SUBJECT: 2018 Regional Harbor Monitoring Program, Data Validation

Dear Ms. Sheredy

Enclosed are the final validation reports for the fractions listed below. These SDGs were received on June 27, 2019. Attachment 1 is a summary of the samples that were reviewed for each analysis.

LDC Project #45386:

SDG #	Fraction
1807003-001, 1807003-003 1807003-005, 1807003-007 1807003-009, 1807003-011 1807003-013, 1807003-015 1807003-017	Polynuclear Aromatic Hydrocarbons, Metals, Wet Chemistry

The data validation was performed under Level II & IV guidelines. The analyses were validated using the following documents, as applicable to each method:

- Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California; August 2013
- USEPA National Functional Guidelines for Organic Superfund Methods Data Review, January 2017
- USEPA National Functional Guidelines for Inorganic Superfund Methods Data Review; January 2017
- EPA SW 846, Third Edition, Test Methods for Evaluating Solid Waste, update 1, July 1992; update IIA, August 1993; update II, September 1994; update IIB, January 1995; update III, December 1996; update IIIA, April 1998; IIIB, November 2004; update IV, February 2007; update V, July 2014

Please feel free to contact us if you have any questions.

Sincerely,

Pei Geng
pgeng@lab-data.com
Project Manager/Senior Chemist

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polynuclear Aromatic Hydrocarbons (PAHs) by Environmental Protection Agency (EPA) Method 625

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

The chain-of-custodies were reviewed for documentation of cooler temperatures. Cooler temperatures all samples was reported at 10.9°C upon receipt by the laboratory.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

Sample B18-SW-EB was identified as an equipment blank. No contaminants were found.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

X. Field Replicates

No field replicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-001	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to results reported below the RL and above the MDL, data were qualified as estimated in five samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Samples appended with "F" were analyzed for dissolved metals

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Iron, Lead, Manganese, Molybdenum, Nickel, Selenium, Silver, Thallium, Tin, Titanium, Vanadium, and Zinc by Environmental Protection Agency (EPA) SW 846 Method 1640 and EPA Method 200.8
Mercury by EPA Method 245.7

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Days From Sample Collection Until Analysis	Required Holding Time (in Days) From Sample Collection Until Analysis	Flag	A or P
B18-SW-EB B18-10065 B18-10066 B18-10067 B18-10068 B18-SW-EBF B18-10065F B18-10066F B18-10067F B18-10068F	Mercury	45	28	UJ (all non-detects)	P

II. ICPMS Tune

ICP-MS tune data were not reviewed for Level II validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Level II validation.

IV. ICP Interference Check Sample Analysis

Interference check sample (ICS) analysis data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

Samples B18-SW-EB and B18-SW-EBF were identified as equipment blanks. No contaminants were found with the following exceptions:

Blank ID	Collection Date	Analyte	Concentration	Associated Samples
B18-SW-EB	07/10/18	Cadmium Copper Lead Molybdenum Nickel Tin Zinc	0.0242 ug/L 0.0762 ug/L 0.0276 ug/L 0.034 ug/L 0.0206 ug/L 0.0303 ug/L 3.98 ug/L	B18-10065 B18-10066 B18-10067 B18-10068

Blank ID	Collection Date	Analyte	Concentration	Associated Samples
B18-SW-EBF	07/10/18	Antimony Cadmium Copper Iron Lead Tin Titanium Zinc	0.0125 ug/L 0.00412 ug/L 0.113 ug/L 2.75 ug/L 0.0101 ug/L 0.0191 ug/L 0.0443 ug/L 2.12 ug/L	B18-10065F B18-10066F B18-10067F B18-10068F

Sample concentrations were compared to concentrations detected in the field blanks. The sample concentrations were either not detected or were significantly greater (>5X blank contaminants) than the concentrations found in the associated field blanks with the following exceptions:

Sample	Analyte	Reported Concentration	Modified Final Concentration
B18-10065	Cadmium Lead Zinc	0.0432 ug/L 0.0859 ug/L 13.3 ug/L	0.0432U ug/L 0.0859U ug/L 13.3U ug/L
B18-10066	Cadmium Lead	0.0817 ug/L 0.084 ug/L	0.0817U ug/L 0.084U ug/L
B18-10067	Cadmium Lead Zinc	0.0469 ug/L 0.115 ug/L 18.2 ug/L	0.0469U ug/L 0.115U ug/L 18.2U ug/L
B18-10068	Cadmium Lead Zinc	0.0415 ug/L 0.109 ug/L 8.29 ug/L	0.0415U ug/L 0.109U ug/L 8.29U ug/L
B18-10065F	Lead Tin Zinc	0.0289 ug/L 0.018 ug/L 10.6 ug/L	0.0289U ug/L 0.018U ug/L 10.6U ug/L
B18-10066F	Iron	0.538 ug/L	0.538U ug/L
B18-10067F	Iron Lead	0.533 ug/L 0.0387 ug/L	0.533U ug/L 0.0387U ug/L
B18-10068F	Lead Zinc	0.02 ug/L 8.46 ug/L	0.02U ug/L 8.46U ug/L

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10065MS/MSD (B18-10065 B18-10066 B18-10067 B18-10068)	Aluminum Antimony	2 (75-125) 10 (75-125)	33 (75-125) 10 (75-125)	J (all detects) J (all detects)	A
B18-10065MS/MSD (B18-10065 B18-10066 B18-10067 B18-10068)	Iron Titanium	51 (75-125) 30 (75-125)	50 (75-125) 62 (75-125)	J (all detects) J (all detects)	A

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
B18-10065MS/MSD (B18-10065 B18-10066 B18-10067 B18-10068)	Aluminum Titanium	177 (≤25) 70 (≤25)	J (all detects) J (all detects)	A

VIII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
B18-10065DUP (B18-10065 B18-10066 B18-10067 B18-10068)	Lead	26 (≤25)	J (all detects)	A
B18-10065FDUP (B18-10065F B18-10066F B18-10067F B18-10068F)	Lead	27 (≤25)	J (all detects)	A

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples/Standard Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Standard reference materials (SRM) were analyzed as required by the methods. The results were within QC limits.

XI. Field Replicates

No field replicates were identified in this SDG.

XII. Internal Standards (ICP-MS)

Internal standard data were not reviewed for Level II validation.

XIII. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-001	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to technical holding time, MS/MSD %R and RPD, DUP RPD, and results reported below the RL and above the MDL, data were qualified as estimated in ten samples.

Due to equipment blank contamination, data were qualified as not detected in eight samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Ammonia as Nitrogen by Standard Method 4500-NH3-D
Dissolved Organic Carbon by Standard Method 5310B
Methylene Blue Active Substances by Standard Method 5540C
Nitrate as Nitrogen by Standard Method 4500-NO3-E
Oil and Grease by Environmental Protection Agency (EPA) Method 1664B
Total Orthophosphate as Phosphorus by Standard Method 4500-P-E
Total Organic Carbon by Standard Method 5310B
Total Suspended Solids by Standard Method 2540D

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Time From Sample Collection Until Analysis	Required Holding Time From Sample Collection Until Analysis	Flag	A or P
B18-SW-EB	Nitrate as N Total orthophosphate as P	58 days 43 days	2 days 2 days	R (all non-detects) R (all non-detects)	P
B18-10065 B18-10066 B18-10067 B18-10068	Nitrate as N Total orthophosphate as P	58 days 43 days	2 days 2 days	J (all detects) J (all detects)	P

II. Initial Calibration

Initial calibration data were not reviewed for Level II validation.

III. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

IV. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

V. Field Blanks

Sample B18-SW-EB was identified as an equipment blank. No contaminants were found with the following exceptions:

Blank ID	Collection Date	Analyte	Concentration	Associated Samples
B18-SW-EB	07/10/18	Dissolved organic carbon	0.167 mg/L	B18-10065 B18-10066 B18-10067 B18-10068

Sample concentrations were compared to concentrations detected in the field blanks. The sample concentrations were either not detected or were significantly greater (>5X blank contaminants) than the concentrations found in the associated field blanks.

VI. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

VII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
B18-10066DUP (B18-10065 B18-10066 B18-10067 B18-10068)	Total organic carbon	28 (≤25)	J (all detects)	A

VIII. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

IX. Field Replicates

No field replicates were identified in this SDG.

X. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-001	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XI. Overall Assessment of Data

The analysis was conducted within all specifications of the methods.

Due to technical holding time, data were rejected in one sample.

Due to technical holding time, DUP RPD, and results reported below the RL and above the MDL, data were qualified as estimated in five samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be rejected (R) are unusable for all purposes. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polynuclear Aromatic Hydrocarbons (PAHs) by Environmental Protection Agency (EPA) Method 625

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

X. Field Replicates

No field replicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-003	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to results reported below the RL and above the MDL, data were qualified as estimated in thirteen samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Samples appended with "F" were analyzed for dissolved metals

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Iron, Lead, Manganese, Molybdenum, Nickel, Selenium, Silver, Thallium, Tin, Titanium, Vanadium, and Zinc by Environmental Protection Agency (EPA) SW 846 Method 1640 and EPA Method 200.8
Mercury by EPA Method 245.7

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Days From Sample Collection Until Analysis	Required Holding Time (in Days) From Sample Collection Until Analysis	Flag	A or P
B18-10015 B18-10016 B18-10438 (overdraw) B18-10020 B18-10073 B18-10074 B18-10075 B18-10015F B18-10016F B18-10438 (overdraw)F B18-10020F B18-10073F B18-10074F B18-10075F	Mercury	49	28	UJ (all non-detects)	P
B18-10017 B18-10019 B18-10017F B18-10019F	Mercury	48	28	UJ (all non-detects)	P
B18-10069 B18-10070 B18-10071 B18-10072 B18-10069F B18-10070F B18-10071F B18-10072F	Mercury	50	28	UJ (all non-detects)	P

II. ICPMS Tune

ICP-MS tune data were not reviewed for Level II validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Level II validation.

IV. ICP Interference Check Sample Analysis

Interference check sample (ICS) analysis data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10015MS/MSD (B18-10015 B18-10016 B18-10438 (overdraw) B18-10020 B18-10073 B18-10074 B18-10075 B18-10017 B18-10019 B18-10069)	Aluminum	180 (75-125)	-	J (all detects)	A
B18-10015MS/MSD (B18-10015 B18-10016 B18-10438 (overdraw) B18-10020 B18-10073 B18-10074 B18-10075 B18-10017 B18-10019 B18-10069)	Antimony Manganese	7 (75-125) -5 (75-125)	7 (75-125) 46 (75-125)	J (all detects) J (all detects)	A
B18-10015MS/MSD (B18-10015 B18-10016 B18-10438 (overdraw) B18-10020 B18-10073 B18-10074 B18-10075 B18-10017 B18-10019 B18-10069)	Iron Beryllium	35 (75-125) -	50 (75-125) 72 (75-125)	J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects)	A
B18-10070MS/MSD (B18-10070 B18-10071 B18-10072)	Aluminum Iron	126 (75-125) -	- 126 (75-125)	J (all detects) J (all detects)	A
B18-10070MS/MSD (B18-10070 B18-10071 B18-10072)	Antimony	10 (75-125)	10 (75-125)	J (all detects)	A

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10070MS/MSD (B18-10070 B18-10071 B18-10072)	Beryllium Manganese Titanium	72 (75-125) 59 (75-125) 66 (75-125)	72 (75-125) 71 (75-125) 73 (75-125)	J (all detects) UJ (all non-detects)	A

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
B18-10015MS/MSD (B18-10015 B18-10016 B18-10438 (overdraw) B18-10020 B18-10073 B18-10074 B18-10075 B18-10017 B18-10019 B18-10069)	Aluminum Iron Manganese	53 (≤25) 35 (≤25) 249 (≤25)	J (all detects) J (all detects) J (all detects)	A

VIII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
B18-10015FDUP (B18-10015F B18-10016F B18-10438 (overdraw)F B18-10020F B18-10073F B18-10074F B18-10075F B18-10017F B18-10019F B18-10069F)	Cadmium Lead Nickel Zinc	61 (≤25) 43 (≤25) 37 (≤25) 71 (≤25)	J (all detects) J (all detects) J (all detects) J (all detects)	A
B18-10070FDUP (B18-10070F B18-10071F B18-10072F)	Lead Titanium	60 (≤25) 30 (≤25)	J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects)	A
B18-10072FDUP (B18-10070F B18-10071F B18-10072F)	Barium	29 (≤25)	J (all detects)	A

DUP ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
B18-10015DUP (B18-10015 B18-10016 B18-10438 (overdraw) B18-10020 B18-10073 B18-10074 B18-10075 B18-10017 B18-10019 B18-10069)	Copper	29 (≤25)	J (all detects)	A

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples/Standard Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Standard reference materials (SRM) were analyzed as required by the methods. The results were within QC limits.

XI. Field Replicates

No field replicates were identified in this SDG.

XII. Internal Standards (ICP-MS)

Internal standard data were not reviewed for Level II validation.

XIII. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-003	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to technical holding time, MS/MSD %R and RPD, DUP RPD, and results reported below the RL and above the MDL, data were qualified as estimated in twenty-six samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Ammonia as Nitrogen by Standard Method 4500-NH3-D
Dissolved Organic Carbon by Standard Method 5310B
Methylene Blue Active Substances by Standard Method 5540C
Nitrate as Nitrogen by Standard Method 4500-NO3-E
Oil and Grease by Environmental Protection Agency (EPA) Method 1664B
Total Orthophosphate as Phosphorus by Standard Method 4500-P-E
Total Organic Carbon by Standard Method 5310B
Total Suspended Solids by Standard Method 2540D

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Time From Sample Collection Until Analysis	Required Holding Time From Sample Collection Until Analysis	Flag	A or P
B18-10020	Nitrate as N	56 days	2 days	J (all detects)	P
B18-10015 B18-10016 B18-10438 (overdraw) B18-10073 B18-10074 B18-10075	Nitrate as N	56 days	2 days	R (all non-detects)	P
B18-10015 B18-10016 B18-10438 (overdraw) B18-10020 B18-10073 B18-10074 B18-10075	Total orthophosphate as P	41 days	2 days	J (all detects)	P
B18-10017 B18-10019	Nitrate as N	55 days	2 days	R (all non-detects)	P
B18-10017 B18-10019	Total orthophosphate as P	40 days	2 days	J (all detects)	P
B18-10069 B18-10072	Nitrate as N	57 days	2 days	J (all detects)	P
B18-10070 B18-10071	Nitrate as N	57 days	2 days	R (all non-detects)	P
B18-10069 B18-10070 B18-10071 B18-10072	Total orthophosphate as P	42 days	2 days	J (all detects)	P

II. Initial Calibration

Initial calibration data were not reviewed for Level II validation.

III. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

IV. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

V. Field Blanks

No field blanks were identified in this SDG.

VI. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

VII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

VIII. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

IX. Field Replicates

No field replicates were identified in this SDG.

X. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-003	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XI. Overall Assessment of Data

The analysis was conducted within all specifications of the methods.

Due to technical holding time, data were rejected in ten samples.

Due to technical holding time and results reported below the RL and above the MDL, data were qualified as estimated in thirteen samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be rejected (R) are unusable for all purposes. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polynuclear Aromatic Hydrocarbons (PAHs) by Environmental Protection Agency (EPA) Method 625

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicate Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10023MS/MSD (B18-10023)	Naphthalene	40 (50-150)	-	UJ (all non-detects)	A

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10023MS/MSD (B18-10023)	1-Methylnaphthalene Naphthalene	36 (≤25) 55 (≤25)	NA	-
B18-10023MS/MSD (B18-10023)	2-Methylnaphthalene	38 (≤25)	J (all detects)	A

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

X. Field Replicates

No field replicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-005	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to MS/MSD %R and RPD and results reported below the RL and above the MDL, data were qualified as estimated in ten samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

METHOD: GC/MS BNA (EPA SW 846 Method 8270D)

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

(Y) N N/A — Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.

(Y) N N/A — Was a MS/MSD analyzed every 20 samples of each matrix?

Y ~~N~~ (N)/A — Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?

Samples appended with "F" were analyzed for dissolved metals

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Iron, Lead, Manganese, Molybdenum, Nickel, Selenium, Silver, Thallium, Tin, Titanium, Vanadium, and Zinc by Environmental Protection Agency (EPA) SW 846 Method 1640 and EPA Method 200.8
Mercury by EPA Method 245.7

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Days From Sample Collection Until Analysis	Required Holding Time (in Days) From Sample Collection Until Analysis	Flag	A or P
B18-10023 B18-10030 B18-10078 B18-10079 B18-10117 B18-10023F B18-10030F B18-10078F B18-10079F B18-10117F	Mercury	45	28	UJ (all non-detects)	P
B18-10080 B18-10081 B18-10082 B18-10083 B18-10084 B18-10080F B18-10081F B18-10082F B18-10083F B18-10084F	Mercury	44	28	UJ (all non-detects)	P

II. ICPMS Tune

ICP-MS tune data were not reviewed for Level II validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Level II validation.

IV. ICP Interference Check Sample Analysis

Interference check sample (ICS) analysis data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10023MS/MSD (B18-10023 B18-10030 B18-10078 B18-10079 B18-10117 B18-10080 B18-10081 B18-10082 B18-10083 B18-10084)	Aluminum	131 (75-125)	-	J (all detects)	A
B18-10023MS/MSD (B18-10023 B18-10030 B18-10078 B18-10079 B18-10117 B18-10080 B18-10081 B18-10082 B18-10083 B18-10084)	Antimony	14 (75-125)	13 (75-125)	J (all detects) J (all detects)	A
B18-10023MS/MSD (B18-10023 B18-10030 B18-10078 B18-10079 B18-10117 B18-10080 B18-10081 B18-10082 B18-10083 B18-10084)	Beryllium Titanium	65 (75-125) 65 (75-125)	63 (75-125) -	J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects)	A

Relative percent differences (RPD) were within QC limits.

VIII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
B18-10023FDUP (B18-10023F B18-10030F B18-10078F B18-10079F B18-10117F B18-10080F B18-10081F B18-10082F B18-10083F B18-10084F)	Copper Zinc	88 (≤25) 56 (≤25)	J (all detects) J (all detects)	A
B18-10023DUP (B18-10023 B18-10030 B18-10078 B18-10079 B18-10117 B18-10080 B18-10081 B18-10082 B18-10083 B18-10084)	Titanium	66 (≤25)	J (all detects)	A

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples/Standard Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Standard reference materials (SRM) were analyzed as required by the methods. The results were within QC limits.

XI. Field Replicates

No field replicates were identified in this SDG.

XII. Internal Standards (ICP-MS)

Internal standard data were not reviewed for Level II validation.

XIII. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-005	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to technical holding time, MS/MSD %R, DUP RPD, and results reported below the RL and above the MDL, data were qualified as estimated in twenty samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Ammonia as Nitrogen by Standard Method 4500-NH3-D
Dissolved Organic Carbon by Standard Method 5310B
Methylene Blue Active Substances by Standard Method 5540C
Nitrate as Nitrogen by Standard Method 4500-NO3-E
Oil and Grease by Environmental Protection Agency (EPA) Method 1664B
Total Orthophosphate as Phosphorus by Standard Method 4500-P-E
Total Organic Carbon by Standard Method 5310B
Total Suspended Solids by Standard Method 2540D

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Time From Sample Collection Until Analysis	Required Holding Time From Sample Collection Until Analysis	Flag	A or P
B18-10023 B18-10030 B18-10078 B18-10079 B18-10117	Nitrate as N	56 days	2 days	R (all non-detects)	P
B18-10023 B18-10030 B18-10078 B18-10079 B18-10117	Total orthophosphate as P	38 days	2 days	J (all detects)	P
B18-10080 B18-10081 B18-10082 B18-10083 B18-10084	Nitrate as N	55 days	2 days	R (all non-detects)	P
B18-10080 B18-10081 B18-10082 B18-10083 B18-10084	Total orthophosphate as P	37 days	2 days	J (all detects)	P

II. Initial Calibration

Initial calibration data were not reviewed for Level II validation.

III. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

IV. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

V. Field Blanks

No field blanks were identified in this SDG.

VI. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

VII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
B18-10023DUP (All samples in SDG 1807003-005)	Total suspended solids	46 (≤25)	J (all detects)	A

VIII. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

IX. Field Replicates

No field replicates were identified in this SDG.

X. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-005	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XI. Overall Assessment of Data

The analysis was conducted within all specifications of the methods.

Due to technical holding time, data were rejected in ten samples.

Due to technical holding time, DUP RPD, and results reported below the RL and above the MDL, data were qualified as estimated in ten samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be rejected (R) are unusable for all purposes. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polynuclear Aromatic Hydrocarbons (PAHs) by Environmental Protection Agency (EPA) Method 625

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results. Samples appended with a double asterisk on the cover page were subjected to Level IV data validation, which is comprised of the QC summary forms as well as the raw data, to confirm sample quantitation and identification.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

A decafluorotriphenylphosphine (DFTPP) tune was performed at 12 hour intervals.

All ion abundance requirements were met.

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

An initial calibration was performed as required by the method.

A curve fit, based on the initial calibration, was established for quantitation. The coefficient of determination (r^2) was greater than or equal to 0.990.

Date	Compound	r^2	Associated Samples	Flag	A or P
08/06/18	Naphthalene 2-Methylnaphthalene 1-Methylnaphthalene 2,6-Dimethylnaphthalene Acenaphthene	0.9816 0.9860 0.9853 0.9888 0.9891	B18-10022** B18-10076** B18-10077** B18-10113** B18-10024** B18-10114** B18-10115** B18-10116**	J (all detects) UJ (all non-detects)	A

Average relative response factors (RRF) for all compounds were within validation criteria.

The percent differences (%D) of the initial calibration verification (ICV) standard were less than or equal to 20.0% for all compounds with the following exceptions:

Date	Compound	%D	Associated Samples	Flag	A or P
08/07/18	Naphthalene	36	B18-10022**	J (all detects)	A
	2-Methylnaphthalene	30	B18-10076**	UJ (all non-detects)	
	1-Methylnaphthalene	34	B18-10077**		
	Biphenyl	28	B18-10113**		
	2,6-Dimethylnaphthalene	27	B18-10024**		
	Acenaphthylene	34	B18-10114**		
	Acenaphthene	38	B18-10115**		
	Fluorene	35	B18-10116**		
	Dibenzothiophene	34			
	Phenanthrene	37			
	Anthracene	42			
	1-Methylphenanthrene	31			
	Fluoranthene	31			
	Pyrene	25			
	Benzo(a)anthracene	29			
	Chrysene	29			
	Benzo(g,h,i)perylene	24			

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

The percent differences (%D) were less than or equal to 20.0% for all compounds with the following exceptions:

Date	Compound	%D	Associated Samples	Flag	A or P
08/08/18	Fluoranthene	23	B18-10022**	J (all detects)	A
	Pyrene	26	B18-10076**	UJ (all non-detects)	
	Benzo(b)fluoranthene	38	B18-10077**		
	Indeno(1,2,3-cd)pyrene	41	B18-10113**		
	Dibenzo(a,h)anthracene	37	B18-10024**		
			B18-10114**		
			B18-10115**		
			B18-10116**		

All of the continuing calibration relative response factors (RRF) were within validation criteria.

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicate Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits.

Relative percent differences (RPD) were within QC limits.

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10076DUP (B18-10076)	Benzo(b)fluoranthene	31 (≤25)	J (all detects)	A

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

X. Field Replicates

Samples B18-10116** and B18-20116 were identified as field replicates. No results were detected in any of the samples with the following exceptions:

Compound	Concentration (ng/L)		RPD
	B18-10116**	B18-20116	
Benzo(b)fluoranthene	1.82	2.36	26
Fluoranthene	3.12	3.06	2
Pyrene	1.96	2.04	4
Acenaphthylene	5U	1.22	Not calculable

XI. Internal Standards

All internal standard areas and retention times were within QC limits for samples which underwent Level IV validation with the following exceptions:

Sample	Internal Standards	Area (Limits)	Affected Compound	Flag	A or P
B18-10114**	d10-Anthracene	2708837 (4818849-8949291)	Fluoranthene Pyrene	J (all detects)	P
B18-10114**	d10-Anthracene	2708837 (4818849-8949291)	Naphthalene 2-Methylnaphthalene Acenaphthylene Acenaphthene Fluorene Phenanthrene Anthracene 1-Methylnaphthalene 2,6-Dimethylnaphthalene 2,3,5-Trimethylnaphthalene Dibenzothiophene Biphenyl 1-Methylphenanthrene	NA	-
B18-10076**	d12-Benzo(a)pyrene	4666325 (1075347-4301390)	Benzo(a)anthracene Chrysene Benzo(b)fluoranthene Benzo(k)fluoranthene Benzo(a)pyrene Benzo(e)pyrene Perylene	J (all detects) UJ (all non-detects)	A

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compound quantitations met validation criteria for samples which underwent Level IV validation.

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-007	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

All target compound identifications met validation criteria for samples which underwent Level IV validation. Raw data were not reviewed for Level II validation.

XIV. System Performance

The system performance was acceptable for samples which underwent Level IV validation. Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to initial calibration r^2, ICV %D, continuing calibration %D, DUP RPD, internal standard area, and results reported below the RL and above the MDL, data were qualified as estimated in seventeen samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Reviewer: 9
2nd Reviewer: 9

Method: Semivolatiles (EPA Method 625)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
Were all technical holding times met?	✓			
Was cooler temperature criteria met?	✓			
II. GC/MS Instrument performance check				
Was a tune check performed prior to establishing and/or re-establishing an initial calibration?	✓			
Were the DFTPP performance results reviewed and found to be within the specified criteria?	✓			
III. Initial calibration				
Did the laboratory perform at least 5 point calibration prior to sample analysis?	✓			
Were all percent relative standard deviations (%RSD) ≤ 35%? . $r^2 \geq 0.99$?		✓		
IIIa. Initial Calibration Verification calibration				
Was an initial calibration verification standard analyzed after each initial calibration for each instrument?	✓			
Were all percent differences (%D) ≤ 20%?		✓		
IV. Continuing calibration				
Was a continuing calibration standard analyzed at the beginning of each analysis batch?	✓			
Were all percent differences (%D) of continuing calibration ≤ 20%?		✓		
V.Laboratory Blanks				
Was a laboratory blank associated with every sample in this SDG?	✓			
Was a laboratory blank analyzed with each analysis batch?	✓			
Was there contamination in the laboratory blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
VI. Field blanks				
Field blanks were identified in this SDG.		✓		
Target compounds were detected in the field blanks.			✓	
VII. Surrogate spikes				
Were all surrogate %R within the QC limits?	✓			
If the percent recovery (%R) for one or more surrogates was out of QC limits, was a reanalysis performed to confirm samples with %R outside of criteria?			✓	
VIII. Matrix spike/Matrix spike duplicates				
Was a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for this SDG?	✓			
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?	✓	✓		
IX. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			

LDC #: 45386b2b

VALIDATION FINDINGS CHECKLIST

Reviewer: 9
2nd Reviewer: A

Validation Area	Yes	No	NA	Findings/Comments
Was an LCS analyzed per analytical batch?	✓			
Were the LCS percent recoveries (%R) within 70-130%?	✓			
X. Field duplicates				
Field duplicate pairs were identified in this SDG.	✓			
Target compounds were detected in the field duplicates.	✓			
XI. Internal standards				
Were internal standard area counts within +/-30% of the area of the most recent continuing calibration standard and +/-50% of the average peak area in the initial calibration?		✓		
Were retention times within +/-30 seconds of the associated calibration standard?	✓			
XII. Compound quantitation/CRQLs				
Were the correct internal standard (IS), quantitation ion and relative response factor (RRF) or regression equations used to quantitate the compound?	✓			
Were compound quantitation and CRQLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XIII. Target compound identification				
Were relative retention times (RRT's) within ± 0.06 RRT units of the standard?	✓			
Did compound spectra meet specified EPA "Functional Guidelines" criteria?	✓			
Were chromatogram peaks verified and accounted for?	✓			
XIV. System performance				
System performance was found to be acceptable.	✓			
XV. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓

METHOD: GC/MS Semivolatiles (EPA Method 625.1)

The percent difference (%D) of the initial calibration average Relative Response Factors (RRFs) and the continuing calibration RRFs were recalculated for the compounds identified below using the following calculation:

% Difference = 100 * (ave. RRF - RRF)/ave. RRF
$RRF = (A_x)(C_{is})/(A_{is})(C_x)$

Where: ave. RRF = initial calibration average RRF
RRF = continuing calibration RRF
A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard

Y N N/A Were all reported results recalculated and verified for all level IV samples?
Y N N/A Were all recalculated results for detected target compounds agree within 10.0% of the reported results?

Concentration = $\frac{(A_x)(I_s)(V_t)(DF)(2.0)}{(A_{is})(RRF)(V_o)(V_i)(\%S)}$

A_x	=	Area of the characteristic ion (EICP) for the compound to be measured
A_{is}	=	Area of the characteristic ion (EICP) for the specific internal standard
I_s	=	Amount of internal standard added in nanograms (ng)
V_o	=	Volume or weight of sample extract in milliliters (ml) or grams (g).
V_i	=	Volume of extract injected in microliters (ul)
V_t	=	Volume of the concentrated extract in microliters (ul)
Df	=	Dilution Factor.
%S	=	Percent solids, applicable to soil and solid matrices only.
2.0	=	Factor of 2 to account for GPC cleanup

Example:

Sample I.D. 2, YY:

Conc. = $\frac{(60 \times 5)(0.574)(\quad)(\quad)(\quad)}{(566824)(0.000557 \times 2)(\quad)}$

= 4.735 ng/L

Samples appended with "F" were analyzed for dissolved metals
**Indicates sample underwent Level IV validation

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Iron, Lead, Manganese, Molybdenum, Nickel, Selenium, Silver, Thallium, Tin, Titanium, Vanadium, and Zinc by Environmental Protection Agency (EPA) SW 846 Method 1640 and EPA Method 200.8
Mercury by EPA Method 245.7

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results. Samples appended with a double asterisk on the cover page were subjected to Level IV data validation, which is comprised of the QC summary forms as well as the raw data, to confirm sample quantitation and identification.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Days From Sample Collection Until Analysis	Required Holding Time (in Days) From Sample Collection Until Analysis	Flag	A or P
B18-10022** B18-10076** B18-10077** B18-10112 B18-10113** B18-10022F** B18-10076F** B18-10077F** B18-10112F B18-10113F**	Mercury	45	28	UJ (all non-detects)	P
B18-10024** B18-10029 B18-10114** B18-10115** B18-10116** B18-20116 B18-10024F** B18-10029F B18-10114F** B18-10115F** B18-10116F** B18-20116F	Mercury	44	28	UJ (all non-detects)	P
B18-10031 B18-10032 B18-10119 B18-10121 B18-10123 B18-10178 B18-10031F B18-10032F B18-10119F B18-10121F B18-10123F B18-10178F	Mercury	43	28	UJ (all non-detects)	P

II. ICPMS Tune

The mass calibration was within 0.1 AMU and the percent relative standard deviation (%RSD) was less than or equal to 5%.

ICP-MS tune data were not reviewed for Level II validation.

III. Instrument Calibration

Initial and continuing calibrations were performed as required by the methods with the following exceptions:

Sample	Analyte	Finding	Criteria
B18-10022** B18-10076** B18-10077** B18-10113** B18-10024** B18-10114** B18-10115** B18-10116** B18-10022F** B18-10076F** B18-10077F** B18-10113F** B18-10024F** B18-10114F** B18-10115F** B18-10116F**	All analytes except Mercury	More than ten samples were run between CCVs.	No more than ten samples to be run between CCVs.

The initial calibration verification (ICV) and continuing calibration verification (CCV) standards were within QC limits with the following exceptions:

Date	Lab. Reference/ID	Analyte	%R (Limits)	Associated Samples	Flag	A or P
10/15/19	ICV (19:02)	Selenium	110.8 (90-110)	B18-10022** B18-10076** B18-10077** B18-10113** B18-10024** B18-10114** B18-10115** B18-10116** B18-10022F** B18-10076F** B18-10077F** B18-10113F** B18-10024F** B18-10114F** B18-10115F** B18-10116F**	J (all detects)	P

Instrument calibration data were not reviewed for Level II validation.

IV. ICP Interference Check Sample Analysis

The frequency of interference check sample (ICS) analysis was met. All criteria were within QC limits.

Interference check sample (ICS) analysis data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods with the following exceptions:

Sample	Analyte	Finding	Criteria
B18-10022** B18-10076** B18-10077** B18-10113** B18-10024** B18-10114** B18-10115** B18-10116** B18-10022F** B18-10076F** B18-10077F** B18-10113F** B18-10024F** B18-10114F** B18-10115F** B18-10116F**	All analytes	No closing CCB associated with these samples.	Closing CCB required for all samples.

No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10076MS/MSD (B18-10022** B18-10076** B18-10077** B18-10112 B18-10113** B18-10024** B18-10029 B18-10114** B18-10115** B18-10116**)	Antimony	11 (75-125)	11 (75-125)	J (all detects)	A
B18-10076MS/MSD (B18-10022** B18-10076** B18-10077** B18-10112 B18-10113** B18-10024** B18-10029 B18-10114** B18-10115** B18-10116**)	Iron	130 (75-125)	155 (75-125)	J (all detects)	A
B18-10076MS/MSD (B18-10022** B18-10076** B18-10077** B18-10112 B18-10113** B18-10024** B18-10029 B18-10114** B18-10115** B18-10116**)	Titanium	44 (75-125)	44 (75-125)	J (all detects)	A
B18-20116FMS/MSD (B18-20116F B18-10031F B18-10032F B18-10119F B18-10121F B18-10123F B18-10178F)	Antimony	10 (75-125)	10 (75-125)	J (all detects)	A
B18-20116FMS/MSD (B18-10178F)	Iron	690 (75-125)	630 (75-125)	J (all detects)	A

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-20116FMS/MSD (B18-20116F B18-10031F B18-10032F B18-10119F B18-10121F B18-10123F)	Iron	690 (75-125)	630 (75-125)	NA	-
B18-20116MS/MSD (B18-20116 B18-10031 B18-10032 B18-10119 B18-10121 B18-10123 B18-10178)	Beryllium Silver	73 (75-125) 74 (75-125)	71 (75-125) -	J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects)	A
B18-20116MS/MSD (B18-20116 B18-10031 B18-10032 B18-10119 B18-10121 B18-10123 B18-10178)	Titanium	155 (75-125)	-	J (all detects)	A

For B18-10076MS/MSD and B18-10116MS/MSD, no data were qualified for aluminum percent recoveries (%R) outside the QC limits since the parent sample results were greater than 4X the spike concentration.

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
B18-20116MS/MSD (B18-20116 B18-10031 B18-10032 B18-10119 B18-10121 B18-10123 B18-10178)	Aluminum Titanium	67 (≤25) 37 (≤25)	J (all detects) J (all detects)	A

VIII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Analyte	RPD (Limits)	Difference (Limits)	Flag	A or P
B18-10076DUP (B18-10022** B18-10076** B18-10077** B18-10112 B18-10113** B18-10024** B18-10029 B18-10114** B18-10115** B18-10116**)	Cadmium Selenium	67 (≤25) -	- 0.019 ug/L (≤0.015)	J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects)	A
B18-20116DUP (B18-20116 B18-10031 B18-10032 B18-10119 B18-10121 B18-10123 B18-10178)	Zinc	38 (≤25)	-	J (all detects)	A
B18-10076FDUP (B18-10022F** B18-10076F** B18-10077F** B18-10112F B18-10113F** B18-10024F** B18-10029F B18-10114F** B18-10115F** B18-10116F**)	Cadmium Lead	31 (≤25) 52 (≤25)	- -	J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects)	A
B18-20116FDUP (B18-20116F B18-10031F B18-10032F B18-10119F B18-10121F B18-10123F B18-10178F)	Titanium	44 (≤25)	-	J (all detects)	A

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples/Standard Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Analyte	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
56560-LCS1/2 (B18-10022** B18-10076** B18-10077** B18-10112 B18-10113** B18-10024** B18-10029 B18-10114** B18-10115** B18-10116** B18-10022F** B18-10076F** B18-10077F** B18-10112F B18-10113F** B18-10024F** B18-10029F B18-10114F** B18-10115F** B18-10116F**)	Zinc	121 (72-116)	-	J (all detects)	P
57249-LCS1/2 (B18-20116 B18-10031 B18-10032 B18-10119 B18-10121 B18-10123 B18-10178 B18-20116F B18-10031F B18-10032F B18-10119F B18-10121F B18-10123F B18-10178F)	Silver	-	56 (61-113)	UJ (all non-detects)	P

Relative percent differences (RPD) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
56560-LCS1/2 (B18-10022** B18-10076** B18-10077** B18-10112 B18-10113** B18-10024** B18-10029 B18-10114** B18-10115** B18-10116** B18-10022F** B18-10076F** B18-10077F** B18-10112F B18-10113F** B18-10024F** B18-10029F B18-10114F** B18-10115F** B18-10116F**)	Zinc Titanium	33 (≤30) 35 (≤30)	J (all detects) J (all detects)	P

Standard reference materials (SRM) were analyzed as required by the methods. The results were within QC limits.

XI. Field Replicates

Samples B18-10116** and B18-20116 and samples B18-10116F** and B18-20116F were identified as field replicates. No results were detected in any of the samples with the following exceptions:

Analyte	Concentration (ug/L)		RPD
	B18-10116**	B18-20116	
Aluminum	216	246	13
Antimony	0.115	0.102	12
Arsenic	1.27	1.51	17
Barium	8.1	7.71	5
Beryllium	0.005U	0.0154	Not calculable
Cadmium	0.0274	0.0521	62
Chromium	0.261	0.521	66
Cobalt	0.0971	0.115	17

Analyte	Concentration (ug/L)		RPD
	B18-10116**	B18-20116	
Copper	1.96	3.01	42

Tin	0.005U	0.00902	Not calculable
Titanium	22	18	20
Vanadium	2.3	2.54	10
Zinc	4.28	6.01	34

XII. Internal Standards (ICP-MS)

All internal standard percent recoveries (%R) were within QC limits for samples which underwent Level IV validation with the following exceptions:

Sample	Internal Standard	%R (Limits)	Affected Analyte	Flag	A or P
B18-10024**	Rhodium (Tune 1)	0.1 (60-125)	Selenium	J (all detects)	P
B18-10024**	Rhodium (Tune 2)	59.3 (60-125)	Iron Nickel Copper Molybdenum Cadmium Tin Antimony	J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects)	P

Internal standard data were not reviewed for Level II validation.

XIII. Sample Result Verification

All sample result verifications were acceptable for samples which underwent Level IV validation.

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-007	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to technical holding time, ICV and CCV %R, MS/MSD %R and RPD, DUP RPD and difference, LCS/LCSD %R and RPD, internal standard %R, and results reported below the RL and above the MDL, data were qualified as estimated in thirty-four samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

VALIDATION FINDINGS CHECKLIST

Reviewer: CR
2nd Reviewer: CR

Method: Metals (EPA SW 846 Method 6010/6020/7000)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. ICP/MS Tune				
Were all isotopes in the tuning solution mass resolution within 0.1 amu?	✓			
Were %RSD of isotopes in the tuning solution ≤5%?	✓			
III. Calibration				
Were all instruments calibrated daily, each set-up time?	✓			
Were the proper number of standards used?	✓			
Were all initial and continuing calibration verification %Rs within the 90-110% (80-120% for mercury) QC limits?		✓		
Were the low standard checks within 70-130%			✓	
Were all initial calibration correlation coefficients within limits as specified by the method?	✓			
IV. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
V. ICP Interference Check Sample				
Were ICP interference check samples performed daily?			✓	
Were the AB solution percent recoveries (%R) with the 80-120% QC limits?			✓	
VI. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and duplicate (DUP) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD or MS/DUP. Soil / Water.	✓			
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the 75-125 QC limits? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken.		✓		
Were the MS/MSD or duplicate relative percent differences (RPD) ≤ 20% for waters and ≤ 35% for soil samples? A control limit of +/- RL(+/-2X RL for soil) was used for samples that were ≤ 5X the RL, including when only one of the duplicate sample values were ≤ 5X the RL.		✓		
VII. Laboratory control samples				
Was an LCS anaylzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the 80-120% QC limits for water samples and laboratory established QC limits for soils?		✓		

Validation Area	Yes	No	NA	Findings/Comments
VIII. Internal Standards (EPA SW 846 Method 6020/EPA 200.8)				
Were all the percent recoveries (%R) within the 30-120% (6020)/60-125% (200.8) of the intensity of the internal standard in the associated initial calibration?		✓		
If the %Rs were outside the criteria, was a reanalysis performed?		✓		
IX. ICP Serial Dilution				
Was an ICP serial dilution analyzed if analyte concentrations were > 50X the MDL (ICP)/>100X the MDL(ICP/MS)?			✓	
Were all percent differences (%Ds) < 10%?			✓	
Was there evidence of negative interference? If yes, professional judgement will be used to qualify the data.				✓
X. Sample Result Verification				
Were RLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XI. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓			
XII. Field duplicates				
Field duplicate pairs were identified in this SDG.	✓			
Target analytes were detected in the field duplicates.	✓			
XIII. Field blanks				
Field blanks were identified in this SDG.		✓	✓	
Target analytes were detected in the field blanks.

VALIDATION FINDINGS WORKSHEET
Initial and Continuing Calibration Calculation Verification

Reviewer: a
2nd Reviewer: a

METHOD: Trace metals (EPA SW 846 Method 6010/6020/7000)

An initial and continuing calibration verification percent recovery (%R) was recalculated for each type of analysis using the following formula:

%R = Found x 100 / True

Where, Found = concentration (in ug/L) of each analyte measured in the analysis of the ICV or CCV solution
True = concentration (in ug/L) of each analyte in the ICV or CCV source

Standard ID	Type of Analysis	Element	Found (ug/L)	True (ug/L)	Recalculated %R	Reported %R	Acceptable (Y/N)
	ICP (Initial calibration)						
ICV	ICP/MS (Initial calibration)	Cd	107.172	100	107	—	Y
IPR	CVAA (Initial calibration)	Hg	1020	1000	102	~~102~~	Y
	ICP (Continuing calibration)						
CCV	ICP/MS (Continuing calibration)	Ba	100	98.56	99	—	Y
CRR	CVAA (Continuing calibration)	Hg	986	1000	99	—	Y

METHOD: Trace Metals (EPA SW 846 Method 6010/6020/7000)

Percent recoveries (%R) for an ICP interference check sample, a laboratory control sample and a matrix spike sample were recalculated using the following formula:

$$\%R = \frac{Found}{True} \times 100$$

Where, Found = Concentration of each analyte measured in the analysis of the sample. For the matrix spike calculation, Found = SSR (spiked sample result) - SR (sample result).
True = Concentration of each analyte in the source.

A sample and duplicate relative percent difference (RPD) was recalculated using the following formula:

$$RPD = \frac{|S-D|}{(S+D)/2} \times 100$$

Where, S = Original sample concentration
D = Duplicate sample concentration

An ICP serial dilution percent difference (%D) was recalculated using the following formula:

$$\%D = \frac{|I-SDR|}{I} \times 100$$

Where, I = Initial Sample Result (mg/L)
SDR = Serial Dilution Result (mg/L) (Instrument Reading x 5)

Sample ID	Type of Analysis	Element	Found / S / I (units)	True / D / SDR (units)	Recalculated %R / RPD / %D	Reported %R / RPD / %D	Acceptable (Y/N)
N	ICP interference check						
LCS	Laboratory control sample	Hg	0.901	1.0	90	90	Y
35	Matrix spike	Be	(SSR-SR) 17.2	20	86	86	↓
35/36	Duplicate	Sb	2.33	2.29	0	0	↓
N	ICP serial dilution

METHOD: Trace Metals (EPA SW 846 Method 6010/6020/7000)

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

Y N N/A Have results been reported and calculated correctly?
Y N N/A Are results within the calibrated range of the instruments and within the linear range of the ICP?
Y N N/A Are all detection limits below the CRDL?

Detected analyte results for Al were recalculated and verified using the following equation:

Concentration = $\frac{(RD)(FV)(Dil)}{(In.\ Vol.)}$

Recalculation:
Raw data = 158.246ug/L

RD = Raw data concentration
FV = Final volume (ml)
In. Vol. = Initial volume (ml) or weight (G)
Dil = Dilution factor

**Indicates sample underwent Level IV validation

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Ammonia as Nitrogen by Standard Method 4500-NH3-D
Dissolved Organic Carbon by Standard Method 5310B
Methylene Blue Active Substances by Standard Method 5540C
Nitrate as Nitrogen by Standard Method 4500-NO3-E
Oil and Grease by Environmental Protection Agency (EPA) Method 1664B
Total Orthophosphate as Phosphorus by Standard Method 4500-P-E
Total Organic Carbon by Standard Method 5310B
Total Suspended Solids by Standard Method 2540D

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results. Samples appended with a double asterisk on the cover page were subjected to Level IV data validation, which is comprised of the QC summary forms as well as the raw data, to confirm sample quantitation and identification.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Time From Sample Collection Until Analysis	Required Holding Time From Sample Collection Until Analysis	Flag	A or P
B18-10112 B18-10113**	Nitrate as N	55 days	2 days	J (all detects)	P
B18-10022** B18-10076** B18-10077**	Nitrate as N	55 days	2 days	R (all non-detects)	P
B18-10022** B18-10076** B18-10077** B18-10112 B18-10113**	Total orthophosphate as P	37 days	2 days	J (all detects)	P
B18-10024** B18-10029 B18-10114** B18-10115**	Nitrate as N	54 days	2 days	J (all detects)	P
B18-10116** B18-20116	Nitrate as N	54 days	2 days	R (all non-detects)	P
B18-10024** B18-10029 B18-10114** B18-10115** B18-10116** B18-20116	Total orthophosphate as P	36 days	2 days	J (all detects)	P
B18-10031 B18-10119 B18-10121 B18-10123 B18-10178	Nitrate as N	53 days	2 days	J (all detects)	P
B18-10032	Nitrate as N	53 days	2 days	R (all non-detects)	P
B18-10031 B18-10032 B18-10119 B18-10121 B18-10123 B18-10178	Total orthophosphate as P	35 days	2 days	J (all detects)	P

II. Initial Calibration

All criteria for the initial calibration of each method were met.

Initial calibration data were not reviewed for Level II validation.

III. Continuing Calibration

Continuing calibration frequency and analysis criteria were met for each method when applicable.

Continuing calibration data were not reviewed for Level II validation.

IV. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

V. Field Blanks

No field blanks were identified in this SDG.

VI. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits.

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
B18-10076MS/MSD (All samples in SDG 1807003-007)	Methylene blue active substances	26 (≤25)	J (all detects) UJ (all non-detects)	A

VII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
B18-10076DUP (All samples in SDG 1807003-007)	Total suspended solids	29 (≤25)	J (all detects)	A

VIII. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

IX. Field Replicates

Samples B18-10116** and B18-20116 were identified as field replicates. No results were detected in any of the samples with the following exceptions:

Analyte	Concentration (mg/L)		RPD
	B18-10116**	B18-20116	
Ammonia as N	0.0246	0.0423	53
Dissolved organic carbon	1.65	2.02	20
Methylene blue active substances	0.0155	0.0223	36
Total organic carbon	1.62	2.27	33
Total orthophosphate as P	0.0378	0.0386	2
Total suspended solids	5.45	6.2	13

X. Sample Result Verification

All sample result verifications were acceptable for samples which underwent Level IV validation.

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-007	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XI. Overall Assessment of Data

The analysis was conducted within all specifications of the methods.

Due to technical holding time, data were rejected in six samples.

Due to technical holding time, MS/MSD RPD, DUP RPD, and results reported below the RL and above the MDL, data were qualified as estimated in seventeen samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be rejected (R) are unusable for all purposes. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

VALIDATION FINDINGS CHECKLIST

Reviewer: [illegible]
2nd Reviewer: [illegible]

Method: Inorganics (EPA Method See cover)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.		✓		
II. Calibration				
Were all instruments calibrated daily, each set-up time?	✓			
Were the proper number of standards used?	✓			
Were all initial calibration correlation coefficients ≥ 0.995?	✓			
Were all initial and continuing calibration verification %Rs within the 90-110% QC limits?	✓			
Were titrant checks performed as required? (Level IV only)			✓	
Were balance checks performed as required? (Level IV only)	✓			
III. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
IV. Matrix spike/Matrix spike duplicates and Duplicates				
Were a matrix spike (MS) and duplicate (DUP) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD or MS/DUP. Soil / Water.	✓			
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the 75-125 QC limits? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken.		✓		
Were the MS/MSD or duplicate relative percent differences (RPD) ≤ 20% for waters and ≤ 35% for soil samples? A control limit of ≤ CRDL(≤ 2X CRDL for soil) was used for samples that were ≤ 5X the CRDL, including when only one of the duplicate sample values were ≤ 5X the CRDL.		✓		
V. Laboratory control samples				
Was an LCS anaylzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the 80-120% (85-115% for Method 300.0) QC limits?	✓			
VI. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?		✓	✓	
Were the performance evaluation (PE) samples within the acceptance limits?			✓	

Validation Area	Yes	No	NA	Findings/Comments
VII. Sample Result Verification				
Were RLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
Were detection limits < RL?	✓			
VIII. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓			
IX. Field duplicates				
Field duplicate pairs were identified in this SDG.	✓			
Target analytes were detected in the field duplicates.	✓			
X. Field blanks				
Field blanks were identified in this SDG.		✓	✓	
Target analytes were detected in the field blanks.

The correlation coefficient (r) for the calibration of MBAS was recalculated. Calibration date: 10/10/16

An initial or continuing calibration verification percent recovery (%R) was recalculated for each type of analysis using the following formula:

%R = Found X 100 / True

Where, Found = concentration of each analyte measured in the analysis of the ICV or CCV solution
True = concentration of each analyte in the ICV or CCV source

Type of analysis	Analyte	Standard	Conc. (mg/L)	Area	Recalculated r or r^2	Reported r or r^2	Acceptable (Y/N)
Initial calibration	MBAS	s1	0.0	0	*0.9983*	*0.9984*	Y

METHOD: Inorganics, Method see cover

Percent recoveries (%R) for a laboratory control sample and a matrix spike sample were recalculated using the following formula:

%R = Found / True x 100 Where, Found = concentration of each analyte measured in the analysis of the sample. For the matrix spike calculation, Found = SSR (spiked sample result) - SR (sample result).
True = concentration of each analyte in the source.

A sample and duplicate relative percent difference (RPD) was recalculated using the following formula:

RPD = |S-D| / (S+D)/2 x 100 Where, S = Original sample concentration
D = Duplicate sample concentration

Sample ID	Type of Analysis	Element	Found / S (units)	True / D (units)	Recalculated %R / RPD	Reported %R / RPD	Acceptable (Y/N)
LCS	Laboratory control sample	TOC	8.51	10	85	85	Y
21	Matrix spike sample	NO_3N	(SSR-SR) 0.553	0.5	111	111

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polynuclear Aromatic Hydrocarbons (PAHs) by Environmental Protection Agency (EPA) Method 625

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicate Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10133MS/MSD (B18-10133)	1-Methylnaphthalene 2-Methylnaphthalene Naphthalene	43 (50-150) 46 (50-150) 37 (50-150)	- - -	UJ (all non-detects) UJ (all non-detects) UJ (all non-detects)	A

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10133MS/MSD (B18-10133)	1-Methylnaphthalene 2-Methylnaphthalene Naphthalene	45 (≤25) 44 (≤25) 60 (≤25)	NA	-

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10133DUP (B18-10133)	Acenaphthene Fluorene	31 (≤25) 41 (≤25)	NA	-

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
56667-BS1/BS2 (All samples in SDG 1807003-009)	1-Methylnaphthalene 2-Methylnaphthalene Naphthalene	49 (70-130) 52 (70-130) 41 (70-130)	67 (70-130) - 69 (70-130)	J (all detects) UJ (all non-detects)	A

Relative percent differences (RPD) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
56667-BS1/BS2 (All samples in SDG 1807003-009)	1-Methylnaphthalene Naphthalene	31 (≤30) 51 (≤30)	NA	-
56667-BS1/BS2 (B18-10124 B18-10126 B18-10137 B18-10139 B18-10141)	2-Methylnaphthalene	31 (≤30)	J (all detects)	P
56667-BS1/BS2 (B18-10127 B18-10132 B18-10133 B18-20133 B18-10136 B18-10140 B18-10142)	2-Methylnaphthalene	31 (≤30)	NA	-

X. Field Replicates

Samples B18-10133 and B18-20133 were identified as field replicates. No results were detected in any of the samples with the following exceptions:

Compound	Concentration (ng/L)		RPD
	B18-10133	B18-20133	
Acenaphthene	2.89	2.44	17
Fluoranthene	3.01	2.60	15
Phenanthrene	2.51	1.94	26
Pyrene	1.71	2.06	19
Fluorene	5U	1.58	Not calculable

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-009	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to MS/MSD %R, LCS/LCSD %R and RPD, and results reported below the RL and above the MDL, data were qualified as estimated in twelve samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Samples appended with "F" were analyzed for dissolved metals

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Iron, Lead, Manganese, Molybdenum, Nickel, Selenium, Silver, Thallium, Tin, Titanium, Vanadium, and Zinc by Environmental Protection Agency (EPA) SW 846 Method 1640 and EPA Method 200.8
Mercury by EPA Method 245.7

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Days From Sample Collection Until Analysis	Required Holding Time (in Days) From Sample Collection Until Analysis	Flag	A or P
B18-10124 B18-10126 B18-10127 B18-10132 B18-10133 B18-20133 B18-10124F B18-10126F B18-10127F B18-10132F B18-10133F B18-20133F	Mercury	39	28	UJ (all non-detects)	P
B18-10136 B18-10137 B18-10139 B18-10140 B18-10141 B18-10142 B18-10136F B18-10137F B18-10139F B18-10140F B18-10141F B18-10142F	Mercury	38	28	UJ (all non-detects)	P

II. ICPMS Tune

ICP-MS tune data were not reviewed for Level II validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Level II validation.

IV. ICP Interference Check Sample Analysis

Interference check sample (ICS) analysis data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10133MS/MSD (B18-10124 B18-10126 B18-10127 B18-10132 B18-10133 B18-20133 B18-10136 B18-10137 B18-10139 B18-10140)	Aluminum Beryllium Iron	70 (75-125) 72 (75-125) -	60 (75-125) 71 (75-125) 65 (75-125)	J (all detects) UJ (all non-detects)	A
B18-10133MS/MSD (B18-10124 B18-10126 B18-10127 B18-10132 B18-10133 B18-20133 B18-10136 B18-10137 B18-10139 B18-10140)	Antimony	10 (75-125)	9 (75-125)	J (all detects)	A

Relative percent differences (RPD) were within QC limits.

VIII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
B18-10133FDUP (B18-10124F B18-10126F B18-10127F B18-10132F B18-10133F B18-20133F B18-10136F B18-10137F B18-10139F B18-10140F)	Cadmium Iron Lead	29 (≤25) 26 (≤25) 65 (≤25)	J (all detects) UJ (all non-detects)	A

DUP ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
B18-10133DUP (B18-10124 B18-10126 B18-10127 B18-10132 B18-10133 B18-20133 B18-10136 B18-10137 B18-10139 B18-10140)	Cadmium Lead Zinc	79 (≤25) 71 (≤25) 28 (≤25)	J (all detects) J (all detects) J (all detects)	A

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples/Standard Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Standard reference materials (SRM) were analyzed as required by the methods. The results were within QC limits.

XI. Field Replicates

Samples B18-10133 and B18-20133 and samples B18-10133F and B18-20133F were identified as field replicates. No results were detected in any of the samples with the following exceptions:

Analyte	Concentration (ug/L)		RPD
	B18-10133	B18-20133	
Aluminum	115	220	63
Antimony	0.142	0.102	33
Arsenic	1.46	1.51	3
Barium	8.44	7.9	7
Cadmium	0.116	0.0561	70
Chromium	0.297	0.454	42
Cobalt	0.0285	0.0572	67

Analyte	Concentration (ug/L)		RPD
	B18-10133	B18-20133	
Copper	3.81	3.91	3
Iron	77.4	134	54
Lead	0.38	0.355	7
Manganese	10.4	11.6	11
Molybdenum	9.25	8.28	11
Nickel	0.624	0.557	11
Selenium	0.0198	0.0241	20
Silver	0.0162	0.017	5
Tin	0.0269	0.0128	71

Cadmium	0.0645	0.0616	5
Chromium	0.115	0.12	4
Copper	3.4	3.02	12
Iron	1.09	0.5U	Not calculable
Lead	0.0729	0.0433	51

Analyte	Concentration (ug/L)		RPD
	B18-10133F	B18-20133F	
Manganese	8.19	8.47	3
Molybdenum	9.42	9.33	1
Nickel	0.597	0.571	4
Selenium	0.0161	0.0325	67
Silver	0.0154	0.0132	15
Titanium	17.5	19.8	12
Vanadium	2.4	2.47	3
Zinc	4.95	4.61	7

XII. Internal Standards (ICP-MS)

Internal standard data were not reviewed for Level II validation.

XIII. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-009	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to technical holding time, MS/MSD %R, DUP RPD, and results reported below the RL and above the MDL, data were qualified as estimated in twenty-four samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

2nd Reviewer: AV

METHOD: Trace metals (EPA SW 846 Method 6010/7000)

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

Y N N/A Was a matrix spike analyzed for each matrix in this SDG?

Y N N/A Were matrix spike percent recoveries (%R) within the control limits of 75-125? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken.

Y N N/A Were all duplicate sample relative percent differences (RPD) ≤ 25% for samples?

LEVEL IV ONLY:

Y N N/A Were recalculated results acceptable? See Level IV Recalculation Worksheet for recalculations.

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

Y N N/A Was a duplicate sample analyzed for each matrix in this SDG? 25

Y N N/A Were all duplicate sample relative percent differences (RPD) ≤ 20% samples? If no, see qualifications below. A control limit of ±R.L. (±2X R.L. for soil) was used for sample values that were <5X the R.L., including the case when only one of the duplicate sample values was <5X R.L.. If field blanks were used for laboratory duplicates, note in the Overall Assessment.

LEVEL IV ONLY:

Y N N/A Were recalculated results acceptable? See Level IV Recalculation Worksheet for recalculations.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Ammonia as Nitrogen by Standard Method 4500-NH3-D
Dissolved Organic Carbon by Standard Method 5310B
Methylene Blue Active Substances by Standard Method 5540C
Nitrate as Nitrogen by Standard Method 4500-NO3-E
Oil and Grease by Environmental Protection Agency (EPA) Method 1664B
Total Orthophosphate as Phosphorus by Standard Method 4500-P-E
Total Organic Carbon by Standard Method 5310B
Total Suspended Solids by Standard Method 2540D

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Time From Sample Collection Until Analysis	Required Holding Time From Sample Collection Until Analysis	Flag	A or P
B18-10124 B18-10126 B18-10127 B18-10132 B18-10133 B18-20133	Nitrate as N	47 days	2 days	R (all non-detects)	P
B18-10124 B18-10126 B18-10127 B18-10132 B18-10133 B18-20133	Total orthophosphate as P	5 days	2 days	J (all detects)	P
B18-10136 B18-10137 B18-10139 B18-10140 B18-10141 B18-10142	Nitrate as N	46 days	2 days	R (all non-detects)	P
B18-10136 B18-10137 B18-10139 B18-10140 B18-10141 B18-10142	Total orthophosphate as P	4 days	2 days	J (all detects)	P

II. Initial Calibration

Initial calibration data were not reviewed for Level II validation.

III. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

IV. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

V. Field Blanks

No field blanks were identified in this SDG.

VI. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

VII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
B18-10133DUP (All samples in SDG 1807003-009)	Total suspended solids	44 (≤25)	J (all detects)	A

VIII. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

IX. Field Replicates

Samples B18-10133 and B18-20133 were identified as field replicates. No results were detected in any of the samples with the following exceptions:

Analyte	Concentration (mg/L)		RPD
	B18-10133	B18-20133	
Ammonia as N	0.0175	0.0498	96
Dissolved organic carbon	1.73	1.52	13
Methylene blue active substances	0.0109	0.0169	43
Total organic carbon	1.75	1.83	4
Total orthophosphate as P	0.0383	0.0462	19
Total suspended solids	2.89	3.6	22

X. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-009	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XI. Overall Assessment of Data

The analysis was conducted within all specifications of the methods.

Due to technical holding time, data were rejected in twelve samples.

Due to technical holding time, DUP RPD, and results reported below the RL and above the MDL, data were qualified as estimated in twelve samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be rejected (R) are unusable for all purposes. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

2nd Reviewer: CA

METHOD: Inorganics, Method see cover

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

Y N N/A Was a duplicate sample analyzed for each matrix in this SDG?

Y N N/A Were all duplicate sample relative percent differences (RPD) ≤ 20% for water and ≤ 35% for soil samples (≤ 10% for Method 300.0)? If no, see qualification below. A control limit of ±CRDL (±2X CRDL for soil) was used for samples that were ≤5X the CRDL, including when only one of the duplicate sample values were ≤5X the CRDL. If field blanks were used for laboratory duplicates, see overall assessment.

LEVEL IV ONLY:

Y N N/A Were recalculated results acceptable? See Level IV Recalculation Worksheet for recalculations.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polynuclear Aromatic Hydrocarbons (PAHs) by Environmental Protection Agency (EPA) Method 625

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
56734-BS1/BS2 (All samples in SDG 1807003-011)	Naphthalene	67 (70-130)	31 (70-130)	J (all detects) UJ (all non-detects)	P
	1-Methylnaphthalene	-	43 (70-130)		
	2,6-Dimethylnaphthalene	-	69 (70-130)		
	2-Methylnaphthalene	-	45 (70-130)		
	Acenaphthylene	-	69 (70-130)		
	Biphenyl	-	68 (70-130)		

Relative percent differences (RPD) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
56734-BS1/BS2 (All samples in SDG 1807003-011)	1-Methylnaphthalene	53 (≤30)	NA	-
56734-BS1/BS2 (B18-10144 B18-10039)	2-Methylnaphthalene	54 (≤30)	J (all detects)	P
56734-BS1/BS2 (B18-10034 B18-10035 B18-10036 B18-10143)	2-Methylnaphthalene	54 (≤30)	NA	-
56734-BS1/BS2 (B18-10039)	Biphenyl	32 (≤30)	J (all detects)	P
56734-BS1/BS2 (B18-10034 B18-10035 B18-10036 B18-10143 B18-10144)	Biphenyl	32 (≤30)	NA	-
56734-BS1/BS2 (B18-10144)	Naphthalene	73 (≤30)	J (all detects)	P
56734-BS1/BS2 (B18-10034 B18-10035 B18-10036 B18-10143 B18-10039)	Naphthalene	73 (≤30)	NA	-

X. Field Replicates

No field replicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-011	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to LCS/LCSD %R and RPD and results reported below the RL and above the MDL, data were qualified as estimated in six samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Samples appended with "F" were analyzed for dissolved metals

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Iron, Lead, Manganese, Molybdenum, Nickel, Selenium, Silver, Thallium, Tin, Titanium, Vanadium, and Zinc by Environmental Protection Agency (EPA) SW 846 Method 1640 and EPA Method 200.8
Mercury by EPA Method 245.7

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Days From Sample Collection Until Analysis	Required Holding Time (in Days) From Sample Collection Until Analysis	Flag	A or P
B18-10034 B18-10035 B18-10036 B18-10143 B18-10144 B18-10039 B18-10034F B18-10035F B18-10036F B18-10143F B18-10144F B18-10039F	Mercury	35	28	UJ (all non-detects)	P

II. ICPMS Tune

ICP-MS tune data were not reviewed for Level II validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Level II validation.

IV. ICP Interference Check Sample Analysis

Interference check sample (ICS) analysis data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10144MS/MSD (B18-10034 B18-10035 B18-10036 B18-10143 B18-10144 B18-10039)	Antimony	12 (75-125)	11 (75-125)	J (all detects)	A
B18-10144MS/MSD (B18-10034 B18-10035 B18-10036 B18-10143 B18-10144 B18-10039)	Manganese Silver	55 (75-125) -	42 (75-125) 57 (75-125)	J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects)	A

For B18-10144MS/MSD, no data were qualified for aluminum and iron percent recoveries (%R) outside the QC limits since the parent sample results were greater than 4X the spike concentration.

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
B18-10144MS/MSD (B18-10034 B18-10035 B18-10036 B18-10143 B18-10144 B18-10039)	Aluminum Iron Manganese Silver	39 (≤25) 360 (≤25) 27 (≤25) 31 (≤25)	J (all detects) UJ (all non-detects)	A

VIII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Analyte	Difference (Limits)	Flag	A or P
B18-10144FDUP (B18-10034F B18-10035F B18-10036F B18-10143F B18-10144F B18-10039F)	Selenium Tin	0.0259 ug/L (≤0.015) 0.0662 ug/L (≤0.01)	J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects)	A

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples/Standard Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Standard reference materials (SRM) were analyzed as required by the methods. The results were within QC limits.

XI. Field Replicates

No field replicates were identified in this SDG.

XII. Internal Standards (ICP-MS)

Internal standard data were not reviewed for Level II validation.

XIII. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-011	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to technical holding time, MS/MSD %R and RPD, DUP difference, and results reported below the RL and above the MDL, data were qualified as estimated in twelve samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Ammonia as Nitrogen by Standard Method 4500-NH3-D
Dissolved Organic Carbon by Standard Method 5310B
Methylene Blue Active Substances by Standard Method 5540C
Nitrate as Nitrogen by Standard Method 4500-NO3-E
Oil and Grease by Environmental Protection Agency (EPA) Method 1664B
Total Orthophosphate as Phosphorus by Standard Method 4500-P-E
Total Organic Carbon by Standard Method 5310B
Total Suspended Solids by Standard Method 2540D

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Time From Sample Collection Until Analysis	Required Holding Time From Sample Collection Until Analysis	Flag	A or P
B18-10034 B18-10035 B18-10036 B18-10143 B18-10144 B18-10039	Nitrate as N	42 days	2 days	R (all non-detects)	P
B18-10034 B18-10035 B18-10036 B18-10143 B18-10144 B18-10039	Total orthophosphate as P	24 days	2 days	J (all detects)	P

II. Initial Calibration

Initial calibration data were not reviewed for Level II validation.

III. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

IV. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

V. Field Blanks

No field blanks were identified in this SDG.

VI. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

VII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

VIII. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

IX. Field Replicates

No field replicates were identified in this SDG.

X. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-011	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XI. Overall Assessment of Data

The analysis was conducted within all specifications of the methods.

Due to technical holding time, data were rejected in six samples.

Due to technical holding time and results reported below the RL and above the MDL, data were qualified as estimated in six samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be rejected (R) are unusable for all purposes. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polynuclear Aromatic Hydrocarbons (PAHs) by Environmental Protection Agency (EPA) Method 625

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
56792-BS1/BS2 (All samples in SDG 1807003-013)	Naphthalene 1-Methylnaphthalene 2,6-Dimethylnaphthalene 2-Methylnaphthalene Acenaphthylene Biphenyl	67 (70-130) - - - - -	31 (70-130) 43 (70-130) 69 (70-130) 45 (70-130) 69 (70-130) 68 (70-130)	J (all detects) UJ (all non-detects)	P

Relative percent differences (RPD) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
56792-BS1/BS2 (All samples in SDG 1807003-013)	1-Methylnaphthalene Biphenyl	53 (≤30) 32 (≤30)	NA	-
56792-BS1/BS2 (B18-10041 B18-10042 B18-10085 B18-10087)	2-Methylnaphthalene	54 (≤30)	J (all detects)	P
56792-BS1/BS2 (B18-10037 B18-10038 B18-10179 B18-10180 B18-10181 B18-10086 B18-10088)	2-Methylnaphthalene	54 (≤30)	NA	-
56792-BS1/BS2 (B18-10085 B18-10086 B18-10087)	Naphthalene	73 (≤30)	J (all detects)	P
56792-BS1/BS2 (B18-10037 B18-10038 B18-10041 B18-10179 B18-10180 B18-10181 B18-10042 B18-10088)	Naphthalene	73 (≤30)	NA	-

X. Field Replicates

No field replicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-013	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to LCS/LCSD %R and RPD and results reported below the RL and above the MDL, data were qualified as estimated in ten samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Samples appended with "F" were analyzed for dissolved metals

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Iron, Lead, Manganese, Molybdenum, Nickel, Selenium, Silver, Thallium, Tin, Titanium, Vanadium, and Zinc by Environmental Protection Agency (EPA) SW 846 Method 1640 and EPA Method 200.8
Mercury by EPA Method 245.7

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Days From Sample Collection Until Analysis	Required Holding Time (in Days) From Sample Collection Until Analysis	Flag	A or P
B18-10037 B18-10038 B18-10041 B18-10179 B18-10180 B18-10181 B18-10037F B18-10038F B18-10041F B18-10179F B18-10180F B18-10181F	Mercury	34	28	UJ (all non-detects)	P
B18-10042 B18-10085 B18-10086 B18-10087 B18-10088 B18-10042F B18-10085F B18-10086F B18-10087F B18-10088F	Mercury	33	28	UJ (all non-detects)	P

II. ICPMS Tune

ICP-MS tune data were not reviewed for Level II validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Level II validation.

IV. ICP Interference Check Sample Analysis

Interference check sample (ICS) analysis data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10038MS/MSD (B18-10038 B18-10041 B18-10179 B18-10180 B18-10181 B18-10042 B18-10085 B18-10086 B18-10087 B18-10088)	Antimony	7 (75-125)	7 (75-125)	J (all detects)	A

For B18-10038MS/MSD, no data were qualified for aluminum and iron percent recoveries (%R) outside the QC limits since the parent sample results were greater than 4X the spike concentration.

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
B18-10038MS/MSD (B18-10038 B18-10041 B18-10179 B18-10180 B18-10181 B18-10042 B18-10085 B18-10086 B18-10087 B18-10088)	Aluminum	33 (≤25)	J (all detects)	A

VIII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Analyte	RPD (Limits)	Difference (Limits)	Flag	A or P
B18-10038FDUP (B18-10038F B18-10041F B18-10179F B18-10180F B18-10181F B18-10042F B18-10085F B18-10086F B18-10087F B18-10088F)	Beryllium Cobalt Tin	- 37 (≤25) -	0.051 ug/L (≤0.01) - 0.01325 ug/L (≤0.01)	J (all detects) UJ (all non-detects)	A
B18-10038FDUP (B18-10038 B18-10041 B18-10179 B18-10180 B18-10181 B18-10042 B18-10085 B18-10086 B18-10087 B18-10088)	Tin	-	0.0169 ug/L (≤0.01)	J (all detects) UJ (all non-detects)	A

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples/Standard Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Standard reference materials (SRM) were analyzed as required by the methods. The results were within QC limits.

XI. Field Replicates

No field replicates were identified in this SDG.

XII. Internal Standards (ICP-MS)

Internal standard data were not reviewed for Level II validation.

XIII. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-013	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to technical holding time, MS/MSD %R and RPD, DUP RPD and difference, and results reported below the RL and above the MDL, data were qualified as estimated in twenty-two samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Ammonia as Nitrogen by Standard Method 4500-NH3-D
Dissolved Organic Carbon by Standard Method 5310B
Methylene Blue Active Substances by Standard Method 5540C
Nitrate as Nitrogen by Standard Method 4500-NO3-E
Oil and Grease by Environmental Protection Agency (EPA) Method 1664B
Total Orthophosphate as Phosphorus by Standard Method 4500-P-E
Total Organic Carbon by Standard Method 5310B
Total Suspended Solids by Standard Method 2540D

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Time From Sample Collection Until Analysis	Required Holding Time From Sample Collection Until Analysis	Flag	A or P
B18-10037 B18-10038 B18-10041 B18-10179 B18-10180 B18-10181	Nitrate as N	41 days	2 days	R (all non-detects)	P
B18-10037 B18-10038 B18-10041 B18-10179 B18-10180 B18-10181	Total orthophosphate as P	23 days	2 days	J (all detects)	P
B18-10085 B18-10086	Nitrate as N	40 days	2 days	J (all detects)	P
B18-10042 B18-10087 B18-10088	Nitrate as N	40 days	2 days	R (all non-detects)	P
B18-10042 B18-10085 B18-10086 B18-10087 B18-10088	Total orthophosphate as P	22 days	2 days	J (all detects)	P

II. Initial Calibration

Initial calibration data were not reviewed for Level II validation.

III. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

IV. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

V. Field Blanks

No field blanks were identified in this SDG.

VI. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

VII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

VIII. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

IX. Field Replicates

No field replicates were identified in this SDG.

X. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-013	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XI. Overall Assessment of Data

The analysis was conducted within all specifications of the methods.

Due to technical holding time, data were rejected in nine samples.

Due to technical holding time and results reported below the RL and above the MDL, data were qualified as estimated in eleven samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be rejected (R) are unusable for all purposes. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polynuclear Aromatic Hydrocarbons (PAHs) by Environmental Protection Agency (EPA) Method 625

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
57527-BS1/BS2 (All samples in SDG 1807003-015)	Naphthalene	-	67 (70-130)	J (all detects) UJ (all non-detects)	A

Relative percent differences (RPD) were within QC limits.

X. Field Replicates

Samples B18-10043 and B18-20043 were identified as field replicates. No results were detected in any of the samples with the following exceptions:

Compound	Concentration (ng/L)		RPD
	B18-10043	B18-20043	
2-Methylnaphthalene	1.41	5U	Not calculable
Naphthalene	2.32	5U	Not calculable

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-015	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to LCS/LCSD %R and results reported below the RL and above the MDL, data were qualified as estimated in four samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Samples appended with "F" were analyzed for dissolved metals

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Iron, Lead, Manganese, Molybdenum, Nickel, Selenium, Silver, Thallium, Tin, Titanium, Vanadium, and Zinc by Environmental Protection Agency (EPA) SW 846 Method 1640 and EPA Method 200.8
Mercury by EPA Method 245.7

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. ICPMS Tune

ICP-MS tune data were not reviewed for Level II validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Level II validation.

IV. ICP Interference Check Sample Analysis

Interference check sample (ICS) analysis data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10040MS/MSD (B18-10040 B18-10043 B18-10044 B18-20043)	Antimony Iron Tin	38 (75-125) 74 (75-125) 70 (75-125)	38 (75-125) 53 (75-125) -	J (all detects) J (all detects) J (all detects)	A
B18-10040MS/MSD (B18-10040 B18-10043 B18-10044 B18-20043)	Titanium	154 (75-125)	-	J (all detects)	A

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
B18-10040MS/MSD (B18-10040 B18-10043 B18-10044 B18-20043)	Aluminum Iron Titanium	29 (≤25) 33 (≤25) 36 (≤25)	J (all detects) J (all detects) J (all detects)	A

VIII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Analyte	RPD (Limits)	Difference (Limits)	Flag	A or P
B18-10040FDUP (B18-10040F B18-10043F B18-10044F)	Beryllium Cadmium Chromium Lead Titanium	- 37 (≤25) 92 (≤25) 62 (≤25) 100 (≤25)	0.031 ug/L (≤0.01) - - - -	J (all detects) UJ (all non-detects)	A
B18-10040DUP (B18-10040 B18-10043 B18-10044 B18-20043)	Cadmium Cobalt	35 (≤25) -	- 0.0553 ug/L (≤0.01)	J (all detects) J (all detects)	A

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples/Standard Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits.

Relative percent differences (RPD) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
57528-LCS1/2 (All samples in SDG 1807003-015)	Manganese	53 (≤30)	J (all detects)	P

Standard reference materials (SRM) were analyzed as required by the methods. The results were within QC limits.

XI. Field Replicates

Samples B18-10043 and B18-20043 and samples B18-10043F and B18-20043F were identified as field replicates. No results were detected in any of the samples with the following exceptions:

Analyte	Concentration (ug/L)		RPD
	B18-10043	B18-20043	
Aluminum	90.9	48	62
Antimony	0.128	0.116	10
Arsenic	1.61	1.83	13
Barium	15	13.9	8
Beryllium	0.005U	0.0124	Not calculable
Cadmium	0.0668	0.0445	40
Chromium	0.152	0.101	40
Cobalt	0.0733	0.0466	45
Copper	2.81	3.58	24
Iron	59.9	36.5	49
Lead	0.115	0.0582	66
Manganese	21.4	19.6	9
Molybdenum	8.43	8.74	4
Nickel	0.519	0.459	12
Selenium	0.0147	0.005U	Not calculable
Silver	0.0182	0.0131	33
Titanium	18.7	17.1	9
Vanadium	3.77	3.23	15
Zinc	2.92	3.22	10

Analyte	Concentration (ug/L)		RPD
	B18-10043F	B18-20043F	
Antimony	0.158	0.148	7
Arsenic	1.86	2.04	9
Barium	15.2	14.9	2
Beryllium	0.005U	0.0362	Not calculable
Cadmium	0.0681	0.0548	22
Chromium	0.0366	0.0214	52
Cobalt	0.0885	0.0261	109
Copper	2.59	5.43	71
Iron	0.978	1.58	Not calculable
Lead	0.0188	0.00407	129
Manganese	19.4	18.3	6
Molybdenum	8.98	9.09	1
Nickel	0.49	0.454	8
Selenium	0.005U	0.00932	Not calculable
Silver	0.031	0.024	25
Titanium	10.3	9.63	7
Vanadium	3.46	3.09	11
Zinc	2.3	3.29	35

XII. Internal Standards (ICP-MS)

Internal standard data were not reviewed for Level II validation.

XIII. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-015	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to MS/MSD %R and RPD, DUP RPD and difference, LCS/LCSD RPD, and results reported below the RL and above the MDL, data were qualified as estimated in eight samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

2nd Reviewer:

METHOD: Trace metals (EPA SW 846 Method 6010/7000)

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

Y N N/A Was a matrix spike analyzed for each matrix in this SDG?

Y N N/A Were matrix spike percent recoveries (%R) within the control limits of 75-125? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken.

Y N N/A Were all duplicate sample relative percent differences (RPD) ≤ 25% for samples?

LEVEL IV ONLY:

Y N N/A Were recalculated results acceptable? See Level IV Recalculation Worksheet for recalculations.

#	MS/MSD ID	Matrix	Analyte	MS %Recovery	MSD %Recovery	RPD (Limits)	Associated Samples	Qualifications
	9/10		Sb	38	38		1-4	J/UJ/A (Det) LM

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

Y N N/A Was a duplicate sample analyzed for each matrix in this SDG? 25

Y N N/A Were all duplicate sample relative percent differences (RPD) ≤ 20% samples? If no, see qualifications below. A control limit of ±R.L. (±2X R.L. for soil) was used for sample values that were <5X the R.L., including the case when only one of the duplicate sample values was <5X R.L.. If field blanks were used for laboratory duplicates, note in the Overall Assessment.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Ammonia as Nitrogen by Standard Method 4500-NH3-D
Dissolved Organic Carbon by Standard Method 5310B
Methylene Blue Active Substances by Standard Method 5540C
Nitrate as Nitrogen by Standard Method 4500-NO3-E
Oil and Grease by Environmental Protection Agency (EPA) Method 1664B
Total Orthophosphate as Phosphorus by Standard Method 4500-P-E
Total Organic Carbon by Standard Method 5310B
Total Suspended Solids by Standard Method 2540D

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Time From Sample Collection Until Analysis	Required Holding Time From Sample Collection Until Analysis	Flag	A or P
B18-10040 B18-10043 B18-10044 B18-20043	Nitrate as N	27 days	2 days	R (all non-detects)	P
B18-10040 B18-10043 B18-10044 B18-20043	Total orthophosphate as P	9 days	2 days	J (all detects)	P

II. Initial Calibration

Initial calibration data were not reviewed for Level II validation.

III. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

IV. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

V. Field Blanks

No field blanks were identified in this SDG.

VI. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

VII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

VIII. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

IX. Field Replicates

Samples B18-10043 and B18-20043 were identified as field replicates. No results were detected in any of the samples with the following exceptions:

Analyte	Concentration (mg/L)		RPD
	B18-10043	B18-20043	
Ammonia as N	0.0165	0.021	24
Dissolved organic carbon	2.26	2.25	0
Methylene blue active substances	0.0287	0.0201	35
Total organic carbon	2.78	2.53	9
Total orthophosphate as P	0.0518	0.0485	7
Total suspended solids	3.04	3.46	13

X. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-015	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XI. Overall Assessment of Data

The analysis was conducted within all specifications of the methods.

Due to technical holding time, data were rejected in four samples.

Due to technical holding time and results reported below the RL and above the MDL, data were qualified as estimated in four samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be rejected (R) are unusable for all purposes. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Data Validation Report

Project/Site Name: 2018 Regional Harbor Monitoring Program

LDC Report Date: July 10, 2019

Parameters: Polynuclear Aromatic Hydrocarbons

Validation Level: Level II

Laboratory: Physis Environmental Laboratories, Inc.

Sample Delivery Group (SDG): 1807003-017

Sample Identification	Laboratory Sample Identification	Matrix	Collection Date
B18-10200	58089	Water	09/12/18

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polynuclear Aromatic Hydrocarbons (PAHs) by Environmental Protection Agency (EPA) Method 625

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
58087-BS1 (All samples in SDG 1807003-017)	Benzo(b)fluoranthene	136 (70-130)	139 (70-130)	NA	-
58087-BS1 (All samples in SDG 1807003-017)	Naphthalene	-	131 (70-130)	J (all detects)	P

Relative percent differences (RPD) were within QC limits.

X. Field Replicates

No field replicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-017	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to LCS/LCSD %R and results reported below the RL and above the MDL, data were qualified as estimated in one sample.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Project/Site Name: 2018 Regional Harbor Monitoring Program

LDC Report Date: July 16, 2019

Parameters: Metals

Validation Level: Level II

Laboratory: Physis Environmental Laboratories, Inc.

Sample Delivery Group (SDG): 1807003-017

Sample Identification	Laboratory Sample Identification	Matrix	Collection Date
B18-10200	58089	Water	09/12/18
B18-10200F	58089F	Water	09/12/18

Samples appended with "F" were analyzed for dissolved metals

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Iron, Lead, Manganese, Molybdenum, Nickel, Selenium, Silver, Thallium, Tin, Titanium, Vanadium, and Zinc by Environmental Protection Agency (EPA) SW 846 Method 1640 and EPA Method 200.8
Mercury by EPA Method 245.7

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. ICPMS Tune

ICP-MS tune data were not reviewed for Level II validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Level II validation.

IV. ICP Interference Check Sample Analysis

Interference check sample (ICS) analysis data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10040MS/MSD (B18-10200)	Antimony Iron Tin	38 (75-125) 74 (75-125) 70 (75-125)	38 (75-125) 53 (75-125) -	J (all detects) J (all detects) J (all detects)	A
B18-10040MS/MSD (B18-10200)	Titanium	154 (75-125)	-	J (all detects)	A

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
B18-10040MS/MSD (B18-10200)	Aluminum Iron Titanium	29 (≤25) 33 (≤25) 36 (≤25)	J (all detects) J (all detects) J (all detects)	A

VIII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Analyte	RPD (Limits)	Difference (Limits)	Flag	A or P
B18-10040FDUP (B18-10200F)	Beryllium Cobalt Tin	- 37 (≤25) -	0.051 ug/L (≤0.01) - 0.01325 ug/L (≤0.01)	J (all detects) UJ (all non-detects)	A
B18-10040DUP (B18-10200F)	Tin	-	0.0169 ug/L (≤0.01)	J (all detects)	A

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples/Standard Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits.

Relative percent differences (RPD) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
57528-LCS1/2 (All samples in SDG 1807003-017)	Manganese	53 (≤30)	J (all detects)	P

Standard reference materials (SRM) were analyzed as required by the methods. The results were within QC limits.

XI. Field Replicates

No field replicates were identified in this SDG.

XII. Internal Standards (ICP-MS)

Internal standard data were not reviewed for Level II validation.

XIII. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-017	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to MS/MSD %R and RPD, DUP RPD and difference, LCS/LCSD RPD, and results reported below the RL and above the MDL, data were qualified as estimated in two samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Ammonia as Nitrogen by Standard Method 4500-NH3-D
Dissolved Organic Carbon by Standard Method 5310B
Methylene Blue Active Substances by Standard Method 5540C
Nitrate as Nitrogen by Standard Method 4500-NO3-E
Oil and Grease by Environmental Protection Agency (EPA) Method 1664B
Total Orthophosphate as Phosphorus by Standard Method 4500-P-E
Total Organic Carbon by Standard Method 5310B
Total Suspended Solids by Standard Method 2540D

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Time From Sample Collection Until Analysis	Required Holding Time From Sample Collection Until Analysis	Flag	A or P
B18-10200	Nitrate as N	21 days	2 days	J (all detects)	P

II. Initial Calibration

Initial calibration data were not reviewed for Level II validation.

III. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

IV. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

V. Field Blanks

No field blanks were identified in this SDG.

VI. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

VII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

VIII. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

IX. Field Replicates

No field replicates were identified in this SDG.

X. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-017	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XI. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to technical holding time and results reported below the RL and above the MDL, data were qualified as estimated in one sample.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

SUBJECT: 2018 Regional Harbor Monitoring Program, Data Validation

Dear Ms. Sheredy

Enclosed are the final validation reports for the fractions listed below. These SDGs were received on May 22, 2019. Attachment 1 is a summary of the samples that were reviewed for each analysis.

LDC Project #45128

SDG #	Fraction
1807003-002, 1807003-004 1807003-006, 1807003-008 1807003-010, 1807003-012 1807003-014, 1807003-016 1807003-018, 1807003-019	Polynuclear Aromatic Hydrocarbons, Polybrominated Diphenyl Ethers, Fipronil & Degradates, Synthetic Pyrethroid Pesticides, Chlorinated Pesticides, Polychlorinated Biphenyls as Congeners, Metals, Wet Chemistry

The data validation was performed under Level II guidelines. The analyses were validated using the following documents, as applicable to each method:

- Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California; June 2018
- USEPA National Functional Guidelines for Organic Superfund Methods Data Review; January 2017
- USEPA National Functional Guidelines for Inorganic Superfund Methods Data Review; January 2017
- EPA SW 846, Third Edition, Test Methods for Evaluating Solid Waste, update 1, July 1992; update IIA, August 1993; update II, September 1994; update IIB, January 1995; update III, December 1996; update IIIA, April 1998; IIIB, November 2004; update IV, February 2007; update V, July 2014

Please feel free to contact us if you have any questions.

Sincerely,

Pei Geng

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polynuclear Aromatic Hydrocarbons (PAHs) by Environmental Protection Agency (EPA) SW 846 Method 8270D

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
56375-BS1/BS2 (All samples in SDG 1807003-002)	1-Methylnaphthalene	49 (70-130)	53 (70-130)	J (all detects)	P
	2,6-Dimethylnaphthalene	59 (70-130)	60 (70-130)	J (all detects)	
	2-Methylnaphthalene	50 (70-130)	53 (70-130)	J (all detects)	
	Acenaphthene	60 (70-130)	61 (70-130)	J (all detects)	
	Acenaphthylene	59 (70-130)	61 (70-130)	J (all detects)	
	Biphenyl	55 (70-130)	57 (70-130)	J (all detects)	
	Naphthalene	41 (70-130)	46 (70-130)	J (all detects)	
56375-BS1/BS2 (All samples in SDG 1807003-002)	Benzo(a)anthracene	149 (70-130)	146 (70-130)	J (all detects)	P
	Indeno(1,2,3-cd)pyrene	131 (70-130)	-	J (all detects)	

Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits with the following exceptions:

CRM ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
SRM 1944	2-Methylnaphthalene	56 (60-140)	All samples in SDG 1807003-002	J (all detects)	A

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-002	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to LCS/LCSD %R, CRM %R, and results reported below the RL and above the MDL, data were qualified as estimated in four samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polybrominated Diphenyl Ethers (PBDE) by Environmental Protection Agency (EPA) SW 846 Method 8270D-NCI

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.

HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
56375-BS1/BS2 (All samples in SDG 1807003-002)	PBDE 190	59 (70-130)	66 (70-130)	J (all detects) UJ (all non-detects)	P
	PBDE 209	23 (70-130)	25 (70-130)	J (all detects) UJ (all non-detects)	

Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits.

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-002	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to LCS/LCSD %R and results reported below the RL and above the MDL, data were qualified as estimated in four samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Fipronil and Degradates by Environmental Protection Agency (EPA) SW 846 Method 8270D-NCI

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-002	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to results reported below the RL and above the MDL, data were qualified as estimated in four samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Synthetic Pyrethroid Pesticides by Environmental Protection Agency (EPA) SW 846 Method 8270D-MRM

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.

LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-002	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to results reported below the RL and above the MDL, data were qualified as estimated in four samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Chlorinated Pesticides by Environmental Protection Agency (EPA) SW 846 Method 8270D/8270D-NCI

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
56375-BS1/BS2 (All samples in SDG 1807003-002)	Dicofol Endosulfan I Endosulfan II Endrin aldehyde	55 (70-130) 12 (70-130) 37 (70-130) 12 (70-130)	51 (70-130) 14 (70-130) 40 (70-130) 13 (70-130)	UJ (all non-detects) UJ (all non-detects) UJ (all non-detects) UJ (all non-detects)	P
56375-BS1/BS2 (All samples in SDG 1807003-002)	Methoxychlor	150 (70-130)	150 (70-130)	NA	-

Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits.

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-002	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identification

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to LCS/LCSD %R and results reported below the RL and above the MDL, data were qualified as estimated in four samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Data Validation Report

Project/Site Name: 2018 Regional Harbor Monitoring Program

LDC Report Date: May 31, 2019

Parameters: Polychlorinated Biphenyls as Congeners

Validation Level: Level II

Laboratory: Physis Environmental Laboratories, Inc.

Sample Delivery Group (SDG): 1807003-002

Sample Identification	Laboratory Sample Identification	Matrix	Collection Date
B18-10065	56380	Sediment	07/10/18
B18-10066	56381	Sediment	07/10/18
B18-10067	56382	Sediment	07/10/18
B18-10068	56383	Sediment	07/10/18

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polychlorinated Biphenyls (PCBs) as Congeners by Environmental Protection Agency (EPA) SW 846 Method 8270D

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits with the following exceptions:

CRM ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
SRM 1944	PCB-105 PCB-118 PCB-128 PCB-156 PCB-206	35 (60-140) 56 (60-140) 19 (60-140) 28 (60-140) 53 (60-140)	All samples in SDG 1807003-002	J (all detects) UJ (all non-detects)	A

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-002	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identification

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to CRM %R and results reported below the RL and above the MDL, data were qualified as estimated in four samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Copper, Iron, Lead, Nickel, Phosphorus, Selenium, Silver, and Zinc by Environmental Protection Agency (EPA) SW 846 Method 6020 and EPA Method 200.8
Mercury by EPA Method 245.7

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Days From Sample Collection Until Analysis	Required Holding Time (in Days) From Sample Collection Until Analysis	Flag	A or P
B18-10065 B18-10066 B18-10067 B18-10068	Mercury	182	28	J (all detects)	P

II. ICPMS Tune

ICP-MS tune data were not reviewed for Level II validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Level II validation.

IV. ICP Interference Check Sample Analysis

Interference check sample (ICS) analysis data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10065MS/MSD (All samples in SDG 1807703-002)	Chromium Barium	131 (75-125) -	135 (75-125) 127 (75-125)	J (all detects) J (all detects)	A

For B18-10065MS/MSD, no data were qualified for aluminum and iron percent recoveries (%R) outside the QC limits since the parent sample results were greater than 4X the spike concentration.

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
B18-10065MS/MSD (All samples in SDG 1807703-002)	Iron	32 (≤25)	J (all detects)	A

VIII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Analyte	RPD (Limits)	Difference (Limits)	Flag	A or P
B18-10065DUP (All samples in SDG 1807003-002)	Chromium	52 (≤25)	-	J (all detects)	A

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the methods. The results were within QC limits.

XI. Field Duplicates

No field duplicates were identified in this SDG.

XII. Internal Standards (ICP-MS)

Internal standard data were not reviewed for Level II validation.

XIII. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-002	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to technical holding time, MS/MSD %R and RPD, DUP RPD, and results reported below the RL and above the MDL, data were qualified as estimated in eight samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Acid Volatile Sulfide by Plumb 1981
Ammonia as Nitrogen by Standard Method 4500-NH3-D
Particle Size by Standard Method 2560D
Percent Solids by Standard Method 2540B
Total Nitrogen and Total Organic Carbon by Environmental Protection Agency (EPA) SW 846 Method 9060

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Time From Sample Collection Until Analysis	Required Holding Time From Sample Collection Until Analysis	Flag	A or P
All samples in SDG 1807003-002	Acid volatile sulfide	178 days	14 days	J (all detects)	A
All samples in SDG 1807003-002	Ammonia as N	177 days	28 days	J (all detects)	A
All samples in SDG 1807003-002	Total nitrogen	184 days	28 days	J (all detects)	A

II. Initial Calibration

Initial calibration data were not reviewed for Level II validation.

III. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

IV. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

V. Field Blanks

No field blanks were identified in this SDG.

VI. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10065MS/MSD (All samples in SDG 1807703-012)	Acid volatile sulfide	42 (80-120)	40 (80-120)	J (all detects)	A

Relative percent differences (RPD) were within QC limits.

VII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

VIII. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the methods. The results were within QC limits.

IX. Field Duplicates

No field duplicates were identified in this SDG.

X. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-002	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XI. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to technical holding time, MS/MSD %R, and results reported below the RL and above the MDL, data were qualified as estimated in four samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Matrix Spike/Matrix Spike Duplicates

Reviewer: CA
2nd Reviewer: CA

METHOD: Inorganics, EPA Method See cover

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

Y N N/A Was a matrix spike analyzed for each matrix in this SDG?

Y N N/A Were matrix spike percent recoveries (%R) within the QAPP limits? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken.

Y N N/A Were all duplicate sample relative percent differences (RPD) within QAPP limits?

LEVEL IV ONLY:

Y N N/A Were recalculated results acceptable? See Level IV Recalculation Worksheet for recalculations.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polynuclear Aromatic Hydrocarbons (PAHs) by Environmental Protection Agency (EPA) SW 846 Method 8270D

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
56375-BS1/BS2 (All samples in SDG 1807003-004)	1-Methylnaphthalene 2,6-Dimethylnaphthalene 2-Methylnaphthalene Acenaphthene Acenaphthylene Biphenyl Naphthalene	49 (70-130) 59 (70-130) 50 (70-130) 60 (70-130) 59 (70-130) 55 (70-130) 41 (70-130)	53 (70-130) 60 (70-130) 53 (70-130) 61 (70-130) 61 (70-130) 57 (70-130) 46 (70-130)	J (all detects) UJ (all non-detects)	P
56375-BS1/BS2 (All samples in SDG 1807003-004)	Benzo(a)anthracene Indeno(1,2,3-cd)pyrene	149 (70-130) 131 (70-130)	146 (70-130) -	J (all detects) J (all detects)	P

Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits with the following exceptions:

CRM ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
SRM 1944	2-Methylnaphthalene	56 (60-140)	All samples in SDG 1807003-004	J (all detects)	A

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-004	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to LCS/LCSD %R, CRM %R, and results reported below the RL and above the MDL, data were qualified as estimated in thirteen samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
56375-BS1/BS2 (All samples in SDG 1807003-004)	PBDE 190	59 (70-130)	66 (70-130)	J (all detects) UJ (all non-detects)	P
	PBDE 209	23 (70-130)	25 (70-130)	J (all detects) UJ (all non-detects)	

Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits.

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-004	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to LCS/LCSD %R and results reported below the RL and above the MDL, data were qualified as estimated in thirteen samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Fipronil and Degradates by Environmental Protection Agency (EPA) SW 846 Method 8270D-NCI

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-004	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to results reported below the RL and above the MDL, data were qualified as estimated in thirteen samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Chlorinated Pesticides by Environmental Protection Agency (EPA) SW 846 Method 8270D/8270D-NCI

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
56375-BS1/BS2 (All samples in SDG 1807003-004)	Dicofol Endosulfan I Endosulfan II Endrin aldehyde	55 (70-130) 12 (70-130) 37 (70-130) 12 (70-130)	51 (70-130) 14 (70-130) 40 (70-130) 13 (70-130)	UJ (all non-detects) UJ (all non-detects) UJ (all non-detects) UJ (all non-detects)	P
56375-BS1/BS2 (All samples in SDG 1807003-004)	Methoxychlor	150 (70-130)	150 (70-130)	NA	-

Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits.

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-004	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identification

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to LCS/LCSD %R and results reported below the RL and above the MDL, data were qualified as estimated in thirteen samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polychlorinated Biphenyls (PCBs) as Congeners by Environmental Protection Agency (EPA) SW 846 Method 8270D

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits with the following exceptions:

CRM ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
SRM 1944	PCB-105 PCB-118 PCB-128 PCB-156 PCB-206	35 (60-140) 56 (60-140) 19 (60-140) 28 (60-140) 53 (60-140)	All samples in SDG 1807003-004	J (all detects) UJ (all non-detects)	A

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-004	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identification

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to CRM %R and results reported below the RL and above the MDL, data were qualified as estimated in thirteen samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Samples appended with "SEM" were analyzed for Simultaneously Extracted Metals

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Copper, Iron, Lead, Nickel, Phosphorus, Selenium, Silver, and Zinc by Environmental Protection Agency (EPA) SW 846 Method 6020 and EPA Method 200.8
Mercury by EPA Method 245.7

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Days From Sample Collection Until Analysis	Required Holding Time (in Days) From Sample Collection Until Analysis	Flag	A or P
B18-10015 B18-10016 B18-10438 (overdraw) B18-10020 B18-10073 B18-10074 B18-10075 B18-10017 B18-10019 B18-10069 B18-10070 B18-10071 B18-10072	Mercury	180	28	J (all detects)	P

II. ICPMS Tune

ICP-MS tune data were not reviewed for Level II validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Level II validation.

IV. ICP Interference Check Sample Analysis

Interference check sample (ICS) analysis data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. For B18-10020MS/MSD, no data were qualified for aluminum and iron percent recoveries (%R) outside the QC limits since the parent sample results were greater than 4X the spike concentration. Relative percent differences (RPD) were within QC limits.

VIII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Analyte	RPD (Limits)	Difference (Limits)	Flag	A or P
B18-10020DUP (B18-10015 B18-10016 B18-10438 (overdraw) B18-10020 B18-10073 B18-10074 B18-10075 B18-10017 B18-10019 B18-10069 B18-10070 B18-10071 B18-10072)	Cadmium	28 (≤25)	-	J (all detects)	A

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the methods. The results were within QC limits.

XI. Field Duplicates

No field duplicates were identified in this SDG.

XII. Internal Standards (ICP-MS)

Internal standard data were not reviewed for Level II validation.

XIII. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-004	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to technical holding time, DUP RPD, and results reported below the RL and above the MDL, data were qualified as estimated in twenty-six samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

Y N N/A Was a duplicate sample analyzed for each matrix in this SDG?

Y N N/A Were all duplicate sample relative percent differences (RPD) ≤ 25% samples? If no, see qualifications below. A control limit of ±R.L. (±2X R.L. for soil) was used for sample values that were <5X the R.L., including the case when only one of the duplicate sample values was <5X R.L.. If field blanks were used for laboratory duplicates, note in the Overall Assessment.

LEVEL IV ONLY:

Y N N/A Were recalculated results acceptable? See Level IV Recalculation Worksheet for recalculations.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Acid Volatile Sulfide by Plumb 1981
Ammonia as Nitrogen by Standard Method 4500-NH3-D
Particle Size by Standard Method 2560D
Percent Solids by Standard Method 2540B
Total Nitrogen and Total Organic Carbon by Environmental Protection Agency (EPA) SW 846 Method 9060

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Time From Sample Collection Until Analysis	Required Holding Time From Sample Collection Until Analysis	Flag	A or P
B18-10015	Acid volatile sulfide	176 days	14 days	J (all detects)	A
B18-10016	Ammonia as N	175 days	28 days	J (all detects)	
B18-10438 (overdraw)	Total nitrogen	182 days	28 days	J (all detects)	
B18-10020					
B18-10073					
B18-10074					
B18-10075					
B18-10017					
B18-10019					
B18-10069					
B18-10070					
B18-10071					
B18-10072					

II. Initial Calibration

Initial calibration data were not reviewed for Level II validation.

III. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

IV. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

V. Field Blanks

No field blanks were identified in this SDG.

VI. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

VII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
B18-10015DUP (All samples in SDG 1807003-004)	Grain size: Phi 1.5	44 (≤20)	J (all detects)	A

VIII. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the methods. The results were within QC limits.

IX. Field Duplicates

No field duplicates were identified in this SDG.

X. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-004	Analytes reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XI. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to technical holding time, DUP RPD, and results reported below the RL and above the MDL, data were qualified as estimated in thirteen samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicates Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10023MS/MSD (B18-10023)	1-Methylnaphthalene 2-Methylnaphthalene Naphthalene	48 (50-150) 48 (50-150) 37 (50-150)	47 (50-150) 47 (50-150) 32 (50-150)	J (all detects) J (all detects) J (all detects)	A
B18-10023MS/MSD (B18-10023)	Benzo(a)anthracene	154 (50-150)	154 (50-150)	J (all detects)	A

Relative percent differences (RPD) were within QC limits.

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10023DUP (B18-10023)	Acenaphthene	92 (≤25)	NA	-
B18-10023DUP (B18-10023)	Benzo(a)pyrene Benzo(e)pyrene Benzo(k)fluoranthene Chrysene Fluoranthene Pyrene	34 (≤25) 26 (≤25) 26 (≤25) 27 (≤25) 43 (≤25) 42 (≤25)	J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects)	A

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
20646-BS1/BS2 (B18-10023 B18-10030 B18-10078)	1-Methylnaphthalene 2,6-Dimethylnaphthalene 2-Methylnaphthalene Acenaphthene Acenaphthylene Biphenyl Naphthalene	49 (70-130) 59 (70-130) 50 (70-130) 60 (70-130) 59 (70-130) 55 (70-130) 41 (70-130)	53 (70-130) 60 (70-130) 53 (70-130) 61 (70-130) 61 (70-130) 57 (70-130) 46 (70-130)	J (all detects) UJ (all non-detects)	P

56510-BS1/BS2 (B18-10079 B18-10117 B18-10080 B18-10081 B18-10082 B18-10083 B18-10084)	1-Methylnaphthalene 2-Methylnaphthalene Biphenyl Naphthalene 2,6-Dimethylnaphthalene Acenaphthene	59 (70-130) 61 (70-130) 64 (70-130) 48 (70-130) - -	54 (70-130) 55 (70-130) 60 (70-130) 42 (70-130) 65 (70-130) 67 (70-130)	J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects)	P
56510-BS1/BS2 (B18-10079 B18-10117 B18-10080 B18-10081 B18-10082 B18-10083 B18-10084)	Benzo(a)anthracene Benzo(b)fluoranthene Indeno(1,2,3-cd)pyrene Dibenzo(a,h)anthracene Fluoranthene	171 (70-130) 131 (70-130) 139 (70-130) - -	171 (70-130) 135 (70-130) 144 (70-130) 134 (70-130) 131 (70-130)	J (all detects) J (all detects) J (all detects) J (all detects) J (all detects)	P

Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits with the following exceptions:

CRM ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
20647-CRM (SRM 1994)	2-Methylnaphthalene	56 (60-140)	B18-10023 B18-10030 B18-10078	J (all detects)	A

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-006	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to MS/MSD %R, DUP RPD, LCS/LCSD %R, CRM %R, and results reported below the RL and above the MDL, data were qualified as estimated in ten samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polybrominated Diphenyl Ethers (PBDE) by Environmental Protection Agency (EPA) SW 846 Method 8270D-NCI

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicates Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10023MS/MSD (B18-10023)	PBDE 190	39 (50-150)	46 (50-150)	J (all detects) UJ (all non-detects)	A
	PBDE 209	19 (50-150)	25 (50-150)	J (all detects) UJ (all non-detects)	

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10023MS/MSD (B18-10023)	PBDE 183	26 (≤25)	NA	-
B18-10023MS/MSD (B18-10023)	PBDE 209	27 (≤25)	J (all detects)	A

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
20646-BS1/BS2 (B18-10023 B18-10030 B18-10078)	PBDE 190 PBDE 209	59 (70-130) 23 (70-130)	66 (70-130) 25 (70-130)	J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects)	P
56510-BS1/BS2 (B18-10079 B18-10117 B18-10080 B18-10081 B18-10082 B18-10083 B18-10084)	PBDE 190 PBDE 209	65 (70-130) 22 (70-130)	- 51 (70-130)	J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects)	P

Relative percent differences (RPD) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
56510-BS1/BS2 (B18-10079 B18-10117 B18-10081 B18-10082 B18-10083 B18-10084)	PBDE 209	79 (≤30)	J (all detects)	P
56510-BS1/BS2 (B18-10080)	PBDE 209	79 (≤30)	NA	-

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits.

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-006	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to MS/MSD %R and RPD, LCS/LCSD %R and RPD, and results reported below the RL and above the MDL, data were qualified as estimated in ten samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Fipronil and Degradates by Environmental Protection Agency (EPA) SW 846 Method 8270D-NCI

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicates Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-006	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to results reported below the RL and above the MDL, data were qualified as estimated in ten samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicates Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10023MS/MSD (B18-10023)	Allethrin Cyhalothrin, total lambda Permethrin, cis-	159 (50-150) 154 (50-150) -	162 (50-150) 167 (50-150) 154 (50-150)	NA	-
B18-10023MS/MSD (B18-10023)	Prallethrin	5 (50-150)	3 (50-150)	UJ (all non-detects)	A

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10023MS/MSD (B18-10023)	Fluvalinate Prallethrin	26 (≤25) 50 (≤25)	NA	-

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-006	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to MS/MSD %R and results reported below the RL and above the MDL, data were qualified as estimated in ten samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Chlorinated Pesticides by Environmental Protection Agency (EPA) SW 846 Method 8270D/8270D-NCI

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicate Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10023MS/MSD (B18-10023)	Dicofol	46 (50-150)	-	UJ (all non-detects)	A
	Endosulfan I	20 (50-150)	23 (50-150)	UJ (all non-detects)	
	Endosulfan II	41 (50-150)	43 (50-150)	UJ (all non-detects)	
	Endrin aldehyde	18 (50-150)	29 (50-150)	UJ (all non-detects)	

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10023MS/MSD (B18-10023)	Endrin aldehyde	47 (≤25)	NA	-

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
20646-BS1 (B18-10023 B18-10030 B18-10078)	Dicofol Endosulfan I Endosulfan II Endrin aldehyde	55 (70-130) 12 (70-130) 37 (70-130) 12 (70-130)	51 (70-130) 14 (70-130) 40 (70-130) 13 (70-130)	UJ (all non-detects) UJ (all non-detects) UJ (all non-detects) UJ (all non-detects)	P
20646-BS1 (B18-10023 B18-10030 B18-10078)	Methoxychlor	150 (70-130)	150 (70-130)	NA	-
56510-BS1/BS2 (B18-10079 B18-10117 B18-10080 B18-10081 B18-10082 B18-10083 B18-10084)	Endosulfan I	3 (70-130)	3 (70-130)	R (all non-detects)	P
56510-BS1/BS2 (B18-10079 B18-10117 B18-10080 B18-10081 B18-10082 B18-10083 B18-10084)	Endosulfan II Endrin aldehyde	21 (70-130) 10 (70-130)	22 (70-130) 29 (70-130)	UJ (all non-detects) UJ (all non-detects)	P
56510-BS1/BS2 (B18-10079 B18-10117 B18-10080 B18-10081 B18-10082 B18-10083 B18-10084)	Methoxychlor Perthane	142 (70-130) 131 (70-130)	144 (70-130) 135 (70-130)	NA	-

Relative percent differences (RPD) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
56510-BS1/BS2 (B18-10079 B18-10117 B18-10080 B18-10081 B18-10082 B18-10083 B18-10084)	Endrin aldehyde	97 (≤30)	NA	-

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits.

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-006	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identification

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method.

Due to LCS/LCSD %R, data were rejected in seven samples.

Due to MS/MSD %R, LCS/LCSD %R, and results reported below the RL and above the MDL, data were qualified as estimated in ten samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be rejected (R) are unusable for all purposes. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polychlorinated Biphenyls (PCBs) as Congeners by Environmental Protection Agency (EPA) SW 846 Method 8270D

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicate Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
56510-BS1/BS2 (B18-10079 B18-10117 B18-10080 B18-10081 B18-10082 B18-10083 B18-10084)	PCB-169	133 (70-130)	-	NA	-

Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits with the following exceptions:

CRM ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
20647-CRM1	PCB-105 PCB-118 PCB-128 PCB-156 PCB-206	35 (60-140) 58 (60-140) 19 (60-140) 28 (60-140) 53 (60-140)	B18-10023 B18-10030 B18-10078	J (all detects) UJ (all non-detects)	A
56512-CRM1	PCB-105 PCB-118 PCB-128 PCB-156 PCB-194	40 (60-140) 53 (60-140) 40 (60-140) 40 (60-140) 58 (60-140)	B18-10079 B18-10117 B18-10080 B18-10081 B18-10082 B18-10083 B18-10084	J (all detects) UJ (all non-detects)	A

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-006	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identification

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to CRM %R and results reported below the RL and above the MDL, data were qualified as estimated in ten samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Copper, Iron, Lead, Nickel, Phosphorus, Selenium, Silver, and Zinc by Environmental Protection Agency (EPA) SW 846 Method 6020 and EPA Method 200.8
Mercury by EPA Method 245.7

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Days From Sample Collection Until Analysis	Required Holding Time (in Days) From Sample Collection Until Analysis	Flag	A or P
B18-10023 B18-10030 B18-10078 B18-10079 B18-10117	Mercury	176	28	J (all detects)	P
B18-10080 B18-10081 B18-10082 B18-10083 B18-10084	Mercury	175	28	J (all detects)	P

II. ICPMS Tune

ICP-MS tune data were not reviewed for Level II validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Level II validation.

IV. ICP Interference Check Sample Analysis

Interference check sample (ICS) analysis data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10023MS/MSD(SEM) (B18-10023(SEM) B18-10030(SEM) B18-10078(SEM) B18-10079(SEM) B18-10117(SEM) B18-10080(SEM) B18-10081(SEM) B18-10082(SEM) B18-10083(SEM) B18-10084(SEM))	Silver	-	66 (75-125)	UJ (all non-detects)	A

For B18-10023MS/MSD, no data were qualified for aluminum and iron percent recoveries (%R) outside the QC limits since the parent sample results were greater than 4X the spike concentration.

Relative percent differences (RPD) were within QC limits.

VIII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the methods. The results were within QC limits.

XI. Field Duplicates

No field duplicates were identified in this SDG.

XII. Internal Standards (ICP-MS)

Internal standard data were not reviewed for Level II validation.

XIII. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-006	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to technical holding time, MS/MSD %R, and results reported below the RL and above the MDL, data were qualified as estimated in twenty samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Matrix Spike/Matrix Spike Duplicates

Reviewer: CT
2nd Reviewer: CT

METHOD: Trace metals (EPA SW 846 Method 6010/7000)

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

Y N N/A Was a matrix spike analyzed for each matrix in this SDG?

Y N N/A Were matrix spike percent recoveries (%R) within the control limits of 75-125? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken.

Y N N/A Were all duplicate sample relative percent differences (RPD) ≤ 20% for samples?

LEVEL IV ONLY:

Y N N/A Were recalculated results acceptable? See Level IV Recalculation Worksheet for recalculations.

#	MS/MSD ID	Matrix	Analyte	MS %Recovery	MSD %Recovery	RPD (Limits)	Associated Samples	Qualifications
	24/25		Ag		66		11-20	J/UJ/A (ND) (LM)

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Acid Volatile Sulfide by Plumb 1981
Ammonia as Nitrogen by Standard Method 4500-NH3-D
Particle Size by Standard Method 2560D
Percent Solids by Standard Method 2540B
Total Nitrogen and Total Organic Carbon by Environmental Protection Agency (EPA) SW 846 Method 9060

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Time From Sample Collection Until Analysis	Required Holding Time From Sample Collection Until Analysis	Flag	A or P
B18-10023 B18-10030 B18-10078	Acid volatile sulfide Ammonia as N Total nitrogen	172 days 171 days 178 days	14 days 28 days 28 days	J (all detects) J (all detects) J (all detects)	A
B18-10079 B18-10117	Acid volatile sulfide Ammonia as N Total nitrogen	172 days 171 days 179 days	14 days 28 days 28 days	J (all detects) J (all detects) J (all detects)	A
B18-10080 B18-10081 B18-10082 B18-10083 B18-10084	Acid volatile sulfide Ammonia as N Total nitrogen	171 days 170 days 178 days	14 days 28 days 28 days	J (all detects) J (all detects) J (all detects)	A

II. Initial Calibration

Initial calibration data were not reviewed for Level II validation.

III. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

IV. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

V. Field Blanks

No field blanks were identified in this SDG.

VI. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

VII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

VIII. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the methods. The results were within QC limits.

IX. Field Duplicates

No field duplicates were identified in this SDG.

X. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-006	Analytes reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XI. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to technical holding time and results reported below the RL and above the MDL, data were qualified as estimated in ten samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polynuclear Aromatic Hydrocarbons (PAHs) by Environmental Protection Agency (EPA) SW 846 Method 8270D

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicates Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10076MS/MSD (B18-10076)	Benzo(b)fluoranthene Fluoranthene	194 (50-150) 162 (50-150)	183 (50-150) -	J (all detects) J (all detects)	A
B18-10076MS/MSD (B18-10076)	Naphthalene	43 (50-150)	-	J (all detects)	A

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10076MS/MSD (B18-10076)	Naphthalene	28 (≤25)	J (all detects)	A

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10076DUP (B18-10076)	1-Methylnaphthalene 2-Methylnaphthalene	32 (≤25) 26 (≤25)	J (all detects) J (all detects)	A

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
20904-BS1/BSD (B18-10022 B18-10076 B18-10077 B18-10112 B18-10113 B18-10024 B18-10029 B18-10114 B18-10115 B18-10116 B18-20116 B18-10031 B18-10032)	1-Methylnaphthalene 2-Methylnaphthalene Biphenyl Naphthalene 2,6-Dimethylnaphthalene Acenaphthene	59 (70-130) 61 (70-130) 64 (70-130) 48 (70-130) - -	54 (70-130) 55 (70-130) 60 (70-130) 42 (70-130) 65 (70-130) 67 (70-130)	J (all detects) UJ (all non-detects)	P
20904-BS1/BSD (B18-10022 B18-10076 B18-10077 B18-10112 B18-10113 B18-10024 B18-10029 B18-10114 B18-10115 B18-10116 B18-20116 B18-10031 B18-10032)	Benzo(a)anthracene Benzo(b)fluoranthene Indeno(1,2,3-cd)pyrene Dibenzo(a,h)anthracene Fluoranthene	171 (70-130) 131 (70-130) 139 (70-130) - -	171 (70-130) 135 (70-130) 144 (70-130) 134 (70-130) 131 (70-130)	J (all detects) J (all detects) J (all detects) J (all detects) J (all detects)	P

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
56578-BS1/BS2 (B18-10119 B18-10121 B18-10123 B18-10178)	1-Methylnaphthalene 2-Methylnaphthalene Acenaphthene Biphenyl Naphthalene 2,6-Dimethylnaphthalene	59 (70-130) 63 (70-130) 67 (70-130) 64 (70-130) 51 (70-130) -	57 (70-130) 60 (70-130) 66 (70-130) 62 (70-130) 49 (70-130) 68 (70-130)	J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects)	P
56578-BS1/BS2 (B18-10119 B18-10121 B18-10123 B18-10178)	Benzo(a)anthracene Benzo(b)fluoranthene Dibenzo(a,h)anthracene Fluoranthene Indeno(1,2,3-cd)pyrene	196 (70-130) 147 (70-130) 142 (70-130) 131 (70-130) 156 (70-130)	200 (70-130) 148 (70-130) 147 (70-130) - 163 (70-130)	J (all detects) J (all detects) J (all detects) J (all detects) J (all detects)	P

Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits with the following exceptions:

CRM ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
56580-CRM1 (SRM 1994)	Benzo(k)fluoranthene	41 (60-140)	B18-10119 B18-10121 B18-10123 B18-10178	J (all detects)	A

X. Field Replicates

Samples B18-10116 and B18-20116 were identified as field replicates. No results were detected in any of the samples with the following exceptions:

Compound	Concentration (ng/g)		RPD
	B18-10116	B18-20116	
1,6,7-Trimethylnaphthalene	1.27	1.38	8
1-Methylnaphthalene	0.814	0.836	3
1-Methylphenanthrene	1.51	1.32	13
2,6-Dimethylnaphthalene	0.577	0.624	8
2-Methylnaphthalene	1.64	1.70	4
Acenaphthene	0.50U	0.157	Not calculable
Acenaphthylene	0.233	0.331	35

Compound	Concentration (ng/g)		RPD
	B18-10116	B18-20116	
Anthracene	0.762	0.767	1
Benzo(a)anthracene	21.8	6.02	113
Benzo(a)pyrene	8.1	3.69	75
Benzo(b)fluoranthene	11.8	5.47	73
Benzo(e)pyrene	7.06	3.58	65
Benzo(g,h,i)perylene	4.66	3.77	21
Benzo(k)fluoranthene	8.53	4.3	66
Biphenyl	0.291	0.275	6
Chrysene	7.27	2.52	97
Dibenzo(a,h)anthracene	4.79	3.2	40
Dibenzothiophene	0.324	0.357	10
Fluoranthene	10.4	4.96	71
Fluorene	0.643	0.605	6
Indeno(1,2,3-cd)pyrene	19.4	14.2	31
Naphthalene	2.17	1.91	13
Perylene	1.64	0.766	73
Phenanthrene	4.51	4.29	5
Pyrene	9.84	5.13	63

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-008	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to MS/MSD %R and RPD, DUP RPD, LCS/LCSD %R, CRM %R, and results reported below the RL and above the MDL, data were qualified as estimated in seventeen samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polybrominated Diphenyl Ethers (PBDE) by Environmental Protection Agency (EPA) SW 846 Method 8270D-NCI

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicates Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10076MS/MSD (B18-10076)	PBDE 190 PBDE 209 PBDE 183	36 (50-150) 12 (50-150) -	28 (50-150) 7 (50-150) 45 (50-150)	J (all detects) UJ (all non-detects)	A

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10076MS/MSD (B18-10076)	PBDE 209	53 (≤25)	J (all detects)	A

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10076DUP (B18-10076)	PBDE 099	49 (≤25)	J (all detects)	A
	PBDE 100	35 (≤25)	J (all detects)	
	PBDE 153	93 (≤25)	J (all detects)	
	PBDE 154	26 (≤25)	J (all detects)	
	PBDE 209	36 (≤25)	J (all detects)	

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
20904-BS1/BS2 (B18-10022 B18-10076 B18-10077 B18-10112 B18-10113 B18-10024 B18-10029 B18-10114 B18-10115 B18-10116 B18-20116 B18-10031 B18-10032)	PBDE 190	65 (70-130)	-	J (all detects) UJ (all non-detects)	P
	PBDE 209	22 (70-130)	51 (70-130)	J (all detects) UJ (all non-detects)	
56578-BS1/BS2 (B18-10119 B18-10121 B18-10123 B18-10178)	PBDE 190	67 (70-130)	61 (70-130)	J (all detects) UJ (all non-detects)	P
	PBDE 209	22 (70-130)	17 (70-130)	J (all detects) UJ (all non-detects)	

Relative percent differences (RPD) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
20904-BS1/BS2 (B18-10076 B18-10077 B18-10112 B18-10113 B18-10024 B18-10029 B18-10114 B18-10115 B18-10031 B18-10032)	PBDE 209	79 (≤30)	J (all detects)	P
20904-BS1/BS2 (B18-10022 B18-10116 B18-20116)	PBDE 209	79 (≤30)	NA	-

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits.

X. Field Replicates

Samples B18-10116 and B18-20116 were identified as field replicates. No results were detected in any of the samples.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-008	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to MS/MSD %R and RPD, DUP RPD, LCS/LCSD %R and RPD, and results reported below the RL and above the MDL, data were qualified as estimated in seventeen samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Fipronil and Degradates by Environmental Protection Agency (EPA) SW 846 Method 8270D-NCI

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicates Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10076MS/MSD (B18-10076)	Fipronil desulfinyl	156 (50-150)	164 (50-150)	NA	-

Relative percent differences (RPD) were within QC limits.

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

X. Field Replicates

Samples B18-10116 and B18-20116 were identified as field replicates. No results were detected in any of the samples.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-008	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to results reported below the RL and above the MDL, data were qualified as estimated in seventeen samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Synthetic Pyrethroid Pesticides by Environmental Protection Agency (EPA) SW 846 Method 8270D-MRM

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicates Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10076MS/MSD (B18-10076)	Cyhalothrin, total lambda	169 (50-150)	165 (50-150)	NA	-
B18-10076MS/MSD (B18-10076)	Deltamethrin/Tralomethrin Prallethrin	37 (50-150) 38 (50-150)	44 (50-150) 38 (50-150)	UJ (all non-detects) UJ (all non-detects)	A

Relative percent differences (RPD) were within QC limits.

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10076DUP (B18-10076)	Danitol (Fenpropathrin)	26 (≤25)	J (all detects)	A

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

X. Field Replicates

Samples B18-10116 and B18-20116 were identified as field replicates. No results were detected in any of the samples.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-008	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to MS/MSD %R, DUP RPD, and results reported below the RL and above the MDL, data were qualified as estimated in seventeen samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Chlorinated Pesticides by Environmental Protection Agency (EPA) SW 846 Method 8270D/8270D-NCI

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicate Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10076MS/MSD (B18-10076)	Endosulfan I Endosulfan II Endrin aldehyde	19 (50-150) 23 (50-150) 11 (50-150)	16 (50-150) 20 (50-150) 8 (50-150)	UJ (all non-detects) UJ (all non-detects) UJ (all non-detects)	A
B18-10076MS/MSD (B18-10076)	Methoxychlor Perthane	157 (50-150) 154 (50-150)	160 (50-150) 152 (50-150)	NA	-

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10076MS/MSD (B18-10076)	Endrin aldehyde	32 (≤25)	NA	-

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
20904-BS1/BS2 (B18-10022 B18-10076 B18-10077 B18-10112 B18-10113 B18-10024 B18-10029 B18-10114 B18-10115 B18-10116 B18-20116 B18-10031 B18-10032)	Endosulfan I	3 (70-130)	3 (70-130)	R (all non-detects)	P
20904-BS1/BS2 (B18-10022 B18-10076 B18-10077 B18-10112 B18-10113 B18-10024 B18-10029 B18-10114 B18-10115 B18-10116 B18-20116 B18-10031 B18-10032)	Endosulfan II Endrin aldehyde	21 (70-130) 10 (70-130)	22 (70-130) 29 (70-130)	UJ (all non-detects) UJ (all non-detects)	P

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
20904-BS1/BS2 (B18-10022 B18-10076 B18-10077 B18-10112 B18-10113 B18-10024 B18-10029 B18-10114 B18-10115 B18-10116 B18-20116 B18-10031 B18-10032)	Methoxychlor Perthane	142 (70-130) 131 (70-130)	144 (70-130) 135 (70-130)	NA	-
56578-BS1 (B18-10119 B18-10121 B18-10123 B18-10178)	Endosulfan I	2 (70-130)	2 (70-130)	R (all non-detects)	P
56578-BS1 (B18-10119 B18-10121 B18-10123 B18-10178)	Endosulfan II Endrin aldehyde alpha-Chlordane cis-Nonachlor	15 (70-130) 10 (70-130) - -	15 (70-130) 30 (70-130) 68 (70-130) 68 (70-130)	J (all detects) UJ (all non-detects)	P
56578-BS1 (B18-10119 B18-10121 B18-10123 B18-10178)	Methoxychlor Perthane	153 (70-130) 136 (70-130)	159 (70-130) 135 (70-130)	NA	-

Relative percent differences (RPD) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
56578-BS1 (B18-10119 B18-10121 B18-10123 B18-10178)	Endrin aldehyde	100 (≤30)	NA	-

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits.

X. Field Replicates

Samples B18-10116 and B18-20116 were identified as field replicates. No results were detected in any of the samples.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-008	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identification

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method.

Due to LCS/LCSD %R, data were rejected in seventeen samples.

Due to MS/MSD %R, LCS/LCSD %R, and results reported below the RL and above the MDL, data were qualified as estimated in seventeen samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be rejected (R) are unusable for all purposes. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polychlorinated Biphenyls (PCBs) as Congeners by Environmental Protection Agency (EPA) SW 846 Method 8270D

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicate Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits.

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10076MS/MSD (B18-10076)	PCB-049	28 (≤25)	J (all detects)	A

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10076DUP (B18-10076)	PCB-031	26 (≤25)	J (all detects)	A

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
56578-BS1/BS2 (B18-10119 B18-10121 B18-10123 B18-10178)	PCB-169 PCB-189 PCB-194 PCB-195	142 (70-130) 136 (70-130) 144 (70-130) -	169 (70-130) 151 (70-130) 149 (70-130) 132 (70-130)	NA	-
56578-BS1/BS2 (B18-10119 B18-10123)	PCB-206 PCB-209	144 (70-130) -	144 (70-130) 133 (70-130)	J (all detects) J (all detects)	A
56578-BS1/BS2 (B18-10121 B18-10178)	PCB-206 PCB-209	144 (70-130) -	144 (70-130) 133 (70-130)	NA	-

Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits with the following exceptions:

CRM ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
20905-CRM1	PCB-105 PCB-118 PCB-128 PCB-156	40 (60-140) 53 (60-140) 40 (60-140) 40 (60-140)	B18-10022 B18-10076 B18-10077 B18-10112 B18-10113 B18-10024 B18-10029 B18-10114 B18-10115 B18-10116 B18-20116 B18-10031 B18-10032	J (all detects) UJ (all non-detects)	A
56580-CRM1	PCB-128 PCB-156	36 (60-140) 39 (60-140)	B18-10119 B18-10121 B18-10123 B18-10178	J (all detects) UJ (all non-detects)	A

X. Field Replicates

Samples B18-10116 and B18-20116 were identified as field replicates. No results were detected in any of the samples with the following exceptions:

Compound	Concentration (ng/g)		RPD
	B18-10116	B18-20116	
PCB-101	0.126	0.127	1
PCB-153	0.135	0.204	41
PCB-138	0.2U	0.224	Not calculable
PCB-149	0.2U	0.0987	Not calculable
PCB-206	0.25U	0.329	Not calculable
PCB-209	0.25U	1.05	Not calculable

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-008	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identification

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to MS/MSD and DUP RPD, LCS/LCSD and CRM %R, and results reported below the RL and above the MDL, data were qualified as estimated in seventeen samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Samples appended with "SEM" were analyzed for Simultaneously Extracted Metals

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Copper, Iron, Lead, Nickel, Phosphorus, Selenium, Silver, and Zinc by Environmental Protection Agency (EPA) SW 846 Method 6020 and EPA Method 200.8
Mercury by EPA Method 245.7

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Days From Sample Collection Until Analysis	Required Holding Time (in Days) From Sample Collection Until Analysis	Flag	A or P
B18-10022 B18-10076 B18-10077 B18-10112 B18-10113	Mercury	177	28	J (all detects)	P
B18-10024 B18-10029 B18-10114 B18-10115 B18-10116 B18-20116	Mercury	176	28	J (all detects)	P
B18-10031 B18-10032 B18-10119 B18-10121 B18-10123 B18-10178	Mercury	175	28	J (all detects)	P

II. ICPMS Tune

ICP-MS tune data were not reviewed for Level II validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Level II validation.

IV. ICP Interference Check Sample Analysis

Interference check sample (ICS) analysis data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10076MS/MSD (B18-10022 B18-10076 B18-10077 B18-10112 B18-10113 B18-10024 B18-10029 B18-10114 B18-10115 B18-10116)	Mercury	-	138 (75-125)	J (all detects)	A

For B18-10076MS/MSD and B18-20116MS/MSD, no data were qualified for aluminum and iron percent recoveries (%R) outside the QC limits since the parent sample results were greater than 4X the spike concentration.

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
B18-10076MS/MSD (B18-10022 B18-10076 B18-10077 B18-10112 B18-10113 B18-10024 B18-10029 B18-10114 B18-10115 B18-10116)	Aluminum Iron	29 (≤25) 67 (≤25)	J (all detects) J (all detects)	A

VIII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the methods. The results were within QC limits with the following exceptions:

CRM ID	Analyte	%R (Limits)	Associated Samples	Flag	A or P
56579-CRM1	Aluminum	151 (42-124)	B18-10022 B18-10076 B18-10077 B18-10112 B18-10113 B18-10024 B18-10029 B18-10114 B18-10115 B18-10116	J (all detects)	A
60150-CRM1	Aluminum	127 (42-124)	B18-20116 B18-10031 B18-10032 B18-10119 B18-10121 B18-10123 B18-10178	J (all detects)	A

XI. Field Duplicates

Samples B18-10116 and B18-20116 and samples B18-10116(SEM) and B18-20116(SEM) were identified as field duplicates. No results were detected in any of the samples with the following exceptions:

Analyte	Concentration (ug/g)		RPD
	B18-10116	B18-20116	
Aluminum	4330	5990	32
Antimony	0.132	0.16	19
Arsenic	4.16	5	18
Barium	9.67	16.7	53
Beryllium	0.0925	0.137	39
Cadmium	0.0295	0.0352	18

Analyte	Concentration (ug/g)		RPD
	B18-10116	B18-20116	
Chromium	8.67	9.66	11
Copper	10.2	14.6	35
Iron	8500	8790	3
Lead	6.82	8.4	21
Mercury	0.0236	0.0425	57
Nickel	1.94	2.58	28
Phosphorus	176	234	28
Selenium	0.097	0.108	11
Silver	0.0938	0.0808	15
Zinc	33.9	45.8	30

Analyte	Concentration (umol/g)		RPD
	B18-10116(SEM)	B18-20116(SEM)	
Copper	0.0894	0.0989	10
Lead	0.0148	0.0219	39
Nickel	0.00363	0.00526	37
Zinc	0.238	0.371	44

XII. Internal Standards (ICP-MS)

Internal standard data were not reviewed for Level II validation.

XIII. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-008	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to technical holding time, MS/MSD %R and RPD, CRM %R, and results reported below the RL and above the MDL, data were qualified as estimated in thirty-four samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Acid Volatile Sulfide by Plumb 1981
Ammonia as Nitrogen by Standard Method 4500-NH3-D
Particle Size by Standard Method 2560D
Percent Solids by Standard Method 2540B
Total Nitrogen and Total Organic Carbon by Environmental Protection Agency (EPA) SW 846 Method 9060

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Time From Sample Collection Until Analysis	Required Holding Time From Sample Collection Until Analysis	Flag	A or P
B18-10022 B18-10076 B18-10077 B18-10112 B18-10113	Acid volatile sulfide	170 days	14 days	J (all detects)	A
B18-10024 B18-10029 B18-10114 B18-10115 B18-10116 B18-20116	Acid volatile sulfide	169 days	14 days	J (all detects)	A
B18-10031 B18-10032	Acid volatile sulfide	168 days	14 days	J (all detects)	A
B18-10119 B18-10121 B18-10123 B18-10178	Acid volatile sulfide	173 days	14 days	J (all detects)	A
B18-10022 B18-10076 B18-10077 B18-10112 B18-10113	Ammonia as N	169 days	28 days	J (all detects)	A
B18-10024 B18-10029 B18-10114 B18-10115 B18-10116 B18-20116	Ammonia as N	168 days	28 days	J (all detects)	A
B18-10031 B18-10032 B18-10119 B18-10121 B18-10123 B18-10178	Ammonia as N	167 days	28 days	J (all detects)	A
B18-10022 B18-10076 B18-10077 B18-10112 B18-10113	Total nitrogen	177 days	28 days	J (all detects)	A
B18-10116 B18-20116	Total nitrogen	176 days	28 days	R (all non-detects)	A

Sample	Analyte	Total Time From Sample Collection Until Analysis	Required Holding Time From Sample Collection Until Analysis	Flag	A or P
B18-10024 B18-10029 B18-10114 B18-10115	Total nitrogen	176 days	28 days	J (all detects)	A
B18-10031 B18-10032	Total nitrogen	175 days	28 days	J (all detects)	A
B18-10119 B18-10121 B18-10123 B18-10178	Total nitrogen	178 days	28 days	J (all detects)	A

II. Initial Calibration

Initial calibration data were not reviewed for Level II validation.

III. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

IV. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

V. Field Blanks

No field blanks were identified in this SDG.

VI. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10114MS/MSD (B18-10022 B18-10076 B18-10077 B18-10112 B18-10113 B18-10024 B18-10029 B18-10114 B18-10115 B18-10116 B18-20116 B18-10031 B18-10032)	Acid volatile sulfide	-14 (80-120)	-5 (80-120)	J (all detects)	A

Relative percent differences (RPD) were within QC limits.

VII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Analyte	RPD (Limits)	Difference (Limits)	Flag	A or P
B18-10022DUP (All samples in SDG 1807003-008)	Grain size-Phi 2.0	26 (≤20)	-	J (all detects) UJ (all non-detects)	A

VIII. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the methods. The results were within QC limits.

IX. Field Duplicates

Samples B18-10116 and B18-20116 were identified as field duplicates. No results were detected in any of the samples with the following exceptions:

Analyte	Concentration		RPD
	B18-10116	B18-20116	
Acid volatile sulfide	0.965 mg/Kg	1.69 mg/Kg	55

Analyte	Concentration		RPD
	B18-10116	B18-20116	
Ammonia as N	3.65 mg/Kg	6.28 mg/Kg	53
Percent solids	79.1 %	75.7 %	4
Total organic carbon	0.12 %	0.14 %	15
Gravel	4.5 %	1.3 %	110

X. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-008	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XI. Overall Assessment of Data

The analysis was conducted within all specifications of the methods.

Due to technical holding time, data were rejected in two samples.

Due to technical holding time, MS/MSD %R, DUP RPD, and results reported below the RL and above the MDL, data were qualified as estimated in seventeen samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be rejected (R) are unusable for all purposes. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

METHOD: Inorganics, Method see cover

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

Y N N/A Was a duplicate sample analyzed for each matrix in this SDG?

Y N N/A Were all duplicate sample relative percent differences (RPD) ≤ 20% for water and ≤ 35% for soil samples (≤ 10% for Method 300.0)? If no, see qualification below. A control limit of ±CRDL (±2X CRDL for soil) was used for samples that were ≤5X the CRDL, including when only one of the duplicate sample values were ≤5X the CRDL. If field blanks were used for laboratory duplicates, see overall assessment.

LEVEL IV ONLY:

Y N N/A Were recalculated results acceptable? See Level IV Recalculation Worksheet for recalculations. (CHD)

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polynuclear Aromatic Hydrocarbons (PAHs) by Environmental Protection Agency (EPA) SW 846 Method 8270D

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicates Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10133MS/MSD (B18-10133)	Benzo(a)anthracene Benzo(b)fluoranthene Dibenzo(a,h)anthracene Indeno(1,2,3-cd)pyrene Fluoranthene	208 (50-150) 162 (50-150) 173 (50-150) 188 (50-150) -	234 (50-150) 170 (50-150) 178 (50-150) 208 (50-150) 159 (50-150)	J (all detects) J (all detects) J (all detects) J (all detects) J (all detects)	A
B18-10133MS/MSD (B18-10133)	Naphthalene 1-Methylnaphthalene	45 (50-150) -	37 (50-150) 49 (50-150)	J (all detects) J (all detects)	A

Relative percent differences (RPD) were within QC limits.

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10133DUP (B18-10133)	Anthracene	45 (≤25)	J (all detects)	A
	Chrysene	30 (≤25)	J (all detects)	
	Dibenzo(a,h)anthracene	30 (≤25)	J (all detects)	
	Dibenzothiophene	44 (≤25)	J (all detects)	
	Fluoranthene	44 (≤25)	J (all detects)	
	Phenanthrene	35 (≤25)	J (all detects)	
	Pyrene	31 (≤25)	J (all detects)	

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
56681-BS1/BS2 (All samples in SDG 1807003-010)	1-Methylnaphthalene	59 (70-130)	57 (70-130)	J (all detects)	P
	2-Methylnaphthalene	63 (70-130)	60 (70-130)	J (all detects)	
	Acenaphthene	67 (70-130)	66 (70-130)	J (all detects)	
	Biphenyl	64 (70-130)	62 (70-130)	J (all detects)	
	Naphthalene	51 (70-130)	49 (70-130)	J (all detects)	
	2,6-Dimethylnaphthalene	-	68 (70-130)	J (all detects)	
56681-BS1/BS2 (All samples in SDG 1807003-010)	Benzo(a)anthracene	196 (70-130)	200 (70-130)	J (all detects)	P
	Benzo(b)fluoranthene	147 (70-130)	148 (70-130)	J (all detects)	
	Dibenzo(a,h)anthracene	142 (70-130)	147 (70-130)	J (all detects)	
	Fluoranthene	131 (70-130)	-	J (all detects)	
	Indeno(1,2,3-cd)pyrene	156 (70-130)	163 (70-130)	J (all detects)	

Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits with the following exceptions:

CRM ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
56683-CRM1 (SRM 1944)	Benzo(k)fluoranthene	41 (60-140)	All samples in SDG 1807003-010	J (all detects)	A

X. Field Replicates

Samples B18-10127 and B18-20133 were identified as field replicates. No results were detected in any of the samples with the following exceptions:

Compound	Concentration (ng/g)		RPD
	B18-10127	B18-20133	
1,6,7-Trimethylnaphthalene	3.69	5.7	43
1-Methylnaphthalene	2.11	3.02	35
1-Methylphenanthrene	8.14	9.75	18
2,6-Dimethylnaphthalene	2.91	4.06	33
2-Methylnaphthalene	4.51	7.13	45
Acenaphthene	1.72	1.37	23
Acenaphthylene	10.4	15.5	39
Anthracene	23.3	25.9	11
Benzo(a)anthracene	169	172	2
Benzo(a)pyrene	267	230	15
Benzo(b)fluoranthene	378	342	10
Benzo(e)pyrene	250	220	13
Benzo(g,h,i)perylene	179	175	2
Benzo(k)fluoranthene	279	261	7
Biphenyl	1.13	1.29	13
Chrysene	127	131	3
Dibenzo(a,h)anthracene	114	106	7
Dibenzothiophene	2.56	2.85	11
Fluoranthene	137	140	2
Fluorene	3.39	4.8	34
Indeno(1,2,3-cd)pyrene	360	364	1
Naphthalene	5.77	6.24	8

Compound	Concentration (ng/g)		RPD
	B18-10127	B18-20133	
Perylene	38.9	34	13
Phenanthrene	28	34.1	20
Pyrene	176	220	22

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-010	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to MS/MSD %R, DUP RPD, LCS/LCSD %R, CRM %R, and results reported below the RL and above the MDL, data were qualified as estimated in twelve samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polybrominated Diphenyl Ethers (PBDE) by Environmental Protection Agency (EPA) SW 846 Method 8270D-NCI

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicates Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10133MS/MSD (B18-10133)	PBDE 183 PBDE 190 PBDE 209	40 (50-150) 23 (50-150) 5 (50-150)	- 34 (50-150) 15 (50-150)	UJ (all non-detects) UJ (all non-detects) UJ (all non-detects)	A

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10133MS/MSD (B18-10133)	PBDE 190 PBDE 209	39 (≤25) 100 (≤25)	NA	-

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
56681-BS1/BS2 (All samples in SDG 1807003-010)	PBDE 190 PBDE 209	67 (70-130) 22 (70-130)	61 (70-130) 17 (70-130)	J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects)	P

Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits.

X. Field Replicates

Samples B18-10127 and B18-20133 were identified as field replicates. No results were detected in any of the samples with the following exceptions:

Compound	Concentration (ng/g)		RPD
	B18-10127	B18-20133	
PBDE209	5.11	24.2	130

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-010	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to MS/MSD %R, LCS/LCSD %R, and results reported below the RL and above the MDL, data were qualified as estimated in twelve samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Fipronil and Degradates by Environmental Protection Agency (EPA) SW 846 Method 8270D-NCI

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicates Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

X. Field Replicates

Samples B18-10127 and B18-20133 were identified as field replicates. No results were detected in any of the samples.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-010	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to results reported below the RL and above the MDL, data were qualified as estimated in twelve samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Synthetic Pyrethroid Pesticides by Environmental Protection Agency (EPA) SW 846 Method 8270D-MRM

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicates Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10133MS/MSD (B18-10133)	Prallethrin	3 (50-150)	4 (50-150)	UJ (all non-detects)	A

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10133MS/MSD (B18-10133)	Prallethrin	29 (≤25)	NA	-

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

X. Field Replicates

Samples B18-10127 and B18-20133 were identified as field replicates. No results were detected in any of the samples with the following exceptions:

Compound	Concentration (ng/g)		RPD
	B18-10127	B18-20133	
Danitol (Fenpropathrin)	0.5U	1.89	Not calculable

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-010	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to MS/MSD %R and results reported below the RL and above the MDL, data were qualified as estimated in twelve samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Chlorinated Pesticides by Environmental Protection Agency (EPA) SW 846 Method 8270D/8270D-NCI

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicate Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10133MS/MSD (B18-10133)	Endosulfan I	0 (50-150)	0 (50-150)	R (all non-detects)	A
B18-10133MS/MSD (B18-10133)	Endosulfan II Endrin aldehyde	13 (50-150) 18 (50-150)	13 (50-150) 29 (50-150)	UJ (all non-detects) UJ (all non-detects)	A

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10133MS/MSD (B18-10133)	Methoxychlor Perthane	169 (50-150) 152 (50-150)	182 (50-150) 158 (50-150)	NA	-

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10133MS/MSD (B18-10133)	Endrin aldehyde	47 (≤25)	NA	-

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
56681-BS1/BS2 (All samples in SDG 1807003-010)	Endosulfan I	2 (70-130)	2 (70-130)	R (all non-detects)	P
56681-BS1/BS2 (All samples in SDG 1807003-010)	Endosulfan II Endrin aldehyde alpha-Chlordane cis-Nonachlor	15 (70-130) 10 (70-130) - -	15 (70-130) 30 (70-130) 68 (70-130) 68 (70-130)	J (all detects) UJ (all non-detects)	P
56681-BS1/BS2 (All samples in SDG 1807003-010)	Methoxychlor Perthane	153 (70-130) 136 (70-130)	159 (70-130) 135 (70-130)	NA	-

Relative percent differences (RPD) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
56681-BS1/BS2 (All samples in SDG 1807003-010)	Endrin aldehyde	100 (≤30)	NA	-

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits.

X. Field Replicates

Samples B18-10127 and B18-20133 were identified as field replicates. No results were detected in any of the samples with the following exceptions:

Compound	Concentration (ng/g)		RPD
	B18-10127	B18-20133	
4,4'-DDD	0.5U	2.57	Not calculable
4,4'-DDE	2.17	2.15	1
gamma-Chlordane	0.377	0.347	8

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-010	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identification

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method.

Due to MS/MSD %R and LCS/LCSD %R, data were rejected in twelve samples.

Due to MS/MSD %R, LCS/LCSD %R, and results reported below the RL and above the MDL, data were qualified as estimated in twelve samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be rejected (R) are unusable for all purposes. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polychlorinated Biphenyls (PCBs) as Congeners by Environmental Protection Agency (EPA) SW 846 Method 8270D

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicate Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10133MS/MSD (B18-10133)	PCB-189	-	164 (50-150)	NA	-
	PCB-194	-	169 (50-150)		
	PCB-195	-	151 (50-150)		
	PCB-206	-	152 (50-150)		

Relative percent differences (RPD) were within QC limits.

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10133DUP (B18-10133)	PCB-099 PCB-180 PCB-209	37 (≤25) 35 (≤25) 27 (≤25)	J (all detects) J (all detects) J (all detects)	A

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
56681-BS1/BS2 (All samples in SDG 1807003-010)	PCB-169 PCB-189 PCB-195	142 (70-130) 136 (70-130) -	152 (70-130) 151 (70-130) 132 (70-130)	NA	-
56681-BS1/BS2 (B18-10127 B18-20133)	PCB-194	144 (70-130)	149 (70-130)	J (all detects)	P
56681-BS1/BS2 (B18-10124 B18-10126 B18-10132 B18-10133 B18-10136 B18-10137 B18-10139 B18-10140 B18-10141 B18-10142)	PCB-194	144 (70-130)	149 (70-130)	NA	-
56681-BS1/BS2 (B18-10124 B18-10126 B18-10127 B18-20133 B18-10139 B18-10141)	PCB-206	144 (70-130)	144 (70-130)	J (all detects)	P
56681-BS1/BS2 (B18-10132 B18-10133 B18-10136 B18-10137 B18-10140 B18-10142)	PCB-206	144 (70-130)	144 (70-130)	NA	-

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
56681-BS1/BS2 (B18-10124 B18-10126 B18-10127 B18-10133 B18-20133 B18-10137 B18-10139 B18-10141)	PCB-209	-	133 (70-130)	J (all detects)	P
56681-BS1/BS2 (B18-10132 B18-10136 B18-10140 B18-10142)	PCB-209	-	133 (70-130)	NA	-

Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits with the following exceptions:

CRM ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
56683-CRM1	PCB-105 PCB-128 PCB-156	36 (60-140) 36 (60-140) 39 (60-140)	All samples in SDG 1807003-010	J (all detects) UJ (all non-detects)	A

X. Field Replicates

Samples B18-10127 and B18-20133 were identified as field replicates. No results were detected in any of the samples with the following exceptions:

Compound	Concentration (ng/g)		RPD
	B18-10127	B18-20133	
PCB-044	0.2U	0.998	Not calculable
PCB-049	1.23	1.32	7
PCB-052	1.76	2.86	48
PCB-066	1.7	2.6	42
PCB-070	1.25	2.51	67
PCB-074	0.2U	0.773	Not calculable

Compound	Concentration (ng/g)		RPD
	B18-10127	B18-20133	
PCB-087	0.2U	1.7	Not calculable
PCB-095	3.55	6.09	53
PCB-099	2.53	4.56	57
PCB-101	5.39	9.35	54
PCB-105	0.649	0.572	13
PCB-110	3.98	7.81	65
PCB-118	3.04	5.95	65
PCB-128	1.88	3.44	59
PCB-138	7.3	12	49
PCB-141	0.7	1.38	65
PCB-149	5.9	9.1	43
PCB-151	2.25	3.14	33
PCB-153	7.55	12.1	46
PCB-156	0.2U	2.38	Not calculable
PCB-158	0.73	1.06	37
PCB-167	0.573	1.21	71
PCB-168+132	1.12	1.8	47
PCB-170	2.03	2.36	15
PCB-174	2.24	3.39	41
PCB-177	1.65	3.03	59
PCB-180	6.66	12	57
PCB-183	1.86	2.6	33

Compound	Concentration (ng/g)		RPD
	B18-10127	B18-20133	
PCB-187	3.91	6.67	52
PCB-194	2.18	5.73	90
PCB-199(200)	0.25U	3.26	Not calculable
PCB-201	0.25U	0.379	Not calculable
PCB-203	0.25U	3.54	Not calculable
PCB-206	1.37	2.72	66
PCB-209	1.07	1.89	55

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-010	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identification

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to DUP RPD, LCS/LCSD and CRM %R, and results reported below the RL and above the MDL, data were qualified as estimated in twelve samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Samples appended with "SEM" were analyzed for Simultaneously Extracted Metals

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Copper, Iron, Lead, Nickel, Phosphorus, Selenium, Silver, and Zinc by Environmental Protection Agency (EPA) SW 846 Method 6020 and EPA Method 200.8
Mercury by EPA Method 245.7

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Days From Sample Collection Until Analysis	Required Holding Time (in Days) From Sample Collection Until Analysis	Flag	A or P
B18-10124 B18-10126 B18-10127 B18-10132 B18-10133 B18-20133	Mercury	169	28	J (all detects)	P
B18-10136 B18-10137 B18-10139 B18-10140 B18-10141 B18-10142	Mercury	168	28	J (all detects)	P

II. ICPMS Tune

ICP-MS tune data were not reviewed for Level II validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Level II validation.

IV. ICP Interference Check Sample Analysis

Interference check sample (ICS) analysis data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10133MS/MSD (B18-10132 B18-10133 B18-20133 B18-10136 B18-10137 B18-10139 B18-10140 B18-10141 B18-10142)	Barium Mercury	187 (75-125) -	183 (75-125) 126 (75-125)	J (all detects) J (all detects)	A

For B18-10133MS/MSD, no data were qualified for aluminum and iron percent recoveries (%R) outside the QC limits since the parent sample results were greater than 4X the spike concentration.

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
B18-10133MS/MSD (B18-10132 B18-10133 B18-20133 B18-10136 B18-10137 B18-10139 B18-10140 B18-10141 B18-10142)	Iron	35 (≤25)	J (all detects)	A

VIII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Analyte	RPD (Limits)	Difference (Limits)	Flag	A or P
B18-10133DUP (B18-10132 B18-10133 B18-20133 B18-10136 B18-10137 B18-10139 B18-10140 B18-10141 B18-10142)	Barium	55 (≤25)	-	J (all detects)	A

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the methods. The results were within QC limits with the following exceptions:

CRM ID	Analyte	%R (Limits)	Associated Samples	Flag	A or P
60151-CRM1	Aluminum	127 (42-124)	B18-10124 B18-10126 B18-10127	J (all detects)	A

XI. Field Replicates

Samples B18-10127 and B18-20133 and samples B18-10127(SEM) and B18-20133(SEM) were identified as field replicates. No results were detected in any of the samples with the following exceptions:

Analyte	Concentration (ug/g)		RPD
	B18-10127	B18-20133	
Aluminum	35400	36700	4
Antimony	0.693	0.52	29
Arsenic	9.9	10.8	9
Barium	94	99.1	5
Beryllium	0.624	0.727	15
Cadmium	0.52	0.52	0
Chromium	69	71.6	4
Copper	196	202	3
Iron	33000	34700	5
Lead	367	57.1	146
Mercury	0.661	2.84	124

Analyte	Concentration (ug/g)		RPD
	B18-10127	B18-20133	
Nickel	28.5	18.3	44
Phosphorus	587	582	1
Selenium	0.501	0.546	9
Silver	1.56	1.34	15
Zinc	255	264	3

Analyte	Concentration (umol/g)		RPD
	B18-10127(SEM)	B18-20133(SEM)	
Copper	0.0591	0.0547	8
Lead	0.124	0.124	0
Nickel	0.0191	0.0185	3
Zinc	2.03	2.24	10

XII. Internal Standards (ICP-MS)

Internal standard data were not reviewed for Level II validation.

XIII. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-010	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to technical holding time, MS/MSD %R and RPD, DUP RPD, CRM %R, and results reported below the RL and above the MDL, data were qualified as estimated in twenty-four samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Acid Volatile Sulfide by Plumb 1981
Ammonia as Nitrogen by Standard Method 4500-NH3-D
Particle Size by Standard Method 2560D
Percent Solids by Standard Method 2540B
Total Nitrogen and Total Organic Carbon by Environmental Protection Agency (EPA) SW 846 Method 9060

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Time From Sample Collection Until Analysis	Required Holding Time From Sample Collection Until Analysis	Flag	A or P
B18-10124 B18-10126 B18-10127 B18-10132 B18-10133 B18-20133	Acid volatile sulfide	167 days	14 days	J (all detects)	A
B18-10136 B18-10137 B18-10139 B18-10140 B18-10141 B18-10142	Acid volatile sulfide	166 days	14 days	J (all detects)	A
B18-10124 B18-10126 B18-10127 B18-10132 B18-10133 B18-20133	Ammonia as N	165 days	28 days	J (all detects)	A
B18-10136 B18-10137 B18-10139 B18-10140 B18-10141 B18-10142	Ammonia as N	164 days	28 days	J (all detects)	A
B18-10124 B18-10126 B18-10127 B18-10132 B18-10133 B18-20133	Total nitrogen	172 days	28 days	J (all detects)	A
B18-10136 B18-10137 B18-10139 B18-10140 B18-10141 B18-10142	Total nitrogen	171 days	28 days	J (all detects)	A

II. Initial Calibration

Initial calibration data were not reviewed for Level II validation.

III. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

IV. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

V. Field Blanks

No field blanks were identified in this SDG.

VI. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10133MS/MSD (All samples in SDG 1807003-010)	Acid volatile sulfide	42 (80-120)	41 (80-120)	J (all detects)	A

Relative percent differences (RPD) were within QC limits.

VII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

VIII. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

IX. Field Replicates

Samples B18-10127 and B18-20133 were identified as field replicates. No results were detected in any of the samples with the following exceptions:

Analyte	Concentration		RPD
	B18-10127	B18-20133	
Acid volatile sulfide	70.2 mg/Kg	154 mg/Kg	75

Analyte	Concentration		RPD
	B18-10127	B18-20133	
Ammonia as N	5.05 mg/Kg	5.33 mg/Kg	5
Percent solids	53.9 %	51.1 %	5
Total nitrogen	0.11 %	0.1 %	10
Total organic carbon	1.45 %	1.43 %	1

X. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-010	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XI. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to technical holding time, MS/MSD %R, and results reported below the RL and above the MDL, data were qualified as estimated in twelve samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polynuclear Aromatic Hydrocarbons (PAHs) by Environmental Protection Agency (EPA) SW 846 Method 8270D

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicates Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits.

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10144MS/MSD (B18-10144)	2-Methylnaphthalene	27 (≤25)	J (all detects)	A

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10144DUP (B18-10144)	2,6-Dimethylnaphthalene	30 (≤25)	J (all detects)	A
	1-Methylnaphthalene	60 (≤25)	J (all detects)	
	2-Methylnaphthalene	34 (≤25)	J (all detects)	
	Acenaphthene	26 (≤25)	J (all detects)	
	Dibenzo(a,h)anthracene	29 (≤25)	J (all detects)	
	Fluorene	43 (≤25)	J (all detects)	
	Naphthalene	47 (≤25)	J (all detects)	

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
20907-BS1/BS2 (B18-10034 B18-10035 B18-10036)	1-Methylnaphthalene	59 (70-130)	57 (70-130)	J (all detects)	P
	2-Methylnaphthalene	63 (70-130)	60 (70-130)	J (all detects)	
	Acenaphthene	67 (70-130)	66 (70-130)	J (all detects)	
	Biphenyl	64 (70-130)	62 (70-130)	J (all detects)	
	Naphthalene	51 (70-130)	49 (70-130)	J (all detects)	
	2,6-Dimethylnaphthalene	-	68 (70-130)	J (all detects)	
20907-BS1/BS2 (B18-10034 B18-10035 B18-10036)	Benzo(a)anthracene	196 (70-130)	200 (70-130)	J (all detects)	P
	Benzo(b)fluoranthene	147 (70-130)	148 (70-130)	J (all detects)	
	Dibenzo(a,h)anthracene	142 (70-130)	147 (70-130)	J (all detects)	
	Fluoranthene	131 (70-130)	-	J (all detects)	
	Indeno(1,2,3-cd)pyrene	156 (70-130)	163 (70-130)	J (all detects)	
56742-BS1/BS2 (B18-10143 B18-10144 B18-10039)	Anthracene	67 (70-130)	-	J (all detects)	P

Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits with the following exceptions:

CRM ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
20910-CRM1 (SRM 1944)	Benzo(k)fluoranthene	41 (60-140)	B18-10034 B18-10035 B18-10036	J (all detects)	A
56744-CRM1 (SRM 1944)	Benzo(k)fluoranthene	41 (60-140)	B18-10143 B18-10144 B18-10039	J (all detects)	A

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-012	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to MS/MSD RPD, DUP RPD, LCS/LCSD %R, CRM %R, and results reported below the RL and above the MDL, data were qualified as estimated in six samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polybrominated Diphenyl Ethers (PBDE) by Environmental Protection Agency (EPA) SW 846 Method 8270D-NCI

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicates Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10144MS/MSD (B18-10144)	PBDE 209	28 (50-150)	31 (50-150)	UJ (all non-detects)	A

Relative percent differences (RPD) were within QC limits.

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
20907-BS1/BS2 (B18-10034 B18-10035 B18-10036)	PBDE 190 PBDE 209	67 (70-130) 22 (70-130)	61 (70-130) 17 (70-130)	UJ (all non-detects) UJ (all non-detects)	P

Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits.

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-012	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to MS/MSD %R, LCS/LCSD %R, and results reported below the RL and above the MDL, data were qualified as estimated in six samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Fipronil and Degradates by Environmental Protection Agency (EPA) SW 846 Method 8270D-NCI

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicates Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-012	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to results reported below the RL and above the MDL, data were qualified as estimated in six samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Synthetic Pyrethroid Pesticides by Environmental Protection Agency (EPA) SW 846 Method 8270D-MRM

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.

LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicates Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10144MS/MSD (B18-10144)	Cyhalothrin, total lambda Permethrin, cis-	157 (50-150) 154 (50-150)	- -	NA	-
B18-10144MS/MSD (B18-10144)	Prallethrin	28 (50-150)	-	UJ (all non-detects)	A

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10144MS/MSD (B18-10144)	Deltamethrin/Tralomethrin Prallethrin	36 (≤25) 124 (≤25)	NA	-

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-012	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to MS/MSD %R and results reported below the RL and above the MDL, data were qualified as estimated in six samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

2018 Regional Harbor Monitoring Program
Synthetic Pyrethroid Pesticides - Data Qualification Summary - SDG 1807003-012

Sample	Compound	Flag	A or P	Reason (Code)

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Chlorinated Pesticides by Environmental Protection Agency (EPA) SW 846 Method 8270D/8270D-NCI

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicate Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10144MS/MSD (B18-10144)	Endosulfan I Endosulfan II Endrin aldehyde	2 (50-150) 16 (50-150) 7 (50-150)	2 (50-150) 17 (50-150) 35 (50-150)	UJ (all non-detects) UJ (all non-detects) UJ (all non-detects)	A
B18-10144MS/MSD (B18-10144)	Methoxychlor	159 (50-150)	160 (50-150)	NA	-

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10144MS/MSD (B18-10144)	Endrin aldehyde	133 (≤25)	NA	-

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
20907-BS1/BS2 (B18-10034 B18-10035 B18-10036)	Endosulfan I	2 (70-130)	2 (70-130)	R (all non-detects)	P
20907-BS1/BS2 (B18-10034 B18-10035 B18-10036)	Endosulfan II Endrin aldehyde alpha-Chlordane cis-Nonachlor	15 (70-130) 10 (70-130) - -	15 (70-130) 30 (70-130) 68 (70-130) 68 (70-130)	UJ (all non-detects) UJ (all non-detects) UJ (all non-detects) UJ (all non-detects)	P
20907-BS1/BS2 (B18-10034 B18-10035 B18-10036)	Methoxychlor Perthane	150 (70-130) 136 (70-130)	159 (70-130) 135 (70-130)	NA	-
56742-BS1/BS2 (B18-10143 B18-10144 B18-10039)	Endosulfan I	3 (70-130)	2 (70-130)	R (all non-detects)	P
56742-BS1/BS2 (B18-10143 B18-10144 B18-10039)	Endosulfan II Endrin aldehyde alpha-BHC Hexachlorobenzene	15 (70-130) 12 (70-130) 67 (70-130) 67 (70-130)	15 (70-130) 21 (70-130) - -	UJ (all non-detects) UJ (all non-detects) UJ (all non-detects) UJ (all non-detects)	P
56742-BS1/BS2 (B18-10143 B18-10144 B18-10039)	Methoxychlor Perthane	143 (70-130) -	146 (70-130) 134 (70-130)	NA	-

Relative percent differences (RPD) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
56742-BS1/BS2 (B18-10143 B18-10144 B18-10039)	Endosulfan I Endrin aldehyde	40 (≤30) 55 (≤30)	NA	-

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits with the following exceptions:

CRM ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
56744-CRM1	gamma-Chlordane	159 (60-140)	B18-10143 B18-10144 B18-10039	NA	-

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-012	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identification

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method.

Due to LCS/LCSD %R, data were rejected in six samples.

Due to MS/MSD %R, LCS/LCSD %R, and results reported below the RL and above the MDL, data were qualified as estimated in six samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be rejected (R) are unusable for all purposes. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polychlorinated Biphenyls (PCBs) as Congeners by Environmental Protection Agency (EPA) SW 846 Method 8270D

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicate Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10144DUP (B18-10144)	PCB-099	28 (≤25)	J (all detects)	A
	PCB-118	35 (≤25)	J (all detects)	
	PCB-138	30 (≤25)	J (all detects)	
	PCB-158	29 (≤25)	J (all detects)	
	PCB-177	29 (≤25)	J (all detects)	
	PCB-206	28 (≤25)	J (all detects)	

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
20907-BS1/BS2 (B18-10034 B18-10035 B18-10036)	PCB-169 PCB-189 PCB-194 PCB-206 PCB-195 PCB-209	142 (70-130) 136 (70-130) 144 (70-130) 144 (70-130) - -	152 (70-130) 151 (70-130) 149 (70-130) 144 (70-130) 132 (70-130) 133 (70-130)	NA	-
56742-BS1/BS2 (B18-10143 B18-10144 B18-10039)	PCB-156 PCB-169 PCB-189 PCB-194 PCB-195	131 (70-130) 153 (70-130) 146 (70-130) 165 (70-130) 133 (70-130)	- 148 (70-130) 144 (70-130) 161 (70-130) 134 (70-130)	NA	-
56742-BS1/BS2 (B18-10143 B18-10144 B18-10039)	PCB-180 PCB-206 PCB-209	135 (70-130) 158 (70-130) 135 (70-130)	131 (70-130) 147 (70-130) -	J (all detects) J (all detects) J (all detects)	A
56742-BS1/BS2 (B18-10143 B18-10144 B18-10039)	PCB-003 PCB-005	60 (70-130) 67 (70-130)	- -	UJ (all non-detects) UJ (all non-detects)	A

Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits with the following exceptions:

CRM ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
20910-CRM1	PCB-105 PCB-128 PCB-156	36 (60-140) 36 (60-140) 39 (60-140)	B18-10034 B18-10035 B18-10036	UJ (all non-detects) UJ (all non-detects) UJ (all non-detects)	A
56744-CRM1	PCB-105 PCB-118 PCB-128 PCB-156	41 (60-140) 53 (60-140) 55 (60-140) 41 (60-140)	B18-10143 B18-10144 B18-10039	J (all detects) UJ (all non-detects)	A

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-012	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identification

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to DUP RPD, LCS/LCSD and CRM %R, and results reported below the RL and above the MDL, data were qualified as estimated in six samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Copper, Iron, Lead, Nickel, Phosphorus, Selenium, Silver, and Zinc by Environmental Protection Agency (EPA) SW 846 Method 6020 and EPA Method 200.8
Mercury by EPA Method 245.7

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Days From Sample Collection Until Analysis	Required Holding Time (in Days) From Sample Collection Until Analysis	Flag	A or P
B18-10034 B18-10035 B18-10036 B18-10143 B18-10144 B18-10039	Mercury	165	28	J (all detects)	P

II. ICPMS Tune

ICP-MS tune data were not reviewed for Level II validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Level II validation.

IV. ICP Interference Check Sample Analysis

Interference check sample (ICS) analysis data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. For B18-10144MS/MSD(SEM), no data were qualified for aluminum and iron percent recoveries (%R) outside the QC limits since the parent sample results were greater than 4X the spike concentration.

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
B18-10144MS/MSD(SEM) (B18-10035 B18-10036 B18-10143 B18-10144 B18-10039)	Iron	200 (≤25)	J (all detects)	A

VIII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the methods. The results were within QC limits with the following exceptions:

CRM ID	Analyte	%R (Limits)	Associated Samples	Flag	A or P
56743-CRM1	Aluminum	139 (42-124)	B18-10035 B18-10036 B18-10143 B18-10144 B18-10039	J (all detects)	A

XI. Field Duplicates

No field duplicates were identified in this SDG.

XII. Internal Standards (ICP-MS)

Internal standard data were not reviewed for Level II validation.

XIII. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-012	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to technical holding time, MS/MSD RPD, CRM %R, and results reported below the RL and above the MDL, data were qualified as estimated in twelve samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Acid Volatile Sulfide by Plumb 1981
Ammonia as Nitrogen by Standard Method 4500-NH3-D
Particle Size by Standard Method 2560D
Percent Solids by Standard Method 2540B
Total Nitrogen and Total Organic Carbon by Environmental Protection Agency (EPA) SW 846 Method 9060

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Time From Sample Collection Until Analysis	Required Holding Time From Sample Collection Until Analysis	Flag	A or P
All samples in SDG 1807003-012	Acid volatile sulfide	163 days	14 days	J (all detects)	A
All samples in SDG 1807003-012	Ammonia as N	157 days	28 days	J (all detects)	A
All samples in SDG 1807003-012	Total nitrogen	168 days	28 days	J (all detects)	A

II. Initial Calibration

Initial calibration data were not reviewed for Level II validation.

III. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

IV. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

V. Field Blanks

No field blanks were identified in this SDG.

VI. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10144MS/MSD (All samples in SDG 1807703-012)	Acid volatile sulfide	46 (80-120)	49 (80-120)	J (all detects)	A

Relative percent differences (RPD) were within QC limits.

VII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

VIII. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the methods. The results were within QC limits.

IX. Field Duplicates

No field duplicates were identified in this SDG.

X. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-012	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XI. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to technical holding time, MS/MSD %R, and results reported below the RL and above the MDL, data were qualified as estimated in six samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polynuclear Aromatic Hydrocarbons (PAHs) by Environmental Protection Agency (EPA) SW 846 Method 8270D

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	%R (Limits)	Flag	A or P
56805-BS1 (All samples in SDG 1807003-014)	Anthracene	67 (70-130)	J (all detects)	P

Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits with the following exceptions:

CRM ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
56807-CRM1 (SRM 1944)	Benzo(k)fluoranthene	41 (60-140)	All samples in SDG 1807003-014)	J (all detects)	A

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-014	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to LCS %R, CRM %R, and results reported below the RL and above the MDL, data were qualified as estimated in eleven samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polybrominated Diphenyl Ethers (PBDE) by Environmental Protection Agency (EPA) SW 846 Method 8270D-NCI

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits.

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-014	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to results reported below the RL and above the MDL, data were qualified as estimated in eleven samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Fipronil and Degradates by Environmental Protection Agency (EPA) SW 846 Method 8270D-NCI

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Chlorinated Pesticides by Environmental Protection Agency (EPA) SW 846 Method 8270D/8270D-NCI

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
56805-BS1/BS2 (All samples in SDG 1807003-014)	alpha-BHC Endosulfan II Endrin aldehyde Hexachlorobenzene	67 (70-130) 15 (70-130) 12 (70-130) 67 (70-130)	- 15 (70-130) 21 (70-130) -	UJ (all non-detects) UJ (all non-detects) UJ (all non-detects) UJ (all non-detects)	P
56805-BS1/BS2 (All samples in SDG 1807003-014)	Endosulfan I	3 (70-130)	2 (70-130)	R (all non-detects)	P
56805-BS1/BS2 (All samples in SDG 1807003-014)	Methoxychlor Perthane	143 (70-130) -	146 (70-130) 134 (70-130)	NA	-

Relative percent differences (RPD) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
56805-BS1/BS2 (All samples in SDG 1807003-014)	Endosulfan I Endrin aldehyde	40 (≤30) 55 (≤30)	NA	-

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits with the following exceptions:

CRM ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
56807-CRM1	gamma-Chlordane	159 (60-140)	B18-10037 B18-10038 B18-10041 B18-10180 B18-10181 B18-10042 B18-10085 B18-10086 B18-10087 B18-10088	NA	-
56807-CRM1	gamma-Chlordane	159 (60-140)	B18-10179	J (all detects)	A

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-014	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identification

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method.

Due to LCS/LCSD %R, data were rejected in eleven samples.

Due to LCS/LCSD %R, CRM %R, and results reported below the RL and above the MDL, data were qualified as estimated in eleven samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be rejected (R) are unusable for all purposes. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polychlorinated Biphenyls (PCBs) as Congeners by Environmental Protection Agency (EPA) SW 846 Method 8270D

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
56805-BS1/BS2 (All samples in SDG 1807003-014)	PCB-003 PCB-005	60 (70-130) 67 (70-130)	- -	UJ (all non-detects) UJ (all non-detects)	P
56805-BS1/BS2 (All samples in SDG 1807003-014)	PCB-156 PCB-169 PCB-189 PCB-194 PCB-195 PCB-206 PCB-209	131 (70-130) 153 (70-130) 146 (70-130) 165 (70-130) 133 (70-130) 158 (70-130) 135 (70-130)	- 148 (70-130) 144 (70-130) 161 (70-130) 134 (70-130) 147 (70-130) -	NA	-
56805-BS1/BS2 (B18-10037 B18-10180 B18-10181)	PCB-180	135 (70-130)	131 (70-130)	J (all detects)	P
56805-BS1/BS2 (B18-10038 B18-10041 B18-10179 B18-10042 B18-10085 B18-10086 B18-10087 B18-10088)	PCB-180	135 (70-130)	131 (70-130)	NA	-

Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits with the following exceptions:

CRM ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
56807-CRM1	PCB-105 PCB-118 PCB-156	41 (60-140) 53 (60-140) 41 (60-140)	All samples in SDG 1807003-014	J (all detects) UJ (all non-detects)	A

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-014	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identification

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to LCS/LCSD and CRM %R and results reported below the RL and above the MDL, data were qualified as estimated in eleven samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Samples appended with "SEM" were analyzed for Simultaneously Extracted Metals

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Copper, Iron, Lead, Nickel, Phosphorus, Selenium, Silver, and Zinc by Environmental Protection Agency (EPA) SW 846 Method 6020 and EPA Method 200.8
Mercury by EPA Method 245.7

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Days From Sample Collection Until Analysis	Required Holding Time (in Days) From Sample Collection Until Analysis	Flag	A or P
B18-10037 B18-10038 B18-10041 B18-10179 B18-10180 B18-10181	Mercury	164	28	J (all detects)	P
B18-10042 B18-10085 B18-10086 B18-10087 B18-10088	Mercury	163	28	J (all detects)	P

II. ICPMS Tune

ICP-MS tune data were not reviewed for Level II validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Level II validation.

IV. ICP Interference Check Sample Analysis

Interference check sample (ICS) analysis data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. For B18-10181MS/MSD, no data were qualified for aluminum and iron percent recoveries (%R) outside the QC limits since the parent sample results were greater than 4X the spike concentration.

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
B18-10181MS/MSD (B18-10181 B18-10042 B18-10085 B18-10086 B18-10087 B18-10088)	Aluminum Iron	67 (≤25) 200 (≤25)	J (all detects) J (all detects)	A

VIII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the methods. The results were within QC limits with the following exceptions:

CRM ID	Analyte	%R (Limits)	Associated Samples	Flag	A or P
56806-CRM1	Aluminum Iron	136 158	B18-10181 B18-10042 B18-10085 B18-10086 B18-10087 B18-10088	J (all detects) J (all detects)	A
601520CRM1	Aluminum Iron	139 157	B18-10037 B18-10038 B18-10041 B18-10179 B18-10180	J (all detects) J (all detects)	A

XI. Field Duplicates

No field duplicates were identified in this SDG.

XII. Internal Standards (ICP-MS)

Internal standard data were not reviewed for Level II validation.

XIII. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-014	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to technical holding time, MS/MSD RPD, CRM %R, and results reported below the RL and above the MDL, data were qualified as estimated in twenty-two samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

METHOD: Trace metals (EPA SW 846 Method 6010/7000)

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

Y N N/A Was a matrix spike analyzed for each matrix in this SDG?

Y N N/A Were matrix spike percent recoveries (%R) within the control limits of 75-125? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken.

Y N N/A Were all duplicate sample relative percent differences (RPD) ≤ 20% for samples?

LEVEL IV ONLY:

Y N N/A Were recalculated results acceptable? See Level IV Recalculation Worksheet for recalculations.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Acid Volatile Sulfide by Plumb 1981
Ammonia as Nitrogen by Standard Method 4500-NH3-D
Particle Size by Standard Method 2560D
Percent Solids by Standard Method 2540B
Total Nitrogen and Total Organic Carbon by Environmental Protection Agency (EPA) SW 846 Method 9060

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Time From Sample Collection Until Analysis	Required Holding Time From Sample Collection Until Analysis	Flag	A or P
B18-10037 B18-10038 B18-10041 B18-10179 B18-10180 B18-10181	Acid volatile sulfide Ammonia as N Total nitrogen	162 days 160 days 168 days	14 days 28 days 28 days	J (all detects) J (all detects) J (all detects)	A
B18-10042 B18-10085 B18-10086 B18-10087 B18-10088	Acid volatile sulfide Ammonia as N Total nitrogen	161 days 159 days 167 days	14 days 28 days 28 days	J (all detects) J (all detects) J (all detects)	A

II. Initial Calibration

Initial calibration data were not reviewed for Level II validation.

III. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

IV. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

V. Field Blanks

No field blanks were identified in this SDG.

VI. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

VII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

VIII. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the methods. The results were within QC limits.

IX. Field Duplicates

No field duplicates were identified in this SDG.

X. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-014	Analytes reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XI. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to technical holding time and results reported below the RL and above the MDL, data were qualified as estimated in eleven samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polynuclear Aromatic Hydrocarbons (PAHs) by Environmental Protection Agency (EPA) SW 846 Method 8270D

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
57533-BS1/BS2 (All samples in SDG 1807003-016)	Anthracene	67 (70-130)	-	J (all detects)	P

Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits with the following exceptions:

CRM ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
57535-CRM1 (SRM 1944)	Benzo(k)fluoranthene	41 (60-140)	All samples in SDG 1807003-016)	J (all detects)	A

X. Field Replicates

Samples B18-10043 and B18-20043 were identified as field replicates. No results were detected in any of the samples with the following exceptions:

Compound	Concentration (ng/g)		RPD
	B18-10043	B18-20043	
1,6,7-Trimethylnaphthalene	2.99036	2.809331	6
1-Methylnaphthalene	2.324625	1.852006	23
1-Methylphenanthrene	3.113301	3.156736	1
2,6-Dimethylnaphthalene	2.002984	1.927649	4
2-Methylnaphthalene	3.297661	3.295014	0
Acenaphthene	0.5443842	0.4131123	27
Acenaphthylene	0.9490548	0.8162883	15
Anthracene	2.13437	2.099126	2
Benzo(a)anthracene	12.79955	14.87139	15
Benzo(a)pyrene	22.64412	24.64431	8
Benzo(b)fluoranthene	22.47953	22.78465	1

Compound	Concentration (ng/g)		RPD
	B18-10043	B18-20043	
Benzo(e)pyrene	21.50939	21.96691	2
Benzo(g,h,i)perylene	29.29789	28.84531	2
Benzo(k)fluoranthene	21.75439	23.67522	8
Biphenyl	0.6808496	0.7100799	4
Chrysene	23.30638	24.76834	6
Dibenzo(a,h)anthracene	4.580828	4.401746	4
Dibenzothiophene	1.502037	1.396281	7
Fluoranthene	30.62514	36.66845	18
Fluorene	2.084437	1.708983	20
Indeno(1,2,3-cd)pyrene	23.17154	24.24481	5
Naphthalene	3.634394	3.5898	1
Perylene	7.801467	7.522212	4
Phenanthrene	16.34855	17.55809	7
Pyrene	35.09925	39.58696	12

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-016	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to LCS/LCSD %R, CRM %R, and results reported below the RL and above the MDL, data were qualified as estimated in four samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polybrominated Diphenyl Ethers (PBDE) by Environmental Protection Agency (EPA) SW 846 Method 8270D-NCI

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits.

X. Field Replicates

Samples B18-10043 and B18-20043 were identified as field replicates. No results were detected in any of the samples with the following exceptions:

Compound	Concentration (ng/g)		RPD
	B18-10043	B18-20043	
PBDE099	0.334	0.446	29
PBDE209	1.56	0.1U	Not calculable

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-016	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to results reported below the RL and above the MDL, data were qualified as estimated in four samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Synthetic Pyrethroid Pesticides by Environmental Protection Agency (EPA) SW 846 Method 8270D-MRM

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

X. Field Replicates

Samples B18-10043 and B18-20043 were identified as field replicates. No results were detected in any of the samples with the following exceptions:

Compound	Concentration (ng/g)		RPD
	B18-10043	B18-20043	
Bifenthrin	2.62	2.88	9
Danitol (Fenpropathrin)	1.19	1.3	9

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-016	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to results reported below the RL and above the MDL, data were qualified as estimated in four samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
57533-BS1/BS2 (All samples in SDG 1807003-016)	alpha-BHC Endosulfan II Endrin aldehyde Hexachlorobenzene	67 (70-130) 15 (70-130) 12 (70-130) 67 (70-130)	- 15 (70-130) 21 (70-130) -	UJ (all non-detects) UJ (all non-detects) UJ (all non-detects) UJ (all non-detects)	P
57533-BS1/BS2 (All samples in SDG 1807003-016)	Endosulfan I	3 (70-130)	2 (70-130)	R (all non-detects)	P
57533-BS1/BS2 (All samples in SDG 1807003-016)	Methoxychlor Perthane	143 (70-130) -	146 (70-130) 134 (70-130)	NA	-

Relative percent differences (RPD) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
57533-BS1/BS2 (All samples in SDG 1807003-016)	Endosulfan II Endrin aldehyde	40 (≤30) 55 (≤30)	NA	-

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits with the following exceptions:

CRM ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
57535-CRM1	gamma-Chlordane	159 (60-140)	All samples in SDG 1807003-016	NA	-

X. Field Replicates

Samples B18-10043 and B18-20043 were identified as field replicates. No results were detected in any of the samples with the following exceptions:

Compound	Concentration (ng/g)		RPD
	B18-10043	B18-20043	
4,4'-DDE	1.56	1.38	12
4,4'-DDT	2.25	0.5U	Not calculable

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-016	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identification

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method.

Due to LCS/LCSD %R, data were rejected in four samples.

Due to LCS/LCSD %R and results reported below the RL and above the MDL, data were qualified as estimated in four samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be rejected (R) are unusable for all purposes. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polychlorinated Biphenyls (PCBs) as Congeners by Environmental Protection Agency (EPA) SW 846 Method 8270D

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
57533-BS1/BS2 (All samples in SDG 1807003-016)	PCB-003 PCB-005	60 (70-130) 67 (70-130)	- -	UJ (all non-detects) UJ (all non-detects)	P
57533-BS1/BS2 (All samples in SDG 1807003-016)	PCB-156 PCB-169 PCB-189 PCB-194 PCB-195 PCB-206 PCB-209	131 (70-130) 153 (70-130) 146 (70-130) 165 (70-130) 133 (70-130) 158 (70-130) 135 (70-130)	- 148 (70-130) 144 (70-130) 161 (70-130) 134 (70-130) 147 (70-130) -	NA	-
57533-BS1/BS2 (B18-10043 B18-20043)	PCB-180	135 (70-130)	131 (70-130)	J (all detects)	P
57533-BS1/BS2 (B18-10040 B18-10044)	PCB-180	135 (70-130)	131 (70-130)	NA	-

Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits with the following exceptions:

CRM ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
57535-CRM1	PCB-105 PCB-118 PCB-156	41 (60-140) 53 (60-140) 41 (60-140)	All samples in SDG 1807003-016	J (all detects) UJ (all non-detects)	A

X. Field Replicates

Samples B18-10043 and B18-20043 were identified as field replicates. No results were detected in any of the samples with the following exceptions:

Compound	Concentration (ng/g)		RPD
	B18-10043	B18-20043	
PCB-052	0.233	0.2U	Not calculable
PCB-095	0.439	0.276	46
PCB-099	0.444	0.407	9
PCB-101	0.566	0.410	32

Compound	Concentration (ng/g)		RPD
	B18-10043	B18-20043	
PCB-110	0.411	0.286	36
PCB-118	0.408	0.338	19
PCB-138	0.693	0.532	26
PCB-149	0.528	0.421	23
PCB-153	0.781	0.781	0
PCB-158	0.141	0.224	45
PCB-168+132	0.153	0.145	5
PCB-180	0.258	0.314	20
PCB-187	0.172	0.237	32

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-016	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identification

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to LCS/LCSD and CRM %R and results reported below the RL and above the MDL, data were qualified as estimated in four samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Samples appended with "SEM" were analyzed for Simultaneously Extracted Metals

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Copper, Iron, Lead, Nickel, Phosphorus, Selenium, Silver, and Zinc by Environmental Protection Agency (EPA) SW 846 Method 6020 and EPA Method 200.8
Mercury by EPA Method 245.7

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Days From Sample Collection Until Analysis	Required Holding Time (in Days) From Sample Collection Until Analysis	Flag	A or P
B18-10040 B18-10043 B18-10044 B18-20043	Mercury	150	28	J (all detects)	P

II. ICPMS Tune

ICP-MS tune data were not reviewed for Level II validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Level II validation.

IV. ICP Interference Check Sample Analysis

Interference check sample (ICS) analysis data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

VIII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the methods. The results were within QC limits with the following exceptions:

CRM ID	Analyte	%R (Limits)	Associated Samples	Flag	A or P
57534-CRM1	Aluminum Iron	136 (42-124) 158 (33-155)	B18-10040 B18-10043 B18-10044 B18-20043	J (all detects) J (all detects)	A

XI. Field Duplicates

Samples B18-10043 and B18-20043 and samples B18-10043(SEM) and B18-20043(SEM) were identified as field duplicates. No results were detected in any of the samples with the following exceptions:

Analyte	Concentration (ug/g)		RPD
	B18-10043	B18-20043	
Aluminum	30800	29900	3
Antimony	0.214	0.214	0
Arsenic	6.23	6.27	1
Barium	67.4	60	12
Beryllium	0.538	0.58	8
Cadmium	0.483	0.416	15
Chromium	32.2	31.7	2
Copper	54.3	54.4	0
Iron	26400	26000	2

Analyte	Concentration (ug/g)		RPD
	B18-10043	B18-20043	
Lead	17	16.6	2
Mercury	0.0754	0.0795	5
Nickel	11.1	11.5	4
Phosphorus	400	417	4
Selenium	0.361	0.389	7
Silver	0.298	0.342	14
Zinc	156	150	4

Analyte	Concentration (umol/g)		RPD
	B18-10043(SEM)	B18-20043(SEM)	
Copper	0.0257	0.0603	80
Lead	0.0283	0.0388	31
Nickel	0.00935	0.0155	49
Zinc	0.858	1.06	21

XII. Internal Standards (ICP-MS)

Internal standard data were not reviewed for Level II validation.

XIII. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-016	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to technical holding time, CRM %R, and results reported below the RL and above the MDL, data were qualified as estimated in eight samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Acid Volatile Sulfide by Plumb 1981
Ammonia as Nitrogen by Standard Method 4500-NH3-D
Particle Size by Standard Method 2560D
Percent Solids by Standard Method 2540B
Total Nitrogen and Total Organic Carbon by Environmental Protection Agency (EPA) SW 846 Method 9060

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Time From Sample Collection Until Analysis	Required Holding Time From Sample Collection Until Analysis	Flag	A or P
All samples in SDG 1807003-016	Acid volatile sulfide	148 days	14 days	J (all detects)	A
All samples in SDG 1807003-016	Ammonia as N	142 days	28 days	J (all detects)	A
All samples in SDG 1807003-016	Total nitrogen	154 days	28 days	J (all detects)	A

II. Initial Calibration

Initial calibration data were not reviewed for Level II validation.

III. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

IV. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

V. Field Blanks

No field blanks were identified in this SDG.

VI. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

VII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

VIII. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the methods. The results were within QC limits.

IX. Field Duplicates

Samples B18-10043 and B18-20043 were identified as field duplicates. No results were detected in any of the samples with the following exceptions:

Analyte	Concentration		RPD
	B18-10043	B18-20043	
Acid volatile sulfide	324 mg/Kg	221 mg/Kg	38
Ammonia as N	11.7 mg/Kg	23.5 mg/Kg	67
Percent solids	49.6 %	47.7 %	4
Total organic carbon	0.12 %	0.14 %	15
Total organic carbon	1.45 %	1.62 %	11

X. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-016	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XI. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to technical holding time and results reported below the RL and above the MDL, data were qualified as estimated in four samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polynuclear Aromatic Hydrocarbons (PAHs) by Environmental Protection Agency (EPA) SW 846 Method 8270D

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.

NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
57533-BS1/BS2 (All samples in SDG 1807003-018)	Anthracene	67 (70-130)	-	J (all detects)	P

Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits with the following exceptions:

CRM ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
57535-CRM1 (SRM 1944)	Benzo(k)fluoranthene	41 (60-140)	All samples in SDG 1807003-018)	J (all detects)	A

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-018	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to LCS/LCSD %R, CRM %R, and results reported below the RL and above the MDL, data were qualified as estimated in one sample.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Data Validation Report

Project/Site Name: 2018 Regional Harbor Monitoring Program

LDC Report Date: May 31, 2019

Parameters: Polybrominated Diphenyl Ethers

Validation Level: Level II

Laboratory: Physis Environmental Laboratories, Inc.

Sample Delivery Group (SDG): 1807003-018

Sample Identification	Laboratory Sample Identification	Matrix	Collection Date
B18-10200	58908	Sediment	09/12/18

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polybrominated Diphenyl Ethers (PBDE) by Environmental Protection Agency (EPA) SW 846 Method 8270D-NCI

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits.

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-018	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to results reported below the RL and above the MDL, data were qualified as estimated in one sample.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-018	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to results reported below the RL and above the MDL, data were qualified as estimated in one sample.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Synthetic Pyrethroid Pesticides by Environmental Protection Agency (EPA) SW 846 Method 8270D-MRM

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-018	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to results reported below the RL and above the MDL, data were qualified as estimated in one sample.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Sample Identification	Laboratory Sample Identification	Matrix	Collection Date
B18-10200	58908	Sediment	09/12/18

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Chlorinated Pesticides by Environmental Protection Agency (EPA) SW 846 Method 8270D/8270D-NCI

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
57533-BS1/BS2 (All samples in SDG 1807003-018)	alpha-BHC Endosulfan II Endrin aldehyde Hexachlorobenzene	67 (70-130) 15 (70-130) 12 (70-130) 67 (70-130)	- 15 (70-130) 21 (70-130) -	UJ (all non-detects) UJ (all non-detects) UJ (all non-detects) UJ (all non-detects)	P
57533-BS1/BS2 (All samples in SDG 1807003-018)	Endosulfan I	3 (70-130)	2 (70-130)	R (all non-detects)	P
57533-BS1/BS2 (All samples in SDG 1807003-018)	Methoxychlor Perthane	143 (70-130) -	146 (70-130) 134 (70-130)	NA	-

Relative percent differences (RPD) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
57533-BS1/BS2 (All samples in SDG 1807003-018)	Endosulfan II Endrin aldehyde	40 (≤30) 55 (≤30)	NA	-

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits with the following exceptions:

CRM ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
58906-CRM1	gamma-Chlordane	159 (60-140)	All samples in SDG 1807003-018	J (all detects)	A

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-018	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identification

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method.

Due to LCS/LCSD %R, data were rejected in one sample.

Due to LCS/LCSD %R, CRM %R, and results reported below the RL and above the MDL, data were qualified as estimated in one sample.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be rejected (R) are unusable for all purposes. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Project/Site Name: 2018 Regional Harbor Monitoring Program

LDC Report Date: May 31, 2019

Parameters: Polychlorinated Biphenyls as Congeners

Validation Level: Level II

Laboratory: Physis Environmental Laboratories, Inc.

Sample Delivery Group (SDG): 1807003-018

Sample Identification	Laboratory Sample Identification	Matrix	Collection Date
B18-10200	58908	Sediment	09/12/18

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polychlorinated Biphenyls (PCBs) as Congeners by Environmental Protection Agency (EPA) SW 846 Method 8270D

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
57533-BS1/BS2 (All samples in SDG 1807003-018)	PCB-003 PCB-005	60 (70-130) 67 (70-130)	- -	UJ (all non-detects) UJ (all non-detects)	P
57533-BS1/BS2 (All samples in SDG 1807003-018)	PCB-156 PCB-169 PCB-189 PCB-194 PCB-195 PCB-206 PCB-209	131 (70-130) 153 (70-130) 146 (70-130) 165 (70-130) 133 (70-130) 158 (70-130) 135 (70-130)	- 148 (70-130) 144 (70-130) 161 (70-130) 134 (70-130) 147 (70-130) -	NA	-
57533-BS1/BS2 (All samples in SDG 1807003-018)	PCB-180	135 (70-130)	131 (70-130)	J (all detects)	P

Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits with the following exceptions:

CRM ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
57535-CRM1	PCB-105 PCB-118 PCB-156	41 (60-140) 53 (60-140) 41 (60-140)	All samples in SDG 1807003-018	J (all detects) UJ (all non-detects)	A

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-018	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identification

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to LCS/LCSD and CRM %R and results reported below the RL and above the MDL, data were qualified as estimated in one sample.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Data Validation Report

Project/Site Name: 2018 Regional Harbor Monitoring Program

LDC Report Date: June 4, 2019

Parameters: Metals

Validation Level: Level II

Laboratory: Physis Environmental Laboratories, Inc.

Sample Delivery Group (SDG): 1807003-018

Sample Identification	Laboratory Sample Identification	Matrix	Collection Date
B18-10200	58908	Sediment	09/12/18
B18-10200(SEM)	58908(SEM)	Sediment	09/12/18

Samples appended with "SEM" were analyzed for Simultaneously Extracted Metals

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Copper, Iron, Lead, Nickel, Phosphorus, Selenium, Silver, and Zinc by Environmental Protection Agency (EPA) SW 846 Method 6020 and EPA Method 200.8
Mercury by EPA Method 245.7

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Days From Sample Collection Until Analysis	Required Holding Time (in Days) From Sample Collection Until Analysis	Flag	A or P
B18-10200	Mercury	121	28	J (all detects)	P

II. ICPMS Tune

ICP-MS tune data were not reviewed for Level II validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Level II validation.

IV. ICP Interference Check Sample Analysis

Interference check sample (ICS) analysis data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

VIII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the methods. The results were within QC limits with the following exceptions:

CRM ID	Analyte	%R (Limits)	Associated Samples	Flag	A or P
58905-CRM1	Aluminum Iron	136 (42-124) 158 (33-155)	B18-10200	J (all detects) J (all detects)	A

XI. Field Duplicates

No field duplicates were identified in this SDG.

XII. Internal Standards (ICP-MS)

Internal standard data were not reviewed for Level II validation.

XIII. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-018	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to technical holding time, CRM %R, and results reported below the RL and above the MDL, data were qualified as estimated in two samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Data Validation Report

Project/Site Name: 2018 Regional Harbor Monitoring Program

LDC Report Date: June 4, 2019

Parameters: Wet Chemistry

Validation Level: Level II

Laboratory: Physis Environmental Laboratories, Inc.

Sample Delivery Group (SDG): 1807003-018

Sample Identification	Laboratory Sample Identification	Matrix	Collection Date
B18-10200	58908	Sediment	09/12/18

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Acid Volatile Sulfide by Plumb 1981
Ammonia as Nitrogen by Standard Method 4500-NH3-D
Particle Size by Standard Method 2560D
Percent Solids by Standard Method 2540B
Total Nitrogen and Total Organic Carbon by Environmental Protection Agency (EPA) SW 846 Method 9060

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Time From Sample Collection Until Analysis	Required Holding Time From Sample Collection Until Analysis	Flag	A or P
B18-10200	Acid volatile sulfide Ammonia as N Total nitrogen	119 days 113 days 125 days	14 days 28 days 28 days	J (all detects) J (all detects) J (all detects)	A

II. Initial Calibration

Initial calibration data were not reviewed for Level II validation.

III. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

IV. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

V. Field Blanks

No field blanks were identified in this SDG.

VI. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

VII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

VIII. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the methods. The results were within QC limits.

IX. Field Duplicates

No field duplicates were identified in this SDG.

X. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-018	Analytes reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XI. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to technical holding time and results reported below the RL and above the MDL, data were qualified as estimated in one sample.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Sample Identification	Laboratory Sample Identification	Matrix	Collection Date
B18-SED-EB	56384	Water	07/10/18

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polynuclear Aromatic Hydrocarbons (PAHs) by Environmental Protection Agency (EPA) Method 625

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

Sample B18-SED-EB was identified as an equipment blank. No contaminants were found.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
56379-BS1 (All samples in SDG 1807003-019)	Benzo(a)anthracene	140 (70-130)	141 (70-130)	NA	-

Relative percent differences (RPD) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
56379-BS1 (All samples in SDG 1807003-019)	Naphthalene	26 (≤25)	NA	-

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-019	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to results reported below the RL and above the MDL, data were qualified as estimated in one sample.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polybrominated Diphenyl Ethers (PBDE) by Environmental Protection Agency (EPA) Method 625-NCI

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.

HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

Sample B18-SED-EB was identified as an equipment blank. No contaminants were found.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-019	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to results reported below the RL and above the MDL, data were qualified as estimated in one sample.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Fipronil and Degradates by Environmental Protection Agency (EPA) Method 625-NCI

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

Sample B18-SED-EB was identified as an equipment blank. No contaminants were found.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-019	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to results reported below the RL and above the MDL, data were qualified as estimated in one sample.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

Sample B18-SED-EB was identified as an equipment blank. No contaminants were found.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
56379-BS1/BS2 (All samples in SDG 1807003-019)	Resmethrin	0 (0-94)	0 (0-94)	UJ (all non-detects)	P

Relative percent differences (RPD) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
56379-BS1/BS2 (All samples in SDG 1807003-019)	Deltamethrin/Tralomethrin Esfenvalerate Fenvalerate Fluvalinate	44 (≤30) 49 (≤30) 44 (≤30) 51 (≤30)	NA	-

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-019	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to LCS/LCSD %R and results reported below the RL and above the MDL, data were qualified as estimated in one sample.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Chlorinated Pesticides by Environmental Protection Agency (EPA) Method 625/625-NCI

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.

LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

Sample B18-SED-EB was identified as an equipment blank. No contaminants were found.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-019	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identification

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to results reported below the RL and above the MDL, data were qualified as estimated in one sample.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC Instrument Performance Check

Instrument performance check data were not reviewed for Level II validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

Sample B18-SED-EB was identified as an equipment blank. No contaminants were found.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standard data were not reviewed for Level II validation.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-019	Compound reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIII. Target Compound Identification

Raw data were not reviewed for Level II validation.

XIV. System Performance

Raw data were not reviewed for Level II validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to results reported below the RL and above the MDL, data were qualified as estimated in one sample.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Copper, Iron, Lead, Nickel, Selenium, Silver, and Zinc by Environmental Protection Agency (EPA) Method 200.8
Mercury by EPA Method 245.7

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. ICPMS Tune

ICP-MS tune data were not reviewed for Level II validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Level II validation.

IV. ICP Interference Check Sample Analysis

Interference check sample (ICS) analysis data were not reviewed for Level II validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

Sample B18-SED-EB was identified as an equipment blank. No contaminants were found with the following exceptions:

Blank ID	Analyte	Concentration
B18-SED-EB	Copper Iron Nickel Zinc	0.386 ug/L 3.61 ug/L 12.5 ug/L 2.47 ug/L

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

VIII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

XI. Field Duplicates

No field duplicates were identified in this SDG.

XII. Internal Standards (ICP-MS)

Internal standard data were not reviewed for Level II validation.

XIII. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-019	Analyte reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to results reported below the RL and above the MDL, data were qualified as estimated in one sample.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Ammonia as Nitrogen by Standard Method 4500-NH3-D
Nitrate as Nitrogen and Nitrite as Nitrogen by Environmental Protection Agency (EPA) Method 300.0
Total Organic Carbon by Standard Method 5310B
Total Phosphorus by Standard Method 4500-P E
Total Suspended Solids by Standard Method 2540D

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. Initial Calibration

Initial calibration data were not reviewed for Level II validation.

III. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

IV. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

V. Field Blanks

Sample B18-SED-EB was identified as an equipment blank. No contaminants were found with the following exceptions:

Blank ID	Analyte	Concentration
B18-SED-EB	Total suspended solids	0.95 mg/L

VI. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-SED-EBMS/MSD (All samples in SDG 1807003-019)	Nitrate as N	-	74 (76-121)	UJ (all non-detects)	A

Relative percent differences (RPD) were within QC limits.

VII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

VIII. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

IX. Field Duplicates

No field duplicates were identified in this SDG.

X. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-019	Analytes reported below the RL and above the MDL	J (all detects)	A

Raw data were not reviewed for Level II validation.

XI. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to MS/MSD %R and results reported below the RL and above the MDL, data were qualified as estimated in one sample.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

SUBJECT: 2018 Regional Harbor Monitoring Program, Data Validation

Dear Ms. Sheredy

Enclosed are the final validation reports for the fractions listed below. This SDG was received on May 30, 2019. Attachment 1 is a summary of the samples that were reviewed for each analysis.

LDC Project #45174:

SDG #	**Fraction**
1807003-008	Metals, Wet Chemistry

The data validation was performed under Level IV guidelines. The analyses were validated using the following documents, as applicable to each method:

- Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California; June 2018
- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Data Review; January 2010
- EPA SW 846, Third Edition, Test Methods for Evaluating Solid Waste, update 1, July 1992; update IIA, August 1993; update II, September 1994; update IIB, January 1995; update III, December 1996; update IIIA, April 1998; IIIB, November 2004; update IV, February 2007; update V, July 2014

Please feel free to contact us if you have any questions.

Sincerely,

Pei Geng

pgeng@lab-data.com

Samples appended with "SEM" were analyzed for Simultaneously Extracted Metals

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Copper, Iron, Lead, Nickel, Phosphorus, Selenium, Silver, and Zinc by Environmental Protection Agency (EPA) SW 846 Method 6020 and EPA Method 200.8
Mercury by EPA Method 245.7

All sample results were subjected to Level IV evaluation, which is comprised of the quality control (QC) summary forms as well as the raw data, to confirm sample quantitation and identification.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Days From Sample Collection Until Analysis	Required Holding Time (in Days) From Sample Collection Until Analysis	Flag	A or P
B18-10022 B18-10076 B18-10077 B18-10113	Mercury	177	28	J (all detects)	P
B18-10024 B18-10114 B18-10115 B18-10116	Mercury	176	28	J (all detects)	P

II. ICPMS Tune

The mass calibration was within 0.1 AMU and the percent relative standard deviation (%RSD) was less than or equal to 5%.

III. Instrument Calibration

Initial and continuing calibrations were performed as required by the methods.

The initial calibration verification (ICV) and continuing calibration verification (CCV) standards were within QC limits.

IV. ICP Interference Check Sample Analysis

The frequency of interference check sample (ICS) analysis was not performed for this SDG.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods with the following exceptions:

Sample	Analyte	Finding
B18-10022 B18-10076 B18-10077 B18-10113 B18-10024 B18-10114 B18-10115 B18-10116	Mercury	No closing CCB was analyzed.

No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10076MS/MSD (B18-10022 B18-10076 B18-10077 B18-10113 B18-10024 B18-10114 B18-10115 B18-10116)	Mercury	-	138 (75-125)	J (all detects)	A

For B18-10076MS/MSD, no data were qualified for aluminum and iron percent recoveries (%R) outside the QC limits since the parent sample results were greater than 4X the spike concentration.

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
B18-10076MS/MSD (B18-10022 B18-10076 B18-10077 B18-10113 B18-10024 B18-10114 B18-10115 B18-10116)	Aluminum Iron	29 (≤25) 67 (≤25)	J (all detects) J (all detects)	A

VIII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the methods. The results were within QC limits with the following exceptions:

CRM ID	Analyte	%R (Limits)	Associated Samples	Flag	A or P
56579-CRM1	Aluminum	151 (42-124)	B18-10022 B18-10076 B18-10077 B18-10113 B18-10024 B18-10114 B18-10115 B18-10116	J (all detects)	A

XI. Field Duplicates

Samples B18-10116 and B18-20116 and samples B18-10116(SEM) and B18-20116(SEM) were identified as field duplicates. No results were detected in any of the samples with the following exceptions:

Analyte	Concentration (ug/g)		RPD
	B18-10116	B18-20116	
Aluminum	4330	5990	32
Antimony	0.132	0.16	19
Arsenic	4.16	5	18
Barium	9.67	16.7	53
Beryllium	0.0925	0.137	39

Analyte	Concentration (ug/g)		RPD
	B18-10116	B18-20116	
Cadmium	0.0295	0.0352	18
Chromium	8.67	9.66	11
Copper	10.2	14.6	35
Iron	8500	8790	3
Lead	6.82	8.4	21
Mercury	0.0236	0.0425	57
Nickel	1.94	2.58	28
Phosphorus	176	234	28
Selenium	0.097	0.108	11
Silver	0.0938	0.0808	15
Zinc	33.9	45.8	30

Analyte	Concentration (umol/g)		RPD
	B18-10116(SEM)	B18-20116(SEM)	
Copper	0.0894	0.0989	10
Lead	0.0148	0.0219	39
Nickel	0.00363	0.00526	37
Zinc	0.238	0.371	44

XII. Internal Standards (ICP-MS)

All internal standard percent recoveries (%R) were within QC limits.

XIII. Sample Result Verification

All sample result verifications were acceptable.

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-008	Analyte reported below the RL and above the MDL	J (all detects)	A

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to technical holding time, MS/MSD %R and RPD, CRM %R, and results reported below the RL and above the MDL, data were qualified as estimated in sixteen samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

VALIDATION FINDINGS CHECKLIST

Page: 1 of 2
Reviewer: CB
2nd Reviewer: CP

Method: Metals (EPA SW 846 Method 6010/6020/7000)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓	✓		
Cooler temperature criteria was met.	✓			
II. ICP/MS Tune				
Were all isotopes in the tuning solution mass resolution within 0.1 amu?	✓			
Were %RSD of isotopes in the tuning solution ≤5%?	✓			
III. Calibration				
Were all instruments calibrated daily, each set-up time?	✓			
Were the proper number of standards used?	✓			
Were all initial and continuing calibration verification %Rs within the 90-110% (80-120% for mercury) QC limits?	✓			
Were the low standard checks within 70-130%			✓	
Were all initial calibration correlation coefficients within limits as specified by the method?	✓			
IV. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
V. ICP Interference Check Sample				
Were ICP interference check samples performed daily?		✓		
Were the AB solution percent recoveries (%R) with the 80-120% QC limits?			✓	
VI. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and duplicate (DUP) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD or MS/DUP. Soil / Water.	✓			
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the 75-125 QC limits? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken.		✓		
Were the MS/MSD or duplicate relative percent differences (RPD) ≤ 20% for waters and ≤ 35% for soil samples? A control limit of +/- RL(+/-2X RL for soil) was used for samples that were ≤ 5X the RL, including when only one of the duplicate sample values were ≤ 5X the RL.		✓		
VII. Laboratory control samples				
Was an LCS anaylzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓	✓		
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the 80-120% QC limits for water samples and laboratory established QC limits for soils?		✓		

Validation Area	Yes	No	NA	Findings/Comments
VIII. Internal Standards (EPA SW 846 Method 6020/EPA 200.8)				
Were all the percent recoveries (%R) within the 30-120% (6020)/60-125% (200.8) of the intensity of the internal standard in the associated initial calibration?	✓			
If the %Rs were outside the criteria, was a reanalysis performed?			✓	
IX. ICP Serial Dilution				
Was an ICP serial dilution analyzed if analyte concentrations were > 50X the MDL (ICP)/>100X the MDL(ICP/MS)?			✓	
Were all percent differences (%Ds) < 10%?			✓	
Was there evidence of negative interference? If yes, professional judgement will be used to qualify the data.			✓	
X. Sample Result Verification				
Were RLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XI. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓			
XII. Field duplicates				
Field duplicate pairs were identified in this SDG.	✓			
Target analytes were detected in the field duplicates.	✓			
XIII. Field blanks				
Field blanks were identified in this SDG.		✓		
Target analytes were detected in the field blanks.			✓

METHOD: Trace metals (EPA SW 846 Method 6010/6020/7000)

An initial and continuing calibration verification percent recovery (%R) was recalculated for each type of analysis using the following formula:

%R = Found x 100 / True

Where, Found = concentration (in ug/L) of each analyte measured in the analysis of the ICV or CCV solution
True = concentration (in ug/L) of each analyte in the ICV or CCV source

Standard ID	Type of Analysis	Element	Found (ug/L)	True (ug/L)	Recalculated %R	Reported %R	Acceptable (Y/N)
	ICP (Initial calibration)						
ICV	ICP/MS (Initial calibration)	Sb	102.172	100	102	102	Y

METHOD: Trace Metals (EPA SW 846 Method 6010/6020/7000)

Percent recoveries (%R) for an ICP interference check sample, a laboratory control sample and a matrix spike sample were recalculated using the following formula:

%R = Found / True x 100 Where, Found = Concentration of each analyte measured in the analysis of the sample. For the matrix spike calculation, Found = SSR (spiked sample result) - SR (sample result).
True = Concentration of each analyte in the source.

A sample and duplicate relative percent difference (RPD) was recalculated using the following formula:

RPD = |S-D| / (S+D)/2 x 100 Where, S = Original sample concentration
D = Duplicate sample concentration

An ICP serial dilution percent difference (%D) was recalculated using the following formula:

%D = |I-SDR| / I x 100 Where, I = Initial Sample Result (mg/L)
SDR = Serial Dilution Result (mg/L) (Instrument Reading x 5)

Sample ID	Type of Analysis	Element	Found / S / I (units)	True / D / SDR (units)	Recalculated %R / RPD / %D	Reported %R / RPD / %D	Acceptable (Y/N)
N	ICP interference check						
LCS	Laboratory control sample	Ba	1.99	2	100	100	Y
17	Matrix spike	Cu	(SSR-SR) 59.5	58.2	102	102	Y

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Acid Volatile Sulfide by Plumb 1981
Ammonia as Nitrogen by Standard Method 4500-NH3-D
Particle Size by Standard Method 2560D
Percent Solids by Standard Method 2540B
Total Nitrogen and Total Organic Carbon by Environmental Protection Agency (EPA) SW 846 Method 9060

All sample results were subjected to Level IV data validation, which is comprised of the quality control (QC) summary forms as well as the raw data, to confirm sample quantitation and identification.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Time From Sample Collection Until Analysis	Required Holding Time From Sample Collection Until Analysis	Flag	A or P
B18-10022 B18-10076 B18-10077 B18-10113	Acid volatile sulfide Ammonia as N Total nitrogen	170 days 169 days 177 days	14 days 28 days 28 days	J (all detects) J (all detects) J (all detects)	A
B18-10114 B18-10115 B18-10116	Acid volatile sulfide Ammonia as N Total nitrogen	169 days 168 days 176 days	14 days 28 days 28 days	J (all detects) J (all detects) J (all detects)	A

II. Initial Calibration

All criteria for the initial calibration of each method were met.

III. Continuing Calibration

Continuing calibration frequency and analysis criteria were met for each method when applicable.

IV. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

V. Field Blanks

No field blanks were identified in this SDG.

VI. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10114MS/MSD (All samples in SDG 1807003-008)	Acid volatile sulfide	-14 (80-120)	-5 (80-120)	J (all detects)	A

Relative percent differences (RPD) were within QC limits.

VII. Duplicate Sample Analysis

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Analyte	RPD (Limits)	Difference (Limits)	Flag	A or P
B18-10022DUP (All samples in SDG 1807003-008)	Grain size-Phi 2.0	26 (≤20)	-	J (all detects) UJ (all non-detects)	A

VIII. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the methods. The results were within QC limits.

IX. Field Duplicates

Samples B18-10116 and B18-20116 were identified as field duplicates. No results were detected in any of the samples with the following exceptions:

Analyte	Concentration		RPD
	B18-10116	B18-20116	
Acid volatile sulfide	0.965 mg/Kg	1.69 mg/Kg	55
Ammonia as N	3.65 mg/Kg	6.28 mg/Kg	53
Percent solids	79.1 %	75.7 %	4
Total organic carbon	0.12 %	0.14 %	15
Gravel	4.5 %	1.3 %	110

X. Sample Result Verification

All analytes reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

2018 Regional Harbor Monitoring Program

VALIDATION FINDINGS CHECKLIST

Reviewer: OR
2nd Reviewer: [signature]

Method: Inorganics (EPA Method See cover)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓	✓		
II. Calibration				
Were all instruments calibrated daily, each set-up time?	✓			
Were the proper number of standards used?	✓			
Were all initial calibration correlation coefficients ≥ 0.995?	✓			
Were all initial and continuing calibration verification %Rs within the 90-110% QC limits?	✓			
Were titrant checks performed as required? (Level IV only)	✓		✓	
Were balance checks performed as required? (Level IV only)	✓			
III. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
IV. Matrix spike/Matrix spike duplicates and Duplicates				
Were a matrix spike (MS) and duplicate (DUP) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD or MS/DUP. Soil / Water.	✓			
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the 75-125 QC limits? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken.		✓		
Were the MS/MSD or duplicate relative percent differences (RPD) ≤ 20% for waters and ≤ 35% for soil samples? A control limit of ≤ CRDL(≤ 2X CRDL for soil) was used for samples that were ≤ 5X the CRDL, including when only one of the duplicate sample values were ≤ 5X the CRDL.		✓		
V. Laboratory control samples				
Was an LCS anaylzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the 80-120% (85-115% for Method 300.0) QC limits?	✓			
VI. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?		✓	✓	
Were the performance evaluation (PE) samples within the acceptance limits?				

Validation Area	Yes	No	NA	Findings/Comments
VII. Sample Result Verification				
Were RLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
Were detection limits < RL?	✓			
VIII. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓			
IX. Field duplicates				
Field duplicate pairs were identified in this SDG.	✓			
Target analytes were detected in the field duplicates.	✓			
X. Field blanks				
Field blanks were identified in this SDG.		✓		
Target analytes were detected in the field blanks.			✓

The correlation coefficient (r) for the calibration of TOC was recalculated. Calibration date: 2/28/18

An initial or continuing calibration verification percent recovery (%R) was recalculated for each type of analysis using the following formula:

%R = Found X 100 / True

Where, Found = concentration of each analyte measured in the analysis of the ICV or CCV solution
True = concentration of each analyte in the ICV or CCV source

Type of analysis	Analyte	Standard	Conc. (mg)	Area	Recalculated r or r^2	Reported r or r^2	Acceptable (Y/N)
Initial calibration	TOC	s1	0.0104	27.5635	*0.999828*	*0.999832*	Y
		s2	0.0207	60.4996

METHOD: Inorganics, Method see cover

Percent recoveries (%R) for a laboratory control sample and a matrix spike sample were recalculated using the following formula:

%R = Found / True x 100 Where, Found = concentration of each analyte measured in the analysis of the sample. For the matrix spike calculation, Found = SSR (spiked sample result) - SR (sample result).
True = concentration of each analyte in the source.

A sample and duplicate relative percent difference (RPD) was recalculated using the following formula:

RPD = |S-D| / (S+D)/2 x 100 Where, S = Original sample concentration
D = Duplicate sample concentration

Sample ID	Type of Analysis	Element	Found / S (units)	True / D (units)	Recalculated %R / RPD	Reported %R / RPD	Acceptable (Y/N)
LCS	Laboratory control sample	AVS	19.1	20.1	95	95	Y
10	Matrix spike sample	NH3N	(SSR-SR) 6.7	8.01	84	84

SUBJECT: 2018 Regional Harbor Monitoring Program, Data Validation

Dear Ms. Sheredy

Enclosed are the final validation reports for the fractions listed below. This SDG was received on May 30, 2019. Attachment 1 is a summary of the samples that were reviewed for each analysis.

LDC Project #45174:

SDG #	Fraction
1807003-008	Polynuclear Aromatic Hydrocarbons, Polybrominated Diphenyl Ethers, Synthetic Pyrethroid Pesticides, Chlorinated Pesticides,

The data validation was performed under Level IV guidelines. The analyses were validated using the following documents, as applicable to each method:

- Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California; June 2018
- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Data Review; January 2010
- EPA SW 846, Third Edition, Test Methods for Evaluating Solid Waste, update 1, July 1992; update IIA, August 1993; update II, September 1994; update IIB, January 1995; update III, December 1996; update IIIA, April 1998; IIIB, November 2004; update IV, February 2007; update V, July 2014

Please feel free to contact us if you have any questions.

Sincerely,

Pei Geng
pgeng@lab-data.com

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polynuclear Aromatic Hydrocarbons (PAHs) by Environmental Protection Agency (EPA) SW 846 Method 8270D

All sample results were subjected to Level IV data validation, which is comprised of the quality control (QC) summary forms as well as the raw data, to confirm sample quantitation and identification.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

A decafluorotriphenylphosphine (DFTPP) tune was performed at 12 hour intervals.

All ion abundance requirements were met.

III. Initial Calibration and Initial Calibration Verification

An initial calibration was performed as required by the method.

For compounds where average relative response factors (RRFs) were utilized, percent relative standard deviations (%RSD) were less than or equal to 20.0%.

In the case where the laboratory used a calibration curve to evaluate the compounds, all coefficients of determination (r^2) were greater than or equal to 0.990 with the following exceptions:

Date	Compound	r^2	Associated Samples	Flag	A or P
01/29/19	Benzo(b)fluoranthene Benzo(k)fluoranthene Fluoranthene Pyrene	0.986 0.988 0.988 0.989	All samples in SDG 1807033-008	J (all detects) J (all detects) J (all detects) J (all detects)	A

Average relative response factors (RRF) for all compounds were within validation criteria.

The percent differences (%D) of the initial calibration verification (ICV) standard were less than or equal to 30.0% for all compounds with the following exceptions:

Date	Compound	%D	Associated Samples	Flag	A or P
01/29/19	Biphenyl	60	All samples in SDG 1807003-008	J (all detects)	A

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

The percent differences (%D) were less than or equal to 20.0% for all compounds with the following exceptions:

Date	Compound	%D	Associated Samples	Flag	A or P
01/30/19	Chrysene Indeno(1,2,3-cd)pyrene	35 26	B18-10077 B18-10113 B18-10024 B18-10114 B18-10115 B18-10116	J (all detects) J (all detects)	A

All of the continuing calibration relative response factors (RRF) were within validation criteria.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicate Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10076MS/MSD (B18-10076)	Benzo(b)fluoranthene Fluoranthene	194 (50-150) 162 (50-150)	183 (50-150) -	J (all detects) J (all detects)	A
B18-10076MS/MSD (B18-10076)	Naphthalene	43 (50-150)	-	J (all detects)	A

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10076MS/MSD (B18-10076)	Naphthalene	28 (≤25)	J (all detects)	A

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10076DUP (B18-10076)	1-Methylnaphthalene 2-Methylnaphthalene	32 (≤25) 26 (≤25)	J (all detects) J (all detects)	A

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
209040BS1/BS2 (All samples in SDG 1807003-008)	1-Methylnaphthalene 2-Methylnaphthalene Biphenyl Naphthalene 2,6-Dimethylnaphthalene Acenaphthene	59 (70-130) 61 (70-130) 64 (70-130) 48 (70-130) - -	54 (70-130) 55 (70-130) 60 (70-130) 42 (70-130) 65 (70-130) 67 (70-130)	J (all detects) UJ (all non-detects)	P
209040BS1/BS2 (All samples in SDG 1807003-008)	Benzo(a)anthracene Benzo(b)fluoranthene Indeno(1,2,3-cd)pyrene Dibenzo(a,h)anthracene Fluoranthene	171 (70-130) 131 (70-130) 139 (70-130) - -	171 (70-130) 135 (70-130) 144 (70-130) 134 (70-130) 131 (70-130)	J (all detects) J (all detects) J (all detects) J (all detects) J (all detects)	P

Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits.

X. Field Duplicates

Samples B18-10116 and B18-20116 were identified as field duplicates. No results were detected in any of the samples with the following exceptions:

Compound	Concentration (ng/g)		RPD
	B18-10116	B18-20116	
1,6,7-Trimethylnaphthalene	1.27	1.38	8
1-Methylnaphthalene	0.814	0.836	3
1-Methylphenanthrene	1.51	1.32	13
2,6-Dimethylnaphthalene	0.577	0.624	8
2-Methylnaphthalene	1.64	1.70	4
Acenaphthene	0.50U	0.157	Not calculable
Acenaphthylene	0.233	0.331	35
Anthracene	0.762	0.767	1
Benzo(a)anthracene	21.8	6.02	113
Benzo(a)pyrene	8.1	3.69	75
Benzo(b)fluoranthene	11.8	5.47	73
Benzo(e)pyrene	7.06	3.58	65
Benzo(g,h,i)perylene	4.66	3.77	21
Benzo(k)fluoranthene	8.53	4.3	66
Biphenyl	0.291	0.275	6
Chrysene	7.27	2.52	97
Dibenzo(a,h)anthracene	4.79	3.2	40
Dibenzothiophene	0.324	0.357	10
Fluoranthene	10.4	4.96	71
Fluorene	0.643	0.605	6
Indeno(1,2,3-cd)pyrene	19.4	14.2	31
Naphthalene	2.17	1.91	13

Compound	Concentration (ng/g)		RPD
	B18-10116	B18-20116	
Perylene	1.64	0.766	73
Phenanthrene	4.51	4.29	5
Pyrene	9.84	5.13	63

XI. Internal Standards

All internal standard areas and retention times were within QC limits with the following exceptions:

Sample	Internal Standards	Area (Limits)	Affected Compound	Flag	A or P
B18-10077	d12-Benzo(a)pyrene d12-Benzo(g,h,i)perylene	66435150 (15953287-63813148) 31353208 (7832575-31330300)	Benzo(a)anthracene Chrysene Benzo(b)fluoranthene Benzo(k)fluoranthene Benzo(a)pyrene Indeno(1,2,3-cd)pyrene Dibenzo(a,h)anthracene Benzo(g,h,i)perylene Benzo(e)pyrene Perylene	J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects)	P
B18-10024	d12-Benzo(a)pyrene d12-Benzo(g,h,i)perylene	69551936 (15953287-63813148) 33396202 (7832575-31330300)	Benzo(a)anthracene Chrysene Benzo(b)fluoranthene Benzo(k)fluoranthene Benzo(a)pyrene Indeno(1,2,3-cd)pyrene Dibenzo(a,h)anthracene Benzo(g,h,i)perylene Benzo(e)pyrene Perylene	J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects)	P
B18-10116	d12-Benzo(a)pyrene d12-Benzo(g,h,i)perylene	67114126 (15953287-63813148) 34112307 (7832575-31330300)	Benzo(a)anthracene Chrysene Benzo(b)fluoranthene Benzo(k)fluoranthene Benzo(a)pyrene Indeno(1,2,3-cd)pyrene Dibenzo(a,h)anthracene Benzo(g,h,i)perylene Benzo(e)pyrene Perylene	J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects)	P

XII. Compound Quantitation

All compound quantitations were within validation criteria.

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-008	Compound reported below the RL and above the MDL	J (all detects)	A

XIII. Target Compound Identifications

All target compound identifications were within validation criteria.

XIV. System Performance

The system performance was acceptable.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to initial calibration r^2, ICV %D, continuing calibration %D, MS/MSD %R and RPD, DUP RPD, LCS/LCSD %R, internal standards area, and results reported below the RL and above the MDL, data were qualified as estimated in eight samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Method: Semivolatiles (EPA SW 846 Method 8270D)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
Were all technical holding times met?	✓			
Was cooler temperature criteria met?	✓			
II. GC/MS Instrument performance check				
Were the DFTPP performance results reviewed and found to be within the specified criteria?	✓			
~~Were all samples analyzed within the 12 hour clock criteria?~~	✓			
IIIa. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Were all percent relative standard deviations (%RSD) ≤ 20% and relative response factors (RRF) within method criteria?	✓			
Was a curve fit used for evaluation? If yes, did the initial calibration meet the curve fit acceptance criteria of ≥ 0.990?		✓		
IIIb. Initial Calibration Verification				
Was an initial calibration verification standard analyzed after each initial calibration for each instrument?	✓			
Were all percent differences (%D) ≤ 30% or percent recoveries (%R) 70-130%?		✓		
IV. Continuing calibration				
Was a continuing calibration standard analyzed at least once every 12 hours for each instrument?	✓			
Were all percent differences (%D) ≤ 20% and relative response factors (RRF) within method criteria?		✓		
V. Laboratory Blanks				
Was a laboratory blank associated with every sample in this SDG?	✓			
Was a laboratory blank analyzed at least once every 12 hours for each matrix and concentration?	✓			
Was there contamination in the laboratory blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
VI. Field blanks				
Were field blanks were identified in this SDG?		✓		
Were target compounds detected in the field blanks?			✓	
VII. Surrogate spikes				
Were all surrogate percent recovery (%R) within QC limits?	✓			
If 2 or more base neutral or acid surrogates were outside QC limits, was a reanalysis?			✓	
If 2 or more base neutral or acid surrogates were outside QC limits, was a reanalysis performed to confirm %R?			✓

METHOD: GC/MS BNA (EPA SW 846 Method 8270D)

The percent difference (%D) of the initial calibration average Relative Response Factors (RRFs) and the continuing calibration RRFs were recalculated for the compounds identified below using the following calculation:

% Difference = 100 * (ave. RRF - RRF)/ave. RRF
$RRF = (A_x)(C_{is})/(A_{is})(C_x)$

Where: ave. RRF = initial calibration average RRF
RRF = continuing calibration RRF
A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard

Y N N/A Were all reported results recalculated and verified for all level IV samples?
Y N N/A Were all recalculated results for detected target compounds agree within 10.0% of the reported results?

Concentration = $\frac{(A_x)(I_s)(V_t)(DF)(2.0)}{(A_{is})(RRF)(V_o)(V_i)(\%S)}$

A_x = Area of the characteristic ion (EICP) for the compound to be measured

A_{is} = Area of the characteristic ion (EICP) for the specific internal standard

I_s = Amount of internal standard added in nanograms (ng)

V_o = Volume or weight of sample extract in milliliters (ml) or grams (g).

V_i = Volume of extract injected in microliters (ul)

V_t = Volume of the concentrated extract in microliters (ul)

Df = Dilution Factor.

%S = Percent solids, applicable to soil and solid matrices only.

2.0 = Factor of 2 to account for GPC cleanup

Example:

Sample I.D. 2, 4F:

Conc. = $\frac{(632868)(2000)(0.13)(\quad)}{(1320496282)(0.818)(\quad)}$

= 2.49 ng/g

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polybrominated Diphenyl Ethers by Environmental Protection Agency (EPA) SW 846 Method 8270D-NCI

All sample results were subjected to Level IV data validation, which is comprised of the quality control (QC) summary forms as well as the raw data, to confirm sample quantitation and identification.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

A perfluorotributylamine (PFTBA) tune was performed.

All ion abundance requirements were met.

III. Initial Calibration

An initial calibration was performed as required by the method.

A curve fit, based on the initial calibration, was established for quantitation. The coefficient of determination (r^2) was greater than or equal to 0.990.

Average relative response factors (RRF) for all compounds were within validation criteria.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

The percent differences (%D) were less than or equal to 20.0% for all compounds with the following exceptions:

Date	Compound	%D	Associated Samples	Flag	A or P
01/18/19	PBDE-209	36	B18-10022 B18-10077 B18-10113 B18-10024 B18-10114 B18-10115 B18-10116	J (all detects) UJ (all non-detects)	A

All of the continuing calibration relative response factors (RRF) were within validation criteria.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicate Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10076MS/MSD (B18-10076)	PBDE-190 PBDE-209 PBDE-183	36 (50-150) 12 (50-150) -	28 (50-150) 7 (50-150) 45 (50-150)	J (all detects) UJ (all non-detects)	A

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10076MS/MSD (B18-10076)	PBDE-209	53 (≤25)	J (all detects)	A

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10076DUP (B18-10076)	PBDE-099 PBDE-100 PBDE-153 PBDE-154 PBDE-209	49 (≤25) 35 (≤25) 93 (≤25) 26 (≤25) 36 (≤25)	J (all detects) J (all detects) J (all detects) J (all detects) J (all detects)	A

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
20904-BS1/BS2 (All samples in SDG 1807003-008)	PBDE-190 PBDE-209	65 (70-130) 22 (70-130)	- 51 (70-130)	J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects)	P

Relative percent differences (RPD) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
20904-BS1/BS2 (B18-10076 B18-10077 B18-10113 B18-10024 B18-10114 B18-10115)	PBDE-209	79 (≤30)	J (all detects)	P
20904-BS1/BS2 (B18-10022 B18-10116)	PBDE-209	79 (≤30)	NA	-

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits.

X. Field Duplicates

Samples B18-10116 and B18-20116 were identified as field duplicates. No results were detected in any of the samples.

XI. Internal Standards

All internal standard areas and retention times were within QC limits.

XII. Compound Quantitation

All compound quantitations were within validation criteria.

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-008	Compound reported below the RL and above the MDL	J (all detects)	A

XIII. Target Compound Identifications

All target compound identifications were within validation criteria.

XIV. System Performance

The system performance was acceptable.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to continuing calibration %D, MS/MSD %R and RPD, DUP RPD, LCS/LCSD %R and RPD, and results reported below the RL and above the MDL, data were qualified as estimated in eight samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Method: Semivolatiles (EPA SW 846 Method 8270D)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
Were all technical holding times met?	✓			
Was cooler temperature criteria met?	✓			
II. GC/MS Instrument performance check				
Were the ~~DFTPP~~ BFB performance results reviewed and found to be within the specified criteria?	✓			
~~Were all samples analyzed within the 12 hour clock criteria?~~	✓			
IIIa. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Were all percent relative standard deviations (%RSD) ≤ 20% and relative response factors (RRF) within method criteria?			✓	
Was a curve fit used for evaluation? If yes, did the initial calibration meet the curve fit acceptance criteria of ≥ 0.990?	✓			
IIIb. Initial Calibration Verification				
Was an initial calibration verification standard analyzed after each initial calibration for each instrument?			✓	
Were all percent differences (%D) ≤ 30% or percent recoveries (%R) 70-130%?			✓	
IV. Continuing calibration				
Was a continuing calibration standard analyzed at least once every 12 hours for each instrument?	✓			
Were all percent differences (%D) ≤ 20% and relative response factors (RRF) within method criteria?		✓		
V. Laboratory Blanks				
Was a laboratory blank associated with every sample in this SDG?	✓			
Was a laboratory blank analyzed at least once every 12 hours for each matrix and concentration?	✓			
Was there contamination in the laboratory blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
VI. Field blanks				
Were field blanks were identified in this SDG?		✓		
Were target compounds detected in the field blanks?			✓	
VII. Surrogate spikes				
Were all surrogate percent recovery (%R) within QC limits?	✓			
If 2 or more base neutral or acid surrogates were outside QC limits, was a reanalysis?		✓	✓	
If 2 or more base neutral or acid surrogates were outside QC limits, was a reanalysis performed to confirm %R?			✓

Validation Area	Yes	No	NA	Findings/Comments
VIII. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.	✓			
Was a MS/MSD analyzed every 20 samples of each matrix?	✓			
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?		✓		
IX. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per analytical batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?		✓		
X. Field duplicates				
Were field duplicate pairs identified in this SDG?	✓			
Were target compounds detected in the field duplicates?		✓		
XI. Internal standards				
Were internal standard area counts within -50% to +100% of the associated calibration standard?	✓			
Were retention times within ± 30 seconds of the associated calibration standard?	✓			
XII. Compound quantitation				
Were the correct internal standard (IS), quantitation ion and relative response factor (RRF) used to quantitate the compound?	✓			
Were compound quantitation and RLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XIII. Target compound identification				
Were relative retention times (RRT's) within ± 0.06 RRT units of the standard?	✓			
Did compound spectra meet specified EPA "Functional Guidelines" criteria?	✓			
Were chromatogram peaks verified and accounted for?	✓			
XIV. System performance				
System performance was found to be acceptable.	✓			
XV. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓

The percent difference (%D) of the initial calibration average Relative Response Factors (RRFs) and the continuing calibration RRFs were recalculated for the compounds identified below using the following calculation:

% Difference = 100 * (ave. RRF - RRF)/ave. RRF
$RRF = (A_x)(C_{is})/(A_{is})(C_x)$

Where: ave. RRF = initial calibration average RRF
RRF = continuing calibration RRF
A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard

Concentration = $\frac{(A_x)(I_s)(V_t)(DF)(2.0)}{(A_{is})(RRF)(V_o)(V_i)(\%S)}$

A_x = Area of the characteristic ion (EICP) for the compound to be measured

A_{is} = Area of the characteristic ion (EICP) for the specific internal standard

I_s = Amount of internal standard added in nanograms (ng)

V_o = Volume or weight of sample extract in milliliters (ml) or grams (g).

V_i = Volume of extract injected in microliters (ul)

V_t = Volume of the concentrated extract in microliters (ul)

Df = Dilution Factor.

%S = Percent solids, applicable to soil and solid matrices only.

2.0 = Factor of 2 to account for GPC cleanup

Example:

Sample I.D. 2, PBDE 209

Conc. = $\frac{(3242)(1000)(0.2123)}{(4710626)(0.0754)}$ = 1.92 ng/g

#	Sample ID	Compound	Reported Concentration (ng/g)	Calculated Concentration ( )	Qualification
	2	PBDE 209	1.92

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Fipronil and Degradates by Environmental Protection Agency (EPA) SW 846 Method 8270D-NCI

All sample results were subjected to Level IV data validation, which is comprised of the quality control (QC) summary forms as well as the raw data, to confirm sample quantitation and identification.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

An autotune/perfluorotributylamine (PFTBA) tune was performed.

All ion abundance requirements were met.

III. Initial Calibration

An initial calibration was performed as required by the method.

A curve fit, based on the initial calibration, was established for quantitation. The coefficient of determination (r^2) was greater than or equal to 0.990.

Average relative response factors (RRF) for all compounds were within validation criteria.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

The percent differences (%D) were less than or equal to 20.0% for all compounds with the following exceptions:

Date	Compound	%D	Associated Samples	Flag	A or P
01/17/19	Fipronil desulfinyl Fipronil sulfide	28.52 31.68	B18-10022 B18-10077 B18-10113 B18-10024 B18-10114 B18-10115 B18-10116	UJ (all non-detects) UJ (all non-detects)	A

All of the continuing calibration relative response factors (RRF) were within validation criteria.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicate Sample Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10076MS/MSD (B18-10076)	Fipronil desulfinyl	156 (50-150)	164 (50-150)	NA	-

Relative percent differences (RPD) were within QC limits.

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

X. Field Duplicates

Samples B18-10116 and B18-20116 were identified as field duplicates. No results were detected in any of the samples.

XI. Internal Standards

All internal standard areas and retention times were within QC limits.

XII. Compound Quantitation

All compound quantitations were within validation criteria.

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-008	Compound reported below the RL and above the MDL	J (all detects)	A

XIII. Target Compound Identifications

All target compound identifications were within validation criteria.

XIV. System Performance

The system performance was acceptable.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to continuing calibration %D and results reported below the RL and above the MDL, data were qualified as estimated in eight samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Method: Semivolatiles (EPA SW 846 Method 8270D)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
Were all technical holding times met?	✓			
Was cooler temperature criteria met?	✓			
II. GC/MS Instrument performance check				
Were the ~~DFTPP~~ auto tune performance results reviewed and found to be within the specified criteria?	✓			
~~Were all samples analyzed within the 12 hour clock criteria?~~	✓			
IIIa. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Were all percent relative standard deviations (%RSD) ≤ 20% and relative response factors (RRF) within method criteria?			✓	
Was a curve fit used for evaluation? If yes, did the initial calibration meet the curve fit acceptance criteria of ≥ 0.990?	✓			
IIIb. Initial Calibration Verification				
Was an initial calibration verification standard analyzed after each initial calibration for each instrument?			✓	
Were all percent differences (%D) ≤ 30% or percent recoveries (%R) 70-130%?			✓	
IV. Continuing calibration				
Was a continuing calibration standard analyzed at least once every 12 hours for each instrument?	✓			
Were all percent differences (%D) ≤ 20% and relative response factors (RRF) within method criteria?		✓		
V. Laboratory Blanks				
Was a laboratory blank associated with every sample in this SDG?	✓			
Was a laboratory blank analyzed at least once every 12 hours for each matrix and concentration?	✓			
Was there contamination in the laboratory blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
VI. Field blanks				
Were field blanks were identified in this SDG?		✓		
Were target compounds detected in the field blanks?			✓	
VII. Surrogate spikes				
Were all surrogate percent recovery (%R) within QC limits?		✓		
If 2 or more base neutral or acid surrogates were outside QC limits, was a reanalysis?			✓	
If 2 or more base neutral or acid surrogates were outside QC limits, was a reanalysis performed to confirm %R?			✓	

Validation Area	Yes	No	NA	Findings/Comments
VIII. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.	✓			
Was a MS/MSD analyzed every 20 samples of each matrix?	✓			
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?		✓		
IX. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per analytical batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?	✓			
X. Field duplicates				
Were field duplicate pairs identified in this SDG?	✓	∅		
Were target compounds detected in the field duplicates?		✓	.	
XI. Internal standards				
Were internal standard area counts within -50% to +100% of the associated calibration standard?	✓			
Were retention times within ± 30 seconds of the associated calibration standard?	✓			
XII. Compound quantitation				
Were the correct internal standard (IS), quantitation ion and relative response factor (RRF) used to quantitate the compound?	✓		∅	
Were compound quantitation and RLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XIII. Target compound identification				
Were relative retention times (RRT's) within ± 0.06 RRT units of the standard?	✓			
Did compound spectra meet specified EPA "Functional Guidelines" criteria?	✓			
Were chromatogram peaks verified and accounted for?	✓			
XIV. System performance				
System performance was found to be acceptable.	✓			
XV. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓

The percent difference (%D) of the initial calibration average Relative Response Factors (RRFs) and the continuing calibration RRFs were recalculated for the compounds identified below using the following calculation:

% Difference = 100 * (ave. RRF - RRF)/ave. RRF
$RRF = (A_x)(C_{is})/(A_{is})(C_x)$

Where: ave. RRF = initial calibration average RRF
RRF = continuing calibration RRF
A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard

Concentration = $\frac{(A_x)(I_s)(V_t)(DF)(2.0)}{(A_{is})(RRF)(V_o)(V_i)(\%S)}$

A_x = Area of the characteristic ion (EICP) for the compound to be measured

A_{is} = Area of the characteristic ion (EICP) for the specific internal standard

I_s = Amount of internal standard added in nanograms (ng)

V_o = Volume or weight of sample extract in milliliters (ml) or grams (g).

V_i = Volume of extract injected in microliters (ul)

V_t = Volume of the concentrated extract in microliters (ul)

Df = Dilution Factor.

%S = Percent solids, applicable to soil and solid matrices only.

2.0 = Factor of 2 to account for GPC cleanup

Example:

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Synthetic Pyrethroid Pesticides by Environmental Protection Agency (EPA) SW 846 Method 8270D-MRM

All sample results were subjected to Level IV evaluation, which is comprised of the QC summary forms as well as the raw data, to confirm sample quantitation and identification.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the analyte should be considered as not detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

An autotune was performed.

All ion abundance requirements were met.

III. Initial Calibration and Initial Calibration Verification

An initial calibration was performed as required by the method.

A curve fit, based on the initial calibration, was established for quantitation. The coefficient of determination (r^2) was greater than or equal to 0.990.

Average relative response factors (RRF) for all compounds were within validation criteria.

The percent differences (%D) of the initial calibration verification (ICV) standard were less than or equal to 30.0% for all compounds with the following exceptions:

Date	Compound	%D	Associated Samples	Flag	A or P
01/21/19	Cyhalothrin, total lambda Cyfluthrin Fluvalinate	48 26 31	All samples in SDG 1807003-008	UJ (all non-detects) UJ (all non-detects) UJ (all non-detects)	A

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

The percent differences (%D) were less than or equal to 20.0% for all compounds with the following exceptions:

Date	Standard	Compound	%D	Associated Samples	Flag	A or P
01/22/19	CCV	Allethrin Prallethrin Bifenthrin Cyhalothrin, total lambda Permethrin, cis- Permethrin, trans- Cyfluthrin	31 26 25 33 22 21 23	B18-10022 B18-10077 B18-10113 B18-10024 B18-10114 B18-10115 B18-10116	J (all detects) UJ (all non-detects)	A

All of the continuing calibration relative response factors (RRF) were within validation criteria.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogate Spikes

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10076MS/MSD (B18-10076)	Cyhalothrin, total lambda	169 (50-150)	165 (50-150)	NA	-
B18-10076MS/MSD (B18-10076)	Deltamethrin/Tralomethrin Prallethrin	37 (50-150) 38 (50-150)	44 (50-150) 38 (50-150)	UJ (all non-detects) UJ (all non-detects)	A

Relative percent differences (RPD) were within QC limits.

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10076DUP (B18-10076)	Danitol (Fenpropathrin)	26 (≤25)	J (all detects)	A

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

All internal standard areas and retention times were within QC limits with the following exceptions:

Sample	Internal Standards	Area (Limits)	Affected Compound	Flag	A or P
B18-10077	2,2',5,5'-Tetrabromobiphenyl	163158 (163431-653724)	All compounds	NA	-
B18-10115	2,2',5,5'-Tetrabromobiphenyl	153574 (163431-653724)	All compounds	J (all detects)	P
B18-10116	2,2',5,5'-Tetrabromobiphenyl	139160 (163431-653724)	All compounds	NA	-

XII. Compound Quantitation

All compound quantitations were within validation criteria.

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-008	Compound reported below the RL and above the MDL	J (all detects)	A

XIII. Target Compound Identifications

All target compound identifications were within validation criteria.

XIV. System Performance

The system performance was acceptable.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to ICV %D, continuing calibration %D, MS/MSD %R, DUP RPD, internal standards area, and results reported below the RL and above the MDL, data were qualified as estimated in eight samples.

The quality control criteria reviewed, as discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J/UJ) are usable for limited purposes only. Based upon the data validation, all other results are considered valid and usable for all purposes.

The percent difference (%D) of the initial calibration average Relative Response Factors (RRFs) and the continuing calibration RRFs were recalculated for the compounds identified below using the following calculation:

% Difference = 100 * (ave. RRF - RRF)/ave. RRF
$RRF = (A_x)(C_{is})/(A_{is})(C_x)$

Where: ave. RRF = initial calibration average RRF
RRF = continuing calibration RRF
A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard

METHOD: GC/MS SVOA (EPA SW 846 Method 8270D)

Y N N/A Were all reported results recalculated and verified for all level IV samples?
Y N N/A Were all recalculated results for detected target compounds agree within 10.0% of the reported results?

Concentration = $\frac{(A_x)(I_s)(V_t)(DF)(2.0)}{(A_{is})(RRF)(V_o)(V_i)(\%S)}$

A_x = Area of the characteristic ion (EICP) for the compound to be measured

A_{is} = Area of the characteristic ion (EICP) for the specific internal standard

I_s = Amount of internal standard added in nanograms (ng)

V_o = Volume or weight of sample extract in milliliters (ml) or grams (g).

V_i = Volume of extract injected in microliters (ul)

V_t = Volume of the concentrated extract in microliters (ul)

Df = Dilution Factor.

%S = Percent solids, applicable to soil and solid matrices only.

2.0 = Factor of 2 to account for GPC cleanup

Example:

Sample I.D. 2 , B :

Conc. = $\frac{+(0.008895 + \sqrt{(0.008895)^2 - 4 \times (3.73e-06)(-64768)})}{(2)(3.73e-06)}$

$= 31.76959 \times 0.2123$

$= 6.745$ ng/g

#	Sample ID	Compound	Reported Concentration (ng/g)	Calculated Concentration ( )	Qualification

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Chlorinated Pesticides by Environmental Protection Agency (EPA) SW 846 Method 8270D and 8270D-NCI

All sample results were subjected to Level IV data validation, which is comprised of the quality control (QC) summary forms as well as the raw data, to confirm sample quantitation and identification.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC Instrument Performance Check

A decafluorotriphenylphosphine (DFTPP) tune was performed at the required frequency.

All ion abundance requirements were met.

III. Initial Calibration and Initial Calibration Verification

An initial calibration was performed as required by the method.

For compounds where average calibration factors were utilized, percent relative standard deviations (%RSD) were less than or equal to 20.0%.

In the case where the laboratory used a calibration curve to evaluate the compounds, all coefficients of determination (r^2) were greater than or equal to 0.990 with the following exceptions:

Date	Compound	r^2	Associated Samples	Flag	A or P
01/28/19	4,4'-DDD	0.988	B18-10077 B18-10113 B18-10024 B18-10114 B18-10115 B18-10116	J (all detects) UJ (all non-detects)	A

Retention time windows were established as required by the method.

The percent differences (%D) of the initial calibration verification (ICV) standard were less than or equal to 30.0% for all compounds.

IV. Continuing Calibration

Continuing calibration was performed at required frequencies.

The percent differences (%D) were less than or equal to 20.0% for all compounds with the following exceptions:

Date	Standard	Compound	%D	Associated Samples	Flag	A or P
01/30/19	CCV	Dicofol Perthane Endrin aldehyde	68 24 24	B18-10077 B18-10113 B18-10024 B18-10114 B18-10115 B18-10116	UJ (all non-detects) UJ (all non-detects) UJ (all non-detects)	A

Retention times of all compounds in the calibration standards were within the established retention time windows.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
B18-10076MS/MSD (B18-10076)	Endosulfan I Endosulfan II Endrin aldehyde	19 (50-150) 23 (50-150) 11 (50-150)	16 (50-150) 20 (50-150) 8 (50-150)	UJ (all non-detects) UJ (all non-detects) UJ (all non-detects)	A
B18-10076MS/MSD (B18-10076)	Methoxychlor Perthane	157 (50-150) 154 (50-150)	160 (50-150) 152 (50-150)	NA	-

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10076MS/MSD (B18-10076)	Endrin aldehyde	32 (≤25)	NA	-

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
20904-BS1/BS2 (All samples in SDG 1807003-008)	Endosulfan I	3 (70-130)	3 (70-130)	R (all non-detects)	P
20904-BS1/BS2 (All samples in SDG 1807003-008)	Endosulfan II Endrin aldehyde	21 (70-130) 10 (70-130)	22 (70-130) 29 (70-130)	UJ (all non-detects) UJ (all non-detects)	P
20904-BS1/BS2 (All samples in SDG 1807003-008)	Methoxychlor Perthane	142 (70-130) 131 (70-130)	144 (70-130) 135 (70-130)	NA	-

Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits.

X. Field Duplicates

Samples B18-10116 and B18-20116 were identified as field duplicates. No results were detected in any of the samples.

XI. Compound Quantitation

All compound quantitations met validation criteria.

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-008	Compound reported below the RL and above the MDL	J (all detects)	A

XII. Target Compound Identification

All target compound identifications met validation criteria.

XIII. System Performance

The system performance was acceptable.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the method.

Due to LCS/LCSD %R, data were rejected in eight samples.

Due to initial calibration r^2, continuing calibration %D, MS/MSD %R, LCS/LCSD %R, and results reported below the RL and above the MDL, data were qualified as estimated in eight samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be rejected (R) are unusable for all purposes. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
Were all technical holding times met?	✓			
Was cooler temperature criteria met?	✓			
II. GC/MS Instrument performance check				
Were the DFTPP performance results reviewed and found to be within the specified criteria?	✓			
~~Were all samples analyzed within the 12 hour clock criteria?~~ 24	✓			
IIIa. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Were all percent relative standard deviations (%RSD) ≤ 20% and relative response factors (RRF) within method criteria?	✓			
Was a curve fit used for evaluation? If yes, did the initial calibration meet the curve fit acceptance criteria of ≥ 0.990?	∅	✓		
IIIb. Initial Calibration Verification				
Was an initial calibration verification standard analyzed after each initial calibration for each instrument?	✓			
Were all percent differences (%D) ≤ 30% or percent recoveries (%R) 70-130%?	✓			
IV. Continuing calibration				
Was a continuing calibration standard analyzed at least once every 12 hours for each instrument?	✓			
Were all percent differences (%D) ≤ 20% and relative response factors (RRF) within method criteria?		✓		
V. Laboratory Blanks				
Was a laboratory blank associated with every sample in this SDG?	✓			
Was a laboratory blank analyzed at least once every 12 hours for each matrix and concentration?	✓			
Was there contamination in the laboratory blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
VI. Field blanks				
Were field blanks were identified in this SDG?		✓		
Were target compounds detected in the field blanks?			✓	
VII. Surrogate spikes				
Were all surrogate percent recovery (%R) within QC limits?	✓			
If 2 or more base neutral or acid surrogates were outside QC limits, was a reanalysis?			✓	
If 2 or more base neutral or acid surrogates were outside QC limits, was a reanalysis performed to confirm %R?			✓	

Validation Area	Yes	No	NA	Findings/Comments
VIII. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.	✓			
Was a MS/MSD analyzed every 20 samples of each matrix?	✓			
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?		✓		
IX. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per analytical batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?		✓		
X. Field duplicates				
Were field duplicate pairs identified in this SDG?	✓			
Were target compounds detected in the field duplicates?		✓		
XI. Internal standards				
Were internal standard area counts within -50% to +100% of the associated calibration standard?	✓			
Were retention times within ± 30 seconds of the associated calibration standard?	✓			
XII. Compound quantitation				
Were the correct internal standard (IS), quantitation ion and relative response factor (RRF) used to quantitate the compound?	✓			
Were compound quantitation and RLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XIII. Target compound identification				
Were relative retention times (RRT's) within ± 0.06 RRT units of the standard?	✓			
Did compound spectra meet specified EPA "Functional Guidelines" criteria?	✓			
Were chromatogram peaks verified and accounted for?	✓			
XIV. System performance				
System performance was found to be acceptable.	✓			
XV. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓

METHOD: GC/MS BNA (EPA SW 846 Method 8270D)

The percent difference (%D) of the initial calibration average Relative Response Factors (RRFs) and the continuing calibration RRFs were recalculated for the compounds identified below using the following calculation:

% Difference = 100 * (ave. RRF - RRF)/ave. RRF
$RRF = (A_x)(C_{is})/(A_{is})(C_x)$

Where: ave. RRF = initial calibration average RRF
RRF = continuing calibration RRF
A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard

#	Standard ID	Calibration Date	Compound (Reference Internal Standard)	Average RRF (initial)	Reported RRF (CC)	Recalculated RRF (CC)	Reported %D	Recalculated %D

$$\text{Concentration} = \frac{(A_x)(I_s)(V_t)(DF)(2.0)}{(A_{is})(RRF)(V_o)(V_i)(\%S)}$$

A_x	=	Area of the characteristic ion (EICP) for the compound to be measured
A_{is}	=	Area of the characteristic ion (EICP) for the specific internal standard
I_s	=	Amount of internal standard added in nanograms (ng)
V_o	=	Volume or weight of sample extract in milliliters (ml) or grams (g).
V_i	=	Volume of extract injected in microliters (ul)
V_t	=	Volume of the concentrated extract in microliters (ul)
Df	=	Dilution Factor.
%S	=	Percent solids, applicable to soil and solid matrices only.
2.0	=	Factor of 2 to account for GPC cleanup

Example:

Sample I.D. 2, J:

Conc. = $\frac{(349760)(1000)(0.2123)(\quad)(\quad)}{(5736585)(3.62)(\quad)(\quad)}$

= 3.58 ng/g

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with Final Quality Assurance Project Plan, Regional Harbor Monitoring Program, San Diego, California (August 2013) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polychlorinated Biphenyls (PCBs) as Congeners by Environmental Protection Agency (EPA) SW 846 Method 8270D

All sample results were subjected to Level IV data validation, which is comprised of the quality control (QC) summary forms as well as the raw data, to confirm sample quantitation and identification.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Qualification Code Reference

BC The initial calibration (ICAL) curve did not meet method-specified criteria.
CH High continuing calibration verification (CCV) recovery. Analytical results may be biased high.
DL The analyte concentration was between the method detection limit (MDL) and the reporting limit (RL).
FB The analyte was detected in the sample and its associated field blank and the concentration detected in the sample is less than five times the concentration detected in the blanks.
H Holding time.
HD Potential analytical imprecision.
HL High LCS recovery. Analytical results may be biased high.
HM High MS recovery. Analytical results may be biased high.
HP High certified reference material (CRM) recovery. Analytical results may be biased high.
HV High initial calibration verification (ICV) recovery. Analytical results may be biased high.
LC Low CCV recovery. Analytical result may be biased low.
LL Low LCS recovery. Analytical result may be biased low.
LM Low MS recovery. Analytical result may be biased low.
LP Low CRM recovery. Analytical result may be biased low.
LS Low Surrogate recovery. Analytical results may be biased low.
LV Low ICV recovery. Analytical result may be biased low.
NC Calibration verification standard concentrations were outside the calibration range.
NQ There is lack of QC for this analyte.
RB The analyte was detected in the sample and its associated equipment blank and the concentration detected in the sample is less than five times the concentration detected in the blank.
TD The dissolved metals concentration is significantly higher than the total metal concentration.
*# Unusual problems found with the data. The number following the asterisk (*) will indicate the section in the validation report where a description of the problem can be found.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

A decafluorotriphenylphosphine (DFTPP) tune was performed at the required frequency.

All ion abundance requirements were met.

III. Initial Calibration and Initial Calibration Verification

An initial calibration was performed as required by the method.

A curve fit, based on the initial calibration, was established for quantitation. The coefficient of determination (r^2) was greater than or equal to 0.990 with the following exceptions:

Date	Compound	r^2	Associated Samples	Flag	A or P
01/28/19	PCB-128 PCB-206	0.988 0.988	All samples in SDG 1807003-008	J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects)	A

Average relative response factors (RRF) for all compounds were within validation criteria.

The percent differences (%D) of the initial calibration verification (ICV) standard were less than or equal to 30.0% for all compounds.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

The percent differences (%D) were less than or equal to 20.0% for all compounds.

All of the continuing calibration relative response factors (RRF) were within validation criteria.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were not required by the method.

VIII. Matrix Spike/Matrix Spike Duplicates/Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits.

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10076MS/MSD (B18-10076)	PCB-049	28 (≤25)	J (all detects)	A

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
B18-10076DUP (B18-10076)	PCB-031	26 (≤25)	J (all detects)	A

IX. Laboratory Control Samples/Certified Reference Materials

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

Certified reference materials (CRM) were analyzed as required by the method. The results were within QC limits with the following exceptions:

CRM ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
20905-CRM1 (SRM 1944)	PCB-105 PCB-118 PCB-128 PCB-156	40 (60-140) 53 (60-140) 40 (60-140) 40 (60-140)	All samples in SDG 18077003-008	J (all detects) UJ (all non-detects)	A

X. Field Duplicates

Samples B18-10116 and B18-20116 were identified as field duplicates. No results were detected in any of the samples with the following exceptions:

Compound	Concentration (ng/g)		RPD
	B18-10116	B18-20116	
PCB-101	0.126	0.127	1
PCB-153	0.135	0.204	41
PCB-138	0.2U	0.224	Not calculable
PCB-149	0.2U	0.0987	Not calculable
PCB-206	0.25U	0.329	Not calculable
PCB-209	0.025U	1.05	Not calculable

XI. Compound Quantitation

All compound quantitations were within validation criteria.

All compounds reported below the reporting limit (RL) and above the minimum detection limit (MDL) were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG 1807003-008	Compound reported below the RL and above the MDL	J (all detects)	A

XII. Target Compound Identifications

All target compound identifications were within validation criteria.

XIII. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to initial calibration r^2, MS/MSD RPD, DUP RPD, CRM %R, and results reported below the RL and above the MDL, data were qualified as estimated in eight samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
Were all technical holding times met?	✓			
Was cooler temperature criteria met?	✓			
II. GC/MS Instrument performance check				
Were the DFTPP performance results reviewed and found to be within the specified criteria?	✓			
~~Were all samples analyzed within the 12 hour clock criteria?~~	✓			
IIIa. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Were all percent relative standard deviations (%RSD) ≤ 20% and relative response factors (RRF) within method criteria?			✓	
Was a curve fit used for evaluation? If yes, did the initial calibration meet the curve fit acceptance criteria of ≥ 0.990?	✓	✓		
IIIb. Initial Calibration Verification				
Was an initial calibration verification standard analyzed after each initial calibration for each instrument?	✓			
Were all percent differences (%D) ≤ 30% or percent recoveries (%R) 70-130%?	✓			
IV. Continuing calibration				
Was a continuing calibration standard analyzed at least once every 12 hours for each instrument?	✓			
Were all percent differences (%D) ≤ 20% and relative response factors (RRF) within method criteria?	✓			
V. Laboratory Blanks				
Was a laboratory blank associated with every sample in this SDG?	✓			
Was a laboratory blank analyzed at least once every 12 hours for each matrix and concentration?	✓			
Was there contamination in the laboratory blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
VI. Field blanks				
Were field blanks were identified in this SDG?		✓		
Were target compounds detected in the field blanks?			✓	
VII. Surrogate spikes				
Were all surrogate percent recovery (%R) within QC limits?			✓	
If 2 or more base neutral or acid surrogates were outside QC limits, was a reanalysis?			✓	
If 2 or more base neutral or acid surrogates were outside QC limits, was a reanalysis performed to confirm %R?			✓	

Validation Area	Yes	No	NA	Findings/Comments
VIII. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.	✓			
Was a MS/MSD analyzed every 20 samples of each matrix?	✓			
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?		✓		
IX. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per analytical batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?		✓		
X. Field duplicates				
Were field duplicate pairs identified in this SDG?	✓			
Were target compounds detected in the field duplicates?	✓			
XI. Internal standards				
Were internal standard area counts within -50% to +100% of the associated calibration standard?	✓			
Were retention times within ± 30 seconds of the associated calibration standard?	✓			
XII. Compound quantitation				
Were the correct internal standard (IS), quantitation ion and relative response factor (RRF) used to quantitate the compound?	✓			
Were compound quantitation and RLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XIII. Target compound identification				
Were relative retention times (RRT's) within ± 0.06 RRT units of the standard?	✓			
Did compound spectra meet specified EPA "Functional Guidelines" criteria?	✓			
Were chromatogram peaks verified and accounted for?	✓			
XIV. System performance				
System performance was found to be acceptable.	✓			
XV. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

(Y) N N/A	Did the laboratory conduct an acceptable 5 point calibration prior to sample analysis?
Y N (N/A)	Were percent relative standard deviations (%RSD) and relative response factors (RRF) within method criteria for all CCC's and SPCC's?
Y (N) N/A	Was a curve fit used for evaluation? If yes, what was the acceptance criteria used for evaluation? ≤0.990
~~Y~~ N N/A	Did the initial calibration meet the acceptance criteria?
(Y) N N/A	Were all %RSDs and RRFs within the validation criteria of ≤20 %RSD and ≥0.05 RRF ?

METHOD: GC/MS BNA (EPA SW 846 Method 8270D)

The percent difference (%D) of the initial calibration average Relative Response Factors (RRFs) and the continuing calibration RRFs were recalculated for the compounds identified below using the following calculation:

% Difference = 100 * (ave. RRF - RRF)/ave. RRF
$RRF = (A_x)(C_{is})/(A_{is})(C_x)$

Where: ave. RRF = initial calibration average RRF
RRF = continuing calibration RRF
A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard

#	Standard ID	Calibration Date	Compound (Reference Internal Standard)	Average RRF (initial)	Reported RRF (CC)	Recalculated RRF (CC)	Reported %D	Recalculated %D

Concentration = $\frac{(A_x)(I_s)(V_t)(DF)(2.0)}{(A_{is})(RRF)(V_o)(V_i)(\%S)}$

A_x	=	Area of the characteristic ion (EICP) for the compound to be measured
A_{is}	=	Area of the characteristic ion (EICP) for the specific internal standard
I_s	=	Amount of internal standard added in nanograms (ng)
V_o	=	Volume or weight of sample extract in milliliters (ml) or grams (g).
V_i	=	Volume of extract injected in microliters (ul)
V_t	=	Volume of the concentrated extract in microliters (ul)
Df	=	Dilution Factor.
%S	=	Percent solids, applicable to soil and solid matrices only.
2.0	=	Factor of 2 to account for GPC cleanup

Example:

Sample I.D. 2, PCB118

Conc. = $\frac{(118)(25)(1000)(0.2123)(\quad)(\quad)}{(2639)(20)(0.973)(\quad)(\quad)}$

= 9.65 ng/g

#	Sample ID	Compound	Reported Concentration ng/g	Calculated Concentration ( )	Qualification
