#### SECTION 1: PERMANENT POST-CONSTRUCTION BMP REQUIREMENTS

**Part A: Determine if the Port BMP Design Manual Applies to the Project**

1. **New Development (see Limited Exclusion):** Is your project a new development that will create 10,000 square feet or more of impervious surfaces collectively over the entire project site? ........ □ Yes □ No

2. **Redevelopment (see Limited Exclusion):** Is your project a redevelopment that will create and/or replace 5,000 square feet or more of impervious surface collectively over the entire project on an existing site of 10,000 square feet or more of impervious surfaces? ........ □ Yes □ No

If “Yes” to either of the above, the project is categorized as a Priority Development Project (PDP) and is subject to permanent post-construction stormwater BMP requirements as outlined in the Port BMP Design Manual. A Port Stormwater Quality Management Plan (SWQMP) for PDPs is required that identifies and supports the use of permanent structural BMPs, as appropriate. See Note for Port template requirements. As permanent source control and site design BMP requirements are addressed in the required SWQMP submittal, Part B of this checklist can be skipped. Continue to Section 2 to identify construction phase stormwater requirements.

If “No” to both of the above, continue to question 3.

3. **New Development or Redevelopment:** Is your project a new or redevelopment project characterized by one of the following? If so, identify the applicable category........... □ Yes □ No

   A) The project will create and/or replace 5,000 square feet or more of impervious surface collectively over the entire project site and support one or more of the following uses:
      i. Restaurant development. This includes any facility that sells prepared foods and drinks for consumption including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption.
      ii. Development on any natural slope that is twenty-five percent or greater.
      iii. Parking lots.
      iv. Streets, roads, highways, freeways and/or driveways.

   B) The project will create and/or replace 2,500 square feet or more of impervious surface collectively over the entire project and discharges directly to an Environmentally Sensitive Area (ESA)*. “Discharging directly to” includes flow that is conveyed overland a distance of 200’ or less from the project to the ESA, or conveyed in a pipe or open channel any distance as an isolated flow from the project to the ESA (i.e. not commingled with flows from adjacent lands). * San Diego Bay is considered an ESA

   C) The project supports one or more of the following:
      i. Automotive repair shop
      ii. Retail gasoline outlet that is 5,000 square feet or more or has a project Average Daily Traffic of 100 or more vehicles per day.

   D) New development or redevelopment project that results in the disturbance of one or more acres of land and is expected to generate pollutants post construction.

If “Yes” to question 3, the project is categorized as a Priority Development Project (PDP) and is subject to permanent post-construction stormwater BMP requirements as outlined in the Port BMP Design Manual. A Port Stormwater Quality Management Plan (SWQMP) for PDPs is required that identifies and supports the use of permanent structural BMPs, as appropriate. See Note (Page 3) for Port template requirements. Permanent source control and site design BMP requirements must be included in the SWQMP submittal. As such, skip Part B of this checklist. Continue to Section 2 to determine construction phase stormwater requirements.

If “No” to question 3, the project is a standard project and is not subject to permanent post-construction stormwater BMP requirements as outlined in the Port BMP Design Manual. A standard project Stormwater Quality Management Plan (SWQMP) consisting of a series of checklists is required for the project. See Note (Page 3) for Port template requirements. Continue to Part B to determine minimum source control and site design BMP requirements appropriate for the project as outlined in the Port BMP Design Manual. Also Complete Section 2 to determine construction phase stormwater requirements.

**Limited Exclusion:** Redevelopment does not include trenching and resurfacing work associated with utility work. Projects that follow design criteria as defined in the MS4 permit E.3.b.(3) may be exempt from PDP requirements.

D2 # 1034552 – Updated January 2016
SECTION 1: PERMANENT POST-CONSTRUCTION BMP REQUIREMENTS
Part B: Determine Minimum Permanent Stormwater BMP Requirements

<table>
<thead>
<tr>
<th>GENERAL REQUIREMENTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Are onsite BMPs planned for this project? □ Yes □ No</td>
</tr>
</tbody>
</table>

*If “Yes”, the project must meet general requirements identified in the Port BMP Design Manual, outlined in Section 2.1 and discussed in Section 4.1.*

<table>
<thead>
<tr>
<th>SOURCE CONTROL BMPs</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Does the project include any new storm drains, or alteration to existing storm drains? □ Yes □ No</td>
</tr>
<tr>
<td>2. Does the project include an outdoor material storage area? □ Yes □ No</td>
</tr>
<tr>
<td>3. Does the project include any outdoor work area with potential for pollutant generation? □ Yes □ No</td>
</tr>
<tr>
<td>4. Does the project include any outdoor trash storage areas? □ Yes □ No</td>
</tr>
<tr>
<td>5. Will commercial or industrial waste handling or storage occur at the site, excluding typical office or household waste? □ Yes □ No</td>
</tr>
<tr>
<td>6. Does the project include any material loading and unloading areas? □ Yes □ No</td>
</tr>
<tr>
<td>7. Will vehicle or equipment fueling, washing or maintenance take place on the site? □ Yes □ No</td>
</tr>
<tr>
<td>8. Does the project include landscaped areas? □ Yes □ No</td>
</tr>
</tbody>
</table>

*If “Yes” to any of the above, the project must implement, where applicable/technically feasible, permanent source control BMPs identified in the Port BMP Design Manual, outlined in Section 2.1 and discussed in Section 4.1.*

<table>
<thead>
<tr>
<th>SITE DESIGN BMPs</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Does the project include any permanent structures within 100 feet of any natural water body? □ Yes □ No</td>
</tr>
<tr>
<td>2. Does the existing site footprint include natural areas with trees, vegetation, or natural soils? □ Yes □ No</td>
</tr>
<tr>
<td>3. Does the project include new impervious areas including roads, parking lots, driveways, rooftops, paths or sidewalks? □ Yes □ No</td>
</tr>
<tr>
<td>4. Does the project include new pervious landscape areas and irrigation systems? □ Yes □ No</td>
</tr>
</tbody>
</table>

*If “Yes” to any of the above, the project must implement, where applicable and technically feasible, site design practices identified in the Port BMP Design Manual, outlined in Section 2.1 and discussed in Section 4.1.*
SECTION 2: CONSTRUCTION PHASE STORMWATER BMP REQUIREMENTS

1. Will the project include clearing, grading, or disturbances to ground such as stockpiling, or excavation that results in soil disturbances of at least one acre total land area? .......................... □ Yes □ No

If “Yes”, a Construction Stormwater Pollution Prevention Plan (SWPPP) for projects greater than 1-acre is required and this project will trigger the General Construction Stormwater Permit. See Note for Port template requirements.

If “No”, continue to questions 2 and 3.

2. Will the project include pavement resurfacing, grading or soil disturbances greater than 100 square feet? ................................................................. □ Yes □ No

3. Will the project occur over or within receiving water? ................................................................. □ Yes □ No

If “Yes” to either of the above, a Construction BMP Plan for Projects less than 1-acre is required. See Note for Port template requirements.

If “No” to both of the above, continue to questions 4 and 5.

4. Will stormwater or urban runoff have the potential to contact any portion of the construction area, including washing and staging areas? ................................................................. □ Yes □ No

5. Will the project use any construction materials that could negatively affect water quality if discharged from the site (such as paints, solvents, concrete, and stucco)? ......................... □ Yes □ No

If “Yes” to either of the above, no Construction SWPPP or Construction BMP Plan is required but contractor is required to follow general construction phase BMPs as identified in the project temporary stormwater pollution control specifications.

If “No” to both of the above, no construction phase stormwater BMP requirements are required.

NOTE: Additional information for construction phase and permanent post-construction stormwater BMP requirements can be found in the Port BMP Design Manual document found on the Port’s website. The Port requires the use of Port templates for construction phase and permanent post-construction stormwater BMP requirement submittals.

- SWQMP templates for standard projects and PDPs: http://www.portofsandiego.org/environment/stormwater/1766-usmp-template.html

Two different specifications are available to cover construction phase requirements. One specification is used when a Construction SWPPP or Construction BMP Plan document is prepared by the contractor submitting the bid and the second is when the document has been prepared and added to the specifications.

For questions regarding construction phase and/or permanent post-construction stormwater BMP requirements, contact the Port’s Planning and Green Port department at (619) 686-6254.
