the values provided in Table 2-2 of the Final EIR represent the maximum allowable pounds of fireworks and durations for the proposed new displays along the Chula Vista and National City Bayfronts assumed in the Final EIR.

Similarly, because the proposed ordinance would also govern the existing fireworks display events identified above, the values provided in Draft EIR Chapter 2, *Environmental Setting*, Table 2-2 also represent the maximum allowable pounds of fireworks for each existing fireworks display event assumed in the Final EIR. If an existing fireworks display event identified in Draft EIR Chapter 2, *Environmental Setting*, Tables 2-1 and 2-2 is proposed to be modified in the future, a new additional fireworks display event is proposed that was not

analyzed in the Final EIR, or any of the characteristics provided in Final EIR Tables 2-1 and 2-2 (e.g., location, magnitude [shell size and pounds] and/or duration) of the four proposed new fireworks display events are proposed to be modified, the fireworks display event will be subject to additional environmental review, pursuant to CEQA Guidelines Section 15168(c).

1.4 Project Objectives

The District has identified the following objectives for the proposed project.

1. To develop a District ordinance that establishes policies, performance standards, and other requirements that would be applied to fireworks display events that occur in and around San Diego Bay and the Pacific Ocean near Imperial Beach and require a discretionary action by the District or are operated by the District's tenants;
2. To allow for the continued occurrence of traditional fireworks display events in and around San Diego Bay and the Pacific Ocean near Imperial Beach that require a discretionary action by the District or are operated by the District's tenants, including on the Fourth of July, providing a popular and region-wide way to celebrate and express civic pride;
3. To allow for the continued occurrence of existing and future occurrence of proposed new traditional fireworks display events in and around San Diego Bay and the Pacific Ocean near Imperial Beach that require a discretionary action by the District or are operated by the District's tenants in a manner that considers the health, safety, and welfare of people, property, and the environment; and
4. To continue to enhance the visitor-serving experience of viewing fireworks display events from various vantage points around District tidelands by providing safe, high-quality fireworks display events using existing and new fireworks technologies as they become available.

2.0 ENVIRONMENTAL PROCEDURES

2.1 Lead Agency

Pursuant to CEQA Guidelines §15367, the District is the “lead agency” for the purpose of preparing the environmental review required by CEQA. The environmental review prepared by the District will be used by the Board of Port Commissioners in connection with its decisions to certify the EIR and adopt an ordinance establishing a proposed ordinance to govern fireworks display events.

The California State Lands Commission (CSLC) and California Department of Fish and Wildlife (CDFW) are trustee agencies, as defined in CEQA Guidelines §15386. CSLC may have an interest in the proposed project, but would not issue approvals or permits that would be required to implement the project. CSLC has jurisdiction and management control over those public trust lands of the state received by the state upon its admission to the United States in 1850. CSLC has jurisdiction over submerged lands within San Diego Bay that are not under the jurisdiction of the District. Several of the barges for the existing fireworks display events are situated within CSLC jurisdiction. However, because the barges are not anchored or moored, a lease or any other similar approval is not required from CSLC. It is anticipated that CDFW may have an interest in the proposed project; however, CDFW would not issue approvals or permits that would be required to implement the proposed project.

2.2 Environmental Impact Report

Pursuant to CEQA Guidelines §15080, *et seq.*, the District prepared an Environmental Impact Report (“EIR”) to analyze the potential impacts of the proposed project on the environment. The Final EIR contains all of the information required by CEQA Guidelines §15132, including the Draft EIR and the appendices to the Draft EIR.

2.3 Public Participation

Environmental review of the proposed project began on August 7, 2015, with the publication of a Notice of Preparation of the EIR and a 30-day public review period. The District held a public scoping meeting on August 25, 2015. The Draft EIR was completed and a Notice of Availability for public review was posted on March 17, 2017. A 45-day public review period began on March 17, 2017, and ended on May 2, 2017. Five public agencies and five private organizations submitted written comments on the Draft EIR during the public comment period. No comment letters were received from individual persons.

These comments and the District’s responses to them are included in Chapter 4 of the Final EIR as required by CEQA Guidelines §§15088 and 15132. The Final EIR was completed and the District’s responses to comments were made available for review on May 12, 2017. A public hearing concerning certification of the Final EIR was held by the Board of Port Commissioners of the District on

May 25, 2017, at which interested agencies, organizations, and individuals were given an opportunity to comment on the Final EIR and the project.

2.4 Record of Proceedings

For purposes of CEQA and the findings set forth below, the administrative record of the District's decision concerning certification of the Final EIR for the project shall include the following:

- The Draft EIR (March 2017);
- The Final EIR (May 2017);
- The appendices to the Draft EIR and the Final EIR;
- All documents and other materials listed as references and/or incorporated by reference in the Draft EIR and Final EIR, including but not limited to the materials identified in the Draft EIR, Chapter 9 (*References*);
- All reports, applications, memoranda, maps, letters, and other documents prepared by the District's staff and consultants for the proposed project which are before the Board of Port Commissioners as determined by the Clerk;
- All documents or other materials submitted by interested persons and public agencies in connection with the Draft EIR and the Final EIR;
- The minutes, tape recordings, and verbatim transcripts, if any, of the public hearing held on May 25, 2017, concerning the Final EIR and the proposed project; and
- Matters of common knowledge to the Board of Port Commissioners and the District, including but not limited to the Port Master Plan.

The custodian of the documents and other materials composing the administrative record of the District's decision concerning certification of the Final EIR is the Clerk of the Board of Port Commissioners. The location of the administrative record is the Port District's office at 3165 Pacific Highway, San Diego, California 92101. (Public Resources Code §21081.6(a)(2).)

3.0 FINDINGS UNDER CEQA

3.1 Purpose

CEQA requires the District to make written findings of fact for each significant environmental impact identified in the Final EIR (CEQA Guidelines §15091). The purpose of the findings is to systematically restate the significant effects of the proposed project on the environment and to determine the feasibility of mitigation measures and alternatives identified in the Final EIR that would avoid or substantially lessen the significant effects. Once it has adopted sufficient measures to avoid or substantially lessen a significant impact, the District is not required to adopt every mitigation measure identified in the Final EIR or otherwise brought to its attention. If significant impacts remain after application of all feasible mitigation measures, the District must review the alternatives identified in the Final EIR and determine if they are feasible. These findings set forth the reasons, and the evidence in support of, the District's determinations.

3.2 Terminology

A "finding" is a written statement made by the District that explains how it dealt with each significant impact and alternative identified in the Final EIR. Each finding contains an ultimate conclusion regarding each significant impact, substantial evidence supporting the conclusion, and an explanation of how the substantial evidence supports the conclusion.

For each significant effect identified in the Final EIR, the District is required by CEQA Guidelines §15091(a) to make a written finding reaching one or more of the following conclusions:

- (1) Changes or alterations have been required in, or incorporated into, the project that mitigate or avoid the significant effect identified in the EIR;
- (2) Such changes or alterations are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that other agency; or
- (3) Specific legal, economic, social, technological, or other considerations, including considerations for the provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the Final EIR.

A mitigation measure or an alternative is considered "feasible" if it is capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal, social, and technological factors. (CEQA Guidelines §15364.) The concept of "feasibility" also encompasses the question whether a particular alternative or mitigation measure promotes the underlying goals and objectives of a project. (*City of Del Mar v. City of San Diego* (1982) 133 Cal.App.3d 410, 417.) "[F]easibility under CEQA encompasses 'desirability' to the extent that desirability is based on a reasonable balancing of the relevant economic, environmental, social, and technological

factors.” (*Ibid.*; see also *Sequoyah Hills Homeowners Assn. v. City of Oakland* (1993) 23 Cal.App.4th 704, 715.)

With respect to a project for which significant impacts are not avoided or substantially lessened either through the adoption of feasible mitigation measures or a feasible alternative, a public agency, after adopting proper findings, may nevertheless approve the project if the agency adopts a statement of overriding considerations setting forth the specific reasons why the agency found that the project’s benefits rendered acceptable its unavoidable adverse environmental effects. (CEQA Guidelines §§15093, 15043 (b); see also Pub. Resources Code §21081 (b).) The California Supreme Court has stated, “[t]he wisdom of approving...any development project, a delicate task which requires a balancing of interests, is necessarily left to the sound discretion of the local officials and their constituents who are responsible for such decisions. The law as we interpret and apply it simply requires that those decisions be informed, and therefore balanced.” (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 576.)

A statement of overriding considerations is required for the approved project because, despite implementation of all feasible mitigation measures, the project as approved will have significant impacts on hydrology and water quality; noise and vibration; and transportation, circulation, and parking that cannot be determined with certainty to be avoided or reduced to a less-than-significant level.

3.3 Legal Effect

To the extent these findings conclude mitigation measures identified in the Final EIR are feasible and have not been modified, superseded, or withdrawn, the District hereby binds itself and any other responsible parties, including future project applicants and their successors in interest, to implement those mitigation measures. These findings are not merely informational, but constitute a binding set of obligations upon the District and responsible parties, which will take effect if and when the District adopts a resolution certifying the Final EIR and the District adopts resolution(s) approving the project.

3.4 Mitigation Monitoring and Reporting Program

In adopting these findings, the District also adopts an MMRP pursuant to Public Resources Code §21081.6 and CEQA Guidelines §15097. This program is designed to ensure the proposed project complies with the feasible mitigation measures identified below during implementation of the approved project. The program is set forth in the “Mitigation Monitoring and Reporting Program for the San Diego Bay and Imperial Beach Oceanfront Fireworks Display Events project,” which is adopted by the District concurrently with these findings and is incorporated herein by this reference (Final EIR Chapter MMRP, *Mitigation Monitoring and Reporting Program*).

4.0 FINDINGS REGARDING DIRECT SIGNIFICANT EFFECTS

The proposed project will result in direct significant environmental effects with respect to air quality and health risk; biological resources; hydrology and water quality; noise and vibration; and transportation, circulation, and parking. These significant environmental effects, and the mitigation measures identified to avoid or substantially lessen them, are discussed in detail in the Final EIR, Chapter 3, *Errata and Revisions*; and Volume II (Draft EIR), Sections 4.2 (*Air Quality and Health Risk*), 4.3 (*Biological Resources*), 4.6 (*Hydrology and Water Quality*), 4.8 (*Noise and Vibration*), and 4.10 (*Transportation, Circulation, and Parking*). A summary of significant impacts and mitigation measures for the project is set forth in the Final EIR, Chapter 2, *Executive Summary*, Table 2-4.

Set forth below are the findings regarding the potential direct significant effects of the approved project. The findings incorporate by reference the discussion of potential significant impacts and mitigation measures contained in the Final EIR. The Final EIR, which includes the Draft EIR and appendices, is referred to in the findings below as the "EIR."

4.1 Air Quality and Health Risk

4.1.1 Impact-AQ-1: Emissions in Excess of PM2.5 Thresholds during Combined National City Bayfront and Chula Vista Bayfront Fourth of July Fireworks Display Events.

Potentially Significant Impact: The EIR identifies a potentially significant impact on air quality and health risk (Impact-AQ-1) in that emissions in excess of particulate matter 2.5 microns or less in diameter (PM2.5) thresholds may occur during combined National City Bayfront and Chula Vista Bayfront Fourth of July Fireworks Display Events.

Project emissions generated when the new National City Bayfront and Chula Vista Bayfront Fourth of July fireworks display events occur at the same time, before mitigation, would exceed the daily San Diego County Significance Level Thresholds (SLTs) for PM2.5. The contribution of project-related emissions is considered significant because the project emissions would exceed the daily threshold that has been set by the San Diego Air Pollution Control District (SDAPCD) to attain the PM2.5 National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS).

Detailed information and analysis regarding this significant potential impact are provided in Volume II (Draft EIR), Section 4.2, *Air Quality and Health Risk*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable.

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the approved project that avoid or substantially lessen the significant environmental effect on air quality and health risk identified as Impact-AQ-1 in the EIR.

Facts in Support of Finding: The potential significant impact of the proposed project on air quality and health risk (Impact-AQ-1) is analyzed in Volume II (Draft EIR), Section 4.2, *Air Quality and Health Risk*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable. Impact-AQ-1 will result from emissions in excess of PM2.5 thresholds during combined National City Bayfront and Chula Vista Bayfront Fourth of July Fireworks Display Events. Project emissions generated when the new National City Bayfront and Chula Vista Bayfront Fourth of July fireworks display events occur at the same time, before mitigation, would exceed the daily San Diego County SLTs for PM2.5. The contribution of project-related emissions is considered significant because the project emissions would exceed the daily threshold that has been set by SDAPCD to attain the PM2.5 NAAQS and CAAQS.

The potential significant impact on air quality and health risk (Impact-AQ-1) can be reduced to a level below significance by implementation of Mitigation Measure MM-AQ-1 and reduced further by implementation of MM-AQ-2. These mitigation measures are fully set forth in the MMRP and Table 2-4 of Chapter 2, *Executive Summary*, of the Final EIR and are briefly described as follows:

MM-AQ-1: Limit the Size of Overlapping New Fireworks Display Events in Compliance with the Conditions of the Proposed Ordinance; the size of Fourth of July Fireworks Display Events at National City and Chula Vista are not to exceed 400 pounds of fireworks.

MM-AQ-2: Implement Air Quality-Related Conditions of the Proposed Ordinance; fireworks display events shall implement Best Management Practices (BMPs) for fireworks display event preparation, discharge and clean-up; and alternative fireworks produced with pyrotechnic formulas shall be used which replace perchlorate with other oxidizers and propellants that burn cleaner, produce less smoke, and reduce pollutant waste loading to surface waters.

4.1.2 Impact-AQ-2: Cumulative Emissions in Excess of PM2.5 Thresholds during Combined Fourth of July Fireworks Display Events

Potentially Significant Impact: Project emissions during new Fourth of July fireworks display events, before mitigation, would exceed the threshold for PM2.5 and, when combined with other nearby past, present, and probable future projects, may result in a cumulatively considerable net increase of a criteria pollutant for which the region is in nonattainment under an applicable state ambient air quality standard. The contribution of project-related emissions is considered significant because the proposed project would exceed thresholds that have been set by SDAPCD to attain the CAAQS during Fourth of July fireworks display events. Detailed information and analysis regarding this significant potential impact are provided in Volume II (Draft EIR), Section 4.2, *Air Quality and Health Risk*, with revisions and clarifications in Final EIR Chapter 3 *Errata and Revisions*, if applicable.

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the approved project that avoid or substantially lessen the significant environmental effect on air quality and health risk identified as Impact-AQ-2 in the EIR.

Facts in Support of Finding: The potential significant impact of the proposed project on air quality and health risk (Impact-AQ-2) is analyzed in Volume II (Draft EIR), Section 4.2, *Air Quality and Health Risk*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable. Impact-AQ-2, before mitigation, will result in the exceedance of the threshold for PM_{2.5} and, when combined with other nearby past, present, and probable future projects, may result in a cumulatively considerable net increase of a criteria pollutant for which the region is in nonattainment under an applicable state ambient air quality standard. The contribution of project-related emissions is considered cumulatively considerable because the project would exceed thresholds that have been set by SDAPCD to attain the CAAQS during Fourth of July fireworks display events.

The potential significant impact on air quality and health risk (Impact-AQ-1) can be reduced to below a level of significance by implementation of Mitigation Measure MM-AQ-1 and reduced further by implementation of MM-AQ-2, as set forth in full in the MMRP and Table 2-4 of Chapter 2, *Executive Summary*, of the Final EIR and described above in Section 4.1.1.

4.2 Biological Resources

4.2.1 Impact-BIO-1: Potential Direct Impact on Marine Reptiles from Fireworks-Generated Trash and Debris.

Impact-BIO-3: Potential Direct Impact on Avian Species from Fireworks-Generated Trash and Debris.

Potentially Significant Impact: The EIR identifies potentially significant direct impacts on biological resources (Impact-BIO-1 and Impact-BIO-3) associated with the introduction of fireworks-generated trash and debris that could cause injury to green sea turtles and avian species, because these species may mistakenly consume the waste, which could cause suffocation, starvation, or debilitation. Detailed information and analysis regarding these potential significant impacts are provided in Volume II (Draft EIR), Section 4.3, *Biological Resources*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable.

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the approved project that avoid or substantially lessen the significant environmental impacts on biological resources (Impact-BIO-1 and BIO-3) as identified in the EIR.

Facts in Support of Finding: The potential significant impacts of the proposed project on biological resources (Impact-BIO-1 and Impact-BIO-3) are analyzed in

Volume II (Draft EIR), Section 4.3, *Biological Resources*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable. Impact-BIO-1 and Impact-BIO-3 will result from the proposed new fireworks display events that would introduce fireworks-generated trash and debris, which in turn has the potential to cause injury to green sea turtles and avian species from the consumption of the waste materials, which could cause suffocation, starvation, or debilitation.

The potential significant impact on *Biological Resources* (Impact-BIO-1 and Impact-BIO-3) under the proposed project will be mitigated to a less-than-significant level by implementing Mitigation Measure MM-BIO-1 and reduced further by MM-BIO-4. These mitigation measures are set forth in full in the MMRP and Table 2-4 of Chapter 2, *Executive Summary*, of the Final EIR and are briefly described below.

MM-BIO-1: Implementation of Biological Resources-Related Conditions of the Proposed Ordinance for Direct Impacts. The fireworks organizer and operator are required to comply with the numerous biological resources-related conditions of the proposed ordinance, including (but not limited to): requirements concerning fireworks chemical composition and packaging, BMPs (such as providing cleanup crews and boats to conduct sweeps of the fireworks detonation zone to gather any floating debris from spent fireworks), and compliance with San Diego Water Board General Permit and other required permits and laws.

MM-BIO-4: Fireworks Biological Monitoring Plan. Not less than 30 days before any fireworks display event in the South Bay that would occur within 1 mile of sensitive avian nesting colonies, the fireworks organizer shall submit to the District an Avian Species Nesting Colony Monitoring Plan (Monitoring Plan). The Monitoring Plan shall be prepared by a qualified biologist and approved by the District in coordination with the U.S. Fish and Wildlife Service and CDFW. The Monitoring Plan shall identify the monitoring protocol that will be used to assess the effectiveness of mitigation measures **MM-BIO-1** and **MM-BIO-2**.

4.2.2 Impact-BIO-2: Potential Indirect Impacts on Marine Reptiles from Increased Human and Boating Activity.

Impact-BIO-4: Potential Indirect Impacts on Special-Status Avian Species from Increased Human and Boating Activity.

Potentially Significant Impact: The EIR identifies potentially significant indirect impacts on biological resources (Impact-BIO-2 and Impact-BIO-4) as a result of increased foot traffic on sand dunes and beaches that can cause disturbance to nesting sites during and immediately after the proposed new fireworks display events. Detailed information and analysis regarding these potential significant impacts are provided in Volume II (Draft EIR), Section 4.3, *Biological Resources*,

with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable.

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the approved project that avoid or substantially lessen the significant environmental effect on biological resources (Impact-BIO-2 and BIO-4) as identified in the EIR.

Facts in Support of Finding: The potential significant impacts of the proposed project on biological resources (Impact-BIO-2 and Impact-BIO-4) are analyzed in Volume II (Draft EIR), Section 4.3, *Biological Resources*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable. The proposed new fireworks display events have the potential to result in indirect impacts on marine reptiles (green sea turtles) and special-status avian species (particularly California least tern and western snowy plover). Concerning green sea turtles, the increase in boat traffic, particularly nighttime and out-of-channel traffic, would increase the potential for propeller strikes, which may cause injury to or death of green sea turtles. Concerning special-status avian species, this would occur as a result of increased foot traffic on sand dunes and beaches that can cause disturbance to nesting sites during and immediately after the proposed new fireworks display events.

The potential significant impacts on biological resources (Impact-BIO-2 and Impact-BIO-4) will be mitigated to a less-than-significant level by the implementation of Mitigation Measure MM-BIO-2 and reduced further by implementation of MM-BIO-4, as set forth in full in the MMRP and Table 2-4 of Chapter 2, *Executive Summary*, of the Final EIR. MM-BIO-4 was described above in Section 4.2.1 and MM-BIO-2 is described below.

MM-BIO-2: Implementation of Biological Resources–Related Conditions of the Proposed Ordinance for Indirect Impacts. The fireworks organizer and operator are required to comply with the following biological resources–related conditions of the proposed ordinance including (but not limited to): protection of species and habitat between February 15 and September 15, post temporary signage along primary access points to sensitive nesting colonies and habitat areas to identify safe viewing locations; implement a public education program to educate potential viewers regarding appropriate viewing and boat docking areas to discourage trespass into sensitive wildlife habitat; and implement BMPs for fireworks display event preparation, discharge and clean-up. In addition, the fireworks organizer shall provide security guards to direct persons away from and to discourage trespass into sensitive nesting areas or habitat and security patrols of the water areas to enforce the existing restrictions on access to unauthorized areas during such fireworks display events in the South Bay.

4.2.3 Impact-BIO-5: Potential Direct Impact on Sensitive Habitat and Wetlands from Fireworks-Generated Trash and Debris.

Impact-BIO-6: Potential Direct Impact on Eelgrass Habitat from Fireworks Barges and Tugboat Activity.

Potentially Significant Impact: The EIR identifies potentially significant direct impacts on biological resources (Impact-BIO-5 and Impact-BIO-6) as a result of fireworks-generated trash and debris, fireworks barges, and tugboat activity. Detailed information and analysis regarding these potential significant impacts are provided in Volume II (Draft EIR), Section 4.3, *Biological Resources*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable.

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the approved project that avoid or substantially lessen the significant environmental effect on biological resources (Impact-BIO-5 and Impact-BIO-6) as identified in the EIR.

Facts in Support of Finding: The potential significant impacts of the proposed project on biological resources (Impact-BIO-5 and Impact-BIO-6) are analyzed in Volume II (Draft EIR), Section 4.3, *Biological Resources*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable. The waste resulting from exploded fireworks shells could fall primarily into the waters of San Diego Bay, potentially resulting in impacts on sensitive habitats and federally protected wetlands of south San Diego Bay. In addition, the positioning of fireworks barges along the Chula Vista Bayfront over the shallow flats could result in direct impacts on eelgrass habitat and its nursery habitat functions, particularly at low tides.

The potential significant impacts on biological resources (Impact-BIO-5 and Impact-BIO-6) will be mitigated to a less-than-significant level by the implementation of Mitigation Measures MM-BIO-1 and MM-BIO-3, and reduced further by implementation of MM-BIO-4, as set forth in full in the MMRP and Table 2-4 of Chapter 2, *Executive Summary*, of the Final EIR. Mitigation Measures MM-BIO-1 and MM-BIO-4 were previously described above in Section 4.2.1. Mitigation Measure MM-BIO-3 is described below.

MM-BIO-3: Implementation of the Biological Resources-Related Conditions of the Proposed Ordinance for Direct Eelgrass Impacts.

The fireworks organizer and operator are required to comply with the following biological resources-related conditions of the proposed ordinance including (but not limited to): for fireworks display events with launching sites located in shallow water with the potential for eelgrass to occur, fireworks barges shall be held in place by tugboats and shall not require temporary moorings; to the extent practicable, barges shall be located in unvegetated deep water channels outside of eelgrass beds; pre-event and post-event eelgrass surveys shall be completed to identify the distribution of eelgrass to assist tug operators and to assess any

impacts to eelgrass that may occur; tug operators shall be made aware of shallow eelgrass and instructed not to use high thrust in the vicinity of eelgrass beds.

4.2.4 Impact-BIO-7: Potential Indirect Impact on Sensitive Habitat and Wetlands from Increased Human and Boating Activity.

Potentially Significant Impact: The EIR identifies a potentially significant indirect impact on biological resources (Impact-BIO-7) as a result of increased boat traffic and human activity due to fireworks viewing. Detailed information and analysis regarding this potential significant impact are provided in Volume II (Draft EIR), Section 4.3, *Biological Resources*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable.

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the approved project that avoid or substantially lessen the significant environmental effect on biological resources (Impact-BIO-7) as identified in the EIR.

Facts in Support of Finding: The potential significant impact of the proposed project on biological resources (Impact-BIO-7) is analyzed in Volume II (Draft EIR), Section 4.3, *Biological Resources*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable. Increased boat traffic could result in minor damage to eelgrass beds through unauthorized anchoring and/or propeller dragging. The proposed new fireworks display events could attract crowds to the Silver Strand State Beach, some of whom may trespass into restricted beach areas that are utilized by sensitive avian species.

The potential significant impact on biological resources (Impact-BIO-7) will be mitigated to a less-than-significant level by implementing Mitigation Measure MM-BIO-2 and reduced further by implementation of MM-BIO-4, as set forth in full in the MMRP and Table 2-4 of Chapter 2, *Executive Summary*, of the Final EIR. Mitigation Measure MM-BIO-2 was previously described above in Section 4.2.2 and MM-BIO-4 was previously described above in Section 4.2.1.

4.2.5 Impact-BIO-8: Potential Indirect Impact on Usage of Nursery Sites from Increased Human Activity.

Potentially Significant Impact: The EIR identifies a potentially significant indirect impact on biological resources (Impact-BIO-8) as a result of increased boat traffic and human activity due to fireworks viewing. Detailed information and analysis regarding this potential significant impact are provided in Volume II (Draft EIR), Section 4.3, *Biological Resources*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable.

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the approved project that avoid or substantially lessen the significant environmental effect on biological resources (Impact-BIO-8) as identified in the EIR.

Facts in Support of Finding: The potential significant impact of the proposed project on biological resources (Impact-BIO-8) is analyzed in Volume II (Draft EIR), Section 4.3, *Biological Resources*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable. Indirect impacts on protected avian species from proposed new fireworks display events, such as increased foot traffic in or adjacent to nesting sites, increased human-generated trash, and noise associated with boating activity, are considered potentially significant due to disturbance noted in nesting birds.

The potential significant impact on biological resources (Impact-BIO-8) will be mitigated to a less-than-significant level by the implementation of Mitigation Measure MM-BIO-2 and reduced further by implementation of MM-BIO-4, as set forth in full in the MMRP and Table 2-4 of Chapter 2, *Executive Summary*, of the Final EIR. Mitigation Measure MM-BIO-2 was previously described above in Section 4.2.2 and MM-BIO-4 was previously described above in Section 4.2.1.

4.2.6 Impact-BIO-9: Potential Conflict with the City of San Diego and Chula Vista MSCP Subarea Plans.

Impact-BIO-10: Potential Conflict with the San Diego Bay National Wildlife Refuge Comprehensive Conservation Plan.

Potentially Significant Impact: The EIR identifies potentially significant direct and indirect impacts on biological resources (Impact-BIO-9 and Impact-BIO-10), as new fireworks display events have the potential to conflict with applicable habitat conservation plans. Detailed information and analysis regarding these potential significant impacts are provided in Volume II (Draft EIR), Section 4.3, *Biological Resources*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable.

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the approved project that avoid or substantially lessen the significant environmental effects on biological resources (Impact-BIO-9 and BIO-10) as identified in the EIR.

Facts in Support of Finding: The potential significant impacts of the proposed project on biological resources (Impact-BIO-9 and Impact-BIO-10) are analyzed in Volume II (Draft EIR), Section 4.3, *Biological Resources*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable. The proposed new fireworks display events have the potential to result in significant direct and indirect impacts on habitat within the City of San Diego Multi-Habitat Planning Area and City of Chula Vista Multiple Species Conservation Program (MSCP) Preserve. The proposed new fireworks display events also have the potential to result in direct and indirect impacts on sensitive habitat and green sea turtles present within the San Diego Bay National Wildlife Refuge, which would be considered significant.

The potential significant impacts on biological resources (Impact-BIO-9 and Impact-BIO-10) will be mitigated to a less-than-significant level by the

implementation of Mitigation Measures MM-BIO-1 and MM-BIO-2, and reduced further by implementation of MM-BIO-4, as set forth in full in the MMRP and Table 2-4 of Chapter 2, *Executive Summary*, of the Final EIR. Mitigation Measures MM-BIO-1 and MM-BIO-4 were previously described above in Section 4.2.1. Mitigation Measure MM-BIO-2 was previously described above in Section 4.2.2.

4.3 Hydrology and Water Quality

4.3.1 Impact-WQ-1: Surface Water Pollutant Related to Fireworks Debris.

Potentially Significant Impact: The EIR identifies a potentially significant impact on hydrology and water quality (Impact-WQ-1) associated with the proposed fireworks display events in that the events could pollute surface waters if fireworks debris is not properly recovered. Detailed information and analysis regarding this potential significant impact are provided in Volume II (Draft EIR), Section 4.6, *Hydrology and Water Quality*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable.

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the approved project that avoid or substantially lessen the significant environmental effect on hydrology and water quality identified as Impact WQ-1 in the EIR; and pursuant to CEQA Guidelines §15091(a)(3), specific legal, economic, social, technological, or other considerations make infeasible other mitigation measures or project alternatives identified in the EIR.

Facts in Support of Finding: The potential significant impact of the proposed project on hydrology and water quality (Impact-WQ-1) is analyzed in Volume II (Draft EIR), Section 4.6, *Hydrology and Water Quality*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable. Impact-WQ-1 would result during proposed fireworks display events if fireworks debris is not properly recovered, thus polluting surface waters.

The potential significant impact on hydrology and water quality (Impact-WQ-1) would be reduced by requiring implementation of Mitigation Measure MM-WQ-1. This mitigation measure is fully set forth in the MMRP and Table 2-4 of Chapter 2, *Executive Summary*, of the Final EIR. MM-WQ-1 is briefly described below:

MM-WQ-1: Implementation of Water Quality–Related Conditions of the Proposed Ordinance for Fireworks Debris. The fireworks organizer and operator are required to comply with the numerous water quality-related conditions of the proposed ordinance, including (but not limited to): requirements pertaining to fireworks chemical composition and packaging; implementation of numerous BMPs for fireworks display event preparation, discharge and clean-up; and compliance with San Diego Water Board General Permit and other required permits and laws.

Under the project, implementation of Mitigation Measure MM-WQ-1 would reduce the water quality impacts associated with the proposed new fireworks display events, but not below significance. Despite the incorporation of Mitigation Measure MM-WQ-1, the impact on hydrology and water quality (Impact-WQ-1) is considered significant and unavoidable. This is because uncontrollable factors such as weather conditions, amount of paper incinerated, sunken material, or material that is blown onto land may affect the ability to recover all post-show debris related to fireworks on surface waters. Therefore, a Statement of Overriding Considerations pursuant to CEQA Guidelines §15093 is required.

4.3.2 Impact-WQ-2: Surface Water Pollutant Related to Increased Human-Generated Trash and Litter.

Potentially Significant Impact: The EIR identifies a potentially significant impact on hydrology and water quality (Impact-WQ-2) associated with the proposed fireworks display events in that publicly advertised fireworks display events could pollute surface waters if increased human-generated trash and litter within the major public viewing areas is not properly disposed of and cleaned up. Detailed information and analysis regarding this potential significant impact are provided in Volume II (Draft EIR), Section 4.6, *Hydrology and Water Quality*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable.

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the approved project that avoid or substantially lessen the significant environmental effect on hydrology and water quality (Impact-WQ-2) as identified in the EIR.

Facts in Support of Finding: The potential significant impact of the proposed project on hydrology and water quality (Impact-WQ-2) is analyzed in Volume II (Draft EIR), Section 4.6, *Hydrology and Water Quality*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable. Impact-WQ-2 would result during publicly advertised fireworks display events if increased human-generated trash and litter within the major public viewing areas is not properly disposed of and cleaned, thus polluting surface waters.

The potential significant impact on hydrology and water quality (Impact-WQ-2) will be mitigated to a less-than-significant level by requiring implementation of Mitigation Measure MM-WQ-2. This mitigation measure is fully set forth in the MMRP and Table 2-4 of Chapter 2, *Executive Summary*, of the Final EIR. MM-WQ-2 is described below.

MM-WQ-2: Implementation of Water Quality–Related Conditions of the proposed Ordinance for Human-Generated Trash and Litter. The fireworks organizer and operator are required to comply with the following water quality–related condition of the proposed ordinance: For all Fourth of July fireworks display events and for Non-Fourth of July fireworks display events which are advertised to the public, the fireworks operator

shall double the number of trash receptacles at major viewing areas prior to each fireworks display event; trashcans shall be emptied and parks and viewing areas shall be cleaned following the event.

4.4 Noise and Vibration

4.4.1 Impact-NOI-1: Substantial Periodic or Temporary Increase in Ambient Noise Levels of the Proposed New Fireworks Display Events.

Potentially Significant Impact: The EIR identifies a potential significant impact on noise and vibration (Impact-NOI-1) in that the proposed new fireworks display events (both Fourth of July and non-Fourth of July events) would result in a noise increase at the Coronado Cays homes to the west in the City of Coronado. Detailed information and analysis regarding this potential significant impact are provided in Volume II (Draft EIR), Section 4.8, *Noise and Vibration*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable.

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the approved project that avoid or substantially lessen the significant environmental effect on noise and vibration identified as Impact-NOI-1 in the EIR; and pursuant to CEQA Guidelines §15091(a)(3), specific legal, economic, social, technological, or other considerations make infeasible other mitigation measures or project alternatives identified in the EIR.

Facts in Support of Finding: The potential significant impact of the proposed project on noise and vibration (Impact-NOI-1) is analyzed in Volume II (Draft EIR), Section 4.9, *Noise and Vibration*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable. Impact-NOI-1 would result because noise increases would occur during proposed new fireworks display events (both Fourth of July and non-Fourth of July events) at homes in the City of Coronado, west of the proposed National City and Chula Vista launch locations.

The potential significant impact on noise and vibration (Impact-NOI-1) would be reduced by implementation of Mitigation Measure MM-NOI-1. This mitigation measure is fully set forth in the MMRP and Table 2-4 of Chapter 2, *Executive Summary*, of the Final EIR and is briefly described as follows:

MM-NOI-1: Implementation of Noise-Related Conditions of the proposed Ordinance. The fireworks organizer and operator are required to comply with the following noise related conditions of the proposed ordinance: fireworks display events shall be located not less than one (1) mile from any federally or state-listed avian species nesting colony unless the maximum size of shells used in the event is limited to eight (8) inches; in addition, fireworks display events shall not use concussion type, non-color shells such as “salutes” or “reports” during the initial twenty-five percent (25 percent) of the duration of any display (e.g., within the first 5 minutes of a 20-minute display).

Under the project, implementation of Mitigation Measure MM-NOI-1 would provide some reduction in overall noise levels from proposed new fireworks display events. The exact amount of noise reduction provided by these conditions cannot be quantified because of the many variables (e.g., precise numbers and types of fireworks to be used, size of shells), but the reductions would be modest. Because loud noise (including noise levels that are intended to be significantly higher than ambient conditions) is considered an integral part of traditional fireworks display events, mitigation measures, such as avoiding the use of noise-generating fireworks (i.e., using silent fireworks), would fundamentally change the nature of the proposed project and the overall audible experience of the display. Despite the incorporation of Mitigation Measure MM-NOI-1, the impact on noise and vibration (Impact-NOI-1) is considered significant and unavoidable and a Statement of Overriding Considerations pursuant to CEQA Guidelines §15093 is required.

4.5 Transportation, Circulation, and Parking

4.5.1 Impact-TRA-1: Decrease in the Performance of Roadway, Pedestrian, and Bicycle Facilities from Proposed New Fireworks Display Events.

Potentially Significant Impact: The EIR identifies a potential significant impact on transportation, circulation, and parking (Impact-TRA-1) in that the proposed new fireworks display events have the potential to temporarily decrease the performance of roadway, pedestrian, and bicycle facilities as a result of increased levels of vehicular, pedestrian, and bicycle activity. Detailed information and analysis regarding this potential significant impact are provided in Volume II (Draft EIR), Section 4.10, *Transportation, Circulation, and Parking*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable.

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the approved project that avoid or substantially lessen the significant environmental effect on transportation, circulation, and parking identified as Impact-TRA-1 in the EIR; and pursuant to CEQA Guidelines §15091(a)(3), specific legal, economic, social, technological, or other considerations make infeasible other mitigation measures or project alternatives identified in the EIR.

Facts in Support of Finding: The potential significant impact of the proposed project on transportation, circulation, and parking (Impact-TRA-1) is analyzed in Volume II (Draft EIR), Section 4.10, *Transportation, Circulation, and Parking*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable. Impact-TRA-1 would result because new fireworks display events would temporarily decrease the performance of roadway, pedestrian, and bicycle facilities as a result of increased levels of vehicular, pedestrian, and bicycle activity.

The potential significant impact on transportation, circulation, and parking (Impact-TRA-1) under the project would be reduced by implementation of Mitigation Measure MM-TRA-1. This mitigation measure is fully set forth in the MMRP and Table 2-4 of Chapter 2, *Executive Summary*, of the Final EIR and is briefly described as follows:

MM-TRA-1: Implementation of the Transportation-Related Conditions of the Proposed Ordinance. The fireworks organizer is required to comply with the following transportation-related condition of the proposed ordinance, including (but not limited to): for all Fourth of July fireworks display events and for non-Fourth of July fireworks display events that are advertised to the public, the fireworks organizer shall prepare and submit an event transportation and parking management plan, which shall be designed to ensure safe and convenient access to public viewing areas while limiting conflicts between transportation modes and reducing impacts on surrounding transportation facilities to the maximum extent feasible. The Applicant shall also demonstrate that it has obtained and shall comply with all other permits and approvals required by federal, state, and local laws and regulations including, without limitation, such permits and approvals as are required by the United States Coast Guard, California Coastal Act, and the District Code.

Under the project, implementation of Mitigation Measure MM-TRA-1 would reduce the traffic impacts during all Fourth of July fireworks display events and non-Fourth of July fireworks display events that are advertised to the public, but it cannot be determined with certainty that the impacts would be reduced to less-than-significant levels. Therefore, despite the incorporation of Mitigation Measure MM-TRA-1, the impact on transportation, circulation, and parking (Impact-TRA-1) is considered significant and unavoidable and a Statement of Overriding Considerations pursuant to CEQA Guidelines §15093 is required.

4.5.2 Impact-TRA-2: Inadequate Parking Supply During proposed New Fireworks Display Events.

Potentially Significant Impact: The EIR identifies a potential significant impact on transportation, circulation, and parking (Impact-TRA-2) in that the proposed new fireworks display events have the potential to result in a temporary inadequate supply during the displays due to an increased demand on parking facilities serving the viewing locations. Detailed information and analysis regarding this potential significant impact are provided in Volume II (Draft EIR), Section 4.10, *Transportation, Circulation, and Parking*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable.

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the approved project that avoid or substantially lessen the significant environmental effect on transportation, circulation, and parking identified as Impact-TRA-2 in the EIR; and pursuant to CEQA Guidelines §15091(a)(3), specific legal, economic, social, technological, or

other considerations make infeasible other mitigation measures or project alternatives identified in the EIR.

Facts in Support of Finding: The potential significant impact of the proposed project on transportation, circulation, and parking (Impact-TRA-2) is analyzed in Volume II (Draft EIR), Section 4.10, *Transportation, Circulation, and Parking*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable. Impact-TRA-2 would result because new fireworks display events have the potential to result in a temporary inadequate supply during the displays due to an increased demand on parking facilities serving the viewing locations.

The potential significant impact on transportation, circulation, and parking (Impact-TRA-2) would be reduced by implementation of Mitigation Measure MM-TRA-1. This mitigation measure is fully set forth in the MMRP and Table 2-4 of Chapter 2, *Executive Summary*, of the Final EIR and was previously described in Section 4.5.1.

Under the project, implementation of an approved Event Transportation and Parking Management Plan as set forth in MM-TRA-1 would reduce the parking impacts during fireworks display events. However, there are no metrics or tools available to quantify the effectiveness of the Event Transportation and Parking Management Plan in reducing parking impacts. Therefore, because the extent to which impacts would be reduced cannot be quantified, it cannot be determined with certainty that the impacts would be reduced to less-than-significant levels. Therefore, despite the incorporation of Mitigation Measure MM-TRA-1, the impact on transportation, circulation, and parking (Impact-TRA-2) is considered significant and unavoidable and a Statement of Overriding Considerations pursuant to CEQA Guidelines §15093 is required.

5.0 FINDINGS REGARDING CUMULATIVE SIGNIFICANT EFFECTS

CEQA requires a lead agency to evaluate the cumulative impacts of a proposed project. (CEQA Guidelines §15130(a).) Cumulative impacts are those that are considered significant when viewed in connection with the impacts of other closely related past, present, and reasonably foreseeable future projects. (CEQA Guidelines §15355.) Cumulative impacts can result from individually minor but collectively significant projects taking place over a period of time.

The EIR considers the cumulative effects of past, present, and reasonably foreseeable future fireworks display events, development projects, and temporary special events and the proposed project's contribution to these effects. Past development projects are defined as those that were recently completed and are now operational. Past and present fireworks display events and temporary special events are defined as those that occurred during the year 2015, unless noted otherwise. Present development projects are defined as those that are under construction but not yet operational. Reasonably foreseeable future fireworks display events and temporary special events are defined as those that have historically re-occurred annually, and therefore are anticipated to continue to reoccur in the future. Reasonably foreseeable future

development projects are defined as those for which a development application has been submitted or credible information is available to suggest that project development is a probable outcome at the time the Notice of Preparation was issued (September 2015).

Based on information obtained through consultation with SDRWQCB and the cities of San Diego, Coronado, National City, Chula Vista, and Imperial Beach, a total of 53 existing fireworks display events were identified for the cumulative analysis. The cumulative fireworks display events listed in Volume II (Draft EIR) Chapter 5, *Cumulative Impacts*, Tables 5-2 and 5-3 all occurred in and around San Diego Bay and Imperial Beach during the year 2015 and were issued permits by the appropriate public agency (i.e., a Special Event Permit). The list of cumulative fireworks display events provided represents the best estimate possible based on the current information available and accounts for only those fireworks display events for which the District received copies of permits as a result of consultation with the aforementioned agencies. However, given the uncertainty surrounding special events in general, the number of actual future fireworks display events in and around San Diego Bay and Imperial Beach may fluctuate from year to year depending on various factors such as the state of the economy and population growth. Nothing would preclude the occurrence of an additional number of future cumulative fireworks display events with those provided in Tables 5-2 and 5-3, as these fireworks display events are outside of the District's control. The cumulative analysis assumes that all event sponsors complied with any and all applicable federal, state, and local regulations and requirements governing fireworks display events, and that all fireworks display event organizers applied for, and received, all necessary permits from the appropriate regulatory agency.

The project would contribute to cumulative impacts related to air quality and health risk, biological resources, and hydrology and water quality. The findings below identify each of the significant cumulative environmental impacts, the mitigation measures adopted to substantially lessen or to avoid them, or the reasons proposed mitigation measures are infeasible due to specific economic, social, or other considerations. The findings incorporate by reference the analysis of significant cumulative impacts contained in Volume II (Draft EIR), Chapter 5 *Cumulative Impacts*, and as revised within Chapter 3, *Errata and Revisions*, of the Final EIR.

The significant cumulative impacts related to air quality and health risk and biological resources identified in the EIR would be reduced to a level below significance after implementation of feasible mitigation. The significant cumulative impacts related to hydrology and water quality identified in the EIR would not be avoided or reduced to a level below significance despite the incorporation of all feasible mitigation measures and alternatives. As described in the Statement of Overriding Considerations below, therefore, the District has determined these unavoidable significant cumulative impacts are acceptable because of specific overriding considerations.

5.1 Air Quality and Health Risk

5.1.1 Impact-C-AQ-1: Emissions in Excess of Cumulative PM2.5 Thresholds during Combined National City Bayfront and Chula Vista Bayfront Fourth of July Fireworks Display Events.

Potentially Significant Impact: The EIR identifies a potential significant cumulative impact on air quality and health risk (Impact-C-AQ-1) in that project emissions generated when the new National City Bayfront and Chula Vista Bayfront Fourth of July fireworks display events occur at the same time, before mitigation, would exceed the daily San Diego County SLTs for PM2.5. The contribution of project-related emissions is considered cumulatively considerable because the project emissions would exceed the daily threshold that has been set by SDAPCD to attain the PM2.5 NAAQS and CAAQS. Detailed information and analysis regarding this significant potential impact are provided in Volume II (Draft EIR), Chapter 5, *Cumulative Impacts* (Air Quality and Health Risk), with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable.

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the approved project that avoid or substantially lessen the significant environmental effect on air quality and health risk identified as Impact-C-AQ-1 in the EIR.

Facts in Support of Finding: The potential significant impacts of the proposed project on air quality and health risk (Impact-C-AQ-1) are analyzed in Volume II (Draft EIR), Chapter 5, *Cumulative Impacts* (Air Quality and Health Risk), with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable. Impact-C-AQ-1 will result from project emissions generated when the new National City Bayfront and Chula Vista Bayfront Fourth of July fireworks display events occur at the same time, and, when combined with other nearby past, present, and probable future projects, would exceed the daily San Diego County SLTs for PM2.5. The contribution of project-related emissions is considered significant because the project emissions would exceed the daily threshold that has been set by SDAPCD to attain the PM2.5 NAAQS and CAAQS.

The potential significant impact on air quality and health risk (Impact-C-AQ-1) would be reduced to below significance by requiring implementation of Mitigation Measure MM-AQ-1 and further reduced by implementation of MM-AQ-2. These mitigation measures are fully set forth in the MMRP and Table 2-4 of Chapter 2, *Executive Summary*, of the Final EIR and were previously described in Section 4.1.1.

5.2 Biological Resources

5.2.1 Impact-C-BIO-1: Cumulatively Considerable Accumulation of Trash and Debris in Upland and Marine Habitats.

Potentially Significant Impact: The EIR identifies a potentially significant direct and indirect cumulative impact on biological resources (Impact C-BIO-1) due to the accumulation of trash and debris in upland and marine habitats when combined with past, present, and reasonably foreseeable future projects. Detailed information and analysis regarding this potential significant impact are provided in Volume II (Draft EIR), Section 4.3, *Biological Resources*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable.

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the approved project that avoid or substantially lessen the significant environmental effect on biological resources (Impact C-BIO-1) as identified in the EIR.

Facts in Support of Finding: The potential significant cumulative impact of the proposed project on biological resources (Impact C-BIO-1) is analyzed in Volume II (Draft EIR), Section 4.3, *Biological Resources*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable. The proposed new fireworks display events have the potential to directly and indirectly contribute to a cumulatively considerable accumulation of trash and debris in upland and marine habitats when combined with past, present, and reasonably foreseeable future projects.

The potential significant impact on biological resources (Impact C-BIO-1) will be mitigated to a less-than-significant level by the implementation of Mitigation Measures MM-BIO-1 and MM-BIO-2, and reduced further by implementation of MM-BIO-4, which are set forth in full in the MMRP and Table 2-4 of Chapter 2, *Executive Summary*, of the Final EIR. Mitigation Measures MM-BIO-1, MM-BIO-2, and MM-BIO-4 were previously described above in Sections 4.2.1 and 4.2.2.

5.3 Hydrology and Water Quality

5.3.1 Impact C-WQ-1: Contribute to a Cumulatively Considerable Water Quality Impact from an Accumulation of Debris.

Potentially Significant Impact: The EIR identifies a potentially significant cumulative impact on hydrology and water quality (Impact C-WQ-1) associated with the proposed fireworks display events in that the events could contribute to an accumulation of fireworks debris when combined with multiple past, present, and foreseeable future fireworks display events that occur in San Diego Bay throughout the year, which could degrade surface water quality if fireworks debris is not properly recovered. Detailed information and analysis regarding this potential significant impact are provided in Volume II (Draft EIR), Section 4.6,

Hydrology and Water Quality, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable.

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the approved project that avoid or substantially lessen the significant environmental effect on hydrology and water quality identified as Impact C-WQ-1 in the EIR; and pursuant to CEQA Guidelines §15091(a)(3), specific legal, economic, social, technological, or other considerations make infeasible other mitigation measures or project alternatives identified in the EIR.

Facts in Support of Finding: The potential cumulatively considerable impact of the proposed project on hydrology and water quality (Impact C-WQ-1) is analyzed in Volume II (Draft EIR), Section 4.6, *Hydrology and Water Quality*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable. Impact C-WQ-1 would occur in that events could contribute to an accumulation of fireworks debris when combined with multiple past, present, and foreseeable future fireworks display events that occur in San Diego Bay throughout the year, which could degrade surface water quality if fireworks debris is not properly recovered.

The potential cumulatively considerable impact on hydrology and water quality (Impact C-WQ-1) would be reduced by requiring implementation of Mitigation Measure MM-WQ-1. This mitigation measure is fully set forth in the MMRP and Table 2-4 of Chapter 2, *Executive Summary*, of the Final EIR. MM-WQ-1 was previously described in Section 4.3.1.

Under the project, implementation of Mitigation Measure MM-WQ-1 would reduce the cumulatively considerable water quality impacts associated with the proposed new fireworks display events, but not below significance. Despite the incorporation of Mitigation Measure MM-WQ-1, the cumulative impact on hydrology and water quality (Impact C-WQ-1) is considered significant and unavoidable and a Statement of Overriding Considerations pursuant to CEQA Guidelines §15093 is required.

5.3.2 Impact C-WQ-2: Contribute to a Cumulatively Considerable Water Quality Impact from an Accumulation of Trash and Litter.

Potentially Significant Impact: The EIR identifies a potentially significant cumulatively considerable impact on hydrology and water quality (Impact C-WQ-2) associated with the proposed fireworks display events in that new fireworks display events could contribute to an accumulation of trash and litter in San Diego Bay when combined with multiple past, present, and foreseeable future fireworks display events that occur in San Diego Bay throughout the year, which could degrade water quality. Detailed information and analysis regarding this potential significant impact are provided in Volume II (Draft EIR), Section 4.6, *Hydrology and Water Quality*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable.

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the approved project that avoid or substantially lessen the significant environmental effect on hydrology and water quality (Impact C-WQ-2) as identified in the EIR.

Facts in Support of Finding: The potential cumulatively considerable impact of the proposed project on hydrology and water quality (Impact C-WQ-2) is analyzed in Volume II (Draft EIR), Section 4.6, *Hydrology and Water Quality*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable. Impact-C-WQ-2 would result in that new fireworks display events could contribute to an accumulation of trash and litter in San Diego Bay when combined with multiple past, present, and foreseeable future fireworks display events that occur in San Diego Bay throughout the year, which could degrade water quality.

The potential cumulatively considerable impact on hydrology and water quality (Impact-WQ-2) will be mitigated to a less-than-significant level by requiring implementation of Mitigation Measure MM-WQ-2. This mitigation measure is fully set forth in the MMRP and Table 2-4 of Chapter 2, *Executive Summary*, of the Final EIR. MM-WQ-2 was previously described in Section 4.3.2.

6.0 FINDINGS REGARDING PROJECT ALTERNATIVES

In preparing and adopting findings, a lead agency need not necessarily address the feasibility of both mitigation measures and environmentally superior alternatives when contemplating the approval of a project with significant environmental impacts. Where the significant impacts can be mitigated to a level of insignificance solely by the adoption of mitigation measures, the lead agency has no obligation in drafting its findings to consider the feasibility of environmentally superior alternatives, even if their impacts would be less severe than those of the project as mitigated. Accordingly, in adopting the findings concerning alternatives for the proposed project, the District considers only those significant environmental impacts that cannot be avoided or substantially lessened through mitigation.

Where a project will result in some unavoidable significant environmental impacts even after application of all feasible mitigation measures identified in an EIR, the lead agency must evaluate the project alternatives identified in the EIR. Under such circumstances, the lead agency must consider the feasibility of alternatives to the project that could avoid or substantially lessen the unavoidable significant environmental impacts. "Feasible" means capable of being accomplished in a successful manner within a reasonable time, taking into account economic, environmental, legal, social, and technological factors (CEQA Guidelines §15364).

If there are no feasible project alternatives, the lead agency must adopt a Statement of Overriding Considerations with regard to the project pursuant to CEQA Guidelines §15093. If there is a feasible alternative to the project, the lead agency must decide whether it is environmentally superior to the proposed

project. The lead agency must consider in detail only those alternatives that could feasibly attain most of the basic objectives of the project; however, the lead agency must consider alternatives capable of eliminating significant environmental impacts even if these alternatives would impede to some degree the attainment of project objectives. (CEQA Guidelines §15126.6(f).)

These findings contrast and compare the alternatives where appropriate in order to demonstrate that the selection of the approved project has substantial environmental, planning, fiscal, and other benefits. In rejecting certain alternatives, the District has examined the project objectives and weighed the ability of the various alternatives to meet the objectives. The District believes the approved project best meets these objectives with the least environmental impact. The objectives considered by the District are set forth in Section 1.4 above and in Volume II (Draft EIR), Section 3.2, *Project Objectives*.

The EIR examined a range of reasonable alternatives to determine whether they could meet the project objectives while avoiding or substantially lessening one or more of the proposed project's unavoidable significant impacts. These findings also considered the feasibility of each alternative. In determining the feasibility of alternatives, the District considered whether the alternatives could be accomplished in a successful manner within a reasonable period of time in light of economic, environmental, social, and technological factors. (CEQA Guidelines §15126(d)(5)(A), 15364.)

The EIR concluded that the proposed project will result in unavoidable significant direct impacts on hydrology and water quality; noise and vibration; and transportation, circulation, and parking, because even though these impacts could be reduced by the mitigation measures recommended in the EIR, the District cannot state with certainty that the impacts will be reduced below significance.

Accordingly, the EIR analyzed three alternatives to the proposed project: (1) the No Project Alternative, (2) the Quiet Fireworks Display Events Alternative, and (3) the No Salute Fireworks Alternative. Detailed information and analysis concerning these alternatives are set forth in Volume II (Draft EIR), Chapter 7, *Alternatives to the Proposed Project*, of the EIR, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable.

This section of the findings summarizes these alternatives and their feasibility and effectiveness in avoiding or substantially lessening any of the unavoidable significant impacts associated with the proposed project.

6.1 Alternative 1 – No Project Alternative

The No Project Alternative is an alternative required to be evaluated by CEQA (CEQA Guidelines §15126(d)(2)). The No Project Alternative assumes that the proposed project would not be implemented. The No Project Alternative serves as the alternative to compare the effects of the proposed project and other project alternatives on the existing conditions.

Under the No Project Alternative, the proposed ordinance would not be adopted and no performance standards to regulate the environmental effects of existing fireworks display events occurring in San Diego Bay or the Imperial Beach Oceanfront would be implemented. In addition, the four proposed new fireworks display events along the National City and Chula Vista Bayfronts would not occur. However, all existing fireworks display events that require a discretionary approval by the District or are operated by the District's tenants and have obtained all necessary agency permits, such as the General Permit from SDRWQCB, would continue to occur, including but not limited to those listed in Volume II (Draft EIR), Chapter 5, *Cumulative Impacts*, Table 5-2.

The potential impacts of the No Project Alternative are discussed in detail in Volume II (Draft EIR), Chapter 7, *Alternatives to the Proposed Project* (Section 7.5.1), with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable. Because the proposed ordinance would not be adopted and the four proposed new fireworks display events along the National City and Chula Vista Bayfronts would not occur, the No Project Alternative would avoid or substantially lessen the direct significant impacts on air quality and health risk; biological resources; hydrology and water quality; noise and vibration; and transportation, circulation, and parking and the cumulative significant impacts on air quality and health risk, biological resources, and hydrology and water quality associated with the proposed project.

However, the No Project Alternative would not meet most of the project objectives because it would not include the adoption of an ordinance that would include policies, performance standards, or other requirements that could be applied to all fireworks display events requiring discretionary action by the District or are operated by the District's tenants, and would preclude obtaining the benefits described in Section 7.0 below.

The District finds that all potential significant environmental impacts of the proposed project will be mitigated by the design of the proposed project and the adoption of the mitigation measures set forth in the MMRP, except the significant direct and cumulative impacts on hydrology and water quality; noise and vibration; and transportation, circulation, and parking. The District further finds that, although the No Project Alternative would avoid or substantially lessen the potential significant direct and cumulative impacts on air quality and health risk; biological resources; hydrology and water quality; noise and vibration; and transportation, circulation, and parking, the No Project Alternative is infeasible because it would not meet the majority of the project objectives and would not provide the District and the region with any of the benefits described below in the Statement of Overriding Considerations, and thus would be undesirable from a policy standpoint. For the potential significant impacts that cannot be avoided or mitigated to a level below significance, the District adopts the Statement of Overriding Considerations in Section 7.0 below pursuant to CEQA Guidelines §15093.

6.2 Alternative 2 – Quiet Fireworks Display Events Alternative

The Quiet Fireworks Display Events Alternative would require the proposed new fireworks display events along the National City and Chula Vista Bayfronts to be quiet fireworks display events that would not exceed a noise limit of 120 A-weighted decibels (dBA).¹ For this type of fireworks display event, the pyrotechnicians design a fireworks package that relies on the quieter types of fireworks. These fireworks display events would eliminate the use of “salute” fireworks altogether (*salute* fireworks, also known as maroon fireworks, are fireworks designed to make a very loud bang, or “report,” and an intense flash of light), as well as any other fireworks that generate a loud report, and instead focus on rich color effects and tight visual choreography in order to garner similar entertainment value out of the display. Generally, fireworks used in quiet fireworks display events would include fountains, wheels, cakes (such as cassettes, comets, spinners or turbillions, colored stars, fish or bees, and falling leaves), Chinese lanterns, and lanceworks.

It is important to note that the use of these fireworks would create a quieter, but not a silent, fireworks display event. In addition, quiet fireworks display events would involve fireworks that are concentrated closer to the ground with fewer aerial shells being employed due to the loud noise that can occur during propulsion of an aerial shell. Therefore, while these fireworks display events would be in the same locations as those specified for the proposed project (as detailed in Chapter 3, *Project Description* within Volume II, Draft EIR), i.e., on barges, because quiet fireworks display events would rely on fireworks that cannot achieve the same heights or the same magnitude as traditional fireworks displays, they would not be as prominently visible and the viewing area would be smaller than that of the proposed project. The Quiet Fireworks Display Events Alternative is intended to avoid or substantially lessen the significant noise impacts of the proposed project on nearby sensitive receptors.

The potential impacts of the Quiet Fireworks Display Events Alternative are discussed in detail in Volume II (Draft EIR), Chapter 7, *Alternatives to the Proposed Project* (Section 7.5.2), with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable. The Quiet Fireworks Display Events Alternative would have slightly greater significant impacts on air quality and health risk than the proposed project, even with similar project mitigation measures. The Quiet Fireworks Display Events Alternative would reduce the proposed project’s unavoidable significant impacts on noise and vibration, as the fireworks would be quieter, and on transportation, circulation, and parking, as the overall number of spectators would be reduced; however, the impacts would not be reduced to a less-than-significant level, even with the incorporation of project mitigation measures. This alternative would not reduce or substantially avoid the unavoidable significant impact on hydrology and water quality of the proposed

¹ 120 dBA maximum impulse sound pressure level due to the fireworks break(s), as measured at a horizontal distance of 15 meters from the launch point at a height of 1 meter above the ground, using a Type 1 sound measuring device with a free-field microphone.

project, as it would result in a similar amount of fireworks-generated debris and human-generated trash, even with the incorporation of project mitigation measures.

The Quiet Fireworks Display Events Alternative would achieve some of the project objectives stated in Section 1.4 above. However, this alternative would only partially meet Objectives #2 and #3, and would also not meet Objective #4. These fireworks display events, while providing a popular and region-wide way to celebrate and express civic pride, would differ significantly from traditional fireworks display events because they would not achieve the same heights and sounds as the fireworks used in traditional Fourth of July and other celebrations. In addition, a quiet fireworks display event would be concentrated lower to the ground and, as such, it would limit the vantage points from which these events would be visible and would decrease the number of spectators that would be able to view these events.

The District finds that the Quiet Fireworks Display Events Alternative would not achieve the project objectives relating to traditional fireworks display events because they would not reach the same heights or create the same sounds as the fireworks used in traditional Fourth of July and other celebrations; would limit the vantage points from which these events would be visible; would decrease the number of spectators that would be able to view these events as stated in Objectives #2, #3, and #4; and would preclude obtaining the benefits described in Section 7.0 below related to those objectives.

The District finds that all potential significant environmental impacts of the proposed project will be mitigated by the design of the proposed project and the adoption of the mitigation measures set forth in the MMRP, except the unavoidable significant direct impacts on hydrology and water quality; noise and vibration; and transportation, circulation, and parking, and the cumulatively considerable and unavoidable impact on hydrology and water quality. The District further finds that, although the Quiet Fireworks Display Events Alternative would reduce the potential significant direct and cumulative impacts on noise and vibration and transportation, circulation, and parking, these impacts would not be reduced to a less-than-significant level. The District further finds that the Quiet Fireworks Display Events Alternative is infeasible because it would not meet the majority of the project objectives and thus would be undesirable from a policy standpoint. For the potential significant impacts that cannot be avoided or mitigated to a level below significance, the District adopts the Statement of Overriding Considerations in Section 7.0 below pursuant to CEQA Guidelines §15093.

6.3 Alternative 3 – No Salute Fireworks Alternative

Salute fireworks, which are fireworks specifically designed to create a loud bang and intense flash of light, are the loudest type of firework. The primary purpose of salute shells is to announce the beginning and end of the display and produce a loud, percussive effect. From a distance, these shells sound similar to cannon

fire when detonated. While the noise level of these fireworks varies by type, a typical linear (unweighted) peak noise level directly below a 3-inch salute exploding at its normal altitude is 140 decibels (dB). The No Salute Fireworks Alternative would have the same characteristics as all of the fireworks display events that compose the proposed project, including the same total pounds of fireworks per event (as outlined in Table 2-2 in Chapter 2, *Executive Summary*, of the Final EIR), but would prohibit the use of salute fireworks (also known as maroon fireworks) and limit the noise produced by all fireworks during fireworks display events to a maximum of 130 dB.² All other firework types, including those described above under Section 6.2, *Alternative 2 – Quiet Fireworks Display Events Alternative*, would be allowed as long as they do not exceed the 130 dB noise limit. The No Salute Fireworks Alternative is intended to avoid or substantially lessen the significant noise impacts of the proposed project on sensitive receptors.

The potential impacts of the No Salute Fireworks Alternative are discussed in detail in Volume II (Draft EIR), Chapter 7, *Alternatives to the Proposed Project* (Section 7.5.3), with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable. This alternative would reduce the significant biological resources and noise impacts of the proposed project with incorporation of similar mitigation. The No Salute Fireworks Alternative would result in similar significant and unavoidable impacts (even after mitigation) associated with hydrology and water quality and transportation, circulation, and parking.

The No Salute Fireworks Alternative would achieve several of the project objectives. However, the No Salute Fireworks Alternative would not achieve Objective #2 and only partially achieve Objective #3 set forth in Section 1.4 above. The No Salute Fireworks Alternative would include adoption of an ordinance that would establish policies, performance standards, or other requirements that would be applied to fireworks display events; it would allow for the continued occurrence of existing and future occurrence of proposed new traditional fireworks display events in and around San Diego Bay and near the Imperial Beach Oceanfront in a manner that considers the health, safety, and welfare of people, property, and the environment, albeit at a slightly reduced intensity; and it would continue to enhance the visitor-serving experience of viewing fireworks display events from various vantage points around District tidelands.

The District finds that the No Salute Fireworks Alternative would not achieve the fundamental project objectives relating to loud sounds associated with fireworks used in traditional Fourth of July and other celebrations, which provide a popular and region-wide way to celebrate and express civic pride. The fireworks display events proposed in this alternative generally would differ significantly from traditional fireworks display events because they would not achieve all of the

² 130 dB linear (unweighted) peak sound pressure level due to the firework break(s), as measured at a horizontal distance of 15 meters from the launch point at a height of 1 meter above the ground, using a Type 1 sound measuring device with a free-field microphone.

same loud sounds associated with fireworks used in traditional Fourth of July and other celebrations. Therefore, this alternative would not meet Objectives #2 and #3 (partially) to allow for the continued occurrence of traditional fireworks display events in and around San Diego Bay and the Pacific Ocean near Imperial Beach that require a discretionary action by the District, including on the Fourth of July, all of which provide a popular and region-wide way to celebrate and express civic pride.

The District finds that all potential significant environmental impacts of the project will be mitigated by the design of the proposed project and the adoption of the mitigation measures set forth in the MMRP, except the proposed project's direct significant impacts on hydrology and water quality; noise and vibration; and transportation, circulation, and parking. The District further finds that the No Salute Fireworks Alternative would not avoid any significant traffic impact of the proposed project, but would slightly reduce the proposed project's significant impacts on biological resources and would slightly lessen the proposed project's unavoidable significant impact on noise and vibration.

Although it is environmentally superior to the proposed project, the District finds that the No Salute Fireworks Alternative is infeasible for policy reasons because it would not attain several fundamental project objectives and would not provide the District and the region with all of the benefits described in Section 7.0 below, and thus would be undesirable from a policy standpoint. For the unavoidable significant impacts that cannot be avoided or substantially lessened, therefore, the District adopts the Statement of Overriding Considerations in Section 7.0 below pursuant to CEQA Guidelines §15093.

7.0 STATEMENT OF OVERRIDING CONSIDERATIONS

The proposed project would have significant unavoidable environmental impacts on the following areas, which are described in detail in Volume II (Draft EIR), Chapter 4, *Environmental Impacts*, and Chapter 5, *Cumulative Impacts*, with revisions and clarifications in Final EIR Chapter 3, *Errata and Revisions*, if applicable:

- Direct impacts on hydrology and water quality; noise and vibration; and transportation, circulation, and parking; and
- Cumulative impacts on hydrology and water quality.

The District analyzed a reasonable range of alternatives to the proposed project, including the No Project Alternative, the Quiet Fireworks Display Events Alternative, and the No Salute Fireworks Alternative. Based on the evidence contained in the EIR and presented during the administrative proceedings, the District determined that the proposed project would meet the fundamental objectives and is feasible. Therefore, the Board of Port Commissioners of the District has adopted the proposed project.

Notwithstanding the District's approval, the approved project would have unavoidable significant impacts. Pursuant to CEQA Guidelines §§15043 and

15093, therefore, the District must adopt a Statement of Overriding Considerations in order to approve the proposed project. A Statement of Overriding Considerations allows a lead agency to determine that specific economic, social, or other expected benefits of a project outweigh its potential unavoidable significant environmental risks. Although the District has no obligation under CEQA to adopt a Statement of Overriding Considerations for significant impacts that will be mitigated to a level below significance, the District wishes to make clear its determination that the benefits of the approved project described below are of such importance to the community and the region as to outweigh all significant adverse impacts described in the EIR or suggested by participants in the public review process.

Pursuant to CEQA Guidelines §15093, the District hereby finds that the proposed project would have the following benefits and that each of the following benefits is sufficient, on its own, to justify adoption of the proposed project:

- The proposed project will advance the goal articulated in the Port's mission statement that provides: "While protecting the Tidelands Trust resources, the District will balance economic benefits, community services, environmental stewardship, and public safety on behalf of the citizens of California." The proposed project meets all aspects of the Port's mission statement, as further described below.
- The proposed project will result in economic benefits in the form of increased business and tax revenue and indirectly result in increased patronage of surrounding businesses. It is anticipated that two proposed new Fourth of July fireworks display events that would occur under the proposed project would attract visitors from around the San Diego region to cities, communities, and neighborhoods that provide viewing opportunities for the fireworks display events and result in increased income for local businesses as well as increased sales tax revenue for the local governments of all neighboring cities. The proposed project would indirectly stimulate additional economic growth through increased patronage of surrounding businesses.
- The Port is charged with implementation of the Public Trust Doctrine and facilitates access to the San Diego Bay for all Californians. The fireworks display events are consistent with that core mission as they provide a community service that is open to all residents and visitors to the waterfront, are free to view, and provide an opportunity for the community interaction and a popular and region-wide way to celebrate and express civic pride.
- The project consists of an ordinance that would include performance standards to regulate the environmental effects of the existing and proposed new fireworks display events that occur within San Diego Bay and the Imperial Beach Oceanfront that require a discretionary action by the District or that are operated by the District's tenants. The ordinance

provides several measures for environmental stewardship, as further detailed below.

- The ordinance includes strategies for transportation during fireworks events, which will support public safety. For all Fourth of July fireworks display events and for non-Fourth of July fireworks display events that are advertised to the public, the fireworks organizer will implement an Event Transportation and Parking Management Plan designed to ensure safe and convenient access to public viewing areas while limiting conflicts between transportation modes and reducing impacts on surrounding transportation facilities to the maximum extent feasible.
- Concerning environmental stewardship, the proposed ordinance includes several conditions pertaining to limiting emissions related to air quality. The proposed ordinance limits delivery truck idling to 3 minutes and encourages the use of alternative fireworks produced with pyrotechnic formulas that replace perchlorate with other oxidizers and propellants that burn cleaner and produce less smoke. Furthermore, the proposed ordinance requires a reduction in the total amount of copper allowed in fireworks used for the Big Bay Boom event. The conditions of the proposed ordinance would ensure that emissions from existing fireworks display events are effectively reduced. As such, compliance with the proposed ordinance would improve existing conditions associated with current recurring fireworks display events.
- The proposed ordinance contains several conditions of approval that would reduce potential impacts on the biological resources of San Diego Bay and the Imperial Beach Oceanfront. The proposed ordinance requires implementation of post-display clean-up practices consistent with the requirements of SDRWQCB's General Permit, removal of fireworks packaging, implementation of best management practices, and a reduction in the amount of non-biodegradable fireworks components that can be used. The proposed ordinance also includes a condition of approval that would require the fireworks organizer, with the assistance of the fireworks operator, to prepare and implement a comprehensive Fireworks Best Management Practices Plan for each fireworks display event consistent with the requirements of SDRWQCB's General Permit. These conditions would require additional clean-up of fireworks-generated trash and debris from existing fireworks display events and that the use of non-biodegradable fireworks components is limited, thereby ensuring that green sea turtles and sensitive avian species are not injured by mistakenly consuming waste materials.
- The proposed ordinance contains several conditions of approval that would reduce potential impacts on the water quality of San Diego Bay and the Imperial Beach Oceanfront. The proposed ordinance requires the use of alternative fireworks that replace perchlorate with other oxidizers and propellants that burn cleaner, produce less smoke, and reduce pollutant

waste; removal of packaging; inclusion of biodegradable inner components; implementation of BMPs; compliance with SDRWQCB's General Permit requirements and other required permits; and implementation of post-display cleanup practices consistent with the requirements of SDRWQCB's General Permit. These conditions would require additional clean-up of fireworks-generated debris from existing fireworks display events, thereby reducing the potential for water quality degradation.

- The proposed ordinance contains several conditions of approval intended to limit noise impacts on sensitive biological resources. These conditions would require the fireworks display events that occur during the nesting season to either be located not less than 1 mile from any federally or state-listed avian species nesting colony unless the maximum shell size used in the event is limited to 8 inches and avoid the use of salutes within the first quarter of a fireworks display event. It is not anticipated that any of the existing fireworks display events launch locations would be moved as a result of the ordinance. As a result, the noise levels from existing fireworks display events would remain largely unchanged except for potential abatement (reduction) that would occur as a result of limiting shell sizes and salutes.
- The proposed project would allow the continuation of a Fourth of July celebration and pride in the freedom of America with traditional fireworks as emblematic of the events of that freedom as enshrined in the national anthem.

The District has weighed the benefits of the proposed project against its potential unavoidable significant environmental risks in determining whether to adopt it as the approved project. After balancing the specific economic, legal, social, technological, and other benefits of the project, the Board of Port Commissioners has determined that the specific benefits identified above outweigh the significant unavoidable environmental impacts of the project. Each of the benefits and the fulfillment of the objectives of the approved project, as stated herein, is determined to be a separate and independent basis for overriding the unavoidable significant environmental impacts identified above. For the foregoing reasons, therefore, the District finds that the proposed project's potential significant unavoidable environmental impacts are outweighed by the benefits described above.

Exhibit B to Resolution No. 2017-075
Attachment B

Chapter MMRP
Mitigation Monitoring and Reporting Program

MMRP.1 Purpose

The purpose of this Mitigation Monitoring and Reporting Program (MMRP) is to ensure that the San Diego Bay and Imperial Beach Oceanfront Fireworks Display Events project implements mitigation measures for significant environmental effects, as required by the Final Environmental Impact Report (EIR) for the proposed project. Those mitigation measures have been integrated into this MMRP. The MMRP provides a mechanism for monitoring the mitigation measures in compliance with the EIR, and general guidelines for the use and implementation of the monitoring program are described below.

This MMRP is written in accordance with California Public Resources Code 21081.6 and Section 15097 of the California Environmental Quality Act (CEQA) Guidelines. California Public Resources Code Section 21081.6 requires the Lead Agency, for each project that is subject to CEQA, to adopt a reporting or monitoring program for changes made to the project, or conditions of approval, adopted in order to mitigate or avoid significant effects on the environment and to monitor performance of the mitigation measures included in any environmental document to ensure that implementation takes place. The San Diego Unified Port District (District) is the designated Lead Agency for the MMRP. The Lead Agency is responsible for review of all monitoring reports, enforcement actions, and document disposition. The Lead Agency will rely on information provided by a monitor as accurate and up to date and will field check mitigation measure status as required.

The District may modify how it will implement a mitigation measure, as long as the alternative means of implementing the mitigation still achieve the same or greater impact reduction. Copies of the measures shall be distributed to the participants of the monitoring effort to ensure that all parties involved have a clear understanding of the adopted mitigation measures and monitoring requirements.

MMRP.2 Format

Mitigation measures applicable to the proposed project include avoiding certain impacts altogether, minimizing impacts by limiting the degree or magnitude of the action and its implementation, and/or requiring supplemental structural controls. Within this document, approval mitigation measures are organized and referenced by subject category. Each of the mitigation measures has a numerical reference. The following items are identified for each mitigation measure.

- Mitigation Language and Numbering
- Mitigation Timing
- Methods for Monitoring and Reporting
- Responsible Parties

MMRP.2.1 Mitigation Language and Numbering

Provides the language of the mitigation measure in its entirety along with a corresponding number for identification.

MMRP.2.2 Mitigation Timing

The mitigation measures required for the project will be implemented at various times, including prior to the issuance of a fireworks permit, prior to each fireworks display event, during each fireworks display event, or following each fireworks display event.

MMRP.2.3 Methods for Monitoring and Reporting

The MMRP includes the procedures for documenting and reporting mitigation implementation efforts. The party responsible for implementing each of the mitigation measures varies. The District is responsible for all mitigation monitoring and reporting.

MMRP.2.4 Responsible Parties

For each mitigation measure, the party responsible for implementation, monitoring and reporting, and verifying successful completion of the mitigation measure is identified.

Table 1. Mitigation Monitoring and Reporting Program

Mitigation Measures	Timing and Methods	Responsible Parties
Air Quality and Health Risk		
<p>MM-AQ-1: Limit the Size of Overlapping New Fireworks Display Events in Compliance with the Conditions of the Proposed Ordinance. The fireworks organizer and operator are required to comply with the following air quality-related conditions of the proposed ordinance. Section X.07 – Permits – Conditions of Approval (c) Size of Fireworks Display Events. D. National City Fourth of July, not to exceed 400 pounds of fireworks E. Chula Vista Fourth of July, not to exceed 400 pounds of fireworks</p>	<p>Timing: Prior to issuance of a fireworks permit Method: Implement conditions of approval per Fireworks Display Ordinance</p>	<p>Implementation: Fireworks Organizer and Fireworks Operator Monitoring and Reporting: Fireworks Organizer, Fireworks Operator Verification: District</p>
<p>MM-AQ-2: Implementation of Air Quality-Related Conditions of the Proposed Ordinance. The fireworks organizer and operator are required to comply with the following air quality-related conditions of the proposed ordinance. Section X.07 – Permits – Conditions of Approval (f) Best Management Practices (BMPs). Fireworks display events shall implement the following BMPs for fireworks display event preparation, discharge and clean-up: 1. Fireworks display events on barges shall be set up at a loading facility in accordance with the requirements and under the supervision of the municipal fire department with jurisdiction over the event. Barges shall be inspected for leaks and other potential safety issues. Idling time for delivery trucks and loading equipment shall not exceed three (3) minutes and all such trucks and equipment shall be shut down when not in use. (d) Fireworks Chemical Composition and Packaging. 1. Chemical Composition. B. All fireworks display events shall use alternative fireworks produced with pyrotechnic formulas which replace perchlorate with other oxidizers and propellants</p>	<p>Timing: Prior to and during each fireworks display event Method: Implement conditions of approval per Fireworks Display Ordinance</p>	<p>Implementation: Fireworks Organizer and Fireworks Operator Monitoring and Reporting: Fireworks Organizer, Fireworks Operator Verification: District</p>

Mitigation Measures	Timing and Methods	Responsible Parties
<p>that burn cleaner, produce less smoke and reduce pollutant waste loading to surface waters, unless the Applicant establishes in writing and to the satisfaction of the Executive Director that such alternative fireworks are not commercially available.</p>		
Biological Resources		
<p>MM-BIO-1: Implementation of Biological Resources-Related Conditions of the Proposed Ordinance for Direct Impacts. The fireworks organizer and operator are required to comply with the following biological resources-related conditions of the proposed ordinance.</p> <p>Section X.07 – Permits – Conditions of Approval</p> <p>(d) Fireworks Chemical Composition and Packaging.</p> <ol style="list-style-type: none"> 2. Packaging. <ol style="list-style-type: none"> A. Prior to commencement of a fireworks display event, the fireworks operator shall remove and properly dispose of all packaging, wrapping and labels (excluding labels mandated by State or Federal laws) from all fireworks to be used in the event. B. Fireworks that include a plastic outer casing or non-biodegradable inner components that make up more than five (5) percent of the mass of the shell or device are prohibited. <p>(f) Best Management Practices (BMPs). Fireworks display events shall implement the following BMPs for fireworks display event preparation, discharge and clean-up:</p> <ol style="list-style-type: none"> 1. Fireworks display events on barges shall be set up at a loading facility in accordance with the requirements and under the supervision of the municipal fire department with jurisdiction over the event. Barges shall be inspected for leaks and other potential safety issues. Idling time for delivery trucks and loading equipment shall not exceed three (3) minutes and all such trucks and equipment shall be shut down when not in use. 2. Fireworks shall be brought to the barge and loaded in their California Department of Transportation (DOT)-approved 	<p>Timing: Prior to issuance of a fireworks permit, prior to, during, and following each fireworks display event</p> <p>Method: Implement conditions of approval per Fireworks Display Ordinance</p>	<p>Implementation: Fireworks Organizer and Fireworks Operator</p> <p>Monitoring and Reporting: Fireworks Organizer, Fireworks Operator</p> <p>Verification: District</p>

Mitigation Measures	Timing and Methods	Responsible Parties
<p>shipping cartons. Fireworks shall be encased in paper to prevent spillage of loose compounds. All packaging material and debris, including fuses, wires, shipping cartons and other wrapping, shall be properly disposed of in trash receptacles as the fireworks display event is set up. Unless prohibited by the municipal fire marshal with jurisdiction over the fireworks display event, barges shall be equipped with a fire-retardant debris barrier that extends six feet (6') in height, with openings no larger than ¼ inch, around the perimeter of the fireworks launch area to contain debris.</p> <ol style="list-style-type: none"> 3. Wires from the electric match placed in the Fireworks fuse shall be secured to avoid strain (such as wrapped around nails that are on the racks, tied to the racks, or tied to the mortar) to prevent wires from being pulled out and falling into the water. Wire cables connected to computer firing equipment modules shall also be properly secured to ensure they remain on the barge during the fireworks display event. 4. Once the fireworks are prepared for launch, all trash and debris shall be removed from the barge while it is at the loading facility and prior to the barge being moved into position. No loose material shall be allowed on the barges during the fireworks display event. 5. Following the fireworks display event and upon expiration of any safety period required by the municipal fire marshal with jurisdiction over the fireworks display event, the fireworks operator shall pick up all loose material on the barge, including all trash and debris resulting from the discharge of the fireworks, to prevent it from being discharged into the water while the barge is underway. 6. Upon return to the loading facility, the fireworks operator shall clean the barge of all fireworks related material and shall photograph and properly dispose of all fireworks trash and debris. Unexploded fireworks and related components shall be collected and disposed of by the fireworks operator in accordance with all applicable regulations. Fireworks operators shall photograph the barge prior to and after cleaning. 		

Mitigation Measures	Timing and Methods	Responsible Parties
<p>7. Following the fireworks display event and upon expiration of any safety period required by the municipal fire marshal with jurisdiction over the event, the fireworks organizer shall provide cleanup crews and boats to conduct sweeps of the fireworks detonation zone to gather any floating debris from spent fireworks using hand held fishnets, pool skimmers, or other similar equipment.</p> <p>8. The morning after the fireworks display event, the fireworks organizer shall conduct another sweep of the fireworks detonation zone and quays, piers and docks adjacent to the fireworks detonation zone to remove fireworks trash and debris. The fireworks organizer shall collect, bag, weigh and photograph all trash and debris collected prior to its disposal.</p> <p>9. The morning after the fireworks display event, the fireworks organizer shall perform a cleanup of the shoreline using crews of not fewer than five persons per barge on the shoreline adjacent to each barge location. Each crew member shall be equipped with trash bags and a trash grabber. The fireworks organizer shall collect, bag, weigh, and photograph all trash and debris collected prior to its disposal.</p> <p>10. Within ten (10) business days after a fireworks display event, the fireworks organizer shall provide the Executive Director with the photographs and written evidence of the weight of the fireworks trash and debris collected pursuant to subdivisions (5) through (9) above. If the weight of the fireworks trash and debris collected is less than fifty percent (50 percent) of the net weight of fireworks launched during the fireworks display event, the fireworks organizer shall offset the remaining amount by providing a crew of not fewer than two (2) persons for each barge or other launch site used in the fireworks display event to participate in the next scheduled "Operation Clean Sweep" or other District-sponsored clean-up event prior to the end of the calendar year to recover trash and debris from San Diego Bay and/or the Imperial Beach Oceanfront.</p> <p>(i) Compliance with San Diego Water Board General Permit.</p> <p>1. Prior to the Executive Director's issuance of a permit</p>		

Mitigation Measures	Timing and Methods	Responsible Parties
<p>pursuant to this article, the Applicant shall demonstrate that it has applied for coverage and has been enrolled under the San Diego Water Board General Permit.</p> <ol style="list-style-type: none"> <li data-bbox="296 370 997 540">2. The Applicant shall comply with all applicable terms, conditions and Best Management Practices required by the San Diego Water Board General Permit, which shall be incorporated into and considered in the terms, conditions and Best Management Practices of any permit issued by the Executive Director pursuant to this article. <li data-bbox="296 548 997 776">3. The Applicant shall submit to the District copies of all applications, plans, reports and other documentation required by the San Diego Water Board General Permit, including without limitation the Notice of Intent, Fireworks Best Management Practices Plan, Public Fireworks Display Log and the Public Display of Fireworks Post Event Report, within the time required for the submission of such reports to the San Diego Water Board. <p>(j) Compliance with Other Required Permits: Prior to the Executive Director's issuance of a Permit pursuant to this article, the Applicant shall demonstrate that it has obtained and shall comply with all other permits and approvals required by federal, state and local laws and regulations including, without limitation, such permits and approvals as are required by the United States Coast Guard, California Coastal Act, the District Code, including Article 10 (Stormwater Management and Discharge Control), and the fire marshal of any city which has jurisdiction over all or any part of the activity allowed under said Permit.</p> <p>(k) Compliance with Laws: The Applicant shall comply with any and all applicable rules and regulations promulgated by the District, including without limitation the District Code, the Chula Vista Bayfront Master Plan Settlement Agreement and Natural Resources Management Plan, and with the laws, rules and regulations of the United States of America and the State of California, and of any department or agency thereof, and with the applicable ordinances, rules and regulations of any city which has jurisdiction over all or any part of the activity allowed under said Permit. The Applicant's failure to comply with any applicable law,</p>		

Mitigation Measures	Timing and Methods	Responsible Parties
<p>ordinance, rule or regulation shall be cause for immediate revocation of said permit and for the denial of applications for future Permits.</p>		
<p>MM-BIO-2: Implementation of Biological Resources-Related Conditions of the Proposed Ordinance for Indirect Impacts. The fireworks organizer and operator are required to comply with the following biological resources-related condition of the proposed ordinance. Section X.07 – Permits – Conditions of Approval (e) Protection of Species and Habitat. The following conditions shall apply to fireworks display events that occur between February 15 and September 15 (i.e., avian breeding season) and are located less than one (1) mile from any federally or state-listed avian species nesting colonies:</p> <ol style="list-style-type: none"> 3. Security. For fireworks display events with public viewing areas (i.e., parks, promenades, publicly accessible piers, and other similar facilities) that occur within one-half mile of unprotected (i.e., unfenced) federally or state-listed nesting colonies or habitat areas, the fireworks organizer shall provide a minimum of two professional security guards to direct persons away from and to discourage trespass into sensitive nesting areas or habitat during such displays. In addition, the fireworks organizer shall provide security patrols of the water area to enforce the existing restrictions on access to unauthorized areas during such fireworks display events in the South Bay. 4. Signage. For fireworks display events with public viewing areas (i.e., parks, promenades, publicly accessible piers, and other similar facilities) that occur within one half-mile of nesting colonies or habitat areas for federally or state-listed species, the fireworks organizer, in cooperation with the District, shall post temporary signage along primary access points to sensitive nesting colonies and habitat areas to identify safe viewing locations, to educate visitors on locations of sensitive wildlife habitats, to prevent viewers from trespassing into sensitive areas and to encourage appropriate viewing behavior. 	<p>Timing: Prior to, during, and following each fireworks display event</p> <p>Method: Implement conditions of approval per Fireworks Display Ordinance</p>	<p>Implementation: District, Fireworks Organizer, Fireworks Operator</p> <p>Monitoring and Reporting: Fireworks Organizer, Fireworks Operator</p> <p>Verification: District</p>

Mitigation Measures	Timing and Methods	Responsible Parties
<p>5. Education. Beginning not less than seven (7) days before fireworks display events with public viewing areas (i.e., parks, promenades, publicly accessible piers, and other similar facilities) located within one-half mile of federally or state-listed nesting colonies or habitat areas, the fireworks organizer shall implement a public education program using daily announcements on social media, press releases, and information posted at parks, boat launch facilities, marinas, yacht clubs and other viewing locations, to educate potential viewers regarding appropriate viewing and boat docking areas, to discourage trespass into sensitive wildlife habitat, and to remind viewers of appropriate viewing behavior in and near sensitive nesting colonies and habitat areas (e.g., appropriate disposal of trash, prevention of illegal fireworks, and safe boating procedures).</p> <p>(f) Best Management Practices (BMPs). Fireworks display events shall implement the following BMPs for fireworks display event preparation, discharge and clean-up:</p> <p>11. For all Fourth of July fireworks display events and for Non-Fourth of July fireworks display events which are advertised to the public, the fireworks organizer shall double the number of trash receptacles at major viewing areas prior to each fireworks display event; trashcans shall be emptied and parks and viewing areas shall be cleaned following the event.</p>		
<p>MM-BIO-3: Implementation of the Biological Resources-Related Conditions of the Proposed Ordinance for Direct Eelgrass Impacts. The fireworks organizer and operator are required to comply with the following biological resources-related conditions of the proposed ordinance.</p> <p>Section X.07 – Permits – Conditions of Approval</p> <p>(g) Eelgrass Avoidance and Mitigation. For fireworks display events with launching sites located in shallow water with the potential for eelgrass to occur, fireworks barges shall be held in place by tugboats and shall not require temporary moorings. To the extent practicable, barges shall be located in unvegetated deep water channels outside of eelgrass beds. Pre-event and post-event eelgrass surveys shall be completed to identify the distribution of</p>	<p>Timing: Prior to, during, and following each fireworks display event</p> <p>Method: Implement conditions of approval per Fireworks Display Ordinance</p>	<p>Implementation: Fireworks Organizer, Fireworks Operator</p> <p>Monitoring and Reporting: Qualified agent, approved by the District, Fireworks Organizer, Fireworks Operator</p> <p>Verification: District</p>

Mitigation Measures	Timing and Methods	Responsible Parties
<p>eelgrass to assist tug operators and to assess any impacts to eelgrass that may occur. Through a pre-event training, tug operators shall be made aware of shallow eelgrass and instructed not to use high thrust in the vicinity of eelgrass beds. If an unanticipated impact to eelgrass occurs, this impact shall be mitigated by replacing the eelgrass at a ratio determined by the California Eelgrass Mitigation Policy.</p>		
<p>MM-BIO-4: Fireworks Biological Monitoring Plan. Not less than 30 days before any fireworks display event in the South Bay that would occur within 1 mile of sensitive avian nesting colonies, the fireworks organizer shall submit to the District an Avian Species Nesting Colony Monitoring Plan (Monitoring Plan). The Monitoring Plan shall be prepared by a qualified biologist and approved by the District in coordination with USFWS and CDFW. A qualified biologist is a person who, by reason of his or her knowledge of the natural sciences and the principles of wildlife biology, acquired by education and experience. The Monitoring Plan shall identify the monitoring protocol that will be used to assess the effectiveness of mitigation measures MM-BIO-1 and MM-BIO-2 and shall, at a minimum, include the following:</p> <ol style="list-style-type: none"> 1. A literature review which refines the proposed methodology. 2. A list of target species identified for each individual event based on the season of the event, proximity of the event to nesting colonies, sensitivity of species, and capacity for the fireworks display event to cause species disturbance/effects. 3. Species behavior and noise data shall be collected at least 1 hour prior to, during, and 1 hour after the fireworks display event. 4. Documentation of the following data: <ol style="list-style-type: none"> a. Site location, name of monitor, date and time of observations b. Number of adults, nests, and chicks observed within one-half mile of spectator viewing areas c. Sources of stressors (e.g., light, noise, trespass, debris) d. Unauthorized access within nesting colonies e. Counts of illegal pyrotechnics <p>Within 30 days following the completion of the fireworks display event, the qualified biologist shall prepare a Monitoring Report for submittal to the District that details the findings of the monitoring</p>	<p>Timing: A minimum of 30 days prior to, during, and within 30 days following each fireworks display event</p> <p>Method: Prepare a Monitoring Plan for fireworks display events in the South Bay that would occur within 1 mile of sensitive nesting colonies, conduct biological monitoring, and prepare a Monitoring Report documenting the results of the biological monitoring.</p>	<p>Implementation: Fireworks Organizer</p> <p>Monitoring and Reporting: Qualified agent, approved by the District, Fireworks Organizer</p> <p>Verification: District</p>

File #: 2017-9901

DATE: May 25, 2017

SUBJECT:

SAN DIEGO BAY AND IMPERIAL BEACH OCEANFRONT FIREWORKS DISPLAY EVENTS PROJECT

- A) CONDUCT PUBLIC HEARING, ADOPT RESOLUTION CERTIFYING THE FINAL ENVIRONMENTAL IMPACT REPORT FOR THE “SAN DIEGO BAY AND IMPERIAL BEACH OCEANFRONT FIREWORKS DISPLAY EVENTS PROJECT,” ADOPT THE FINDINGS OF FACT AND STATEMENT OF OVERRIDING CONSIDERATIONS, ADOPT THE MITIGATION MONITORING AND REPORTING PROGRAM, AND DIRECT FILING OF THE NOTICE OF DETERMINATION**
- B) ADOPT ORDINANCE ESTABLISHING THE “SAN DIEGO UNIFIED PORT DISTRICT FIREWORKS DISPLAY EVENT ORDINANCE” AS ARTICLE 14 OF THE SAN DIEGO UNIFIED PORT DISTRICT CODE TO GOVERN EXISTING AND PROPOSED NEW FIREWORKS DISPLAY EVENTS**

EXECUTIVE SUMMARY:

The proposed San Diego Bay and Imperial Beach Oceanfront Fireworks Display Events Project (herein referred to as “proposed project”) includes: (1) an ordinance establishing a District Code section to govern existing and proposed new fireworks display events that occur within San Diego Bay and the Imperial Beach Oceanfront that require a discretionary action by the District or that are operated by the District’s tenants (Ordinance) (see Attachment A, Draft Ordinance); and (2) four proposed new fireworks display events that would be located adjacent to the National City and Chula Vista Bayfronts.

In August 2015, the San Diego Unified Port District (District), as lead agency under the California Environmental Quality Act (CEQA), initiated the environmental review process for the proposed project. A Notice of Preparation (NOP) and Initial Study/Environmental Checklist were circulated for public review, which began on August 7, 2015 and ended on September 8, 2015. The District received a total of seven comment letters during the NOP public review period. Comments received on the NOP primarily included concerns related to: air quality, biological resources, greenhouse gas (GHG) emissions, hydrology and water quality, noise, and transportation and traffic.

In March 2017, a Draft Environmental Impact Report (EIR) was prepared for the proposed project and circulated for a minimum 45-day public review period, which began on March 17, 2017 and ended on May 2, 2017. A total of 10 comment letters were received during the Draft EIR public review period. Comments received during the Draft EIR public review period included many similar concerns to those received during the NOP public review period. They included comments on air quality, biological resources, GHG emissions, hydrology and water quality, noise, and transportation and

traffic. Staff determined that the comment letters did not raise any new significant environmental issues not already analyzed in the Draft EIR and therefore, pursuant to CEQA Guidelines Section 15088.5, recirculation of the Draft EIR was not required. The comment letters and responses to all written comments received on the Draft EIR are included in the Final EIR. In response to the comments received during the public review period, the Final EIR includes minor clarifications and corrections to the proposed project and mitigation measures, and revisions to figures. The additional information contained in the District's responses to comments clarifies and further substantiates the conclusions contained in the Draft EIR. The Final EIR, Findings of Fact and Statement of Overriding Considerations (SOC), and Mitigation Monitoring and Reporting Program (MMRP) have been prepared in accordance with CEQA, the State CEQA Guidelines, and the District's Guidelines for Compliance with CEQA. Copies of the Final EIR, Findings of Fact and SOC, and MMRP have been provided to the Board.

Staff recommends that the Board conduct a public hearing and adopt a resolution to certify the Final EIR, adopt Findings of Fact and SOC, MMRP, and direct filing of the Notice of Determination (NOD). Staff further recommends that the Board adopt the proposed Ordinance to govern existing and proposed new fireworks display events.

RECOMMENDATION:

- A) Conduct Public Hearing, Adopt Resolution Certifying the Final Environmental Impact Report for the "San Diego Bay And Imperial Beach Oceanfront Fireworks Display Events Project," Adopt the Findings of Fact and Statement of Overriding Considerations, Adopt the Mitigation Monitoring and Reporting Program, and Direct Filing of the Notice of Determination
- B) Adopt Ordinance Establishing the "San Diego Unified Port District Fireworks Display Event Ordinance" as Article 14 of the San Diego Unified Port District Code to Govern Existing and Proposed New Fireworks Display Events

FISCAL IMPACT:

The agenda item as no fiscal impact. However, the adoption of the San Diego Unified Port District Fireworks Display Event Ordinance will enable the District to charge an appropriate fee for permit applications.

COMPASS STRATEGIC GOALS:

This proposed project would govern existing and proposed new fireworks display events, which will enhance the visitor-serving experience of viewing fireworks display events in and around San Diego Bay and the Pacific Ocean near Imperial Beach, while protecting the environment and maintaining a healthy and sustainable bay.

The agenda item supports the following Strategic Goal(s).

- A Port that the public understands and trusts.
- A thriving and modern maritime seaport.
- A vibrant waterfront destination where residents and visitors converge.
- A Port with a healthy and sustainable bay and its environment.
- A Port with a comprehensive vision for Port land and water uses integrated to regional plans.

DISCUSSION:

Background and Project Description

Fireworks display events have been occurring for many years at several locations within San Diego Bay and the Imperial Beach Oceanfront. Fireworks display events within the San Diego Bay take place off Shelter Island, Harbor Island, Centre City Embarcadero (which includes North Embarcadero, Central Embarcadero, and South Embarcadero), and the National Steel and Shipbuilding Company (NASSCO) facility. In addition, fireworks display events currently take place along the Coronado Bayfront within Glorietta Bay (an inlet of San Diego Bay adjacent to Coronado Island) as well as the Imperial Beach Oceanfront. There are currently no fireworks display events along the National City or Chula Vista Bayfronts. Along the National City Bayfront, it is anticipated that future fireworks display events would take place from a barge within view of Pepper Park. Along the Chula Vista Bayfront, it is anticipated that fireworks display events would take place from a barge within view of both Chula Vista Bayside Park and the Chula Vista Bayfront Park (see Attachment B, Map of Existing and Proposed Fireworks Sites).

The proposed project consists of: (1) a proposed Ordinance to govern existing and proposed new fireworks display events that occur within San Diego Bay and the Imperial Beach Oceanfront that require a discretionary action by the District or that are operated by the District's tenants (see Attachment A, Draft Ordinance); and (2) four proposed new fireworks displays, which would be located adjacent to the National City and the Chula Vista Bayfronts and are anticipated to require a future discretionary action by the District.¹

Furthermore, the proposed project objectives include the following:

- To develop a District ordinance that establishes policies, performance standards, and other requirements that would be applied to fireworks display events that occur in and around San Diego Bay and the Pacific Ocean near Imperial Beach and require a discretionary action by the District or are operated by the District's tenants.
- To allow for the continued occurrence of traditional fireworks display events in and around San Diego Bay and the Pacific Ocean near Imperial Beach that require a discretionary action by the District or are operated by the District's tenants, including on the Fourth of July, providing a popular and region-wide way to celebrate and express civic pride.
- To allow for the continued occurrence of existing and future occurrence of proposed new traditional fireworks display events in and around San Diego Bay and the Pacific Ocean near Imperial Beach that require a discretionary action by the District or are operated by the District's tenants in a manner that considers the health, safety, and welfare of people, property, and the environment.
- To continue to enhance the visitor-serving experience of viewing fireworks display events from various vantage points around District tidelands by providing safe, high-quality fireworks display events using existing and new fireworks technologies as they become available.

CEQA Process

Notice of Preparation and Public Scoping Meeting for the Environmental Impact Report

In accordance with CEQA, an NOP was prepared for the EIR and circulated to solicit agency and public comments on the scope and content of environmental analysis to be included in the EIR. A minimum 30-day NOP public review period began on August 7, 2015 and ended on September 8, 2015. The NOP and notices of NOP availability were mailed or emailed to various federal, state, and local agencies; environmental groups, other organizations; and other interested individuals and groups.

As part of the NOP process, the District held a public scoping meeting on August 25, 2015 at the District Administration Building to provide the public and governmental agencies with information on the proposed project and the CEQA process, and to give the attendees an opportunity to identify environmental issues and alternatives that should be considered in the EIR.

Seven comment letters were received during the NOP public review period. The primary issues raised were related to air quality, biological resources, GHG emissions, hydrology and water quality, noise, and transportation and traffic. These concerns were considered in the preparation of the Draft EIR.

Environmental Impact Report

The District, as lead agency under CEQA, prepared a Draft EIR (UPD #EIR-2015-115; SCH #2015081013; Clerk Document No. 66168) for the proposed project. The Draft EIR evaluated whether the proposed project would result in potentially significant environmental effects related to: aesthetics and visual resources; air quality and health risk; biological resources; GHG emissions, climate change, and energy; hazards and hazardous materials; hydrology and water quality; land use and planning; noise and vibration; public services and facilities; transportation, circulation and parking; and cumulative impacts.

As described in the Draft EIR, the proposed project would not result in significant impacts to aesthetics and visual resources; GHG emissions, climate change, and energy; hazards and hazardous materials; land use and planning; and public services and facilities. The Draft EIR identified direct significant mitigable impacts to air quality and health risk; biological resources; hydrology and water quality; noise and vibration; and transportation, circulation and parking. The Draft EIR also identified direct significant and unavoidable impacts to hydrology and water quality; noise and vibration; and transportation, circulation, and parking. Furthermore, the Draft EIR identified cumulative significant and unavoidable impacts to hydrology and water quality. The significant and unavoidable impacts are further described below.

Hydrology and Water Quality: The EIR identifies a direct significant and unavoidable impact on hydrology and water quality associated with the proposed fireworks display events in that the events could pollute surface water if fireworks debris are not properly recovered. Required compliance with the water quality-related conditions of the proposed Ordinance (Mitigation Measure MM-WQ-1, as described in Section 4.6 in the Draft EIR) would reduce the water quality impacts associated the proposed new fireworks display events, but not to a level below significance. This is because uncontrollable factors such as weather conditions, amount of paper incinerated, sunken material, or material that is blown onto land may affect the ability to recover all post-show debris related to fireworks on surface waters. In addition, the EIR identifies a cumulative significant and unavoidable impact on hydrology and water quality

associated with the proposed fireworks display events in that new fireworks display events could contribute to an accumulation of trash and litter in San Diego Bay when combined with multiple past, present, and reasonably foreseeable future fireworks display events that occur in San Diego Bay. The cumulative impact would be reduced by requiring implementation of MM-WQ-1, but not to a level below significance.

Noise and Vibration: The EIR identifies a direct significant and unavoidable impact on noise and vibration in that the proposed new fireworks display events would result in a noise increase at the Coronado Cays homes to the west in the City of Coronado. Required compliance with noise-related conditions of the proposed Ordinance (MM-NOI-1, as described in Section 4.8 of the Draft EIR) would reduce overall noise levels from proposed new fireworks display events but not to a level below significance. The exact amount of noise reduction cannot be quantified because of the many variables (e.g., precise numbers and types of fireworks to be used, size or shells, etc.), but the reductions would be modest. Because loud noise (including noise levels that are intended to be significantly higher than ambient conditions) is considered an integral part of traditional fireworks display events, mitigation measures, such as avoiding the use of noise-generating fireworks (i.e., using silent fireworks), would fundamentally change the nature of the proposed project and the overall audible experience of the display.

Transportation, Circulation and Parking: The EIR identifies a direct significant and unavoidable impact on transportation, circulation, and parking in that the proposed new fireworks display events would have the potential to temporarily decrease the performance of a roadway, pedestrian, and bicycle facilities as a result of increased levels of vehicle, pedestrian, and bicycle activity. Required compliance with transportation-related conditions of the proposed Ordinance (MM-TRA-1 and MM-TRA-2, as described in Section 4.10 the Draft EIR), would reduce the traffic impacts during all Fourth of July fireworks display events and non-Fourth of July fireworks display events, but it cannot be determined with certainty that the impacts would be reduced to less-than-significant levels.

The Draft EIR also analyzed three alternatives to the proposed project: the CEQA-required No Project Alternative, Quiet Fireworks Display Events Alternative, and the No Salute Fireworks Alternative. The Draft EIR concluded that the Quiet Fireworks Display Events Alternative is the environmentally superior alternative and could substantially reduce the amount of noise generated by the proposed new fireworks display events and therefore, would reduce significant and unavoidable noise impacts compared to the proposed project. However, impacts to noise would remain significant and unavoidable. In addition, the Quiet Fireworks Display Events Alternative would reduce impacts associated with other resources, such as light and glare, biological resources, transportation, circulation, and parking. However, the Quiet Fireworks Display Events Alternative would not meet the fundamental proposed project objectives relating to the continuation of traditional fireworks display events.

The Draft EIR was circulated for a minimum 45-day public review period, which began on March 17, 2017 and ended on May 2, 2017. The District received 10 comment letters (totaling over 200 comments) from: the United States Department of Homeland Security FEMA Region IX; United States Department of the Interior Fish and Wildlife Service; State of California Governor's Office of Planning and Research State Clearinghouse and Planning Unit; California Coastal Commission; State of California Department of Fish and Wildlife; Coastal Environmental Rights Foundation; Fireworks & Stage FX America; H.P. Purdon & Company, Inc.; Pacific Tugboat Service; and Pyro

Spectaculars, Inc. Generally, the comment letters focused on air quality, biological resources, GHG emissions, hydrology and water quality, noise, and transportation and traffic. The comments are summarized as follows:

- United States Department of Homeland Security FEMA Region IX requested the District to review the current effective countywide Flood Insurance Rate Maps for the City and County of San Diego, as well floodplain management building requirements.
- United States Fish and Wildlife Service provided comments based on their knowledge of sensitive and declining species and their habitats. The primary concern raised in the comment letter was in regard to fireworks conducted in South San Diego Bay and impacts to nesting, roosting, rafting, foraging, seabirds, shorebirds, and waterfowl. Additionally, their letter expressed concern regarding the potential for avian behavioral responses to the bright lights, noise, and vibration associated with fireworks.
- State of California Governor's Office of Planning and Research State Clearinghouse and Planning Unit informed the District of the State agencies that received the Draft EIR for comment and the date the comment period closed, and included as an attachment the Draft EIR comment letters from the United States Fish and Wildlife Service and the California Department of Fish and Wildlife.
- California Coastal Commission expressed concern regarding potential biological resources impacts from excessive noise, light, chemical pollutants and firework debris on wildlife.
- State of California Department of Fish and Wildlife expressed concern regarding impacts associated with biological resources and provided various recommendations to assist the District in avoiding, minimizing, and adequately mitigating project-related impacts on biological resources in South San Diego Bay.
- Coastal Environmental Rights Foundation expressed concern regarding the Draft EIR methodology for determining water quality effects of the proposed new fireworks display events. The comment letter expressed concern regarding significant wildlife impacts associated with the proposed Chula Vista Bayfront fireworks. In addition, the comment letter raised concerns over the ability to detect impacts on eelgrass from fireworks display events and that direct and indirect impacts would not be detectable through surveys. Finally, the comment letter states the Draft EIR failed to analyze air quality and GHG emissions associated with spectator traffic.
- Fireworks & Stage FX America requested clarification on the project objectives in reference to consumer fireworks. They requested clarification on noise measurements as identified in the Draft EIR. They also requested several modifications to MM-BIO-1 in regard to the removal of labels, height of the fire retardant debris barrier, number of persons required for cleanup, post-event reporting, and security. The comment letter expressed concerns regarding the conditions of approval, as included in MM-WQ-1. They also requested clarification related to the responsibility for trash receptacles and collection as stated under MM-WQ-2. They also suggested that visitor traffic analysis should not apply to fireworks display events other than the Big Bay Boom (Fourth of July) or San Diego Symphony Pops (Non-Fourth of July). In addition, the letter stated the health risk assessment included in the Draft EIR did not consider

changes in chemical compounds. Finally, they requested clarification from the District regarding the proposed Ordinance conditions of approval.

- H.P. Purdon & Company, Inc. expressed concern with the proposed Ordinance, Section X.05, Permits – Application subsections (c) and (a) in regard to application submittal requirements and the timing of the National Pollutant Discharge Elimination System Permit. In addition, they expressed concern with proposed Ordinance, Section X.07, Permits – Conditions of Approval subsections (f) 7 through 9 and (h) in regard to Best Management Practices (BMPs), clean-up program, and the Event Transportation and Parking Management Plan.
- Pacific Tugboat Service expressed a safety concern regarding the height of the 6-foot-tall perimeter fence and suggested that the District lower the height of the fence or replace it with a curtain to contain debris.
- Pyro Spectaculars, Inc. expressed a legal opinion that the District did not have the jurisdiction to adopt the draft Ordinance. They also expressed concern regarding applicable regulations involving an application for a private fireworks display event. The comment letter objects to the proposed Ordinance, Section X.07, Permits – Conditions of Approval subsections (f)(2),(3), (7) through (10) which outlines requirements including: BMPs for fire-resistant debris barrier, wires in water, disposal of fireworks packaging material and debris, shipping cartons, and fireworks debris and trash. In addition, the letter expressed objection to the BMP required by the proposed Ordinance, Section X.07(d)(2)(b) which prohibits fireworks that include a plastic outer casing or non-biodegradable inner components that make up more than five percent of the mass of the shell or device. Finally, their letter stated the proposed Ordinance failed to state the correct standard for fireworks' weight.

In response to the comments received during the public review period, the Final EIR includes minor clarifications and corrections to the proposed project and mitigation measures, shown in underlined and strikethrough text, and revisions to figures. The additional information contained in the District's responses to comments clarifies and further substantiates the conclusions contained in the Draft EIR.

District staff prepared written responses to the comments and determined that all of the comments received did not raise any significant environmental issues not already analyzed in the Draft EIR. As such, none of the comments received constituted or resulted in significant new information requiring recirculation under CEQA Guidelines Section 15088.5.

Revisions and clarification have been made to the Draft EIR in accordance with CEQA Guidelines Section 15088.5. The Draft EIR has been revised to clarify that proposed new fireworks display events are anticipated to occur on barges only. Furthermore, the changes made include clarification of the fireworks packaging and BMPs for fireworks display event preparation, discharge, and clean-up; revising MM-BIO-1 and MM-WQ-1. Also, in response to the comments, the Draft EIR was updated to include MM-BIO-4 to provide assurance that biological impacts would be reduced to less than significant, even though impacts are already reduced to less than significant with implementation of MM-BIO-1. MM-BIO-4 requires biological monitoring and reporting for the proposed new fireworks display events in South San Diego Bay. The comment letters and responses to all written comments received on the Draft EIR are included in the Final EIR.

The Final EIR has been prepared in accordance with CEQA Guidelines Section 15132. The Final EIR consists of three volumes, organized as follows: Volume 1 contains an Executive Summary; errata

and revisions to the Draft EIR; a list of public agencies, organizations, and persons commenting on the Draft EIR; comments received on the Draft EIR and the District's responses to those comments; and the MMRP. Volume 2 includes the Draft EIR and Volume 3 includes the Draft EIR Appendices.

Pursuant to CEQA Guidelines Section 15090, prior to approving the project, the District must certify that: (1) the Final EIR has been completed in compliance with CEQA; (2) the Final EIR was presented to the Board, and the Board reviewed and considered the information contained in the Final EIR prior to its approval of the project; and (3) the Final EIR reflects the District's independent judgment and analysis.

Mitigation Monitoring and Reporting Program

As concluded by the Draft and Final EIR, the proposed project would result in various potentially significant environmental impacts. With the exception of significant unavoidable impacts from hydrology and water quality; noise and vibration; and transportation, circulation, and parking (described above); all project-level and cumulative impacts can be mitigated to below a level of significance with the implementation of the mitigation measures outlined in the Final EIR. The MMRP, which has been prepared in compliance with CEQA Guidelines Section 15097, identifies the following: (1) required mitigation measures; (2) when they are to be carried out; (3) the party responsible for carrying them out; and (4) their monitoring and reporting procedures. Compliance with the applicable mitigation measures identified in the MMRP contained in the Final EIR will be required by applicants subject to the proposed Ordinance.

Findings of Fact and Statement of Overriding Considerations

CEQA requires the District to make written findings of fact for each significant environmental impact identified in the Final EIR (CEQA Guidelines Section 15091), including: (1) impacts that are considered less than significant after mitigation; and (2) impacts that are considered significant and unavoidable. In addition, the significant and unavoidable impacts related to hydrology and water quality; noise and vibration; and transportation, circulation, and parking require the Board (1) to determine whether there is any feasible alternative that would substantially reduce a significant unavoidable impact of the project and (2) if there is no feasible such alternative, to also adopt an SOC identifying that the District has balanced the specific economic, legal, social, technological, and other benefits of the proposed project, including region-wide or statewide environmental benefits, against its unavoidable (i.e., can be mitigated but not to a level of less than significant) significant environmental risks in determining whether to approve the proposed project. Staff believes the alternatives analyzed in the EIR, which could substantially reduce any of the significant unavoidable impacts of the project, are not feasible for the reasons stated in Chapter 7.0 (Alternatives) of the EIR. Therefore, staff recommends the Board find that, pursuant to CEQA Guidelines Section 15093, the benefits of the proposed project include, but are not limited to, the following: (1) economic benefits in the form of increased business and tax revenue that indirectly result in increased patronage of surrounding businesses; (2) a free community event that is open to all residents and visitors to the waterfront; (3) performance standards to regulate the environmental effects of the existing and proposed new fireworks display events; (4) strategies for transportation during fireworks events which will support public safety; (5) incorporates conditions pertaining to limiting emissions related to air quality and encourages the use of alternative fireworks that burn cleaner and produce less smoke; and (6) conditions of approval that require additional clean-up of fireworks-generated trash and debris, thereby, ensuring green sea turtles and sensitive avian species are not injured by mistakenly consuming waste materials. The benefits are more particularly described in the draft SOC attached to the draft resolution. Based on these reasons, staff recommends the Board adopt the SOC.

Copies of the Final EIR, MMRP, and Findings of Fact and SOC have been provided to the Board and are available on the District's website for the public.

Ordinance

As stated above, the proposed project consists of a proposed Ordinance to govern existing and proposed new fireworks display events that occur within San Diego Bay and the Imperial Beach Oceanfront that require a discretionary action by the District or that are operated by the District's tenants (see Attachment A, Draft Ordinance). The proposed Ordinance addresses the following:

- Permit procedures and requirements for conducting fireworks displays
- Compliance with applicable federal, state, and local laws and regulations governing fireworks, including, but not limited to:
 - Code of Federal Regulations
 - Clean Water Act
 - California Health and Safety Code
 - California Code of Regulations
 - CEQA
 - California Coastal Act
- Compliance with applicable federal, state, and local plans and permits governing fireworks, including, but not limited to:
 - San Diego Regional Water Quality Control Board's General Permit for Public Display of Fireworks (Order No. R9-2011-0022)
 - District's Climate Action Plan
 - District's Stormwater Management and Discharge Control Code
 - San Diego Bay Integrated Natural Resources Management Plan
 - Chula Vista Bayfront Master Plan Natural Resources Management Plan
- Consistency with the features and characteristics of each individual fireworks display event analyzed in this Draft EIR, including, but not limited to:
 - Allowable launch site locations for individual displays
 - Total pounds of fireworks for individual displays
 - Allowable shell size(s) for individual displays
 - Frequency of individual displays
 - Duration of individual displays
- Compliance with the applicable mitigation measures identified in the MMRP for the proposed project.

General Counsel's Comments:

The Agenda Sheet and attachments thereto have been reviewed by the General Counsel's Office as presented to it and are approved as to form and legality.

Environmental Review:

The District's compliance with the requirements of CEQA is described in detail in the description of the "CEQA Process" above. The Board's consideration of the EIR and its adoption of the proposed resolution certifying the EIR, adopting the Findings of Fact and SOC, MMRP, and directing staff to file a NOD, will complete the CEQA process for this Project.

In addition, the proposed Board actions comply with Section 87 of the Port Act, which allows for the construction, reconstruction, repair, maintenance, and operation of public buildings, public assembly

and meeting places, convention centers, parks, playgrounds, bathhouses and bathing facilities, recreation and fishing piers, public recreation facilities, including, but not limited to: public golf courses, and for all works, buildings, facilities, utilities, structures, and appliances incidental, necessary, or convenient for the promotion and accommodation of any of those uses. The Port Act was enacted by the California Legislature and is consistent with the Public Trust Doctrine. Consequently, the proposed Board actions are consistent with the Public Trust Doctrine.

Finally, the proposed Board actions to certify the Final EIR, adopt Findings of Fact and SOC, MMRP, direct filing of the NOD, and to adopt the Ordinance to govern existing and proposed new fireworks display events do not allow for “development,” as defined in Section 30106 of the California Coastal Act, or “new development,” pursuant to Section 1.a. of the District’s Coastal Development Permit (CDP) Regulations. Therefore, issuance of a CDP or exclusion is not required at this time. However, development within the District’s jurisdiction requires processing under the District’s CDP Regulations, including processing any fireworks display events. The Board’s adoption of the Ordinance in no way limits the exercise of the District’s discretion under the District’s CDP Regulations, and if applications for fireworks display events are submitted, they will undergo review under the District’s CDP Regulations. That review may result in the issuance of a Coastal Act Exclusion or a CDP.

Equal Opportunity Program:

Not applicable.

PREPARED BY:

Dana Sclar
Senior Planner, Real Estate Development

Attachment(s):

Attachment A: Draft Ordinance

Attachment B: Map of Existing and Proposed Fireworks Sites

¹Discretionary actions for fireworks displays that may require District approval include, but are not limited to, the following: Sponsorship agreement, Special event permit, Lease and lease amendment, Tideland Use and Occupancy Permit, Right of Entry Permit, Coastal Act Categorical Determination of Exclusion, and Coastal Development Permit

ARTICLE 14

FIREWORKS DISPLAY ORDINANCE

Section 14.01 - TITLE

The title of this article shall be known as the “San Diego Unified Port District Fireworks Display Event Ordinance.”

Section 14.02 - PURPOSE

The purpose of this article is to establish a defined set of requirements and procedures by which the District and users of the District tidelands may continue to enjoy fireworks displays in and around San Diego Bay and the Pacific Ocean near Imperial Beach. Further, it is the intent of this article to protect the health, safety and welfare of persons, property and the environment within the District’s jurisdiction and to comply with federal, state and local laws and regulations governing the handling, possession, storage, loading, staging, launching and detonating of fireworks.

Section 14.03 - DEFINITIONS

For purposes of this article, certain words and phrases not otherwise defined in District Code section 0.03 shall be defined as follows, unless the context requires a different meaning:

“Alternative fireworks” means fireworks produced with new pyrotechnic formulas that replace perchlorate with other oxidizers and propellants that burn cleaner, produce less smoke and reduce pollutant waste loading to surface waters.

“Applicant” means a person who submits an application to the District for a permit pursuant to this article.

“Application” means the District’s written form to be submitted by a person requesting a permit pursuant to this article.

“Barge” means a water vessel from which fireworks are launched or detonated.

“Best Management Practices” or “BMPs” means schedules of activities, prohibitions of practices, pollution prevention and educational practices, maintenance procedures, tools and other management practices used to prevent or reduce the discharge of pollutants directly to receiving waters to the maximum extent practicable. BMPs may include any type of pollution prevention and pollution control measure that can help to achieve compliance with this article.

“District” means the San Diego Unified Port District.

“District General Counsel” means the General Counsel of the District or her/his designee.

“Executive Director” means the Executive Director (President/CEO) of the District or her/his designee.

“Fireworks” means any device containing chemical elements and chemical compounds capable of burning independently of the oxygen of the atmosphere and producing audible, visual, mechanical, or thermal effects which are useful as pyrotechnic devices or for entertainment, including aerial shells, low-level comet or multi-shot devices or ground-level displays. The term "fireworks" includes, but is not limited to, devices designated by the manufacturer as fireworks, torpedoes, skyrockets, roman candles, rockets, sparklers, party poppers, paper caps, chasers, fountains, smoke sparks, aerial bombs, and fireworks kits.

“Fireworks Display Event” means the handling, possession, storage, loading, staging, launching or detonating of fireworks on the land or waters within the District’s jurisdiction for viewing by the public or any group of persons exceeding twenty-five (25) in number.

“Fireworks Operator” means a pyrotechnic operator licensed by the State of California, who by examination, experience and training has demonstrated the required skill and ability in the use and discharge of fireworks as authorized by the license granted, and who is responsible for supplying, staging, launching or detonating the fireworks used in a fireworks display event.

“Fireworks Organizer” means a person who proposes to conduct a fireworks display event and who is responsible for obtaining the funding and approvals for a fireworks display event and for contracting with a fireworks operator to produce a fireworks display event.

“Fourth of July Fireworks Display Event” means a fireworks display event that occurs annually on the Fourth of July to express patriotism and civic pride and to celebrate the signing of the Declaration of Independence of the United States of America.

“Non-Fourth of July Fireworks Display Event” means a fireworks display event that occurs on a date other than the Fourth of July.

“Operation Clean Sweep” means the annual cleanup event sponsored by the San Diego Port Tenants Association and District, among others, where volunteers remove trash and debris from San Diego Bay.

“Permit” means the District-issued authorization for an applicant to conduct a fireworks display event pursuant to this article.

“Person” means an individual, association, partnership, nonprofit organization, corporation, limited liability company, trustee, municipality, public agency or other legal entity, or the agent or employee thereof.

“Pounds” means the net explosive weight of fireworks.

“Salute” means an aerial shell as well as other pyrotechnic items whose primary effects are loud noise generated by detonation and flash of light.

“San Diego Bay Fourth of July Fireworks Display Event” means the annual fireworks display event which occurs on the Fourth of July at up to four (4) locations in northern San Diego Bay and is currently known as the “Big Bay Boom.” The San Diego Bay Fourth of July Fireworks Display Event will be referred to in this article as the Big Bay Boom.

"San Diego Water Board" means the California Regional Water Quality Control Board for the San Diego Region.

"San Diego Water Board General Permit" means California Regional Water Quality Control Board for the San Diego Region Order No. R9-2011-0022/NPDES No. CAG999002, General National Pollutant Discharge Elimination System (NPDES) Permit for Residual Firework Pollutant Waste Discharges to Waters of the United States, including any updates and amendments thereto.

“Sponsor” means a person who contributes funds, services, or other forms of assistance to a fireworks organizer in support of a fireworks display event.

Section 14.04 - PROHIBITIONS

(a) It shall be unlawful for any Person to handle, possess, store, load, stage, launch or detonate Fireworks on land or water within District jurisdiction without first having obtained a Permit from the Executive Director as provided in this section. By signing said Permit, each Permit recipient acknowledges and agrees to comply with all of the applicable terms and conditions that may be specified in such Permit and this article.

(b) Any Person who receives a discretionary lease, permit, license or other entitlement for use or a contract, grant, subsidy, loan or other form of financial assistance from the District in connection with a Fireworks Display Event shall also obtain a Permit from the Executive Director as provided in this article. By signing said Permit, each Permit recipient acknowledges and agrees to comply with all of the applicable terms and conditions that may be specified in such Permit and this article.

Section 14.05 - PERMITS - APPLICATION

Whenever the privilege of doing any of the acts hereinbefore enumerated in this article requires obtaining a Permit from the Executive Director, the following procedure shall be followed:

(a) An application for a Permit shall be filed with the District not less than sixty (60) days before the date on which the Fireworks Display Event is proposed to occur.

(b) The application shall be in writing, in a form approved by the District, and shall include, at minimum, the following information: the Person who proposes to handle, possess, store, load, stage, launch or detonate Fireworks, including if applicable the Fireworks Organizer, Fireworks Operator and Sponsor of the Fireworks Display Event; the date, time and duration of the proposed Fireworks Display Event; the location(s) of the proposed Fireworks Display Event, including the loading, staging and launching sites; the total number of pounds, shell sizes and types of Fireworks to be used; and the proposed event transportation and parking management plan for the Fireworks Display Event.

(c) The application shall include copies of the Applicant's Notice of Intent for coverage under the San Diego Water Board General Permit, the San Diego Water Board's Notice of Enrollment of the proposed Fireworks Display Event under said General Permit, and the Best Management Practices Plan approved by the San Diego Water Board for the proposed Fireworks Display Event.

(d) When the application is deemed complete, the Executive Director shall review the application and determine whether the proposed Fireworks Display Event complies with all of the requirements of section 14.07 (Permit – Conditions of Approval) of this article. If the proposed Fireworks Display Event complies with all of the requirements of section 14.07 (Permit – Conditions of Approval) of this article, the Executive Director shall issue a Permit.

(e) Each Permit issued shall state the date, time and location of the Fireworks Display Event for which it is issued, the name of the Person to whom it is issued and all mandatory conditions upon which the Permit is given.

(f) An application for a permit for a Fireworks Display Event at a location not identified in Section 14.07(a) of this article may be granted by the Executive Director provided that (i) environmental review for the proposed Fireworks Display Event has been completed and approved or certified by the District as required by the California Environmental Quality Act, Public Resources Code § 21000, et seq. prior to issuance of a permit and (ii) the applicant has obtained all other permits and approvals as required by law, including without limitation

approvals and permits required under the California Coastal Act, Public Resources Code § 30000, et seq.

Section 14.06 - PERMITS – PUBLIC NOTICE

(a) Within five (5) business days after the issuance of a Permit pursuant to this article, the Executive Director shall give public notice of the issuance of such Permit by posting a copy of the Permit on the District’s website.

Section 14.07 - PERMITS - CONDITIONS OF APPROVAL

All permits issued by the Executive Director shall be subject to the following terms and conditions:

- (a) Location of Fireworks Display Events.
1. Fourth of July Fireworks Display Events shall occur only at the following locations:
 - A. Big Bay Boom, at up to four (4) locations in northern San Diego Bay;
 - B. Fourth of July Imperial Beach Fireworks, at one (1) location along the Imperial Beach Pier;
 - C. Fireworks Over Glorietta Bay, at one (1) location in Glorietta Bay;
 - D. Chula Vista Fourth of July, at one (1) location adjacent to the Chula Vista Bayfront; and
 - E. National City Fourth of July, at one (1) location adjacent to the National City Bayfront.
 2. Non-Fourth of July Fireworks Display Events shall occur only at the following locations:
 - A. National Steel and Shipbuilding Company (NASSCO) shipyard, not to exceed two (2) displays per year along NASSCO Pier 12;
 - B. U.S.S. Midway Museum, not to exceed twenty-three (23) displays per year on or adjacent to the U.S.S. Midway Museum;
 - C. San Diego Symphony Summer Pops Concerts, not to exceed twenty (20) displays per year adjacent to Embarcadero Marina Park South;

D. Our Lady of Rosary Church Annual procession, not to exceed one (1) display per year along Harbor Drive and at end of Grape Street Pier; and

E. Chula Vista Bayfront, not to exceed two (2) displays per year adjacent to the Chula Vista Bayfront.

(b) Duration of Fireworks Display Events.

1. Fourth of July Fireworks Display Events shall not exceed twenty (20) minutes in duration.
2. Non-Fourth of July Fireworks Display Events shall not exceed ten (10) minutes in duration.

(c) Size of Fireworks Display Events.

1. Fourth of July Fireworks Display Events:

A. Big Bay Boom, not to exceed a cumulative 5,342 pounds of fireworks with shell sizes not to exceed 10 inches;

B. Fourth of July Imperial Beach Fireworks, not to exceed 456 pounds of fireworks with shell sizes not to exceed 10 inches;

C. Fireworks Over Glorietta Bay, not to exceed 397 pounds of fireworks with shell sizes not to exceed 10 inches;

D. National City Fourth of July, not to exceed 400 pounds of fireworks with shell sizes not to exceed 8 inches; and

E. Chula Vista Fourth of July, not to exceed 400 pounds of fireworks with shell sizes not to exceed 8 inches.

2. Non-Fourth of July Fireworks Display Events:

A. NASSCO shipyard, not to exceed 281 pounds of fireworks per display with shell sizes not to exceed 6 inches, or a cumulative total of 439 pounds of fireworks per year;

B. U.S.S. Midway Museum, not to exceed 235 pounds of fireworks per display with shell sizes not to exceed 6 inches, or a cumulative total of 1,759 pounds of fireworks per year;

C. San Diego Symphony Summer Pops Concerts, not to exceed 95 pounds of fireworks per display with shell sizes not to exceed 6 inches, or a cumulative total of 1,498 pounds of fireworks per year;

D. Our Lady of Rosary Church Annual procession, not to exceed 18 pounds of fireworks with shell sizes not to exceed 6 inches; and

E. Chula Vista Bayfront, not to exceed 114 pounds of fireworks per display with shell sizes not to exceed 8 inches, or a cumulative total of 228 pounds of fireworks per year.

(d) Fireworks Chemical Composition and Packaging.

1. Chemical Composition.

A. The Big Bay Boom Fourth of July Fireworks Display Event shall use Fireworks which contain no more than 0.32% copper (Cu) per pound of explosive firework material, unless the Applicant establishes in writing and to the satisfaction of the Executive Director that the total copper emissions from the proposed Big Bay Boom Fireworks Display Event will not exceed seventeen (17) pounds. Fireworks which do not conform to the foregoing requirement, but were lawfully purchased prior to the effective date of this article, may be used for a period of six months after the effective date of this article.

B. All Fireworks Display Events shall use Alternative Fireworks produced with pyrotechnic formulas which replace perchlorate with other oxidizers and propellants that burn cleaner, produce less smoke and reduce pollutant waste loading to surface waters, unless the Applicant establishes in writing and to the satisfaction of the Executive Director that such Alternative Fireworks are not commercially available.

2. Packaging.

A. Prior to commencement of a Fireworks Display Event, the Fireworks Operator shall remove and properly dispose of all packaging, wrapping and labels (excluding labels mandated by State or Federal laws) from all Fireworks to be used in the event.

B. Fireworks that include a plastic outer casing or non-biodegradable inner components that make up more than five (5) percent of the mass of the shell or device are prohibited.

(e) Protection of Sensitive Species and Habitat. The following conditions shall apply to Fireworks Display Events that occur between February 15 and September 15 (i.e., avian

breeding season) and are located less than one (1) mile from any federally or state-listed avian species nesting colonies:

1. Location. Fireworks Display Events shall be located not less than one (1) mile from any federally or state-listed avian species nesting colony unless the maximum size of shells used in the event is limited to eight (8) inches.

2. Salutes. Fireworks Display Events shall not use concussion type, non-color shells such as “salutes” or “reports” during the initial twenty-five percent (25%) of the duration of any display (e.g., within the first 5 minutes of a 20-minute display).

3. Security. For Fireworks Display Events with public viewing areas (i.e., parks, promenades, publicly accessible piers, and other similar facilities) that occur within one-half mile of unprotected (i.e., unfenced) federally or state-listed nesting colonies or habitat areas, the Fireworks Organizer shall provide a minimum of two professional security guards to direct persons away from and to discourage trespass into sensitive nesting areas or habitat during such displays. In addition, the fireworks organizer shall provide security patrols of the water area to enforce the existing restrictions on access to unauthorized areas during such fireworks display events in the South Bay.

4. Signage. For Fireworks Display Events with public viewing areas (i.e., parks, promenades, publicly accessible piers, and other similar facilities) that occur within one half-mile of nesting colonies or habitat areas for federally or state-listed species, the Fireworks Organizer, in cooperation with the District, shall post temporary signage along primary access points to sensitive nesting colonies and habitat areas to identify safe viewing locations, to educate visitors on locations of sensitive wildlife habitats, to prevent viewers from trespassing into sensitive areas and to encourage appropriate viewing behavior.

5. Education. Beginning not less than seven (7) days before Fireworks Display Events with public viewing areas (i.e., parks, promenades, publicly accessible piers, and other similar facilities) located within one-half mile of federally or state-listed nesting colonies or habitat areas, the Fireworks Organizer shall implement a public education program using daily announcements on social media, press releases, and information posted at parks, boat launch facilities, marinas, yacht clubs and other viewing locations, to educate potential viewers regarding appropriate viewing and boat docking areas, to discourage trespass into sensitive wildlife habitat, and to reminds viewers of appropriate viewing behavior in and near sensitive nesting colonies and habitat areas (e.g., appropriate disposal of trash, prevention of illegal fireworks, and safe boating procedures).

(f) Best Management Practices. Fireworks Display Events shall implement the following BMPs for Fireworks Display Event preparation, discharge and clean-up:

1. Fireworks Display Events on barges shall be set up at a loading facility in accordance with the requirements and under the supervision of the municipal fire department with jurisdiction over the event. Barges shall be inspected for leaks and other potential safety issues. Idling time for delivery trucks and loading equipment shall not exceed three (3) minutes and all such trucks and equipment shall be shut down when not in use.

2. Fireworks shall be brought to the barge and loaded in their U.S. Department of Transportation (DOT)-approved shipping cartons. Fireworks shall be encased in paper to prevent spillage of loose compounds. All packaging material and debris, including fuses, wires, shipping cartons and other wrapping, shall be properly disposed of in trash receptacles as the Fireworks Display Event is set up. Unless prohibited by the municipal fire marshal with jurisdiction over the Fireworks Display Event, barges shall be equipped with a fire-retardant debris barrier that extends six feet (6') in height, with openings no larger than ¼ inch, around the perimeter of the Fireworks launch area to contain debris.

3. Wires from the electric match placed in the Fireworks fuse shall be secured to avoid strain (such as wrapped around nails that are on the racks, tied to the racks, or tied to the mortar) to prevent wires from being pulled out and falling into the water. Wire cables connected to computer firing equipment modules shall also be properly secured to ensure they remain on the barge during the Fireworks Display Event.

4. Once the Fireworks are prepared for launch, all trash and debris shall be removed from the barge while it is at the loading facility and prior to the barge being moved into position. No loose material shall be allowed on the barges during the Fireworks Display Event.

5. Following the Fireworks Display Event and upon expiration of any safety period required by the municipal fire marshal with jurisdiction over the Fireworks Display Event, the Fireworks Operator shall pick up all loose material on the barge, including all trash and debris resulting from the discharge of the Fireworks, to prevent it from being discharged into the water while the barge is underway.

6. Upon return to the loading facility, the Fireworks Operator shall clean the barge of all Fireworks related material and shall photograph and properly dispose of all Fireworks trash and debris. Unexploded Fireworks and related components shall be collected and disposed of by the Fireworks Operator in accordance with all applicable regulations. Fireworks Operators shall photograph the barge prior to and after cleaning.

7. Following the Fireworks Display Event and upon expiration of any safety period required by the municipal fire marshal with jurisdiction over the event, the Fireworks Organizer shall provide cleanup crews and boats to conduct sweeps of the fireworks detonation

zone to gather any floating debris from spent Fireworks using hand held fishnets, pool skimmers, or other similar equipment.

8. The morning after the Fireworks Display Event, the Fireworks Organizer shall conduct another sweep of the fireworks detonation zone and quays, piers and docks adjacent to the fireworks detonation zone to remove Fireworks trash and debris. The Fireworks Organizer shall collect, bag, weigh and photograph all trash and debris collected prior to its disposal.

9. The morning after the Fireworks Display Event, the Fireworks Organizer shall perform a cleanup of the shoreline using crews of not fewer than five persons per barge on the shoreline adjacent to each barge location. Each crew member shall be equipped with trash bags and a trash grabber. The Fireworks Organizer shall collect, bag, weigh, and photograph all trash and debris collected prior to its disposal.

10. Within ten (10) business days after a Fireworks Display Event, the Fireworks Organizer shall provide the Executive Director with the photographs and written evidence of the weight of the Fireworks trash and debris collected pursuant to subdivisions (5) through (9) above. If the dry weight of the Fireworks trash and debris collected is less than fifty percent (50%) of the net weight of fireworks launched during the Fireworks Display Event, the Fireworks Organizer shall offset the remaining amount by providing a crew of not fewer than two (2) persons for each barge or other launch site used in the Fireworks Display Event to participate in the next scheduled "Operation Clean Sweep" or other District-sponsored clean-up event prior to the end of the calendar year to recover trash and debris from San Diego Bay and/or the Imperial Beach Oceanfront.

11. For all Fourth of July Fireworks Display Events and for Non-Fourth of July Fireworks Display Events which are advertised to the public, the Fireworks Organizer shall double the number of trash receptacles at major viewing areas prior to each fireworks display event; trashcans shall be emptied and parks and viewing areas shall be cleaned following the event.

(g) Eelgrass Avoidance and Mitigation. For Fireworks Display Events with launching sites located in shallow water with the potential for eelgrass to occur, fireworks barges shall be held in place by tugboats and shall not require temporary moorings. To the extent practicable, barges shall be located in unvegetated deep water channels outside of eelgrass beds. Pre-event and post-event eelgrass surveys shall be completed to identify the distribution of eelgrass to assist tug operators and to assess any impacts to eelgrass that may occur. Through a pre-event training, tug operators shall be made aware of shallow eelgrass and instructed not to use high thrust in the vicinity of eelgrass beds. If an unanticipated impact to eelgrass occurs, this

impact shall be mitigated by replacing the eelgrass at a ratio determined by the California Eelgrass Mitigation Policy.

(h) Event Transportation and Parking Management Plans. For all Fourth of July Fireworks Display Events and for Non-Fourth of July Fireworks Display Events which are advertised to the public, the Fireworks Organizer shall prepare and submit an event transportation and parking management plan (ETPMP) to the Executive Director for approval as part of the Application, which shall be designed to ensure safe and convenient access to public viewing areas while limiting conflicts between transportation modes and reducing impacts on surrounding transportation facilities to the maximum extent feasible. The ETPMP shall take into account anticipated attendance, existing transportation and parking facilities, and other concurrent public events in the surrounding areas, and shall include but is not limited to the following:

1. Transportation management strategies, including but not limited to, a public awareness program, traffic management and enforcement, incident management, and public transit and alternative modes of transportation management, which shall be implemented for the Fireworks Display Event; and

2. Parking management strategies, including but not limited to a public awareness program, coordination with parking vendors, off-site parking arrangements, designated areas for taxi and rideshare pick up/drop off, promotional programs with rideshare vendors, joint event ticketing programs with public transit agencies, and expanded shuttle operations.

(i) Compliance with San Diego Water Board General Permit.

1. Prior to the Executive Director's issuance of a permit pursuant to this article, the Applicant shall demonstrate that it has applied for coverage and has been enrolled under the San Diego Water Board General Permit.

2. The Applicant shall comply with all applicable terms, conditions and Best Management Practices required by the San Diego Water Board General Permit, which shall be incorporated into and considered in the terms, conditions and Best Management Practices of any permit issued by the Executive Director pursuant to this article.

3. The Applicant shall submit to the District copies of all applications, plans, reports and other documentation required by the San Diego Water Board General Permit, including without limitation the Notice of Intent, Fireworks Best Management Practices Plan, Public Fireworks Display Log and the Public Display of Fireworks Post Event Report, within the time required for the submission of such reports to the San Diego Water Board.

(j) Compliance with Other Required Permits: Prior to the Executive Director's issuance of a Permit pursuant to this article, the Applicant shall demonstrate that it has obtained and shall comply with all other permits and approvals required by federal, state and local laws and regulations including, without limitation, such permits and approvals as are required by the United States Coast Guard, California Coastal Act, the District Code, including Article 10 (Stormwater Management and Discharge Control), and the fire marshal of any city which has jurisdiction over all or any part of the activity allowed under said Permit.

(k) Compliance with Laws: The Applicant shall comply with any and all applicable rules and regulations promulgated by the District, including without limitation the District Code, the Chula Vista Bayfront Master Plan Settlement Agreement and Natural Resources Management Plan, and with the laws, rules and regulations of the United States of America and the State of California, and of any department or agency thereof, and with the applicable ordinances, rules and regulations of any city which has jurisdiction over all or any part of the activity allowed under said Permit. The Applicant's failure to comply with any applicable law, ordinance, rule or regulation shall be cause for immediate revocation of said permit and for the denial of applications for future Permits.

(l) Indemnity: The Applicant shall indemnify and hold harmless the District, its board, officers and employees, from any and all claim of loss, liability or damage arising out of the Fireworks Display Event, including but not limited to the issuance of the District Permit, or in connection with the handling, possession, storage, loading, staging, launching or detonating of Fireworks by the Applicant, its officers, employees, contractors, agents or other representatives, howsoever caused, whether such loss, liability or damage results, either directly or indirectly, from the acts, omissions or negligence of the Applicant, its officers, employees, contractors, agents or other representatives, in connection with the handling, possession, storage, loading, staging, launching or detonation of Fireworks pursuant to said Permit.

(m) Insurance: The Applicant shall file with the Executive Director, in a form approved by the District General Counsel, a policy of public liability and property damage insurance, in such amounts and form as the Executive Director may specify, indemnifying the District, its boards, officers and employees, as their interest may appear under the terms and conditions of said Permit. The Permit shall not become effective until after such policy of insurance has been received by the District.

(n) Performance Bond: For public Fireworks Display Events with over 500 spectators the Applicant shall post a faithful performance bond, in a form approved by the District General Counsel, or in lieu thereof the equivalent in cash, in an amount sufficient in the opinion of the Executive Director to cover costs associated with the Fireworks Display Event allowed under the

permit, including without limitation the costs of providing security for the protection of sensitive species and habitat, and cleaning up and removing debris, rubbish and trash. The permit shall not become effective until after such faithful performance bond, or cash in lieu thereof, has been posted with and received by the District.

(o) Mitigation Measures: All permit applications shall be reviewed by the District for consistency with the Mitigation Monitoring and Reporting Program (MMRP) from the Final Environmental Impact Report for the San Diego Bay and Imperial Beach Oceanfront Fireworks Display Events Project, as certified by the Board of Port Commissioners, and all applicable mitigation measures from the MMRP shall be identified as required conditions of the approved permit issued by the District.

Section 14.8 – GENERAL PROVISIONS

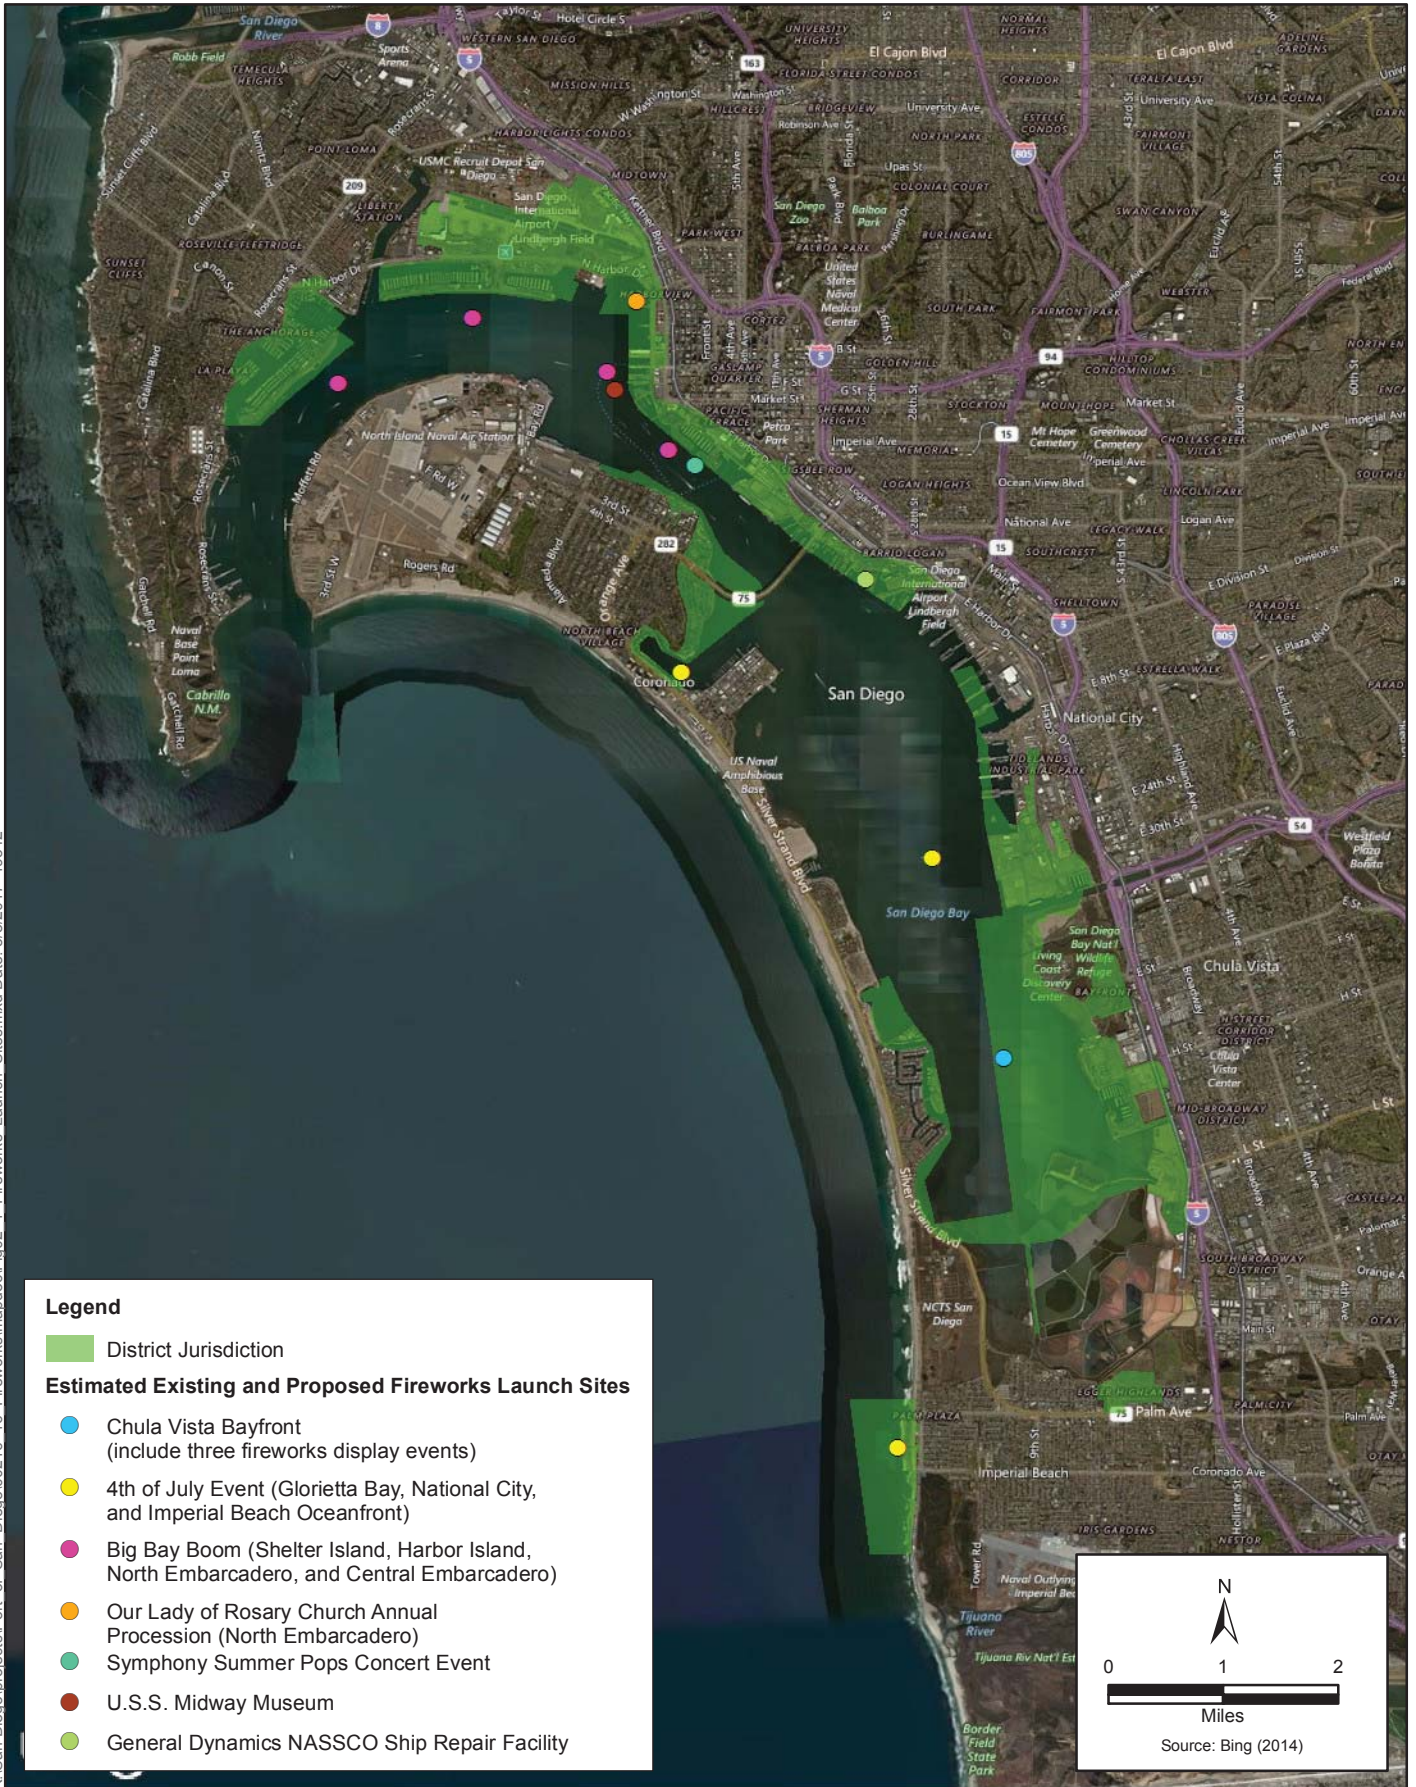

(a) Preemption. The provisions of this article do not apply where any federal or state law regulates the handling, possession, storage, loading, staging, launching or detonating of Fireworks if the federal or state law preempts local regulation or the federal or state law is more restrictive.

(b) Severability. If any provision of this article or the application thereof to any person or circumstances is held invalid, such invalidity shall not affect other provisions or applications of this article which can be given effect without the invalid provisions or application, and to this end the provisions of this section are severable.

(c) Cost Recovery. The Applicant shall pay a fee to the District for the cost of services and administrative acts of the District incurred in processing a permit application.

Section 14.9 - ENFORCEMENT

Any person who violates this article or who fails to comply with the terms and conditions of a permit issued pursuant to this article shall be subject to punishment in accordance with District Code section 0.11, General Penalty, and section 0.13, Permit Violations.

DRAFT

RESOLUTION _____

RESOLUTION TO CERTIFY FINAL ENVIRONMENTAL IMPACT REPORT, ADOPT FINDINGS OF FACT AND STATEMENT OF OVERRIDING CONSIDERATIONS, ADOPT MITIGATION MONITORING AND REPORTING PROGRAM, AND DIRECT FILING OF NOTICE OF DETERMINATION

WHEREAS, the San Diego Unified Port District (District) is a public corporation created by the Legislature in 1962 pursuant to Harbors and Navigation Code Appendix I (Port Act); and

WHEREAS, Section 21 of the Port Act states that the Board of Port Commissioners (Board) may pass all necessary ordinances and resolutions for the regulation of the District; and

WHEREAS, Section 35 of the Port Act states that the Board may do all other acts necessary and convenient for the exercise of its powers; and

WHEREAS, fireworks display events have been occurring for many years at several locations within San Diego Bay and the Imperial Beach Oceanfront, including off Shelter Island, Harbor Island, Centre City Embarcadero (which includes North Embarcadero, Central Embarcadero, and South Embarcadero), and the National Steel and Shipbuilding Company (NASSCO) facility, as well as along the Coronado Bayfront within Glorietta Bay (an inlet of San Diego Bay adjacent to Coronado Island) and off the Imperial Beach Pier; and

WHEREAS, in the interest of protecting the environment and the public health, safety and welfare, the District has proposed the adoption of an ordinance that establishes policies, performance standards and other requirements that would apply to all fireworks display events that occur in and around San Diego Bay and the Pacific Ocean near Imperial Beach and require a discretionary action by the District or are operated by the District's tenants (Proposed Ordinance); and

WHEREAS, the District has proposed four additional new fireworks display events, including three along the Chula Vista Bayfront and one along the National City Bayfront, which also would be subject to the Proposed Ordinance; and

WHEREAS, the Proposed Ordinance and the proposed four additional new fireworks display events along the Bayfront in Chula Vista and National City are collectively referred to as the "Proposed Project"; and

DRAFT

WHEREAS, pursuant to the California Environmental Quality Act ("CEQA"), Public Resources Code Section 21000, et seq., and its implementing regulations, 14 California Code of Regulations Section 15000, et seq. ("CEQA Guidelines"), the District prepared a Draft Environmental Impact Report for the San Diego Bay and Imperial Beach Oceanfront Fireworks Display Events Project (UPD #EIR-2015-115; SCH #2015081013) for the Proposed Project ("Draft EIR"), which was made available for public review and comment as required by law in March 2017; and

WHEREAS, the District received comments letters concerning the Draft EIR from several public agencies and organizations and, pursuant to CEQA Guidelines section 15088, the District has prepared written responses to all comments received on the Draft EIR during the public comment period which raised environmental issues; and

WHEREAS, the District has determined that the comments received on the Draft EIR do not contain any significant new information within the meaning of CEQA Guidelines section 15088.5 and therefore recirculation of the Draft EIR is not required; and

WHEREAS, the District has prepared a Final Environmental Impact Report ("Final EIR") which contains the information required by CEQA Guidelines section 15132, including the Draft EIR and the revisions and additions thereto, technical appendices, public comments and the District's responses to public comments on the Draft EIR, and which has been filed with the District Clerk; and

WHEREAS, pursuant to CEQA Guidelines sections 15091, 15093 and 15097, the District has prepared Findings of Fact and a Statement of Overriding Considerations and a Mitigation Monitoring and Reporting Program, which have been filed with the District Clerk; and

WHEREAS, the District Clerk has caused notice to be duly given of a public hearing in this matter in accordance with law, as evidenced by the affidavit of publication and affidavit of mailing on file with the District Clerk; and

WHEREAS, all materials with regard to the Proposed Project were made available to the Board for its review and consideration of the Proposed Project including, but not limited to, the following:

1. The Draft EIR and appendices, dated March 2017;
2. The Final EIR and its appendices, dated May 2017;
3. The Staff Report and Agenda Sheet, dated May [x], 2017;
4. The proposed Findings of Fact and Statement of Overriding

DRAFT

Considerations, dated May 2017;

5. The proposed Mitigation Monitoring and Reporting Program, dated May 2017; and

6. All documents and records filed in this proceeding by the District and other interested parties;

WHEREAS, a duly noticed public hearing was held on May 25, 2017, before the Board, at which the Board received public testimony, reviewed and considered all testimony and materials made available to the Board regarding the Proposed Project; and

WHEREAS, having reviewed and considered all testimony and materials made available to the Board, including but not limited to the Final EIR, the staff reports and all the testimony and evidence in the record of the proceedings with respect to the Proposed Project, the Board took the actions hereinafter set forth.

NOW, THEREFORE, BE IT RESOLVED by the Board of Port Commissioners of the San Diego Unified Port District, as follows:

1. The Board finds the facts recited above are true and further finds that this Board has jurisdiction to consider, approve and adopt the subject of this Resolution.

2. The Board finds and determines that the applicable provisions of CEQA, its implementing State Guidelines, and District Guidelines have been duly observed in conjunction with said hearing and the considerations of this matter and all of the previous proceedings related thereto.

3. The Board finds and determines that (a) the Final EIR is complete and adequate in scope and has been completed in compliance with CEQA and the State and District Guidelines for implementation thereof, (b) the Final EIR was presented to the Board, and the Board has fully reviewed and considered the information in Final EIR prior to approving the Proposed Project, (c) the Final EIR reflects the District's independent judgment and analysis, and, therefore, the Final EIR is hereby declared to be certified in relation to the subject of this Resolution.

4. The Board finds and determines that the Proposed Project is approved despite the existence of certain significant environmental effects identified in the Final EIR and, pursuant to Public Resources Code Section 21081 and CEQA Guidelines Section 15091, the Board hereby makes and adopts the findings with respect to each significant environmental effect as set forth in the Findings of Fact, appended hereto as Exhibit "A" and made a part hereof by this reference, and declares that it considered the evidence described

DRAFT

in connection with each such finding.

5. The Board further finds and determines that the Proposed Project is approved despite the existence of certain unavoidable significant environmental effects identified in the Final EIR, and, pursuant to Public Resources Code section 21081(b) and CEQA Guidelines section 15093, the Board hereby makes and adopts the Statement of Overriding Considerations appended hereto as Chapter 7.0 of Exhibit A and made part hereof by this reference, and finds that such effects are considered acceptable because the benefits of the Proposed Project outweigh the unavoidable environmental effects.

6. Pursuant to Public Resources Code Section 21081.6 and CEQA Guidelines Section 15091(d), the Board hereby adopts and approves the Mitigation Monitoring and Reporting Program, which is appended hereto as Exhibit "B" and is made a part hereof by this reference, with respect to the significant environmental effects identified in the Final EIR, and hereby makes and adopts the provisions of the Mitigation Monitoring and Reporting Program as conditions of approval for the Proposed Project.

7. Pursuant to Public Resources Code Section 21152 and CEQA Guidelines Section 15094, the Clerk of the Board shall cause a Notice of Determination to be filed with the Clerk of the County of San Diego and the State Office of Planning and Research. Unless the Proposed Project is declared exempt herein and a Certificate of Filing Fee Exemption is on file, the Proposed Project is not operative, vested or final until the filing fees required pursuant to Fish and Game Code Section 711.4 are paid to the Clerk of the County of San Diego.

8. Pursuant to Public Resources Code Section 21081.6(a)(2) and CEQA Guidelines Section 15091(e), the location and custodian of the documents and other materials which constitute the record of proceedings on which this Resolution is based is the Clerk, San Diego Unified Port District, 3165 Pacific Highway, San Diego, California 92101.

Exhibit B: Mitigation Monitoring and Reporting Program

PASSED AND ADOPTED by the Board of Port Commissioners of the San Diego Unified Port District, this 25th day of May, 2017, by the following vote:

DRAFT

SAN DIEGO UNIFIED PORT DISTRICT

ORDINANCE xxxx

ORDINANCE ESTABLISHING THE “SAN DIEGO UNIFIED PORT DISTRICT FIREWORKS DISPLAY EVENT ORDINANCE” AS ARTICLE 14 OF THE SAN DIEGO UNIFIED PORT DISTRICT CODE TO GOVERN EXISTING AND PROPOSED NEW FIREWORKS DISPLAYS

WHEREAS, the San Diego Unified Port District (District) is a public corporation created by the Legislature in 1962 pursuant to Harbors and Navigation Code Appendix I (Port Act); and

WHEREAS, Sections 4, 21, 35, 55, 56 and 87 of the Port Act grant the District broad general police powers, including the ability to enact ordinances to protect, preserve and enhance physical access to the bay, the natural resources of the bay, and the quality of water in the bay; and

WHEREAS, Section 55(a) of the Port Act requires the Board of Port Commissioners (BPC) to make and enforce all necessary rules and regulations governing the use and control of all navigable waters and all tidelands and submerged lands, filled or unfilled, and other lands within the territorial limits of the District; and

WHEREAS, Section 55(b) of the Port Act requires the BPC to regulate and control the anchoring, mooring, towing and docking of all vessels; and

WHEREAS, Section 55(c) of the Port Act authorizes the BPC to establish and maintain a harbor police and harbor fire protection within the territorial limits of the District; and

WHEREAS, Section 56 of the Port Act requires the BPC to make and enforce such local police and sanitary regulations relative to the construction, maintenance, operation, and use of all public services and public utilities in the District, operated in connection with or for the promotion or accommodation of commerce, navigation, fisheries, and recreation therein as are now vested in the District; and

WHEREAS, it is necessary for the District to regulate fireworks display events within San Diego Bay or the Imperial Beach oceanfront that require a discretionary action by the District or that are operated by the District’s tenants in order to encourage and promote commerce, navigation, fisheries, and recreation in and through its jurisdiction; and

XXXX

WHEREAS, the regulations included in this Ordinance are adopted pursuant to the authority granted to the District by the Port Act and the Port District Code to regulate the use and control of all navigable waters and all tidelands and submerged lands, filled or unfilled, and other lands within the territorial limits of the District, to regulate and control the anchoring, mooring, towing and docking of all vessels, and to enact ordinances to protect, preserve and enhance physical access to the bay, the natural resources of the bay, and the quality of water in the bay; and

WHEREAS, on May 25, 2017, the District has considered and certified a Final Environmental Impact Report pursuant to the California Environmental Quality Act, State CEQA Guidelines, and District procedures relative to the adoption of this Ordinance; and

WHEREAS, the District Clerk has caused notice to be duly given of a public hearing in this matter in accordance with law, as evidenced by the affidavit of publication and affidavit of mailing on file with the District Clerk; and

WHEREAS, the District has considered all comments received at the public meeting on May 25, 2017 prior to adoption of this Ordinance; and

WHEREAS, the District's approval of this Ordinance reflects the BPC's independent judgement and analysis.

NOW, THEREFORE, the Board of Port Commissioners of the San Diego Unified Port District does ordain as follows:

Section 1. That the San Diego Unified Port District Code is amended to add Article 14 regulating fireworks display events requiring a discretionary approval from the San Diego Unified Port District as follows:

ARTICLE 14 - FIREWORKS DISPLAY ORDINANCE

Section 14.01 – TITLE

The title of this article shall be known as the “San Diego Unified Port District Fireworks Display Event Ordinance.”

Section 14.02 - PURPOSE

The purpose of this article is to establish a defined set of requirements and procedures by which the District and users of the District tidelands may continue to enjoy fireworks displays in and around San Diego Bay and the Pacific Ocean near Imperial Beach. Further, it is the intent of this article to protect the health,

XXXX

safety and welfare of persons, property and the environment within the District's jurisdiction and to comply with federal, state and local laws and regulations governing the handling, possession, storage, loading, staging, launching and detonating of fireworks.

Section 14.03 – DEFINITIONS

For purposes of this article, certain words and phrases not otherwise defined in District Code section 0.03 shall be defined as follows, unless the context requires a different meaning:

“Alternative fireworks” means fireworks produced with new pyrotechnic formulas that replace perchlorate with other oxidizers and propellants that burn cleaner, produce less smoke and reduce pollutant waste loading to surface waters.

“Applicant” means a person who submits an application to the District for a permit pursuant to this article.

“Application” means the District's written form to be submitted by a person requesting a permit pursuant to this article.

“Barge” means a water vessel from which fireworks are launched or detonated.

“Best Management Practices” or “BMPs” means schedules of activities, prohibitions of practices, pollution prevention and educational practices, maintenance procedures, tools and other management practices used to prevent or reduce the discharge of pollutants directly to receiving waters to the maximum extent practicable. BMPs may include any type of pollution prevention and pollution control measure that can help to achieve compliance with this article.

“District” means the San Diego Unified Port District.

“District General Counsel” means the General Counsel of the District or her/his designee.

“Executive Director” means the Executive Director (President/CEO) of the District or her/his designee.

“Fireworks” means any device containing chemical elements and chemical compounds capable of burning independently of the oxygen of the atmosphere and producing audible, visual, mechanical, or thermal effects which are useful as pyrotechnic devices or for entertainment, including aerial shells, low-level comet or multi-shot devices or ground-level displays. The term "fireworks" includes, but is not limited to, devices designated by the manufacturer as fireworks, torpedoes, skyrockets, roman candles, rockets, sparklers, party poppers, paper caps, chasers, fountains, smoke sparks, aerial bombs, and fireworks kits.

XXXX

“Fireworks Display Event” means the handling, possession, storage, loading, staging, launching or detonating of fireworks on the land or waters within the District’s jurisdiction for viewing by the public or any group of persons exceeding twenty-five (25) in number.

“Fireworks Operator” means a pyrotechnic operator licensed by the State of California, who by examination, experience and training has demonstrated the required skill and ability in the use and discharge of fireworks as authorized by the license granted, and who is responsible for supplying, staging, launching or detonating the fireworks used in a fireworks display event.

“Fireworks Organizer” means a person who proposes to conduct a fireworks display event and who is responsible for obtaining the funding and approvals for a fireworks display event and for contracting with a fireworks operator to produce a fireworks display event.

“Fourth of July Fireworks Display Event” means a fireworks display event that occurs annually on the Fourth of July to express patriotism and civic pride and to celebrate the signing of the Declaration of Independence of the United States of America.

“Non-Fourth of July Fireworks Display Event” means a fireworks display event that occurs on a date other than the Fourth of July.

“Operation Clean Sweep” means the annual cleanup event sponsored by the San Diego Port Tenants Association and District, among others, where volunteers remove trash and debris from San Diego Bay.

“Permit” means the District-issued authorization for an applicant to conduct a fireworks display event pursuant to this article.

“Person” means an individual, association, partnership, nonprofit organization, corporation, limited liability company, trustee, municipality, public agency or other legal entity, or the agent or employee thereof.

“Pounds” means the net explosive weight of fireworks.

“Salute” means an aerial shell as well as other pyrotechnic items whose primary effects are loud noise generated by detonation and flash of light.

“San Diego Bay Fourth of July Fireworks Display Event” means the annual fireworks display event which occurs on the Fourth of July at up to four (4) locations in northern San Diego Bay and is currently known as the “Big Bay Boom.” The San Diego Bay Fourth of July Fireworks Display Event will be referred to in this article as the Big Bay Boom.

XXXX

"San Diego Water Board" means the California Regional Water Quality Control Board for the San Diego Region.

"San Diego Water Board General Permit" means California Regional Water Quality Control Board for the San Diego Region Order No. R9-2011-0022/NPDES No. CAG999002, General National Pollutant Discharge Elimination System (NPDES) Permit for Residual Firework Pollutant Waste Discharges to Waters of the United States, including any updates and amendments thereto.

"Sponsor" means a person who contributes funds, services, or other forms of assistance to a fireworks organizer in support of a fireworks display event.

Section 14.04 – PROHIBITIONS

(a) It shall be unlawful for any Person to handle, possess, store, load, stage, launch or detonate Fireworks on land or water within District jurisdiction without first having obtained a Permit from the Executive Director as provided in this section. By signing said Permit, each Permit recipient acknowledges and agrees to comply with all of the applicable terms and conditions that may be specified in such Permit and this article.

(b) Any Person who receives a discretionary lease, permit, license or other entitlement for use or a contract, grant, subsidy, loan or other form of financial assistance from the District in connection with a Fireworks Display Event shall also obtain a Permit from the Executive Director as provided in this article. By signing said Permit, each Permit recipient acknowledges and agrees to comply with all of the applicable terms and conditions that may be specified in such Permit and this article.

Section 14.05 - PERMITS - APPLICATION

Whenever the privilege of doing any of the acts hereinbefore enumerated in this article requires obtaining a Permit from the Executive Director, the following procedure shall be followed:

(a) An application for a Permit shall be filed with the District not less than sixty (60) days before the date on which the Fireworks Display Event is proposed to occur.

(b) The application shall be in writing, in a form approved by the District, and shall include, at minimum, the following information: the Person who proposes to handle, possess, store, load, stage, launch or detonate Fireworks, including if applicable the Fireworks Organizer, Fireworks Operator and Sponsor of the Fireworks Display Event; the date, time and duration of the proposed Fireworks Display Event; the location(s) of the proposed Fireworks Display Event, including the loading, staging and launching sites; the total number of

XXXX

pounds, shell sizes and types of Fireworks to be used; and the proposed event transportation and parking management plan for the Fireworks Display Event.

(c) The application shall include copies of the Applicant's Notice of Intent for coverage under the San Diego Water Board General Permit, the San Diego Water Board's Notice of Enrollment of the proposed Fireworks Display Event under said General Permit, and the Best Management Practices Plan approved by the San Diego Water Board for the proposed Fireworks Display Event.

(d) When the application is deemed complete, the Executive Director shall review the application and determine whether the proposed Fireworks Display Event complies with all of the requirements of section 14.07 (Permit – Conditions of Approval) of this article. If the proposed Fireworks Display Event complies with all of the requirements of section 14.07 (Permit – Conditions of Approval) of this article, the Executive Director shall issue a Permit.

(e) Each Permit issued shall state the date, time and location of the Fireworks Display Event for which it is issued, the name of the Person to whom it is issued and all mandatory conditions upon which the Permit is given.

(f) An application for a permit for a Fireworks Display Event at a location not identified in Section 14.07(a) of this article may be granted by the Executive Director provided that (i) environmental review for the proposed Fireworks Display Event has been completed and approved or certified by the District as required by the California Environmental Quality Act, Public Resources Code § 21000, et seq. prior to issuance of a permit and (ii) the applicant has obtained all other permits and approvals as required by law, including without limitation approvals and permits required under the California Coastal Act, Public Resources Code § 30000, et seq.

Section 14.06 - PERMITS – PUBLIC NOTICE

(a) Within five (5) business days after the issuance of a Permit pursuant to this article, the Executive Director shall give public notice of the issuance of such Permit by posting a copy of the Permit on the District's website.

Section 14.07 - PERMITS - CONDITIONS OF APPROVAL

All permits issued by the Executive Director shall be subject to the following terms and conditions:

(a) Location of Fireworks Display Events.

1. Fourth of July Fireworks Display Events shall occur only at the following locations:

XXXX

A. Big Bay Boom, at up to four (4) locations in northern San Diego Bay;

B. Fourth of July Imperial Beach Fireworks, at one (1) location along the Imperial Beach Pier;

C. Fireworks Over Glorietta Bay, at one (1) location in Glorietta Bay;

D. Chula Vista Fourth of July, at one (1) location adjacent to the Chula Vista Bayfront; and

E. National City Fourth of July, at one (1) location adjacent to the National City Bayfront.

2. Non-Fourth of July Fireworks Display Events shall occur only at the following locations:

A. National Steel and Shipbuilding Company (NASSCO) shipyard, not to exceed two (2) displays per year along NASSCO Pier 12;

B. U.S.S. Midway Museum, not to exceed twenty-three (23) displays per year on or adjacent to the U.S.S. Midway Museum;

C. San Diego Symphony Summer Pops Concerts, not to exceed twenty (20) displays per year adjacent to Embarcadero Marina Park South;

D. Our Lady of Rosary Church Annual procession, not to exceed one (1) display per year along Harbor Drive and at end of Grape Street Pier; and

E. Chula Vista Bayfront, not to exceed two (2) displays per year adjacent to the Chula Vista Bayfront.

(b) Duration of Fireworks Display Events.

1. Fourth of July Fireworks Display Events shall not exceed twenty (20) minutes in duration.

2. Non-Fourth of July Fireworks Display Events shall not exceed ten (10) minutes in duration.

(c) Size of Fireworks Display Events.

1. Fourth of July Fireworks Display Events:

XXXX

A. Big Bay Boom, not to exceed a cumulative 5,342 pounds of fireworks with shell sizes not to exceed 10 inches;

B. Fourth of July Imperial Beach Fireworks, not to exceed 456 pounds of fireworks with shell sizes not to exceed 10 inches;

C. Fireworks Over Glorietta Bay, not to exceed 397 pounds of fireworks with shell sizes not to exceed 10 inches;

D. National City Fourth of July, not to exceed 400 pounds of fireworks with shell sizes not to exceed 8 inches; and

E. Chula Vista Fourth of July, not to exceed 400 pounds of fireworks with shell sizes not to exceed 8 inches.

2. Non-Fourth of July Fireworks Display Events:

A. NASSCO shipyard, not to exceed 281 pounds of fireworks per display with shell sizes not to exceed 6 inches, or a cumulative total of 439 pounds of fireworks per year;

B. U.S.S. Midway Museum, not to exceed 235 pounds of fireworks per display with shell sizes not to exceed 6 inches, or a cumulative total of 1,759 pounds of fireworks per year;

C. San Diego Symphony Summer Pops Concerts, not to exceed 95 pounds of fireworks per display with shell sizes not to exceed 6 inches, or a cumulative total of 1,498 pounds of fireworks per year;

D. Our Lady of Rosary Church Annual procession, not to exceed 18 pounds of fireworks with shell sizes not to exceed 6 inches; and

E. Chula Vista Bayfront, not to exceed 114 pounds of fireworks per display with shell sizes not to exceed 8 inches, or a cumulative total of 228 pounds of fireworks per year.

(d) Fireworks Chemical Composition and Packaging.

1. Chemical Composition.

A. The Big Bay Boom Fourth of July Fireworks Display Event shall use Fireworks which contain no more than 0.32% copper (Cu) per pound of explosive firework material, unless the Applicant establishes in writing and to the satisfaction of the Executive Director that the total copper emissions from the proposed Big Bay Boom Fireworks Display Event will not exceed seventeen (17) pounds. Fireworks which do not conform to the foregoing

XXXX

requirement, but were lawfully purchased prior to the effective date of this article, may be used for a period of six months after the effective date of this article.

B. All Fireworks Display Events shall use Alternative Fireworks produced with pyrotechnic formulas which replace perchlorate with other oxidizers and propellants that burn cleaner, produce less smoke and reduce pollutant waste loading to surface waters, unless the Applicant establishes in writing and to the satisfaction of the Executive Director that such Alternative Fireworks are not commercially available.

2. Packaging.

A. Prior to commencement of a Fireworks Display Event, the Fireworks Operator shall remove and properly dispose of all packaging, wrapping and labels (excluding labels mandated by State or Federal laws) from all Fireworks to be used in the event.

B. Fireworks that include a plastic outer casing or non-biodegradable inner components that make up more than five (5) percent of the mass of the shell or device are prohibited.

(e) Protection of Sensitive Species and Habitat. The following conditions shall apply to Fireworks Display Events that occur between February 15 and September 15 (i.e., avian breeding season) and are located less than one (1) mile from any federally or state-listed avian species nesting colonies:

1. Location. Fireworks Display Events shall be located not less than one (1) mile from any federally or state-listed avian species nesting colony unless the maximum size of shells used in the event is limited to eight (8) inches.

2. Salutes. Fireworks Display Events shall not use concussion type, non-color shells such as "salutes" or "reports" during the initial twenty-five percent (25%) of the duration of any display (e.g., within the first 5 minutes of a 20-minute display).

3. Security. For Fireworks Display Events with public viewing areas (i.e., parks, promenades, publicly accessible piers, and other similar facilities) that occur within one-half mile of unprotected (i.e., unfenced) federally or state-listed nesting colonies or habitat areas, the Fireworks Organizer shall provide a minimum of two professional security guards to direct persons away from and to discourage trespass into sensitive nesting areas or habitat during such displays. In addition, the fireworks organizer shall provide security patrols of the water area to enforce the existing restrictions on access to unauthorized areas during such fireworks display events in the South Bay.

XXXX

4. Signage. For Fireworks Display Events with public viewing areas (i.e., parks, promenades, publicly accessible piers, and other similar facilities) that occur within one half-mile of nesting colonies or habitat areas for federally or state-listed species, the Fireworks Organizer, in cooperation with the District, shall post temporary signage along primary access points to sensitive nesting colonies and habitat areas to identify safe viewing locations, to educate visitors on locations of sensitive wildlife habitats, to prevent viewers from trespassing into sensitive areas and to encourage appropriate viewing behavior.

5. Education. Beginning not less than seven (7) days before Fireworks Display Events with public viewing areas (i.e., parks, promenades, publicly accessible piers, and other similar facilities) located within one-half mile of federally or state-listed nesting colonies or habitat areas, the Fireworks Organizer shall implement a public education program using daily announcements on social media, press releases, and information posted at parks, boat launch facilities, marinas, yacht clubs and other viewing locations, to educate potential viewers regarding appropriate viewing and boat docking areas, to discourage trespass into sensitive wildlife habitat, and to remind viewers of appropriate viewing behavior in and near sensitive nesting colonies and habitat areas (e.g., appropriate disposal of trash, prevention of illegal fireworks, and safe boating procedures).

(f) Best Management Practices. Fireworks Display Events shall implement the following BMPs for Fireworks Display Event preparation, discharge and clean-up:

1. Fireworks Display Events on barges shall be set up at a loading facility in accordance with the requirements and under the supervision of the municipal fire department with jurisdiction over the event. Barges shall be inspected for leaks and other potential safety issues. Idling time for delivery trucks and loading equipment shall not exceed three (3) minutes and all such trucks and equipment shall be shut down when not in use.

2. Fireworks shall be brought to the barge and loaded in their U.S. Department of Transportation (DOT)-approved shipping cartons. Fireworks shall be encased in paper to prevent spillage of loose compounds. All packaging material and debris, including fuses, wires, shipping cartons and other wrapping, shall be properly disposed of in trash receptacles as the Fireworks Display Event is set up. Unless prohibited by the municipal fire marshal with jurisdiction over the Fireworks Display Event, barges shall be equipped with a fire-retardant debris barrier that extends six feet (6') in height, with openings no larger than ¼ inch, around the perimeter of the Fireworks launch area to contain debris.

3. Wires from the electric match placed in the Fireworks fuse shall be secured to avoid strain (such as wrapped around nails that are on the racks, tied to the racks, or tied to the mortar) to prevent wires from being pulled

XXXX

out and falling into the water. Wire cables connected to computer firing equipment modules shall also be properly secured to ensure they remain on the barge during the Fireworks Display Event.

4. Once the Fireworks are prepared for launch, all trash and debris shall be removed from the barge while it is at the loading facility and prior to the barge being moved into position. No loose material shall be allowed on the barges during the Fireworks Display Event.

5. Following the Fireworks Display Event and upon expiration of any safety period required by the municipal fire marshal with jurisdiction over the Fireworks Display Event, the Fireworks Operator shall pick up all loose material on the barge, including all trash and debris resulting from the discharge of the Fireworks, to prevent it from being discharged into the water while the barge is underway.

6. Upon return to the loading facility, the Fireworks Operator shall clean the barge of all Fireworks related material and shall photograph and properly dispose of all Fireworks trash and debris. Unexploded Fireworks and related components shall be collected and disposed of by the Fireworks Operator in accordance with all applicable regulations. Fireworks Operators shall photograph the barge prior to and after cleaning.

7. Following the Fireworks Display Event and upon expiration of any safety period required by the municipal fire marshal with jurisdiction over the event, the Fireworks Organizer shall provide cleanup crews and boats to conduct sweeps of the fireworks detonation zone to gather any floating debris from spent Fireworks using hand held fishnets, pool skimmers, or other similar equipment.

8. The morning after the Fireworks Display Event, the Fireworks Organizer shall conduct another sweep of the fireworks detonation zone and quays, piers and docks adjacent to the fireworks detonation zone to remove Fireworks trash and debris. The Fireworks Organizer shall collect, bag, weigh and photograph all trash and debris collected prior to its disposal.

9. The morning after the Fireworks Display Event, the Fireworks Organizer shall perform a cleanup of the shoreline using crews of not fewer than five persons per barge on the shoreline adjacent to each barge location. Each crew member shall be equipped with trash bags and a trash grabber. The Fireworks Organizer shall collect, bag, weigh, and photograph all trash and debris collected prior to its disposal.

10. Within ten (10) business days after a Fireworks Display Event, the Fireworks Organizer shall provide the Executive Director with the photographs and written evidence of the weight of the Fireworks trash and debris

XXXX

collected pursuant to subdivisions (5) through (9) above. If the dry weight of the Fireworks trash and debris collected is less than fifty percent (50%) of the net weight of fireworks launched during the Fireworks Display Event, the Fireworks Organizer shall offset the remaining amount by providing a crew of not fewer than two (2) persons for each barge or other launch site used in the Fireworks Display Event to participate in the next scheduled "Operation Clean Sweep" or other District-sponsored clean-up event prior to the end of the calendar year to recover trash and debris from San Diego Bay and/or the Imperial Beach Oceanfront.

11. For all Fourth of July Fireworks Display Events and for Non-Fourth of July Fireworks Display Events which are advertised to the public, the Fireworks Organizer shall double the number of trash receptacles at major viewing areas prior to each fireworks display event; trashcans shall be emptied and parks and viewing areas shall be cleaned following the event.

(g) Eelgrass Avoidance and Mitigation. For Fireworks Display Events with launching sites located in shallow water with the potential for eelgrass to occur, fireworks barges shall be held in place by tugboats and shall not require temporary moorings. To the extent practicable, barges shall be located in unvegetated deep water channels outside of eelgrass beds. Pre-event and post-event eelgrass surveys shall be completed to identify the distribution of eelgrass to assist tug operators and to assess any impacts to eelgrass that may occur. Through a pre-event training, tug operators shall be made aware of shallow eelgrass and instructed not to use high thrust in the vicinity of eelgrass beds. If an unanticipated impact to eelgrass occurs, this impact shall be mitigated by replacing the eelgrass at a ratio determined by the California Eelgrass Mitigation Policy.

(h) Event Transportation and Parking Management Plans. For all Fourth of July Fireworks Display Events and for Non-Fourth of July Fireworks Display Events which are advertised to the public, the Fireworks Organizer shall prepare and submit an event transportation and parking management plan (ETPMP) to the Executive Director for approval as part of the Application, which shall be designed to ensure safe and convenient access to public viewing areas while limiting conflicts between transportation modes and reducing impacts on surrounding transportation facilities to the maximum extent feasible. The ETPMP shall take into account anticipated attendance, existing transportation and parking facilities, and other concurrent public events in the surrounding areas, and shall include but is not limited to the following:

1. Transportation management strategies, including but not limited to, a public awareness program, traffic management and enforcement, incident management, and public transit and alternative modes of transportation management, which shall be implemented for the Fireworks Display Event; and

XXXX

2. Parking management strategies, including but not limited to a public awareness program, coordination with parking vendors, off-site parking arrangements, designated areas for taxi and rideshare pick up/drop off, promotional programs with rideshare vendors, joint event ticketing programs with public transit agencies, and expanded shuttle operations.

(i) Compliance with San Diego Water Board General Permit.

1. Prior to the Executive Director's issuance of a permit pursuant to this article, the Applicant shall demonstrate that it has applied for coverage and has been enrolled under the San Diego Water Board General Permit.

2. The Applicant shall comply with all applicable terms, conditions and Best Management Practices required by the San Diego Water Board General Permit, which shall be incorporated into and considered in the terms, conditions and Best Management Practices of any permit issued by the Executive Director pursuant to this article.

3. The Applicant shall submit to the District copies of all applications, plans, reports and other documentation required by the San Diego Water Board General Permit, including without limitation the Notice of Intent, Fireworks Best Management Practices Plan, Public Fireworks Display Log and the Public Display of Fireworks Post Event Report, within the time required for the submission of such reports to the San Diego Water Board.

(j) Compliance with Other Required Permits: Prior to the Executive Director's issuance of a Permit pursuant to this article, the Applicant shall demonstrate that it has obtained and shall comply with all other permits and approvals required by federal, state and local laws and regulations including, without limitation, such permits and approvals as are required by the United States Coast Guard, California Coastal Act, the District Code, including Article 10 (Stormwater Management and Discharge Control), and the fire marshal of any city which has jurisdiction over all or any part of the activity allowed under said Permit.

(k) Compliance with Laws: The Applicant shall comply with any and all applicable rules and regulations promulgated by the District, including without limitation the District Code, the Chula Vista Bayfront Master Plan Settlement Agreement and Natural Resources Management Plan, and with the laws, rules and regulations of the United States of America and the State of California, and of any department or agency thereof, and with the applicable ordinances, rules and regulations of any city which has jurisdiction over all or any part of the activity allowed under said Permit. The Applicant's failure to comply with any applicable law, ordinance, rule or regulation shall be cause for immediate revocation of said permit and for the denial of applications for future Permits.

XXXX

(l) Indemnity: The Applicant shall indemnify and hold harmless the District, its board, officers and employees, from any and all claim of loss, liability or damage arising out of the Fireworks Display Event, including but not limited to the issuance of the District Permit, or in connection with the handling, possession, storage, loading, staging, launching or detonating of Fireworks by the Applicant, its officers, employees, contractors, agents or other representatives, howsoever caused, whether such loss, liability or damage results, either directly or indirectly, from the acts, omissions or negligence of the Applicant, its officers, employees, contractors, agents or other representatives, in connection with the handling, possession, storage, loading, staging, launching or detonation of Fireworks pursuant to said Permit.

(m) Insurance: The Applicant shall file with the Executive Director, in a form approved by the District General Counsel, a policy of public liability and property damage insurance, in such amounts and form as the Executive Director may specify, indemnifying the District, its boards, officers and employees, as their interest may appear under the terms and conditions of said Permit. The Permit shall not become effective until after such policy of insurance has been received by the District.

(n) Performance Bond: For public Fireworks Display Events with over 500 spectators the Applicant shall post a faithful performance bond, in a form approved by the District General Counsel, or in lieu thereof the equivalent in cash, in an amount sufficient in the opinion of the Executive Director to cover costs associated with the Fireworks Display Event allowed under the permit, including without limitation the costs of providing security for the protection of sensitive species and habitat, and cleaning up and removing debris, rubbish and trash. The permit shall not become effective until after such faithful performance bond, or cash in lieu thereof, has been posted with and received by the District.

(o) Mitigation Measures: All permit applications shall be reviewed by the District for consistency with the Mitigation Monitoring and Reporting Program (MMRP) from the Final Environmental Impact Report for the San Diego Bay and Imperial Beach Oceanfront Fireworks Display Events Project, as certified by the Board of Port Commissioners, and all applicable mitigation measures from the MMRP shall be identified as required conditions of the approved permit issued by the District.

Section 14.8 – GENERAL PROVISIONS

(a) Preemption. The provisions of this article do not apply where any federal or state law regulates the handling, possession, storage, loading, staging, launching or detonating of Fireworks if the federal or state law preempts local regulation or the federal or state law is more restrictive.

XXXX

(b) Severability. If any provision of this article or the application thereof to any person or circumstances is held invalid, such invalidity shall not affect other provisions or applications of this article which can be given effect without the invalid provisions or application, and to this end the provisions of this section are severable.

(c) Cost Recovery. The Applicant shall pay a fee to the District for the cost of services and administrative acts of the District incurred in processing a permit application.

Section 14.9 – ENFORCEMENT

Any person who violates this article or who fails to comply with the terms and conditions of a permit issued pursuant to this article shall be subject to punishment in accordance with District Code section 0.11, General Penalty, and section 0.13, Permit Violations.

Section 2. The administrative record for the District's approval of this Ordinance is maintained at the District's Administrative Building located at 3165 Pacific Highway, San Diego, CA 92101. The custodian of records is the District Clerk.

Section 3. This Ordinance shall take effect on the 31st day from its passage by the Board of Port Commissioners.

APPROVED AS TO FORM AND LEGALITY:
GENERAL COUNSEL

By: Assistant/Deputy

PASSED AND ADOPTED by the Board of Port Commissioners of the San Diego Unified Port District, this 25th day of May, 2017, by the following vote:
